# THE PHARMACEUTICAL ERA

AN ILLUSTRATED MONTHLY PUBLICATION FOR THE DRUG TRADE

VOL. XLVIII

NEW YORK, JANUARY, 1914

No. 1

## THE PHARMACEUTICAL ERA

PUBLISHED ON THE FIRST OF EACH MONTH

D. O. HAYNES & Co. . . . Publishers

No. 3 PARK PLACE, NEW YORK.

Telephone, 7646 Barclay.

Cable Address, "Era, New York."

### SUBSCRIPTION RATES:

Single Copies, 15 cents.

Domestic Rates to U.S., Cuba, Hawaii, Porto Rico, the Philippines and Mexico.....	\$1.00 a year
To Canada, postpaid.....	1.50 a year
To Foreign Countries in Postal Union.....	2.00 a year

THE ERA PRICE LIST with Subscription, 50c. a Copy.

PRICES INCLUDE POSTAGE AND PAYABLE IN ADVANCE.

REMIT by P.O. or Express Order or New York Draft payable to order of D. O. Haynes & Co. Add 10 cents for collection charges if you send local check.

Published at No. 3 Park Place, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation: President and treasurer, D. O. Haynes; vice-president, E. J. Kennedy; secretary, N. W. Haynes. Address of Officers is No. 3 Park Place, New York.

Entered at the New York Post-office as Second-class Matter. Copyright, 1914, by D. O. Haynes & Co. All rights reserved.

Title registered in the United States Patent Office.

## Table of Contents.

THE BROOKS LAW IN EFFECT.

ATTENTION of druggists in New York State is called to the fact that on and after Feb. 1, 1914, the so-called Brooks Law, in so far as it relates to package and bottled goods, will be in effect. The general law, forming Chapter 81 of the Laws of 1912, has been active since June 1, 1913, but the sections affecting goods sold in packages or in small containers, which make up the bulk of commodities handled by druggists, were not to become effective until eight months later. The provisions of the new regulations have been fully set forth in past issues of the ERA (May and September, 1913). The law was passed chiefly in the interests of purchasers, and stipulates that all packages must bear a plain statement of the net contents, or of the numerical count of the pieces in the package. Certain exceptions are made, and a list of tolerances has been drawn up by the State Superintendent of Weights and Measures. All classes of commodities, foods and candies, as well as drugs, are within the scope of the law. We do not believe that the new measure will present any difficulties to the druggists of the State, or to the manufacturers. Ample time has been given in which to make necessary changes in labels, etc., and the public, if it will but use its eyes, now has full protection against deception.

In this connection we may mention that a list of tolerated variations in druggists' weights, taken from the November "Weights and Measures Bulletin," appears in the Trade Section of this issue.

### A WORD AS TO SUNDAY CLOSING.

WITH the passage of the "one-day-rest-in-seven" bill by the New York State Legislature an added impetus has been given to the movement in favor of the closing—for at least part time—on Sunday of drug stores. Many New York druggists have gone on record as in favor of this solution of the "day off" problem, particularly since the latest move on the part of the authorities toward the limiting of sales in New York drug stores on Sunday to drugs, thus shutting out the income from soda, cigars and sundries, which has always made the greatest showing in the day's total cash receipts. Drug clerks' organizations have for years urged such a legalized respite from labor, and in some States, notably California, have won a six-

day week—60 hours in California—and a minimum wage scale. At the recent conference called under the auspices of the New York State Ph.A., President Jacob H. Rehfuess was pronouncedly in favor of Sunday closing, declaring that the sooner the pharmacists consider the question seriously the better, since "as soon as the clerks organize they will get the desired hours." Postal-card canvasses among members of New York associations of druggists indicate that but from 10 to 15 per cent. of the druggists favor keeping open all day Sunday, the majority favoring either complete or partial closing.

#### ADOPTION OF A STANDARD POISON BOTTLE.

THERE is at the present time before Congress a proposed amendment to the Federal Food and Drugs Act which requires that when packages containing virulent poisons are shipped into interstate commerce direct to the consumer, such poisons shall be placed in containers to be prescribed by the Secretary of Agriculture and the Secretary of Commerce. Since the introduction of this bill, and following the recent agitation in the newspapers relating to the accidental deaths that have occurred through the inadvertent use of corrosive sublimate, there have been many discussions as to what form of container would best meet the conditions and obviate the dangers of accidental poisoning.

Legislation embodying this idea has been more than once attempted in various States in this country, but we cannot at the present moment recall a law in force in any State which makes the enclosure of a poison in a special form of container obligatory. In Great Britain the regulations are more specific, the pharmacy law requiring that the container must be labeled with the name of the poison and some distinctive mark showing that it contains a poison, and that such poison must be kept in one of three systems, the particular system to which we refer requiring that the poison shall be kept in "a bottle or vessel rendered distinguishable by touch from the bottles or vessels in which ordinary articles are kept in the same warehouse, shop, or dispensary." As a further precaution, all poisons sold or dispensed must be sent out in bottles, also rendered distinguishable by touch from ordinary medicine bottles, which must bear the required label as to name, etc., and a notice that the contents of the bottle are not to be taken internally or are poisonous if taken in overdoses. These regulations support our belief that of all the containers that have been suggested, that one which enables the consumer to receive warning of danger by means of his sense of touch is the most practical, and is most serviceable both in the darkness and in the light. A distinctive color can also be adopted, but the precautionary value of this alone has its limitations.

There is, in our opinion, no doubt but that regulations as proposed in the above amendment are needed, for as conditions stand at present, anyone can ship into the homes of consumers the most deadly poisons without indicating in any manner whatever the nature of the commodity. With the

adoption of a particular form of container, the manufacturer, or shipper, and the pharmacist as well, should be compelled to explain to purchasers the deadly nature of poisons and to point out to them the shape and color of the containers in which such agents are enclosed.

#### RETURN TO DRUGS AND MEDICINES.

AT the recent meeting of the Congress of Clinical Surgeons held in Chicago, the new president, Dr. John B. Murphy, made the seemingly confident prediction that for the next quarter of a century the practice of surgery will be subordinated to internal medicine. This admission by a most distinguished surgeon shows that the so-called "drugless therapy" is on the wane, so far as scientific medicine is concerned, that drugs and medicines are the dependable weapons of the physician's armamentarium in fighting disease, and that to them the sick must look for relief in many diseases the knife of the surgeon can never reach. The eminent surgeon's statements are significant:

"If you were to ask me whether if I were to start in to study medicine today I would take medicine or surgery, I would tell you without hesitation that I would start in internal medicine. The advance of internal medicine in the next quarter of a century will be enormously greater than that in surgery. Internal medicine has enormously more possibilities than surgery has. It is the internal medicine that goes into the details, makes a careful examination and analyses, and endeavors to arrive at a diagnosis.

"I feel with you that the clinical conventions are to be the conventions of the future, that clinical teaching is to be the line of the medical profession rather than the line of the papers, which we have followed in the past, but in order that that should be a success, and a continued success, it must have the support of every member of the congress and the profession."

These views confirm the belief that the standing of the medical profession is much more closely connected with pharmacy than many doctors seem to realize, and they also show a brighter outlook for the early future of our calling. If pharmacists are to supply this greater demand for drugs the return to clinical medicine will develop, they must do their share in equipping themselves for the practice of professional pharmacy. The pharmacist must get in closer touch with prescribing doctors, and let them know that he is abreast of the times in scientific attainments. Good drugs and medicines have their place in fighting disease, and the more this fact is realized, the more will it do to increase the amount of medicine intelligently used, and this, in the final analysis, means more prescriptions.

#### TWO NOTABLE RULINGS.

Two recent decisions of the courts in price maintenance cases are of decided interest to druggists and manufacturers for the trade, in that both the rulings maintain the position of the Supreme Court of the United States in the famous Sana-togen decision. The cases at issue were those of the Waltham Watch Co. against Chas. A. Keene, a Broadway jeweller, and the "Maey" case (Strauss vs. the American Publishers' Association). The

Waltham company sought to prevent Keene from selling watch movements at less than the price fixed by the manufacturers, and the U.S. Circuit Court of Appeals affirmed the decree of Judge Ray of the Federal district court, who dismissed the case last February with the following comment:

"On the subject of fixing prices for resales by dealers to consumers the Supreme Court of the United States has declared that such limitations are opposed to sound public policy, and, therefore, void. A combination having that for its object is illegal."

The "Macy" case, which had for its object perfecting the right of the retailer to vend books at the price most satisfactory to himself, rather than at the price stipulated by the publishers, was still another action to establish the status of price protection under the copyright law. The gist of the unanimous decision of the United States Supreme Court is that copyright as well as patent property is not exempt from the provisions of the Sherman anti-trust law. It had been supposed, previous to this decision by the highest court, that the inclusion in the copyright statutes of the right to "vend" protected copyright property to the extent of allowing the maintenance of prices and the prevention of under-selling, but the Supreme Court decision negatives any such differentiation.

As there had been something more than a lingering hope in the minds of manufacturers of price-protected goods that the patent laws and copyright laws contained a certain barrier against price-severe blow to advocates of the fixed price policy, cutting the two decisions cited have come as a with the result that the movement to so change existing laws that price protection shall be legalized as a commercial policy has been given a decided impetus.

#### ANTIDOTES ON POISON LABELS.

THE action of the Kentucky Board of Pharmacy in recommending that all poison labels should carry a definite statement as to the antidotes generally recognized as efficient for each particular poison, is a step in the right direction. It has been frequently called to attention that many of the labels used by druggists on poisons name antidotal measures that are entirely inadequate and inefficient for the purpose desired, while some labels call for remedial measures or the use of means that are absolutely inaccessible to the average person. Some of the labels criticised make no reference to use of emetics in the treatment of cases where these remedies would likely prove most serviceable, and generally the most easily obtainable and understood, while others repeat such glaring inconsistencies as recommending the use of lime and oil as an antidote for arsenical poisoning! In many cases label printing houses are to blame for repeating many obsolete and inadequate antidotal measures, but in any litigation that might follow in the courts on the pretext that a label failed to give approved information, the responsibility would invariably be placed on the pharmacist.

When a person has swallowed a dose of poison it is of utmost importance to know just what to do at the time, for life in such cases often depends

on doing the right thing and doing it quickly. To mislead by information that should be trustworthy is criminal neglect, and it should be required of boards of pharmacy to provide standard labels to be used on all poisons sold within their respective jurisdictions, including a definite statement of the particular antidote or other remedial measure to be recommended. In some of the States, particularly California, the law requires that the board of pharmacy shall adopt a schedule of what in its judgment are the most suitable common antidotes for the various poisons usually sold, and when any poison is sold it must bear the official label on which appears the name of the particular antidote adopted and *no other*. Theoretically, the enforcement of such a measure affords protection to the druggist, and it contributes not a little to conserving the public health. The responsibility of determining what constitutes an adequate antidote for any particular poison is, by such a law, also shifted from the pharmacist's shoulders.

#### LIFE REGISTRATION FOR PHARMACISTS.

THE announcement that the Ohio Pharmaceutical Association has begun a State-wide campaign for a law providing that pharmacists shall be registered for life, instead of for three years, as at present, again brings to the front the debatable question of the necessity for re-registration. Lawyers and doctors, having once qualified to practice their chosen callings, are not thereafter compelled to do anything to protect their prerogative except to be honest and straightforward in the practice of their professions. Pharmacists, on the other hand, not only must re-register, but they must pay fees, at least in some of the States (in Ohio \$2) for the privilege.

There are arguments in favor of re-registration of pharmacists that do not apply to the majority and which are well known. The same arguments would apply in even greater degree to lawyers and physicians. Without at this time passing upon the main question as to whether all three professions ought or ought not to re-register at stated intervals, it seems, nevertheless, to be adding insult to injury, that pharmacists in addition to being forced to re-register, should have to pay for so doing.

Many board officials have claimed with considerable degree of reason that re-registration made it easier to keep track of pharmacists, and for board members to detect the fraudulent use of certificates of registration. To this extent, perhaps, re-registration has something to commend it, but why should pharmacists be taxed to support boards of pharmacy? Lawyers are not compelled to pay fees to support the courts, doctors are not required to pay the cost of boards of health or examining boards, and this discrimination against pharmacists is plainly on a level with class legislation. The license fees of one kind or another the pharmacist is compelled to meet constitute an onerous burden, and that one exacted from him for re-registration is practically the penalty he pays for being allowed to practice an honorable profession. In Ohio, as in other States, there seems to be need of a read-

justment of the relation of pharmacists to the Government.

#### ENZYMES IN OUR SERVICE.

A ROMANCER of a dozen years ago brought the inhabitants of Mars to Earth, and then allowed them to perish by a form of death utterly undreamed of by the Martians—the effects of germs. Somewhat similar to the feelings of the bacteria-stricken Martians must be the astonishment of those who are not quite abreast of the modern developments of pharmacy, on reading Professor Tschirch's address on "Enzymes," appearing in the last issue of the ERA, and in this number. The magnitude of the work silently carried on by these remarkable substances is scarcely to be realized, until the subject is presented to us by such a master as the Bern professor. Although at present the circle of our knowledge is just large enough to allow us to peer comfortably into the greater circles of black ignorance beyond, yet already we can see in what ways the scientific control of these bodies will be useful to us. Fortunately, as with micro-organisms, there are benign and malignant enzymes, so to speak. Some work disastrous results in drugs, while without the aid of others the medicinal plants would be worthless. Our task shall now be to distinguish the good from the bad, and determine the conditions under which the former can act for the greatest benefit of mankind.

#### THE NEW ERA FORMULARY.

A most valuable aid to the druggist and manufacturer is a good formula book, and too often it is just the aid he lacks. In some special lines or upon some subjects there are plenty of such works, but when it comes to one which shall embrace the general branches of information with which the druggist must be conversant, then those which he may procure are found to be unsatisfactory, and generally lacking just the one formula or class of formulas which he most desires.

The new ERA *Formulary*, now in the printer's hands, is designed to furnish a collection of formulas which in scope and trustworthiness possess a value far beyond that the druggist can derive from a whole library of ordinary receipt books. The new formulas cover all of the branches of manufacturing that pertain to the professional and mercantile calling of pharmacy, and many special fields in which manufacturers of technical products are interested. The whole range of technical literature has been scanned to get the best and most recent information for this work, and the nearly 8000 formulas represent several years of compilation. Many of these formulas are original contributions to THE PHARMACEUTICAL ERA, others have never before been published, but all have been selected with the distinct purpose of making available information not usually easily obtainable, and thus giving the user of the book a means of increasing his manufacturing operations and also his source of income. The instructions given with each formula or process are sufficiently complete

to answer all questions as to the method of manufacture, information that is usually very abbreviated or entirely omitted from many works of this character. We can, with confidence, recommend this book to all retail druggists, pharmacists and manufacturers who want a thoroughly reliable and up-to-date formulary.

#### THE DISCOVERY OF QUININE.

WHEN the two French savants, Pelletier and Caventou, isolated the alkaloids cinchonine and quinine from cinchona bark, they placed the crown on a long series of investigations, during which several workers actually had the sought-for substances in their hands, but remained in ignorance of their good fortune. Not until Sertuerner's discovery of morphine did the chemical world realize that plants contained a new class of bodies, the so-called plant alkalies, at least one of which, morphine, was endowed with enormous activity. Guided by the new idea, discoveries followed apace. Instead of seeking for resins, acids, oils, or gums, the investigators aimed at finding new plant bases, with the result that in less than three years five alkaloids had been obtained. The significance of Sertuerner's work lies in the fact that he had the insight to realize the analogy between the organic base morphiium and the common alkalies, soda, potassa and ammonia. The service of the discoverers of quinine, while not so great in its theoretical bearings, is perhaps just as important from the standpoint of medicine.

## CORRESPONDENCE

### Urges Sunday Closing of Drug Stores.

To the Editor of the ERA:

I suppose it will bring happiness to the hearts of the pharmacists to know that the up-State pharmacists are favoring a bill which will close the drug shops on the Sabbath, and give the pharmacist an opportunity to spend at least one day a week with his family and friends—at least one day where, if he cares, he can attend a lecture or an educational meeting where-by his knowledge may be broadened. The pharmacist in the last decade has suffered from want of matters of interest, from narrow-mindedness due solely to his solitary confinement. It is high time that he awakened and put himself on a parity with other professions.

Foreign countries are far more advanced than we in that respect. Are we not flesh and bones like our brother pharmacists on the other side? Does not our skin bleed when pricked with a pin or a needle? Does not red blood run through our veins? Then, why should we be made to suffer more than others? Why should we be permitted to weaken our minds for a few paltry dollars? The pharmaceutical journals all over the country have been preaching this Sunday-closing sermon for a long time. Let such journals come to the fore now, when their help is most needed. Let them fight, and fight hard, for the betterment of the profession and for the good of the cause. Surely, it would be a godsend.

Imagine a pharmacist, who cannot afford a clerk, working from morn till night, year in and year out! Of course, there are a few miserable characters in this profession who object to Sunday closing solely for the sake of a few paltry dollars, but whose excuse may be explained otherwise. Let their faces be wreathed in shame. They should never have been permitted to enter into this profession. Let the cries of these few be drowned in the cheers of the multitude who favor Sunday closing.

J.B.W.

## II. Prof. Alex. Tschirch on: "Enzymes in Their Significance for Pharmacognosy."

(Concluded from December Issue.)

### FRESH PLANT VS. DRUG.

THE changes considered heretofore, which medicinal plants undergo during drying, are outwardly perceptible to the eye or nose, but we know that they also suffer deep-seated inner modifications, not directly to be apprehended—so that we can say that the drug is in no wise identical with the fresh plant. But by this we do not mean to say that the examples of *Cochlearia*, which loses almost all of its activity on drying, or that of *Aegle Marmelos*, the fresh fruit of which saved my life in India, but which is worthless when dry, are repeated with all other plants, or even with the majority of drugs—not at all! It is totally erroneous to assume that the fresh plants are under all circumstances more active than the drugs. At times this may be true, but often it is not the case. The question must be tested in each instance. It is only certain that the dried drug is a different pharmacological individual from the living plant; but different does not always mean better. If I wish to brew some gentian brandy, I must allow the fresh gentian root to ferment, since in the dried drug the fermentable saccharide has been transformed, and it is of no value for the preparation of an alcoholic drink, although as a drug it is better than the fresh root. Much depends, therefore, on the use to be made of the material.

The above-mentioned process—the splitting up of a glucoside and oxidation of an aglucon, is apparently a frequent one in the drying of drugs, and is not confined to the glucotannids. The combined action of the hydrolyzing and oxidizing ferments may be observed, as Bourquelot showed, in a really classical example, that of salicin, which is first broken up by emulsin into a glucon and salicylic alcohol, the latter then being oxidized by an oxydase to salicylic aldehyde.

Hence it may be regarded as proved that during the drying of drugs, glucosides undergo changes under the influence of enzymes, and not only a mere splitting up, but a direct decomposition.

The modifications suffered by alkaloids during the drying of drugs have not yet been accurately investigated. According to the work of Lesueur, it appears that these changes are not considerable. An interesting observation is that of Schoonbroodt, that pure alkaloids can be obtained in a crystallized form much more easily from fresh plants, while the same methods applied to dried plants usually give amorphous products.

We are therefore certain that the changes which medicinal plants undergo during the drying process, and which may continue subsequently to the extraction of the dried drug, are for the most part due to enzyme action. And to enzyme effects we must ascribe the later alterations in many plant extracts, such as the aging of tinctures and of wine. For the statement that enzymes are insoluble in alcohol is known to be incorrect. There are many which are especially soluble in dilute alcohol.

#### Stability of Enzymes.

What, now, is the behavior of the enzymes themselves, while a plant is being dried? Bourquelot showed that many plants contain enzymes only in the green state, but lose them on drying, or after long keeping. Some drugs, like *Cichorium*, *Taraxacum*, and *Althaea*, still contain many enzymes in the dried state, and especially the enzymes of the gums and gum resins, which always contain oxydases, are of the most resistant kinds. In the dried state gum arabic will keep its enzymes unchanged for dozens of years, and the same thing has been observed by us in the laccase of Japan lac, which plays an important part in the transformation of the primary resinous material into the completely insoluble, very resistant oxidation product, which gives the lacquers of Japanese wares their character. The enzymes accompanying the gummy portions of gum resins, and apparently having an important role in the chemical work of the colloidal membranous layer, which I have called the resinogen layer, and which, as is known, forms the gummy parts of the gum resins, are also very stable.

But when speaking of resistance and non-resistance, we must not infer that all members of the enzyme mixture show the same properties. We find both sensitive and resistant en-

zymes. And a more careful study of these bodies will doubtless extend the scale of sensitivity in a large degree. Thus, in the case of drugs which give evidence of enzyme activity in the dry condition, the more sensitive part of the enzymes may have perished, while the more resistant ones, to which the oxydases belong, have survived.

#### Should All Drugs Be Sterilized?

A question of great import to us is: "Shall we kill the enzymes in the fresh plant by sterilization"—which must be sharply distinguished from the question, "Shall we prepare our remedies from fresh medicinal plants?" Shall we preserve the enzymes, or shall we by some means render them inactive? This query demands first of all the answer to another, which is still unanswered: "Do all enzymes have a medicinal action?" On this point we know very little. Pepsin and papayotin are, of course, employed in medicine, and in many other preparations enzymatic forces may be at work in a limited measure, but nevertheless it appears that the human organism, in general, cannot utilize many of the enzymes introduced from without. It produces so many itself, that there is a great probability that the healthy organism quickly destroys enzymes brought in from without, and assimilates them, and that only in pathological conditions can they occasionally be of use. Those enzymes which are unstable toward acids are destroyed in the stomach, while those which are unstable toward alkalis perish in the intestines. For instance, it is known that zymase is destroyed by trypsin, the proteolytic ferment of the gastric juice. Only in the case of the herbivorous animals do we know that they require the enzymes present in their food, for the complete assimilation of the latter, especially of cellulose. Whether in the pharmacological use of drugs the enzymes are effective in the alimentary canal, we do not know.

Of importance, but not to be considered here, is the behavior of the enzymes formed by the animal body within the organism itself, and *in vitro*, toward the several groups of substances found in drugs, the glucosides, alkaloids, esters, and ethers, which behavior is of importance for the pharmacological action of the latter.

We can accordingly limit the preceding question thus: "Are the changes which enzymes produce during the drying of plants, so considerable and so harmful, that it is advisable to kill the enzymes before drying?" To reply to this question, we must again glance at the enzymes which occur in plants. The chief members are the hydrolases and oxydases, and among the first especially the glucosidases and esterases, which bring about both internal and externally perceivable modifications.

#### Appearance of Drugs Important.

The modifications discernable outwardly, those of color and odor, are of unequal importance. Odor is usually improved, as has been stated, provided the temperature is not too high, and an evaporation of the odorous principles to any great extent is avoided. In exceptional cases distillers use fresh plants for the distillation of oils. Only the sensitive perfumes of the violet, tuberose, orange flowers and roses are extracted or distilled from the fresh blossoms. The case is different with the color. In no case is there any improvement in color; discoloration is the rule. However, since coloring matters do not, as a usual thing, belong to the active constituents, it may be regarded as immaterial, from the pharmacological standpoint, whether color changes take place or not. But with drugs, as with foods, it is true that psychic influences cannot be entirely left out of account. Well prepared dishes, having an attractive appearance, are more enjoyed and are better assimilated than those which are uncleanly and inelegant. In the same way, the external appearance of drugs is not entirely a matter of indifference. Other things being equal, we will prefer slightly drugs to discolored ones.

Internal changes can be ascertained and characterized only through pharmacological experiment and chemical investigation. Experience has shown that, as a rule, either the hydrolases and the oxydases, or one of the two groups, brings about these changes, breaking up glucosides and oxidizing susceptible substances, thus altering the drug in a manner which might better be avoided; although the statement cannot be made without reservation that a glucoside is always more active than its constituents. At any rate, the experiment would be interesting and valuable, to compare "sterilized" and "unsterilized" plants

\*Translated for THE PHARMACEUTICAL ERA from the "Apotheker Zeitung, 1913, p. 881.

in the fermentations with each other. But the investigator must be careful regarding the sterilized drugs as *a priori* more serviceable and must continually bear in mind that both varieties of different pharmacological individuals, and hence that the sterilized drugs must be tested chemically, pharmacologically and clinically, since our experience heretofore has been limited almost exclusively to unsterilized drugs.

#### Modern Galenicals from Sterilized Drugs.

New pharmacological practice is in a position to fulfill these demands. Since Bourquelot published his basic article on "Éléments solubles oxydants et médicaments" in 1896, both French workers, especially Bourquelot himself, and Perrot and Goris, as well as German investigators, such as Winckel and Bernegau, have been busy with the problem. Sterilized drugs and their preparations, even those intended for subcutaneous and intravenous injection, are to be had on the market. The Laboratoire Pharmaceutique de Dausse, which proceeds according to the methods of Perrot and Goris, has given the not wholly fortunate name of "intraits" (intraacts) to extracts of sterilized drugs, prepared by special methods, and in addition to intrait of digitalis, of valerian, of horse-chestnut, of mallow, and of convallaria, has also put out a fresh stabilized digitalis powder, with a physiological assay according to Focke-Joanin. This house has set out on the right path, as it subjects all its preparations to exact physiological and pharmacological tests. The fact appears in this connection that quite different, and in part much more active preparations are produced, which is, however, not to be attributed to the sterilization alone, but to the elimination of many ballast substances by special processes.

One thing is certainly achieved by sterilization: Any further action of enzymes, which might alter the composition of the drug, is excluded; stabilization is actually brought about. And herein lies the chief advantage of the new method.

In Germany Bernegau has prepared and introduced extracts made from fresh sterilized kola, and Winckel has produced sterilized digitalis leaves and ergot, as well as sterilized fresh fruit (Robst). In addition, the "Dialysés" and "Energétènes," known for a long time, start with the fresh plants, which are "exolyzed" by a suitable solvent. In the first "Dialysata Golaz," which appeared in 1895, sterilization was not used, the enzymes, which Golaz called "the soul of the plant," being purposely preserved. The alcoholatures prepared with boiling alcohol from fresh plants, which Lesueur recommends for certain cases, do not seem to have won their way into use.

In any case, the manifold and often secret sterilization methods—Perrot and Goris, for instance, use alcohol vapor—provided only that the sterilizing agent works promptly and energetically, bring about an unequivocal killing of the enzymes, which can never be achieved by simple rapid drying with strong ventilation, that is, pumping off the water vapor, the most complete method of drying. If the material is not absolutely dry, modifications will still go on in the drugs through the agency of the enzymes; drying alone does not stabilize a drug. Indeed, the action of the enzymes may even continue after the drug has been worked up into an extract. Rosenthaler and Meyer have recently showed that this is the fact with gentian, cascara sagrada and rhubarb.

Not only do the enzymes work changes in the drugs themselves, but enzyme-bearing substances may also, on being mixed with other materials or mixtures of materials, affect these latter. This applies to the very drug whose enzyme reactions were known first of all—gum arabic. I have already mentioned that the enzyme-complex of this gum is very stable; it is also very active, and the number of observations is large which prove how great the changes can be, if we mix gum arabic mucilage with other substances, especially with those easily oxidizable. In order to avoid these subsequent changes, the new Swiss Pharmacopoeia has prescribed that mucilage of gum arabic shall be heated, so that the enzymes may be killed.

#### Useful Effects of Enzymes.

Up to this time we have been discussing only the harmful effects of enzymes, but we also know of useful effects. The process of fermentation practiced on so many drugs, in particular those of the purine group—tea, coffee and cocoa—and also on tobacco, vanilla and tamarinds, is, at least, according to the general assumption, a process of improvement and bettering the appearance, which, to be sure, is of very different significance. If we examine carefully the processes going on, it appears, as I showed in my "Textbook of Pharmacognosy" in 1909, that we cannot fit all of them over the same last, and that, for instance, the fermentation of coffee must not be aligned with that of other drugs. In this case we are dealing only

with the removal of the fragments of the pericarp by rotting. Fermented coffee and that prepared by the dry process have the same properties. Fermentation in coffee does not lead to internal changes in the cells, and we must accordingly roast it in addition, to bring about this end. But the case is entirely different with tea and cocoa, the collection of which I had opportunity to study in India in 1888. Apparently, we are here confronted with endocellular processes, which go on under the influence of the enzymes present in the cells. And the same thing may hold true of the curing of tobacco and vanilla. To be sure, micro-organisms have been sought for here, and yeasts have been held responsible for the fermentation processes in tea and cocoa (in cocoa *saccharomyces* cells are found in large numbers in the adhering flesh of the fruit), and bacteria have been suspected of being implicated in tobacco; but to me it is very doubtful if these are concerned in the actual fermentation, and are not rather a secondary phenomenon. In my book I have made these remarks about cocoa in particular: "In the course of cocoa fermentation two processes go on, a vinous and acetous fermentation in the masses of fruit which are adhering to the seeds, produced by *Saccharomyces*, and a fermentation taking place in the interior of the cells forming the cotyledons of the enclosed seeds, in which enzymes (hydrolytic and oxydases) are active. Whether this latter true fermentation is dependent upon or influenced by the former, cannot be stated."

It is still to be proved, whether the micro-organisms, which are undoubtedly present, and their metabolism products, which are also enzymes in part, as well as the substances formed in exogenous fermentation processes, as acetic acid, influence or modify the principal fermentation. There are some indications that certain enzymes are more energetic in acid solution. But may not the method occasionally employed with vanilla, of dipping the fruits before curing into hot water, have as its very purpose the destruction of the micro-organisms adhering externally, which cause a false fermentation? At any rate, the endogenous endocellular fermentation is the principal question, and there is no doubt that the high temperature always observed during the fermentation of drugs lying in heaps enhances the effect of the enzymes, for it is one of the characteristics of these substances, that they are most energetic at about blood heat, that is, between 30 and 40 degrees.

#### Role of Enzymes in Tea, Cocoa, Indigo.

But we also find the process of stabilizing, by killing at least the more sensitive enzymes by gentle heat, in the case of the purine drugs. The heating of tea leaves before rolling in the manufacture of green tea, and the procedure of drawing the maté branches through a flame before warming on the "giraó," have this end in view. The green color of the finished green tea and of maté shows that the processes have not gone on, which lead to the formation of the red-brown decomposition products. Dried coca leaves can be distinguished even by color from the "coca pisada," which has been trodden by the feet after sprinkling the wilted leaves: "coca pisada" is dark in color. In earlier days the formation of color in the fermentation processes of indigo extracts and litmus lichens was ascribed to enzymes produced by micro-organisms. But recently investigators, such as Molisch and van Lookeren, incline to the view that in the indigo process micro-organisms play no important part, although certain bacteria are able to build up indigo from indican. Rawson pictures the process as a purely diastatic one, going on of itself under the influence of endocellular enzymes set free in the plants.

Fermentation processes caused by the endocellular enzymes are also responsible for the increased development of odorous substances in the semi-moist bales of patchouli leaves during the sea voyage, and the formation of the dark, almost black color of the originally reddish-brown tamarinds, when the latter, as happens in India, are subjected to fermentation.

#### Highest Aim to Utilize Enzymes.

But all of these very important and interesting processes have been little examined in detail. When we have learned their cause, conditions and *modus operandi*, we shall be able to regulate them and improve them. Here is opening up a wide field for pharmacognosy, the compass and problems of which grow from day to day. Our highest goal is not to eliminate the harmful effects of enzymes, but to use the enzymes in the service of mankind, to make them available for drugs, just as we have so long used them in the preparation of foods, in brewing, in wine manufacture, in cheese and dairy practice, and in baking, in all places where enzymes produced by micro-organisms exist, which cause the process of "fermentation."

When we shall have also learned to utilize the enzymes of the higher plants—as is already done in the case of lipase, in splitting up fats, with myrosin in preparing mustard oil, and emulsin in breaking up almond amygdalin—the circle of useful enzymatic effects will still be capable of great expansion, and, in the words of Goethe, we shall proceed from amazement to contemplation and from contemplation to investigation.

That is one of the thoughts to which we are brought by a consideration of the enzyme question. To such thoughts are we led by the philosophy of pharmacognosy and the rationally conducted experiment. And Houston Stewart Chamberlain has said: "Science without philosophy is a mere bureau of registration."

## Classical Discoveries in Pharmacy.—II.

### THE DISCOVERY OF QUININE.

IT was once remarked, at a gathering of chemists who were reviewing the life-work of a fellow member, that although he had enriched chemical science by the discovery of many important facts, it was regrettable that he did not leave behind him any new *method* of investigation. The inference was that the origination of new methods is of greater benefit to science than the accumulation of facts and the discovery of new compounds. This is well illustrated in the years following Serturmer's discovery of morphine, as related in the December issue of the ERA. Not only did this pharmacist bring to light the first member of a new class of vegetable alkalies, but he gave to the world a new weapon of research. The troublous times after the French Revolution having passed, communication among the nations of Eastern Europe again became reliable and universal, with the result that chemists of other countries outside of Germany began to avail themselves of Serturmer's methods of isolating the active principles of certain plants, and new discoveries followed rapidly.

#### New Alkaloids Appear.

Prominent among the French chemists of the time were Pelletier and Caventou. Immediately after the finding of morphine in opium became known, these two men began a series of investigations into the principles of medicinal plants. In 1818 they obtained a new alkaline base from *nux vomica*, and named it strychnine. The same base was later found by them in *Ignatia* bean. In the same year they isolated brucine from "false *Angostura* bark," which was then supposed to be derived from *Brucea ferruginea*, but is now known to be simply the bark of *Strychnos Nux Vomica*. Brucine was later found in *nux vomica* and *Ignatia* bean. In 1820 the same workers obtained a new base from *cevadilla*. According to the classification of the day, this drug was derived from *Veratrum Sabadilla*, and the new vegetable alkali was therefore named veratrine. Pelletier and Caventou regarded this substance as identical with another, found in *Veratrum album*, and also identified it with the alkali from *Colchicum autumnale*, in which supposition they erred.

Other active principles discovered about this time were delphinine, from *Delphinium staphisagria*, obtained by Lassaigne and Feneulle in 1819; picrotoxin, from *Cocculus Indicus*; and daphnin, found by Vauquelin in *Daphne alpina*. The two latter substances are not alkaloids.

#### Thought to Contain No Nitrogen.

Thus the new group of vegetable alkalies, instituted by Serturmer, contained at least five members when Pelletier and Caventou turned their attention to cinchona bark. It is remarkable that none of the investigators had thus far noticed the constant presence of the element nitrogen in these vegetable bases. In most cases the reports expressly state that nitrogen is not present. The method used in testing for nitrogen, or azote, was to heat the substance with copper oxide, and collect the gases formed in alkaline solutions. It was thought that if any nitrogen was present, it would pass over in gaseous form, and could be collected as such. But apparently, all the nitrogen, in every instance, must have been transformed into oxides, which were absorbed by the alkalies, and thus lost sight of in the subsequent examinations. This is the only explanation we can offer to account for the failure of every worker in plant chemistry to detect nitrogen in the alkaloids.

Cinchona bark had been in use in Europe for 150 years before a systematic analysis was made. In 1791 Fourcroy pub-

lished the results of an elaborate study of various cinchonas. He isolated a large number of mixed substances, but as his methods were chiefly of a physical nature, he did not succeed in obtaining any materials which threw much light on the chemical nature of the principles present in the bark. Gum, resin, tannin, coloring matter, etc., were found, but no definite chemical individuals were isolated. Fourcroy's methods were used by later chemists, with equally unprofitable results. In a letter to the editors of the *Annales de Chimie*, Vol. XVI, p. 108, 17-8, G. C. Berthollet relates that on treating a decoction of cinchona with lime water, he obtained a dark red precipitate which, when dry, "was as hard as hardened clay." This precipitate must have contained some of the alkaloids of cinchona, probably mixed with quinate of calcium, resins, gums, and colored with cinchona red.

A few years later, in 1799, Westring, a Swedish pharmacist, was engaged in the analysis of cinchona, especially of the Royal, or Brazil variety (*C. flava*). He concluded that the virtue of the bark in quartan fevers was due principally to its "tanning" property (*vis coriaria*). This hypothesis was supported to some extent by the fact that a number of drugs which were thought to be efficacious in similar affections were known to contain much tannin or gallic acid.

#### Duncan Isolates "Cinchonin."

The studies of Duncan led that worker to believe that the active principle of cinchona resided in a precipitate obtained by treating an infusion of the bark with an infusion of galls. To this substance the name *cinchonin* was given. The Portuguese physician Gomez followed up the work of Duncan, and secured a white crystalline material, which he considered to be the pure substance sought by Duncan. He retained the name cinchonin. His new substance was obtained by the action of caustic alkalies on the water-soluble part of the alcoholic extract of the bark, and there is little reason to doubt that it was actually what is now known as *cinchonine*. Gomez, however, stated that it was neither acid nor basic in its nature.

About this time Deschamps isolated the "essential salt" of cinchona. But as it was almost tasteless, easily soluble in water, insoluble in alcohol, and contained lime, there is every reason to believe that his essential salt was calcium quinate. This is confirmed by the fact that Vauquelin later, in 1806, obtained quinic or kinic acid from this substance, by merely treating it with oxalic acid. It is also probable that Vauquelin extracted the alkaloids of cinchona in crude form, as he treated infusions with potassium hydroxide, and got a number of precipitates of various colors. The researches of Seguin, published in 1814, revealed nothing of great importance, although they were quite extended, and included the study of the effects of many reagents on cinchona extracts. Among his statements is one to the effect that a bitter taste is not an essential characteristic of the febrifuge principle of cinchona. Other workers who deserve mention are Reuss, of Moscow, who first isolated cinchona red, and Laubert, who obtained practically the same substance as the cinchonin of Gomez, and considered it to be a resin.

#### Discovery of Cinchonine.

The account of the labors of Pelletier and Caventou appears in a paper read before the French Academy on September 11, 1820, and published in *Annales de Chimie et de Physique*, Vol. 15, pp. 289 and 337, 1820. These two chemists called in question Gomez's statement about the neutral character of the substance cinchonin. They pointed out that a keen young student, Houton-Labillardiere, had already called the attention to the fact that the very method of preparation used by Gomez indicates that cinchonin is a vegetable alkali. Experiments soon confirmed this supposition, and the name was changed to *cinchonine*. Of this base, Pelletier and Caventou prepared the sulphate, hydrochloride, nitrate, acetate, phosphate, oxalate, tartrate, and gallate. They also confirmed the presence of Vauquelin's quinic acid. The bark used in this work was the gray cinchona, or *C. Condaminica*.

The same methods were then applied to yellow cinchona, obtained according to the authors, from *C. cordifolia*. Entirely unexpected results were found, which are best described in the investigators' own words:

"We prepared some tinctures of yellow cinchona, to extract the resinoid substances: the latter, treated with potassa, left behind a yellowish substance which dissolved, in large proportion, in hydrochloric acid diluted with water, leaving behind a fatty material which differed from that of gray cinchona only by its yellow color. The acid liquor was colored yellow;

It is very strongly bitter, and resembles so much a hydrochloric acid solution of cinchonine. In this condition we added magnesia in amounts more than sufficient to combine with the hydrochloric acid. The liquid was in great part decolorized. The magnesia precipitate was washed, dried on the water bath, and treated with alcohol.

#### New Substance Not Crystalline.

The above-mentioned liquids were distilled at first, then abandoned to a slow evaporation; we then expected to have a fine crystallization of cinchonine, what was our surprise on obtaining only a yellowish, transparent substance, in no wise crystalline!

"According to our reasoning, the substance should have been cinchonine, mingled with some foreign material peculiar to yellow cinchona, but all our efforts did not enable us to separate from the supposed cinchonine the foreign matter which we thought was united with it; solution in new quantities of acid offered us nothing special, we separated only a little fatty matter.

A little coloring material was removed by lead subacetate, but still the supposed cinchonine would not crystallize. Dissolving in ether and evaporating gave no better results. "Finally, having dissolved our material in water and acetic acid, we added ammonium oxalate; immediately there was formed a precipitate of a dazzling white, that one would have taken for oxalate of lime, if it had not been soluble in alcohol. This precipitate, treated with magnesia, and then with alcohol, again furnished us an uncrystallized substance. At last—a remarkable thing!—this material, thus treated, dissolved in all acids (some must be in excess) and formed very white salts, which seemed to be more easily crystallized than the salts of cinchonine, from which they differ in form and aspect.

"It is thus, by force of circumstances, we have been led to consider the bitter material of yellow cinchona as a special salifiable base, and different from cinchonine. We declare at the same time that it is only after mature reflections, in consequence of a number of trials, and after having made a great number of salts, that we decided to distinguish the alkali of yellow cinchona from that of gray cinchona; but what especially determined us to make this distinction is the simultaneous existence of these two substances in some species of cinchona, and the possibility of separating them from each other. In effect, if the bitter principle of yellow cinchona is only cinchonine united with another substance, how could one separate pure cinchona from impure cinchona, if they should be reunited? As well say that one could at the same time purify and not purify cinchonine from the matters with which it is sullied.

"If the examination which we shall make of the alkali of yellow cinchona proves to us that it differs essentially from cinchonine, the same examination will lead us to recognize in these two substances many analogous properties. Thus it is that, in the medicinal properties of yellow cinchona and gray cinchona, one finds a great analogy, but not a perfect identity; so that in certain diseases gray cinchona is employed with advantage, while in other cases yellow cinchona is justly praised. Since, in a work of some extent, we are obliged to designate the alkali of yellow cinchona without using any paraphrases: since, moreover, this substance, being well characterized, deserved a special name just as much as its congener in gray cinchona, we have thought it proper to name it quinine, to distinguish it from cinchonine, by a term equally indicating its origin.

#### Properties of Quinine.

"Quinine never crystallizes. Dried, and deprived of all humidity, it forms a porous mass of a dirty white color; it is very little soluble in water; boiling water dissolves only about 0.005; cold water dissolves even less; in spite of its slight solubility, this substance is very bitter; we cannot deny to it a certain affinity for water, for when one evaporates a solution of quinine in alcohol which is not absolute, it retains some water with force, from which results a sort of transparent hydrate, melting at 90 degrees; while, deprived of water by long-continued heat, quinine loses its solubility, and presents itself under the form of a porous mass, instead of offering the appearance of melted wax, or dried varnish.

"Alcohol dissolves quinine very easily. It is much more soluble than cinchonine in sulphuric ether; it dissolves also, but in smaller quantities, in fixed and volatile oils.

"Quinine, exposed to air, undergoes no alteration; it does not appear even to attract carbonic acid sensibly. It is decomposed by the action of fire, and like cinchonine, gives the

products of vegetable matters not containing nitrogen; it also behaves like cinchonine with copper deutoxide."

After giving reasons why quinine and cinchonine are to be considered as the active principles of cinchona bark, the authors conclude: "There are circumstances where one will be glad to administer it (the active principle) pure, in order to have it in all its energy. This is true in cases where the patient cannot take an ounce of powder or a glass of liquid; moreover, this knowledge of the active principles throws some light on the pharmaceutical preparation of medicaments, makes us acquainted with rational formulas, and distinguishes them from those which are empirical, absurd, and often dangerous. In addition, let us hope that some skillful practitioner, uniting prudence with sagacity, will make some therapeutic researches with the alkalies of cinchona and thus give our work utility in medicine."

## Sensitiveness of Alkaloidal Solutions to Sterilization\*

By DR. GUSTAV MOSSLER.

THE dispensing of solutions intended for hypodermic use in a sterile condition, which is demanded by the modern pharmacopoeias, makes it appear necessary to include directions for carrying out the sterilization in the various official books, which has already been done in the new Swiss Pharmacopoeia. But it would be more acceptable if, in addition to the general directions, methods adapted for the individual substances were also introduced; in connection with which it should be considered that, for practical reasons, the drug-store laboratory cannot make use of time-consuming processes. It would therefore have to be made permissible, with sensitive substances, to use an abridged process when preparing extempore solutions, in case the less delicate method did not cause decomposition or physiological deterioration beyond a certain degree. With regard to the suitability of the various methods of sterilization for different substances, opinions are divided, for which reason it seems desirable to investigate this field experimentally, in order to clear up the subject. There has been much inclination to conclude theoretically, from the constitution of a body, what its behavior on sterilizing will be. For example, it has been considered dangerous to heat codeine to 100°, while with other substances, as apomorphine, persons have dealt too roughly.

Experiments were carried out in quartz flasks, in order to eliminate the influence of glass, and parallel tests were made in ordinary pharmaceutical glass. Heating was conducted at 70°C. (Tyndallizing for half an hour thrice repeated), at 101.5° in an ordinary steam sterilizer, and at 115° in an autoclave. At the higher temperatures, in the case of each substance which resisted decomposition during half an hour, the time was extended to two hours. Chemical-physical methods were principally used to investigate decomposition in the solutions, while in special instances tests were made for particular decomposition products. From the specific gravity and refractive index of the solutions no conclusions could be drawn, but rather these constants could be used to determine whether the original concentration had been restored after heating. The optical activity, again, furnished data for certain conclusions only in a few cases, but on the other hand, much aid was afforded by the measurement of the electrical conductivity, and the determination of the reaction of the solutions before and after heating, by ascertaining the hydrogen exponent according to Sørensen. The conductivity measurements permitted an estimation of the degree of decomposition, by comparing them with figures obtained from empirical solutions containing known amounts of decomposition products. With a number of alkaloidal salts in aqueous solution, the cause of decomposition could be recognized as a more or less complete dissociation into free base and acid, wherein the amino group set free by the detachment of the acid acted on one of the sensitive groups of the same molecule. Thus with morphine and apomorphine the discoloration is proportional to the temperature and duration of heating, and can be inhibited by adding an acid, in which case a definite concentration of

\*Read before the 85th meeting of German Naturalists and Physicians, in Vienna, September, 1913. Translated for THE PHARMACEUTICAL ERA from the "Chemiker Zeitung," 1913, page 1201.

acid is protective only up to a certain temperature. The yellow coloration of morphine solutions, which takes place even in quartz vessels, is due not to alkalinity alone, and also not to the formation of oxymorphine nor the action of atmospheric oxygen, but to "inner alkalinity," the free amino group affecting the phenolic hydroxyl.

In all 17 alkaloids were investigated. The morphine derivatives, in which the phenolic hydroxyl is esterified, as codeine and dionine, can be safely sterilized at 115°C., while heroin hydrochloride, the diacetate of morphine, suffers decomposition in 2 per cent. solution to the extent of about 5 per cent., acetic acid being split off. At the same time, it is immaterial whether the longer Tyndall process, or the shorter heating to 100° or 115° is employed, as apparently a state of equilibrium is established. Morphine hydrochloride always shows, even when alkalis are absolutely excluded, a yellow coloration, which is proportional to the temperature and duration of heating. Among the local anesthetics, tropacocaine, beta-eucaine, and novocaine proved to have perfect resistance; cocaine hydrochloride in 5 per cent. solution was decomposed at 100° to the extent of 1 per cent., and at 115°, 2.4 per cent. With these preparations, the Tyndall process is, in spite of the lower temperature, unfavorable by reason of the long time of exposure, and 1.6 per cent. decomposition took place, against only 1.0 per cent. at 100° with half an hour's heating. This decomposition at 100° can practically be considered as negligible. In ordinary medical glass there was 2.3 per cent. decomposition at 100°. Stovaine hydrochloride undergoes Tyndallization without change; at 100° there is 0.75 per cent. decomposition, at 115° 1.0 per cent., which can be neglected. On the other hand, alypin salts cannot withstand heating at all. Five minutes boiling decomposed 7.8 per cent. of the nitrate, Tyndallizing changed 13.2 per cent., heating at 100° for 30 minutes destroyed 24 per cent., and 49.1 per cent. at 115°. Atropine sulphate suffers no change through the Tyndall process; circulating steam at 100° decomposes 0.6 per cent., and 1.2 per cent. is lost at 115°. For extempore preparations the temperature of 100° is permissible. Quinine bishydrochloride and cotarine hydrochloride withstand even 115°, with only a slight intensification of color. Pilocarpine solutions are very stable at 100°, while at higher temperatures there is a slight formation of isopilocarpine. For physostigmine salicylate the only method to be used is filtration through germ-proof filters, as even Tyndallization produces a red color.

## NEW REMEDIES

*Acetylin* is a protected name for tablets of acetyl-salicylic acid.

*Aguma* is a food prepared from soya beans, forming a palatable powder, easily soluble in water.

*Arausan* contains 20 per cent. of camphor, 10 per cent. of Peru balsam, and 20 per cent. of potassium soap. It is used by inunction.

*Arscical* pills contain 0.05 g. ovolecthin, 0.00025 g. arsenous acid, 0.1 g. haemoglobin, and Blaud's mass.

*Bilosin* pills contain sodium oleate, lithium salts, and extract of rhubarb.

*Cholosan* is made from black radishes, and is used in the treatment of gall-stones.

*Depurose* is a specially prepared, perfectly pure and palatable dried yeast.

*Digacoffein* ampules contain 1 cc. of digalen, and 0.07 g. of citrated caffeine.

*Diogenal* is a dibrom-propyl derivative of veronal (diethyl-barbituric acid), with the substitution in one of the imino groups. It is said to have a milder action than veronal. The bromine content is 41.6 per cent., and the average adult dose is 1 g.

*Enteroseptyl* is tri-naphthyl phosphate.

*Erysol* is a clear, oily liquid, containing camphor and phenol. It is not caustic, and the odor of the phenol is not apparent, the camphor predominating.

*Glycobrom* is the glyceride of brominated cinnamic acid, a white amorphous powder, melting at 66-68°. It is employed to bring about a slow change in the halogen content of the blood, or to gradually saturate the system with bromine.

*Gudona* is a mouth-wash containing witch hazel extract and potassium chlorate.

*Gyraldose* is a mixture of thymol, trioxymethylene, and aluminum phosphate, used in vaginal disinfection.

*Intesitermin* is a mixture of the pure cultures of glaucobacteria and yoghurt bacteria.

*Kustanol-Pine Needle* baths contain the active constituents of the horse-chestnut, pine-needle oil, and salts which liberate carbon dioxide.

*Lecithum-nervin* pastilles contain lecithin, and the three bromides.

*Lecivalin*, an ointment for rheumatism, consists of 10 parts camphor, 35 parts chloroform, 45 parts vasogen, 5 parts Peru balsam, and 5 parts lecithin.

*Lekosan* tablets contain kola, lecithin, casein and phosphates.

*Merlusan* is a mercury-albumen combination, which dissolves in alkaline intestinal liquids, and is used in gonorrhoea and syphilis.

*Modan* (Mondan?) pills contain 0.05 g. creosote carbonate, camphor salicylate, and ichthyol, with aromatics.

*Narcosia* is a local anesthetic, containing witch hazel, novocain, and epinephrine.

*Nasanal*, a nasal cream, consists of menthol and zinc vasogen, also, hydrogen peroxide, lanolin and vaselin.

*Nco-Hexal* is secondary sulphosalicylate of hexamethylenetetramine.

*Picrastol* is said to be dimethylol-formylmethenyl-tetramethylenepentamine, of the formula C<sub>10</sub>H<sub>17</sub>N<sub>5</sub>O<sub>4</sub>. It is a colorless or light yellow resin, soluble in water and alcohol, but not in ether or benzene, and difficultly soluble in chloroform and acetone. On heating with acids or alkalis it forms ammonia, formic acid and formaldehyde. When heated in a vacuum to 190°, picrastol breaks down into hexamethylenetetramine and trimethyl-trimethylenetriamine, also called *Ncoleptol*. The latter is insoluble in alcohol and ether, difficultly soluble in cold water, and soluble 1.5 : 100 in hot water. Both these preparations are used in the treatment of epilepsy, the former in doses of 5-50 drops of a 25 per cent. solution, and the latter in tablets containing 0.5 g.

*Picurin* tablets are to be used for arteriosclerosis, and are said to contain *Cereus grandiflorus* and ammonium vanadate.

*Rademante* is a charcoal powder activated by the absorption of radium emanation. It is used in sealed tubes of silver or magnalium, and loses half its activity in four days.

*Sexol* is a soap cream, containing mercurioxybenzoate of sodium.

*Sironel* contains 7 per cent. potassium guaiacolate, 10 per cent. crystallized extract of malt, 2 per cent. quinine, 3 per cent. sodium and calcium lactophosphates, dissolved in syrup of acacia.

*Sotopan* contains quinine, iron, bromine, lime and glycerophosphoric acid in small amounts. *Jodsotopan* contains iodine in addition.

*Süsin*, used for rheumatism, contains alcohol, camphor, Turkish, German and Japanese mint, citronella, cloves, Ceylon cinnamon, etc.

*Synthalin* is the methyl ester of piperonyl-atophan, used in rheumatism.

*Trivalin locale* contains the valerates of morphine, codeine and epinephrine. It is a local anesthetic.

*Veropyrin* contains veronal and aspirin, or kalmopyrin, with the addition of 0.01 g. of morphine in each dose.

*Vinol* (not the American product) is an anti-fat remedy, containing *Fucus vesiculosus*, cascara and rhubarb.

### General Flavoring Extract.

Oil of bitter almond .....	10 drops
Oil of lemon .....	12 drops
Oil of orange .....	8 drops
Oil of cinnamon .....	6 drops
Oil of nutmegs .....	3 drops
Essence of vanilla.....	1 dram
Deodorized alcohol, enough to make...	1 ounce
Use one-half teaspoonful for puddings.	

### Furniture Oil.

Linseed oil .....	4 pints
Tincture of benzoin.....	4 ounces
Copal .....	2 ounces
Vinegar .....	1 pint
Solution of antimony chloride.....	6 ounces
Alcohol .....	10 ounces

Dissolve the copal in the oil by heat; when cool, add the other ingredients, and stir well.

## SELECTED FORMULAS

**Compound Resorcin Ointment.**

Resorcin	140 grains
Bismuth subnitrate	140 grains
Zinc oxide	140 grains
Black tar oil	70 grains
Distilled water	140 minims
Lanolin	560 grains
White soft paraffin, enough to make	4 ounces

The resorcin is dissolved in the water before mixing with the bismuth subnitrate and zinc oxide.

**Dyspepsia Capsules.**

Calcined magnesia, heavy	1 grain
Pepsin	½ grain
Pancreatin	1 grain
Calcium lactophosphate	1 grain
Lactic acid	½ drop
Taka-diastase	½ grain
Bismuth subnitrate	4 grains

For one capsule.

**Eucalyptus Embrocation.**

Oil of eucalyptus	1½ ounces
Camphor	½ ounce
Oil of turpentine	12 ounces
Water	12 ounces
Acetic acid	12 ounces
Eggs	6

**Vanishing Cream.**

Stearic acid (white, triple pressed)	4 lbs. 12 ozs.
Glycerin	8 lbs. 8 ozs.
Distilled water	14 pints
Stronger ammonia water	4 ozs. 6 drs.
Cologne spirit	1 pint
Oil of hyacinth	6 drops
Oil of jasmine (artificial)	4 drams
Artificial musk (crystal)	20 grains
Terpineol	2 ounces

Melt the stearic acid on a waterbath at 75° to 80° C. Heat 2 pounds of glycerin with 12 pints of water to the same temperature; add the ammonia water, and pour slowly into the melted stearic acid, with constant stirring. Mix the rest of the glycerin and water, and heat to 80° C.; pour this into the first mixture, with constant stirring; maintain the temperature and continue the stirring for about 15 minutes. Remove from the heat and beat until cold. Mix the perfuming materials with the spirit and slowly add this, with constant beating to the cream.

**Non-Greasy Massage Cream.**

Tragacanth, whole pieces	4 drams
Boric acid	12 drams
Water	3 pints
Glycerin	8 fl. ounces
Alcohol	8 fl. ounces

Dissolve the boric acid in the water by the aid of heat; to the hot liquid add the tragacanth, stir occasionally until the gum is thoroughly softened. Then add the alcohol and glycerin, strain the mixture forcibly through a cheesecloth, and pass enough water through the cloth so that the liquid will measure 64 fl. ounces. If too thick, dilute with more water.

**Glycerin of Cucumber.**

Yolk of one egg	
Glycerin	1 ounce
Tincture of quillaja	120 minims
Oil of almonds	1 ounce
Essence of cucumber	1 ounce
Rose water, enough to make	8 ounces

Mix the glycerin and yolk of egg, add the tincture of quillaja, then gradually the essence of cucumber previously mixed with 2 ounces of rose water. Mix thoroughly, and make up to 8 ounces with rose water.

**After-Shave Lotion.**

Menthol, 5 grains; tannic acid, 20 grains; phenol, 10 grains; glycerin, 3 drams; bay rum, 1½ ounces; water, to make 6 ounces. Dissolve the menthol and tannic acid in the bay rum, and add the mixture to the phenol dissolved in the water.

**Cement for Non-Inflammable Cinematograph Films.**

Isinglass, 50; gum ammoniacum, 4; gum mastic, 2; alcohol (95%), 10; water, q.s. Soak the isinglass in cold water over night, or until thoroughly softened, then drain, and press gently between absorbent cloths. Place the softened material in a flask, and heat on a waterbath until it becomes fluid. Dissolve the gums in the alcohol, and add the solution to the isinglass liquid after removing it from the source of heat and cooling to about 160° F. Stir well or mix by agitation. Before applying the cement, which must be used warm, clean the surface of the films with chloroform or other fat solvent. If this does not succeed, a borax-shellac solution may be used. (Pharm. Journ.)

**Red Roach Paste.**

Red iodide of mercury	1 part
Wheat flour	3 parts
Corn meal	3 parts
Molasses	2 parts
Water	sufficient

Cook the corn meal and flour with the molasses and an equal quantity of water until a stiff paste is obtained; triturate the red iodide of mercury with a portion of this to a smooth paste, add to the remainder and mix thoroughly, then add an equal volume of cold water and heat the mixture, until it sets to a soft paste on cooling, stirring constantly and adding about half an ounce of oil of rhodium or anise seed to every 5 pounds of mixture after removing from the source of heat.

**Patent Leather Polish.**

Yellow wax or ceresine	3 ounces
Spermaceti	1 ounce
Oil of turpentine	11 ounces
Asphaltum varnish	1 ounce
Borax	80 grains
Frankfort black	1 ounce
Prussian blue	150 grains

Melt the wax, add the borax, and stir until an emulsion has been formed. In another pan melt the spermaceti; add the varnish, previously mixed with the turpentine; stir well and add the wax; lastly add the colors.

**Etching Steel.**

The steel is covered with a film of beeswax and the design etched through the wax by means of a fine-pointed instrument. The etching liquid is then poured on and allowed to act for an hour or so. This liquid may be nitric acid or—

Copper sulphate	½ ounce
Ammonium chloride	½ ounce
Powdered alum	¼ ounce
Vinegar	5 ounces

**Illuminated Ink for Show Cards.**

Honey	1 dram
Alcohol	1 dram
Mucilage	1 ounce
Water	8 ounces
Bronze	1 ounce

Rub the honey, alcohol and mucilage together in a mortar, then add the water. To be shaken before using.

**White Ink for Stamping Hosiery.**

Zinc white	2 drams
White precipitate	5 grains
Mucilage	1 dram
Water	6 drams

Triturate the zinc white with a small quantity of the water till quite smooth before adding the mucilage and the remainder of the water.

**Liquid Brass Polish.**

For cleaning brass work of motor cars, a writer in the *British Medical Journal* recommends the following:

Oxalic acid	4 ounces
Powdered rotten stone	6 ounces
Paraffin (liquid)	4 fl. ounces
Methylated spirit	6 fl. ounces

Dissolve the acid in a half pint of boiling water, then add the rotten stone; shake well, add the paraffin and spirit, and make up to half a gallon with boiling water.

## FOREIGN ABSTRACTS

### THE LATEST FROM EUROPEAN WORKERS.

#### New Syntheses by Bourquelot—Properties of Sulphur Ointments—Source of Siam Benzoin Settled—Other Items of Practical Interest.

**T**WO articles from Prof. Bourquelot's laboratory are reviewed this month, one dealing with the synthesis of a biose, a sugar consisting of two molecules of hexose, and the other relating his preliminary experiences in uniting glycerol with glucose. Bourquelot's work is always interesting, and the present series of researches will take rank as one of the classics of pharmaceutical chemistry. The theoretical considerations involved in the preparation and use of sulphur ointments are presented in another important article, the author apparently proving that the preparation of these ointments by fusion is greatly superior from the standpoint of efficacy in use. Holmes sums up some recent work to discover the true source of Siam benzoin, with results that leave no doubt that *Styrax benzoin* is not at present the parent tree. Laborde describes the properties of colloidal metals, and touches on their use in disease. Numerous new tests and quantitative processes are also outlined.

#### The Fluorescence Microscope—

Wasicky describes the construction, manipulation, and uses of the fluorescence microscope in drug work. Quinine in hydrochloric acid solution shows fluorescence in dilutions up to one in one million, and in sulphuric acid solutions up to one hundred million. The color is a splendid pale blue. Quinidine and cinchonine show the same fluorescence, but more feebly. Weak decoctions of cinchona bark also fluoresce in very dilute solutions. The constituents of cacao fluoresce under the microscope in various shades of blue. Shells of cacao show whitish particles, which thus makes it possible to detect the presence of very slight additions of shells to powdered cacao. In a coffee substitute consisting of chicory and taraxacum root, the former is yellowish-white, and the latter more or less blue. Ergot can be detected by the reddish color of its fragments. Gentian powder is whitish or pale blue; rumex powder, a frequent adulterant of gentian, is golden yellow to green, and contains many glittering particles. (Wasicky, Pharm. Post, 1913, p. 877; through C. Zentralbl.)

#### Determination of Iron in Syrups, Etc.—

This method is a colorimetric one, and is said to be sufficiently accurate for the purpose to which it is adapted. Ten cc. of Syrupus Ferri Phos. Comp., etc., with 50 cc. of water and 5 cc. of concentrated nitric acid, are boiled for five minutes, to oxidize the iron. After cooling, the solution is diluted to 100 cc., and of this dilution 5 cc. are taken and again diluted to 100 cc. Five cc. of this last dilution are transferred to a 100 cc. Nessler cylinder, and filled with water to the 50 cc. mark. The solution is acidified with 5 cc. of hydrochloric acid (1 : 3), and then treated with 10 cc. of 5 per cent. potassium sulphocyanate. After filling to the mark, the red solution is compared with one treated in the same way in another tube, and containing a known amount of iron. One cc. of the standard should contain about 0.02 mg. of iron. In another sample of the syrup the iron is determined without oxidation with nitric acid. The difference between the two tests gives the amount of ferrous iron present. (Evers, Analyst, 1913, p. 447; through C. Zentralbl.)

#### Constituents of Senna Leaves—

The present investigation dealt with Tinnevely leaves, grown at Lima, Peru, and botanically identical with the former, and Alexandrian leaves. The alcoholic extract of Tinnevely senna gave a small amount of essential oil, salicylic acid, rhein, previously known only in rhubarb, kaempferol, aloë-emodin, kaempferin, a glucoside of kaempferol, and other sugars and glucosides. Myricyl alcohol, a phytosterolin, and fatty acids were also met with. The purgative action is due in part to the aloë-emodin, and partly to amorphous products. The iso-emodin and chrysophanic acid of Tschirch and Hiepe could not be confirmed. The Peruvian and Alexandrian leaves give the same compounds as the above, with the exception of a magnesium salt of an unknown organic acid, and isorhamnetin. (Tutin, Chem. Drug., 1913, p. 743.)

#### Colloidal Metals—

Laborde sums up the properties and uses of colloidal metals as follows: They consist of ultramicroscopic particles performing the Brownian movement. Those prepared by chemical means always contain impurities, while those made by electrical methods can be obtained absolutely pure. Colloidal metals are charged with electricity; they are precipitated by electrolytes, losing their colloidal state, but they can be stabilized by the addition of another colloid having the same electric sign. The metals act like diastases, having catalytic powers. They can form compounds with each other, the new complexes having new properties. Their antiseptic power is very marked, and superior to those of an equal amount of the metal when not in a colloidal state. They are practically free of toxicity, and notably increase the power of the organism to defend itself against bacterial agents. Stabilized colloidal metals possess all the powers of unstabilized metals, and differ from them only in their resistance to precipitation. They preserve their properties during a practically indefinite time. Stabilized and isotonic colloidal solutions of metals increase the exchanges between the organs, and provoke a very marked leucocytosis. Colloidal metals are indicated in infectious diseases; electro-mercury in syphilis, electro-cuprol in cancer and tuberculosis, and electro-selenium in inoperable cancer. Intramuscular or subcutaneous injections are most frequently used, the usual dose being 10 cc. for an adult; but doses of as much as 40 cc. per day can be given without danger. The injections are not painful, and are not complicated with abscesses or induration. The most immediately appreciable effect of the injection is a notable lowering of temperature, succeeding a temporary elevation of 1° to 1.5°C. (Laborde, L'Union Pharm., 1913, p. 523.)

#### Modified Jonescu Test for Benzoic Acid—

Jonescu's reaction is based on the conversion of benzoic acid into salicylic acid by hydrogen peroxide. All the methods in use for carrying it out employ heat, but it is shown that heat is liable to carry the reaction too far, and thus to cause failure. While the reaction takes place in the cold, some hours are necessary for the purpose, but the addition of a trace of ferrous sulphate, which acts as a catalyzer, ensures complete reaction in a fraction of a minute. Ten cc. of the solution to be tested, containing from 1 to 5 mg. of free benzoic acid, are treated with 3 drops of solution of ferric chloride (containing about 26 per cent. of anhydrous salt) diluted 1 to 10, then with 3 drops of peroxide solution (12 vols.), also diluted 1 to 10, and finally with 3 drops of 3 per cent. ferrous sulphate solution. The reagents are added in the order given, shaking after each addition. In about 30 seconds the reaction commences, and the violent coloration attains its maximum in 5 to 10 minutes. The reaction is sensitive to 0.2 mg. of benzoic acid. (Fleury, J. Pharm. Chim., 1913, p. 460; through Pharm. J.)

#### Synthesis of Gentiobiose—

This sugar is a hexobiose, of the same formula as cane sugar; on hydrolysis, it gives two molecules of d-glucose. It was obtained in 1901 by Bourquelot and Hérissey in the incomplete hydrolysis of gentianose. The syntheses of other bioses have been reported by other experimenters, but their results are in general not conclusive. Croft Hill claimed to have formed maltose from glucose, but his results were called in question by Emmerling and Armstrong, and he could not extract the maltose from the reaction mixture. Trehalose might be formed from glucose also, but trehalase, the probable agent of this synthesis, is always accompanied by such a large number of other ferments, that the reaction could not be easily followed. The choice, therefore, fell upon gentiobiose. One liter of a solution containing 50 g. of glucose in 100 cc., with a rotation of +50.5°, was treated with 5 g. of emulsin and 5 cc. of toluene, then kept at 15-20° for a month. The rotation became +44.2°. After filtering, heating on the water bath, filtering again, and diluting to 5 liters, baker's yeast was added, and allowed to act for two weeks. It was then neutralized with a little calcium carbonate, filtered, boiled, and evaporated in a partial vacuum. The solution was further purified by lead subacetate, evaporated to dryness, and ex-

tracted with strong alcohol. The alcoholic liquors, after being speeded with a little potassium, yielded crystals of that sugar, amounting to 8 g. This agrees in all its properties with other specimens of genuine ones. It has a sweet taste, melts between 111° and 114°, and is split up by acids into glucose. Emulsin has the same effect. Some cellulase is formed in the synthesis at the same time, since the emulsion used contains a little cellulase. (Bourquet, Hérissay, and Coirre, J. Pharm. Chim., 1913, p. 441.)

#### Glucosides of Glycerol—

In the biochemical syntheses of glucosides with which Bourquet and his co-workers have been engaged, the use of emulsion from almonds always leads to the formation of beta-products. In order to form alpha-glucosides, the best material to bring about the synthesis is dried bottom yeast, which, while not entirely free of other enzymes, contains so much alpha-glucosidase that the products of the reaction are predominantly alpha. Bourquet has now turned his attention to the preparation of some alpha-glucosides, a recent report dealing with some experiments with glycerol. It was found that the action of the ferment was not inhibited by glycerol, solutions so strong as 94 per cent. having practically no effect on the enzymes even after four months. The synthesizing reaction is more rapid in dilute solutions of glycerol than in concentrated. The formation of an alpha-glucoside is proved by following the optical rotation of the reaction mass in a polarimeter. Two g. of glucose, 60 g. of glycerol, a quantity of yeast maceration equivalent to 5 g. of dried bottom yeast, and sufficient water to make 100 cc., showed a rotation of 2° to the right at the beginning of the trial. After 60 days the rotation had increased to 4.73°, showing that 69.78 per cent. of glucose had entered into combination. Bayliss recently obtained different results. He found that under similar conditions to the above, the rotation diminished. The present authors repeated Bayliss's experiments, and obtained an increase in rotation, as was to be expected. From Bayliss's own admissions, it is seen that his yeast was abnormal in several ways. The glycerol glucosides have not yet been isolated, and it is probable that a large number of products are formed simultaneously in the above reaction. (Bourquet and Bridel, J. Pharm. Chim., 1913, p. 489.)

#### Disinfectant Action of Toluene—

Benians has made a detailed study of the disinfectant action of toluene on many classes of micro-organisms, and finds that in some cases it is quite effective, while in others its efficacy is practically nil. There is no effect on spores or sporing organisms, nor on the bodies of the staphylococcus group. But toluene readily destroys all bacteria of the Gram-negative class. There is a marked action on the tubercle bacillus, and on the diphtheria and diphtheroid organisms. There is a moderately well marked destructive action on the streptococcus bodies. The disintegration and lysis of bacteria in emulsions exposed to the action of toluene do not readily take place, no matter whether they have been killed or have proven resistant. The action is markedly inhibited by the presence of fats and oils. One part of oil mixed with 50 parts of toluene, before use, will completely inhibit the disinfecting powers. Starch and dextrose are without effect, and albuminous substances do not interfere, or only very slightly. Benzene and xylene are similar to toluene in their peculiarities, and on the whole, benzene appears to be the most potent as a disinfectant. (Benians, Z. Chemotherapie, 1913, p. 28.)

#### Thyroidium Siccum—

In the B.P. directions are given for preparing dried thyroid glands, but the ratio between the weight of the fresh gland and the dry powder is not given. The U.S.P. states that 1 part of desiccated thyroid glands represents approximately 5 parts of the fresh glands. Several commercial preparations also give this ratio of 1 to 5. According to Bennett's observations, fresh glands carefully trimmed, dried and defatted, lose about 75 per cent. of their weight, so that 1 part of the dry powder is equal to 4 parts of fresh glands. In a recent paper by Martin, who worked with kilograms of glands, the extreme figures for the ratio are 1 to 258, and 1 to 566, while the average for the total quantity of glands treated was 1 to 339. Another set of experiments by Martin showed the ratios of 1 to 326, and 1 to 534, with an average of 1 to 415. Guyer obtained the ratio of 1 to 371 for 37 kilos of fresh glands. Merivale reports 1 to 382 for Holland sheep, and 1 to 4 for Southdowns. Guyer believes that the factor should be set at 1 to 35. At any rate, the evidence for the old

figure of 1 to 5 should be traced, as the ratio is apparently seldom attainable, and may be misleading. (Bennett, Pharm. J., 1913, p. 804.)

#### Source of Siam Benzoin—

After reviewing a number of attempts to obtain authentic information as to the plant furnishing Siam benzoin, generally stated to be *Styrax Benzoin*, Holmes summarizes some new evidence as follows: It seems to be indicated that the chief, if not only source of Siam benzoin of commerce is *Styrax Tonkinense* Craib, which is found in the district between Luang Prabang and Hanoi; second, that the *Styrax benzoides* of Northwest Siam yields a fragrant resin used locally, but the evidence that it yields any commercial Siam benzoin is not satisfactory; third, that the method of preparation with hog's marrow, described by Rordorf, would account for the characteristic appearance of Siam benzoin, but it is not yet quite clear whether this method is applied in Siam to the product of *Styrax benzoides*. Saigon benzoin has the vanilla odor and absence of cinnamic acid characteristic of Siam benzoin, and it is probable that it may be produced from *S. Tonkinense* also, but exported just as it is collected. (Holmes, Pharm. J., 1913, p. 804.)

#### Sulphur Ointments by Fusion—

The value of a sulphur ointment depends on the fine state of subdivision of the sulphur. It was formerly the custom to make use of the solubility of sulphur in fats and vaseline, but no complete study of the physical-chemical and pharmacological properties of these bodies has ever been made. If 2 g. of precipitated sulphur are fused in 100 g. of vaseline and kept at 140-145° until the sulphur is dissolved, after rapid cooling the sulphur is found in the form of round granules, about 0.7-1.1  $\mu$  in diameter. With lard, under the same conditions, the sulphur is likewise uniformly distributed, and the granules are larger, about 1.5-6.6  $\mu$  in diameter. Cacao butter gives an ointment with about the same properties as that made with lard. White wax containing 2 per cent. of sulphur, prepared by fusion, contains granules with diameters of 0.5-0.7  $\mu$ . When lanolin is used, no trace of granules can be seen after cooling, even under great magnification. In thin layers the ointment is opalescent, while the other ointments are milky and white. The granules begin to form after an hour, and later reach the size of 0.2-0.5  $\mu$ . Spermaceti gives much larger granules and spheroids of sulphur, about 6  $\mu$  in diameter. Paraffin (m.p. 58-60°) with 2 per cent. of sulphur shows irregular angular spaces under the microscope, filled with yellowish masses of sulphur. This preparation is very stable, and maintains the same appearance after months. The others are unstable, and gradually the sulphur granules pass into the rhombic crystalline form, in periods varying from a few hours to several days. The smallest sulphur granules in such ointments approach the size of colloidal particles, 0.1-0.2  $\mu$ , and may be considered as a disperse phase. Since the coarser crystals grow at the expense of the granules, we are forced to assume the existence of a liquid phase in addition. The equilibrium between the liquid and solid phase is established, in ointments prepared by fusion, only when the disperse phase has entirely disappeared; while in ointments made by simple mixture of the fat, etc., with flowers of sulphur, the equilibrium sets in when saturation of the base is complete. The liquid phase is of the greatest importance from a pharmacological viewpoint. It enables the sulphur to come into intimate contact with the tissues, without which contact chemical reaction between the sulphur and tissue would be impossible. On account of the slight solubility of sulphur in most ointment bases, the medicinal action would be very small if we were dependent solely on the amount of sulphur dissolved, but a continuous effect is made possible by the transition through the liquid phase. In ointments made by fusion, the solution tension, on account of the enormous surface of the almost colloidal particles, is very great, and their action is therefore more intense than those made by simple mixing. (Sabbatani, Kolloid-Z., 1913, p. 249.)

#### Solid Substitute for Tr. Iodine—

This substitute aims to do away with the ease with which tincture of iodine decomposes. It consists of two tablets, one of which contains principally sodium iodide and sodium nitrite, and the other tartaric acid. On dissolving one of each in water about 0.5 g. of iodine is liberated. Nitric oxide gas is also set free, which unites with atmospheric oxygen at once. The tablets are now being brought on the market under the name of "Iodoïn." (Münch. Med. Wochschr., 1913, p. 2626.)

? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**Cagafute Oil: Cajuput Oil.**

(W.P.J.)—"We had a recent call for 'cagafute oil', but were unable to supply the same. Our customer says he bought it from some of the older druggists, and they would go to their 'big book' and find the name. He bought it up to within a year, when his old druggist died, and since that time he has been unable to obtain it. He says that various druggists said they had the same oil, but when they gave it to him they invariably gave him oil of cajuput, which did not work like the other oil. He used it for making a liniment for barb-wire cuts on horses, etc., and it would work with almost miraculous effect. The oil of cajuput would always cause the horse to rear and jump when it was applied, but the 'cagafute oil' caused no pain whatever. Can you give me any information on this oil?"

By not submitting the formula for the liniment we have no very strong evidence on which to base a suggestion as to what oil might be intended. But from the information furnished we can hardly believe that an oil of cajuput answering the pharmacopoeial requirements, especially when combined in a liniment and applied as our correspondent relates, would produce any painful symptoms, and certainly no more painful than would result from the application of the usual liniments to raw or abraded surfaces.

We have taken some trouble to review the literature of most of the medicinal and commercial oils, including polyglot dictionaries published during the last 60 years, covering the synonyms employed in most of the literary languages and many dialects, and we find nothing that would lead us to believe that "cagafute oil" stands for other than "cajuput oil." As this oil is used externally as a healing application, and is said to possess anodyne, stimulating and antiseptic properties, especially when diluted with sweet oil or other agent to modify its action, it would seem to "fit into" the liniment suggested better than any other oil we can think of. This probability is further emphasized by the fact that there is no name in any language of which we have knowledge that corresponds so closely to "cajuput oil," and this name might be readily construed to "cagafute oil" by the laity. The tree producing the leaves from which the oil is distilled is a native of the Moluccas, and is called by the Malays "kayu-putih" or "kyaputti," which, so far as linguistic peculiarities will permit, is closely followed in all languages from "cajuput" in German to "caeputowe" in Russian and "kaja-puti" in Tamoul. There is no "big book" of which we have knowledge that indexes any substance whatever under the name "cagafute," nor can we find anyone in the trade who knows of such a product.

**Test for Wood Alcohol.**

(E.A.B.)—See page 34 of the Pharmacopoeia, where you will find the full text of the official test which, as you may note, depends on the formation of formaldehyde from methyl alcohol by the oxidizing effect of red-hot copper, and the reaction between this and resorcinol, as shown by the rose-red ring which will appear if any wood alcohol be present. According to the Pharmacopoeia, methyl alcohol is defined as "rectified, purified wood alcohol, having a specific gravity of about 0.812 at 25°C., and free from pyroligneous odor."

Various other tests have been recommended. An admixture of wood alcohol with ethyl alcohol, or with preparations thereof, may be readily detected by the following reaction of the acetone which it contains: The liquid to be examined is mixed with water, and a portion is distilled over a small flame. To 10 cc. of the distillate thus obtained, 1 cc. of a fresh 1 per cent. solution of sodium nitroprusside and 2 cc. of a 4 per cent. solution of caustic soda are added. In the presence

of acetone a red color, passing after a time to yellowish-brown, is obtained. If only ethylic alcohol is present a yellow tint is given. Since both aldehyde and fusel oil give reactions similar to acetone by this test, they must, if necessary, be eliminated. Aldehyde is got rid of by heating 10 cc. of the above distillate for an hour on the water-bath under a reflux condenser with 20 cc. of 25 per cent. solution of caustic soda and some water; the liquid is again distilled and tested as above. To eliminate fusel oil a portion of the distillate from the original liquid is heated for an hour on the water-bath with granulated zinc and dilute sulphuric acid, one drop of platinic chloride solution having been added. The liquid is then distilled and tested.

**Waterproofing Labels.**

(C.T.S.)—Labels are usually "waterproofed" by covering them with a coating of varnish. Here are some formulas:

(1)

A very satisfactory varnish is made with equal parts of Canada balsam and oil of turpentine. The labels should first receive a thin coating of mucilage, which must be dried before the varnish is applied.

(2)

Dissolve 20 parts of dammar in 180 parts of acetone, and to the solution add 150 parts of clear collodion solution. Apply with a soft brush. This formula is said to produce a varnish that does not penetrate paper.

(3)

White lac. ....	1 ounce
Lead carbonate .....	½ ounce
Ether .....	½ pint

Place the shellac in a mortar and reduce it to a fine powder; then transfer to a bottle containing the ether and set aside, shaking the bottle occasionally until dissolved, and add the lead carbonate in fine powder; shake well and filter through paper, returning the first portions of the filtrate two or three times until it becomes perfectly clear. Ordinary shellac may be used, but it imparts a brownish color to the labels. Paste the labels on the bottle, smooth as usual (it is not necessary to wait until it is dry), then apply the varnish with a soft brush.

**Non-Alcoholic Liniment.**

(W.D.C.)—We cannot give the formula for the proprietary preparation. However, it is possible that one of the following formulas, which contain no alcohol, may answer your purpose:

(1)

Camphor .....	2 drams
Oil of rosemary .....	2 minims
Oil of mustard, volatile.....	2 minims
Cottonseed oil .....	2 minims
Oil of turpentine, enough to make.....	6 ounces

(2)

Oil of sassafras .....	1 ounce
Oil of origanum .....	1 ounce
Oil of turpentine .....	2 ounces
Camphorated oil .....	2 ounces

(3)

Oil of cedar .....	1 fl. ounce
Oil of cajuput .....	1 fl. ounce
Oil of cloves .....	1 fl. ounce
Oil of sassafras .....	1 fl. ounce

The last formula is that given in King's American Dispensary for "linimentum oleorum" (liniment of oils), which is said "to form an efficient application to rheumatic and other painful affections; it should also be rubbed on the affected part three or four times daily."

**Shaving Cream.**

(C.S.T.)—We cannot give the formula for the proprietary article, but the following formulas have been recommended as producing satisfactory preparations of this character:

(1)

White wax, spermaceti, almond oil, of each ½ ounce; shaving soap (Williams'), 2 small cakes; rose water, 2 ounces. Melt the soap with the rose water in a wide-mouthed bottle.

Melt the wax, spermaceti, and almond oil together and add to the water solution of soap, bringing in together until cool.

For more tubes: Lard, 10 ounces; spermaceti, 1 ounce; caustic potassa, 2 ounces; alcohol, 2 ounce; oil of bitter almond, 2 ounces; water, 10 fl. ounces. Melt the lard and spermaceti together on a sand bath. Dissolve the caustic potassa in half the water and gradually add the solution to the melted lard and spermaceti with gentle stirring. Dissolve the oil of almond in the alcohol, mix with the water, and while the soap is cooling, mix it thoroughly. The resulting product may be run into tubes while warm.

Curd soap .....	8 ounces
Expressed oil of almonds.....	2 fl. ounces
Glycerin .....	1 fl. ounce
Spermaceti .....	1 1/2 ounce
Potassium carbonate .....	1 1/2 ounce
Water .....	20 fl. ounces

Cut the soap into shreds and dissolve it on a water-bath in 14 fl. ounces of the water. Dissolve the spermaceti in the almond oil, and while warm mix it with the glycerin, potassium carbonate and the remainder of the water. Transfer to a warm mortar, gradually incorporate the warm soap solution, and continue to stir until a smooth paste is obtained. Add any suitable perfume.

#### Non-Inflammable Metal Polish.

(J.W.H.)—Try one of the following:

Alcohol .....	32 parts
Solution of ammonia.....	3 parts
Water .....	45 parts
Carbon tetrachloride .....	6 1/2 parts
Kieselguhr .....	8 parts
White or red bole.....	4 parts
Chalk .....	8 parts

This formula, according to a writer in the *Ch. & Dr.*, produces a metal polishing cream which has the advantage of being a grease solvent, as well as a polishing medium, while the addition of carbon tetrachloride keeps it out of the category of inflammable polishes.

Soft soap .....	2 pounds
Water .....	10 pints
Borax .....	8 ounces
Ammonia water .....	1 1/2 ounces
Infusorial earth .....	2 pounds
Tripoli .....	8 ounces

Dissolve the soap in water by means of heat, adding the borax. Remove from the fire, and when cooled, add the ammonia and stir in the powders, mixing thoroughly.

#### Black and Tan Shoe Polishes.

(M.J.S.)—The following are typical formulas for shoe polish:

**Cream Blacking**—Paraffin, 30 parts; ceresin, 10 parts; crude wool fat, 10 parts; solution of caustic soda (38° B.), 2 parts; fat-soluble nigrosin, 5 parts; oil of turpentine, 180 parts; melt the paraffin, ceresin, and wool fat together, heat to 120° C., adding very cautiously a little at a time and under constant stirring the solution of soda. When the foam caused by adding the solution vanishes, let cool down to 106° C. and dissolve the nigrosin in the mass. Cool down to 80° C., add the oil of turpentine and stir thoroughly. Continue the stirring until the mass cools off. It makes a beautiful shining mass which, when ready for filling into small packages, must be heated just enough to make sufficiently soft to flow slowly. This formula is recommended by the *Siefensieder Zeitung*.

**Saponified Cream Blacking**—Carnauba wax, 10 parts; beeswax, 20 parts; solution of soda (40° B.), 4 parts; fat-soluble nigrosin, 15 parts; hot water, 160 parts; oil of turpentine, 60 parts. Melt the carnauba wax and beeswax together, add the solution of caustic soda and continue the heat until saponification takes place and the mass becomes homogeneous. Let the mass cool down to about 140° F., and gradually add the color, which is dissolved in the oil of turpentine, warmed up to 125° F. in a water-bath.

This cream can be made of any color desired by using instead of nigrosin for yellow, 0.8 part cerotin yellow; orange, 0.6 part cerotin yellow and 0.3 part of cerotin orange; brown,

0.6 part cerotin orange and 0.4 part cerotin brown; and red, 1 part cerotin scarlet B, extra, all of the colors named to be fat-soluble.

For a typical "paste" basis, "Pharmaceutical Formulas" gives the following: Carnauba wax, 10 ounces; beeswax, 3 ounces; stearin, 1 ounce; oleic acid, 1 ounce; oil of turpentine, 45 ounces. Melt the three solids by heat, dissolve the coloring required in the oleic acid, add to the "melt," then gradually add the turpentine, keeping the mixture at a temperature of 40° C.

For a typical "cream" basis, the same authority gives this formula:

Carnauba wax, 1 ounce; beeswax, 4 ounces; pearlash, 6 drams; boiling water, 6 ounces; oil of turpentine, 40 ounces. Melt the waxes and add to the boiling solution of pearlash, mix, and remove from the fire. Now add as much more boiling water, mixing all the time, and gradually work in the turpentine. These last two formulas may be used as they are for any color of leather, but it is preferable to stain them for respective kinds. Oil-soluble blue, nigrosin, red, green and brown dyes (dissolved in the oleic acid) may be used for the paste in the proportion of 10 to 30 grains to 10 ounces of paste. For the cream, use the same dyes dissolved in the turpentine. Other formulas may be found in previous volumes of the *ERA*. Consult the indexes.

#### Removal of Warts.

(M.W.)—"Can you advise me of a practical formula for the preparation of a liquid remedy to remove warts? If glacial acetic acid, what strength would be safe and effective?"

Many medical writers recommend the direct application of glacial acetic acid, which is accomplished by touching the wart with a drop of the acid by means of a glass rod, or by slightly moistening a piece of blotting paper or white cambric with the acid and placing it on the wart. "Pharmaceutical Formulas" states that "the safest and best escharotic is glacial acetic acid applied morning, noon and night with a camel-hair pencil. Just touch the wart with the acid; do not saturate. Should soreness result, drop the application for two days, then resume."

The combination of salicylic acid with acetic acid for the purpose is not uncommon. Hare ("Practical Therapeutics") giving this formula:

Salicylic acid .....	30 grains
Acetic acid .....	1 fl. ounce

Apply with a camel-hair brush.

Here are two other formulas, published under the title "Wart Paint":

Carbolic acid .....	1 dram
Glacial acetic acid.....	3 drams

Chloral hydrate .....	1 ounce
Glacial acetic acid.....	1 ounce
Salicylic acid .....	4 ounces
Methylated ether .....	4 ounces
Flexible collodion .....	8 ounces

See also formulas in April, 1912, *ERA*, page 252, and December *ERA*, same year, page 754.

#### Removing Water from Camphorated Oil.

(F.A.M.)—Whether it will be commercially practicable to attempt to remove water from camphorated oil will depend on the quantity of oil to be treated. If the quantity be very small, the labor and difficulty involved will hardly pay for the trouble, as new stock can be made for about 30 or 35 cents a pint. However, if the quantity be sufficiently large, we should attempt the operation by first allowing the camphorated oil to stand quiescent sufficiently long to permit the oil and water to separate into layers, and then without disturbing the mixture would remove all of the aqueous layer possible by means of a pipette. When this has been done, shake up the oily mixture with some well-dried sodium sulphate, in the proportion of about two teaspoonfuls of the salt to each pint of oil. On coming in contact with the water, the dried sulphate will take it up, coalescing in flocculent masses from which the oil may be separated by simply pouring or siphoning off the oil. Care must be taken to use the dried or exsiccated sodium sulphate which, if not in stock, may be readily prepared from the crystalline salt (Glauber's salt) by heating and driving off the water of crystallization. The use of dried sodium sulphate for abstracting water from oils and fats is a laboratory method and we think it will answer your purpose in removing water from camphorated oil.

# WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

## A New Year Wireless.

A new year—a real, unlied, unmarred bundle of 365 shining days, is a wonderful thing. Behind us lies the experience of the past to guide us in the opportunities of the future; for opportunities for work, sacrifice, and growth will come every single day—if you and I are ready for them.

Let us resolve together, that this year—this clean, new 1914—we shall at least be better than our word and more generous than our promises. Let us determine to be rich in sympathy; strong in honest effort; unflinching in patience; true in justice; courageous in right; abounding in fraternalism and hope.

And let us remember that the Law of Compensation will bring back to us exactly what we have sent out to others.

Oh, 1914 is sure to be splendidly, gloriously worth while because we are going to marshal the troop of days to do our wise bidding! We are going to command the morning, and if the path to success be closed, the path of heroism is always open, and sooner or later it will lead to the ultimate goal, even if circuitously, of true happiness and lasting success.

A happy and a prosperous new year for each of the ERA's great family circle; a glad and a strong new year, the very best, all things considered, that has been vouchsafed to us as yet on this, our earthly journey!

EMMA GARY WALLACE.

## II. The Woman Pharmacist's Future.

### HYGIENIC AND SANITATION INTEREST.

THE alert, professional man finds it well worth his time to become a part—if possible a dynamic part—of the community life of which he forms a part. He joins the Business Men's Association and some of the local clubs for fraternal societies, that he may meet and establish friendly relations with those who are likely at some time to have need of his services. One professional man of the legal persuasion was heard to declare that he could trace 65 good-paying cases to one which was the result of a pleasant club acquaintance.

The woman pharmacist has need to heed the same opportunity. If there are Civic Improvement, Mother's Clubs, Home and School Leagues or those of similar interests, she can well afford to lend a hand.

Of course she will have no desire and will be too tactful even to suggest by word or deed, "Buy your castor oil and fumigating materials of me," but in establishing public confidence in her knowledge she is laying a fine business foundation, nevertheless, and she may with propriety prepare a most helpful, timely paper or talk on such subjects as "Proper Care of the Sick-room During and After Contagious Disease," or "The Use and Misuse of Household Remedies," or she may give a series of interesting, simple experiments to show how household tests may be made for common adulterants and harmful colorings.

It will pay to take time and even to spend a little money to make such talks or experiments thoroughly interesting, practical, and illuminating, for by so doing the woman pharmacist is establishing herself as an authority, and, as she is readily available, she will be sought and her services more thoroughly appreciated.

The writer has a carefully prepared talk on pure and adulterated spices with a case filled with samples of each (kindly provided by a well-known pharmaceutical house) and has had the satisfaction of hearing many women say: "I will buy my spices in future where I know the goods will be right."

#### Attention to Sanitation.

This is the first generation that has made a science of sanitation and even yet the rank and file of people need to be awakened to the menace of mouldy, damp cellars, illy-cared-for refrigerators, pantries, garbage containers; foul toilets in schools, stations, and public places; germ-laden air in the con-

stantly darkened and often improperly ventilated moving-picture shows, etc., etc.

What can the woman pharmacist do about these things? Are they in her line? Is it wise for her to risk stirring up antagonism to herself or her business by rousing the people who are responsible for these neglected conditions? Why not let sleeping dogs lie? Why! Why! Why!

#### Pioneers Reap Reward.

Pioneers along these lines everywhere are needed—those who can point out by window displays, advertisements and public-spirited interest that they are ready, willing and able to help better conditions.

Of course, the pioneer will have for sale fumigators, disinfectants, deodorizers, antiseptics, germ destroyers, and cleansing agents, sponges, gauzes, soaps, sterilizing apparatus, and renovating materials, such as oils, polishes, paints, etc.; but if these are needed from a health and happiness standpoint, is not a public service being rendered to point the need, and to show intelligent means of caring for the situation?

The doctor, the minister, and the lawyer contribute from their knowledge and experience to the shaping of public opinion and are not criticised, likewise workers along every other line. Why not the woman pharmacist? If we want specific information, we go to one especially informed. The pharmacist is a specialist, why should she hide her light under a bushel of false modesty? It is perfectly legitimate also that wise, broad-minded leaders should profit because of their effort in behalf of the public betterment and welfare.

Everybody is bound to profit when conditions are improved and the pioneers themselves are in the front rank, as is entirely right and proper. The old truism remains constant, that what we get out of anything is in exact proportion to what we put in. Plant indifference and we get indifferent results; plant stupid methods and we reap stunted returns; plant far-sighted, earnest, intelligent effort and harvest satisfaction, worth-while community results and a competence.

(To be continued)

## W.O.N.A.R.D. Prize Won by Era Course Student.

THE prize offered by the W.O.N.A.R.D. to the woman student receiving the highest percentage average for college work, covering not less than two years, has been awarded to Mrs. A. C. Collom, of 10 South Penn street, Sharon, Pa. Mrs. Collom is a bride, having been Miss Myra Adele Willson until the time of her recent marriage. The charming winner of this \$10-piece was born in Meadville, Pa., Oct. 4, 1889. She graduated from High school in 1907, from Allegheny College in 1911, and from the ERA Course in Pharmacy in 1912.

During her junior year in college her father's health gave out and forced him to give up his position as an engineer. At that time Miss Willson was "keeping company" with a young man who was a druggist in one of the city's leading drug stores. About this time Mr. Willson, who was born and reared in Sharon, Pa., heard of an old and well-established drug store in that place for sale. Being desirous of getting into some suitable line of business, he decided to purchase the store, taking as his partner A. C. Collom, his daughter's friend, who was to manage the business.

MRS. A. C. COLLOM.

As Miss Wells was a student toward the study of medicine she was able to spend her pharmacy so as to be of assistance in the class. In the fall of 1911 she entered the University of Chicago. In the first year she finished with a B. S. In the second year she had a special department in the Presbyterian Hospital at Washington, Aug. 6, 1913, Miss Wells became the wife of a pharmacist Arthur C. Wells.

Miss Wells says that her marriage in no wise interferes with her interest in her chosen work, as she thinks it is one of the finest things any girl can do, as it is decidedly the kind of neat, exact, and careful work in which a woman delights. To mention the patients she is called upon to examine.

The Director of the ERA Course feels a justifiable pride in Mrs. Williams and the honors which have come to her. She was ever a conscientious student, making the relation of instructor and instructed a very pleasant one.

Mrs. Wells is hereby tendered the heartiest well-wishes for a life-time of married happiness and congratulations upon the signal success of attaining the highest standing of any young woman pharmacy student under the conditions named.

### Miss Frances E. Wells.

To be a successful pharmacist is exacting. To be a Civil Service pharmacist and to serve with increasing satisfaction is a stamp of peculiar efficiency. Miss Frances E. Wells is and for the past two years has been pharmacist under Civil Service regulations at the Peoria State Hospital, Peoria, Ill. The institutions under the State of Illinois Board of Administration are:

MISS F. E. WELLS

Elgin State Hospital, Elgin; Kankakee State Hospital, Kankakee; Jacksonville State Hospital, Jacksonville; Anna State Hospital, Anna; Watertown State Hospital, Watertown; Peoria State Hospital, Peoria; Chester State Hospital, Menard; Lincoln State School and Colony, Lincoln; the Illinois School for the Deaf, Jacksonville; the Illinois School for the Blind, Jacksonville; the Illinois Industrial Home for the Blind, Chicago; the Illinois Soldiers' and Sailors' Home, Quincy; the Soldiers' Widows' Home of Illinois, Wilmington; the Illinois Soldiers' Orphans' Home, Normal; the Illinois Charitable Eye and Ear Infirmary, Chicago; the State Training School for Girls, Geneva; the St. Charles School for Boys, St. Charles.

Miss Wells was born and brought up in the State of Maine. During a visit to Illinois she became interested in pharmacy. As none of her people were in the drug business they felt her determination to enter the profession an unwise one and all tried to discourage her taking it up.

Nevertheless, she persevered and graduated from the University School of Pharmacy in 1905. After this, this earnest young lady worked in retail drug stores and hospital pharmacies in Chicago to gain the needful experience and in these associations she found employers and associates who were courteous and considerate.

Miss Wells finds drug work, and especially her present work, very interesting, and can always enthuse about it. Someone has truly said that enthusiasm is the white heat that fuses the elements of successful endeavor. Miss Wells is a believer in organization and is a member of the W. Ph. A., the I. Ph. A., and the A. Ph. A., all of which goes to show that our friends are not always the best judge of what we should and can do, even though they may be thoroughly sincere in their advice.

### ONTARIO WOMEN GRADUATES.

A most attractive Year Book for 1913-1914 has just come to hand from the Ontario College of Pharmacy with a list of

its women graduates. There are 18 in all. The registrar-treasurer, W. B. Graham writes:

"Some of our lady graduates have taken up hospital work and have become splendid dispensers in hospitals and lecturers in materia medica to the nurses."

The Year Book shows that our Canadian sisters have fine opportunities for gaining a thorough professional training.

### Boston Offers An Attractive Programme.

THE Winter's programme of Boston Chapter No. 1 is especially attractive. It provides for eight meetings, those yet to come being as follows:

- Jan. 15.....Home Economics Department  
The Education of Girls as Home-Makers.  
Mrs. Margaret J. Stannard,  
Music, Mrs. DeForest Smith, Violinist.
- Feb. 19.....Literature Department  
Guest Day. Music, Fensmore Orchestra.
- March 19.....Legislative Department  
Mr. Edwin Mulready (subject announced later).  
Music, Miss Margaret Blake, Soprano.
- April 16.....Philanthropy Department  
Charity Work Experiences, Mrs. Mary R. Martin.  
Music, Mrs. Willa Quimby, Pianist.
- May 8.....Annual Luncheon  
Election of Officers.  
Music, Miss Isabelle Stevens, Soprano.

Aside from this Home Economics conferences are held on the fourth Thursday of each month from October to April at the homes of the members of the committee. The subjects for discussion are:

- Jan. 22—Euthenics, Mrs. Morey.  
Hostess, Mrs. Edwards.
- Feb. 26—How to Save Fuel, Time, Labor and Money in  
Cooking Ordinary Dinners, Mrs. Connolly.  
Hostess, Mrs. Hayes.
- Mar. 26—Home Problems from a New Standpoint, Mrs. Corner.  
Hostess, Mrs. Conolly.
- Apr. 23—Reminiscences of Linda Richards, Mrs. Gammon.  
Hostess, Mrs. Corner.

The Literature Committee meets the third Thursday of the month and has planned to examine the works of a number of standard authors.

- Jan. 19—William Locke and "The Glory of Clementina."  
Paper by Mrs. Connolly. Hostess, Mrs. Waterhouse.
- Feb. 23—Program to be announced.
- Mar. 23—Mrs. Humphrey Ward and "Lady Rose's Daughter."  
Paper by Mrs. Waterhouse. Hostess, Mrs. Hayes.
- Apr. 20—Arnold Bennett and "Hilda Lessways."  
Paper by Mrs. Hayes. Hostess, Mrs. Green.

The Philanthropy Committee meets on the second Tuesday of each month to sew for local charities.

It will thus be seen that there is something of interest going on all the time and the Spring is sure to find the members much better informed because of their work and study together.

### BOSTON W. O. B. A. R. D. MEETS.

On Thursday, Nov. 20, a meeting of the W. O. B. A. R. D. was held at the Hotel Vendome, Mrs. James Cooper, president of the club, presiding. After the business was transacted, W. L. Hubbard, assisted by Floyd Baxter, gave an interesting talk on the Opera of Tales of Hoffman with musical selections. Tea was served by Mrs. William D. Corner, Mrs. William R. Acheson, Mrs. Frances J. Connolly and Mrs. T. J. Bradley.

### CHICAGO CHAPTER HAS CHRISTMAS TREE.

Chicago Chapter, No. 2, Woman's Organization, National Association of Retail Druggists, held a Christmas tree party at the Hotel LaSalle ball room on Tuesday afternoon, Dec. 30, from 2 till 5 o'clock. The party was for the special benefit of the children, who enjoyed the fun hugely. In the evening of the same day there was a dance for the young people also. Mrs. C. D. Collins and Mrs. B. A. C. Hoelzer were the ladies in charge of the arrangements.

# NEWS SECTION

## Laws Governing Narcotic Sales Enforced as Never Before.

THE increasing use of narcotics in all parts of the country, and the consequent bulletins by food and drug officials, have influenced the Department of Agriculture to a decision to enforce Treasury Decision 33,456—as regards the importation of narcotic drugs—until Congress shall enact the Harrison anti-narcotic bill, or some similar measure.

This Treasury Decision has been outlined and discussed in previous issues of the ERA. By letter, Dr. Alsberg has assured the legislative committee of the Kings County Ph.S. that it would not be interpreted by the Bureau of Chemistry as applying to prescriptions; if rigidly enforced it would regulate the importation and sale of cocaine, under authority given the Secretary of the Treasury under the Pure Food and Drugs Act. By this act the Secretary is given jurisdiction over any article of food or drugs imported into the United States, if such food or drugs are "adulterated or misbranded within the meaning of the act" or are "otherwise dangerous to the health of the people of the United States."

Dr. Carl L. Alsberg, chief of the Bureau of Chemistry, and Dr. Lyman F. Kebler, chief of the Drug Division, are quoted in a recent interview to the effect that there is not one case in 10,000 where an internal dose of such a drug as cocaine is necessary. Dr. Kebler said that "in spite of this fact, the United States imports 1,202,300 pounds of coca leaves in a year—half of the world's supply which passes through the Amsterdam market. From these leaves 140,000 ounces of cocaine are made. I believe an estimate of a million users in this country is conservative. A large number are due to the ease with which heroin, a morphine derivative, may be procured. This drug was practically unknown when existing drug laws were made, and few provide any restrictions for its sale. It produces violent convulsions, which often result in death, making it one of the most dangerous drugs."

### U.S. Second to China in Abuse of Opium Products.

PHILADELPHIA, Dec. 4.—As a criterion of the probable drift of public opinion, the recent address of Dr. B. C. Keister, a Roanoke specialist, before a meeting of the Society for the Study of Alcohol and other Narcotics held at the Rittenhouse hotel, deserves consideration. Dr. Keister asserted that the United States is now second to China and ahead of every other country in the world in the use of opium and narcotics derived from it. "The menace is so great that there is danger of our degenerating back to something worse than monkeydom." The only logical course, the speaker argued, was to cut the habit-forming drugs out of the Pharmacopoeia entirely, and prohibit their manufacture.

Dr. Keister further asserted that this country imported 400,000 pounds of opium a year, 15 times as much as is consumed by Austria, Germany and Italy combined, in a similar period. Seventy-five per cent. of this opium is manufactured into morphine, and of the latter only 20 per cent. finds its way into legitimate medical practice. Morphine is being used extensively, even in cigarettes.

All of Dr. Keister's figures were startling. American cocaine habitues consumed 150,000 ounces per year. Twenty-three per cent. of the medical profession were victims of the morphine habit. The complete abolition of the manufacture of the habit-forming drugs, including alcohol, would reduce homicides by 50 per cent., suicides by 60 per cent., and lunacy by 33 per cent. The possible benefits would outweigh the loss

to medicine through the prohibition of morphine, alcohol, opium and cocaine.

Dr. C. J. Douglas, of Boston, another speaker, stated that heroin was making victims by the hundreds in his city. The vicinity of one drug store in Boston which markets heroin is called "Heroin Square."

### Grand Jury May Indict Memphis Druggist.

NEW YORK, Dec. 10.—The grand jury recently began an investigation which may result in the indictment of a druggist of Memphis, Tenn., who is said to have sold in one year more than \$200,000 worth of cocaine in this city. Floyd H. Wilnot, assistant district attorney, made a flying trip to Memphis, following receipt of information that the Memphis druggist had sold \$15,000 worth of cocaine to James Di Lorenzo, who is awaiting trial here for violation of the anti-cocaine law. Wilnot obtained the records of all the telegraph messages that passed between the druggist and Di Lorenzo for three months and believes that his evidence is so convincing that the services of Di Lorenzo as a State's witness will not be needed. This is the first attempt in this country to prosecute dealers in another State who sell cocaine here. If the higher courts decide that the local authorities have no jurisdiction the matter will be taken to the United States authorities.

### Smoking Opium Conspiracy Charge Fails to Convict.

NEW YORK, Dec. 10.—Lionel W. Widder, wholesale druggist at 502 West Broadway; Samuel Berman, Widder's representative, and Ing Quong Quock, of 32 Division street, were found "not guilty" in the Criminal Branch of the United States District Court of the charge of participating in a conspiracy to manufacture smoking opium. Evidence was presented at the trial that showed the defendants had sold crude opium across the counter in large quantities four and five times a week to Chinamen, and that no records were kept of these transactions. No evidence, however, was presented to show that the defendants had positive knowledge as to the final disposition or use of the opium so delivered. Records were kept of the rest of the firm's business and deliveries were made by wagon to the respective doors of the defendants' customers, exception being made, it seemed, when opium was delivered.

The driver in one case, according to the testimony, left his horse and wagon some distance—a block or so—away and walked to the address of delivery. He climbed four flights of stairs and delivered the opium to a Chinaman, who was neither "tall, short, big or little" and had the name of "Charley," an appellation which might be employed to denominate any Chinaman in this country. It was necessary to leave the horse and wagon some distance from addresses fronted by "L" structures, owing to the fact that the horse had run away some time previous, probably having been frightened by the overhead racket, and the driver had been instructed by someone not to leave it where such an accident might occur again. Crude opium was delivered in large quantities to an address, the building at which was fronted by the "L." Opium was also delivered personally by one of the defendants to a Chinaman in Newark, N. J. One of the defendants could not remember having said before Commissioner Shields that he thought or said the opium was to be used for smoking purposes. Widder claimed that he did not know he was selling

the opium to the manufacturer of such opium, he thought the Chinaman had resorted to a total of \$2,000,000 annual business, \$250,000 of which were in opium transactions. Four thousand pounds were sold annually.

An interesting feature of the trial was a statement by one of the witnesses that Chinamen bought large quantities of crude opium across the counters of five or six of the largest wholesale druggists in this city. Two of these firms were named. This witness had not seen such transactions consummated, but he had been told that such was the case by a responsible employee of one of the firms. The defendants obtained their crude opium from these large wholesale firms.

Frank Aronow, counsel for Wilder and Berman, successfully defended his clients against the charge of conspiracy to manufacture smoking opium.

#### New York's Anti-Cocaine Law Effective.

NEW YORK, Dec. 10.—As was prophesied when the present anti-cocaine law of this State was drafted, most of the cases coming under its provisions have been thrown into Special Sessions. From May 9, when the law went into effect, to Nov. 10, 117 cases were brought into Special Sessions. Thirteen cases were pending at the latter date. Of the 106 cases disposed of 191 have resulted in convictions. In General Sessions there have been 81 cases. Of these, three defendants were convicted of a felony, 16 pleaded guilty to a misdemeanor, six were discharged and the other cases were pending on Nov. 10. Fifty-one defendants out of 102 cases were acquitted in 1912 under the old law.

#### Cocaine Sale Sentence in Toledo.

Thomas A. Huston, for 40 years one of the leading druggists in Toledo, Ohio, was fined \$150 and given a jail sentence of 60 days, Nov. 19, on the charge of selling cocaine illegally. The prosecution was carried on by the State Agricultural Commission, whose inspectors had been working among Toledo druggists for several weeks. John H. Bell, of Schaeffer & Bell, the other druggist arrested at the same time by the inspectors, promised the court he would not sell habit-forming drugs to any but reputable physicians, and that he would endeavor to do as little business as possible in that line. He was fined \$75 and costs and severely lectured by the court. Mr. Huston told the court: "I absolutely refused to fill a prescription for more than 10 grains. At first I refused to fill any prescriptions for Dr. Lilly or Dr. Sickles. Dr. Lilly came to me personally and told me that he was working out a cure by gradually lessening the dose for the drug fiends. The same was true of Dr. Sickles. I filled prescriptions to help them in a good cause."

George Ritter, special prosecuting attorney, said that from Aug. 13 to Oct. 20 Huston filled 711 prescriptions for morphine and cocaine. Ritter also said that from Oct. 20 to the day of arrest Huston had filled 150 prescriptions. He received from 50 cents up for each prescription.

"His apparent purpose in filling the prescriptions," said Ritter, "was to get the money. He did not fill them for the sake of humanity, but only for profit. The wholesale house with whom he dealt warned him against the use of such large quantities of dope."

"It would not be fair," said Judge O'Donnell, "if the people in prominent positions are going to be allowed to violate these laws, while poor unfortunates suffer from their conduct. Drugs have been peddled on the street and have brought ruination to more homes than anything else. The court is bound to protect the interests of the public. I don't believe in fines."

#### Wilmington Druggists Fined \$100 and Costs.

James Ferris Belt, a druggist of Wilmington, Del., was fined \$100 and costs Dec. 10 in the Municipal Court there for selling cocaine. His arrest followed the capture of several peddlers of the drug, it being found that a regular syndicate to carry on the traffic existed. One of the peddlers to whom Belt had sold the cocaine was fined a similar amount. Thomas Phillips, Belt's clerk, was fined several days before, Belt paying the fine.

#### 65th New York Arrest in Cocaine Raids.

Albert Verardo, of West 45th street, New York City, was arrested Dec. 18, as a result of the New York crusade against illegal cocaine sellers.

## MOSTLY PERSONAL

—REPRESENTATIVES of Indianapolis drug interests responded quickly to a call of Sheriff Theodore Porteus for aid during the recent strike of street and interurban railway employees in that city. The city and interurban service was suspended for one week and during most of that time the city was in the hands of an uncontrollable mob. The police were unable to control the situation, and the sheriff organized a force of 1090 deputy sheriffs, consisting of the leading business and professional men in the city. This force acted wholly in an advisory capacity, and in a few days, with the aid of Governor Samuel M. Ralston, an agreement was reached between the employers whereby the differences were submitted to the Indiana Public Service Commission for arbitration. Among those who were sworn in as deputy sheriffs were J. K. Lilly and Charles J. Lynn, president and vice-president, respectively, of Eli Lilly & Co., and William J. Mooney, of the Mooney-Mueller Drug Co. Mr. Lynn was made chairman of a special committee of five, which acted in an advisory capacity to Sheriff Porteus and Martin J. Hyland, superintendent of police.

—Two former druggists were elected to office at the election in Massachusetts in November. Frank J. Donahue, a graduate of the Massachusetts College of Pharmacy, but who recently has been engaged in newspaper work, was re-elected Secretary of State, and Fred W. Mansfield, a registered pharmacist, who forsook pharmacy for law, was elected State Treasurer. Both are Democrats. Representative Thomas W. White, of Newton, a druggist, was re-elected to the Legislature. John J. Gilbride, a registered pharmacist, who for several years was employed in a Lowell drug store, was elected to the Legislature as a Democrat, in the face of unusual opposition, and is one of the youngest members in the House. He was born Sept. 14, 1889, graduated from the Lowell High School at the age of 16, and, securing employment in a drug store, became a registered pharmacist in April, 1912. He is a member of the Massachusetts State Pharmaceutical Association and of the Mathew Temperance Institute and the Knights of Columbus.

—LOUIS K. LIGGETT, president of the United Drug Co., gave a talk on "Co-operation Between Manufacturers and the Retailer" at a recent luncheon of the Boston Publicity Club. He explained in detail the system that has been adopted by his company in co-operating with retail merchants. Through the closer understanding between the manufacturer and the retailer, said Mr. Liggett, the middleman has come within the last 20 years to occupy a less important position in trade. Many of the larger manufacturing houses in all lines are establishing retail stores which serve not only to advertise their wares the way they want them advertised, but also show a very satisfactory profit. The jobber, Mr. Liggett believes, has little or no place in 20th-century business. Direct sales from manufacturer to retailer mean lower prices for the ultimate consumer. While the middleman will continue to exist in many lines of merchandising for a good many years, Mr. Liggett said that he believed he could be eliminated in many cases.

—ARTHUR NATTANS, who is just 21 years old and holds the position of secretary of the Read Drug & Chemical Company, which conducts a wholesale and retail business in Baltimore, eloped with and married Carlyn Burgunder, just 18 years old, recently. The couple got a license and were married by a rabbi, afterward going to Pittsburgh and from there telegraphing the news home and asking forgiveness. The parents of the young people tried to stop the elopement, but were too late. Mr. Nattans is a son of Mrs. Jennie Nattans, widow of the late Arthur Nattans, who for years controlled the company. The widow now holds a majority of the stock. A brother of the groom, Ralph A. Nattans, is general manager of the company.

—MRS. VIOLA NEUBIG, owner of the Neubig pharmacy, in Brighton avenue, Rochester, Pa., and Andrew I. Kerr, a well-known pharmacist of East Liverpool, Ohio, went to Youngstown, Ohio, where they were married recently. Mr. Kerr has been employed as manager at the Neubig pharmacy. After the wedding Mr. and Mrs. Kerr returned to Rochester, Pa., where they will go to housekeeping. The bride is one of the most popular business women in the Beaver Valley, while Mr.

Kerr is widely known as a graduate pharmacist in Pittsburgh and other Western Pennsylvania and Eastern Ohio towns. He is a native of East Liverpool, Ohio, where he has managed different stores since receiving his diploma.

—JOHN G. BECK, of Baltimore, general manager of the Calvert Drug Co., a co-operative buying and wholesale organization, who was taken ill at his office about two months ago and had to be sent home, continues to be in an unsatisfactory state, and it is said that he will be sent to a sanitarium in order that he may have the best attention. In his absence President Harry F. Lindeman and Secretary R. E. Lee Williamson are looking after details at the Calvert company's new place of business in West German street, where the corporation occupies a handsome five-story brick and terra cotta building. This latter Mr. Beck helped to plan and equip.

—CHARLES M. CARR, editor of *The Journal of the N.A.R.D.* (N.A.R.D. Notes) and "official booster" of the retail druggists' organization, has severed his connection with that publication and is devoting his attention to his new journal, *The Package Advertiser*. The new journal is of chap-book size, but is filled with advertising and well-written and well-illustrated material relating to its chosen field. Col. Carr was the founder of *N.A.R.D. Notes* and for 11 years has devoted himself to furthering the interests of the National organization through this journal. His successor is Hugh Craig, of New York.

—FRANK H. GARRETT, manager of the Harle-Haas Drug Co., of Council Bluffs, left Dec. 12 for Chicago and Eastern cities to do the annual buying for his house. Accompanying Mr. Garrett were four of his traveling salesmen, P. B. Hull, Keith Bradley, W. J. O'Donnell and Harry Conklin. According to an agreement entered into at the beginning of the season four travelers holding the high record in their territories were to be given this trip with Mr. Garrett. The four mentioned were the lucky ones and had an exceedingly pleasant outing at the expense of the company.

—THE reappointment of Edward H. Walsdorf, secretary of the Louisiana State Board of Pharmacy, by Gov. Hall recently was an exceedingly popular one in New Orleans, where Mr. Walsdorf is recognized as one of the leading druggists in the city. He has been a member of the State Board of Pharmacy for the past five years, during which period he has been very active in enforcing the State Pharmacy laws. He is a member of the A.Ph.A., president of the State Ph.A., and of the Orleans Ph.A., and is also a member of the Board of Control of the American Druggists' Syndicate.

—C. PHILIP DONNEL, of the sales staff of the Smith, Kline & French Co., of Philadelphia, since its organization in 1891, has resigned to become the president of the Williams-Donnel Drug Co., a newly incorporated wholesale drug company in Norfolk, Va., with \$50,000 capital. H. G. Malsbury will be vice-president and general manager, and John N. Williams, Jr., of Norfolk, son of the founder of the drug house of Williams, Martin & Gray, will be secretary and treasurer of the new company.

—J. H. HUBLEY, for many years store manager for Wm. B. Riker & Son Co., and later for Riker-Hegeman Co., has severed his connection with the latter corporation. For some years Mr. Hubley was in charge of the Riker's 23d street and Sixth avenue store. More recently he managed the 42d street and Sixth avenue store. Mr. Hubley was very popular with his assistants and will be missed by them.

—ALBERT ROSS, JR., who operated a drug store at Eighth and Vine streets, Cincinnati, will open up a new store at the southwest corner of Ninth and Walnut streets. The Weatherhead Drug Company has leased Mr. Ross's present location. The Weatherhead firm will move into new quarters about the middle of January, while Ross will take hold of his new place about the middle of December.

—E. B. CURTIS, formerly a drug clerk with the L. B. Swett & Co. store in Bath, Me., has been appointed manager of the new Riker-Jayne store at Lewiston. The store is one of the finest in Maine and occupies the front of the *Journal* building. Mr. Curtis is a graduate of the Massachusetts College of Pharmacy, and has been with the Riker-Jaynes Co. several years.

—MISS MARY CUNNINGHAM, of Holyoke, Mass., has become a registered pharmacist. For several years she has been connected with Martin's pharmacy, Holyoke. She is the second young Holyoke woman to become registered, the other being Miss Grace O'Connor, of the O'Connor pharmacy in High street.

—CHARLES J. LYNN, vice-president and general manager of Eli Lilly & Co., was asked by Mayor Samuel L. Shank a few days ago to become a member of the Indianapolis board of safety, which controls the police and fire departments. Mr. Lynn declined the offer because of his business responsibilities.

—PAUL J. MANDABACH, field manager of the *National Drug Clerk*, the official publication of the N.A.D.C., was a recent visitor at this office. He was in New York in the interests of his publication and of the Druggists' Home at Palmyra, Wis., which was founded by the National Drug Clerks' Association.

—AFTER 15 years away from his former home, W. A. Browne has returned to Boston to take charge of the new store of Green the Druggist in Scollay Square. Mr. Browne has been in the drug business all his life, and for the past 15 years has been manager of the Green Springfield store.

—RALPH E. DORLAND, proprietor of the drug business at Fourth and Jefferson streets, Springfield, Ill., will remove his business to Gillespie, same State. Mr. Dorland is very well known to Illinois druggists because of his activities for the benefit of his fellow craftsmen.

—JAMES W. MORRISON, president of Morrisson, Plummer & Company, and member of the Board of Control, N.W.D.A., has been elected general secretary of the Chicago Association of Commerce. Mr. Morrison is also a director and member of the executive committee.

—F. D. MARR, a Tacoma, Wash., druggist, has been appointed a member of the State Board of Pharmacy. Mr. Marr comes from a family of druggists, his father being one of the pioneers in that State. The new State official is manager of the Virges Drug Co.

—MISS NORMA HAWLEY, of Sherman, N. Y., who for a little more than two years has been the pharmacist at the Miami Valley Hospital, has tendered her resignation and accepted a similar position with the Southside Hospital, Pittsburgh.

—THE engagement of Miss Irma H. Teichmann, daughter of Mr. and Mrs. Otto L. Teichmann, to Theodore F. Meyer, Jr., son of Mr. and Mrs. Theodore F. Meyer, of St. Louis, was announced recently at a luncheon given by Miss Alice Judge.

—F. W. KISKER, who for many years was the chairman of the Formulary Committee of the O.V.D.A. at Cincinnati, has been appointed resident vice-president of the Royal Life Insurance Company for the Southern District of Ohio.

—JOHN C. CALEY, a druggist, of Columbia, Pa., has been re-elected for the fifth time to the local school board. This is a tribute to his personal popularity as he is the lone Democrat on the board.

—SPENCER MERRELL, cadet at West Point, returned to his home in St. Louis for the Christmas holidays, to visit his parents, Mr. and Mrs. George R. Merrell, of 6209 Washington avenue.

—WILLIAM E. JENNINGS, a member of the New Bedford, Mass., School Board for several years, has successfully passed the State Board examinations as a registered pharmacist.

—JAMES I. JOHNSON, of Raleigh, N. C., has sold his retail drug business to enter the business of manufacturing proprietary remedies, and will head the Johnson Chemical Co.

—F. A. FOWLE, for 31 years a druggist in Lynn, Mass., opened a new store recently, and 50 or more of his friends united in presenting him with a mahogany clock.

—KELLY EDWIN BENNETT, a druggist, of Bryson City, N. C., was married on Dec. 30 to Miss Ola Tela Zachary, the daughter of Dr. W. P. Zachary, of Sylva, N. C.

—JOHN P. JAMES, who has been in charge of the prescription department of the Charles H. Scarborough drug store, Wilmington, Del., has been made manager.

—LOUIS C. WIESE has been elected a member of the Indianapolis board of school commissioners. He has been a retail druggist in that city nine years.

—CHARLES L. REICHEL, pharmacist at the City Dispensary, Kansas City, Mo., has resigned his position to enter business for himself.

—GUY H. WEBBER, proprietor of the Dearborn (Mich.) pharmacy, has been married to Miss Helen Whiting, of Birmingham.

—WILLIAM MINDIN is the proprietor of a new store at 172d street and St. Nicholas avenue. He is a N.P.S. member.

—LEO REICH, a former member of the National Pharmaceutical Society, has opened a store in the Bronx.

## OBITUARIES

### Elmer W. Billings.

Elmer W. Billings, senior member of the firm of Billings & Stover, druggists, who was known to almost every Harvard student for the past 50 years, died suddenly of heart disease at his store, Nov. 28. He had arrived at the store early in the morning and casually mentioned the fact that he was not feeling well. An hour later his dead body was found at the foot of the stairs in the basement, where he had swooned. Mr. Billings was born in Somersworth, N. H., 48 years ago, and as a boy of 18 went to Boston. He secured employment in the drug store of John Hallard in Cambridge. In 1895, with Charles A. Stover, he bought out his employer, and since then had carried on the business under the name of Billings & Stover. Mr. Billings was a member of the Massachusetts State Pharmaceutical Association and the Boston Association of Retail Druggists. At one time he held membership in the Artillery and Honorable Artillery Company of Boston. He was also very active in the St. Vincent de Paul Society and the Holy Name Society. He leaves two brothers and a sister. Four years ago his wife died suddenly, and her death was preceded by just about a year by the death of their only daughter, and these events had borne on him very heavily, but he had continued steadily at business and had thrown himself with greater energy into the activities of his church. He was held in universal esteem.

### George A. Hearn.

A great many druggists, particularly in New York State, were grieved early last month to learn of the death of George A. Hearn, of the New York dry goods firm of James A. Hearn & Sons. This merchant was noted as an art collector and a philanthropist, but his charities were unostentatious. While not prominent in commerce, finance, literature and art were to be observed at the funeral services at St. James Episcopal Church, Madison avenue and 71st street, Dec. 5, to do honor to the dead merchant, notable among the gathering were many men who began business life as cash boys at the Hearn store, and many others—both men and women—who had benefitted through the helpfulness of Mr. Hearn during his life. Mr. Hearn was a successful merchant of the school which builds upon merit and service, a consistent, progressive business man along conservative lines. The Hearn store for years has had for its business slogan, "No drugs, groceries or liquors, but everything in dry goods," and the Hearn store is one of the few big stores in this city which has never run a cut-rate drug department. Mr. Hearn himself was always a consistent friend of the drug trade.

### Louis Woltersdorf.

Louis Woltersdorf, a pioneer retail druggist of Chicago, died Dec. 12 at his home, 717 South Ashland boulevard, that city. He was born in Warnow, Germany, 72 years ago, went to Chicago in 1869, and several years later established a drug store at Blue Island avenue and West Taylor street, which he conducted until 1890, when he retired from active business. Mr. Woltersdorf was a former president of the Chicago Veteran Druggists' Association, and a member of the Germania Maennerchor. He leaves a widow and three children—Arthur Woltersdorf and Mrs. F. W. Blocki, of Chicago, and Mrs. Paul Hager, of Berlin, Germany. The funeral was held on Sunday afternoon, Dec. 14, and the burial was at Forest Home Cemetery. The impressive farewell service of the C.D.V.A. was conducted at the grave.

### Thomas M. Peck.

Thomas M. Peck, pioneer drug merchant of Grand Rapids, Mich., and for more than 30 years engaged in the manufacture and sale of surgical instruments and supplies, died at his home Dec. 16. He was 79 years of age, and death resulted from shock following a fracture of the hip received in a fall. He was a native of Newburgh, N. Y., and conducted his business in Grand Rapids under the name of Peck Bros. After retiring from business he became interested in the purchase of timber lands in Michigan and elsewhere. He was the donor recently of \$150,000 to the Moody Institute at Northfield, Mass., to endow a hall there.

### Denny Carleton.

Denny Carleton, of 180 South Beacon street, Hartford, Conn., and for many years a member of the Williams & Carleton Drug Co., died Dec. 5 at his home after a long illness. He was born in Chester, Vt., in 1846. He became bookkeeper for the old firm of George W. Williams & Co., in Hartford, about 1870, and in 1876 was taken into the firm, when the name was changed to Williams & Carleton. In 1890 the firm was incorporated, becoming the Williams & Carleton Company. Until three years ago he continued his active connection with the firm, but ill-health compelled his retirement from the business. He was 67 years of age.

### George B. Whitelaw.

George B. Whitelaw, who organized before the Civil War a firm which handled heavy drugs and paints, and which after several changes became the firm of Whitelaw Bros., St. Louis, died Dec. 3, at the Westmoreland Hotel, aged 84. He had lived in St. Louis since he was eight years old. He spent three years in the California gold fields, 1850-53. He was the father of the wife of former Judge Daniel G. Taylor, Charles W. Whitelaw, president of the Polar Wave Ice Co., and George G. Whitelaw, vice-president of the Scudder-Gale Grocery Co. At one time he was in the white lead business.

### Baltimore's First Cut-Rate Druggist.

Henry H. Klingel, who held the reputation of being among the first, if not the first, "cut-rate" druggists in Baltimore, died suddenly Nov. 30 in his store at 103 West Lexington street, of heart trouble. He had been ill for several days, but his condition was not regarded as serious, and he had put in the morning working in the store when the fatal attack occurred. Mr. Klingel came to Baltimore in 1892 from Illinois, and had been in business here ever since. He was 54 years old and is survived by his wife and one son.

### Dr. E. W. Gardner.

Dr. Edward Winslow Gardner, 37, son of the late Robert W. Gardner, of New York, pharmaceutical chemist, died recently at Twilight Park, N. Y., after an illness of two years' duration. He was born in Jersey City, but spent most of his life in Plainfield and Bloomfield. After the death of his father, in 1911, Dr. Winslow took charge of the chemical plant in Orange, where his father, who was the originator of Gardner's syrup of hydriodic acid, and of other preparations, carried on the business of pharmaceutical chemist. Dr. Gardner leaves a widow and his mother.

### RECENT DEATHS.

—BERT S. SHAY, 34, a druggist and one of the most highly esteemed men of East Liverpool, Ohio, died Dec. 15. Death was due to Bright's disease. Several years ago Mr. Shay, accompanied by Charles Usler, now of Los Angeles, Cal., rode a bicycle from this city to Lincoln, Neb., to shake hands with the present Secretary of State, William Jennings Bryan. Mr. Shay was affiliated with Riddle Lodge, No. 315, F. & A. M.; East Liverpool Chapter, No. 100, R.A.M., and Keramos council. He was a 32° Mason and a member of the Al Koran Shrine of Cleveland. He was prominently identified in church circles and for 15 years had been a member of the First Presbyterian Church of this city.

—W. B. ARNOLD, the pioneer druggist of 14th avenue, Rockford, Ill., is dead at the age of 73. He was a native of Seneca, N. Y., was a veteran of the Civil War, and was the inventor of a preservative and disinfectant named Zymotoid. He was a graduate of the Eclectic Medical Institute of Cincinnati in 1879, and practiced medicine for some time before entering the drug business.

—HENRY T. CHAMPNEY, founder and for many years president of the Bovinine Co., manufacturers of a prepared food product, at 75 Houston street, is dead at the age of 88. He was a native of New Hampshire and came to New York City about 30 years ago, after being in business in Boston and Chicago.

—WILLIAM JONES MARSH, for 22 years a business man of Corning, N. Y., is dead at the age of 60. He began business life in the drug store of his uncle, S. J. Jones, at Rushville, Yates county, and then opened a drug store at Trumansburg in partnership with his cousin, Wilson J. Jones, in 1881. In 1891 he established his business in Corning.

—AFTER failing to kill himself by severing a vein with a razor blade, Charles Ryder, a druggist of Emporia, Kan., committed suicide by drowning in the Neosho river. He had been worried greatly over financial affairs, but it is stated that these worries were largely imaginative.

—MAURICE O'CONNELL, a resident of East St. Louis, is dead at Santa Fe, N. Mex., where he had gone for his health. He sold his drug business in East St. Louis a year ago, when his disease, tuberculosis, gained such headway that he was forced to seek a milder climate.

—MRS. ELIZABETH SMITH, widow of Valentine H. Smith, a pioneer wholesale druggist of Philadelphia, and founder of the present house of Valentine H. Smith & Co., of that city, died Dec. 1, after a brief illness. She was 79 years of age.

—WILLIAM JAMES KIRBY, for 28 years proprietor of a drug store at Steurbridge, Mass., died Nov. 20 from hardening of the arteries. He was 56 years old, and leaves a widow and five daughters.

—CHARLES H. ROBERTS, 53, for 17 years a traveler for Parke, Davis & Co., and later manager of a drug store at Philippi, W. Va., died suddenly Dec. 17, while at the dining table.

—MORRIS M. CURLEY, a druggist of Newport, R. I., is dead after a three-years' illness. He was 56 years old, a native of Newport, and had been in business there many years.

—W. A. JESTER, a druggist of Delaware City, Del., was killed recently when the automobile in which he was a passenger was struck by a train.

—DR. JOHN KEMPER, a well-known druggist of Galesburg, Ill., a graduate physician, and a veteran of the Civil War, is dead at the age of 80.

—CHARLES MOORE, a druggist of Driggs avenue, is dead at the age of 42. He had been in business in Brooklyn for several years.

—RAYMOND SHAUB, 36, a Quarryville, Pa., druggist, is dead of pellagra, the second recorded death in Pennsylvania from that disease.

—FRED OSWALD, formerly in the drug business at Wheeler and Warner streets, Cincinnati, is dead from a complication of diseases.

—EDWARD E. FARRINGTON, DD, a traveling salesman for the Ward Bros. Drug Co., Indianapolis, is dead from pneumonia.

—HARRY JENKS, of Findlay, Ohio, who went to Texas for his health about a year ago, is dead at Electra, that State.

—JOHN A. ZABRISKIE, proprietor of the Elk drug store, Fountain square, Elgin, Ill., is dead from hemorrhage.

—WILLIAM J. GILL, justice of the peace, and ex-druggist of Beacon, Mich., is dead at the age of 59 years.

—CLINTON K. KELLER, the oldest druggist in Harrisburg, Pa., died recently from apoplexy at the age of 81.

—ARCHIE I. LAFFERTY, 46, a Philadelphia druggist, died at Sharon, Pa., recently at the home of his sister.

—SAM SLOGGY, postmaster, druggist and pioneer citizen of Ontario, Wis., is dead at the age of 83.

—WALTER HARDEN, connected with a New Orleans wholesale drug house, is dead.

## Jottings from Great Britain.

*Latin Dropped as Compulsory Subject by Council of the Pharmaceutical Society—Prof. H. E. Greenish on "Drug Markets in Great Britain and Abroad."*

IT has been decided by the Council of the Pharmaceutical Society of Great Britain to drop Latin out of the syllabus of compulsory subjects for the preliminary examination in pharmacy. This decision is of some considerable importance to the pharmaceutical profession, and although it will probably be regretted by many pharmacists of the old school, it is a step the Council was bound to take, sooner or later.

Latin is not taught in all primary and secondary schools, and the result is that quite a number of boys who are well suited to begin to learn something of the art and mystery of pharmacy are deterred because they cannot pass the entrance examination. The result of the change will probably be that in course of time the supply of chemists' assistants will be sufficient to meet the demand, which can hardly be said to be the case at present. The Council strongly recommends candidates to take Latin as an optional subject, for the simple reason that when the time comes to enter for the qualifying examination the candidate who knows nothing of the rudiments of

Latin will find it difficult to pass the examiner in prescription reading.

### Lectures on the Drug Markets.

At an evening meeting of the Pharmaceutical Society, Professor H. E. Greenish, dean of the School of Pharmacy, exhibited and described a large series of lantern slides, illustrating the drug markets at home and abroad. He mentioned that London was by far the most important drug market of Europe, but that Hamburg was gradually increasing in importance, much of the trade which had been done through London now being done through Hamburg.

Referring to the adulteration of drugs by native collectors, the speaker said that after the drugs had been sold at public auction they were removed from the warehouses by the purchasers, but before they reached the hands of the pharmacists they had to be subjected to a careful process of hand-picking to separate extraneous material which might have been the result of careless collection or intentional admixture.

Thus, every piece of myrrh is examined, and, if necessary, broken to determine whether or not it is genuine before it is passed on to the retailer. The necessity for the picking over is obvious, from the fact that buchu leaves often contain 25 per cent. of stalks which have to be separated. Senna leaves and senna pods are carefully picked over, and the former are usually sifted to remove sand and seeds, with which they are often contaminated. Opium occasionally contains lead and other material.

The pharmacist, Prof. Greenish pointed out, has much to thank the wholesale druggist for in standing between him and the often wily natives who collect the drugs and skilfully sophisticate them.

The most interesting feature of the lantern slides was that they showed the various manners in which the different drugs are packed by the exporters. For instance, they showed that aloes exported from the Dutch West Indian Islands usually arrives in wooden cases in which bottled spirits had been sent out, while Zanzibar aloes is exported in goat skins. Cloves are usually sent from Zanzibar in mats made from interlaced strips of coconut leaves, and so on. This is just the kind of lecture to interest students who are satiated with scientific discourses.

### NATIONAL HOME NOTES.

Although by the calendar it is Winter, one would hardly know it here. No snow yet, weather like October, with bright sunshine. Yesterday the Moving Picture Association sent their men here and took nearly 2000 feet of moving-picture films, showing the Home, grounds and lake. Both sail and row-boats were on the lake and made a very pretty series of pictures. A number of plates were also taken and when finished will be taken to different cities for exhibition under the supervision of Superintendent Heimstreet and M. J. Gosa. The usual number of visitors have been at the Home last month, in fact enjoyed the Fall scenery as much as last Summer.

Letters are being sent out for the dollar donation, and the trustees hope to meet with a generous response from the druggists and drug clerks of the United States.

New York is the first to make a concerted effort to furnish funds for the Home. They commenced a campaign in January and every town and city in the State will be canvassed, in addition to this the New York City and Brooklyn druggists give a fair for the benefit of the Home. This will be under the supervision of the committees, and promises to be a grand affair. Mr. Thomas Lamb, of Brooklyn, N. Y., one of the best workers in the country, has been appointed chairman of the Fair committee, and will push matters at once. The moving pictures of the Home will be displayed each day. It is also proposed to ship three carloads of the mineral spring water to the fair from the Home, as it will be put on the market, and this will be a good chance to introduce it.

There will be a meeting of the Board of Trustees in January, when committees will be appointed and general business transacted.

A systematic canvass will be commenced in January of every druggist and drug clerk in the United States.

The wholesale drug trade and manufacturers are responding with generous donations. If druggists will only send their donations now it will save the expense of writing, and if everyone will send in what they can, the Home will be paid for and a fund to take care of it.

## NEWS FROM ASSOCIATIONS

### What the N. W. D. A. Did.

INDIANAPOLIS will be the next meeting-place of the National Wholesale Druggists' Association, in October, 1914, despite the invitations from New York City, St. Louis, Galveston, Denver, Atlantic City, Toledo and Niagara Falls, while the 1915 convention will be held at Del Monte, Cal., in the latter part of September.

The Jacksonville convention, of which brief mention was made in the December ERA, was one of the most successful in the history of the organization, for while the attendance was not as large as at some previous meetings the reports presented and the business transacted were of great importance. The convention again placed itself on record in favor of the regulation of the sale of narcotics through National legislation, indorsing the Harrison bill as passed by the House in June, 1913.

The association also went on record in favor of the movement for securing legislation to fix prices on trade-marked and branded goods, both wholesale and retail, by the adoption of the following resolutions:

*Resolved*, That the National Wholesale Druggists' Association is unanimously in favor of legislation which will secure the legal right for manufacturers of trade-marked and branded articles to establish and enforce both wholesale and retail prices for their goods. We, therefore, indorse the American Fair Trade League, and believe it should receive our hearty support.

*Resolved*, That the National Wholesale Druggists' Association earnestly request the United States Congress to make an appropriation of at least \$100,000 for the use of the Department of Commerce in conducting an inquiry during the coming year, into the question of legalizing reasonable trade agreements. We believe that this investigation will establish the fact that the legalizing of reasonable trade agreements is a movement toward relief from monopoly, and this important question should be decided only after a thorough inquiry by the Department of Commerce.

Among the other items of business transacted, some by resolution following recommendation by the various committees and then further recommendation by the Board of Control, and others simply by recommendation of committees, were the following:

A vacation period for commercial travelers—to be adopted by local associations—from Saturday, June 27, to Monday, July 6, 1914; and that general representative F. E. Holliday bring the matter to the attention of the local associations at their mid-Winter meetings.

That uniform terms and discounts, applicable alike to drugs and sundries, should become the custom.

An exchange of credit information "along fair and proper lines."

That credit men of competitive houses visit each other more frequently, cultivating closer relations and maintaining attitudes conducive to mutual confidence and frankness. A conscientious exchange of legitimate data in matters relating to credit should be the natural outgrowth of this plan.

That members investigate mutual liability insurance and ascertain the possibilities of these companies.

That members be requested to use their influence where possible to decrease the loss by fire, also to join local associations whose purpose is to prevent loss of life and property.

That the N. W. D. A. join the National Fire Protection Association, and that the secretary be authorized to take the necessary steps.

That members adopt more specific measures for inspection of their property and places of business.

That members endeavor to secure proper legislation to bring reciprocal insurance companies under State supervision.

That it is the opinion of the N. W. D. A. that the postal regulations in regard to the mailing of medicines should allow the dealers to mail the same under proper regulations.

That we urge the necessity of retaining the variation clause in the Pure Food and Drugs Act, as it is clearly in the interest of the wholesale druggists, manufacturing chemists and manufacturers of pharmaceutical drugs that the clause be retained.

That all members who have not already done so be urged to join at once the National One-Cent Letter Postage Association.

That the N. W. D. A. indorse the Harrison bill, passed by the House of Representatives, June 26, 1913, and referred to the finance committee of the United States Senate, and "we will cheerfully accept the provisions of this act."

The formation of local associations where such do not exist; the holding of regular meetings to safeguard the interests of members.

Pledging the assistance of the N. W. D. A. and its "hearty co-operation to every phase of work for the elimination of adulteration."

That the N. W. D. A. again call the attention of proprietors who have not yet granted the request for at least 15 per cent. discount, and urgently request that they consider the matter favorably at an early date.

That the N. W. D. A. favor the repeal of the exemption clause in regard to our coastwise shipping from Panama Canal tolls.

The appointment of a committee of five to investigate and report upon the railroad situation.

The appointment of a committee of three to draw up resolutions to the memory of the late Thomas P. Cook.

That the N. W. D. A. become a member of the Chamber of Commerce of the United States.

The report of Secretary J. E. Toms showed an active membership of 260, and an associate membership of 326. The receipts, including balance from previous year, totaled \$29,356.38, while the disbursements were \$21,828.31, leaving a balance on hand of \$7,528.07.

Four active and 26 associate members were elected on recommendation of the membership committee, Robert H. Bradley, chairman.

The roster of officers elected, and members of the Board of Control, appeared in our report in the December ERA.

### Association of N. W. D. A. Ex-Presidents.

During the recent convention of the N. W. D. A. at Jacksonville the ex-presidents of that body were entertained at the Seminole Club by President Albert Plaut, of New York, and at the conclusion of the dinner Ex-President Thomas F. Main suggested that a permanent organization of the ex-presidents be formed, a suggestion that Mr. Plaut had already entertained, and the plan was heartily indorsed.

### New York Pharmaceutical Conference.

IN order to determine the consensus of opinion on the mercuric bichloride tablet, the Sunday closing, the certification of pharmacies, giving away of souvenirs, propaganda and other questions of more or less pertinency at just this moment, Jacob H. Rehfuess, president of the New York State Pharmaceutical Association, called a general conference early last month at the New York College of Pharmacy. In attendance were members of the State organization's legislative committee, delegates representing up-State and local associations and other interested pharmacists, possibly 50 in all. Among these were Thomas Stoddart, L. J. Schlesinger, J. G. Wischerth, Dr. Joseph Weinstein, Thomas Lamb, Hugh Craig, W. R. Guest, C. N. Lehman, A. S. Wardle, Peter Diamond, Dr. Wm. C. Anderson, S. V. B. Swann, Jacob Diner, A. C. Purdy, Fred S. Rogers, Hugo Kantrowitz, John Roemer, M. R. Mandelbaum, John Wall, T. J. France, Dr. Charles F. Klippert and Felix Hirseman.

No action was taken on the subject of mercuric bichloride tablets, it being deemed advisable that the legislative committee wait for the enactment of National legislation and follow that lead. Incidentally, it was decided that uniform and proper labeling should be required for wood alcohol, but that the legislative committee should in this case follow the lead of the New York City Board of Aldermen. Relative to bichloride tablets, John Roemer, of White Plains, argued that if the pharmacists of the State should advocate a measure before the Legislature on this subject they would practically be admitting that they were responsible for the deaths caused by this poison. Not the druggists, but the newspapers were responsible. Should the sale of rope be restricted because men will hang themselves? Dr. Wm. C. Anderson and Fred S. Rogers, of Middletown, were in accord, both recommending that the conference should not propose any aggressive legislation and that its representatives should not appear in Albany any more than

is necessary. The latter are "undesirable" and are not wanted there. No action was taken.

The greater part of the session was devoted to a discussion of the Sunday closing movement which has gained considerable impetus as a result of the recently enacted one-day-in-seven labor law. A number of incomplete, but none the less interesting, postal-card canvasses of the trade were reported by representatives of various local organizations. The Westchester County Pharmaceutical Association stood 17 in favor of Sunday closing to 13 opposed and three "on the fence." According to Dr. Joseph Weinstein, 20 members of the New York Retail Druggists' Association, at the time of this meeting, favored closing all day Sunday. Twelve were opposed to Sunday closing. One hundred and eight favored partial closing on Sunday.

S. V. B. Swann stated that the German Apothecaries' Society had been late in getting out its cards, 355 of which were mailed. Out of 160 replies received at date of meeting, 30 opposed Sunday closing and 130 favored partial closing. The 37 members of the Erie County Retail Druggists' Association, according to Thomas Stoddart, considered that Sunday closing was a matter devolving solely upon themselves. Sunday closing is at the present time optional with the druggist: he may close all day if he wishes to. Three of the members closed because they gained nothing by staying open. He himself could not close on Sunday as, besides the sale of medicines, he handled a large line of surgical instruments. He found it necessary to keep a man in the store all night. President Rehffuss reported that the members of the Albany Drug Club had unanimously opposed Sunday closing. Mr. Rehffuss explained the four propositions presented to members of the Kings County Pharmaceutical Society for their vote. To 450 cards mailed later than usual, 159 replies had been received at time of this meeting. Twenty favored remaining open all day, 21 would close all day, 54 would close after 1 p.m., 43 between 1 and 6 p.m. would close up shop and 21 named different hours of closing.

Mr. Rehffuss was firm in the opinion that sooner or later pharmacists must accord proper attention to the trend of opinion relative to Sunday closing. "If you don't—sooner or later, the labor unions will make you. As soon as the clerks unionize they will get their desired hours. If the public can stand having the drug stores closed from 10:30 p.m. to 7 a.m., it can stand having them closed from 1 to 6 p.m. on Sundays." Mr. Rehffuss concluded by noting that many druggists were getting around the clerk problem and saving \$25 a week besides by sending their wives to colleges of pharmacy.

Warren Guest, representing the National Pharmaceutical Society, asserted that the membership of his organization would increase five times immediately if it became a labor organization. The members had not cared to be thus characterized. This statement relative to the clerks refraining from labor affiliations received the commendation of several of the proprietors present. Mr. Guest also stated that the clerks were satisfied with their 24 hours per week allowed by law. Peter Diamond wished to have himself placed on record as favoring Sunday closing—not as a Sabbath observer, for he himself might choose another day—but because he was moved by humanitarian considerations. In behalf of the poor unfortunates who toil 17 hours a day he would work for partial Sunday closing.

In part, other delegates presented their opinions as follows:

John Roemer expressed the opinion that in Sunday closing pharmacy was coming down to where it proved its own uselessness. Sunday closing would put the drug store on a par with the saloon. "Don't argue Sunday closing from the commercial standpoint—on the side of profit. It is cheaper to close on Sunday. If you could enact a law preventing people from getting sick on Sunday, if you could prevent by legislation physicians visiting their patients and if you could close all the hospitals on Sundays, then I would favor Sunday closing. If pharmacists are unnecessary on Sunday, they are unnecessary on any day. If physicians can be shown that prescriptions are unnecessary on Sunday they will soon prove that they are unnecessary on the other six. Each new piece of restrictive legislation will only draw the noose tighter to show that we are useless."

C. N. Lehman opposed Sunday closing. Thomas Lamb pointed out that it was impossible to purchase merchandise in English drug stores on Sunday. Dr. Joseph Weinstein probed the effect of Sunday closing by asking: "When drug store night calls were stopped in New York City, did the death rate

increase?" A. S. Wardle considered the matter one which each druggist should decide for himself. He was opposed to obligatory Sunday closing, but would close if his business warranted such action, or would remain open if his prescription business demanded that he do so. A. C. Purdy kept his store closed on Sunday, but opened on call.

S. V. B. Swann asserted that the State association was negligent in letting the labor law get through. "It would be better to amend the labor law than for the State association to attempt the enactment of a Sunday closing law."

Felix Hirsman asserted that partial Sunday closing would help hundreds of poor, toiling druggists in New York City. The subject, however, was too new, it should be probed—canvassed—and if there is a desire for Sunday closing then all should work for it.

Thomas Stoddart stated that clerks and proprietors in his section were not satisfied with the labor law. Anent the unopposed passage of this measure, Mr. Stoddart said: "The legislative committee did not do its duty. I don't care who was on it." Commenting further upon the immense amount of restrictive pharmaceutical legislation, he asserted that "No druggist carries on business nowadays without violating the law. Who frames the laws? I think they are framed in Chicago and distributed throughout the country. We should oppose all legislation, no matter what its character is. We are professional men and above the labor law."

Dr. Anderson characterized the schedule which under the law must be posted in every drug store the most obnoxious feature of the law. The 24-hour feature was all right. The entire question was left open by common consent until next meeting, and those present were requested to "think it over."

The certification of pharmacies was the next subject discussed. Hugh Craig outlined a paper on the subject presented by J. Leon Lascoff at Nashville. Mr. Craig did not think that the association should force the matter, but if the medical society should take it up by itself some poor druggist will some day find himself on the "black list." Local pharmacists were offered equal representation on a grievance committee, an opportunity which, if the proposed certification is evolved, should not be thrown away. The American Medical Association is also taking the matter up. This organization has rated the medical colleges. "It behooves us to keep our eyes open in this matter, but we should not rush in saying that we are going to trust to the Board of Regents or anything else." He advised watching the medical societies. The members should work with them if possible and if necessary. The policy of "keeping in touch" appealed to those present and the subject was closed with its tacit adoption. The giving away of souvenirs was the next subject discussed. A. S. Wardle stated that a Supreme Court decision relative to trading stamps rendered several years ago had, at the instance of members of the association, been cited a year or so ago as a precedent by an Albany judge in ruling that if the decision held for trading stamps it also held for souvenirs. Thomas Stoddart observed that one firm in Buffalo did \$25,000,000 business a year by giving away something for nothing. Dr. Weinstein asserted that any check imposed upon the souvenir evil was a check upon the chain stores. Dr. Anderson reported that the Anti-Coupon League had found that the coupon evil could only be checked by the imposition of a revenue tax which would make them prohibitive. F. S. Rogers had heard in the last six hours that Vice-President Whelan, of the United Cigar Stores Company, had said that he would not think of installing the coupon plan in the Riker-Hegeman stores, and that he "wished to God" he had never put them in the cigar stores.

It was further developed that under the Pennsylvania law retail and wholesale liquor dealers could not give away souvenirs. Some of those present thought that if the coupon evil could be argued from the standpoint of public welfare that a measure benefitting pharmacists could be secured against it.

John Roemer, of the State association propaganda committee, presented an interesting report on propaganda. In Westchester county even the homeopathic physicians were writing prescriptions and the others would not think of doing otherwise. His propaganda plan called for joint "get-together" meetings of pharmacists and physicians throughout the State. At these papers should be read and an exhibit of preparations made. Albany and Elmira druggists had already assured him that such meetings would be held and Buffalo, Syracuse and other druggists were considering the matter. A general conference of physicians and pharmacists would be held at the drug show in this city at Madison Square Garden. Mr. Roemer was also

endeavoring to enlist the interest of all the hospitals in the State and the association's exhibit would be sent from hospital to hospital in greater New York. All the committee's plan requires is the co-operation of every member.

President Kufuss solicited the support asked by Mr. Koenig. He characterized the committee's plan as "beautiful." "The exhibit is almost ready and may be shipped to any city asking for it for one week." Dr. Anderson stated that the association would have 48 feet of exhibiting space on either side of the entrance of Madison Square Garden on the occasion of the drug show in January. "We should impress the public with what the retail druggists are doing. The local associations must come on it, especially with help."

A resolution adopted at the Grand Central Palace conference, to the effect that only registered pharmacists have anything to do with the preparing, selling, disposing and retailing of medicaments and poisons, was characterized as a fine thing, but something which could not be enacted into law. It was referred to "last year's legislative committee."

"The legislative committee was instructed to 'look into' the suit between the New York County Medical Society and the Wood Medical Company. The society holds that putting out any preparation bearing directions is prescribing medicine and a violation of the State law. A delegate present stated that the medical society had picked out an article that *everyone might be opposed to* in order to get general support. F. S. Rogers expressed the opinion that the suit was not a friendly action, since the Woods are preparing to fight the case.

Previous to adjourning, Dr. Anderson brought up the subject of the pharmacist's responsibility for his clerk's mistakes. The clerk is licensed and should know his business. The State association should take this matter up and see that the clerk is made responsible. Peter Diamond observed that the clerk could not be held liable in a civil action but he could in a criminal action. Thomas Stoddart agreed with Dr. Anderson.

#### DR. KLIPPERT RE-ELECTED HEAD OF G.A.S.

Old Slate. With One Exception, Unanimously Elected at the 62d Annual Meeting—349 Members.

**D**R. CHARLES F. KLIPPERT was re-elected president of the German Apothecaries' Society for the ensuing year at the recent 62d annual meeting of that organization. Henry Buch was elected recording secretary. The other officers re-elected are:

First vice-president, Paul F. Gebicke; 2d vice-president, Otto P. Gilbert; corresponding secretary, Carl Baum; treasurer, Robert S. Lehman; recorder, George Leinecker; librarian, George C. P. Stolzenburg; trustees, C. F. Schleussner, Felix Hirsman and George Kleinau and custodian of special fund, Paul Gebicke.

The ticket was elected unanimously, the secretary casting one ballot.

President Klippert appointed the following chairmen of committees:

Scientific, Otto Raubenheimer; legislation, S. V. B. Swann; entertainment, Otto P. Gilbert; press, Hugo Kantrowitz.

Otto Raubenheimer, Dr. Wm. C. Alpers, Robert S. Lehman, George T. Riefflin, Dr. H. V. Arny and Hugo Kantrowitz were elected delegates to represent the society at the A.Ph.A. convention at Detroit, Aug. 24.

Treasurer Robert S. Lehman presented his annual report showing receipts for the year of \$2,131.60; disbursements, \$2,104.77, and balance on hand of \$29.83. He also reported a total membership of 349, consisting of 317 regular, 19 associate and 13 honorary and corresponding members. The funds in the bank amount to about \$2100.

Paul F. Gebicke, custodian of the mortuary fund, submitted an annual report showing that on December 1, 1913, there were 135 members in the fund, that during the year four members had died, and that at present there was the sum of \$672.84 in the fund, \$648.84 of which was in the People's Bank.

First vice-president Gebicke took the chair while President Klippert presented his annual report which reviewed all important occurrences during the past year and included some important recommendations. He advocated an increase in the monthly dues and a rotation in office at least every two years, the latter to give more of the members an opportunity to hold office than under the present system. Dr. Klippert concluded by thanking the pharmaceutical press for the publicity given the activities of the society. He recommended that the organiza-

tion continue to send each member a copy of the *Apotheker Zeitung*.

S. V. B. Swann, chairman of the legislative committee, notified the members of the newly-enacted mercuric bichloride ordinance. He also touched on the subject of pharmaceutical representation upon the Board of Health, reporting an interview he had had with Dr. Lederle, Commissioner of Health. The latter told Mr. Swann that if the pharmaceutical profession wanted representation upon the Board of Health they should endeavor to have the charter of the City of New York amended. There is at present no appropriation for the remuneration of a pharmacist should he be given a position upon the board, and the Board of Apportionment and Estimate would have to be approached upon this subject. Dr. Lederle himself favored the desired representation and would appoint a pharmacist at once if he had the means at his command to pay him.

Mr. Swann discussed the above subject with the presidents of the local pharmaceutical organizations, all of whom favored the proposition. These officers represent 2400 druggists in this city. Mr. Swann expressed the opinion that they should bring the matter of representation before the new commissioner of health during the first week of January. Upon the motion of Mr. Schaefer, the entire subject was referred to the legislative committee with the recommendation that Dr. Wm. C. Alpers be advanced for any opening which might be made upon the board. Mr. Swann observed that an advisory board had been suggested, this body to consist of three physicians and three pharmacists. This proposal did not receive much support from the members.

Mr. Swann also reported the postal vote upon the Sunday-closing question, the same being published in another page of this issue. Fifty per cent. of those receiving cards did not reply. Eighty per cent. of the members who did reply favored partial closing on Sunday. A resolution was adopted—not unanimously—to the effect that the society favored partial Sunday closing.

Otto Raubenheimer, chairman of the scientific committee, reviewed the year's program of lectures and addresses, among the speakers having been Dr. Hermann Engelhardt, Professor H. V. Arny, Dr. Lyman F. Kebler, H. L. Rehse, F. F. Angelo Haase, Dr. Wm. Mansfield, Dr. Wm. C. Alpers, Otto Raubenheimer and Professor C. E. Vanderkleed.

Otto P. Gilbert, chairman of the entertainment committee, solicited instructions relative to the nature of the anniversary celebration to be held Feb. 12, 1914, at Terrace Garden—whether it should be a masquerade, a regular ball or a kommers including ladies. The matter was left to the committee for decision. Mr. Gilbert exhibited to the members a sample of the window sign which would be given to each to call public attention to their membership. The year in which the society was founded was added to the sign.

Messrs. Hirsman, Schleussner and Kleinau reported that they had audited the treasurer's books and found them in first-class condition. Two new members, Wm. Wisendanger and Herman Klein were in attendance at the meeting and were warmly welcomed by the members. Dr. Wm. C. Alpers, having in charge the 1914 European trip, asserted that members not having already signified their intention of signing for the expedition should endeavor to arrive at an early conclusion in this direction.

President Klippert reported that it was his sad duty to announce the death of Mrs. Rosa Imhof, widow of former president Henry Imhof. The members were requested to rise in honor to her memory and the secretary was instructed to write the family a letter of condolence.

The next meeting of the society will be held Jan. 15.

#### N. Y. BRANCH CRITICIZES NEW ORDINANCE.

President-Elect and President A.Ph.A. Attend December Meeting—Castile Soap Question Settled.

**P**RESIDENT CLARENCE O. BIGELOW called to order the December meeting of the New York branch of the American Pharmaceutical Association, held at the New York College of Pharmacy. Dr. Wm. C. Anderson, chairman of the committee on legislation, reported that no great activity was apparent in pharmaceutical circles and that the members could expect nothing from Washington for some time to come. The Health Department of this city had amended the penal code so as to restrict the sale of mercuric chloride in dry form, the ordinance taking effect March 1. This measure, thought Dr. Anderson, ended the local situation. No restric-

tion is placed on the wholesaler, and the retailer is entirely eliminated from handling photographers' bichloride supplies. The Board of Aldermen had approved the reduction of the fire license fee from \$5 to \$2, and all that remained was to secure the approval of the mayor. Dr. Anderson concluded his report by outlining the work of the recent N. Y. S. P. A. legislative conference.

The mercuric bichloride ordinance was severely criticized, and as strenuously approved by various of the members. Some thought that the physicians, as well as pharmacists, should be restricted. Mr. Raubenheimer deemed it ridiculous that pharmacists should be required to use only blue-colored bichloride tablets. C. O. Bigelow did not see how anyone would suffer much loss of business by the new ordinance. Only 33<sup>1</sup>/<sub>3</sub> per cent. of the tablets were sold over drug store counters, and the great bulk were sold by department stores.

President Bigelow requested Caswell A. Mayo, president-elect of the American Pharmaceutical Association, to escort George M. Beringer, president of the parent body, to the rostrum to address the members. Mr. Beringer had not expected to be called upon, but nevertheless made a very interesting address, in the course of which he asserted that his hobby was pharmaceutical meetings. He would go any distance to attend a gathering of pharmacists.

Dr. George C. Diekman, chairman of the committee on progress of pharmacy, presented an interesting report. In it he referred to the warning of Schimmell & Co., to the effect that the upward trend of prices had put a premium on skillful adulterations, some of these being extremely difficult to detect, artificial esters playing an important part in the sophistications. This company had at one time threatened to expose the names of firms seeking to purchase adulterants for well-known products. One firm requesting prices and information as to quantity on hand of "ester L," which might be employed as an adulterant for lavender oil, was named.

Hugh Craig read considerable correspondence between himself, as secretary, and members of the U. S. P. Revision Committee and Mr. Mitchell, of the Board of Food and Drug Inspection, relative to the inclusion of Castile soap in the U. S. P. The latter advised that any name in any place in the U. S. P.—text or index—was recognized under the Food and Drugs Act. The lengthy discussion on this subject, which had taken place at the October meeting, had been wasted.

Jacob Rehffuss, president of the N. Y. S. P. A., moved that a committee of three be appointed to co-operate with the propaganda committee of the State association in connection with the latter committee's efforts to present a suitable exhibition at the Madison Square Garden drug show. President Bigelow had considerable difficulty in appointing this committee, inasmuch as many of the members had already been pre-empted by Chairman Roemer. He finally named Messrs. Diner, Berger and McCartney.

Professor Henry Kraemer, of Philadelphia, presented an illustrated lecture on "The Cultivation of Medicinal Plants." Professor Kraemer had with him the material for an hour or more of interesting discourse and sufficient enthusiasm went his subject to maintain the interest of the members at a high pitch. Due, however, to close adherence to the regular program, he was obliged to begin his address rather late in the evening and to confine himself to passing remarks on the many stereopticon views thrown on the screen.

Previous to adjournment President Bigelow called upon the 1st vice-president of the branch, Wm. Jay Schieffelin, for a short address. Mr. Schieffelin presented a short report on the recent N. W. D. A. convention, referring with satisfaction to the atmosphere of friendliness which clothed the occasion. He expressed further satisfaction over the results of the recent local election and the success of the more recent \$4,000,000 Y. M. C. A. fund campaign, in both of which he had been interested.

#### BROOKLYN DRUGGISTS FOR SUNDAY CLOSING.

**Kings County Pharmaceutical Society Postal Card Vote Not All In—Shows How Majority Stands.**

SECRETARY ANDREW E. HEGEMAN reported the postal-card vote of the members of the Kings County Pharmaceutical Society on the question of Sunday closing at the December meeting of that organization, held at the Brooklyn College of Pharmacy and called to order by President H. B. Smith. Two hundred and five reply cards were returned at the time of this meeting out of 500 sent out. The card

presented four propositions: "Do you favor keeping drug stores open all day Sunday (as at present)?" and three modifications of Sunday closing, "To close all day?" "To close after 1 p. m.?" and "To close between 1 and 6 p. m.?" Twenty-five favored closing all day, 25 remaining open all day, 64 closing 1 to 6 p. m. (about 10 per cent. of these, one member remarked, were not in active practice), 66 close after 1 p. m., and the balance favored closing at the different hours which they named. Some of the replies went further than merely stating "Yes" or "No," some of the members expressing the belief that "there is absolutely no reason why drug stores should keep open all day Sunday."

Jacob H. Rehffuss reported that 90 per cent. of the members of the East New York Pharmaceutical Association favored closing after 1 p. m. Mr. Rehffuss stated that much to the surprise of the members of the Kings county society the Sunday-closing movement had started up-State, but the sentiment favoring it is much stronger in the metropolitan districts. He then reported the attitude of the recent legislative conference held at the N. Y. C. P. to the effect that the matter be deliberated upon and be brought up at the annual State association meeting at Sagamore Hotel, Lake George. Dr. Joseph Kahn advised that the members consider the public welfare in deciding the question. Adrian Paradis agreed with a previous contention made by Dr. Henry J. J. Kassebaum that the detail houses would stock the physicians for Sunday "when the drug stores are closed." Before leaving the argument Mr. Rehffuss pointed out that it would be impossible to get the best material among the young men of today to enter pharmacy because they would not work seven days a week.

T. J. France was opposed to legislation on Sunday closing: "The druggists are simply legislating themselves out of business." Dr. Wm. C. Anderson explained that the Sunday-closing movement had been started as a remedy for the situation created by the new labor law. The posting of a schedule containing a list of employees required to work on Sundays and designating the day of rest for each, the filing of such schedule with the commissioner and the prompt filing with the said commissioner of a copy of every change in such schedule, was the most objectionable feature of the law. Up-State druggists had concluded it best to close their stores on Sundays, and having decided to close, deemed it desirable that everybody else should do likewise. "Partial closing will not solve the original problem. It is foolish to legislate ourselves out of business for part of a day. It shows that we are not necessary one day a week." Dr. Anderson asked what would be done if a doctor needed a tank of oxygen while all the drug stores were closed. "Don't go to Albany and try to get legislation which will tie us down. Keep away from the law if you can't meet the labor law situation."

Dr. Hy. J. J. Kassebaum, detail man, gave an interesting talk on his work to date. He had seen approximately 100 men since his appointment and in his experience the physicians were more interested in the official preparations than were the druggists. The latter were not making the preparations. In a dozen cases druggists had called up the doctors who had prescribed official preparations and had requested the latter to substitute manufactured articles. The druggist should cater more to the physician than he does. The speaker pointed out that a few druggists were sending out samples of official preparations to the physicians in their neighborhood and were building up fine businesses by these tactics.

Charles Heimerzheim, of the trade matters committee, explained that the propaganda policy of the society had been changed since last year. He explained that the detail man now endeavored to educate physicians how to prescribe and was introducing original preparations which druggists should have on hand. He did not push imitations of proprietaries. He visited about 20 physicians and 10 pharmacists a week and was endeavoring to get the co-operation of the two professions. At Mr. Heimerzheim's request his committee was voted the sum of \$100 for expenses.

The resignation of Wm. F. Morgan as trustee of the college was accepted, Dr. Morgan having been appointed an assistant in pharmacognosy to Dr. A. P. Lohness. M. D. Cadman was elected a trustee and O. F. Bancroft a member of the Board of Censors.

Treasurer Adrian Paradis reported a balance on hand of \$223. T. J. France reported that the mid-Winter examinations at the college would begin the first Monday in January. Otto Raubenheimer presented an interesting paper on the "Centenary of Iodine." Mr. Raubenheimer reported that

Thomas Keenan, editor of *Pharm.*, would address the members on "K. coin" at the January meeting.

### DRUG TRADE SECTION ACTS ON LEGISLATION.

**Takes Stand Anent Bichloride, Solicits Action on Harrison Bill and Proposes P. O. Measure.**

THE members of the Drug Trade Section of the New York Board of Trade and Transportation at their regular December meeting, called to order by Chairman Henry C. Lewis, voiced their attitude toward the bichloride tablet question by adopting the following resolution:

"Resolved, That the Drug Trade Section of the New York Board of Trade and Transportation recommends the enactment of a law requiring that bichloride of mercury tablets containing more than one-tenth of a grain shall be colored blue and shall be made in distinctive forms.

"Further, That the section is opposed to any legislation which will require the artificial coloring of bichloride of mercury when sold in any other than tablet form."

Thomas Main asserted that it had been the general opinion at the N.W.D.A. Jacksonville meeting that Treasury Decision 33,456 would be revoked upon the passage of the Harrison bill. Albert Plaut said that Dr. Alsberg had assured him that the decision would be revoked if the Harrison bill were passed. Secretary Wm. McConnell also quoted the Chief of the Bureau of Chemistry to the effect that the latter would for some time enforce the measure only as regards importations. Mr. Main introduced a resolution which was unanimously adopted and which incorporated the following points:

That the section record with regret the failure of Congress at its special session to enact H.R. bill 6282, the Harrison bill, which passed the House of Representatives June 26, 1913, without opposition, having been carefully prepared by the collaboration of Government officials, committees of Congress and representatives of the several trades affected by its administration.

Early enactment of this bill is of utmost importance to the people of the United States. This country took the initiative in convening an international congress to restrict the use of narcotics and, while some of the participants are enforcing their agreements the U.S. is delaying action.

The section earnestly petitions the finance committee of the U.S. Senate to report this bill for passage at once, and we urge the Senators from New York to use every proper effort to promote its passage.

The secretary was instructed to send copies to the President, Senators Root and O'Gorman and the members of the Senate finance committee.

Secretary McConnell brought before the meeting the ambiguous postal regulation relative to the mailing of preparations containing poisons. He stated that according to the local authorities nothing containing poisons would be mailable in this city. Mr. Plaut asserted that Second Assistant Postmaster-General Joseph Stewart had assured him that there would be no hold-up on bonafide medicines, but that the only way to remedy the law was to have it changed. It had been passed to "hit" poisoned candy; legitimate business had not been aimed at. The post-office authorities, however, found it impossible to interpret the law any differently than it does. Since it was not seriously affecting anyone's business the matter was laid over until next meeting, the secretary being instructed to prepare suitable legislation for the consideration of the section.

The recent ruling of the State Superintendent of Weights and Measures that "In relation to commodities put up in tubes, they shall be marked plainly and conspicuously and a reasonable variance shall be allowed," was called to the attention of the members by the secretary. He also admonished them that the Brooks weights and measures law with all its provisions as to labeling with net weight, measure or numerical count would be enforced February 1, 1914.

The new Cuban requirement that a statement be made upon the label of the component to which every preparation owes its value was brought up by Thomas Main, who proposed a resolution, later adopted, that the committee on legislation protest against the regulations to the Secretary of Sanitation and Beneficence in Cuba and that it request Secretary of State Bryan to protest with the Cuban government against the imposition of this law. The measure also requires the registration of every article offered for sale in Cuba and that certificates for each be obtained. It was reported that the wholesale druggists of Cuba are as strenuously opposed to the regu-

lations as are the American manufacturers. The action taken by the section was substantially that taken by the N.W.D.A. at Jacksonville.

### Chicago Branch, A.Ph.A.

The November meeting of the Chicago branch of the American Pharmaceutical Association was held at the University of Illinois School of Pharmacy building. The subject was "General Principles of Pharmacy Legislation." The members of the State Board of Pharmacy and the president and members of the executive committee of the Illinois Pharmaceutical Association were invited to be present.

The following general statement was presented in type-written form to each one present and became the basis of the discussion:

"1. Pharmaceutical legislation, though framed by pharmacists and secured only through their organized efforts, must primarily be intended to provide efficient pharmaceutical service for the public. 2. Such legislation must control the traffic in habit-forming drugs and safeguard so far as possible the handling and employment of poisons and potent remedies. 3. Concessions must be made so as to permit dealers other than pharmacists to supply under proper restrictions such poisonous substances as are used largely in the arts. 4. Standards covering school and drug-store training should be provided for three grades of certificates—Apprentice, Assistant and Pharmacist. 5. Boards of Pharmacy should have full supervision of all matters within the State relating to the handling and sale of drugs and medicines. By co-operation with other State departments facilities for analyses could be provided. 6. By co-operation with the State department of education, trained experts should be provided to conduct the examinations but directly supervised and controlled by the Board of Pharmacy. 7. Appointments of board members should be made upon the recommendation of State pharmaceutical associations."

James H. Wells, president of the branch, presided, and called upon Editor George Engelhard to lead in the discussion. Mr. Engelhard expressed himself as substantially in accord with the statement of principles as presented to the meeting. He referred to the part he took in the drafting of the original Illinois pharmacy law, adopted in 1880, and stated that it was based on a model law proposed by the A.Ph.A. previous to that time. He brought out the point that an endeavor was made in this original draft to provide for the election of the members of the Board of Pharmacy by the pharmacists of the State, but such a provision, it was shown, would be unconstitutional, as the members of the board must be appointed by the Governor. He declared that board members in all the States were, to a more or less extent, political appointees and that if pharmacists had the power to elect the administrators of the law, the condition of pharmacy in the several States would now be ideal.

Mr. Engelhard also discussed the question of college prerequisites before examination and stated that no such requirement should be included in the law itself, but educational requirements, as well as the character and methods of examination should be left to the discretion of the board. If conditions in pharmacy have reached such a state that a course in a college of pharmacy is essential to the proper qualifications of a pharmacist, well and good, let the board so rule.

He criticised severely the provisions of the law permitting physicians to dispense and held that qualified pharmacists alone should dispense medicine and then that pharmacists should be responsible for all medicines so dispensed. In this respect he is completely in accord with the principles laid down by the drug reform committee of the A.Ph.A. and further stated that the doctors were to the very front in fighting for pure food and drug legislation, but now, through the dispensing physician 75 per cent. of the medicines dispensed in this country do not come within the scope of these laws.

Secretary T. H. Potts, of the N.A.R.D., was the next speaker and stated emphatically that the State board of pharmacy have no right nor should they have a right to make regulations concerning the qualifications of candidates for the examination, but these qualifications should be definitely stated in the law. He spoke strongly in favor of the pre-requisite requirement and wanted to know how we are ever going to place pharmacy on the footing where it belongs if we do not require an adequate and advancing education of those entering pharmacy. He referred to the successful U.S.P. and N.F. propaganda work among physicians.

Secretary Isam Light, of the C.R.D.A., also spoke of this propaganda work and stated that one of the great difficulties of the work was the indifference displayed by the retail druggists themselves. He further stated that, as a rule, those who were indifferent were not college graduates and that the main cause of the indifference was their incompetence to properly prepare the U.S.P. and N.F. preparations. Mr. Light said that if the prerequisite clause was inserted in our pharmacy law we would have more capable pharmacists in Illinois within a short time.

Ex-President W. B. Day spoke in favor of the prerequisite clause. He brought out the point that at present druggists did not teach pharmacy to their apprentices as in former years, and while drug-store experience still had much value in the training of a pharmacist, yet candidates for registration should now be required to show some systematic effort to qualify in pharmacy before being admitted to examination.

Wm. Gray, pharmacist at the Presbyterian Hospital, spoke of the difficulties of the apprentice acquiring a competent education from drug-store experience alone and favored the prerequisite requirement.

Mr. Wells, speaking from his own experience, told how he had very successfully passed the board examination (a considerable number of years ago, however) after a very limited experience of running errands in a drug store followed by three months cramming. He then spent 10 years as apprentice and clerk, acquiring a true pharmaceutical education. He referred to apprentices nowadays, who knew nothing of scientific or ethical pharmacy, who after a three-months' course in one of these stuffing schools successfully passed the board. He pointed out that such an "education" evaporated almost as rapidly as it was acquired, and urged that, when the prerequisite requirement was placed in the law, it be so worded as to require a reasonably complete and broad education, general and pharmaceutical.

Professor A. H. Clark presented several examples from his own experience of insufficiently educated pharmacists, particularly one instance in which the physician ordered a prescription calling for 1/60 grain strychnine tablets to be refilled but with tablets only half as strong. The drug clerk dispensed 1/30 grain strychnine tablets.

Mr. Brunstrom, of Moline, chairman of the legislative committee of the Illinois Pharmaceutical Association, urged upon all Illinois pharmacists unity in backing the desired amendments to the pharmacy law; that the law had enemies enough among the "patent medicine" and "wagon" men and that we must have the unanimous support of the pharmacists.

President Ralph E. Dorland, of the Illinois Pharmaceutical Association, closed the discussion. He stated that the I.Ph.A. stood solidly back of the fight for amendments to our present State law in favor of prerequisite college education, the labeling of medicines with name and amount of each potent drug contained in them and the restriction of the sale of all powerful medicines to registered pharmacists. He said further, the salvation of pharmacy in every State lies in right legislation. To obtain legislation, co-operation is essential. The pharmacists of the State must write and present a solid front in their State organization.

A pleasing and instructive incident of the evening was the display and demonstration of oxygen apparatus, especially pieces designed for anesthesia and for life-saving, by representatives of the Roessler & Hasslacher Chemical Company.

The December meeting of the branch was held Dec. 16. E. N. Gathercoal introduced the subject of the evening, "The Pharmacognosy of the Rhamnus Barks." He showed specimens of the bark from *Rhamnus Frangula* and *R. cathartica*, which are European shrubs; *R. Purshiana*, *R. californica*, and *R. crocea*, from Western United States, and *R. chlorophorus*, a Chinese plant; also samples of barks used as adulterants of *Cascara* and *Frangula*, including the one found a year or so ago by Mr. Miller, of Eli Lilly & Co., in a large lot of *Cascara*. Mr. Gathercoal discussed the characters of the plant supplying each of these, mentioned its habitat and pointed out the external markings of each bark, their resemblances, as well as the features by which they may be readily distinguished. He stated that the adulterant found, but not identified, by Mr. Miller, disclosed in its internal structure all the ear-marks of a cherry bark, and, as on maceration in water, a slight odor of hydrocyanic acid was observed, it probably was from a species of cherry. He also presented a review of the literature on the chemistry of the Rhamnus barks and showed the chemical tests proposed for the monographs of

*Rhamnus Purshiana* and *Frangula* in the new U.S.P. His part of the discussion was closed with a projection-microscope exhibit of sections prepared from the various barks and a description of the tissues of each, bringing out points of similarity and dissimilarity in their structure.

Mr. L. E. Warren, of the chemical laboratory of the A.M.A., Professors A. H. Clark, C. M. Snow, G. D. Timmons and W. B. Day and Messrs. J. H. Wells, Wm. Gray, I. A. Becker and C. F. Storer took part in the discussion.

#### Executive Committee. III. Ph.A.

The semi-annual meeting of the executive committee of the Illinois Pharmaceutical Association was held at the University of Illinois School of Pharmacy, Chicago, on Nov. 19. For the first time the committee held an all-day session. The attendance was large, the members were enthusiastic and much was accomplished.

There were present at the meeting the following: President Ralph E. Dorland, Secretary W. B. Day, Executive Committeemen I. M. Light, J. T. Lueder, J. P. Crowley, S. J. Jeruzal, H. N. Bruun, G. J. Guerten, of Chicago; A. E. Clyde, Glenco; W. D. Duncan, Ottawa; H. M. Anderson, Monmouth; T. B. Shaffer, Oneida; Joe Reinhart, Peoria; W. F. Baum, Danville; Byron Armstrong, Jacksonville; W. R. Graham, Carlinville; P. L. Gain, East St. Louis; W. C. Irwin, Salem, and Thos. Gregg, Harrisburg. Also Charles Brunstrom, chairman legislative committee, and Eugene Caron. Of the political committee, Chairman J. H. Wells, C. H. Avery, J. J. Boehm, L. M. Pedigo and L. P. Larsen, and J. A. Mahaffy, of the membership committee.

By invitation, the following members of the Illinois Pharmaceutical Travelers' Association were in attendance: President M. L. Burhans, Vice-President R. H. Smith, Secretary H. E. Cornish, A. W. Hobart and R. D. Keim, also Secretary Potts and Field Representative Singer, of the N.A.R.D.

The morning session was devoted to fixing of a date for the next annual meeting and the selection of a meeting-place. The representatives of the I.P.T.A. were practically a unit upon recommending Fox Lake. They urged the desirability of meeting at a Summer resort, which would be a decided innovation and would undoubtedly draw a large attendance. By meeting early in June very favorable arrangements could be made at Fox Lake, so that the convention would be cared for in one large hotel at reasonable rates and with excellent facilities for the business sessions. Several novel entertainment features will also be provided. Invitations were also presented from Peoria and other cities and Dr. Hobart discussed a proposition to hold the meeting on one of the fine lake boats and make a four-day trip on Lake Michigan. After a very general discussion it was unanimously decided to meet at Fox Lake, June 11, 12 and 13, and the sentiment of the members was that the meeting, as planned, will be the most successful the association has ever held.

At the afternoon session nominations for the Board of Pharmacy and Advisory Board were made. Appropriations were allotted to the various standing committees and a membership campaign was discussed. Mr. Lee M. Pedigo, chairman of the propaganda committee, brought forward a definite plan for interesting the physicians and pharmacists in the propaganda for U.S.P. and N.F. and recommended that this work include also a campaign for new members. This plan was heartily approved and an appropriation of \$400 was granted to Mr. Pedigo for expenses in conducting the campaign with the understanding that the local pharmacists in the districts which are visited would bear their share of the expense.

Resolutions were passed protesting against the proposed removal of the N.A.R.D. headquarters from Chicago: endorsing the candidacy of ex-President J. H. Wells for the Postmastership in his home city, Evanston; authorizing the president and secretary to employ a solicitor on a commission basis for securing new members; authorizing the president and secretary to fill vacancies on the voting card where no nominations had been made.

The treasurer's report showed the expenses since the annual meeting as \$914.81, the receipts \$424.00, the balance on hand \$918.54.

#### City of Washington Branch. A.Ph.A.

At the November meeting of the Washington branch, A.Ph.A. Dr. L. F. Kebler, the president, introduced Dr. H. A. Seil, of New York City, who discussed observations on *asafetida* and *balsam* of Peru. Dr. Seil clearly showed that the

present tests for purity were wholly inadequate to cope with the cunning of dishonest shippers, and that the official definition, which requires that each of these substances be derived from definite sources was the only satisfactory basis upon which spurious and adulterated products could be denied entry into the United States.

Illicit opium traffic was the next subject considered. A. B. Adams, chemist for the Internal Revenue Department, spoke of the work of the service in this connection. He described minutely the cunning of some of the dealers, which is almost beyond human conception. Numerous examples were cited where the department had almost positive knowledge that this traffic was being carried on, yet because of the extreme cunning employed, no evidence sufficient to procure a prosecution could be obtained. Examples were also cited where the smallest slip had cost the dealer a conviction. One instance, where the opium was cast into a sewer was described, conviction being obtained therein by removing a brick from the sewer wall and showing that when the opium was thrown into the sewer the water in the sewer was splashed against this brick. Upon chemical examination of the surface of the brick the presence of opium was shown.

Much gratification was expressed that a number of reputable manufacturers of drugs and chemical products had discontinued the manufacture of extract of opium. It was claimed that this form of opium was the most frequently employed by the smoker, and was merely a variety of smoking opium apparently manufactured for legitimate use.

"The Present Status of the Federal Control of Habit-Forming Drugs," was the title of a paper read by S. L. Hilton. Attention therein was invited to the decided opposition to the so-called "Harrison Bill" now pending before Congress, and belief was expressed that the opposition was growing to the extent that it would defeat the bill, unless there was a renewal in a decided manner of the activities which have supported it.

The recent decision of the Treasury Department, having as its object the regulation of cocaine, coca, their derivatives and preparations, from the time it entered the United States until such reached the ultimate consumer, was also considered. Mr. Hilton, in discussing this decision, called upon Mr. Stewart, a local attorney, for some remarks concerning his belief in its validity, and in response thereto Mr. Stewart stated that he did not believe that the order could be enforced under existing statute. A slight modification of the pure food and drug act would, however, bring such a regulation clearly within the province of the Treasury Department.

Dr. Lyman F. Kebler briefly reviewed the various steps taken previous to the issuing of this order, generally called Treasury Decision No. 33,456. This order, it seems, was directly the result of efforts of the Department of Agriculture to regulate the importation of the habit-forming drugs. So much opposition was developed that the efforts of the Department were held in abeyance until certain investigations were had. The result of these investigations was the opium act in 1909. Again, in 1911, the Department of Agriculture attempted to regulate the importation of habit-forming drugs, and much opposition was developed to all the drugs named in the regulation except cocaine and coca. During the year 1912 some coca leaves were detained because their alkaloidal content was not noted. The importers voiced their willingness to label the drugs as desired, and after a number of other shipments were detained, and then allowed entry, it was decided to make the enforcement uniform, hence the decision above noted.

All the questions brought up were freely discussed by the members present, the attendance being much better than usual. This meeting is considered one of the most profitable in the history of the local branch.

The December meeting of the branch was held Dec. 17, in the Institute of Industrial Research, 19th and B streets, Northwest. The following programme was provided:

- (1) Conservation of Pharmaceutical Chemistry—Mr. H. C. Fuller, Institute of Industrial Research.
- (2) Commercial Alcohol in Germany—Dr. Rodney H. True, U.S. Department of Agriculture.
- (3) The Peru Balsam Industry—Mr. Albert Hale, Pan-American Union.

#### Nashville Branch, A.Ph.A.

At the November meeting of the Nashville branch of the American Pharmaceutical Association, the subject of the location of the A.Ph.A. headquarters was freely discussed, and the opinion unanimously expressed that it should be located

in Nashville. A committee consisting of W. R. White, Ira B. Clark and S. C. Davis was appointed to co-operate with the Nashville Industrial Bureau in properly presenting Nashville's claims to the Council.

"Articles for Quick Dispensing" was the regular subject for discussion. Ira B. Clark began the discussion by saying that more stock solutions were used by the large uptown stores than the suburban stores since they had a much larger prescription business. He kept the solutions for making Sol. Ammon. Acetate, Sat. Sol. Boric acid, Sat. Sol. Iodide of Potash and a few others, but said the Sol. Pot. Iodide became colored after a while.

Dr. E. A. Ruddiman stated that a solution of pure Iod. Pot. would color in three or four weeks, but that the commercial article would keep several months on account of the Pot. Carbonate usually present in it. Dr. J. M. Rogoff thought light and temperature had much to do with the change. He strongly discouraged the use of stock alkaloidal solutions, and gave the results of some recent experiments he had made on frogs with solutions of cocaine, morphine, strychnine, atropine, codeine, nicotine and thebaine which had been made five or six weeks, all of which showed signs of deterioration. He and Dr. Ruddiman agreed to do some experimental work along these lines, and will report their results to the branch. Messrs. Hutton, Clark and Davis discussed the keeping qualities of ointments and were of the opinion that retailers neglected this class of preparations too much. Most of them should be made fresh when needed. How to keep iron solutions from turning dark was discussed by Messrs. Burge, Davis, Ruddiman and White. Dr. Burge stated that he had found that ammonia turned iron solution dark and in making Elix. Phos., Iron, Quinine and Strych., he does not neutralize with ammonia, leaving the solution cold, and in this way gets a nice green elixir that keeps a long time unchanged. Lead in the bottles and sunlight were given as causes of the change.

The branch then adjourned.

#### Next Illinois Pharmaceutical Convention.

The executive committee of the Illinois Pharmaceutical Association met in Chicago recently and unanimously voted to accept the recommendation of the Travelers' Association to hold the next annual joint convention at Mincola Hotel, Fox Lake, Ill., and fixed the dates at June 11, 12 and 13, 1914. Fox Lake is situated but 50 miles from Chicago and is easily accessible both by rail and by auto.

The committee from the Travelers contended that the innovation of holding the convention at a Summer resort instead of at one of the larger cities of the State has been tried successfully in all parts of the country and has resulted in genuine vacations for members of both associations as well as a greatly increased attendance at the much-needed business meetings.

The details of arrangement, publicity and entertainment, are as usual in the hands of the Illinois Pharmaceutical Travelers' Association, and the latter are enthusiastic over the prospect of one of the biggest meetings ever held by the associations. They report that the Summer resort idea particularly appeals to the small town druggists who relish the idea of combining a genuine pleasure trip with the business of the convention.

#### Nevada State Ph.A.

At the adjourned meeting of the new Nevada State Pharmaceutical Association at Reno, in November, the temporary organization was perfected by the election of A. S. Olds, of Goldfield, as president; to serve till next November. C. E. Weck, of Reno, was elected vice-president, and H. J. Duncan, of Reno, secretary and treasurer. Committees were appointed to look after legislation, commercial interests, progress of pharmacy in the State papers, and meeting and entertainment. Lewis H. Zeh, secretary of the California State Board of Pharmacy, was a guest and gave a talk on organization and the purposes of such a body.

#### N.A.R.D. to Meet at Philadelphia.

The 1914 convention of the National Association of Retail Druggists will be held at Philadelphia, beginning August 24. It is expected that the attendance of delegates will exceed 1000, and the Philadelphia Association of Retail Druggists is already at work in perfecting plans for the entertainment of the body and its guests. The choice of Philadelphia was made by the executive committee of the National Association held recently at Chicago.

## N. P. S. Discusses Bichloride Problem.

*Coroner Feinberg Favors Triple Check on Poisonous Mercury Tablets.*

REGULATION of the sale of bichloride tablets, and the value of organization were the principal topics considered at a slimly attended but interesting meeting of the National Pharmaceutical Association, at the New York College of Pharmacy, on Dec. 15.

Coroner Feinberg, of the Borough of Manhattan, traced the growth of the use of bichloride of mercury as a disinfectant, and expressed himself in favor of a distinctive container, of a special color, holding tablets made of a peculiar and unmistakable shape and surface. The bottle should be of colored glass, so as to be readily distinguishable in the daytime, and should have a roughened surface, to insure protection in the dark. The word "poison" should not be put on the tablets with a rubber stamp, but should be heavily embossed. The tablets must be of such a shape that they will immediately suggest a difference from all other kinds of tablets. Wrapping the tablets in paper is of minor importance, and details as to shape and surface are of little moment, provided the above general principles are embodied. There is no advantage in having a distinctive container and wrapping, if the tablets themselves are not such as to call the attention of anyone who picks one up, to the fact that something unusual is in his hand. The form of container should be agreed upon by the manufacturers all over the country, and no patented containers or tablets should be used. Local propaganda is of no avail; the movement must be national in its scope, and should apply to all poisonous tablets containing mercury, such as the iodide and cyanide. A resolution was passed indorsing Dr. Feinberg's views.

Mr. A. L. Strouse, of the committee on labor laws, reported that the work of the organization in securing the enforcement of the State laws had the hearty indorsement of the State Labor Department. It was announced that a future meeting would be devoted to the consideration of the advisability of affiliating with the American Federation of Labor. Mr. Wm. J. McNulty, attorney for several labor organizations, thought that no professional standing would be lost by such a step. Sunday closing was also indorsed.

### BALTIMORE R.D.A.

**Sale of Bichloride, a Permanent Secretary, and Parcel Post Subjects Before This Body.**

BALTIMORE, Dec. 20.—Among the matters which occupied the attention of the Baltimore Retail Druggists' Association at its last meeting, an ordinance before the City Council, which aims to restrict the sale of bichloride of mercury, took, perhaps, the leading place. The ordinance was introduced some time ago by Councilman Heller and reflects the views of the marshal of police and other officials, who urge that the frequency of bichloride of mercury being mistaken for headache or other remedies and the recurrence of suicides by this means makes it desirable to surround the sale of the bichloride tablets with additional safeguards. Not only is the purchase to be made more difficult, but some special form of container is prescribed. The druggists, for their part, point out that many of the so-called mistakes are not mistakes at all, but attempts at suicide, encouraged and stimulated by the ill-advised publicity given to the subject in the daily papers, and that no special form of package or additional restrictions will avail, while the value of bichloride of mercury as an antiseptic makes it desirable that it shall be readily accessible to the public, the acts of misguided or morbid individuals being no argument for denying the people the benefits to be derived from the use of the tablets. It was announced that Councilman Heller would be present at the next meeting to explain his ordinance, and a special committee was also appointed to attend a hearing before the City Council some time in January, when the arguments of the pharmacists are to be presented. This committee includes John Kelly, J. W. Owings, of the Hynson, Westcott & Co.; John B. Thomas, of the Thomas & Thompson Company; M. S. Kahn, and Samuel Y. Harris.

The benefits of close affiliation of the Baltimore Association with the N.A.R.D. were pointed out by Mr. Kahn, who was a delegate at the last annual meeting of the N.A.R.D., and who explained what had been done by the organization to

advance the interests of the retailers. No formal action was taken.

The extra labor, especially before the holidays, incidental to the practical operation of the parcel post was dilated upon by druggists who have branch offices in their stores. This work, it was stated, had become very onerous, while the druggists were not getting any additional compensation. The suggestion was made and strongly urged that the postal authorities be appealed to for extra help, in order that the business of the druggists might not suffer.

The advisability of employing a paid secretary, who shall be at all times in a position to keep the members informed as to the state of legislation in Congress and elsewhere affecting their business, and who shall keep in close touch with other developments of interest to the profession, carrying on also the work of the association, will be discussed at the next meeting by Dr. Pritchard, secretary of the Pittsburgh association, and by Mr. Davis, of the Philadelphia organization. The suggestion has been made that the work of the Baltimore association has become so complicated and heavy that it can be looked after effectively only by a man who can give all of his time to it.

The following officers were re-elected: President, R. E. Lee Williamson, of Lee Williamson & Co.; 1st vice-president, John B. Thomas, of the Thomas & Thompson Company; 2d vice-president, J. A. Gerlach; 3d vice-president, Charles Morgan, of Morgan & Millard; corresponding secretary, Ephraim Bacon; recording secretary, Charles L. Meyer; treasurer, William M. Fouch.

### Chicago Drug Club's "Biggest Night."

"Everybody had a good time." Brother Kellett's slogan most aptly expresses the actual happenings at the Good Fellowship Night held by the Chicago Drug Club at the Hotel Bismarck, Dec. 15. More than 300 loyal members gathered around the festive board and joined in the spirit of the occasion which warms the innermost soul of men at the season of the year when brotherly "love" and "charity" bring cheer to the heart and fireside. Business was forgotten, and after a few appropriate remarks President Umenhofer wished the boys a Merry Xmas and a Happy New Year and turned the meeting over to Brother McCracken, who acted as toastmaster. Most nobly did Brother McCracken acquit himself, and in words that expressed good fellowship to all present he bid them welcome to the Chicago Drug Club. Brother "Tom" Potts, the thunderbolt of the N.A.R.D., responded to the request of the toastmaster and gave the boys one of his usual heart-to-heart talks on the manner in which he felt we should foster the feeling of comradeship in our organization. "Doc" Pritchard, after being complimented on being the handsomest man in the room, arose to his feet with a great deal of trepidation and added a few good stories and stunts in mimicry to the enjoyment of the evening. Among the many other members who made short but telling addresses, were Messrs. Kellett, Schwalbe, "Jim" Stevenson, "Matt" McAnneny and R. D. Keim, who led the boys in singing "O Tannenbaum!" After a lively cabaret show during which a splendid luncheon and liquid refreshments were served, Gus Hergert, our amiable chairman of the entertainment committee, who is making a record far ahead of his predecessors, played Santa Claus to the boys and everybody took home a souvenir for the "baby." Ten new members were added to the roster, and it is hoped that every one of the visitors present will shortly sign an application blank to become one of us. The year has been a prosperous one for the club, and as we ring out the old and ring in the new we look forward to brighter times, more good fellows in our ranks, and wish you all the compliments of the season.

### Perfumers, Soap and Extract Makers.

The annual meeting of the Perfumers, Soap and Extract Makers' Association was held at Chicago, Dec. 17, the second annual banquet and election being held at Volgensang's banquet hall. The following officers were elected: President, George F. Merrell, president of the Allen B. Wrisley Company; vice-president, Wood S. Rayburn, treasurer of the Raydith Perfume Co.; secretary and treasurer, Charles W. Brown; executive committee, the officers and John Blocki and Harry Bartole. A feature of the meeting was the presentation of a very handsome loving cup to John Blocki, the retiring president.

### N.P.S. Annual Ball and Bazaar Feb. 24.

The National Pharmaceutical Society will hold its annual ball and bazaar on Feb. 24 at the New Amsterdam Opera House.

### AMONG THE ASSOCIATIONS.

The Ohio Valley Druggists' Association held its annual election of officers at the Sinton Hotel, and the entire regular ticket was elected. About 200 votes were cast. The following officers were elected: Charles Harding, president; William C. Lakamp, 1st vice-president; George E. Smith, 2d vice-president; John M. Fallon, 3d vice-president; Fred S. Kotte, secretary; Otto E. Kistner, treasurer; Henry J. Dusterberg, John Weik and Otto Katz, members of the Board of Control of Hamilton county, for three-year term; E. L. Peick, member of the Board of Control of Kenton county, one year; Ferd Ott, member of the Board of Control of Campbell county, one-year term, and William Howe, member of the Board of Control for Butler county, one year. There were some very interesting talks given on the new Duffy law, which regulates the sale of opium and narcotics. Dr. Theodore Wetterstrom, secretary of the O.S.P.A., brought out the different features of the new law, explaining every detail. Edward Voss, Cincinnati member of the Ohio State Board of Pharmacy, also made an interesting talk. There were members present from Dayton, Hamilton, Middletown, Covington, Newport and Bellevue.

At a meeting of the executive committee of the Iowa State Ph.A. at Des Moines recently, the action of the State Board of Pharmacy against illegal sellers of cocaine and similar drugs was warmly indorsed. "The druggists of Iowa are against that sort of traffic as illegitimate," said President Miller and Secretary Falkenhainer. "The State board is right and the druggists are with it. Another thing in which we heartily indorse the board is insistence upon the observance of the law requiring a registered pharmacist in every drug store. A drug store without a registered man, capable of dispensing drugs with intelligence, is absurd. The board is right there, too." The executive committee made plans for the next annual meeting of the association at Burlington in June or July, 1914. Keokuk and Burlington druggists will co-operate for the entertainment of delegates and agents, and one feature of the meeting will be an excursion from Burlington to Keokuk to see the big dam. The executive committee has also arranged to keep an organizer in the field again this year. The State body now has 1500 members.

The November meeting of the Alumni Association of the Department of Pharmacy, Temple University, was devoted to advertising, a number of advertising managers addressing the gathering. Walter Lee Rosenberger, of Smith, Kline & French, spoke on "Advertising with the Co-operation of the Manufacturer"; Bruce Drysdale, of John Lucas & Co., Inc., explained the methods of advertising which have proven successful, and showed how retailers had taken advantage of National advertising campaigns. Prof. Herbert W. Hess, of the Wharton School of Finance, treated of the general principles of advertising as applied to the retail drug business. The general discussion which followed was opened by Prof. H. B. Morse, of the Pharmacy Department of Temple University.

The November meeting of Boston Chapter, No. 1, W.O.N. A.R.D., was held at the Hotel Vendome, and about 40 members heard Havrah W. C. Hubbard, of the Boston Opera House, describe in a most fascinating manner "The Tales of Hoffman." His interpretations were very enjoyable, and he was accompanied at times on the piano by Floyd M. Baxter. Mrs. James W. Cooper presided. At the social hour following, tea was poured by Mrs. William R. Acheson, Mrs. Frank Connelly, Mrs. William Connor and Mrs. Theodore J. Bradley. The servers were Mrs. E. H. LaPierre, Mrs. Leopold Bartell, Mrs. Truman Hayes and Miss Sallie LaPierre.

The St. Paul R.D.A. and the St. Paul Drug Club have been merged into one society to be known as the St. Paul Retail Druggists' Association. The active membership will be confined to master druggists, while associate members will be drawn from the clerks and traveling men. The following officers were elected: R. J. Messing, president; Ernest Otto, 1st vice-president; Frank W. Smetena, 2d vice-president; H. Martin Johnson, secretary, and W. St. Clair, treasurer. The executive committee is composed of W. Schoel, chairman; Herman Ritzke, C. A. Campbell, C. J. Heller and J. P. Jel'nek. News has been received by the Cincinnati Chapter of the

American Chemical Society, that the directors of the society in New York City have decided to hold the annual convention of the organization in the city of Cincinnati some time next April. The exact dates have not been selected, as yet. The local chapter, in conjunction with the Cincinnati Chamber of Commerce, made the effort to bring the convention to the Queen City. Preparations will be started at once to make the coming convention the most successful ever held.

Posture and balancing movements for the development of dormant brain cells were advocated by Mrs. Theodore Parsons in an address made to the Woman's Organization of the Chicago R.D.A. at their December meeting. The subject of the address was: "The Artistic and Scientific Training of the Body." Mrs. Miles Geringer sang, and Miss T. Filip read. The meeting was in charge of Mrs. B. A. C. Hoelzer, Mrs. A. E. Fechter and Mrs. C. D. Collins.

The Retail Drug Clerks of Boston held their first assembly and dance in St. James Hall in November, and the occasion drew an attendance of several hundred persons. The committee in charge consisted of William Stenzel, Albert Krause, Lester Clow, Albert J. Thompson, James F. Collins and Frank Sweeney. Thomas T. Foley was floor marshal, James F. Collins, floor director, and William H. Quirk and George Hegarty, assistants.

A pure drug exhibit will be a feature of the meeting of the Minnesota Pharmaceutical Association in February, at the Armory, Minneapolis. At the annual meeting of the Minneapolis Drug Club this plan was outlined, and considerable discussion of features of the meeting followed. These officers of the Drug Club were elected: President, Dr. Justin Brewer; vice-presidents, L. E. Schmidley, C. L. Kerr, H. J. Barnett; treasurer, C. S. Barrows; secretary, E. V. Clark.

At a recent meeting of the Bristol (Conn.) Druggists' Association Edward W. Merriman was elected secretary, to take the place of Frederick Calvin Norton, who had been secretary of the association since its organization in 1904. As he left the drug business in August he also left the association. Burton L. Bennett, of the Bennett-Bull Drug Co., is the president, and the association will hold a number of social meetings this Winter under his direction.

The Women's Club of the Allied Drug Trade of Chicago held its November meeting at the Hotel Sherman, with an address by John D. Shoop, superintendent of schools. Miss Florence Mattern, soprano, and Miss Lillian King, pianist, rendered a musical programme. Mrs. Gustav Frank was in charge of the arrangements.

Sidney R. Wrightington of the Boston Chamber of Commerce, was the speaker at the Fall meeting and dinner of the Boston Druggists' Association, at Young's Hotel. He took for his topic: "What the Chamber of Commerce Means to Boston." President F. L. Carter, Jr., presided, and there were 75 members present.

About 125 delegates attended the Fall meeting of the American Pharmaceutical Association at Minneapolis in November, with President Stewart Gamble in the chair. Among the speakers were P. L. Newcomb, Dean F. J. Wulling, C. H. Rogers and C. H. Huhn. Plans for the revision of drug standards were discussed.

The Southern Drug Club, made up of several hundred manufacturers, jobbers and representatives of drug and chemical houses, gave a banquet in Jacksonville prior to the opening of the session of the N.W.D.A. J. T. Doster, of Birmingham, Ala., is president, and John W. Dourr, of Montgomery, secretary.

The Montgomery County (Ohio) Pharmaceutical Association is defunct, following the resignation of the president and chairman of the executive committee, who were dominant factors in the organization. It was impossible, they said, to get the druggists to attend meetings.

Prof. F. N. Strickland addressed the December meeting of the Providence Alumni Chapter, Kappa Psi fraternity, of the Rhode Island College of Pharmacy and Allied Sciences. His subject was bacteriology and he explained the characteristics of the various types, etc.

The Springfield (Ill.) R.D.A. entertained the physicians of that city at a banquet—a "fellowship dinner"—at the St. Nicholas Hotel, Dec. 17. The speakers included Dr. Bernard Fantus, of Chicago, and Lee M. Pedigo.

At the November meeting of the Northwestern branch of the A.Ph.A. the Minneapolis R.D.A. members were guests of honor. The new anti-narcotic ordinance was the principal topic of discussion.

A special meeting of the Lucas County (Ohio) Branch of the Ohio Ph.A. was held in November at Toledo to discuss the new laws governing the sale of habit-forming drugs.

The St. Louis Branch, A.Ph.A., held its November meeting at the St. Louis College of Pharmacy, with a paper on "Pharmaceutical Advertising," by J. A. Wilkerson.

The November meeting of the Rock Island (Ill.) Druggists' Auxiliary was held at the home of Mrs. Harry Rowe, 41st street and 18th avenue, Rock Island.

At the recent election of the Ohio Valley Druggists' Association William H. Howe was elected a member of the Board of Control for Butler county.

The Elmira retail druggists have elected the following officers: President, J. P. Kelly; secretary, Tom Gerity; J. R. Spillane, treasurer.

Walter Bacon, of St. Clair, Mich., has been appointed a member of the executive board of the Ferris Pharmacy Alumni Association.

The Akron (Ohio) Drug Clerks' Association held a smoker in November with a sociable, cards and refreshments.

The Peoria Retail Druggists' Association held a banquet and social meeting in November.

## SCHOOLS AND COLLEGES

### University of Michigan School of Pharmacy.

The University dispensary service has already proved of great value to the students. Little aches and pains are no longer left until they become something serious, but are attended to at once, for the student figures that he has paid for the medical attention and so, why not receive it? The prescriptions are all filled by the School of Pharmacy free of charge. Two hundred were filled during the month of November. The beginning of the second semester the senior students will derive the benefit of this practical experience such as cannot usually be obtained outside the best prescription stores in the large cities.

Charles Dillon, who entered this Fall with advance credit from Albion, died Nov. 9, of tubercular spinal meningitis. During his short residence here he made many warm friends among students and faculty.

H. C. Eisenman, B.S. (Pharm.), '13, is in the chemical laboratory of the W. S. Merrell Co., of Cincinnati.

The Prescott Club was very fortunate in obtaining F. L. Shannon, B.S. (Pharm.), '10, Michigan State analyst, for their November meeting. The subject was "Fakes and Frauds." It was an illustrated talk, and of such general interest that more than 200 people attended.

Prof. A. F. Schlichting, B.S. (Pharm.), '12, was recently elected president of the Chemistry Club at the North Dakota Agricultural College.

Premananda Das, B.S. (Pharm.), '11, M.S. (Pharm.), '12, was married to Miss Subarna Prablia Dutta, Oct. 6, in Calcutta, India.

### Philadelphia College of Pharmacy.

The special lectures given this Fall and Winter at the Philadelphia College of Pharmacy have proved of special interest, the following having been presented recently:

On Nov. 24 W. A. Nightingale, of the United States Navy, spoke on "The Pharmacist in the Navy," dwelling upon the life of the sailor so that his hearers might be familiar with the conditions that meet a pharmacist when he enlists. He described fully the sailor's first aid to the injured, the medical treatment of the sick and the sanitary conditions of a battleship. His description of the Hospital Ship *Solace* and the work of the Hospital Corps was especially interesting. All of his descriptions were illustrated with a large number of colored lantern slides. For pharmacists desiring travel and adventure, the Navy offers unusual opportunities. First enlistment must be made as a hospital apprentice at \$27.50 per month, but from year to year and by re-enlistment, he may advance himself to the position of Hospital Steward, which pays from \$66 to \$120 per month. These salaries also include maintenance. Mr. Nightingale presented his subject very clearly, and his humorous expressions, acquired through nine years of naval service, made the lecture doubly interesting.

"The Cultivation of Medicinal Plants" was the subject of an interesting special lecture delivered by Fred A. Miller, of

Eli Lilly & Company, at the college, Dec. 1. Mr. Miller said the reason given for the cultivation of medicinal plants was the scarcity of crude material and the desire to improve the quality of the drugs. The chief difficulties encountered in this work are the successful propagation and the procuring of authentic seeds. Seeds are obtained from various sources, such as local collectors, Agricultural Experiment Stations, the waste and offal in large shipments of the crude drug, and also the large seed merchants. Weeds are the great evil in raising medicinal plants as well as in other agricultural fields. Between three and four years of experimental work have been done on digitalis, belladonna, hyoscyamus and cannabis indica. The experimental work consists in chiefly trying different fertilizers and soils and also hybridization. The results on the first three of these drugs have been very encouraging and real harvests are now in sight. Cannabis indica has also shown the possibility of successful cultivation. Mr. Miller showed a few slides of fields on which actual crops of these drugs were being successfully cultivated.

The fifth special lecture was given at the college Dec. 8 by Prof. W. A. Pearson, of the Smith, Kline & French Co.'s physiological laboratories. Professor Pearson introduced his subject, "The Physiological Testing of Drugs," by stating that in the future the cultivation of drugs would be the basis of manufacturing pharmaceuticals. He explained the mechanism of kymographs and string galvanometers, illustrating by means of lantern slides their mode of operation and the results obtained. After a brief review of the research work on digitalis, Professor Pearson pointed out the fallacy of attempting to chemically assay a drug with such a varied and complex composition. In speaking of the frog method for testing digitalis preparations, he commented on all the objections offered against this method but expressed his opinion that the recent adoption of a standard solution of strophanthin or ouabain for comparison of results eliminated these objections, especially because of the practicability of the method. The guinea-pig and cat methods were thoroughly explained, and in concluding his lecture, Professor Pearson showed the heart action of digitalis and strophanthus upon an anesthetized dog by means of the kymograph.

### University of Illinois School of Pharmacy.

The senior class has organized and elected officers as follows: President, Ralph Thompson; vice-president, T. Ewing; secretary, Harry Goldstine; treasurer, Miss Vavra; sergeant-at-arms, Philip Hildebrand.

Forrest O. Snyder, Ph.C., '13, has taken a position with Armour & Co. The demand for young men who have a knowledge of pharmaceutical chemistry is indicated by the fact that four of the pharmaceutical chemists and four of the graduates in pharmacy of this school are now employed with Armour & Co. Five of these alumni are employed in one department, of which Clemence Zimmerman, Ph.C., is assistant superintendent.

The 1913 convention of Kappa Psi Fraternity was held in Chicago, Nov. 26, 27, 28 and 29, with headquarters at LaSalle Hotel. The convention was given under the auspices of Chi Chapter (University of Illinois School of Pharmacy), Phi Chapter (Northwestern University School of Pharmacy) and the Chicago Alumni Chapter. A large attendance of delegates and visitors was present from the 40 chapters located throughout the country.

### Dept. of Pharmacy, University State of New Jersey.

The exterior as well as the interior of the University of the State of New Jersey, in Jersey City, have been reconstructed and remodeled within the last few months. The lecture room has been enlarged and four laboratories have been fully equipped with modern apparatus and appliances.

To celebrate this event, and to show the pharmacists and the friends of the institution the changes which have taken place, a reception was held at the college buildings, Oct. 31. The president of the university, James E. Pope, presided and spoke favorably of the transformation. The Hon. Henry Snyder, superintendent of the public schools of Jersey City, who has made a national reputation in the improvement of the school system, complimented the university on the improvements of the buildings as well as the laboratories and also the enlarged faculty.

David Strauss, president of the New Jersey State Board of Pharmacy, spoke on the value of a college education for pharmacists and impressed those present with the fact, that a

collegiate education would soon become a necessity in New Jersey.

Dr. I. S. Polak, former professor of hygiene in the Department of Pharmacy, complimented the institution on the great improvements in the buildings as well as in the faculty since the early days of the university.

Dr. Samson, a graduate of the college, presented a silver cup which is to be given to the graduate who makes the best examination in inorganic chemistry.

Prof. J. Leon Liscow donated a silk flag to the college.

Prof. J. J. G. Ross, of Eli Lilly & Co., delivered an educational and scientific lecture, showing the manufacture of pharmaceutical preparations in their laboratory. This lecture was illustrated with stereopticon slides and also moving pictures taken directly from the Lilly laboratories.

Reservations were solved after the reception and the buildings and laboratories, which were in full working order, were inspected by the visitors.

#### New Orleans College of Pharmacy Notes.

A change has been made this session in the method of conducting the examinations, and in the future monthly examinations will take the place of the preliminary exams.

The books of the session closed on Nov. 1, with an enrollment of 89. There are nine Cubans and one Costa Rican enrolled as pupils.

On Dec. 2 a lantern and moving-picture exhibition was given by Prof. Wright, showing the manufacture of pharmaceuticals in the laboratories of Eli Lilly & Co. The druggists of the city were invited to attend.

The students of the College of Pharmacy and the University proper are getting up a boat ride to take place the night of Jan. 9. They are looking forward with a great deal of interest to this affair and competition is very keen among them in the sale of tickets.

Both classes have held elections for respective officers.

#### College of Pharmacy, State University of Iowa.

I. H. Pierce, '12, has accepted a position on the instructional staff at the Washington Agricultural College at Pullman, Wash.

At the last meeting of the Mortar and Pestle Club Prof. Zada M. Cooper read a paper on "Personal Name Synonyms."

Christmas vacation began on the evening of Dec. 19, continuing until Jan. 5, when all classes will be resumed at noon.

At a meeting of the faculty of the College of Pharmacy on Dec. 4, a motion prevailed that they recommend to the president and Board of Education that beginning with September, 1915, entrance requirements be raised to high-school graduation.

#### University of Oklahoma School of Pharmacy.

The Christmas holidays were quite long this year, beginning Dec. 19, and ending Jan. 5. Nearly all of the out-of-town students took advantage of the opportunity to visit the folks at home.

A new typewriter is a recent acquisition in Dean Stocking's office. The dean has spent many anxious moments in trying to find the right key, and has just about decided to let the stenographer write his letters.

About 25 students, accompanied by Dean Stocking, visited the large wholesale establishment of Alexander Drug Co., at Oklahoma City recently. The boys were very cordially received and spent both a pleasant and profitable morning studying the wholesale side of drug life.

The faculty and the students of the School of Pharmacy were entertained through the courtesy of Messrs. Eli Lilly & Co., with a very interesting set of moving-picture views of the Lilly plant at the Empress Theater in Oklahoma City Dec. 20.

#### NEWS FROM SCHOOL AND COLLEGE.

The University of Saskatchewan has added a course in pharmacy, with lectures to begin Jan. 6 and close in April. This step is in accord with an agreement between the university and the pharmaceutical association. The university course is to prepare candidates for the final examinations required for the license to practice pharmacy. The association has agreed to exempt from their preliminary and final examinations all students who take the course in pharmacy at the university and who pass the final examinations there, provided that the course is approved by the pharmaceutical council and that the

examinations are equivalent to theirs. For the current session instruction in pharmacy and dispensing will be given by A. Campbell; in materia medica and prescriptions, by T. A. Rague; in chemistry, by Professor MacLaurin; in botany, by Professor Willing. The staff will consist of W. C. Murray, LL.D.; president, Geo. H. Ling, P.D.D.; R. D. MacLaurin, P.D.; professor of chemistry, Thos. N. Willing; professor of botany, A. Campbell; lecturer in pharmacy and dispensing, T. A. Rague; lecturer in materia medica and prescriptions, A. R. Weir, B.A., registrar. The subjects of the final examinations are pharmacy, dispensing, materia medica, prescriptions, chemistry and botany.

The Atlanta College of Pharmacy started the present session on Oct. 6 in its new home, especially modeled for its purposes, at 253-255 Courtland street. The institution not only has a building of its own, splendidly arranged for its purposes, but a large half-acre lot, practically in the business part of the city and very convenient to everything.

#### The Druggists' National Home.

AT a recent meeting of the trustees of the Druggists' National Home at Palmyra, Wis., it was decided that a fee of \$5 to join and \$1 a year be asked from every druggist, and that a general effort be made to induce druggists to become members of the Home association. A committee of three—of which J. J. Kearney, of Chicago, is the chairman—was appointed to bring about the financing of the Home, and to bring the matter before the National Wholesale Druggists' Association at the annual meeting of that body at Jacksonville, Fla., last month. Thanksgiving Day was appointed for a Thanksgiving donation from all the druggists of the country.

A number of changes were suggested in the regulations of the Home, notably that admission to its privileges be regulated by the age of the applicant and the time he had been in the drug business, so as to give the most deserving the first opportunity.

BUT—the Home needs money! Such an institution as this is planned to be, a real home for the aged and infirm druggist, requires constant support, a dependable source of income. Were there a sufficient number of wealthy druggists who could see the advisability of joining together to provide an endowment fund, the interest of which would serve to pay the bills for maintenance, etc., the plans of the trustees could be carried out in detail to the inestimable benefit of worn-out druggists in all sections of the country.

Apparently such an endowment from such a source is not possible, although there have been a number of very handsome donations from prominent firms. Hence the next and most natural step is to secure the support of the druggists of the country as a body.

If every druggist in the country would pay at one time the small sum of \$5 and every drug clerk the sum of \$1, the Home would be placed on a self-supporting, self-respecting basis. There should be no necessity for this constant appeal for funds to meet already contracted liabilities.

The Home is your institution—you are at liberty to visit it and utilize its decided advantages. It is not a money-making institution, but a haven for the men of our craft who have labored long and earnestly for the common weal. By supporting the Home you are doing your part not only to provide for those who have fallen by the wayside through age or illness or infirmity. To paraphrase a famous saying, "There but for the mercy of God lie I"—and no one of us knows when he may be glad to have such a veritable rest haven to which to turn.

The ERA from the first has appealed for the united support of the craft toward the complete fulfillment of the plans of the founders of this institution, and we are deeply in earnest when we repeat—in spirit if not in the same words—"No better use can be made of a \$5 bill by any druggist than its contribution to the trustees of the Druggists' National Home." It may not be bread upon the waters, for all will not be forced to turn for aid to this really philanthropic institution, but its return will be a hundredfold in happiness, comfort and renewed faith, in such beneficiaries as the bounty of the druggists of this country enables to enjoy freedom from worry, the best of care and real home comforts in one of the beauty spots of the Middle West.

Send that \$5 today, Superintendent Heimstreet will be delighted to acknowledge its receipt.

# BOARD EXAMINATIONS

## Arkansas.

LITTLE ROCK, Dec. 20.—At the recent meeting of the State Board of Pharmacy the following were successful in passing their examinations, 29 in all including one woman:

John Bruner, Nashville; John T. Puckett, Franklin; Wyatt Crawford, Benton; J. E. Turner, Hot Springs; A. B. Coger, St. Paul; W. C. Beldingfield, Pettigrew; A. O. P. Nickerson, Benton; W. C. Cruce, Monticello; A. J. Seeman, Little Rock; Henry Frick, Jr., Little Rock; Henry Stamper, Little Rock; John Parback, Little Rock; C. J. Walker, Little Rock; Jesse Herrod, Little Rock; F. C. Puch, Little Rock; G. C. Gilliam, Des Arc; H. W. Johnson, Hot Springs; W. B. Allen, Hot Springs; R. H. Verser, Scary; W. B. Walsh, Crossett; H. C. Overstreet, Argenta; Clarence Marsh, Prescott; W. F. Alexander, Dierks; W. A. Thomas, Eldorado; E. D. Gaughey, Hartford; R. E. Foster, Kansas City, Mo.; Miss Annabell Wilson, Wichita, Kan.; S. Y. Palmer, Shreveport, La.; W. O. Riggins, Vinson, La.

## Florida.

PALATKA, Dec. 20.—The Board of Pharmacy for the State of Florida will meet for the examination of applicants for registration as pharmacists in the Board of Health Building, Jacksonville, commencing at 9 a.m., Jan. 20, and continuing for two days. It is required that applicants be at least 18 years of age and that they present proof of four years' experience in the practice of pharmacy, time spent in a college of pharmacy to be credited as such. Applications must be filed in this office five days prior to the examination. Fee for examination, \$15.00.

## Illinois.

SPRINGFIELD, Dec. 5.—At the meeting of the Illinois State Board of Pharmacy, held in Chicago Nov. 18-20, 33 of the 93 candidates for registered pharmacist, 23 of the applicants for assistant pharmacist and one of the three candidates for local registration passed successful examinations. Their names follow:

Registered Pharmacists—David Baxter, Harold P. Dereby, Edwin B. Douglas, Joseph E. Dubsy, D. E. Finkelstein, Wm. Garside, V. M. Gaskins, Peter J. Gowens, John M. Hart, C. A. Halden, S. M. Kolar, Louis C. Kivitek, Wm. A. Lee, S. M. Mesiroff, Chester A. Milewski, Henry S. Mesirov, Clinton B. Painter, Leon R. Radomski, H. T. Schantz-Hansen, Albin J. Stritesky, Walter Swiecinski, Harry A. Taylor, Dvora Veselaja, Alexander Webster, E. R. Williams, Bernard Zak and Viktor Zucker, all of Chicago, and H. V. Cleveland, Grayslake; Leon H. Dewey, Madison, Wis.; J. J. Garrity, Spring Valley; Sophie C. Michels, El Paso; Guy L. Pulley, Marion; Reuben W. Walther, Peru.

Assistant Pharmacists—Frank J. Chmatal, Arthur A. Dahms, A. H. Erickson, Nicholas Engels, Chas. H. Grund, Jr., Earl P. Haney, L. E. Irvine, J. G. Jordan, J. J. Kaczkowski, Frank V. Kara, John Krizan, G. D. Lavieri, Henry C. Maynard, Anton Nessidall, Peter Patlogan, S. S. Petrulis, Michael Schwetz, Robt. B. Sherry, Adrian Ton, Lillian Voursanger, all of Chicago, and Warren B. McCabe, Rushville; Joe K. Oetzel, Danville; Albert Schreiner, Jr., Batavia.

Local Registered Pharmacist—Bertram J. Hooper, Lake Villa. The following passed the mid-month examination held at Springfield:

Registered Pharmacists—H. V. Cleveland, Gray's Lake; Leon H. Dewey, Madison; J. J. Garrity, Spring Valley; Sophie C. Michels, El Paso; Guy L. Pulley, Marion; Reuben W. Walther, Peru.

Assistant Pharmacists—Warren B. McCabe, Rushville; Joe K. Oetzel, Danville; Albert Schreiner, Jr., Batavia.

Local Registered Pharmacist—Bertram J. Hooper, Lake Villa. The next meeting of the board for the examination of applicants for registered pharmacist and assistant pharmacist will be held in Springfield on Jan. 20.

The next meeting of the board in Chicago for the examination of applicants for registered pharmacist will be held on March 10 and on March 12, 1914, for applicants for assistant pharmacist.

The next apprentice examinations throughout the State will be held on January 2.

## Iowa.

DES MOINES, Dec. 20.—Only 30 out of 92 who took the State pharmacy examination before the board succeeded. Those who got certificates as registered pharmacists were:

H. L. Platt, Anamosa; C. R. Machogan, Dyersville; Wilbur Cook, Sigourney; Charles Copeland, Lenox; J. W. Auld, Cedar Falls; J. M. Sturdivant, Cincinnati; Edward T. Sichel, Cedar Rapids; Karl Werner, Milton; Will Dreyer, Aplington; Herman King, Coin; S. S. Foster, Malvern; Adelbert Holt, Oskaloosa; James V. P. Moran, Le Mars; E. J. Bohninger, Des Moines; A. E. Engler, Dyersville; D. L. Arkwright, Seranton; Ernest Rosenthal, Decorah; M. C. McMurray, Janesville; Edward G. Herring, Waterloo; Homer P. Smelz, Glenwood; A. E. Schroeder, Dubuque; Roland A. Miller, Hancock; Earl Mady, Shelby; Jay M. Griffith, Des Moines; Roy Laughlin, Des Moines; Fred Darville, Des Moines; H. D. Irish, Des Moines; Emory Miller, Des Moines; Ernest W. Westphal, Olin; Lawrence McNamee, Sioux City.

## Kansas.

KANSAS CITY, Dec. 20.—The third quarterly meeting of the Kansas Board was held in Kansas City Nov. 12 and 13, at which time there were 51 applicants in attendance for the examinations. Of this number 19 were successful and received certificates as follows:

Marl M. Robbins, Fredonia; Montie Nelson, Lenora; Lida Horr, Frankfort; B. E. Taylor, McCune; Otto H. Munger, Athol; Lois Ellen Evans, Republic; Glenn S. Maddux, Onaga; Edward Govette, Elmore; Frank W. Ainsworth, Eureka; Roy S. Gillespie, Reserve;

Ray G. Samuel, Baldwin; Chas. W. Yoder, Haddam; Joe J. Gorman, Cawker City; Frederick A. Beyer, Kansas City; Geo. R. Belshaw, Jr., Seneca; Henry W. Dillard, Kansas City; Phillip C. Pfalzgröf, Kansas City; Joe L. Cherry, Liberal; George E. Coulter, Potter.

The next quarterly meeting of the board will be held in Wichita, Feb. 11 and 12, 1914, beginning at 9 a.m. Those desiring to take the examination should notify the secretary at least five days before the date of meeting.

## Louisiana.

NEW ORLEANS, Dec. 20.—Edward H. Walsdorf, secretary of the Louisiana State Board of Pharmacy, has compiled the results of the examination recently held at the Tulane University for certificates as registered pharmacists and qualified assistants.

There were 18 applicants. Dalph Donaway, of New Orleans, was awarded a certificate as registered pharmacist. Those awarded certificates as qualified assistants were George McDuff, of New Orleans, and B. B. Kennedy, of Pinola, Miss.

The various branches are under the direction of the following: Gus Seeman, chairman, pharmacy; Paul Eckels, materia medica; Peter Rupp, practical work; Frank J. Simon, chemistry.

## Massachusetts.

BOSTON, Dec. 20.—The following have successfully passed the examinations of the State Board of Registration in Pharmacy, and have been granted certificates as registered pharmacists:

Thomas H. Fox, Holyoke; Joseph C. Viera, New Bedford; Rudolph Bellefeuille, Fall River; Stuart B. Hawley, Boston; Maurice Penn, Lawrence; Charles Anastasia, Boston; Harry W. Baker, Albany, N. Y.; Frederic T. Browne, Jr., New Bedford; David J. Byrne, Mattapan; John J. Creeden, Malden; Frances P. Coddahu, Springfield; Cyrus D. Hakes, New York City; George Mazel, Lynn; Paul Mongeau, Indian Orchard; William J. McCannon, Wellesley; Abraham Troupin, Boston; George H. Hooper, Brookline; Walter J. Gilbride, Lowell; Zachary Zarsky, Boston; Louis H. Dubois, Lowell; Gilbert J. Healy, Wellington; Hermann T. Hemmen, South Boston; Harry Jaffe, Fitchburg; Harry I. Korobkin, Newtonville; Matthew Lang, Somerville; Clement M. Lussier, New Bedford.

Assistant's certificates have been granted to the following: Sylvia Gorshel, Chelsea; Edward M. Bartley, Whittinsville; Carlo Smiraglia, New York; Clarence A. Ahlquist, Lynn; Joseph H. Cooney, Boston; Ovide A. Dumas, Worcester; Albert E. Hunt, Holyoke; Miss Helen M. Rose, Quincy; Fred E. Therrien, New Bedford; Francesco Villari, Bridgeport, Conn.; Paul J. Worcester, West Somerville; Moses Berlant, Boston; Frank M. Gaffney, Leominster; Joseph A. Lamothe, Holyoke; William H. McDevitt, Salem; Temple A. Corson, New Bedford; James G. Elkind, Worcester; Simon Michaelson, East Boston; Walter L. O'Brien, Worcester; Humbert G. A. M. Rossi, Boston; Felix R. Scanlon, East Boston; Miss Minna Seimiger, Boston; Jacob Titiev, Brooklyn, N. Y.

## New York State Penalties.

The number of penalties paid the New York State Board during the month of November, also the character of violations, follows:

Adulterated and deficient prescriptions.....	2
Adulterated and deficient Pharmacopoeial products 2	2
Junior violation .....	1
Unlicensed dealers selling prohibited drugs.....	2
Label violation .....	1
Total .....	8 cases

## North Carolina.

RALEIGH, Dec. 20.—At a meeting of the North Carolina Board of Pharmacy at Raleigh, Nov. 18-19, for the examination of candidates to practice pharmacy, out of a class of 46, 38 whites and 8 colored, the following 15 were successful:

Brem Bonner, Hickory; Joe B. Haymore, Mt. Airy; Thos. E. Holding, Jr., Wake Forest; Edgar B. Mayberry, Charlotte; John A. Zeigler, Marshville; Lonnie W. Murphey, Raleigh; Guyton Hall, Asheville; Edgar T. Beddingfield, Raleigh; John F. Simpson, Raleigh; Carl W. Davis, Greensboro; Hector B. McPhaul, Lumberton; Clifton C. Munday, Statesville, N. C.; William M. Folkes, Rockingham; William B. Ramsey (colored), Greensboro; Detroit D. Johnson (colored), Raleigh.

The board agreed to add to their present examinations a branch in Practical Pharmacy to be inaugurated at their next meeting, which will be held on Tuesday, June 9. The board also decided to hold all of their meetings in the future at Raleigh, instead of holding the Summer meeting at the same place as the association.

## Pennsylvania.

PHILADELPHIA, Dec. 20.—At the examinations given by the State Pharmaceutical Examining Board in Pittsburgh and Philadelphia, on Nov. 7 and 8, 63 persons applied for registration as pharmacist. Thirty-three passed the examinations and 30 failed. Of the 153 applicants for qualified assistant pharmacist certificates, 110 were successful and 43 failed. The names of those successful were as follows:

Pharmacists—James C. Alexander, George L. McMillin and William H. Lysscomb, of Pittsburgh; Albert L. Kossler, Crafton; Harry J. Garvey, Charleroi; Walter W. Siegel, Erie; Charles R. George, Juniata; Michael Strozzi, Buffalo, N. Y.; George W. Carey, Harry E. Casey, M. Beatrice Comber, Arthur J. Durand, Alfred M. Evans, Leonora G. Fetters, Meyer S. Glaiser, Ralph A. Hurley, Aaron Lipschutz, Michael J. Mandarino, Pilibos Movsesian, Charles A. McBride, all of Philadelphia; Earle O. Bong and Alvin H. Kern, of Allentown; Howard J. Koch, Coopersburg; Agnes Duvoisin, Clifton Heights; Fanny Ferry, Freeland; Wilford G. Stauffer, New Holland; Lloyd P. Griesemer and C. Raymond Moyer, of Reading; Harold A. McKean, Ridley Park; John J. Bridgeman, Jr., West Chester; Marvin A. Shales, Wilkes-Barre; John F. Keppler, Williamsport; Jan S. Jorczak, Thorndike, Mass. Qualified Assistants—Arthur L. Baer, Ernest Davies, Lee A.

DeMason, George M. Gillen, Leo F. Jerome, James J. Klavon, William J. Kirsch, Theodore W. McDermott, John W. Kouzer, Howard A. Ward, all of Pittsburgh; William H. Seeds, Altoona; Elmer Bierwirth, Bellevue; Clyde T. Reed, Butler; Charles H. Lee, Charleroi; Leslie K. Davies, Cration; Martin Kovacs, S. Potter Brown, Jr., J. V. Stephenson, Jr., Greensburg; Harold Marsh, Irwin; Gus A. Bitner, Jeannette; Carl J. Dumeyer, Johnstown; Henry D. Primas, Lock No. 4; George A. Herd, Connellsville; John B. Torry, Cambridge Springs; Stanley A. Guskea, Monongahela; Edward H. Hoak, Elmer Thomas, McKeesport; Daniel Kovacs, McKees Rocks; Cecil Anthony, Natrona; Harry L. Miller, Washington; Glenn B. Hamilton, Fairmount, W. Va.; James A. Archibald, Wheeling, W. Va.; Leon H. Anthony, M. Lewis Agendick, Louis N. Braunstein, J. William Bright, Samuel M. Cuenkin, Benjamin Cohen, Parker B. Creep, William Eidelson, Isaac S. Gadoi, John H. Gralnick, Paul L. Hartnett, William Hendie, John W. Holloway, Abraham Hurwitz, Morris Kabacoff, Louis Kron, Matthew I. Lasley, Owen B. Law, Michael Meisel, George N. Netssy, Everett J. Roberts, John A. Rnphs, Harry M. Sagsay, Morris Senn, Robert J. Stewart, Charles F. Siegfried, Harvey A. Smeay, Edith Schofield, David L. Sabin, Walter Weidner and Joseph L. Wilder, all of Philadelphia; Vincent P. O'Neill, Ashland; Samuel A. Fretheway, Boyertown; Harold Schoonover, Carbondale; Fred L. Carn, Claysburg; Paul F. Houser and Harry W. Nudd, Chambersburg; Lester Y. Brendle and Raymond G. Groncy, Gettysville; John E. Collins, Conshohocken; Walter K. Escher, Dushore; Chalmers J. Durand, Easton; Alphus W. Kesser, East Berlin; Earl S. Gottschall, Eddystone; Laroy L. Penny-packer, Fort Washington; John A. Fissel, Gettysburg; Calvin E. Beil, Huntingdon; Joshua Israel, Lawndale; J. Walter Shaffer, William H. Snyder, Lebanon; Clark M. Miller, Lewistown; C. Paul Mallard, Lanerch; George W. Gerhard, Macungie; William A. Wallace, Charles Whitman, Middletown; Harry L. Guers, Pottsville; Daniel B. Nagel, Henry Mathias, Paul E. Rhoads and C. LeRoy Wall, Reading; Walter W. Rex, Slaton; Clayton H. Aloner, Shippensburg; George W. Samsel, Stroudsburg; Frank J. Reddon, Susquehanna; William M. Kemner, Tamaqua; Robert A. Levy, Trumbauersville; Gerald J. Ruddy and Martin Y. Smulyan, Wilkes-Barre; Isaac D. Kinley, Williamsport; Asher M. Hawk, Harold E. Werkheiser, Wind Gap; A. Hastings Fitzkee, Wrightsville; Louis J. Kleinfield, Alliance, N. J.; Lawrence G. Beisler, Hilton, N. J.; William J. E. Clymer, Phillipsburg, N. J.; Thomas A. Cramer, Point Pleasant, N. J.; Martin F. Carmody, Syracuse, N. Y.

The next examinations will be held in Harrisburg on March 14, 1914.

### South Carolina.

ORANGEBURG, Dec. 29.—At the November examinations of the State Board of Pharmacy, the following were successful:

J. Rhett Simmons, Chas. D. Miller, F. C. Duffie, H. E. Miller, John Hart Hardwicke, J. A. Gilberson, Charleston; B. F. Smith, Bowman; W. Clay Harper, Anderson; Jno. Gordon Howell, Sumter; W. C. F. Harris, Sumter; J. D. Irby Cross Anchor; John M. Hutchinson, Rock Hill; J. E. Watkins, Laurens; J. P. Sherard, Anderson; William LeRoy Rogers, Hemmingway; Edward W. Carroll, Columbia; William Wallace Wetsell, Spartanburg, white; and the following colored: George Washington Singleton, Spartanburg; Lemuel M. Dantzier, Orangeburg, and Fred Douglas Jones, Raleigh, N. C.

The next meeting of the board will be at Rock Hill on the third Wednesday in March, 1914, the board being required to meet every four months.

### NEWS OF THE BOARDS.

In its annual report to Governor Taylor, the New Jersey State Board of Pharmacy calls attention to the unusual spirit of unrest, rivalry and jealousy that is manifest among the druggists of New Jersey, pointing out that during the past year there have been an unusual number of complaints of alleged violations of law reported. All of these were investigated, but most of the cases seemed to be of temporary absences of the registered pharmacists in charge of the stores, or of owners who were registered being without registered clerks for a time. Of the eight prosecutions seven were successful. The report then continues: "There seemed to be a spirit of unrest among many pharmacists, where it was a loss of business, or a spirit of rivalry, or jealousy among competitors which has caused a wonderful amount of work for the board to get at the facts concerning complaints of procuring papers to attend the examinations by fraud or of furnishing false affidavits from employers as to time of apprenticeship. All of these charges were given a thorough and searching investigation, and in every instance the person making the complaint failed to furnish proof against any of the accused. The candidates this year have been, as a rule, of a high standing as to deportment while attending the examinations, but at the same time the board has been compelled to dismiss a number for conduct unbecoming gentlemen by violating the rules of the board." There are 3017 registered pharmacists and 139 registered assistants in New Jersey, making a total of 3176 in good standing. The receipts for the year were \$498.56 and the disbursements \$478.59. The balance turned over to the State Treasurer was \$219.97.

The closing meeting of the Washington State Board of Pharmacy was held at Spokane, Dec. 29-31. The board wishes to call attention to the provision of the pharmacy law which holds all proprietors of drug stores who are employing unregistered men equally guilty with the unregistered clerk, and that as rapidly as possible all such cases will be brought to court by the board. Former Secretary Lee, of the State Board, and now a member of that board, has retained counsel to fight the action of the State auditor, C. W. Clausen, in withholding his salary warrants. It is charged that the warrants are being withheld until a tangle is unravelled relative to alleged overpayments to the former secretary.

A banquet was given at the Lindell Hotel, Lincoln, Neb., recently by the members and ex-members of the Nebraska State

Board of Pharmacy in honor of the retiring president, Robert Lock, and Mrs. Lock, of Central City. After the banquet a theater party was given.

The Nebraska State Board of Pharmacy has organized as follows: President, D. J. Killen, Beatrice; vice-president, L. W. McConnell, McCook; 2d vice-president, S. E. Ewing, Creston; secretary, J. Earl Harper, Clearwater; treasurer, Orel Jones, Oconto.

Agents of the State Examining Board of Pennsylvania have been making a series of arrests in Lackawanna and Luzerne counties of drug clerks and proprietors charged with violating the Act of March 18, 1909, in selling poisons without a prescription.

At the recent meeting of the North Carolina State Board of Pharmacy, President H. S. Arrington, of Norfolk, and John E. Jackson, of Taswell, members of the Virginia State Board of Pharmacy, were guests of the Old North State Board.

Gov. Hall, of Louisiana, has appointed W. E. Allen, of Monroe; E. L. McClung, of Natchitoches; L. E. Carruth, of Kentwood, and E. H. Walsdorf, of New Orleans, to succeed themselves as members of the State Board of Pharmacy.

J. E. Justice, a prominent druggist of Clarksville, Tenn., has been appointed a member of the Tennessee State Board of Pharmacy. He will fill out the unexpired term of J. W. Head, which ends April 24, 1918.

Gov. Major, of Missouri, has made the following appointments to the State Board of Pharmacy: R. A. Doyle, of East Prairie, to succeed William Mittelbach, of Boonville. The term expires Aug. 16, 1918.

A special meeting of the Arizona Board of Pharmacy has been called for the second Monday in January at Douglas as which very important matters will be brought before the board.

## BOOKS REVIEWED

DICTIONARY OF PHARMACY. For students, teachers and examiners, etc. By George F. Payne, Ph.G., M.D., F.C.S. State chemist of Georgia for eight years, president and professor of pharmacy of the Atlanta College of Pharmacy, etc. 2d ed., 6x3/4 inches, 167 pages. Mor., \$2.50. Published by the author, Atlanta, Ga.

This is not a dictionary in the usually accepted sense, for no attention is given to the derivation or pronunciation of the pharmaceutical terms listed. More properly, the book is a "catechism of pharmacy," and this view is practically conceded by the author himself, who tells us on the title page that the text is "arranged in question and answer form for brevity and directness, and to impress students." Many educators concede that instruction imparted in catechetical form has a place in the training of the student, and more especially if he be required to look up the necessary data and formulate his own answers. In this book the topics are arranged alphabetically with matters relating to the same subjects grouped together, but not all of the answers to the questions, which number about 3000, seem to be well expressed, for what scientist would define "benzene" without other qualification as "C<sub>6</sub>H<sub>6</sub>. It forms a closed chain and is called the benzene ring. (It is the starting-point of many organic chemical compounds.)"? Or "protein" as "dead protoplasm"? Yet these answers, as quoted, appear on pages 26 and 34 of the book. Errors in proofreading are very numerous, most of them being inexcusable. According to the author, "the work is based on the American idea of short, clear explanations and definitions," but in our opinion not all of the definitions he has given conform to the basic idea thus expressed.

### SOLVENTS, OILS, GUMS, WAXES AND ALLIED SUBSTANCES.

By Frederic S. Hyde, Ph.B., formerly assistant chemist, Brooklyn Health Department, late assistant in analytical chemistry, Columbia University, etc. 5/4x8 1/4 inches, 176 pages. Cloth, \$2. New York, Van Nostrand Co.

According to the author, the notes incorporated in this monograph are intended for the use of factory chemists and others who may desire a short reference book on commercial organic products. The methods and tests outlined have been taken from many authoritative sources and are sufficiently complete to answer the purposes of the average industrial chemist. The pharmacist also will find much valuable information in the book, which is well worth a place in his library.

### Reprints, Proceedings and Reports Received.

From the Research Laboratory of Parke, Davis & Co., Detroit, Mich.: On Crystalline Kombé-Strophanthin, by D. H. Brauns, Ph.D., and O. E. Closson, Ph.B.

The Pompeian Co., Washington, D. C.: Seven Eventful Olive Oil Years.

The American Underwriter Magazine, New York: Sprinkler Protection for Factory Workmen.

Citizens Central National Bank of New York: Complete Schedules of the Tariff Act of 1913.

## Riker-Hegeman Reorganization Plans.

*Old Stock at \$100 Par Value Replaced by New Issue at \$5 Per Share in the "Corporation of Riker and Hegeman Stock," a Delaware Corporation.—Many Shares Traded in on the New York Curb.*

**G**EORGE J. WHELAN and his associates have at last put through the deal which has been pending for months past, and the Riker-Hegeman stores are now controlled by the United Cigar Stores interests. A new corporation has been formed under a Delaware charter, with an authorized capital of \$5,000,000 in common stock, of which \$3,700,000 will be issued, while the remainder, \$1,300,000, will remain in the treasury as treasury stock. It is expected that the rate of dividend will be increased to 10 per cent. per annum. The stock of the old Riker-Hegeman company will be reduced from \$100 a share to \$5 a share—that is, 20 shares of the new stock in the Corporation of Riker and Hegeman Stock (the new corporation) will be exchanged for one share of the old. The purpose of this reduction in share value is to promote public investment, and a more general distribution.

The capitalization of the Riker-Hegeman Co. is \$9,000,000, of which \$7,000,000 is in common stock, and \$2,000,000 preferred. In acquiring control of the Riker-Hegeman Co. common shares, Mr. Whelan bought from the company itself at par \$1,500,000 common stock, and of the \$7,000,000 outstanding the Whelan associates secured approximately \$3,700,000, thus giving him control of the corporation.

In his official statement in which Mr. Whelan announced the completion of the deal and the completion of his plans, he said:

"My associates and myself arranged to buy a majority of the common stock of the Riker & Hegeman Co., with no other purpose than to develop to the fullest extent of its possibilities what we believe to be an enterprise already profitable. The present annual gross sales of the drug company in its 93 stores is, according to our best information, about \$15,000,000.

"In embarking in the drug business, I am carrying out a plan long in contemplation by myself and by those who in association with me have brought the United Cigar Stores Co. up to its present position as a mercantile enterprise. The systematization of that business, especially from the auditing standpoint, was the feature that cost us most anxiety, and most money, in the early days of its career.

"Investigations several years ago satisfied us that the retail drug business as heretofore conducted, while yielding a handsome return on the investment, was without an organized auditing system that could be called upon at any hour of any day for reliable figures. We had developed by long experience and costly experiment a system ready-made, and this consideration, more than any other, directed our attention to the drug business.

"The Riker & Hegeman Co., we were convinced by investigation, had progressed along the right lines. So far as we have been able to discover, it is an economically, progressively managed business, well abreast of modern methods, and in the ablest hands.

"In those hands the drug business will undoubtedly be left, so far as its practical operation is concerned. The drug company will, as a first step in the contemplated change, come under an auditing system similar to that which has been developed and proved to be efficient by the United Cigar Stores Company.

"Under the plan of reorganization this new company will

issue shares of a par value of \$5 each, or at the rate of 20 shares of the stock of the new company, having a par value of \$5, for each share of the Riker & Hegeman Co., having a par value of \$100 each acquired by the new company.

"It is proposed that in the Riker & Hegeman directorate there shall be no one who is not actively engaged in the promotion of its business, as there is now no director of the United Cigar Stores Co. who is not actively engaged in its business. No element in the building up of the Cigar Stores Co. has contributed so much to its success as a firm adherence to this rule.

"At the top will be men who know the drug business and will be responsible to the stockholders and to the public for its management down to the smallest detail.

"In the drug stores the only monopoly we will strive to establish is a monopoly of good service such as for years the United Cigar Stores have sought to establish.

"In this relationship of business policies between the drug stores and the cigar stores, as well as in the advantages to follow the adoption by the drug company of a similar auditing system and a similar real estate system, we feel that the drug company will derive a benefit that will prove that what has been done is based on fundamental principles of good business, judged from the standpoint of the stockholder, the patron of the stores who buys over the counter and of the employee who, through loyalty and good work, helps to build up the success of the business."

## Featuring Confectionery in Drug Stores\*

By WILLIAM T. BELL.

**T**O my mind this department, which has become one of vital importance to the retail druggist, has been sadly neglected; and having had the privilege of representing one of the leading manufacturers of confectionery of New England, in the State of New York, I could not help but realize the golden opportunities which the retailer is letting slip through his fingers by not featuring confectionery.

Of course, most all retail stores carry confectionery, but carrying confectionery and featuring it are two distinctly different propositions.

Purchasing a bill of confectionery and packing it solidly into a case and waiting for customers to call for it, is one thing, while intelligently featuring the same is another.

### Large Expenditure Unnecessary.

It is not necessary to expend a lot of money in buying an expensive case of display confectionery, but let the retailer use the means to be found at hand; for instance, there is no better place, to my mind, for featuring confectionery, than by using the backbar of our soda fountains.

Have a stand of glass shelves and make a neat display of packages ranging in price from 10 cents to \$1. or even higher in price, depending upon the demands of your trade.

Then run sales every week of bulk goods, *i. e.*, purchase a barrel of kisses at 11 cents or 12 cents a pound, mark them 10 cents and put the barrel right in the window on its side, and scatter enough kisses to thoroughly cover the base of your window. This encourages the customer to believe that you are selling some candy and that if you are selling candy it must be fresh. The Fall is a good time to feature kisses, they keep well at that season.

A wrapped caramel is another piece of goods that I have

\*Paper read at the 1913 meeting of the Massachusetts Pharmaceutical Association.

found to be a good seller. You can buy assorted caramels at 29 cents a pound, mark them 29 cents, put 5 or 6 pans containing 6 pounds each in your window with a large sign, "40-cent caramels today 29 cents." Isn't it better to clean up a lot of 60 or 100 pounds of caramels and make 9 cents a pound than to put them in a tray and wait for customers to purchase them at 40 cents a pound?

Some stores run a 1-pound box of assorted chocolates on Saturdays for 29 cents, but I have not been successful with this particular proposition.

I carry a 29-cent chocolate mixture and supply it on demand, but my game has been to carry six or seven good numbers of one make, in 1-pound and  $\frac{1}{2}$ -pound boxes, ranging in price from 50 cents to \$1 for 1 pound and 20 cents to 40 cents for  $\frac{1}{2}$  pound.

By confining myself to six or seven numbers I can watch my stock better and the danger of furnishing a customer with stale goods is practically eliminated.

This suggests one feature of the confectionery game that I have had brought to my attention most forcibly, i.e., many druggists try to handle too many lines of goods, consequently some particular packages get passé and there is danger of losing a customer by furnishing him candy the vintage of which is uncertain.

During the Summer it is well to watch nut goods, such as montevideos and pecans, and eliminate them from packages and mixtures so far as is possible.

The location of one's store, also the class of trade one enjoys, is the key to the grades of confectionery one should carry. Every dealer has to experiment for himself and try out various propositions.

Some stores can handle fancy colored packages, while others can sell nothing but plain wrapped boxes; some can handle a large assortment of holiday packages, while others find they have most of their shipment of fancy boxes left over; and right here let me suggest, don't try to sell a box of candy with a Christmas card in it on the Fourth of July.

Immediately after a holiday dump your holiday packages into your trays and sell them for what you can get.

It is unwise to place filled boxes in a show window where sunlight or heat will reach them, as the coatings of chocolates contain a large percentage of cacao butter which the sun will melt and this will ruin your chocolates.

It is better to have your dealer furnish dummies to be used in window decoration, and even these should be protected from strong sunlight, because they will fade and become unfit for display.

By using the backbar of your soda fountain for a representative display of confectionery you can reach it easily—the customer can't help but see it, and as soon as a sale is made replace the sold package from cartons kept elsewhere.

This method keeps your stock moving.

There is nothing new in this paper—it is simply a few suggestions gathered while calling upon the trade, but since returning to the retail drug business I have put them into actual operation to my advantage. So if there is anything of value to any of you gentlemen in these few suggestions, I will feel that I have not wasted your time and mine by writing and reading this paper.

## Annual Report of U. S. Chemist.

From the annual report of Chief Chemist Carl L. Alsberg, which is a part of the Annual Reports of the Department of Agriculture, the following paragraphs of interest to the drug trade have been taken:

*Sherley Act.*—The work of the Bureau of Chemistry under the food and drugs act during the year was greatly stimulated by two important acts of Congress amending this law. The first, known as the Sherley amendment, enacted August 23, 1912, deals with medicines branded with false and fraudulent statements concerning their effect on disease. To make this act rapidly effective, as many chemists as could be spared were transferred during the Winter from food to drug work. These chemists, transferred to the laboratories in Washington, New York and Chicago, in a few months analyzed hundreds of these preparations. As a result of this work seizure of several of these preparations was recommended and the resulting cases were won by default. Even at this early date a vast improvement in the labeling of medicinal preparations has resulted. Such positive therapeutic claims as "a sure cure,"

"a reliable remedy," and the like are being replaced on the labels by less misleading expressions, such as "will be found beneficial in" or "will relieve many of the symptoms of." Claims that preparations are cures for such serious diseases as tuberculosis or cancer do not appear on the labels as often as formerly.

Through the Secretary of the Treasury it has been possible to apply the Sherley Act to nearly all importations of drugs, so that false and fraudulent labels should soon disappear from imported medicinal products.

*Physicians' Supplies.*—Special attention has been given to products of physicians' supply houses which do not pass through the usual trade channels of wholesale and retail drug houses and therefore escape the notice of inspectors. Many of these products were found to be adulterated or misbranded.

*Crude Drugs.*—Analyses have been made of a large number of samples of anise and fennel seeds and cubeb berries to set standards for the composition of the pure articles and to detect the admixture of inferior or exhausted seeds. A method was developed to distinguish the genuine Peru balsam from imitation and from mixtures. The analytical part of the investigation of the adulteration of pyrethrum, or insect powder, has been completed. Results of the investigation of oil of chenopodium show that ascaridole, the medicinally active constituent of wormseed oil on which the vermifuge properties of the oil depend, is a very unstable compound of the peroxid type. Its relations to other compounds have been elucidated, and a number of new and interesting substances prepared from it.

*Insecticides.*—An investigation has been made of the toxic effect on fruit trees of certain constituents used in insecticides, notably copper and arsenic. Apprehension has been entertained by some, especially the orchardists of the semiarid or irrigated districts of the West, that the continued use of the large amount of spray containing these substances might ultimately result in a serious accumulation in the soil and consequent injury of the tree through absorption of poison by the roots.

*Analytical Methods.*—Investigations of analytical methods of various kinds are always needed in conducting various lines of work. Among those recently studied are: Methods for the examination of asafetida; the detection of small quantities of strychnine in the presence of large quantities of quinine; the determination of moisture, arsenic, and lead; and the determination of tin in canned goods. Some of this work is done in co-operation with the Association of Official Agricultural Chemists. The method on which the leather and paper laboratory has worked in co-operation with the American Leather Chemists' Association for determining glucose in leather has been fully established in this laboratory and made the official method of the association. The contract laboratory has co-operated in a similar way with the American Society for Testing Materials and with the Bureau of Standards.

*Pharmacological Investigations.*—Information was obtained concerning the action of caffeine under a variety of conditions. Acute and chronic intoxications with salts of tin were studied and observations upon the action of tartrates were made.

### Ohio Insecticide License Fee Prohibitive.

According to a law passed by the Ohio Legislature last year any wholesale druggist who makes a pretense of supplying his customers with most of the insecticides and fungicides on the market will be forced to pay something like \$14,000 annually for the privilege. The law provides a license fee of \$20 for each variety of such bug and worm-killers carried, and as there are more than 700 such preparations on the market, the amount of the annual fee for a wholesaler would be prohibitive. The result has been a protest to the Governor by wholesale drug houses and a personal visit to the State Executive by a committee from the Ohio State Ph.A., headed by G. B. Kauffman, of the Kauffman-Lattimer Co., and J. D. Price, of the Orr, Brown & Price Co. The State Agricultural Commission, to whom the enforcement of the law is intrusted, have not as yet made any attempt to do so.

### National Drug Trade Conference.

A meeting of the executive committee of this conference will be held at the New Willard Hotel in Washington, Jan. 12, at 10 o'clock, a.m. The conference itself will convene at the same place Jan. 13, at 10 o'clock a.m. Each constituent association is entitled to three delegates.

## FROM THE BUSINESS FIELD.

More than 200 representatives of business houses from which the United Drug Co. buys its raw materials toured the company's plants in Boston last month, inspecting the manufacture of the Rexall remedies, candies, perfumes, etc. Luncheon was served at the Copley Square Hotel and there was a banquet at the same hostelry in the evening. One of the features of the banquet was the detailed history of the company as outlined by President Louis K. Liggett, who said in part: "You gentlemen may wonder why we ask you to be with us today and see what we are doing and tonight to hear how we have done it. With us tonight we have the officer of the firm from whom we buy corks for our bottles; the bottle manufacturer; the paper man from whom we buy paper for labels and wrappers, down to the firm from whom we buy wooden cases in which our goods are shipped. We have as guests the crude drug concerns, and every big business represented who sell us any class of material merchandise we use in our business. We even have the bankers from whom we buy money to help us finance the business. We term you our business friends. We have studied the needs of an up-to-date drug store and supplied them. We have analyzed the business of the retailer so that we could help him in his service to his customers, the buying public. We have tried to make him more money by making him a merchant and evolutionizing his store. We have been able to give him the fullest benefit because we have kept close to him, because we know him well and his possibilities. We are handling \$15,000,000 in turnover this year, and in a few years it will be nearer \$50,000,000."

J. A. Dew, until recently assistant State entomologist of Alabama, has resigned to take the position of demonstrator in citrus fruit insecticides, with the Van Antwerp Drug Corporation. A demonstration department is to be established in connection with the Van Antwerp Corporation, this firm having secured exclusive rights in a number of the Southern States for the manufacture and sale of Schnarr's insecticide. Mr. Dew will have charge of a bureau of information to be established by the corporation for the benefit of citrus fruit growers in Mobile and Baldwin counties, and his demonstration work will be confined largely to Southern Alabama.

The new Owl drug store, No. 5, at Kansas City, Mo., which is to be opened for business this month, is on the busiest corner of Kansas City. The drug company occupies the first floor and the basement, the ground floor space is 38 by 112 feet in the clear. The ceiling is 18 feet high, thus giving room for a large and airy mezzanine floor. The basement space is 55 by 124 feet, with a ceiling 12 feet high. It is all finished and decorated, and will be used as a salesroom, easy access being gained by a broad stairway. It is understood that the Owl Drug Co. rental in this new location—12th and Walnut streets—is \$30,000 a year.

The Buck & Rayner chain of drug stores, Chicago, controlled by Louis Eckstein, president; Stephen Hexter, vice-president; Charles T. Boynton and others, has leased the entire ground floor and basement of the new Bezak building, 1307-1309 Milwaukee avenue, just a few doors north of the Wieboldt department store. The same syndicate owns the leasehold at the southwest corner of State and Adams streets on which site Buck & Rayner expect to erect a 16-story building next year. The plans for this new structure are well under way.

The firm of John Wyeth & Brother, Inc., of Philadelphia, has been incorporated under the laws of the State of Illinois. The capital stock is \$4,000,000, of which \$50,000 is in the State of Illinois. This step was necessary, according to Harry C. Trumbower, secretary and treasurer of the company, to make it possible for the company to open a distributing station in that State. Preparations are being made by the concern to open similar stations in other States.

The Riker-Jaynes Co. opened its new store in Lewiston, Me., Dec. 19, with a beautiful sanitary soda fountain, humidors for the display and storage of cigars and tobacco, a modern brine ice-cream freezing apparatus, gas kettles, fruit-paring and crushing machines, etc. The store includes a sick-room supply department. The new store occupies all the street floor of the Lewiston *Journal* building except the corridor, and a similar space in the basement.

Joseph R. Methudy and associates have leased a store room in the corridor of the Pierce building, St. Louis, for a drug store. Methudy has a drug store at Russell and California avenues. The Pierce building is a 17-story building covering half of a block and connected with the Merchants' Exchange, which occupies the other half of the same block, and is opposite the Planters Hotel. This would seem to insure the corridor store success.

The wholesale chemical and drug business of C. H. Talcott & Co., of Hartford, Conn., has been incorporated under the name of the Talcott Company. Several old employees of the house have become stockholders and officers of the new company, and Frederick F. Small, who has bought an interest, is president and treasurer. The business is one of the oldest mercantile concerns in Hartford, having been established in 1851.

The officials of the Churchill Drug Co., of Cedar Rapids, Iowa, gave a complimentary banquet to its employees at the Commercial Club in that city recently. This company began business 11 years ago with a force of less than six men. There were 50 present at the banquet. The banquet was the culmination of a series of educational talks and tests Prof. Daniel Sloan has been carrying on in the interests of efficiency.

The Ganby-Walters Co. have gone to Jacksonville, Fla., to engage in the manufacture of proprietary medicines, extracts and pharmaceutical preparations. They will manufacture for the jobbing trade and will do business strictly with the jobbers. H. C. Schrader, one of the largest fruit shippers in that section of Florida, is president of the concern, and the management is in the hands of E. H. Anderson.

Eli Lilly & Co., Indianapolis, were hosts recently to 30 students of the pharmacy department of the University of Wisconsin, Madison. The students were entertained at luncheon at the company's plant, at a theater party, and finally at a banquet in the evening at the Claypool Hotel, where Charles J. Lynn, vice-president and general manager of the company, presided.

Growing and marketing of ginseng is to be undertaken by the Ladoga Ginseng Gardens, Ladoga, Ind., just organized and incorporated with a capital stock of \$6000. The growing of ginseng has been accomplished very successfully in some parts of Indiana. Those interested in the new project are George W. Anderson, R. A. Allison and Frank Quinley.

Woodall & Sheppard, druggists, of Charlotte, N. C., have announced their retirement from the drug business. They operate one of the finest stores in the State, but their lease expires Feb. 1, and so far they have been unable to secure a satisfactory location and have deemed it best to retire from business altogether.

The Cincinnati Economy Drug Co., wholesale drug house at Canal and Walnut streets, Cincinnati, have leased the building at 917-921 Main street to obtain larger quarters. The building consists of a basement, four floors containing 21,000 square feet, and it was ready for occupancy the middle of December.

The Sheffield Dentifrice Co. and the New England Collapsible Tube Co. have plans for a large addition to their factory which will replace their storehouse recently burned. It is understood that the work will be begun at New London in the Spring.

E. H. Rau, a well-known druggist at Wheeling, W. Va., will make extensive improvements to his large store early this year. The "new" pharmacy is to be fitted up with a 25-foot soda fountain of latest type and a 17-foot cigar case. Partitions are to be razed between two storerooms to provide increased space.

A wholesale drug business will be conducted at Evansville, Ind., by the Evansville Wholesale Drug Co., which has been organized and incorporated with \$25,000 capital. Those interested in the company are W. P. Woods, E. J. Laval and V. Alexander.

Ross, the druggist, at 9th and Vine streets, Cincinnati, for a quarter of a century, has closed a deal for the store at the southwest corner of 9th and Walnut streets, and occupied the new location last month.

Grant Hemphill, of Cincinnati, Ohio, and Frank Loring, of Rising Sun, Ind., have purchased the drug store of J. P. Hemphill, of Rising Sun. The new firm will be known as Loring & Hemphill.

The Mentholatum Co., headquarters of which are at Wichita, Kan., have occupied a new \$22,000 plant at Bridgeburg, Ontario, where this preparation will be manufactured.

## DRUG LAWS AND RULINGS

**Tennessee's New Anti-Narcotic Law.**—What is said to be the most stringent anti-narcotic law in the Union goes into effect in Tennessee on Jan. 1. It has been drafted to stop the indiscriminate sale of habit-forming and narcotic drugs and provides that no such drugs or their derivatives shall be sold except on the prescription of a reputable physician, and that the order must be filled on the day of its issuance. Druggists are also required to keep a record of all sales. A section of the law, which forbids druggists to keep on hand more than five ounces of morphine is attacked as unconstitutional. A section of the bill forbids the sale of medicines—except for external use—when they contain more than a specified amount of any narcotic; in the case of morphine one-fourth of a grain to the ounce (av.). In order to check the sale of morphine by itinerant peddlers the possession of any of the narcotics named or their derivatives is held *prima facie* evidence of the violation of the law.

**Sold Oil in a Fruit Jar.**—A Champaign (Ill.) druggist has paid a fine of \$10 for selling gasoline in an unlawful receptacle. He had filled a fruit jar for a boy. The law requires that all gasoline receptacles shall be labeled in red with letters not less than one-half inch in height.

**To Test Validity of the Sunday Law.**—The retail druggists of Selma, Ala. have employed counsel and will fight the State law which prohibits the sale of anything else than drugs on Sunday. The druggists are to keep open on Sunday, as usual, and will sell cigars, soda water, etc. They declare that they will refuse to sell medicine if forced to close.

**Druggists Allowed Minimum Amount of Alcohol.**—Gov. Cruce, of Oklahoma, has given instructions to a State bonded warehouse for the distribution of alcohol that no druggist shall be sold more than 10 gallons during a month, and not to exceed 100 gallons during any one year. The Governor is convinced that alcohol being sold by the State under the prohibition law for pharmaceutical and scientific uses is being employed in the manufacture of tinctures and other products that are intoxicating. Up till this ruling there has been no limit to the amount of alcohol a druggist could purchase.

**Sulphate of Iron Ruling Questioned.**—Representatives of the American Steel and Wire Co. have protested to the Iowa State Board of Pharmacy against a recent ruling of the board concerning sulphate of iron. The board notified lumber yards and hardware stores throughout the State that they must not sell this product, which is a by-product of the Steel company's business. As the board interprets the law no one but a pharmacist can sell sulphate of iron; while the steel corporation men declare that it is used extensively as a remedy, especially for hog cholera, and it is unjust to confine its sale to druggists.

**No More Liquor Sales on Sunday.**—Druggists of Kalamazoo have decided to sell no more liquor on Sunday. The action was taken voluntarily because of the large number of offenders appearing in court, and confessing that they obtained their liquor in drug stores.

**Illicit Stores Under Ban in Bay State.**—Under the new pharmacy law in Massachusetts any place at which drugs of any sort can be purchased comes under the jurisdiction of the State Board of Pharmacy, and a wholesale clean-out of "shady" places is anticipated this month.

**War on Drug Store Bars at Kansas City.**—Police Commissioner Reynolds, of Kansas City, Mo., has inaugurated a campaign for the enforcement of the law against drug stores selling intoxicants for other than medicinal purposes.

**New Drug Store Rules in Massachusetts.**—Under the new drug law in Massachusetts no store can be kept open for the transaction of a retail drug business unless it is registered with and has a permit issued by the State Board of Pharmacy; a fee of \$1 is required. In applying for store registration, the storekeeper is required to answer several questions. Among them are the location of the store, the name or title under which business is to be conducted, and the owner of the store. If the store is opened by an individual the name must be stated. In case of a partnership, the firm name must be given, the names of partners who are registered phar-

macists, and partners who are not registered, names of partners actively engaged in the business, the date when the partnership was formed and if there are unregistered partners, the date when each became partner. A statute enacted in 1908 provides that no unregistered partner shall be actively engaged in the drug business. The name of the registered owner or partner which appears on signs and labels must be included in the answers and the names of the clerks who are registered pharmacists, as well as the names of clerks who hold certificates as assistant registered pharmacists. The applications may be signed by an individual owner, or if partnership, by any registered partner, and must be sworn to before a justice of the peace.

**Life-long Registration for Pharmacists.**—The Ohio State Pharmaceutical Association has begun a State-wide campaign for a law providing that pharmacists be registered for life instead of for three years, as at present. Such a law would place them on the same plane as physicians in regard to registration, they assert. Hundreds of blank petitions have been mailed to every pharmacist in the State. These will be signed and returned to officers of the association, who will ask the general assembly to pass such a law. Members of the State pharmaceutical association who are active in the campaign are E. W. Harrington, Columbus, drug inspector; C. D. Keel and H. W. Cotner.

**Codeine Held Alkaloid of Opium.**—The Board of U. S. General Appraisers has handed down a decision that codeine is properly classified as an alkaloid of opium, thereby sustaining the action of the collector of the port of New York and overruling the protests of Merck & Company and Gustav Martin. Codeine pays duty under paragraph 43, tariff act of 1897, and paragraph 41, tariff act of 1909, as an alkaloid of opium whether manufactured from opium or synthetically from morphia. The same classification holds under the tariff act of 1913.

### N. Y. POLICE MAY SOLVE SUNDAY CLOSING.

**Business Men Complain to Commissioner Waldo Against Sale of General Merchandise on Sabbath.**

THAT the local authorities may solve the problem of Sunday closing now confronting the druggists of New York City was evinced by the recent reports that Police Commissioner Waldo had assured various business men that orders would be issued to drug companies confining them to the drug business on Sunday. The Commissioner has received a number of complaints against the sale on Sunday of general merchandise by drug stores. The complaining dealers argued that the competition was unfair and could not be met because they were obliged to keep their stores closed.

Alfred H. Cosden, vice-president of the Riker-Hegeman Company, and Joseph B. Greenhut, of the Greenhut-Siegel Company, are quoted on the situation, the former having asserted that "our Sunday business is now conducted at a loss and we would be glad to be permitted to close down entirely on Sunday. The stores are kept open on Sunday solely for the convenience of the public. We have received no intimation from Mr. Waldo that an attempt is to be made to restrict the character of the business we do on Sunday, although I have heard that complaints have been made to him on the subject."

Mr. Greenhut is quoted as saying:

"There is no question that drug stores ought to open on Sundays for the filling of prescriptions, selling of medicine or any other emergency necessity; but when it comes to selling everything else except wearing apparel it is unfair competition. We have no criticism to make of the drug stores selling everything they can through the week. But when it comes to continuing daily trade seven days and nights a week it is a far different matter.

"We also find no fault with the small drug store keepers of outlying sections who sell a few outside things like candies, because that is sometimes a convenience to their usual patrons. But when the large places become practically department stores seven days a week we feel that we are not getting a square deal.

"We have a large drug store with a prescription department and we might with just as much propriety as the regular drug stores keep the entire store open on Sundays so persons might enter the drug department. We do not feel that this would be right."

**LABEL LACKS ACETANILIDE STATEMENT.****Headache Tablets Contained Less Than Stated Quantity—Cottonseed Oil in Olive Oils.**

WASHINGTON, Dec. 20.—The Department of Agriculture has given public notice of judgments 2567 to 2626, imposed by the courts in cases brought by the United States involving violation of the Food and Drugs Act, most of them relating to misbranding or adulteration.

A fine of \$10 and costs was imposed upon Allaire, Woodward & Co. (Inc.), Peoria, Ill., for the shipment in interstate traffic of a quantity of headache tablets which were misbranded. The label read: "Headache Tablets Contains Acetanilide 3 grains. Never fail to help all kinds of headache. Relief prompt and pleasant. Produce no nausea . . . Directions for use: Dose one tablet, Repeat the dose once an hour until relieved. . . . Peoria Pharmacal Co., Peoria, Ill." Each tablet contained only 2.594 grains of acetanilide. Further, the quantity or proportion of acetanilide per ounce as required by Regulation No. 30 of the Rules and Regulations for the Enforcement of the Food and Drugs Act was not stated. The acetanilide declaration was in type smaller than 8 point (brevier) capitals, contrary to Regulation 17, paragraph c, of said rules and regulations.

Judgment of condemnation and forfeiture was entered against three barrels of so-called olive oil remaining unsold at Boston, Mass., and alleged to have been shipped by Natale Licata, New York, and transported in interstate traffic. Product was adulterated. It was labeled: "N. L.—78—New York—V. Cuilla, Boston, Mass." Cottonseed oil had been mixed and packed with product. It was ordered sold after label had been made to read: "Olive oil and cottonseed oil." The same adulterant was used to the extent of 60 per cent. in an olive oil shipment made by Louis Scianamea, New York. Court in this case suspended sentence.

A fine of \$100 was imposed against the above defendant for shipping so-called olive oil which was adulterated and misbranded, the adulterant being 62 per cent. of cottonseed oil. Product was labeled: "Olio Puro E Garantito di Fontanarosa Italy. Olio D'Olive Sopraffino Di Fontanarosa Avellino Italy. Mike De Feo Sole Agent for the U. S. of America. Schenectady, N. Y." It was an American product.

A fine of \$15 was imposed upon Stefano Crisafulli, Joseph Crisafulli, and Carmolo Arria, co-partners, doing business under the firm name of Crisafulli, Arria & Co., New York, for shipping "Prodotti-Italiana Pure Lucca Olive Oil Olio d'Olive Sublime Extra B. B. & Co. B. Bartolini & Co. Lucca, Toscana, Product of Italy. Pure Olive Oil for medicinal and table uses. Non plus ultra. We guarantee this Olive Oil to be absolutely pure under chemical analysis and of the finest quality. B. Bartolini & Co. Registered." It consisted of approximately 60 per cent. cottonseed oil, and was not an imported product.

**FAULTY INSECTICIDE LABELS INCUR FINES.****Some Products Lack in Essential Ingredients, Weigh Less Than as Stated, Contain Water, Etc.**

WASHINGTON, Dec. 20.—Public notice has been made of the judgments which are briefly abstracted in the following text, and which involve violation of the Insecticide Act of 1910:

A fine of \$200 was imposed on the James A. Blanchard Co., St. Joseph, Mich., for shipment into Nebraska of misbranded lead arsenate; for shipment into Iowa of misbranded Paris green; and for shipment into Iowa of lead arsenate which was adulterated and misbranded. The lead arsenate shipped into Nebraska bore a label which falsely stated that it contained 15 per cent. arsenic oxide. Despite label statement each package of Paris green contained less than one pound net. Label statement on third shipment falsely claimed soluble arsenic oxide less than 75/100 of 1 per cent.

The Blumaker-Frank Drug Co., of Portland, Ore., was fined \$100 for shipping misbranded "Whale Oil Soap," label on which product falsely stated "This soap is highly and universally esteemed as a destroyer of moths, worms, lice and all insects that infest plants, shrubs and trees, it also operates as a fertilizer to the plant or tree." The name and percentage of water, an inert substance which was present, was not stated, nor in lieu thereof were the names and percentage amounts of the active ingredients and the total percentage of the inert ingredient stated. Product was further misbranded because the label bore the statement, "Put up by Blumaker-Frank

Drug Company, Wholesale Importing and Manufacturing Druggists, Portland, Oregon," whereas the product was in fact put up by Fisher-Thorsen & Co., Portland.

A fine of \$50 was imposed on the Formacone Co., Newark, N. J., for shipment to Washington, D. C., of an article called "Sanoc," which was misbranded. Circular statement, which follows, was misleading:

"Sanoc is a powerful disinfectant, being superior to carbolic acid on account of being non-caustic, non-poisonous, and more economical. . . . One ounce of Sanoc to a gallon of water makes a powerful disinfectant and antiseptic and will destroy all germs and odors at once. . . ."

Water, and the percentage of this inert ingredient, were not stated, nor were the names and percentages of each ingredient having insecticidal or fungicidal properties and the total percentage of the inert ingredient stated on the label.

The Western Chemical Co., New York, was fined \$50 for shipping "The Great Western Bug Exterminator," which was misbranded in that label claimed product would kill or destroy roaches and that it was not poisonous and not inflammable. The two samples analyzed differed in composition, one being a carbolic preparation and poisonous. It would not kill or destroy roaches and consisted partially of water, this ingredient and these having active insecticidal properties not being mentioned. The other specimen contained nitrobenzene and a mineral oil and was poisonous and inflammable.

The C. G. Betts Co., Spokane, Wash., was fined \$25 and costs for the shipment of "Inlaid Lime-Sulphur Spray," which consisted partially of water, the name and percentage amount of which was not stated. The names of the ingredients having insecticidal or fungicidal properties were not given.

A fine of \$25 was imposed on the Hood River Spray Manufacturing Co., Oregon, for shipment into Washington of "Nigara Spray," which consisted partially of water and relative to which inert ingredient the required statement was not made.

J. C. Pierson, New York, was fined \$25 for shipment into Colorado of "Stott's Fir Tree Oil Soap." Misbranding was alleged because the product was manufactured by the Thompson Carbolic Soap Co. Further, because, contrary to label statement, it was not effective for killing San Jose scale or for killing aphids and all insects that infest plants. The statement on the label that it contained 85 per cent. of soap was also discovered to be untrue. Product also contained water.

William Branson, Bloomington, Ill., was fined \$25 for shipping to California an insecticide known as "Insectonos," which product, contrary to label claim, was not effective to exterminate red spiders. It was further misbranded in that the article consisted partially of charcoal, name and percentage of which inert ingredient was not stated, nor in lieu thereof were the names and percentage amounts of each ingredient having insecticidal and fungicidal properties and the total percentage of the inert ingredient stated on the label.

Peter, Thomas and Andrew Kerr, co-partners, doing business as Kerr, Gifford & Co., Portland, Ore., were fined \$25 for the shipment of "Hemingway's Pure Lead Arsenate," which was adulterated and misbranded. Contrary to label statement, the substance consisted of more than 50 per cent. water, less than 15 per cent. arsenic oxide, less than 32 per cent. lead oxide and each package contained less than "2 pounds net."

A fine of \$10 and costs was imposed on the Sherwin-Williams Co., of Kansas City, Mo., for shipment into Kansas of a quantity of Paris green, each package of which, contrary to label statement, contained less than one pound.

The Grasselli Chemical Co., of New Orleans, was fined \$10 and costs for shipping adulterated and misbranded arsenate of lead paste, adulterated because it contained more than the 50 per cent. water allowed by law and the excess water was not declared. Product was misbranded because the label misleadingly claimed a water content of not over 50 per cent., claimed 15 per cent. arsenic oxide, and claimed the contents of the package as one pound.

The Sanitas Co., New York City, was fined \$10 for shipping "Sanitas," which was misbranded. Contrary to label statement, product possessed only weak germicidal and disinfectant properties and did not generate oxygen. It was misbranded also because it consisted partially of water, and the proper label statements required were not made.

The Dr. David Roberts Veterinary Co., of Waukesha, Wis., was fined \$10 for shipping "Dr. David Roberts Disinfectant for Dipping Livestock. To Prevent Disease and Kill Para-

sites, the packages of which contained less than one gallon, as stated on the label. The claims that the product was invaluable for destroying mange and all parasites of live stock were not true.

William McCann, of Minneapolis, Minn., was fined \$10 for shipment of "Security Carbolyzed Disinfectant," which consisted partially of water, relative to which inert ingredient proper label statements were not made.

George E. Littlefield, Cambridge, Mass., trading as the Sterling Chemical Co., entered a plea of *non contedere* to an information alleging the shipment of a product called "Creolusol," which was misbranded in that the label misleadingly stated that it was non-poisonous and perfectly harmless to animals and the contents of the cans amounted to one quart. Product also consisted partially of water and the proper label statements were not made.

The defendant having entered a plea of *non vult*, the court suspended sentence in a case against William H. Rust, New Brunswick, N. J., charged with the shipment of a quantity of "Rusoline," which was misbranded. Each can, contrary to label statement, contained less than one quart.

A decree of condemnation, by default, was entered against five cases of lead arsenate labeled at Jacksonville, Fla. Packages were labeled: Hemingway's 1 lb. Net 1 lb. Net Pure Lead Arsenate; Hemingway's London Purple Co. Ltd., New York and London. Analysis: Arsenic Oxide, 15%, Lead Oxide, about 82%, Water, 50%. Soluble Arsenic under 1/2%. Hemingway's Lead Arsenate conforms to the requirements of official entomologists and agriculturists, and to the provisions of the Federal laws. Product was adulterated and misbranded because it contained more than 50 per cent. of water, and in that the content of the packages was less than one pound on a 50 per cent. water basis.

## Legal Tolerances for Commercial Druggists' Weights.

In the November Bulletin of the State Superintendent of Weights and Measures, F. Reichmann, Ph.D., appears this official table of tolerances for commercial druggists' weights, as follows:

Troy Ounces:	Tolerances	Weight	Tolerances	
12.....	4.00	Kilograms:	10.....	2000 mg.
10.....	4.00		5.....	1500
8.....	3.00		2.....	800
5.....	3.00		1.....	500
4.....	2.00	Grams:		
3.....	2.00	500.....	350	
2.....	2.00	200.....	200	
1.....	1.00	100.....	150	
Drachms:		50.....	100	
8.....	1.00	20.....	50	
6.....	1.00	10.....	40	
4.....	0.70	5.....	20	
3.....	0.60	2.....	15

## PURE FOOD LAW 50 PER CENT. EFFICIENT.

### Education of Manufacturers Advocated Before National Civic Federation—Few Deliberate Frauds.

The National Civic Federation held its annual meeting at the Hotel Astor, Dec. 11 to 13. President James L. Wallis, of the National Association of Food and Dairy Officials, presented a paper in which he confessed the inefficient execution of the National Pure Food and Drugs Act and the State laws. He regarded them as only 50 per cent. efficient. This state of

affairs was due to ignorance. Educational methods should be employed. It did not suffice to inform the people of the frauds consummated by the manufacturer, the best work of education should be devoted to the manufacturer and dealer. Only 10 per cent. of the violations of the law were violations due to deliberate fraud. Ninety per cent. arose from ignorance and carelessness.

The speaker did not consider the penalties heavy enough to deter the manufacturers who deliberately defrauded the consumer. The object of all pure food and drug laws is to obtain, quickly, a perfection of supply. This end might be obtained soonest by educating manufacturers and dealers, most of whom are honest. Mr. Wallis also contended that there should be but one organization for all the health activities of the Federal government. The States should have similar organizations. Further, "the States should endow the Federal inspectors with State power and the State inspectors should be endowed with Federal powers, so that each might have the authority of the other, and there should be no sanctuary of safety for the adulterator. When a city or a State laboratory has work to do in a city where the Federal government has a laboratory, that work should be done in the Federal laboratory."

Other speakers were Dr. A. D. Melvin, of the Bureau of Animal Industry; Dr. Harvey W. Wiley, and Charles Wesley Dunn, author of Dunn's Pure Food Manual. Seth Low was re-elected president, and Samuel Gompers, vice-president, of the Federation.

## ESSENTIAL OIL FIRMS SEEK TARIFF RULING.

### From Temporary Organization With Christian Beilstein as Chairman—Oppose Sandalwood Duty.

In order to take concerted action toward securing a ruling from the Treasury Department officials on the interpretation of paragraph 49 of the Underwood-Simmons tariff act relating to perfumery and raw materials, the leading crude drug importers and manufacturers of essential oils recently met at the Drug and Chemical Club. Those present had learned that the custom officials at the port of New York proposed to assess a 20 per cent. duty on sandalwood. This product they considered not dutiable under the new tariff, sandalwood and orris root, crude drugs, not being dutiable under the provisions of the free list. They should therefore not be dutiable under paragraph 49 of the tariff act embracing perfumery raw materials.

Christian Beilstein, secretary of Dodge & Olcott, wholesale drug dealers, 87 Fulton street, was elected chairman of a temporary organization to take the matter in charge. An early ruling will be called for from the Treasury Department officials. It was shown at the initial meeting that sandalwood and orris root are put through a special process before they may be classified as perfumery raw materials. Fully 90 per cent. of the two products, it was stated, are used in the drug manufacturing business.

## BOARD OF HEALTH ADOPTS MERCURY LAW.

### New York Pharmacists Must Sell Only "Colored Tablets Individually Wrapped"—Glass Container.

By resolution, the local Department of Health, of which Dr. Ernst J. Lederle is the head, adopted the following amendment to the Sanitary Code, which is to be known as 67a, and will take effect March 1, 1914:

WHEREAS, Bichloride of mercury, otherwise corrosive sublimate, a poison, has frequently been taken by mistake and loss of life has resulted therefrom, therefore be it

*Resolved*, That the sanitary code be and the same is hereby amended by the adoption of an additional section to be known as section 67a, to take effect March 1, 1914, and to read as follows:

"67a. Bichloride of mercury, otherwise known as corrosive sublimate, shall not be held, kept, sold or offered for sale at retail in the dry form except in colored tablets individually wrapped, the wrapper to have the word 'POISON' in plain letters conspicuously placed, and dispensed in sealed containers of glass, conspicuously labeled with the word 'POISON' in red letters.

"This section does not apply to tablets containing 1/10 of a grain or less of bichloride of mercury."

**How Septorin Tablets Are Introduced.**

The Septorin Drug Co., Baltimore, a \$100,000 concern, is putting on the market a new internal antiseptic and laxative. The preparation is put up in 10-, 25- and 50-cent packages, and the equipment includes packages, cartons, counter display stand, etc. The newspaper advertising is done sectionally, and prior to its appearance every druggist in the territory in which

foreign commerce. The company had been putting out a high quality line of molded water bottles, syringes, ice caps, etc., under the name of "Crest." About a year after the line was issued it was learned that an Eastern concern, by right of prior usage, had pre-empted the name, although the name itself had not been registered. The Goodrich company at once issued the line under the name "Maximerit," but this conflicted with some other trade designation, and the word "Endure" was fixed upon. Again it was found that another firm had prior rights, although the name was not registered. The initials "B.F.G." of the company have now been taken as a final choice. The "B.F.G." will appear in monogram form on medallion and label on all the goods of this line, which is claimed to be unusually excellent in quality, of attractive appearance, leakproof construction, and "wears like leather" in service.

**A New Package and An Old Friend.**

The old-time charcoal wagon, which appears on the label of the handsome metal box in which Murray's Charcoal Tablets are now sold, is the only thing old-fashioned about the tablets unless it is their high quality. The new-style package protects the tablet from moisture and impurities, and economical methods of manufacture enable the proprietor to give a much larger package than previously sold at retail for 25 cents.

To meet the demand for a 10-cent article a smaller package is now put up in the same style, containing about one-third the quantity of the larger size.

Every druggist knows the value of charcoal in various digestive troubles—for many years nothing but powdered charcoal, which is not soluble in water, untidy and difficult to swallow, could be had, but the introduction of Murray's Charcoal Tablets by A. J. Ditman, druggist, New York, solved the problem and the public appreciated their convenience.

the advertisements appeared was sent by parcel post a metal display stand containing half a dozen small-size packages of the tablets. These were sent with the compliments of the makers, and insured distribution in every drug store in the territory mentioned. When the advertising began in this Eastern territory every retail druggist had the stand—a cut of which appears herewith—on his counter, and the amount of the sales was very gratifying to both the druggists and the manufacturers.

**Endorsement of the Mulford Products.**

An emphatic endorsement of the competence and skill shown by the H. K. Mulford Co., and the products of their manufacture, is furnished by the report of Dr. W. A. Puckner, director of the chemical laboratory of the American Medical Association, published in the *Journal of the A.M.A.* of Sept. 13, 1913. This report covers an investigation of a number of products furnished by 20 different manufacturers, an attempt being made to summarize and classify the results in various ways. The preparations examined consisted of such pharmaceuticals as hypodermic tablets of morphine sulphate, tablets of potassium iodide, solution of potassium arsenite, fluid-extracts of hydrastis, digitalis, etc., the standard of those named, with the exception of fluidextract of digitalis, being definitely fixed either by the Pharmacopoeia or the manufacturer's claim. The digitalis samples were examined for Dr. Puckner by Dr. R. A. Hatcher with the result, that of the 19 fluidextracts under investigation, the fluidextract of digitalis of the H. K. Mulford Co. fully represented a digitalis of good quality, and that the next in value only possessed 65.8 per cent. of the strength of the Mulford preparation. The other 18 fluidextracts of digitalis ranged from 65.8 per cent. down to a minimum of 29.25 per cent. The fact that the Mulford preparation attained first place in this examination is evidence that this company is doing its best to furnish standard pharmaceuticals.

**The B. F. Goodrich Co. and Trade-marks.**

The B. F. Goodrich Co., makers of rubber goods of every description, are advocating—as a result of recent experiences—compulsory registration of all trade-marks used in interstate or

**Lilly Gets the New Lloyd Reagent.**

Eli Lilly & Co. have acquired the sole privilege of making and marketing the alkaloidal reagent known as "Lloyd's Reagent," a form of hydrous aluminum silicate perfected by John Uri Lloyd, of Cincinnati. They have also acquired the right to manufacture all commercial products, medicinal or otherwise, in which the trade-mark term "Alcresta" is used. As the reagent has become commonly known as "Lloyd's Reagent," that term in connection with the scientific name "Hydrous Aluminum Silicate" will be hereafter accepted as the name of the reagent itself, which will be so labeled, "Alcresta" being the trade-mark term. At the October meeting of the Chicago Branch, A.Ph.A., the principal topic of discussion was "alcresta." Prof. A. H. Clark demonstrating its properties. An extended report of the demonstration and ensuing discussion appeared on page 611 of the December ERA.

**New Preparations from Wilford Hall Laboratories.**

According to Adolph Bakst, general representative of Wilford Hall Laboratories, who has just returned from a trip to the Pacific Coast, and New York manager A. H. Highie, business is good in both sections, while the Coast expects a boom within the next two years. The Wilford Hall Laboratories have recently placed on the market two new preparations, the Tak-a-way Headache Bandage which by mere outward application is claimed to do the work of depressing remedies; and the "Little First Aid Packet," a miniature surgical dressing for cuts which takes the place of the old-fashioned court plaster.

**Prevention of Bichloride Poisoning.**

The Wm. S. Merrell Chemical Company has introduced an antiseptic to take the place of bichloride of mercury tablets. This Antiseptic Leaf consists of a thick, bibulous paper, in

which has been used for some time of the lende mixture as is contained in these leaves added to a pint of water. This form of product is so safe that there is no danger of its being mistaken for a poisonous substance and the body being in use of a medicinal material should be eaten, even if the attempt were made. Antisepsis leaves are put up in convenient packages of 25—wrapped in self-sealing water-proof paper and packed in a carton with complete label and directions for making a solution of various strengths. They are sold at the usual Merrell discount.

#### Nifty-Nibbs, a Real Candy Cathartic.

The advertisement of the Therapeutic Specialty Co., makers of Nifty-Nibbs, in this issue is a striking example of trade journal publicity and in keeping with the sales campaign now being carried on by this concern. A chocolate-covered confection, each cream containing a teaspoonful of pure castor oil, the best-known laxative, Nifty-Nibbs neither taste nor smell of the oil, thus making them particularly effective with children. This preparation is sold so that the druggist makes 75 cents profit on an investment of \$120, and a handsome 12-package counter display case minimizes the salesmanship required to make Nifty-Nibbs a "quick-seller." See advertisement and coupon for further details.

#### "1914 Model" Guarantee Iceless Fountains.

Beauty and durability have been successfully combined in the 1914 model of the Guarantee Iceless soda fountain, which is announced through their distributors. These makers were among the first to appreciate the desirability of stainless, non-absorbent opal glass in such construction, and have utilized this material to striking advantage in their new "Crystal King" outfit, in which the pure white stainless opal is combined with heavy German silver, silver oak, and just enough color in the electric light fixtures, art glass, verde marble and pillars to give the apparatus "life." Prospective soda-fountain purchasers are invited to send their names to the Fountain Specialty Co. for use on the new mailing lists.

#### "Clearance Sales" Without Cutting Prices.

The Brenard Mfg. Co. are advertising elsewhere in this issue a business-getting method which is strongly endorsed by a number of users, two drug companies being quoted in their advertisement. By the use of their plan they claim it is possible for a druggist to hold the largest clearance sale in his history without reducing his regular prices one cent. This system goes to but one druggist in a community, and all interested are requested to either write or telegraph at once, as the Brenard Co. will close the deal with the first merchant who wishes it in any city or town. See their advertisement for further details.

#### Big Offer in Cold Tablets.

At this season of the year particularly druggists are making money by pushing cold tablets, either under their own name or some special preparation. There is always satisfaction in being able to push a good cold tablet with your own name on the label, and there is usually more money return than from handling a proprietary preparation. Druggists interested in this specialty are requested to write to D. C. Leo & Co., whose advertisement appears elsewhere, for samples and for their "big offer" on Formula D. cold tablets, mentioning the ERA.

#### Ten-Cent Tablets of Good Bond Paper.

The Western Tablet Co. are offering elsewhere in this issue a line of 10-cent tablets of Hammermill bond, a widely advertised writing paper, with envelopes to match, and are making a special introductory offer to dealers of a neat carton containing a special assortment of tablets and envelopes, together with window cards, counter signs, 500 advertising circulars and a book of 500 selling ideas. This is called the "Show Me 50% Profit Assortment" because it gives the dealer \$6.80 return on an \$8 investment. See their advertisement for further details.

#### Distinction in Store Fixtures.

The Wilmarth line of store fixtures, made by the Wilmarth Show Case Co. of Grand Rapids, Mich., is well known to druggists the country over as uniting utility with taste and the most useful and individuality which make a store dis-

tinctive. Druggists needing store equipment (or who may be thinking of such improvements) are requested to write this company for literature on drug-store fixtures. They are built for druggists wishing the "best possible" and not the "least investment."

#### Now the Smith-Faus Drug Co.

The name of the Smith-Bailey Drug Co., wholesale druggists of Salt Lake City, Utah, has been changed to the Smith-Faus Drug Co., the officers of the new company, as well as the stockholders, remaining unchanged, as follows: President, E. C. Smith; vice-president and manager, C. A. Faus; Paul Franke, secretary; L. M. Smith, director, and H. S. Highett, treasurer. Mr. Faus succeeded Mr. Bailey in the firm about three years ago, but for business reasons no change was made in the style of the firm at that time.

#### Customers' Personal Letter Plan.

The Bauer Chemical Co., handlers of Sanatogen, the "food-tonic," are utilizing in connection with their sales campaign a series of sales helps for the benefit of the druggists handling this preparation. These are planned to connect the retail store with this company's general advertising. Druggists handling Sanatogen, or intending to do so, are requested to write for a complete display, prepaid, and also for the "Customers' Personal Letter Plan."

#### Guilbert Winchell New Liquid Manager at Boston.

One of the best liked young men in the local soda-fountain field, Guilbert Winchell, was recently made manager of the Liquid Carbonic Company's Boston branch, 136 Broadway, Cambridge, Mass. Mr. Winchell has had considerable experience as salesman, office manager and sales manager in the company's New York branch and is well equipped for his new position.

#### New Quarters for Canadian H. W. Johns-Manville Company, Ltd.

The Toronto branch of the Canadian H. W. Johns-Manville Co., Ltd., announces its removal to more spacious quarters at No. 19 Front street, East. This new store and warehouse has a floor area of approximately 35,000 sq. ft. and is situated in the heart of the wholesale district.

#### Calendars and Educational Charts.

The druggist who wishes a maximum of advertising return from calendars is invited by the Grand Rapids Stationery Co. to get in touch with them in regard to their calendar and educational chart which they term "one of the most important factors in advertising today." In writing for sample and prices please mention the ERA.

#### Price List for Phenalgin.

A new advertisement appearing in this issue is that of the Etna Chemical Co., featuring Phenalgin, a "dependable analgesic." This advertisement gives the price in powder, 2½ and 5-grain tablets and 5-grain pink-top capsules. For trade discounts, etc., write the manufacturers.

#### BUSINESS TROUBLES.

Albert C. Richards, Bowling Green, Ohio; voluntary petition; debts, \$5229.96; assets, \$4014.02. (Modern Drug Store.) A. F. Miller, druggist, Coalmont, Ind.; receiver appointed. James & Nelson, Jackson, Tenn.; liabilities, about \$6000; assets between \$2000 and \$3000.

Charles B. George, Lawrence, Ind.; voluntary petition; liabilities, \$3537.45; assets, \$3123.50.

W. E. Green, Northampton, Mass.; creditors' petition.

William M. DeLay, Dugger, Ind.; liabilities, \$3583.43; assets, \$2391.86.

Halden & Floyd, Waterloo, Iowa; receiver appointed. (Two stores.)

J. D. Magee Drug Co., Abilene, Texas; liabilities \$78,151.78; assets, \$79,274.04.

Higginson Drug Co., Wichita, Kan.; store and stock sold by receiver.

Mickelson-Shapiro Co., vermin poison manufacturers; receiver appointed. Firm in business in Minneapolis.

Bartlett J. Smith, druggist, 1960 Seventh avenue, New York; receiver appointed.

C. L. Nixon, Tchula, Miss.; voluntary petition.

# PATENTS AND TRADE MARKS

## POISON BOTTLE.

### New Attachment Planned to Prevent Accidental Poisoning Through Careless Selection of Container.

THE recent agitation, following a number of deaths due to accidental poisoning, has suggested to various inventors the desirability of containers for poisons that would serve to call the attention of dispensers and consumers to the character of the toxic substances they were handling. A new device of this character, the invention of Axel L. Larsen, St.

1.079.203      1.080.464

Paul, Minn. (Patent No. 1,080,464), is an alarm for poison bottles comprising an elastic attaching member, an arm secured to and extending from the attaching member, a bell secured to one terminal of the arm, a rubber element depending from the arm and located within the bell, and a metallic sounding object carried by said element. When the bottle is opened, an alarm is sounded on the bell.

## Soluble Capsule for Medicine.

A novel feature is presented in a capsule for medicine, the invention of Montague Pollock, New York, N. Y. (Patent No. 1,079,438).

1.079.438

The capsule, which is soluble, consists of two parts, one part telescoping over a portion of the other, and having interengaging notches in the parts whereby the parts are not permitted to separate when once the capsule has been assembled. A reproduction of the capsule is shown in the accompanying illustration.

## Combination Ice Bag, Water Bottle and Fountain Syringe.

Charles J. Barrenpohl, of New York, has devised a combination apparatus which can be utilized for any of the purposes named in the above title (Patent No. 1,079,203). It consists of the combination of a container having a mouth fitted with a screw-threaded collar and closure means therefor, the closure including a cap screw threaded into the collar and having an opening therethrough and a plug having a plurality of shanks adapted to co-operate in said cap, opening with the plug on either the inside or outside of said cap. One of the shanks is solid, while the other is provided with a central bore, the latter also including a nipple on the side opposite the shank having the bore and through which the bore extends.

## PATENTS.

### Granted November 18, 1913.

- 1,078,667—Amos Calleson, assignor to Benjamin Adriaance, Brooklyn, N. Y. Bottle sealing machine.
- 1,078,691—Frank G. Perkins, deceased, Lansdale, Pa. et al, assignor to Perkins Glue Co. Vegetable glue.
- 1,078,723—Frank Dodge, assignor to Frederic R. Sawyer, Malden, Mass., and Arthur E. Coffin, Newton, Mass. Labeling machine.
- 1,078,737—John Letera, Tuolumne, Cal. Non-refillable bottle.
- 1,078,893—Charles Francis Allen, New Brighton, N. Y. Process of producing tannin and the product.
- 1,079,074—William B. Thompson, Chicago, Ill. Bottle closure or seal.
- 1,079,158—Richard C. Beatty, Buffalo, N. Y. Display device for bottles and analogous articles.
- 1,079,192—Charles N. Sowden, Guantanamo, Cuba. Bottle holder.
- 1,079,203—Charles J. Barrenpohl, New York. Combined ice bag, water bottle and fountain syringe.
- 1,079,238—Charles Hammer, assignor to American Metal Cap Co., Brooklyn, N. Y. Bottle cap or seal.
- 1,079,246—Josef Houben, assignor to The Firm of J. D. Riedel Aktiengesellschaft, Berlin-Britz, Germany. Process for the manufacture of nitroso derivatives of phenyl-glycin-ortho-carboxylic acid.
- 1,079,295—Joseph V. Irenius and Clayton B. Weaver, Newark, N. J. Bottle handling mechanism.

### Granted November 25, 1913.

- 1,079,387—William J. Beisel, Brooklyn, N. Y. Non-refillable bottle.
- 1,079,403—Louis J. Crecelius, assignor to Charles A. Thompson, St. Louis, Mo. Refillable bottle.
- 1,079,438—Montague Pollock, New York. Capsule for medicine.
- 1,079,527—Edward Moore Wallace, New Orleans, La. Bag closure and carrier.
- 1,079,541—Emil Collet, assignor to Norsk Hydro-Elektrisk Kvaelfabriksselskab, Christiania, Norway.
- 1,079,618—John H. Trayner, assignor to Elma Mfg. Co., Groton, Mass. Toothbrush holder.
- 1,079,693—Alex. B. Davis, assignor to Eli Lilly & Co., Indianapolis, Ind. Mercury compounds and processes of producing same.
- 1,079,705—Faustin Hlavati, Vienna, Austria-Hungary. Process for synthetically preparing ammonia and other compounds containing nitrogen and hydrogen.
- 1,079,916—August Jonas and Eduard Tschunker, assignors to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Process of producing pinacones.

### Granted December 2, 1913.

- 1,079,974—John E. Bucher, Coventry, R. I. Method of producing alkali metals.
- 1,080,015—Clarence J. Lawson, Yonkers, N. Y. Machine for making bottle-caps.
- 1,080,046—Herbert L. Johnston, assignor to The Hebart Electric Mfg. Co., Troy, Ohio. Refining machine for coffee and the like.
- 1,080,070—Leopold Mambourg, assignor to the Sanitary Nursing Bottle Co., Columbus, Ohio. Nursing bottle.
- 1,080,107—Arthur Cohn, Neukolin, near Berlin, Germany. Process for the manufacture of lacquers and varnishes.
- 1,080,141—Charles W. De Laney, Hammond, Ind. Label moistener.
- 1,080,293—Burriss M. Morton, Koshkonong, Mo. Bottle.
- 1,080,311—Augustus C. Watts, assignor of one-half to Andrew Winter and Frank Oestreicher and one-half to Williard B. Forsythe, Columbus, Ohio. Non-refillable bottle.
- 1,080,318—John Behrimer, Chicago, Ill. Non-refillable bottle.
- 1,080,331—Elena Mayolini de Valdes, New York. Bottle stopper.
- 1,080,464—Axel L. Larsen, St. Paul, Minn. Poison bottle.

### Granted December 9, 1913.

- 1,080,632—Sylvester B. Husch and George S. Husch, New York, N. Y. Tooth brush.
- 1,080,634—Same as preceding.
- 1,080,659—Charles F. Schuh, assignor to Robert J. Wilkie, Saugus, Mass. Stopper for hot-water bottles.
- 1,080,747—Thomas J. Buckley, New Brunswick, N. J. Metal container.
- 1,080,835—George I. Kelly, Attleboro, Mass. Atomizer.
- 1,080,891—Joseph P. Carson, Chesterfield, Va. Stopper for closing and sealing bottles.
- 1,080,985—George F. Barlow, East Long Meadow, Mass. Bottle stopper.
- 1,081,107—Francis A. Freeth, Great Crosby, and Herbert E. Cockledge, London, England. Process of making ammonium nitrate by the ammonia-soda process.
- 1,081,156—John Sharp, assignor of one-half to Clifford A. Greenleaf, San Bernardino, Cal. Lock seal bottle.
- 1,081,178—Robert Werner, Ludwigshafen-on-the-Rhine, Germany. Strontium salt of cholic acid.
- 1,081,276—Benjamin P. A. Saylor, assignor by mesne assignments to Standard Turpentine and Wood Pulp Co., Atlanta, Ga. Process for extracting turpentine and rosin from wood.

## Carbolic Salve.

Petrolatum .....	16 ounces
Yellow wax .....	1 1/2 ounces
Camphor .....	1 ounce
Oil of sassafras .....	30 drops

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

PUBLISHER, ERA COURSE IN PHARMACY,  
c/o D. O. Hayes & Co.,  
NO. 3 PARK PLACE, NEW YORK.

### EQUATION WRITING (Continued).

WHEN chlorine gas is passed into a hot and concentrated solution of potassium hydroxide, we know that both potassium chloride and chlorate are formed. In the former the valence of the chlorine atom is supposed to be  $-1$ , as we saw last month. In the latter the valence of the chlorine is  $5$ ; it is joined to three negative oxygen atoms, so that one of their negative bonds is left over, to unite with the positive potassium atom. The chlorine in the free state has a valence of zero. Hence part of it has its valence lowered by  $1$ , while another part has its valence raised from  $0$  to  $5$ . Consequently, we must take five atoms of chlorine for the oxidation, and another atom for the reduction, or six in all. As each molecule of the salts that are formed contains one atom of potassium to each chlorine atom, six atoms of potassium are needed, which means that six molecules of potassium hydroxide are required. As five of the Cl atoms are reduced, in order to oxidize the other Cl atom, these five atoms must form the chloride, and hence we get five molecules of that salt. Also, one molecule of potassium chlorate will be formed. The remaining atoms are H and O, which form exactly three molecules of water. The completed equation is therefore

Another instructive example is that of the oxidation of arsenous acid or arsenites, to arsenic acid or its salts, by means of iodine. This reaction takes place during the assay of Fowler's Solution, when the solution of arsenous acid in a weak alkali is titrated with the volumetric solution of iodine. In  $As_2O_3$ , the As has a valence of  $3$ , obviously. In  $As_2O_5$ , the valence is plainly  $5$ . Hence, two bonds are gained by the arsenic atom, or four bonds are gained by the two atoms in the molecule. The iodine changes to hydriodic acid, and therefore has its valence changed from  $0$  to  $-1$ . The arsenic therefore gains four bonds, or charges, while the iodine loses one. Hence we must take four atoms of iodine to each molecule of arsenous acid ( $As_2O_3$ ). Water enters into the reaction also. We can, for simplicity's sake, consider the reaction as producing merely the anhydride of arsenic acid, instead of the acid itself. The equation then is written as once:

Another reaction of great practical importance is that between potassium permanganate and hydrogen peroxide. Here we have a peculiar charge, in that the oxygen itself is oxidized. In hydrogen peroxide the two oxygen atoms are regarded as joined by a single valence, just as the two carbon atoms are joined in ethane. Two bonds are thus left, which are united to the two hydrogen atoms. During the reaction the oxygen is set free, and bubbles off in gaseous form. In this state it has a valence of  $0$ ; hence each pair of oxygen atoms gains a total of two bonds. In potassium permanganate the manganese has a valence of  $7$ , and during the reaction is reduced to manganese sulphate,  $MnSO_4$ , the manganese thus losing  $5$  bonds. According to our rule, we must take five molecules of peroxide, with two molecules of permanganate, in order to balance the equation. Now if these two substances are allowed to react alone, the reaction does not go to completion. Oxides of manganese are formed, which are insoluble in water, and the reaction stops. In order to utilize all the oxidizing power of the permanganate, it is necessary to remove these oxides as fast as they are formed, which can be done by adding sulphuric acid. When this is present the reaction proceeds smoothly, and a colorless solution results. Let us see how

much sulphuric acid is needed. Two molecules of potassium permanganate contain two potassium atoms, which require one molecule of sulphuric acid. In addition, the two manganese atoms require one molecule each, as they are bivalent in the sulphate. This makes three molecules of sulphuric acid in all. The oxygen of the permanganate forms water with the hydrogen atoms present, of which there will be  $16$ ,  $10$  from the peroxide and  $6$  from the acid. Hence the complete equation is

$$2KMnO_4 + 5H_2O_2 + 3H_2SO_4 = K_2SO_4 + 2MnSO_4 + 8H_2O + 5O_2.$$

The equation balances perfectly, all the atoms being accounted for.

These examples suffice to show the application of the simple rule we have given in these pages. It is only necessary to ascertain what valence changes take place in the oxidized and reduced atoms, and then use a number of atoms of the oxidized substance, equal to the charges lost by the reduced substance, and *vice versa*, use a number of atoms of the reduced substance, equal to the number of charges gained by the oxidized substance. By holding fast to this rule, the student will always be able to think his way through equations which seem very complicated at first.

Matriculation Number.	Graduates to Dec. 19, 1913.	Graduating Average.

#### Used Era Course Only, Passed State Board.

"Am pleased to advise that I passed the Iowa State Board of Pharmacy on November 19. While I have only sent in my answers to the first three Parts, I had gone through the entire set, which took me just five weeks, studying evenings only, which was the only available time which I had.

"Your Course is the only books which were used, outside of a quiz compend, and was also the only studying I had ever done to prepare myself for a pharmacy examination.

"Will certainly recommend the Course to anyone wishing to prepare himself for a State Board Examination, and for myself cannot give it enough praise."—E. T. SICKEL, Cedar Rapids, Iowa.

"I find that the ERA Course in Pharmacy is the best and cheapest study for a student who would like to learn pharmacy at home."—W. F. HASEK, Cleveland, Ohio.

#### For Men in the Navy.

"The ERA Course has certainly proved beneficial to me in my examination for Hospital Steward, U.S.N., and I cheerfully recommend it to all who have an upward grade to climb."—HENRY TOPP, Norfolk, Va.

#### The Era Course Takes Men Through Examinations.

"Since I took up the ERA Course in Pharmacy with you I have taken the examination for Hospital Steward, U.S.N., successfully passed and received my appointment for same, and have been ordered to this station. I know I have not given the Course the proper study in this space of time, but I wish to say that in all the text-books and periodicals that I have studied and read, I have not found one to be so complete in every detail for the average man who has a desire to take an examination in a short space of time, either for military or civil employment as the ERA Course in Pharmacy."—ROBT. T. HALLEY, Hospital Steward, U.S.N., Bremerton, Wash.

"I wish to advise you that I was successful in passing the Alabama State Board of Pharmacy at their last meeting, which was held Oct. 13-14, 1913. I took your Course last year. I thank you again for your assistance."—MURRAY F. HOOVER, Gainesville, Fla.

#### Violin Varnish.

Coarsely powdered glass.....	1 ounce
Coarsely powdered copal.....	1 ounce
Camphor .....	60 grains
Mastiche .....	60 grains
Canada balsam .....	60 grains
Strong methylated spirit.....	5 fl. ounces

Warm gently, and agitate well until dissolved; then let stand for several days, until the supernatant liquid is quite clear, then decant. The glass is added to carry down mechanically any impurities in the resins.

# THE DRUG MARKETS

## ADVANCE IN QUININE THE FEATURE.

Marked Decline in Prices for Menthol—Following Season's Lessening Demands, Citric Acid Quotably Lower.

See pages 26 to 40 for Prices Current.

NOTE—A, advanced; D, declined; C, correction; N, new.

NEW YORK, Dec. 23.—Quiet conditions have prevailed in the drug market since our last report, dealers curtailing their purchases as much as possible in anticipation of the usual yearly inventory, the demand being limited to moderate quantities to meet current requirements. Business has also felt the uncertainties of national legislation, and more especially the outcome of the currency measure following so closely the passage of the tariff law. The list of changes in prices shows slower quotations for many commodities, with not a few advances for some staples. Opium is without change, but prices are well maintained. Morphine and codeine have been advanced 25 cents per ounce, owing to the upturn recently in basic material. Carbolic acid, all grades, is slightly lower. Quinine is firm, and has been advanced 3 cents an ounce by American and German manufacturers. Citric acid is lower. Ergot is slightly advanced in price, following cable reports of a bare market in producing regions. Mexican sarsaparilla, owing to the great difficulty of obtaining supplies, is higher. Balsam of fir, Canada and Oregon, are considerably lower, while menthol has taken a decided slump, quotations being quite in contrast with prices obtaining several weeks ago. Rose leaves, both pale and red, have moved upward, and Florentine orris root is very firm, reflecting bull's market advices from abroad and diminished stocks here. Levant wormseed is materially higher and stocks greatly depleted. Arnica flowers are in fair demand and higher.

OPPIUM—Has been extremely quiet, but prices in all instances have been well maintained. Natural is quoted at \$6.25@ \$6.50 per pound and granulated and U.S.P. powdered at \$8@ \$8.20 per pound. Latest cables from Smyrna report arrivals there to date as 3912 cases as compared with 1973 cases for the corresponding period last year.

QUININE—Is considerably higher. American and German manufacturers announcing an advance of 3 cents per ounce to the basis of 26 cents per ounce in 100-ounce tins. Higher values on this article are largely due to the fact that the yield of quinine sulphate in the 11,011 packages of cinchona bark sold at auction in London on Dec. 10 was only 5.76 per cent. against 6.13 per cent. in the amount sold in November. Shipments of the bark for 11 months ended with November were 17,578,000 Dutch pounds, against 15,004,000 in 1912, 15,427,000 in 1911 and 16,684,000 in 1910.

CITRIC ACID—Has been reduced in reflection of the restricted demand now coming forward. Jobbers quote 48 cents per pound for kegs, and 54@58 cents for less; granulated, 55@59 cents, and powdered, 57@61 cents.

MORPHINE—Has been advanced by manufacturers and is held very firmly at the following quotations; acetate, ¼-oz. vials, per ounce, \$5.20@ \$5.50; alkaloids, ¼-oz. vials, \$6.30@ \$6.50; hydrobromide, ¼-oz. vials, \$6@ \$6.25; hydrochloride, ¼-oz. vials, \$5.20@ \$5.50; sulphate, per ounce, \$5@ \$5.10 and in ¼-oz. vials, \$5.20@ \$5.50; valerate, ¼-oz. vials, \$6.80@ \$7.00 per ounce.

CODEINE—Similar conditions prevail with this article, quotations showing an advance in price to \$6.10@ \$6.65; phosphate, \$5.70@ \$6.10, and sulphate, \$5.85@ \$6.45 per ounce.

MENTHOL—Considerable competition is in evidence not only in the local market, but at primary centers, and quotations have declined to \$3.90@ \$4.05 per pound for crystals, and 30@ 35 cents per ounce. Offerings are reported to be very heavy.

SARSAPARILLA ROOT—The market for Mexican retains a very firm tone, owing to the great difficulty in obtaining supplies from the country of production which is in the throes of revolution. Cut root is held at 40@45 cents per pound, and powdered at 45@50 cents.

BALSAM FIR—A decline is noted for both Canada and Oregon, the former being quoted at \$1.25@ \$1.35 per pound, and the latter at 25@35 cents per pound.

CUBEBS—Are meeting with a fair demand, but stocks

are apparently light and the market firm. Powdered berries have been advanced to 60@65 cents per pound.

**BACCH LEAVES**—Short are meeting with a somewhat better inquiry, the demand having been stimulated to some extent by the increase of tariff on the collection of leaves in South Africa which is reported to go into effect on January 1. Jobbers' quotations in this market are unchanged.

**ERGOT**—Russian for shipment is cabled higher abroad. Collectors in the producing regions report a bare market for the time being. Revised quotations for all grades show a range of 85c.@\$1.20 per pound for whole, and 95c.@\$1.45 for powdered.

**ROSE LEAVES**—Both pale and red varieties have continued to move upward, owing to an unusual demand due to the fact that the Government has imposed a duty of 20 per cent., and dealers now quote 85@90 cents per pound for pale, and \$1.30@\$1.40 for red.

**BALSAM TOU**—Is lower under increased supplies and keener competition, and jobbers have reduced prices to 60@75 cents per pound.

**ARNICA FLOWERS**—Are reported higher abroad and the market here is much firmer in tone, whole leaves being quoted at 25@28 cents per pound, and powdered, 32@35 cents.

**LAVENDER FLOWERS**—Are firmer owing to an intimation that the custom authorities will impose a duty of 20 per cent. in the future. It is said that several lots are now being held up in the appraisers' stores and that importers can only remove the goods by paying duty which, however, is done only under protest.

**OIL LEMON**—Following a falling off in demand for this oil and a further weakening of the primary markets in Sicily, jobbers have reduced prices to \$3.80@\$4 per pound.

**OIL ORANGE**—Sweet is slightly easier, reflecting keener competition among holders who are anxious to realize. Jobbers have marked down prices to \$4@\$4.20 per pound.

**ORRIS ROOT**—Florentine is strong and higher, reflecting bullish market advices from abroad and administered stocks here, and the further report that the Government intimates that an import duty of 20 per cent. is likely to be placed on this article. This variety is quoted at 27@30 cents per pound, while select fingers range from 90c.@\$2 per pound.

**WORMSEED**—Levant (Santonica) is materially higher, stocks being greatly depleted and the market here almost bare, with quotations at 50@55 cents per pound for whole, and 55@60 cents per pound for powdered.

**COLCHICUM SEED**—Is firmer; stocks in some quarters have become diminished, and whole seed is quoted at 26@28 cents per pound; powdered, 34@36 cents.

**COLCHICUM ROOT**—In contradistinction to the seed, colchicum root has been marked down, present quotations being 20@23 cents per pound for whole, and 25@28 cents for powdered.

**ACETONE**—Pure C.P. "medicinal" is higher, 35@40 cents per pound being asked.

**CARBOLIC ACID**—Has been reduced to 10@12 cents per pound for crystal in bulk, and 12@14 cents per pound for 10- and 5-lb. cans. Crude acid, 10 to 95 per cent., is quoted at 20@90 cents per gallon. There is an exceedingly active market in this commodity, and keen competition is given as the reason for the reduction in prices.

**TAMARINDS**—Continue to be very firmly maintained on the basis of \$3.25@\$3.50 per keg.

**HOMATROPINE**—Revision of prices for this alkaloid and its salts show a lower range in quotations, as follows: Alkaloid, 22@26 cents per grain; hydrobromide, 17@28 cents per grain; hydrochloride, 22@28 cents per grain; salicylate and sulphate, 22@28 cents per grain.

**RESORCIN**—Pure white is lower, \$1.05@\$1.15 per pound being quoted.

Reports: North Carolina Board of Pharmacy, year ending May 31, 1913, and Missouri Board of Pharmacy, for the fiscal year ending July 31, 1913. According to these reports North Carolina has 897 registered pharmacists, of whom 42 are colored, and 95 registered practicing physicians living in towns of not more than 500 inhabitants, to whom permits have been granted to conduct drug stores. Missouri has about 5200 registered pharmacists and 175 registered assistants. The total disbursements for the year were \$6,614.41, and the cash balance on hand in the State Treasury and credited to the board on August 1 was \$4,805.16.

The October, 1913, issue of Schimmel's Report (Fritzsche Brothers), Miltitz, near Leipzig, Germany, on essential oils, synthetic perfumes, etc., is fully up to the standard of previous numbers of this valuable publication and should be read by all those interested in the production, examination and commercial exploitation of these interesting products. The report covers a review of the commercial conditions existing in the various countries with reference to the essential oil industry, commercial notes and scientific information concerning new essential oils, pharmacopoeias, chemical preparations and drugs, and many notes on recent research work. This number of the Report is embellished by full-page plates showing two views of thyme oil distillation in Spain and a view of the Miltitz rose fields at harvest time, the last-named being a reproduction in colors.

## RECENT FIRES.

Willow, Okla., B. H. Moss drug store; loss \$3000; insurance \$1500.

Winnipeg, Man., Poyntz' drug store.

Stockville, Neb., H. J. Logan drug store; loss total.

Caddo Mills, Tex., G. G. Barnes drug store; loss heavy.

New York, Beck & Goulka drug store, 65 Carmine street; loss \$1000.

Joaquin, Tex., E. A. Russing Drug Co.; loss heavy.

Cleveland, Ohio, L. Harold, drug store, 5641 Broadway; loss slight.

Freeport, Ill., C. P. Guenther & Co.; loss heavy.

Louisville, Ky., B. G. Roadco & Co., druggists; loss exceeding \$5000.

Warren, Pa., Reynolds drug store; loss \$20,000.

Tower Hill, Ill., Schueler's drug store; loss \$1000.

Red Rock, Okla., Lovelady & Bankston pharmacy; loss heavy.

Argentine, S. D., Hartz drug store; total.

Mobile, Ala., E. A. Peterson drug store; loss \$2500.

Phenix, R. I., Himes building and drug store; loss \$5000.

Richmond, Mo., J. A. McCown drug store; loss total.

Fall River, Mass., Wm. M. Dedrick drug store; loss heavy.

Grand Rapids, Mich., Vandek drug store; loss heavy.

Millett, Tex., P. E. Kennell drug store; loss \$6000; insurance \$2000.

Chula, Ga., W. E. Tyson, drug store; loss \$300; Chula Drug Co., \$3000; no insurance.

Ross, N. D., Dougherty's drug store; loss total.

Stockville, Neb., Logan drug store; loss total; insurance small.

ESTABLISHED 1887

# THE PHARMACEUTICAL ERA

AN ILLUSTRATED MONTHLY PUBLICATION FOR THE DRUG TRADE

VOL. XLVII

NEW YORK, FEBRUARY, 1914

No. 2

## THE PHARMACEUTICAL ERA

PUBLISHED ON THE FIRST OF EACH MONTH

D. O. HAYNES & Co. . . . Publishers

No. 3 PARK PLACE, NEW YORK.

Telephone, 7646 Barclay.

Cable Address, "Era, New York."

### SUBSCRIPTION RATES:

Single Copies, 15 cents.

Domestic Rates to U.S., Cuba, Hawaii, Porto Rico,  
the Philippines and Mexico.....\$1.00 a year  
To Canada, postpaid..... 1.50 a year  
To Foreign Countries in Postal Union..... 2.00 a year

THE ERA LIST with Subscription, 50c. a Copy

PRICES INCLUDE POSTAGE AND PAYABLE IN ADVANCE.

REMIT by P.O. or Express Order or New York Draft payable to order of D. O. Haynes & Co. Add 10 cents for collection charges if you send local check.

Published at No. 3 Park Place, Borough of Manhattan, New York, by D. O. Haynes & Co., a corporation; President and treasurer, D. O. Haynes; vice-president, E. J. Kennedy; secretary, N. W. Haynes. Address of Officers is No. 3 Park Place, New York.

Entered at the New York Post-office as Second-class Matter. Copyright, 1914, by D. O. Haynes & Co. All rights reserved. Title registered in the United States Patent Office.

### COMPENSATION FOR INJURED WORKMEN.

DRUGGISTS and manufacturers of pharmaceuticals, toilet goods, medicines and chemicals are directly affected by the new workmen's compensation law of New York State which becomes effective July 1. Under its provisions employers are held responsible for certain monetary damages, established at fixed sums by the act, to all injured employees in certain enumerated "hazardous employments"—the list including:

*Group 25*—Manufacture of explosives and dangerous chemicals, corrosive acids or salts, ammonia, gasoline, petroleum, petroleum products, carbonic gas, charcoal, artificial ice, gun powder or ammunition.

*Group 26*—Manufacture of drugs and chemicals, not specified in group 25, medicines, dyes, extracts, pharmaceutical or toilet preparations, soaps, candles, perfumes, non-corrosive acids or chemical preparations, fertilizers, including garbage disposal plants, shoe blacking or polish.

Included among the other groups are the majority of occupations in which death or injuries are not uncommon, including printing in all its branches, canning, baking, metal and glass work, all more or less connected with the drug industry.

Since the publication of the provisions of this law the question has been raised by many retail druggists as to whether or not the prescription laboratory in a retail drug store is, in the sense of the law, a manufactory of pharmaceutical and toilet preparations, with the consequent result that the employer to come within the law must take out liability insurance upon all his employees, whether they ever visit this prescription department or not.

Another question, of direct importance to pharmaceutical manufacturers and wholesale houses operating their own printing plants, relates to the liability of employers for accidents to employees of other departments who should chance to be injured in laboratory or printing plants.

For the benefit of the druggists of New York State the ERA has been in communication with attorneys and counsellors who have made more or less a study of the new law, and presents the following information as authoritative:

Through the provisions of this law the employer may provide for possible damages to any one of his employees by taking out a policy in a casualty insurance company; by participating in the State insurance fund—according to regulations yet to be made by the State commission yet to be appointed; or by furnishing bond as to his financial responsibility to meet such obligations should they fall due.

The scope of the provisions of the law and the extent to which they apply to the various trades and occupations specified in the group classification under the law has yet to be determined by the State commission, and by the courts. (The fact that this law is absolutely new, and that no precedents exist in the court records of this State, renders any decisive opinion as to its scope without weight, until the court shall have decided in test cases.) The New York State law is a composite measure, with a number of the provisions of a similar act in Germany and also provisions taken from the English act, neither of which have legal weight in this country.

Lawyers disagree as to the scope of this law, some holding that the phraseology is broad enough to cover any possible contingency as to injuries received while in the employ of any manufacturer engaged in the so-called "hazardous" occupations. Others hold that the law will be interpreted almost literally, and that the provisions will not apply to any employee injured unless such injuries shall have been received in the pursuit of his livelihood—his daily occupation—which comes under the category of hazardous pursuits. In other words, the consensus of legal opinion appears to be that the injury must be received while the injured is at work at his stipulated pursuit—and not as an incident to other work.

For example, should a sales clerk—not a prescription chemist—in a drug store be injured during the making up of some pharmaceutical preparation—by himself or by another—the employer would not be liable under the new law, as the sales clerk was not engaged in the principal work for which he was engaged, but rather work incidental to his daily occupation.

A manufacturing pharmaceutical house under this interpretation of the law would be responsible for the injury to any employee in any department, laboratory, shipping or printing, as all are held "hazardous occupations," while on the other hand if the house were simply that of a drug jobber, the injury of one of the other employees in the printing office probably would not come under the act as the printing would be the only "hazardous occupation" under the law.

To carry this another step, it is not at all likely under the reading of the law by attorneys consulted by the ERA, that the fact that a laboratory exists in a drug store would convert that entire store into a factory under the law, since the preparation of pharmaceuticals and toilet preparations would not be the *principal* business of the store.

Thus the rule may be deduced, pending decisions by the State commission, the State's attorney, the courts, and the actuarial rules of the insurance companies—all yet to be made—that the law will apply to every business where the "hazardous occupation" is the principal business of the firm affected, and not incidental to it.

Without legal precedent upon which to base other conclusions, without any ruling by courts, State attorney or commission, and without the policy specifications of casualty insurance companies—all yet to be drafted with the assistance of eminent legal authority—it behooves the druggist, the drug manufacturer and the chemist to obey in good faith as best he may the apparent reading of the law, with the further understanding that its application will be elucidated by both State and insurance authorities prior to its becoming effective July 1.

#### GUESSING AT PROFITS.

DOES THE average druggist apply the same exact methods to the computation of his selling prices and profits as to the compounding of a prescription? Judging from the keen interest manifested on the occasion of Harry B. Mason's recent address on "Profit in the Drug Business," before the New York College of Pharmacy, this question

must be answered in the negative. What is more important, many druggists apparently do not even possess sufficient knowledge of arithmetic to make the simple calculations needed, in spite of having passed State Board examinations where pharmaceutical arithmetic was required. Some appalling examples were brought out in the discussion following the lecture, which showed that there are pharmacists who do not even know the meaning of the term "per cent.," as applied to profits, although they may lawfully be called on to make a percentage solution. This condition of affairs cries for improvement.

Unless the druggist is in business merely for his health, and not solely for other people's health and his own pocket, he must learn to eliminate the guess-work in fixing prices. The ERA and THE SODA FOUNTAIN have very frequently called attention to this point in no uncertain terms. Every druggist knows whether his prices are fixed according to some arbitrary scale which exists only in his own mind, or whether he takes into account the money actually spent before an article is sold, in addition to the cost of the goods. No one can know this for him, and the remedy rests in himself. The calculations used are so childishly simple that if the druggist really feels unable to accomplish the task, he can rely on the assistance of his 10-year-old son. Remember that the amount of total sales is the only figure which represents all of your business. The total cost of goods sold is only one item in the expense of running your store. Therefore base your total, ultimate, *real* profit on your selling prices, and fix these prices accordingly.

#### COMMERCIAL VS. PROFESSIONAL PHARMACY.

AMONG the most important advances in pharmacy during the past 25 years is that which pharmacists have made in the direction of commercial progress, and this conclusion is forcibly brought out in the article by Louis K. Liggett, the initial contribution of which appears in this issue of the ERA. While it is true that the growth of modern merchandising methods has been common to all industries, it is doubtful if the resulting changes induced by the application of such methods have been felt to a greater degree than in the drug business. In many quarters the commercial transformation of the pharmacist has been almost revolutionary, and possibly in some instances, professionalism has succumbed to the greater glorification of business. But anyone who has carefully watched and studied these evolutionary changes will think a long time before he will conclude to say that pharmacy has suffered thereby. True professionalism and the business instinct are not antagonistic, and the trend of modern progress is conclusive that the pharmacist who does not put into practice the principles embodied in these qualities is as unlikely to make headway as the idealist who strives to live by faith alone.

To the pharmacist educated in the old school and whose sympathies still lean toward the professional side of pharmacy—and there are many of them still

in business—there may come a pang of regret that times have changed. The subject has a sentimental side, and full credit must be given to those earlier pharmacists for their devotion to ideals and the self-sacrifice they underwent to raise pharmacy to a business which should stand alone and be directed by men of professional attainments. How successful the old-time pharmacist was in attaining his object it is not for us to say, but in all pharmaceutical history there is no more ennobling theme than that furnished by these men who were prompted by the loftiest ideals and a spirit of broad humanitarianism, qualities which they practiced persistently and conscientiously, and too often in the face of insurmountable difficulties. It is proper that we should pay a fitting tribute to the men who, according to their lights, passed the work of their day forward to those who were to follow and take up the burdens of pharmacy. We do not belittle present-day effort by giving due recognition to a class of men to whom the professional ideals were the loftiest conceptions of the true art of living. Future progress may reach its greatest developments along commercial lines, but no true pharmacist can afford to neglect his professional training in all that pertains to the most recent advances in pharmacy, chemistry, research work, etc., all of them subjects which have an intensely practical side in the promotion of his advancement.

#### SWEEPING BEFORE OUR OWN DOORS.

THE country-wide agitation regarding the sale of habit-forming and narcotic drugs—cocaine, opium bases, and coal-tar synthetics—seems to point to a growing realization in the minds of the public and law-makers alike, that this country is behind the general world-standard in this branch of social legislation, as in many others. What has been done abroad, and in many cases enforced for decades, is shown in the statements of several authorities on the restriction of sales of dangerous drugs, published elsewhere in this issue of the ERA. The Harrison bill, indorsed largely by the drug trade, may furnish a remedy of some sort, if enacted, but this bill does not apply to the many synthetic remedies which now easily find their way into lay hands, often producing disaster. Other legislation will doubtless be needed before the public is adequately protected from itself—for, in the last analysis, this is the object of all such restrictive measures.

Meantime, the druggists have an opportunity to carry on a fruitful campaign of publicity and education, with a view to further enlightening the public, and making the pressure of opinion felt. The druggists can take a most determined stand in ferreting out and halting to justice all dealers of any sort who are known to be engaged in practices detrimental to the public health. The surreptitious dealer in narcotics and habit-forming drugs is a moral outlaw, and should be made an Ishmael. There must be many cases in which druggists have knowledge of violations of the present laws, in their own neighborhoods, and of further misconduct

which is condemnable, if not yet illegal. It must be admitted that the general public is very prone to accuse the drug trade at large of being responsible for the traffic in dangerous medicaments, and does not discriminate nicely between the guilty parties, often not druggists at all, and the vast majority of law-abiding pharmacists. This impression must be removed; the druggist must have the complete confidence of his public. Certainly the easiest method of getting rid of this mistaken idea is to prove by deeds that the drug trade, as a whole, does not countenance criminal or even questionable acts. Through the committees on ethics and legislation of the many State associations, through the prosecuting power of the State Boards of Pharmacy, much may be accomplished. The recent action of the Kansas City Retail Druggists' Association must be but an entering wedge. Continual following up of every point gained, newspaper publicity, co-operation with adjoining States, and absolute frankness in dealing with offenders—all of them measures depending on the initiative of the druggist—will bring about more lasting and intelligently good results than ill-considered legislation rushed through by politicians who make capital out of the increasing pressure of public opinion.

#### COURT UPHOLDS ONE-PRICE-FOR-ALL.

IN THE maze of decisions rendered during the past two years by the U.S. Court of Appeals, and by the U.S. Supreme Court in the now famous Sanatogen case, the Gillette Safety Razor case and other suits in which the right of the manufacturer to fix the retail sales price was the issue, there has been no pronouncement of such really sensational import as that just given in the Fisher Flouring Mills case. In view of the attitude of President Wilson in urging anti-trust legislation this decision is held by constitutional lawyers to be one of the most important in recent years.

The case itself was a replica of similar suits—a manufacturer of flour brought suit against a retail dealer who cut the price of the article contrary to agreement. The dealer's right to cut prices was upheld by the lower courts, but when an appeal was made to the Supreme tribunal the lower court decisions were reversed, and by a vote of eight to one the milling company was granted an injunction and damages.

The advocates of a "one-price-for-all" policy in merchandising are given more real encouragement in the concluding paragraph of the court's findings than in all similar decisions during the past decade:

"The true competition is between rival articles, a competition in excellence, which can never be maintained if through the *perfidy of the retailer who cuts prices for his own ulterior purposes the manufacturer is forced to compete in prices with goods of his own production, while the retailer recoups his losses on the cut price by the sale of other articles at, or above their reasonable price.* It is a fallacy to assume that the price-cutter pockets the loss. *The public makes it up on other purchases.* The manufacturer alone is injured except as the public is also injured through the manufacturer's inability in the face

...of his  
...fixing the  
...*The one*  
...*and it is in-*  
...*derivative*  
...*to say that the*  
...*to be contract*  
...*of the pre-*  
...*of the fact*

considered an acetanilid derivative is now to be determined and tried on its merits.

We feel confident that the Government will lose this case, as the Supreme Court has already held in a somewhat similar case that a *theo. etc.* derivative substance cannot be considered a derivative substance and construed the word "derived" as "made or obtained from."

Acetphenetidin is not "made or obtained from" acetanilid, and can only be considered a theoretical derivative and not an actual derivative of acetanilid. In view of the foregoing, we cannot see how it is possible for the courts to render a decision favorably to the Government's contentions.

It occurs to us that possibly the foregoing might interest your readers, and beg to remain, Very truly yours,

MONSANTO CHEMICAL WORKS.

St. Louis, Jan. 8, 1914 JNO. F. QUELNY, Pres.

A CONSTRUCTIVE DECISION NEEDED.

ONE of our correspondents calls attention to an important matter which is liable to be misunderstood by those who are dependent on the daily press for their information. The recent decision of the Supreme Court in a case involving the labeling of preparations containing acetphenetidin was merely on a demurrer, claiming that the Government had exceeded its authority in requiring both parent and derivative substances to appear on the label. The decision did not touch the main question as to whether acetphenetidin is a derivative of acetanilide.

This question of derivatives may degenerate into a war of words, or it may be kept within sensible bounds. There is no difficulty in proving that acetphenetidin is a derivative of acetanilide in the chemical sense. Theoretically, any organic compound which has been synthesized may be regarded as a derivative of any other organic compound. Given a sufficient supply of material, a chemist could make one substance from the other. On this point there can be no debate. But what the Court must bring out, in order to render a decision which shall be of constructive value in future trials, is a clear-cut statement to the effect that within the purposes of the Pure Food and Drugs Act, the labeling of a substance as a derivative of another is necessary *only in case the derivative partakes of any undesirable or dangerous properties possessed by the parent substance.* Otherwise a statement of derivation has no possible bearing on the subject. If, for instance, a derivative of alcohol is present in a medicinal preparation, this derivative being utterly devoid of any intoxicating, narcotic, or poisonous effects, we fail to see of what advantage it would be to state that alcohol is the parent substance of this particular compound. Labels are not affixed for the purpose of teaching chemistry to the general public. If necessary, they should contain enough information to enable a literate purchaser to realize the nature of the substance he is buying. This is exactly in accord with the spirit of the Act of 1906.

Acetphenetidin Not Acetanilid Derivative

To the Editor of THE PHARMACEUTICAL ERA:

From reports appearing recently in the newspapers, it would appear that the Supreme Court held that acetphenetidin was a derivative of acetanilid. This is not the case, however. The Supreme Court's decision was on a demurrer that the Government exceeded its authority under the law requiring the label to show both the parent and derivative substance.

The question as to whether or not acetphenetidin is to be

Removing Water from Oils.

To the Editor of THE PHARMACEUTICAL ERA:

I notice in the January number of your magazine on page 14 an inquiry concerning the removal of water from camphorated oil.

As I have had numerous occasions to clear up samples of camphor liniment, sent in by the drug inspector of this department, so that it is possible to take the polariscopic reading, and as the method is much easier of manipulation, and at the same time gives a *perfectly clear* solution, I am taking the liberty of calling your attention to it.

Take sheet gelatin and break it up into small pieces and add it to the camphorated oil, shake well, and allow to stand over night, when it will be found perfectly free from water, the gelatin having absorbed all the water. All that is necessary then is to pour off or strain the oil and it is ready for use.

The amount of gelatin to be used naturally depends upon the amount of water present, any excess of gelatin, however, does not do any harm.

I have found this method of removing water from oils to be perfectly satisfactory, and we think superior to the dried sodium sulphate method.

Very truly yours,  
LINWOOD A. BROWN.

Lexington, Ky., Jan. 9, 1914.

An Illuminating Circular.

To the Editor of the ERA:

I have received recently a letter from a certain New York company which, it strikes me, will bear investigating, particularly as it is reported to me by a mercantile agency that the head of the company is a practicing physician. This letter-circular read as follows:

"WOULD YOU DISPENSE YOUR OWN PRESCRIPTIONS

If you could do so quicker than you could write a R? We make a specialty of preparing physicians' private formulas, put up in small bottles, labeled with plain or printed labels (ready to have the directions written thereon) and wrapped. We supply any quantity you require and at a price that will surprise you. Can make deliveries 24 hours after receipt of order. Have you ever considered this as a source of legitimate income that you are not now taking advantage of?

"CLUB AND SOCIETY PRACTICE

can be made trebly profitable if you will dispense your own prescriptions to this class of patient.

"We can prepare your Liquids, Powders, Ointments, Capsules, etc., ready to be handed to the patient, at a price that will allow you 300% profit on a 50-cent prescription.

"The pharmacist now makes this money—you should have it.

"(Signed).....  
"New York City."

In justice to the pharmacist, I think an investigation of this company might throw some interesting light on many another of these companies which take advantage of every opportunity to make the burden of the pharmacist heavier, and at the same time compel him to charge so-called high prices when this company's goods are called for.

Brooklyn, N. Y., Jan. 21, 1914. THOMAS LAMB.

soon extended to include proprietary medicines. The result was demoralizing. Almost everywhere prices melted away.

Various attempts at repression were defeated, whether by enlightened influence or by the department stores, as was claimed by the framers of such measures, matters little. There

GEORGE RAMSEY  
of New York City

G. B. EVANS  
of Philadelphia

was bitter warfare between the cutters and the advocates of price maintenance.

In the beginning of price-cutting by department stores, the average druggist, true to his professional traditions, tamely submitted to what seemed inevitable and continued to work 15 hours a day, seven days a week, to make a living. A few of the more progressive spirits in the larger cities, however, refused to submit to these conditions. They broke wholly away from the old "ethical" idea of doing business and started what is known as the Cut Rate War.

It was in the early eighties that the pioneer price-cutting of the "big four"—Evans of Philadelphia, Robinson of Memphis, Dow of Cincinnati, and Jacobs of Atlanta—aroused national attention. Other famous price-cutters included W. G. Marshall, Cleveland, Ohio; Geo. C. Lyon, of Hall & Lyon Co., Waltham and Providence; Charles P. Jaynes, Boston, Mass.; George Ramsey, formerly of the Hegeman Corporation; Messrs. Wheeler & Bolton, Brooklyn, N. Y., and Hurd & Gray, Detroit, Mich.

Price-cutting became, in a few years, practically universal. It is interesting to consider this problem from the viewpoint of one of the men who inaugurated cut rates. The first cut-rate drug store in New York City was established by George Ramsey, of the Hegeman Company. In a recent letter Mr. Ramsey describes the conditions leading to cut rates and tells how the latter affected his business.

#### Effect of Cut Rates.

"The cutting in the drug business commenced in New York about 1879 in our store; previous to that time business was very slow. The sales then were very much smaller than now. We rarely sold a bottle of perfume over 75 cents, or a hair brush over one dollar. And our idea in starting to cut prices was to try to get a volume of business. We started with a cut of 10% on all patents, and found it such a success that we increased our discount to 15% and 20%. This soon enabled us to buy direct from manufacturers. In 1882 our business had increased 300% from 1879. In 1879 our percentage of cost to do business was about 30% and in 1882 about 23%. Rent was about one-half what it is now, cartage about 33 1/3% less than now, but there is not much difference in freight. We had no difficulty in getting registered clerks at \$15 a week, as good men in every way as we now pay \$25 a week. All our other help was in about the same proportion. At the same time we reduced soda water from 10 cents to 6 cents per glass."

Another interesting account of the effect of cut prices in changing the old pharmacy into the merchandising drug store, is contained in the following letter from Mr. John W. Gray, founder of the Gray & Worcester Store, Detroit, Mich.:

"Mr. Hurd and I commenced business at 208 Woodward avenue about the 1st of August, 1886, with a stock of drug merchandise and fixtures amounting to about \$2500. We had

a small soda fountain and our stock consisted of drugs, patent medicines, perfumes, a few sundries, such as tooth, nail and cloth brushes, combs, shoulder braces, and a small stock of cigars. Until we began cutting, along in 1894, Mr. Hurd and I, with the assistance of a boy, conducted the business.

"Our average monthly sales during this period, with but little variation, were from \$600 to \$700, about one-half of which we considered as gross profits. Rent was \$100 a month, other expenses would total from \$40 to \$50 a month. Along, I think, in '94, as there had been more or less cutting of prices by our competitors, and our business had shown a slight loss for a few months, we decided to become more aggressive, to put on our signs and advertise ourselves as a cut-rate drug store. Our policy at the beginning was to meet prices made by any other house on anything in our line, and a price once established was continued indefinitely.

"We always kept on hand a large stock of our leading sellers, and soon we acquired a reputation for having the goods and selling them at advertised prices, both of which helped us materially. As nearly as I can recollect, within six months from the time we began cutting prices, our average monthly sales had been doubled and the increase kept up at a gradually increasing rate until they became about \$15,000 a month. I might mention that during this time, as our business was increasing, we put in a larger and more varied stock of sundries, rubber goods, fancy goods, cigars, etc. We also installed a new and large soda fountain, finding that our cut rates on patent medicines attracted many more people to our store and furnished us with the opportunity of increasing and extending in many ways; on most of these goods we made the same profits as we had made under the old methods of doing business.

"The gross profits made on goods sold after we began cutting prices were from one-fourth to one-third of total sales. Expenses, of course, were more as business grew, on account of extra help and advertising, but our net gain increased faster in proportion, as many items of expense, such as rent, light, heating, phones, etc., cost no more than before.

"The average salaries paid drug clerks from 1894 to 1905 was from \$12 to \$18 a week."

To the energy and foresight of the early price cutters are due much of the credit for the changing conditions which made possible the final transformation wrought by the spirit of co-operation. The business of the cut-rate drug stores increased very rapidly, and for the first time men began to realize the possibilities of the retail drug business. The live druggists were quick to adopt the policy of price cutting, and in a short time cut prices ruled in practically every city in the United States, although for some time price cutting was confined to the leading druggist in each locality.

GEO. C. LYON  
of Waltham, Mass.

THE LATE C. P. JAYNES  
of Boston, Mass.

Among the forces working against price-cutting were the local pharmaceutical organizations. With undeniably good intentions the members of these organizations, refusing to see the dawning of a new era, banded together to maintain full prices, thus playing into the hands of the big price-cutters into whose stores they drove their own business.

(To be continued)

## Efficiency in Food and Drug Control.\*

By HON. JAMES H. WALLIS.

*Food and Drug Commissioner of Idaho.*

THE importance of food and drug control looms large at the present time. Zealous and conscientious officials, working with defective laws, have yet been able to make long strides toward securing pure and properly labeled foods for the stomachs of the people, and for our sick, drugs which have not been debased. These results have been accomplished only by the aid of strong public opinion enlightened by a friendly press, and with the help of sympathetic judges who have endeavored to overlook technical defects in the laws and to see only the spirit of such legislation.

In the Congress of the United States, and generally in the legislatures of the various States, there has been such lively appreciation of the necessity of pure food and unadulterated drugs that the officials charged with the enforcement of food and drug laws had but little trouble in securing adequate appropriations to carry on their work. This put the responsibility for proper results squarely upon the food and drug officials. Have we secured the greatest possible result for each dollar expended? I am forced to the conclusion that the question cannot be answered in the affirmative.

The first difficulty in the way of efficient enforcement of food and drug laws has been a lack of effective co-operation among food and drug control officials. This applies not only as between State officials and National officials, but also to co-operation among the State officials themselves. This is an evil well recognized by all the officials and steps have now been taken to correct it. It is a matter which rests entirely with the officials, and help must come from within and not from without. We must do that work ourselves.

### Educational Work Necessary.

We have been deficient also in the quantity and quality of educational work which should be done. True, we have sent our bulletins to the consumer, warning him against the frauds and impositions which we have detected in his food supply, and in his drugs; and in these same bulletins we have given him the names of those food and drug manufacturers and dealers who have sold him the adulterated and misbranded articles. We have informed him of the dire consequences which the officials of the State have visited upon these manufacturers in the way of fines and other penalties. This has been good work but it has not gone far enough. There is not a food and drug official of experience who does not know that 90 per cent. of the violations of food and drug laws, both State and National, have been caused largely by the ignorance or carelessness of the manufacturer, and not with a wilful intent to produce and dispose of adulterated and misbranded articles. Ten per cent., perhaps, of the prosecutions are against manufacturers who deliberately offer debased, deleterious, adulterated and misbranded foods and drugs; and as against this latter class of manufacturers the penalties provided in various laws have been woefully deficient. But how about those manufacturers who have sinned because of ignorance?

Have we done our full governmental duty when we say, let the manufacturer beware, let him put out foods and drugs at his peril? Does not such a policy lose sight of the end sought to be attained, which is to secure as quickly as may be possible a pure food and drug supply for the people? Will we not attain that result more quickly if we educate our manufacturers, show them how to produce pure foods in a cleanly manner, and spread information regarding methods of adulterating drugs, largely perpetrated by the foreign producer upon the American importer who buys in good faith?

The great majority is honest. It is not right, it is not even politic, to confound the great mass of clean, honest manufacturers with the sordid, dishonest minority. A distinction should be made. Increase the penalties against the dishonest, and educate the honest. If this be done there will be fewer court cases, because there will be a lesser number of violations of law.

The two minor reasons why the food and drug control work has not been more effective are as stated, lack of effective co-operation between food and drug control officials, and

insufficient and defective educational work. I do not wish to be understood to state that great good has not already been accomplished, but before the best results are permanently secured there must be a radical reorganization and change of methods.

### Drug Control Not Efficient.

The food and drug control work in the United States is not 50 per cent. efficient. This is startling, but it is true. Where is the trouble? The answer is found in defective organization and utter lack of correlation of several branches of what really is but one subject. This trouble has its root in the laws of the Federal Government and in the laws of the States. We must secure basic changes in these National and State laws and this association can help materially.

### What Is Food and Drug Control?

It has been customary to divide food and drug frauds into two classes: (1) those which strike the pocketbook because of the substitution of inferior quality; and (2) those which prey upon the human system, either because they are positively deleterious, or because they are deficient in strength or in effect. This is an artificial classification and an unsound one. All food and drug frauds fall within the second class. They prey upon the system, for it will be found, whenever a food or drug is debased by the substitution of cheaper material, cheaper only because it is deficient in food value or lacking in therapeutic effect, that not only has the money of the consumer been stolen, but there has been a direct attack upon the system. Either the body has been deprived of proper nourishment in the food, or it has suffered from the lack of remedial value in the drug.

In plain English, then, the underlying principle upon which food and drug control rests is the protection of the bodily welfare of the citizens. It falls in the same class as the sewage problem of our cities, and the disposal of waste products of animal life in our rural sections. It is brother to the "swat the fly" crusade, and a first cousin to the work of inspecting working conditions in factories, including woman and child labor, a terrible menace to the welfare of the generations of citizens yet to come. It is closely related to the inspection and quarantine work against contagious disease, be that disease measles or bubonic plague. It is in the same family as the work of protecting our water supplies from pollution. In short, it is one branch of *health work*.

### One Effective Organization.

To be efficient we must have all of these activities I have named and the many others which I have not named, combined into one organization. It must be done in the Nation, and it must be done in each State. As the matter stands now, there is no correlation of these various activities which are all but part and parcel of one great work, fostering and protecting the bodily welfare of our citizens. I do not care whether we have a National Department of Health, with its head sitting as a cabinet officer. It is not the name and position that count. It is the effective organization which, no matter what it may be called, can group together this widely scattered work and combine under one head and one direction all of these separate forces really working for a common end.

Consider the deplorable condition which exists now. Each activity has its own administrative and executive force, separate clerical and inspecting forces, separate laboratories and experts, separate filing and housing. Think what this means in waste of money and energy, and that is by far the lesser waste. The paralyzing thing is the absence of one broad, far-reaching plan which takes into account all that can be done by each separate line of endeavor, and welds the whole into one irresistible engine of progress.

First, we must have national legislation, which will recognize the principle, but placing within one organization the various and many health activities of the Federal government. This organization, when created, must be directed to co-operate with the State organizations, which will be patterned after it. Every dollar of appropriation for health work must be made to do its work. In cities and towns where Government laboratories are located, the municipal and State laboratory work should be done in the Government laboratory. The Federal government should clothe the State inspectors with all the powers held by Federal inspectors, and the State likewise should make the Federal inspector the agent of the State. The legislation, Federal and State, should be uniform, and

\*Delivered before the National Civic Federation, New York

to. Such as are to follow the National law, the latter must be progressive and adequate to remedy evils which must be met.

When these things are done we shall secure results, and I shall have in these United States men and women of finer physique and larger souls than the world has ever before seen.

## Classical Discoveries in Pharmacy.— III

### THE FIRST GLUCOSIDE.

THE search for alkaloids, and their recognition as such, among many plants, gave rise to a series of experiments to locate an active principle possessing general powers. Indeed, the search was carried down in our day. In course of these searches were found which were evidently the result of the action of plants, but which could not be explained as such, on account of striking differences in their properties. The first of these bodies to be isolated was the salicin, discovered by Leroux, a French pharmacist at Vitry-le-François, in 1830. Leroux's own account of the discovery is given in the article telling of the discovery of salicin by the eminent chemists Gay-Lussac and myself, who had examined Leroux's statements and his experiments. The account appears in the *Annales de Chimie et de Physique*, Series 2, Tome 43, page 449, 1830.

As the following story shows, Leroux was not at first aware of the fact that his new substance was not an alkaloid like morphine and quinine. Indeed, he did not learn from his experiments that he had, like Sertuerner with morphine, found the first member of still another class of compounds. It was not until 1845 that Piria demonstrated the splitting up of salicin into saliretin and glucose. The first paper on salicin follows. We have preserved the old ending in -ine:

*Report of a Memoir of M. Leroux, Pharmacist at Vitry-le-François, Relative to the Chemical Analysis of Willow Bark, by Gay-Lussac and Magendie.*

"In the month of June last, the Academy charged us—M. Gay-Lussac and myself—to examine a memoir of M. Leroux and to report on it. The importance of the facts contained in this memoir, and the researches to which we had to devote ourselves in order to verify its exactitude, have prevented us from making our report sooner. No less a question is involved, in fact, than whether there exists, in one of our indigenous plants, a principle that can take the place of the alkalies which chemical industry now extracts from cinchona barks. One can therefore understand with what attention we examined the work of M. Leroux.

"Since the beautiful and useful researches of M. Sertuerner on morphine, and those of MM. Pelletier and Caventou on quinine, cinchonine, strychnine, etc., many chemists have striven to separate from energetic medicaments the particular principle to which they owe their properties. This kind of work has enriched science by several new substances, and medicine by a number of important therapeutic means.

"M. Leroux, an enlightened pharmacist of Vitry-le-François, knowing that the willow had been employed more than once with advantage as a bitter and febrifuge, desired to know if the worthless barks which are detached from wicker twigs before the latter are worked up, did not contain some substance analogous to quinine and cinchonine, and soon his analyses placed him in a position to send, first to one of us and finally to the Academy, two products extracted from the bark of *Salix Helix*: one which he called salicine, and which he regards as a salifiable vegetable base; the other, which he called salicine sulphate; and these two substances M. Leroux announced as possessing the febrifuge power.

"The memoir thus presented two parts, one chemical and the other clinical. Our task, in examining the first part, consisted in ascertaining whether the substance described by M. Leroux was actually a new vegetable alkali; now M. Leroux, having come from Paris in the month of July last, recognized with us that the substance which he extracted from willow bark, under the name of salicine, is not alkaline at all; it does not sensibly saturate acids; also, that, far from com-

bining with it, acids decompose it, and make it lose its property of crystallizing; that it does not contain azote, and hence cannot be ranked among the new vegetable alkalies; as for the substance which he has sent to the Academy under the name of sulphate of salicine, M. Leroux himself had already realized that he had allowed himself to be imposed upon by certain circumstances of his analysis, and that this pretended salt does not exist; and this is in effect what our committee have verified.

"The substance to which M. Leroux gives the name of salicine, when pure presents itself under the form of very slender, pearly white crystals, it is very soluble in water and alcohol, but not in ether; its taste is of the bitterest, and recalls the aroma of willow bark.

"After having confirmed the existence of salicine, and determined its properties and its mode of preparation, it was necessary to assure ourselves if this substance really possesses the febrifuge virtue, and in case of an affirmative outcome, to see if it could replace quinine. Now, as to the first point, that is, the febrifuge property, one of us has assured himself by trials begun in the month of June of last year, on intermittent fevers of different types, that salicine is a febrifuge agent suiting to arrest the attacks of fever, without carrying the dose too high; our reporter has seen fevers cut off, from one day to the next, by three doses of salicine of six grains each; many physicians give sulphate of quinine in doses as high and even higher.

"In fine, M. Leroux has discovered, in the bark of *Salix Helix*, a crystalline principle, which incontestably enjoys the febrifuge power to a degree which approaches that possessed by sulphate of quinine, and this discovery is without contradiction one of the most important which has been made in therapeutics since several years."

### THE PHARMACEUTICAL CALENDAR ONE CENTURY AGO.

In a paper appearing January 1, 1814, Berzelius and Marcet confirmed the composition of carbon disulphide, proving that it contained no hydrogen. The substance had been discovered by Lampadius in 1796. (*Ann. Chim.*, Vol. 89, p. 67, 1814.)

In the same number of the *Annales de Chimie* is found the announcement of the subject for the Parmentier Prize for 1815. Parmentier, pharmacist-in-chief of the French Army, and the man who introduced potatoes into France on a large scale, left a sum of 600 francs to the Society of Pharmacy at Paris, for the awarding of an annual prize for the best piece of research on any subject assigned. For 1815 the topic was "Extractive in Plants."

De Saussure analyzed alcohol and ether, and concluded that both are combinations of olefiant gas and water. Making the necessary allowances for our different ideas of structure, this conclusion holds true in the light of modern knowledge. (*Ibid.*, p. 273.)

"The Culture and Products of *Laurus Cinnamomum* in Jamaica" is the title of a paper by Dancer, reprinted in *Ann. Chim.*, Vol. 89, p. 330.

About the same time the first volume of P. Orfila's famous work appeared, entitled "Treatise on Poisons, or General Toxicology."

Doebereiner reported his results in the study of barley and malt starches. He discovered soluble starch, or dextrin, and noted many points of differences between the two varieties. (*Schweigger's Journal*, Vol. 8, p. 207, 1814.)

The combination of iodine with vegetable and animal substances is the subject of a detailed study by Colin and de Claubry (*Ann. Chim.*, Vol. 90, p. 87, 1814). They discovered iodized starch.

Berzelius, in *Schweigger's Journal*, Vol. 8, p. 317, 1814, gives the analysis of Iceland moss, and reports on its value as a food.

In the "*Philosophical Transactions*," for 1814, p. 74, Sir Humphrey Davy relates "Some Experiments and Observations on a New Substance, which becomes a violet-coloured Gas by Heat." This new substance, iodine, had been discovered only a year previously, and was the center of attraction in the chemical world at that time.

That chemists of one hundred years ago also had their troubles with the apparatus makers is shown by a complaint

from Doebereiner (*Schweigger's Journal*, Vol. 10, p. 217, 1814), in which he states that platinum crucibles were frequently met with of poor quality, which blistered easily and soon wore into holes.

Pfaff, one of the many investigators who "almost" discovered quinine, published about this time a memoir on "Chinastoff und Chinabarz" (*Ibid.*, p. 265). He probably had the impure mixed alkaloids of cinchona in his hands, and obtained the pure crystalline "cinchonin."

## The Curse of the Retail Drug Trade.

By OTTO RAUBENHEIMER, PH.G.

THE writer well remembers that some years ago, when refined deodorized wood alcohol was first placed on the market under a fanciful name, silver-tongued salesmen were trying to convince the pharmacists throughout the country that this product was non-poisonous, and was in every way equivalent to grain or ethyl alcohol, and could be used in its place. As the result of this many druggists throughout the United States were induced to use this product on account of its cheapness, and as a result many druggists had to pay fines or even go to jail.

Practically the same conditions have existed, and do still exist ever since the new chemicals, the so-called coal-tar derivatives have been introduced into the United States. The large chemical industry, especially that of Germany, has spent thousands, nay millions of dollars to perfect and to introduce these products, and for that reason are charging a fair, and in some cases, a somewhat fancy price for these new chemicals. The process of manufacture is patented, and the names of the chemicals are trade-marked. This serves as a protection for the manufacturer. The little republic of Switzerland has a patent law which refuses protection to chemicals and chemical processes, and the result is that most of these chemicals are duplicated or imitated in that country, and are distributed from there. The United States in particular seems to be one of the large outlets for these products.

Some time ago the writer read the following letter from a firm in Philadelphia: "Kindly note that we have reduced prices on Givaudan's chemicals. Perhaps, at times, you have calls from druggists who want chemicals at ruinous low prices, regardless of whether the goods are A-1 or not. If so, we have some of Siegfried's chemicals on hand, which we will sell below cost. You, of course, buy these at your own risk. Any reasonable offer will not be refused if you can use same."

### "Gunmen" Peddlers Sell Imitations.

Just think of such a condition in medicine, intended for the cure and relief of the sick! These imitation goods are distributed by peddlers who deliver their fraudulent wares to druggists from hand satchels. These peddlers are irresponsible men, who very frequently make only one visit, who have no addresses, who leave no bills, and who cannot be held, nor can they be caught. These peddlers are in the same class as "gunmen," many of them being ex-convicts who would resort to any means in order to obtain money. These peddlers are also the distributors of obscene rubber goods and instruments, the sale of which is forbidden by law. They also supply cocaine and morphine to habitués, and even to school children. These peddlers buy and sell stolen goods and act as fences.

It is a large, a very large traffic that these illegitimate chemicals constitute. They are bought and sold without any guarantee whatsoever. The average druggists buy these chemicals at a slightly lower cost than the genuine articles. They dispense same, and thereby violate the patent as well as the trade-mark rights of the manufacturer. That the manufacturer has such a right has been demonstrated on numerous occasions, when druggists have been caught substituting these chemicals in place of the genuine ones, and thereby have had a great deal of legal annoyance, and even have had to pay fines or were sentenced to jail.

### Dispensing Physicians Also to Blame.

But the druggists are not the only guilty parties, as the peddler furthermore is in the habit of supplying the dispensing physician with these articles. The dispensing physician has no means of convincing himself of the chemical identity of these products, much less than the druggist, and thereby runs a greater risk as to the health and welfare of his patients.

All he knows is that the goods bear a certain label; that the goods are cheap, and *this* is the sole reason that prompts him to buy them.

The infringers sell these imitations under their chemical names, and the peddler claims that they are identical with the patented and trade-marked product, but frequently, almost invariably, these chemicals are grossly adulterated and instances are known that "aristol" had been adulterated with brick dust. "protargol" substitutes contained only 3 to 4% of silver, instead of 8.3%, and were strongly alkaline, and that salicylic acid has been sold as "aspirin," and as "pyramidon" a mixture of magnesium and sodium sulphate. Adulteration has even gone so far as to imitate the labels of the genuine product, so as to require an expert to tell the difference in the outside appearance between the imitation and the genuine. It is also well known that chemicals supplied by the irresponsible peddler are generally short weight. It has been repeatedly shown that tablets which are sold by peddlers are fraudulent. "Aspirin" and "veronal" tablets, which were said to contain five grains, have been found to consist entirely of inert matter. A large quantity of tablets is sold by peddlers which are made from adulterated chemicals, and it is predicted that some time or other there will be a large exposé, which will be a serious blow to pharmacy and medicine.

### Oxid of Iron Instead of "Salvarsan."

It has even come to my knowledge that vials bearing imitation labels of "Salvarsan," instead of containing this wonderful remedy, were filled with oxid of iron to give it the characteristic color of the genuine article, and this fraud was not discovered until the peddler selling this counterfeit article had left town to continue his criminal activities in another community.

The dangerous practice indulged in by so many druggists, as well as dispensing physicians all over the United States, of purchasing supplies from peddlers, is one of the most serious menaces to the health and life of every community. How dangerous this practice is has been well demonstrated in a recent case, when a substitute for a chemical which was intended as eye drops resulted in the loss of the patient's eye, and in the recovery of heavy damages from the substituting druggist.

Just now I received a circular from A. C. Smith, Windsor, Ontario, Canada, one of the veteran dealers in this class of goods, which circular, in fact, prompted me to write this article. I would ask you to read carefully the following sentence taken from it:

"You are taking an awful chance buying elsewhere; it is a crime to buy rank imitations and short-weight tablets peddled by every Tom, Dick and Harry, whose sole desire is to get all the profit possible irrespective of quality. You owe it to yourself and customers to buy these chemicals only from a reliable source. I positively cannot recommend anyone to you. I am retiring from business with a clean slate—honorable. No man will ever find me ungrateful or dishonorable."

Could there be better proof than these statements, made by a man who knows the truth of the nefarious dealings of these peddlers? How humiliating for us druggists that we must allow ourselves to be advised by that man not to take any chances in buying goods from his competitors.

Retail druggists as well as physicians should take pride in their honorable calling, and in this profession, and should not buy their supplies from irresponsible parties. This, in my opinion, is the curse of the retail drug trade of today, and the sooner this is abolished, the better it will be for professional pharmacy.

We pride ourselves upon our high state of civilization, but I doubt whether conditions in this particular are anywhere as bad as in the United States; not in the darkest part of Mexico would it be possible for peddlers to sell medicines, and no druggist could be found who would stoop so low as to buy supplies from notorious criminals.

### Celluloid Varnish.

Celluloid chips .....	5 ounces
Ether .....	1 pound
Acetone .....	1 pound
Amyl acetate .....	1 pound
Mix and dissolve.	

# SELECTED FORMULAS

**Liniment for Rheumatism and Sprains.**

Camphor .....	1/2 ounce
Chloroform .....	1/2 ounce
Tincture of arnica.....	2 drams
Tincture of aconite.....	1 dram
Tincture of opium.....	2 drams
Oil of wintergreen.....	1/2 dram
Soap liniment, enough to make.....	4 ounces

Mix. Apply as often as necessary and cover with flannel or silk.

**Niemann's Sultana Ointment.**

Spermaceti .....	8 parts
Cacao butter .....	16 parts
Oil of sweet almond.....	32 parts
Balsam of Peru.....	1 part

Melt together and add—  
Orange-flower water ..... 1 part |

Stir constantly until cold.

**Hinkle's Voice Lozenges.**

Cubebs, powdered.....	50 grains
Benzoic acid.....	33 grains
Tragacanth, powdered.....	25 grains
Extract of licorice.....	500 grains
Sugar .....	1300 grains
Eucalyptol .....	25 minims
Oil of anise.....	5 minims
Black currant paste, enough to make.....	2000 grains

Mix and make into 100 lozenges. A small piece may be made to dissolve in the mouth just before any considerable vocal exercise. Recommended for singers and speakers.

**Eucalyptus Embrocation.**

Oil of eucalyptus .....	1 ounce
Lard oil .....	1 ounce
Cottonseed oil .....	1 ounce
Oil of turpentine.....	3 ounces
Ammonia water .....	5 ounces
Oleic acid .....	1/2 ounce

Mix the acid and the lard and cottonseed oil. Then add the turpentine and ammonia and shake, lastly adding the oil of eucalyptus.

**Salol Dentifrice.**

Salol .....	3 1/2 drams
Saccharin .....	12 grains
Sodium bicarbonate .....	10 grains
Water .....	1/2 ounce
Oil of peppermint .....	1 dram
Oil of anise .....	5 minims
Oil of fennel .....	5 minims
Oil of cloves .....	2 minims
Oil of cinnamon .....	1 minim
Rectified spirit, enough to make.....	6 ounces

Dissolve the saccharin and sodium bicarbonate in the water, mix all the rest of the ingredients with the alcohol; dissolve, add the saccharin solution, tint with cochineal and filter.

**Paraffin Rouge.**

Hard paraffin.....	1 ounce
Soft paraffin.....	1 1/2 ounces
Eosin in powder.....	1 dram
Essential oil of almond.....	5 drops

Melt the paraffin on a water bath and digest with the eosin for 30 minutes, stirring occasionally; filter through paper (using a hot funnel) to remove excess of dye. When nearly cool add the essential oil.

Directions: Apply with the finger tip, gently rubbing until the desired tint is produced. Allow to remain a few minutes, then dust with starch and remove surplus grease with a cloth. This cures the skin and is not affected by perspiration.

**Ear Drops.**

Tannic acid.....	30 grains
Tincture of opium.....	2 fl. drams
Glycerin .....	6 fl. drams

Mix.

**Nail Powder.**

(1)

Oleate of tin.....	2 ounces
Powdered pumice stone.....	1 ounce
Oil of lavender.....	5 drops

Mix and pass through a fine sieve.

(2)

Cinnabar .....	1 ounce
Powdered emery .....	1 ounce
Oil of bitter almonds.....	2 drops

Mix and sift.

**Antiseptic Soothing Cream.**

Carbolic acid .....	10 grains
Camphor .....	10 grains
Anhydrous woolfat .....	4 drams
Soft paraffin .....	12 drams
Cacao butter .....	2 drams

Melt the cacao butter and lanolin, and when cooling, but still transparent, add the camphor and carbolic acid, which have been previously liquefied by rubbing together.

**Dandruff Pomade.**

Salicylic acid .....	20 grains
Chloral hydrate .....	10 grains
Oil of eucalyptus.....	5 drops
Zinc ointment .....	1/2 ounce
Cold cream .....	1/2 ounce

Mix well.

**Paper Barometers.**

Paper or fabric immersed in one of the following solutions, according to the *Chemist and Druggist*, changes color according to the humidity of the weather:

(1)

Cobalt chloride.....	1 part
Gelatin .....	10 parts
Water .....	100 parts

The normal color is pink; this changes to violet and blue, the latter being the indication of very dry weather.

(2)

Cobalt chloride .....	1 part
Gelatin .....	20 parts
Nickel chloride .....	75 parts
Cupric chloride.....	25 parts
Water .....	200 parts

The color is green in dry weather.

(3)

Cupric chloride.....	1 part
Gelatin .....	10 parts
Water .....	100 parts

The color is yellow in dry weather.

**Sealing Wax Insoluble in Alcohol.**

Beeswax, yellow .....	5 parts
Carnauba wax .....	1 part
Paraffin .....	1 part

Melt together and mix with—

Red lead .....	5 parts
Prepared chalk .....	2 parts

Heat the mixture under constant stirring until it thickens.

**For Cleaning Playing Cards.**

Bring to a boil one liter of water to which has been added 20 grams of soap bark. Continue ebullition for a few moments, then add 15 grams of starch, and the same quantity of borax, stirred up in a little water. Boil the mixture for about 10 minutes, then cool, filter, and preserve in a stoppered bottle. For use, rub the soiled surfaces of the cards lightly with a sponge saturated with the mixture.

**Paint for Renovating Linoleum.**

Yellow wax .....	5 ounces
Turpentine .....	11 ounces
Varnish .....	5 ounces

Mix at a gentle heat. Wash the linoleum first with soap and water, and when dry, apply the above with a woolen rag.

## FOREIGN ABSTRACTS

### NEWS FROM EUROPEAN LABORATORIES.

#### Some New Tests for Impurities in Tragacanth and Bismuth Salts—Decomposition of Spirit Nitrous Ether—Distinguishing Artificial and Natural Vaseline—Liquid Paraffin in Surgery.

**A**MONG the analytical notes presented this month are two simple processes for detecting the presence of lead in bismuth salts, and gum arabic in tragacanth. An extended examination of spirit of ethyl nitrite shows that with ordinary care this solution does not deteriorate at such a rapid rate as has been alleged in many cases of drug seizures. Caviblenes, a new form of urethral bougie, are described, and their advantages pointed out. Some recent work by Stapf appears to settle the question of the source of *Lignum Nephriticum*, discussed in this department some months ago. A physician serving during the Balkan war reports excellent results with liquid paraffin as a surgical dressing. Bourquelot and his colleagues are continuing their researches into the biosynthesis of glucosides, having recently succeeded in coupling the diacid alcohol glycol with glucose. An interesting case of inorganic isomerism is found in sodium acetate, and the new isomer seems to be of greater value in acetylation work on oils than the old anhydrous form.

#### Decomposition of Ethyl Nitrite—

The plea of defence in prosecutions for selling spirit of nitrous ether which is below strength is generally the unavoidable decomposition of the solution on keeping. In order to determine whether this plea is justified, Hodgson and Bailey examined a number of solutions of ethyl nitrite at various intervals. The samples were kept in 8-ounce brown, glass-stoppered bottles. From one bottle the stopper was removed and a portion taken for analysis. This was repeated every 24 hours. After 15 days the solution was devoid of ethyl nitrite. (The stopper apparently remained out of the bottle during this test. Abstr.) Another bottle was kept closely stoppered, being opened only long enough to remove the sample for analysis. At first the test was made every week, and later on, every month. Ordinary room temperatures prevailed. After one year the strength was reduced to 50 per cent. It is concluded that the usual defence should not be allowed if the deficiency exceeds 25 per cent., since the spirit is bought in small quantities and quickly moved. (Pharm. J., 1914, p. 28.)

#### Caviblenes, New Form of Bougie—

The author has devised a new form of hollow urethral bougie for the application of drugs to the urethral canal or to other cavities. It consists of a hollow sheath with thin, resistant, closely contiguous walls, which melt when introduced into the body. The inner cavity is filled with the drug, and the caviblene is then inserted in the same manner as a rubber sound, and left *in situ* until it melts, and the active ingredient comes in contact with the surface it is desired to treat. Either powders, liquids, or ointments may be administered in this way. It is especially convenient for use with highly colored remedies. Uranoblene is such a preparation consisting of sodium fluorescein, or uranin, with silver. Its solutions are highly fluorescent and of a bright yellow color. Although it is a powerful germicide, especially for gonococcus, and is non-irritant, its staining properties render it inconvenient for use by the ordinary method of injection. Caviblenes of various shapes and sizes are on the market. (Bruck, Pharm. Ztg., 1913, p. 874; through Pharm. J.)

#### New Culture Medium for Bacteria—

This new medium, devised by Besredka and Jufille, is cheap, but at first somewhat difficult to prepare properly. It is composed of incoagulable egg albumen, incoagulable egg yolk, and beef broth, in the proportions of 4 : 1 : 5. The albumen may be omitted when the tubercle bacillus is to be cultivated. It is claimed that by this medium the human and bovine types of bacillus can be differentiated, and a very active tuberculin prepared. Cultures of the pneumococcus in this medium conserve their vitality for several months; the meningococcus—usually a very delicate organism—retains its vitality for at

least two months; and a still more delicate organism, the gonococcus, not only gives good growths within 24 hours, but subcultivates on other media after a stay of 20 days in the new medium. The bacillus of whooping cough gives abundant cultures, and the organisms survive for at least four months in the incubator; and it is striking that several organisms which can only be grown in other media under strictly anaerobic conditions, grow and flourish in this medium in the presence of oxygen. (Brit. Med. J., 1914, p. 45; through Pharm. J.)

#### Artificial and Natural Vaseline—

According to the German Pharmacopoeia, artificial vaseline is prepared by mixing 3 parts of vaseline oil, containing 1.6 per cent. of paraffin, with 1 part of ceresin with a melting point of 60-62°. To distinguish this mixture from the true proprietary vaseline, dissolve 1 or 2 g. of sample in 40 cc. of propyl acetate, cool to -20°, filter off the precipitate at the same temperature, wash with 80 cc. of propyl acetate, dissolve with benzene in a dish, evaporate, and weigh. The paraffin content of natural vaseline is from 24.4 to 26.8 per cent., while that of the artificial is from 22.5 to 23.1. The difference is not great, but the composition of the precipitates differs considerably. If the precipitate from artificial vaseline, which is hard, is boiled out with alcohol, and the liquid decanted, the residue, on account of the removal of the lower-melting paraffins, is still harder and colorless. The paraffin thrown down from natural vaseline is yellow, and is not decolorized by long continued treatment with alcohol, a soft, yellowish residue remaining. (Kantorowicz, Chem. Ztg., 1913, p. 1565.)

#### Patchouli Oil—

Since about six months striking variations in the properties of patchouli oil have been noticed. While previous years have shown oils with sp. grs. above 0.97, rotations of more than -60°, and solubility in every proportion of 90 per cent. alcohol, the later oils have sp. grs. of about 0.95-0.96, lower rotation—as low as -42°—and a solubility in 6 parts of 90 per cent. alcohol, in many cases. Two very abnormal oils showed sp. grs. of 0.935 and 0.937, rotations of -9° and -34°, and solubility in 4.5 volumes of alcohol. The odor, on the other hand, was extraordinarily fine and intense. By varying the method of distilling the patchouli herb, the yield of oil was changed, but not its constants. The herb was proved to be unadulterated. Apparently the cause is to be sought in unusual weather conditions during growth or harvesting. (Lehmann, Chem. Ztg., 1913, p. 1589.)

#### Isomeric Form of Sodium Acetate—

The authors confirm the statements of Miller and Green, that the anhydrous salt and not a lower hydrate is formed on heating the sodium acetate trihydrate above 58°, or by cooling the molten trihydrate. This salt is also obtained by dehydrating the trihydrate at low temperatures, and is not identical with the anhydrous salt obtained by dehydrating at over 200°, or by melting the anhydrous salt and allowing it to cool. Sodium acetate I, stable above 198°, is probably monoclinic. Sodium acetate II, stable below 198°, is rhombic. Owing to the slowness of the change, the form I can be preserved for a long time at the ordinary temperature. The transition from trihydrate to the form II takes place at 58.2°. On crystallizing from boiling absolute alcohol, the form II separates, whether I or II has been dissolved. The new form II is a much better condensing agent and takes up water more readily than I, so that when sodium acetate is required for use in organic preparations, it is better not to fuse the anhydrous salt as is usually recommended, but to dehydrate at 120°. (Vorländer and Nolte, Ber., 1913, p. 3199; through J. Soc. Chem. Ind.)

#### Gum Arabic in Tragacanth—

Only traces of gum tragacanth dissolve in an ammoniacal solution of copper oxide, whereas gum arabic and similar gums dissolve practically completely. By utilizing this fact and carrying out at the same time a control test with tragacanth gum of known purity, the proportion of gum arabic in an adulterated sample of tragacanth can be determined. Tests with mixtures containing 30 and 20 per cent. respectively of

... salts accurate to within ... of gum tragacanth ... percent of gum arabic ... J. Soc. Chem. Ind.

**Process for Demolishing Tobacco—**  
... excess ... must pump ... is now ... still charged ... of this ... in the tobacco ... vessel and pass- ... is finally heated ... ammonium salts ... is recovered. (French ... J. Soc. Chem. Ind., 1913, p. 188.)

**Reactions of Digitoxin—**

Purified digitoxin was used for the tests. The color reaction is sufficiently apparent, and the color is snow-white. It is insoluble in water, but soluble in alcohol, and is easily dissolved by chloroform. In cold sulphuric acid digitoxin remains apparently unchanged for days. Gradually, however, the crystals increase in size, and appear black when held against a white ground. This black appearance is quite characteristic of digitoxin, and is caused by minute air bubbles. The substance is easily soluble in glacial acetic acid. Twenty-five per cent nitric acid causes no color formation, but the addition of potassium hydroxide brings out a pale yellowish red, not very characteristic. Chromic acid and molybdic acid give quite characteristic reactions. If a little digitoxin is treated on a slide with ammonium molybdate or potassium dichromate, and water, there is no change, and added acetic acid has no effect. But on the addition of sulphuric acid, solution takes place in a few hours, although no color reaction takes place after five days in the cold. If the test is slightly warmed, however, the molybdate slide becomes a beautiful sky blue, while the chromic acid mixture changes to a nickel green. Vanadic acid used in the same manner gives a yellow color, due to the metavanadate, but no reduction takes place with digitoxin. Sodium iodate with sulphuric acid gives no color. Of the greatest importance are the reactions with ferrocyanides and ferricyanides. When treated with yellow or red prussiate of potash and water digitoxin gives a precipitate of the corresponding salt. On allowing the mass to dry in the air, and adding acetic acid, the ferricyanide gives long needles. After standing for 12 hours, the addition of sulphuric acid causes an intense blue with the ferri salt, and a gradual change to sky blue with the ferro salt. Other tests of value are carried out with tungstic acid, mercury salts, silver nitrate, and hydrochloric acid, and cobalt nitrate. (Reichard, Pharm. Zentralhalle, 1913, p. 687.)

**Incompatibility Due to Glass Alkalinity—**

If sodium phosphate is present in solutions intended for injections and put up in sterilized ampules, the quality of the glass must be considered. Ampules heated for 20 minutes at 120° with water containing phenolphthalein, should show no pink color. A solution containing sodium glycerophosphate, sodium sulphate, and strychnine sulphate formed crystals. High percentage of strychnine alkaloid. (Mabert, J. Pharm. Centralhalle, 1913, p. 54.)

**Alpha-Glucoside of Glycol—**

... of bottom yeast on a mixture ... Bourquelot and Bridel have synthesized ... as shown by the change in ... although the glucoside itself ... The reaction has its maximum effect ... 50 and 60 per cent of glycol ... and glucose ... in 75 per cent alcohol. The ... relation between glycol and glycol ... a greater extent with the ... up to at least 74 per cent. In ... studies gives the following ... making ethyl-alcohol in large ... 15 liter flasks placed 45 kg of ... and 10 liters of 90 per cent alcohol ... for a month. Decant the alcohol,

replace by a new quantity of 10 liters, allow to stand for another month, and repeat the process. In this manner at least 1 kg. of beta-ethyl-glucose can be obtained from each bottle in a month. The energy of the ferment is impaired only slightly by its long immersion in alcohol. The only difficult point in connection with the operation is obtaining the ferment. (Bourquelot and Bridel, J. Pharm. Chim., 1913, p. 547; Coirre, Rev. p. 554.)

**Detection of Lead in Bismuth Salts—**

Advantage is taken of the fact that a boiling solution of ammonium nitrate will remove any lead present in the subnitrate or carbonate of bismuth without dissolving even a trace of the latter. In 10 g. of the subnitrate, 10 g. are boiled for 8 minutes with 100 cc. of a 20 per cent solution of ammonium nitrate. After allowing the liquid to become quite cold, it is filtered, and a few drops of a neutral solution of potassium chromate are added. In the presence of a trace of lead the well-known chrome yellow appears. With the subcarbonate, treat 10 g. with 100 cc. of the ammonium nitrate solution, boil down to 80 or 40 cc., then evaporate to dryness on the water bath. Treat the dry residue with 100 cc. of distilled water, stir well, and evaporate to 40 cc. over a naked flame. When cold, this solution is filtered and tested with potassium chromate solution. The reason for the prolonged heating in this case is to absolutely eliminate the ammonium carbonate formed in the reaction, since the presence of this salt in the filtrate would prevent the precipitation of the lead chromate. (J. Pharm. Chim., 1913, p. 422; through Pharm. J.)

**Disinfectant Action of Solargyl—**

The silver-albumin preparations used thus far in the treatment of acute gonorrhoea have a number of defects, among them being the ease of decomposition, lack of solubility in water, and slight stability in solution. A new preparation, solargyl, is said to overcome these difficulties. It contains 30 per cent. of silver, being a combination of silver oxide and proteoses. Solargyl has a strong disinfectant action on resistant bacilli, as staphylococcus, coli, and pyocyanus. In this regard solargyl with 30 per cent. of silver approaches collargol, with 76 per cent. The solutions are not decomposed by boiling, and can therefore be sterilized; they are neutral, and stable for long periods. (Glücksmann and Gobbi, Münch. Med. Wochschr., 1913, p. 2788.)

**Antiseptic Constituents of Creosote—**

The question of what constituents of creosote have the most powerful antiseptic action is not yet cleared up, in spite of the efforts of many investigators. Charitschkoff has studied the problem in the following manner. The phenolic and acid constituents were removed by alkali, and the nitrogen bases separated by acids; naphthalene and other unsaturated bodies were removed by sulphuric acid. The phenol-free creosote was almost as strongly antiseptic as crude creosote, and the same is true of creosote from which the bases have been removed. After treatment with sulphuric acid the substance is highly active. The phenols themselves, as well as the bases, have an antiseptic action like creosote. Probably the cause of the action is not only the substances named, which are contained ready formed in creosote, but also those which result from the oxidation of the unsaturated compounds. (Charitschkoff, Chem. Ztg., 1913, p. 1164.)

**Liquid Paraffin as Wound Dressing—**

During the Falk war 20 cases of wounds were dressed with liquid paraffin. In every case the wounds healed over in a remarkably short time. Dressing wounds with creosote has been recommended. The latter is recommended as a dressing for cases of ulcers, where there is some suppuration, the application of 2 per cent of iodoform liniment waters. (Clayton studies, Zentr. f. Bakt., 1913, New Series, Abt. Pharm. J.)

**Genisteine, a New Alkaloid—**

At the meeting of the Society of Chemists at Paris, held December 3, 1913, M. Duran was read a paper on genisteine, a new alkaloid isolated from the ground seeds of the bean (*C. H<sub>2</sub>N*), melts at 153° and 148° at 177-178°, and at 22 mm. pressure. It forms a picric acid salt melting at 117°. Genisteine reacts with picric acid to form a phenol-picric salt, yet is soluble in water, as shown by the formation of the picrate and platino-chloride. (J. Pharm. Chim., 1913, p. 578.)

# THE QUESTION BOX

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

### Use of the Words "Cold Cream."

(J.W.C.)—"Kindly enlighten me on a question that has been raised on the use of the words 'cold cream.' A druggist makes a 'greaseless cream' and calls it 'greaseless cold cream.' I claim that his product cannot be 'cold cream' if it is 'greaseless,' and that 'Unguentum Aquae Rosae, U.S.P., is the only cold cream. He claims that any cream can be called 'cold cream.' Any information on the subject will be highly appreciated."

As the words "cold cream" are no longer used by the Pharmacopoeia as an official synonym for ointment of rose water there is nothing in the law or common usage of language that will prohibit one from applying these words to any preparation of "cream" he may wish. The principle of the law as to the use of names is set forth in No. 7 of the Regulations for the enforcement of the Federal Food and Drugs Act, as follows: (a) "A drug bearing a name recognized in the United States Pharmacopoeia or National Formulary, without any further statement respecting its character, shall be required to conform in strength, quality, and purity to the standards prescribed or indicated for a drug of the same name recognized in the U.S.P. or N.F., official at the time." As "cold cream" is not recognized by either of the authorities named, there is no standard for the preparation except that which each manufacturer may elect. In former editions of the U.S.P. "cold cream" was an official synonym for ointment of rose water, but, as stated above, the name does not appear in the present revision. The dismissal of the synonym became necessary because of the large number of unofficial ointments of varying composition popularly exploited as cold cream, and these were frequently dispensed when physicians' prescriptions directed ointment of rose water.

### Resilvering Mirrors.

(J.S.H.)—"We have repeatedly published formulas for resilvering mirrors, and if you care to take the trouble to go over the files of THE PHARMACEUTICAL ERA covering the last three or four years, you will find a number of processes outlined."

However, to help you out, we would state that as mirrors are made by backing the glass with a film of silver or with an amalgam of mercury, the character of the "resilvering" process must be selected accordingly. But whatever method is employed, great stress is laid on the absolute cleanliness of the glass, not only from dirt and grease, but also freedom from any organic matter. In fact, herein lies the success of any method employed for this purpose. The following formula has been recommended as answering most of the requirements. Make three solutions, as follows:

(1)

Silver nitrate .....	2 grains
Stronger ammonia water.....	1 ss
Distilled water .....	1 ss
Alcohol .....	1 fl. ounce

Dissolve the silver nitrate in 6 fl. ounces of distilled water, and gradually add the ammonia water until the precipitate first formed is dissolved no more. Any excess of ammonia must be guarded against. Then filter through a piece of filter paper, adding distilled water to make 12 ounces of clear alcohol. Place in a clean bottle shake thoroughly and keep in a cool, dark place.

(2)

Reebell's salt .....	12 grains
Silver nitrate .....	10 grains

1. Dissolve in 12 fl. ounces of distilled water 1 fl. ounce of alcohol.

2. Dissolve 10 grains of Reebell's salt in 8 ounces of distilled water in a clean glass vessel. While boiling, add gradually the silver nitrate dissolved in 1 ounce of distilled water until the solution begins to turn gray, add 10 ounces of distilled water and filter, making up to 12 fl. ounces with distilled water. Add the alcohol and bottle, keeping the solution in a cool, dark place. Allow both of these solutions to stand five or six days before using.

Mix equal parts of the above solutions and pour the mixture on the glass to be silvered. Allow to stand for one hour or more, pour off the solution, rinse with clear water, and before drying, amalgamate with the following solution:

(3)

Potassium cyanide .....	8 grains
Mercury cyanide .....	10 grains
Water .....	qs.

Dissolve the salts separately in 8 ounces of water and add to distilled water to make 1 gallon. Place this solution in a sprinkler, and sprinkle the silver film on the glass until it turns a lead color; then rinse immediately and stand the glass on end to dry. Paint over the deposited film with asphaltum varnish, using a soft brush. The silver coating must not be touched before it is painted.

A varnish for the backs of silvered mirrors consists of dammar gum, 20 parts; asphalt, 3 parts; gutta-percha, 3 parts; benzole, 75 parts. Mix and dissolve. To use varnish it may be applied with a soft brush, or pour it over the silvered surface and move the plate back and forth until the varnish is evenly and completely distributed over the back of the glass.

### Face Lotion: Hair Tonic.

(G.D.Co.)—"Please give us formulas for each of the following: Face lotion, thick, nice odor; face lotion, thin, nice odor; and a hair tonic, also possessing a nice odor."

The title "face lotion," without other qualification, is so elastic that it may be employed to cover a broad range of preparations of widely differing composition and characteristics. However, one of the most common "lotions" of the "thick" type used for the face and hands, perhaps, is the well-known quince seed lotion or toilet cream, a common formula being:

Quince seed .....	2 ounces
Rose water .....	4 pints
Glycerin .....	2 pints
Tincture of benzoin.....	2 ounces

Macerate the quince seed in the rose water for 24 hours, strain, and add the glycerin and tincture of benzoin.

Another lotion which possesses considerable density is

Mucilage of flax seed.....	8 fl. ounces
Glycerin .....	8 fl. ounces
Alcohol .....	2 fl. ounces
Essence of roses.....	1/2 fl. ounce
Borax .....	2 grains
Rose water or distilled water.....	32 fl. ounces

Mix the mucilage and glycerin in the alcohol and essence, and finally filter the mixture into the borax has been dissolved. If desired, a few drops of perfume may be added to give consistency for use.

For a thin, lotionic type of face lotion:

Glycerin .....	1 ounce
Alcohol .....	10 fl. ounces
Tincture of benzoin.....	enough to color
Glycerin .....	4 ounces
Orange leaf extract.....	1 ounce
Rose water .....	5 ounces
Distilled water .....	5 ounces

Mix. This lotion may be colored with liquid carmine, 1 to 4 fl. drams.

## Hair Tonic.

(1)

Resorein .....	5.0 parts
Menthol .....	0.5 part
Alcohol .....	150.0 parts
Rose water .....	25.0 parts
Cologne water .....	25.0 parts

Mix.

(2)

Castor oil .....	2 fl. ounces
Oleo-balsamic mixture .....	3 fl. ounces
Tincture of cantharides .....	3 fl. drams
Benzoic acid .....	1.55 grains
Tannic acid .....	1½ drams
Alcohol .....	4 fl. drams

Mix and filter.

As stated above, these preparations may also be variously perfumed by the addition of suitable handkerchief extracts.

## Tincture of Larkspur.

(G. P. H.)—There is no official formula for tincture of larkspur, but the following has been proposed for admission into the next edition of the National Formulary:

Larkspur seed, No. 50 powder.....	100 grams
Alcohol, enough to make.....	1000 cc.

The resulting tincture has a permanent brownish-green color.

The so-called "nursery hair lotion" to kill "nits" in children's hair may be made after one of the following formulas ("Pharmaceutical Formulas").

(1)

Stavesacre seed, in rough powder.....	2 ounces
Acetic acid .....	1 ounce
Water .....	16 fl. ounces

Boil for 10 minutes in a covered vessel, set aside until cold; then add:

Rectified spirit .....	2 ounces
Oil of geranium.....	2 minims
Oil of lavender.....	2 minims
Oil of lemon.....	4 minims

Filter and add:

Glycerin .....	1 ounce
Water, enough to make.....	20 fl. ounces

According to the authority cited, this formula from the Edinburgh Infirmary Pharmacopœia, is a valuable one and certain in its effects.

(2)

Larkspur seed .....	10 ounces
Potassium carbonate .....	1 ounce
Water .....	50 ounces

Boil together five minutes, and when cold add:

Rectified spirit .....	50 ounces
Water, enough to make.....	100 ounces

## Mange Remedy for Dogs.

(E. J. H.)—We are not familiar with the proprietary remedy and do not recall any analysis that throws any light on the probable composition. However, if you want a formula recommended by a contributor to the ERA, you can try the following:

Whale oil .....	2 parts
Oil of tar.....	1 part
Flowers of sulphur.....	1 part

This is to be thoroughly mixed and applied to the parts affected, and allowed to remain for about 24 hours, when the dog should be washed and a fresh supply applied. Usually two or three applications will effect a cure. This remedy contains no poison, and cannot injure the dog should he lick it off. Two other standard formulas are:

(1)

Olive oil .....	1 pint
Oil of turpentine.....	¼ pint
Sulphur .....	2 ounces

(2)

Olive oil .....	1 pint
Creolin .....	1 ounce
Sulphur .....	2 ounces

The dog should be thoroughly washed with plenty of soft soap and warm water. After drying, either of the foregoing applications will generally eradicate the pest, the hair usually growing again. Two or three dressings at intervals of three days will suffice.

## Shampoo Paste.

(M. P. H.)—Here are three formulas.

(1)

White castile soap.....	2 ounces
Ammonia water .....	2 ounces
Bay rum or cologne water.....	1 ounce
Glycerin .....	1 ounce
Water .....	12 ounces

Dissolve the soap in the water by the aid of heat; when nearly cold, stir in the other ingredients.

(2)

Castile soap .....	4 ounces
Potassium carbonate .....	1 ounce
Water .....	6 ounces
Glycerin .....	2 ounces
Oil of lavender flowers.....	5 drops
Oil of bergamot.....	10 drops

To the water add the soap, in shavings, and the potassium carbonate, and heat on a water bath until thoroughly softened; add the glycerin and oils; if necessary to reduce consistency, more water may be added.

(3)

White castile soap.....	4 ounces
Powdered curd soap.....	2 ounces
Potassium carbonate .....	1 ounce
Honey .....	1 ounce

Perfume to suit. Make a homogeneous paste by heating with a sufficient quantity of water. Many other formulas for shampoos may be found in the new edition of the ERA Formulary, now on the press.

## Antiseptic Solution.

(J. L. C.)—"Will you please publish in your next issue a formula for an antiseptic solution containing the following articles: Benzoic acid, boric acid, eucalyptol, oil of peppermint, oil of wintergreen, thymol, and alcohol, the solution not to contain over 28 per cent of alcohol, and enough water to make 1 gallon?"

The substances named constitute the ingredients directed in the Pharmacopœia for the official "antiseptic solution" which, according to Professor A. B. Stevens' calculation, given in the ERA Dose Book, contains 23.7 per cent. of alcohol in the finished product. Taking the official formula and converting the metric quantities there prescribed to the nearest equivalents in English weights and measures (on the basis of making 1 gallon of finished product), the formula becomes as follows:

Boric acid .....	22 5 12 troy ounces
Benzoic acid .....	56 grains
Thymol .....	56 grains
Eucalyptol .....	16 minims
Oil of peppermint.....	16 minims
Oil of gaultheria.....	16 minims
Oil of thyme.....	8 minims
Alcohol .....	32 fl. ounces
Water, enough to make.....	1 gallon

Dissolve the boric acid in 92 fl. ounces of water and the benzoic acid in 10 fl. ounces of alcohol, and pour the aqueous solution into the alcoholic solution. Then dissolve in a mortar the thymol in the eucalyptol, and oils of peppermint, gaultheria and thyme; thoroughly incorporate the purified talc, and add, with constant trituration, the solution first prepared. Allow the mixture to stand, with occasional agitation, during 48 hours, filter, add the remainder of the alcohol, and enough water to make the finished product measure 1 gallon.

But why be compelled to convert the metric units of any formula into units of English weights and measures for manufacturing operations? A set of metric weights and measures and their intelligent employment would obviate nearly all of the "conversion problems" many druggists think they are compelled to solve before they can proceed with a formula stated in metric units.

# WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

Women Students, Junior and Senior, and Instructors at Columbia.

THE 84th annual term of instruction at the College of Pharmacy, Columbia University, is now well under way. The Junior class numbers 17 students, and the Senior class nine. This unusual number of women shows the increasing favor accorded to women in pharmacy and to the course offered by this well-known institution. A private sitting room is provided for the young ladies, and everything possible done for their profit and comfort. The college graduates are represented on the faculty membership for the first time this year. Columbia offers unusual advantages in three-, four- and six-year courses of study based upon high school graduation and leading respectively to the degrees of Pharmacy Chemist (Ph.Ch.), Bachelor of Science in Pharmacy (B.S. in Phar.), and Doctor of Pharmacy (Phar.D.).

Women students of the Junior and Senior classes of the College of Pharmacy, Columbia University, together with some of the members of the faculty. Those in the Junior class are: Miss Deborah Arginteanu, Miss Lena Brill, Miss Edythe Caffrey, Miss Rose Dispenza, Miss Sarah Gilman, Miss Marie Goldberg, Miss May Levit, Miss Guarana Lora, Miss Lena J. Lindeman, Miss Daisy Myerson, Miss Mary A. O'Connor, Miss Sophia Rose, Miss Helen F. Roudin, Miss Ida Schimansky, Miss Henrietta Silverman, Miss Anna Solosko, and Mrs. Edith Thom. Those in the Senior class are: Miss Lena Ager, Miss Marguerite Colfax, Miss Henrietta De Maio, Miss Rose Fried, Miss Kate Kramer, Miss Ruth Propper, Miss Rose Ofrias, Miss Mary Rothstein and Mrs. Florence V. G. Wodicka.

### III. The Woman Pharmacist's Future.—“The Better Babies” Movement.

THE Federal government led the way to a still greater work when it began to experiment and conduct exhaustive tests in scientific crop productions and animal husbandry. Slowly, but surely, it began to dawn upon an increasingly large number of people that even if cotton and hogs were immensely valuable, our babies were worth vastly more.

Statistics are wonderfully illuminating even if they are considered dry as dust to the uninterested, and statistics revealed appalling waste of human life from improper prenatal and post-natal conditions; from unclean milk, improper feeding, indiscriminate home medication, disease-carrying insects, neglect of sanitary and hygienic conditions, and hot, close, dusty rooms, while thousands were needlessly doomed to go through life blind before the enforced use of silver nitrate solution almost eliminated blindness from *ophthalmia neonatorum*. The decrease of puerperal septicaemia has been in steady proportion to the better understanding of hygienic conditions and the intelligent use of antiseptics.

At the time of the last census in 1910, there were 40,417,361 persons in the United States under 21 years of age, and they formed 43.9 per cent. of the total population. There were 29,499,136 children under 15 years of age or about one-third of the population, and over 2,000,000 babies under a year old or almost one-fortieth of the entire number of people. Not

quite one child in five lives in a big city. The major portion, therefore, of children under 15 live in towns, villages and rural communities.<sup>1</sup> These young people will form a large part of the citizenship of tomorrow—in fact the native citizenship itself.

The more the native birth rate is lowered, the greater is the administrative power placed in the hands of the multitude trooping through the gateway at Ellis Island.

And, strange as it may seem, the big problem of infant mortality no longer is centered in the big cities, but in smaller places.

Through labor and legislation, New York City has reduced the infant mortality rate from 191 per 1000 births in 1901, to 105 in 1912, as against 143 in Utica and 158 in Troy.<sup>2</sup>

The bulletin from which these figures are taken, says:

“The result is that we have suddenly awakened to the fact that we are in much the same position as New Orleans when she learned that instead of quarantining against Havana, Havana was quarantining against New Orleans.”

<sup>1</sup>Handbook of Federal Statistics of Children, Children's Bureau, Julia C. Lathrop, Chief.

<sup>2</sup>Special Bulletin, New York State, Department of Health.

From 1800 to 1913 the Milk and Baby Hygiene Association of Boston has reduced the infant mortality 25 per cent. During the past Summer 3270 babies under one year of age died in New York City from diarrhoeal diseases, and these diseases do not rank first in importance as the cause of infant mortality. The congenital diseases take first rank. Nevertheless, most of these 3270 could have been saved if they had been properly fed.

Too often, it is claimed, undersized people and actual dwarfs are the result of imperfect nutrition during infancy. Older children suffer from neglected teeth, eyes, ears, etc., and that, too, in spite of recent legislation to supply medical inspection. The result of years of neglect cannot be undone in a moment, even by the most conscientious of physicians. New York City has 184 medical inspectors, 301 nurses, 10 dentists, 55 nurses' assistants, etc., and in addition 55 trained nurses are assigned for extra duties at the infant's milk stations from May 1 to Oct. 1. All places are not provided with such a corps of workers, but the fact remains there is work to do for child welfare everywhere.

The woman pharmacist has neither time nor training to undertake specialized work in any of these lines, but in order to keep step with the progress of events about her she must be prepared to give helpful information with the goods she sells. When she wraps up nursing bottles or rubber nipples for a young mother or a foreign one, she can easily lead the conversation to the care of these articles and tell her a clean, boiled nipple should be used each time—one that has been cleansed inside and out; that clean, boiled bottles should be used for each feeding, and any milk left in the bottle thrown away; that hands and all dishes should be scrupulously clean when baby's food is prepared; and that no pains should be spared to nurse a baby, as that is the best food of all when it is possible.

She can discourage the mother from following the neighbors' advice when baby is ill, and point out that babies are delicate creatures and that skilled, medical advice is decidedly safest. She can utter a timely warning against ignorant "doping" of children with narcotics, and the too common belief that all childish ills come from teeth or worms. Too often indigestion and a reactionary nervous condition are present that call for expert diagnosis.

The woman pharmacist can do a great deal toward educating the mothers about her on the importance of care of teeth and eyes in relation to physical well being of their children, and as she has frequent opportunity, can urge adequate prenatal care under medical supervision. She can acquaint herself with the hygienic needs of maternity and specialize on these supplies. She can, by means of a very little study, help her customers to follow the doctor's orders by explaining thoroughly the use of sterilizing and pasteurizing apparatus and the clinical thermometer.

She could with propriety have a pamphlet of timely information printed bearing a few common-sense rules of baby hygiene, and a listed advertisement of the baby supplies she offers and enclose them with each sale of baby goods or send them to the mothers of her locality.

When there is a "Better Babies Show" in town, she can, if she is in business for herself, offer one or more prizes for the most physically perfect specimens of babyhood. She can keep a capacious filing drawer in which to store all the infant literature of which there is such an abundance, and she can so familiarize herself with the child welfare movement that she will be the first thought of the mother in need of the services of a sympathetic woman pharmacist.

(To be continued)

#### NEW YORK WOMEN'S P.H.A.

At the annual meeting of the Women's Pharmaceutical Association of New York the following officers were elected: President, Mrs. E. V. Wisendanger, Woodmere, L. I.; vice-president, Miss Louise Kramer, New York City; recording secretary, Miss Lucille Rein, New York City; corresponding secretary, Mrs. May V. Crosby, Inwood, L. I.; treasurer, Mrs. Evelyn Baker Schwager, New York City.

The retiring president was Mrs. Bertha Broder who was pharmacist of the East New York Dispensary until her marriage last August to Morris Dlugash, a wholesale druggist of New York City. Mrs. Dlugash has a daughter in the Junior class of the Brooklyn College of Pharmacy.

## A Promising Pharmacy Graduate.

THE history of Miss Nora Marceline Gobie, of Dorchester, Mass., is of especial interest because it shows how closely are linked together long-cherished desire, the timely word spoken at the right season, and the ability of a joyous, capable, ambitious girl to accomplish great things. It also shows that results longed for with sufficient earnestness are pretty certain to be accomplished sooner or later.

Miss Gobie was born in the State of Vermont just 22 years ago in the town of Quebec. The family home is still there. During his own young manhood Mr. Gobie, the father, had felt a strong inclination to enter pharmacy, but other business prevented. The business which occupied Mr. Gobie largely to the exclusion of other things was and is the printing of druggists' and physicians' labels. He found the ERA a valuable advertising medium and that magazine came regularly to his office.

MISS NORA M. GOBIE

As the daughter grew to womanhood she became a fine student, graduating from the Woodstock High school with high rank. The Gobie printing business is in Woodstock, and, naturally, the young High school student was much in her father's office during her four-year course. She handled and sorted and studied the labels until the desire awoke to know what they stood for and the scientific knowledge that lay behind them. Then the history of what women had accomplished in pharmacy began to be told in the ERA, and father and daughter read it. What had been done might be done again. Together they eagerly awaited the coming of each copy, until it came to be the accepted fact that Nora Gobie would do the thing her father had always longed to do.

As soon as she finished High school she entered the Massachusetts College of Pharmacy, from which she expects to graduate next May. In the meantime this young lady, thanks to hard work, thorough training and careful instructions, received her diploma of registration as an assistant pharmacist from the Vermont Board in July of last year, and her full registration papers in October, taking a standing sufficient to entitle her to reciprocity privileges.

Miss Gobie says the utmost courtesy was extended to her by the members of the board of her native State, which shows that the day of prejudice has passed against a woman entering this profession. During the time she has been in college she has been fortunate in having excellent places in which to work during her leisure hours, and this is giving her the training she desires for the management of the drug store which she hopes to own some day.

At the present time she is employed in the store of Mr. I. A. Piercy, 1270 Dorchester avenue, Dorchester. Naturally, this occupies the young lady's time very fully. It means a fixed purpose to do good work provided a student takes several subjects and works in a store at the same time. She says:

"Many nights I have put in two or three hours of hard study after working until 10 o'clock. But, at the same time, if one can stand it, you are getting valuable experience in the store and your training at the school to apply on your education in the meantime."

Miss Gobie is right, and many young people who are spending time and energy in late-hour pleasures would be better off to be spending the same time to a definite, worthy purpose.

Miss Gobie finds the public cordial and appreciative of her efforts. She likes her work more and more each day; and she looks forward to a career of usefulness. She considers pharmacy a fine field for any young woman willing to apply herself sufficiently to master its principles.

## MOSTLY PERSONAL

### How F. K. Stearns Takes His Recreation.

**F**REDERICK K. STEARNS, of Detroit, is a motor enthusiast. Not content with having motored all through this country, he has made 20 trips abroad, has traversed Europe in all directions, has visited the islands of the sea, Yokohama, Singapore, Ceylon and Java, and as he himself expresses it, he's been everywhere but South Africa, Russia and Jerusalem. He has hopes of traveling through Russia in his car before he stops; but while he has been in the Holy Land he has tabooed Jerusalem because—"it did not seem just exactly what you might call sanitary." Mr. Stearns undoubtedly has reference to that peculiar state of bodily sanitation in the Eastern countries so frankly epitomized by Mark Twain, when he told his reasons why he was no longer attracted by the glories of the Queen of Sheba.

F. K. STEARNS  
of Detroit.

Mr. Stearns is a most interesting man to talk with. He will take a map of the Continent and point to the network of tracings in red, blue and yellow, all records of his journeys, extending from sea to sea and from capital to capital. He has traveled thousands of miles during his 12 years of motoring and has never had an accident. Only once has he injured a pedestrian, and that was in Spain. The party was then cast into a dungeon and held until it was learned that the woman was not seriously hurt. It was uncomfortable and it looked serious for a time for the motorists, but they were eventually released. His most thrilling ride was through the Stelvio pass, the highest mountain pass in the world, which lies between Austria and Italy. In it there are 80 "hair-pin" curves, so narrow that a motor car has to back through them, and the drop down the sides of the pass are sheer for more than a mile.

Only last September he returned from a trip to Australia. He finds Hawaii—that is, Honolulu—an ideal climate and says that while people visit Europe in search of perfect weather they overlook this beauty spot so near our doors. Japan, he finds, has been over-praised.

"It's beautiful," he says, "but by no means the dreamland of cherry blossoms and wistaria people think it. It has been unbearably hot when I have been there, and the last time we were in Japan it was in a raging snow storm."

Mr. Stearns is a man of many accomplishments. While motoring is his hobby, he is passionately fond of music, and his activities in behalf of the Detroit Symphony Association have done much for that organization. He himself has been at some time or another a proficient performer upon any one of a half dozen different musical instruments. He is an enthusiastic baseball "fan" as well, and for four years was the

president of the Detroit Baseball Club—and Detroit had a world's champion team then, too. He comes naturally by his love for the National game, for during his college days at Ann Arbor he was a member of the "Varsity Nine" and a most effective member at that.

—Daniel R. Jones, well-known Milwaukee druggist, whose store in the Wells building is one of the best patronized in that city, believes that the day has passed when the city druggist can profitably feature holiday goods. Mr. Jones says that it is all right for the druggist in the smaller city or town to specialize in holiday goods, but that it will pay the city druggist to give his attention to a general line of drugs and accessories. "Five or six years ago," said Mr. Jones, "this was a profitable sideline for the city druggist, but nowadays people don't go to a drug store to buy their holiday stationery, perfumes and other lines. They go to the department stores, where they can usually find a larger assortment at lower prices. Other druggists in the downtown section have told me the same thing. Druggists in the residence districts and druggists in the smaller cities and towns meet with just the opposite experience, and find that it is a paying proposition to feature holiday goods in their windows and in their stores. The small-town druggist who does not play up the usual special stuff at holiday time is missing a great opportunity, but it is easy to see why conditions are different with proprietors of city stores. The department stores and the 5-and-10-cent stores have killed the holiday business for the city druggist, and the sooner he realizes this the better, because then he will devote his time and energy to the regular lines of goods and will increase his sales in this line during the holidays."

—Joseph T. Baltar, of New Orleans, one of the most popular druggists in that city, has been appointed a member of the State Board of Pharmacy by the Governor. Mr. Baltar is a graduate of the medical department of Tulane University, and is a member of the Tulane Alumni Association. He started in the retail drug business as an apprentice for William Wright, with whom he remained for eight years. He then accepted a position as head prescription clerk at Eugene May's drug store, which position he held for three years, when he went into business for himself. He is now the proprietor of a prosperous drug store in the Sixth district and is highly esteemed by both the medical profession and the public. His ability as a pharmacist led to his being named for the position on the State Board, and he is expected to prove a most valuable member of that body.

JOSEPH T. BALTAR

—Dr. H. M. Whelpley has 'em going. You know, the Doctor is a way-up pharmacist in St. Louis and the United States, and more than likely when you get across the water you'll find him listed as somewhat of an American celebrity. The Doctor, with his ready smile and his steady twinkling eyes and his soft voice and his delightful method of imparting information to the ignorant without asking embarrassing questions, is doing the utterly impossible—he's getting business men interested in flints and other crude-looking Indian stones and pieces of old pottery, and men heretofore chiefly interested in billiards and such are pottering about Monk's Mound across

the river, where they are picking up things to bring back to St. Louis, where they are calling their friends aside to inspect their wonderful finds. "A year ago," says the Doctor, "you couldn't get a single prescription for human wounds and mound pickings. Today you find them for women and children on the streets, and on the streets of St. Louis and its mounds or the banks of the river, and it is wonderful. I'm delighted to see this as a thing to be as historical." Dr. Whelpley is a member of the St. Louis Academy of Science and the St. Louis Academy of Natural Sciences.

**William McGibbon**, manager of the Missouri River branch of Eli Lilly & Co., joined the Red Lilly organization as a traveling salesman five years ago. Previous to that time he was with the National Biker & Co. Mr. McGibbon's first assignment of the Lilly company was the State of Michigan, where he remained for a year, and he was assigned the position of branch manager at Grand Rapids. His experience in Michigan was recognized by his house in promoting him to the management of the Chicago branch of the Lilly company, where he remained for several years. Mr. McGibbon now resides in Kansas City. He is a close student of pharmaceutical subjects and is well informed on drug business both technical and commercial. He has been active in the drug organizations of Michigan and Illinois and is certain to prove a valuable accession to the ranks of the Kansas and Missouri associations. A man of fine personality, very genial and a capital mixer, with a faculty of becoming widely acquainted in any community in a short time, he is also a man of great industry and perseverance, as his success in his chosen field attests.

**Dr. Charles S. Woods**, who for the last two years has been medical counsel for Eli Lilly & Co., Indianapolis, has accepted the chair of preventative medicine in the University of Iowa, and has gone to Iowa City to reside. Friends in Indianapolis gave a farewell dinner to Dr. Woods at the Severin Hotel prior to his departure. Among the guests were Severance Burrage, H. E. Barnard, Jack Hinman, Dr. E. J. Dubois, and others. Dr. Woods is a graduate of Moores Hill College, University of Chicago, and has studied extensively abroad. He is an active member and worker in the American Pharmaceutical Association, American Medical Association, American Chemical Society, National Educational Association and American Public Health Association. Recently he was a candidate for mayor of Indianapolis, and prior to his connection with Eli Lilly & Co., was city sanitarian and secretary of the city health board.

**Miss Alice Henkel**, botanist in the Bureau of Plant Industry, of the United States Department of Agriculture, writes the bureau's pamphlets on the medicinal qualities of plants for the schools of pharmacy and for others interested. Her most recent publication is "American Medicinal Flowers, Fruits and Seeds," which gives and describes a list of 14 plants furnishing medicinal flowers, fruits and seeds, with synonyms and pharmacopoeial name, and common name, habitat, range, description and information in regard to collection, prices and uses of the parts in greatest demand. Miss Henkel is a graduate of the National College of Pharmacy in Washington. She wrote her first pamphlet on "Weeds Used in Medicine" in 1904, and since that time has written several others. Her booklets are part of the official literature issued by the Government.

**Ali Selim** will return from St. Louis to Egypt not only a pharmacist but also a benedict. Ali is a young Egyptian of the family. He says he is the son of Selim Osman, former treasurer for an Egyptian ruler. Ali came to St. Louis about two years ago, and he expects to be graduated from the St. Louis College of Pharmacy in April. Ali said he wanted to keep his marriage secret from his relatives in Cairo until after his graduation. "They are sending me money to go to school and not get married on," he said. Last Summer, when he was vacationing in Hot Springs, Ark., he met Miss Opal Sardin, of Fort Smith, Ark. On Jan. 13, this year, he and Miss Sardin were married in St. Louis by the Rev. John C. Allen. Ali said he probably would go into business in Cairo, where he has a brother and a sister and other relatives who are physicians.

**Thomas A. Huston**, the Summit street (Toledo) druggist, who was sent to jail recently on the charge of selling narcotics illegally, was released just before Christmas. He

had served 32 of the 60 days' sentence and paid a fine of \$150. In suspending sentence the judge said that the 32 days Mr. Huston had spent in jail had accomplished as much good in stopping the widespread sale of "dope" in Toledo for druggists as all the crusades ever made in the city. After his release Mr. Huston said: "There is not a reputable druggist in Toledo who is now selling dope unless it is on the prescription of a reputable physician. I do not believe there will ever be the necessity for a hospital in Toledo to cure the dope habit because before one year has passed dope will be completely wiped out in this city."

**Gilbert A. Doty**, of Doty Brothers, proprietors of a chain of drug stores in Detroit, was shot twice in the arm, in the store at 288 West Warren avenue, recently, by an insane man who entered the store and demanded money. Mr. Doty was standing near the center of the store when the man entered and exhibited a revolver. "I want money," he announced. "I haven't any," said Mr. Doty, a small, slight man, raising both hands above his head. "Well, I'm going to shoot you any way," the crank replied, and fired several times. Two bullets took effect in Mr. Doty's arm. His assailant escaped.

**Fred B. Flettner**, who has just been promoted from the position of assistant superintendent of the Summer street store of the Riker-Jaynes Drug Company, to that of manager of the wholesale drug department in Boston, was tendered a complimentary dinner Jan. 19 at the Quincy House by his associates in the Summer street store, and he was presented with a beautiful mahogany mantle clock. Frank Locke made the presentation speech. Lots of nice things were said about Mr. Flettner, and all wished him success in his new and responsible position.

**August E. Holmberg**, a druggist of Superior, Wis., was one of the leading witnesses before the Wisconsin State Vice Commission, when that body held a recent hearing in Superior. Mr. Holmberg testified that he was doing a business with the "tenderloin" district that amounted to about \$250 a month and that he had a boy in his employ who collected the fines imposed by the city in the district and turned them over to the police. Mr. Holmberg testified that he carried forbidden drugs in his stock, but he denied that he had ever sold any.

**C. T. Coldsmith**, a druggist at Mt. Pleasant, Pa., was held up and robbed recently as he was about to close his store. A stranger entered the store, asked for chewing gum, and when Coldsmith turned to produce it the man drew a gun and demanded money. Coldsmith ran from the store into the arms of an accomplice of the hold-up man. He was taken back into the store and robbed of his watch, valued at \$150. The robbers took \$20 from the cash register, but when Coldsmith asked for some change they gave him some nickels and dimes.

**C. J. Mount**, formerly with the McKike Drug Co., and also the head sale-man with the Faxon-Gallagher Drug Co., Kansas City, for some time, went to Atchison, Kan., Jan. 1, to assume the direction of the traveling men of the Wherrett-Mize Drug Co. Some time ago he went to the Pacific Coast and established himself at Seattle with the Pacific Coast Drug Co., which went out of business after the death of Leslie Brinkenhoff, but has now returned to the scene of earlier experiences.

**Leo Pionati**, pharmacist at Franklin and Erie street, Buffalo, is receiving congratulations, instead of condolences, from his friends. A man with Mr. Pionati's card was found dying in a Harrisburg, Pa., street recently. A bottle labeled "strychnine" lying by his side told the story, and the card in his pocket was the only means of identification. "The man probably was someone I had met and handed my card to when I was a pharmacist at the Columbus hospital," said Mr. Pionati. "You can see that I am very much alive."

**A. C. Smith**, of Lancaster, Wis., a traveling salesman for the Watkins Medicine Co., of Winona, Minn., has represented that company in Grant county, Wis., for the past 26 years. In fact, his term of service will total 27 years in March. He had the whole county as his territory for 20 years, and it was then divided into two sections, Mr. Smith being given the South half. This is an unusually good record from point of service and one upon which Mr. Smith prides himself.

**Charles F. Cutler**, president of the Eastern Drug Co.;

George R. White, president of the Potter Drug & Chemical Co., and Walter M. Lowney, president of the Walter M. Lowney Co., were included in the list of 90 friends of the late Horace W. Wadleigh, of Boston, who after disposing of a fortune of \$130,000 to educational and philanthropic enterprises of Boston and vicinity made gifts of \$100 each to a long list of personal friends.

—**Edward E. Leighton**, attorney for the California State Board of Pharmacy, gave a talk recently before the Evening City Club of Los Angeles on "An Evening with the Drug Fiends, or the Morphine, Cocaine and Opium Traffic in California." State Inspector Jones illustrated the speaker's remarks by exhibiting and explaining the opium pipe, lamp, drugs and all the paraphernalia used by drug devotees.

—**James E. Mastin**, assistant food chemist for Kentucky, has been appointed to the position at the head of the food laboratory under Dr. W. F. Hand, State Chemist and Food and Drug Commissioner of Mississippi. Mr. Mastin is the sixth Kentuckian to be appointed to pure food work under the Federal government and in the several States. The appointment is a promotion in both position and salary.

—**Roy S. Patterson**, formerly pharmacist with John Harding & Co., Brady street, Davenport, Ia., has accepted a position as Tri-city salesman with the Hartz & Bahnsen Co., wholesale druggists of Rock Island. He began his new duties Jan. 1. Mr. Patterson went to Davenport from Marshalltown nine years ago, and has been associated with the Harding store ever since.

—**George W. Clark**, for six years employed as a clerk with Theodore Merritt's Sons, Newburg, N. Y., has purchased the drug business established by Richard Ennis, and conducted by his widow since the death of Mr. Ennis eight years ago. Mr. Clark is a graduate of the Buffalo College of Pharmacy. The Ennis drug store has been conducted at the same stand for 35 years.

—**William DeCoursey Rose**, druggist, at 82 Lafayette avenue, Buffalo, has preferred charges against the Federal Telephone Company before the Public Service Commission, alleging discrimination against him. The allegations are to the effect that the telephone company refuses to give him telephone service at the same rate other business men receive in his vicinity.

—**A. C. Schulte**, son of Druggist A. H. Schulte, 300 South Jefferson avenue, St. Louis, suffered a cut on his nose and other cuts and abrasions when he and Miss Cora Mae Hess, 17, the daughter of Police Captain W. C. Hess, were thrown from an automobile while returning from a New Year's celebration. Miss Hess was not seriously injured.

—**Harry Clinton McFadden**, of the drug firm of McFadden & Libbey, of Wolfboro, N. H., has been married to Mrs. Rose Nickerson Mason. He is one of the youngest merchants in the town, going there from Lewiston, Me., about 15 years ago. The bride is a member of several local organizations.

—**Miss Margaret Barrett**, pharmacist at the Methodist Hospital, Des Moines, Iowa, and a graduate of the Starling Medical College, has been appointed a pharmacist at the Miami Valley Hospital to succeed Miss Norma Hawley, who has assumed a position as pharmacist at the Pittsburgh City Hospital.

—**Warren R. Potter**, one of Sharp & Dohme's Brooklyn representatives, has been confined to the Brooklyn Hospital for some weeks past with typhoid fever. His friends will be glad to know that he has greatly improved. He hopes to be up and about within the next few weeks.

—**Warren B. Armstrong**, a druggist of Sunbury, Pa., has been married to Miss Elizabeth L. McGann, of Philadelphia. The bride is a native of Shamokin, and a graduate trained nurse from the Medico-Chirurgical College, Philadelphia.

—**G. V. Kradwell**, well-known as a druggist of Racine, Wis., has been appointed a member of the Wisconsin State Board of Pharmacy by Governor McGovern. Mr. Kradwell will fill the term which expires on April 11, 1918.

—**Michael Bernstein**, druggist and capitalist, of Shreveport, La., is on his way to Egypt and the Far East. His tour will last for six months. He sailed from New York on the "Princess Irene" of the North German Lloyd line.

—**J. L. Prior**, of Atlanta, with Mrs. Prior, were recent visitors at New York and Baltimore. Mr. Prior, better known to his many friends in the South as "Jack" Prior, is the Atlanta branch manager of Sharp & Dohme.

—**G. H. Roebke**, traveling salesman for Meyer Bros. Drug Co., was operated upon successfully for appendicitis at a St. Louis hospital recently, and in his absence from his territory A. C. Meyer took his place on the road.

—**Charles E. Mathews**, manager of the Chicago branch of Sharp & Dohme, recently visited the firm's laboratories at Baltimore. He also spent a day or so at the Sharp & Dohme general offices in New York City.

—**New York drug trade visitors** from out of town recently included J. A. Peboortan, wholesale druggist, Vancouver, B. C.; and Benjamin Exley, general manager of the Ohio Valley Drug Co., of Wheeling, W. Va.

—**A. P. Scarborough**, a druggist of Jasper, Texas, was stabbed in the back the night of Jan. 10 by a negro from whom he was endeavoring to collect a debt. He was not dangerously injured, however.

—**Arthur H. Johnson**, for two years manager of the Riker-Jaynes store at Lowell, Mass., has been transferred to Boston and has become manager of the firm's store at 129 Summer street.

—**Miss Jennie H. Sumner, Ph.G.**, the popular woman pharmacist of West Roxbury, Mass., has been elected to membership in the college corporation of the Massachusetts College of Pharmacy.

—**Walter Barth**, a popular young druggist with the Keen-Norris Drug Co., of Fairfield, Ill., has taken a position as traveling salesman with the John T. Millikin Chemical Co., of St. Louis.

—**Frank J. Butler**, of Pontiac, was appointed a member of the Illinois State Board of Pharmacy, Jan. 3, by Governor Dunne, to succeed James P. Crowley, of Chicago, whose term expired.

—**E. P. Ferguson**, general New York State representative of Sharp & Dohme, reports the business done by his division for 1913 was quite satisfactory as compared with previous years.

—**Hon. William J. Bullock**, of New Bedford, is agitating the establishment of a municipal ice plant for his city, and for that purpose has filed a petition with the Legislature.

—**Philip M. Jacobus**, one of the pioneer druggists of La Crosse, Wis., retired from active business Jan. 3. He had been located for many years at 529 Main street.

—**Frederick P. Schwaemmle**, at one time a retail druggist in business in Philadelphia, has joined the sales forces of the Drug Products Co., of New York.

—**O. P. Meyer**, of Meyer Bros. Drug Co., recently underwent an operation at a St. Louis hospital, and at last report at his offices was recovering rapidly.

—**W. J. Maresh**, of the Lambert Pharmacal Co., St. Louis, and Miss Mary Wendell, a popular young woman of Clayton, Mo., were married recently.

—**Robert J. Martin**, a traveling man for the Witte Drug Co., Burlington, Ia., was married recently to Jeannette Jansen, of West Point, Iowa.

—**George J. Whelan**, who recently purchased control of the Riker-Hegeman stores, has gone to Europe for his annual Winter vacation.

—**Walter Rudy**, a pharmacist at Mount Airy, Md., who was for many years postmaster at that place, has given place to a Democrat.

—**Charles F. Cutler**, president of the Eastern Drug Co., has been elected a director of the Commercial National Bank of Boston.

—**Louis K. Liggett**, president of the United Drug Co., has been elected a director of the American Trust Company of Boston.

—**John Fulton, Jr.**, has taken charge of the drug department of Theo. M. Stephan, of William street, New York City.

—**F. A. Upsher Smith** has opened for business the drug store in Rice street, St. Paul, known as the Haase place.

## Drug Club Unveils Memorial Tablet to the Late Thomas P. Cook.

*Old-time Friends of Late Thomas P. Cook Attend Ceremony—  
J. N. Peters and C. G. Stone Speak*

THE Board of Governors of the New York Drug and Chemical Club, on Tuesday afternoon, Jan. 13, unveiled with appropriate ceremony a bronze tablet as a memorial to the late Thomas Penrose Cook, a member of that organization for 18 years. The tablet is in the reading room of the Club, at 100 William street. The ceremonies were simple. President Clement F. Gardner stated the object of the memorial and then called on John N. Peters for a few remarks. The latter spoke of the deceased's interests in affairs leading up to the formation of the club, Mr. Cook, not, however, having been one of the founders. Clarence G. Stone, the only other speaker, asserted that he considered himself highly honored to speak on such an occasion, as he thought himself one of Mr. Cook's oldest acquaintances. He referred with feeling to the latter's great unselfishness and his willingness to be helpful to others.

Mr. Stone first met Mr. Cook at the meeting of the American Medical Association at St. Paul in 1882. Mr. Cook then represented Powers & Weighmann and was in charge of an exhibit. Mr. Stone found him lending his hammers, nails and saw to everybody. With his exhibit stock he had packed a hand truck and shipped it all the way from Philadelphia. This truck was also used by all. The speaker used the figure that during the 30 odd years since that first meeting the deceased loaned his friends a truck run on wheels of human kindness—he had even rolled it himself in his effort to help carry the burdens of others.

Mr. Cook had been left an orphan at the age of six years and had obtained his first instruction in business from his grandfather. Contemplation of his business career justifies the conclusion that he had had the "right stuff" in him. The speaker and the deceased had served on the arrangement and entertainment committee of the N.W.D.A. for 18 consecutive years, a long enough period in which to gauge a man's character. Thirty years ago, at the June 7, 1883, meeting of the A.M.A. meeting, at Cleveland, Mr. Cook was again in charge of an exhibit for his house. Mr. Stone had secured a small notebook from one of the exhibitors. This he took about the convention hall and had many of his friends write their autographs therein. On the first page appears:

\* ..... \*  
: "Your friend always" :  
: T. P. Cook, :  
: 6 7 '83." :  
: ..... :  
\* ..... \*

This little expression was typical of the man's friendship. Mr. Stone concluded by observing that the little tablet was beautiful and complete, but had his aid been sought in connection with its erection, he would have suggested this little entry as a particularly applicable sentiment for an inscription in memoriam.

When the speaker had concluded, those present, 50 or more, including many of Mr. Cook's old-time friends, gathered about the tablet and read the inscription. It is as follows:

THIS TABLET  
IS PLACED HERE AS A TRIBUTE  
TO THE MEMORY OF  
THOMAS PENROSE COOK  
WHO DIED JANUARY 7 1913  
  
IN RECOGNITION OF HIS STERLING  
CHARACTER HIS GENIAL PERSONALITY  
AND HIS UNSELFISH SERVICES TO HIS  
CLUB DURING HIS EIGHTEEN YEARS  
OF MEMBERSHIP

## OBITUARIES

### MISS AGNES QUINLAN.

The first woman to become a registered pharmacist in the State of Vermont, Miss Agnes Quinlan, of Bennington, is dead after a two weeks' illness with pneumonia. She was 26 years old and was born in Troy. As a mere girl she attended the Albany College of Pharmacy, from which she was graduated at the age of 17. The same year she took the State Board examinations for registration in Vermont and passed successfully, later taking the Massachusetts examination. She was a member of the Vermont State Ph.A., and was the first vice-president of that organization in 1911. She was a general favorite in Bennington, particularly in church circles, and was a member of the Ladies' Sodality of St. Francis de Sales Church, Bennington. Her father, two sisters and a brother survive her.

MISS QUINLAN

### Dr. H. I. Johnson.

Dr. Horace Irving Johnson, for 28 years one of the most eminent pharmacists of Waltham, died at his home in that city Jan. 18. He lacked one month of being 65 years of age. Dr. Johnson was a native of Chelmsford, Mass., and afterward lived in Manchester, N. H., but nearly half his life had been spent in Waltham. Dr. Johnson was held in the highest esteem by physicians of his vicinity, and they universally considered him a thorough expert in all problems of pharmacy. Dr. Johnson was also a collector of antiques, and his home on Lyman street was well filled with rare specimens. In still another field he was recognized as an expert, and that was in geology. His collection of minerals and stones was ranked in this part of the country with that at Harvard University. Dr. Johnson gave personal attention to every detail of his business, and nothing pleased him more than to set up and print the labels for all the bottles and boxes used in his business. He leaves a wife and a son, Horace I. Johnson, Jr., a student.

### Robert F. Amend.

Robert F. Amend, treasurer and director of the firm of Eimer & Amend, wholesale druggists, and a son of the late Bernhard G. Amend, one of the founders of the house, is dead at the age of 51. Paralysis was the cause of his demise. He was born in New York City, educated in the public schools and in the College of the City of New York, and was graduated from that institution in the early eighties. He later entered the business which his father had established, acting as the cashier as long as it remained a partnership, and then becoming treasurer at the time of incorporation. About five years ago an attack of paralysis forced him to retire from active participation in business and from club and social life. He was, however, vice-president of the German Exchange Bank, and treasurer of Limer & Amend up till his death. He leaves a widow and one daughter.

### St. Louis Salesman Killed.

George Winterer, 47, a salesman for Meyer Bros. Drug Co., St. Louis, was killed in an automobile accident, in which his roadster ran off the road and overturned in a three-foot ditch, on the Denny road near St. Louis. Mr. Winterer lived at 3109 Keokuk street, and leaves a widow and two sons, Charles, 20 years old, and Herbert, seven. Dr. Freeland J. Dunn, who was in the auto on Winterer's drive to Glencoe on business, was pinioned under it, and when taken out by passing automobilists, was so dazed that he suddenly disappeared. When he finally reached his home in St. Louis he had only a faint recollection of the accident. He said he had a vague recollection of having crossed a field, after the accident, and of an attack on him by two dogs which bit him three times on the ankles. When he regained his bearings he cauterized the bites.

**Dr. Joseph H. Schenck.**

Dr. Joseph Howard Schenck, the son of the late Dr. Joseph H. Schenck, founder of the proprietary medicine business of J. H. Schenck & Son, of Philadelphia, is dead following an attack of apoplexy. He was ill but a few hours. He was 66 years old on Christmas day. His only son, Joseph H. Schenck, Jr., is a member of the firm. Dr. Schenck was a native of Philadelphia, a graduate of Jefferson Medical College, and almost immediately after graduation in 1875 entered his father's business to which he was later admitted as a partner, succeeding to the presidency and control following the death of his father. He was active in church work and was a member of many organizations, civic and fraternal.

**Frank W. Colby.**

Frank W. Colby, 50, one of the best-known pharmaceutical chemists in New England, a native of Haverhill, Mass., and a lifelong resident of the Bradford district, died very suddenly while at work. He served his apprenticeship as a druggist under George B. Holden, and then entered the Massachusetts College of Pharmacy, by which he was given a degree. Later in partnership with his brother, the late Ethan L. Colby, he opened the Colby Bros. pharmacy in the Bradford district. Later he was made manager of the Parker Chemical Co. at Ballardville, his ability as a pharmaceutical chemist having been recognized by drug men.

**Samuel A. Fisher.**

After a short illness from acute indigestion, Samuel Allen Fisher, general manager of the Mooney-Mueller Drug Co., wholesale druggists, Indianapolis, died at his home, 2511 Central avenue, in that city. Mr. Fisher was 49 years old and had been with the Mooney-Mueller Drug Co. 12 years, five years as a traveling salesman and for the last seven years as general manager. Prior to his connection with this concern he was employed by the Indianapolis Drug Co. At one time he was president of the Commercial Travelers' Association of Indiana. Mr. Fisher is survived by a widow.

**Jeremiah Weber.**

Jeremiah Weber, one of the oldest druggists in Philadelphia, died recently at his home, 2954 Richmond street, where for more than half a century he had conducted a drug store. For six months his health had been failing, death being hastened by a stroke of paralysis. Mr. Weber entered the drug business as a boy. He was a lifelong Democrat and had for many years expressed the desire to live until a Democratic president should occupy the White House. Since the election of President Wilson he had often said before witnesses that "he was ready to die."

**Wellington Morehouse.**

Wellington Morehouse, a familiar figure in the drug trade for a half century, the duration of his service with the drug brokerage firm of James H. Taft & Co., 100 William street, New York, died Jan. 1, at the age of 67. He was in his usual good health until Christmas, when he contracted pneumonia, from which he died. He leaves a widow, three sons and two daughters.

**Gilbert J. McArthur.**

Gilbert J. McArthur, who was engaged in the drug business in Boston and Malden, Mass., for many years, died Jan. 1 after a brief illness. He was 53 years of age, a native of Vermont, and had resided in Malden 28 years. For 12 years he was employed by the old Boston drug firm of Thomas Hollis in Union street, and later purchased a business in Malden.

**William I. Dohme.**

William I. Dohme, a nephew of Louis Dohme, of Sharp & Dohme, Baltimore, although he himself was never connected with that firm, died recently at his home at Patchogue, L. I., where he had retired after selling his retail drug business in Montclair, N. J., about two years ago. He was 42 years of age.

**Carl J. Kleemann.**

Carl J. Kleemann, for 45 years a druggist in Brooklyn, and for 20 years in business in Court street, near Baltic, died recently in his 73d year. He was born in Mecklenburg, Ger-

many, Dec. 2, 1840, and came to Brooklyn when 20 years old. He leaves a widow and one son, Hans C. Kleemann.

**OTHER RECENT DEATHS.**

—**Charles Naylor**, chemist of the C. I. Hood Co., at Lowell, Mass., died suddenly recently while returning from the Lowell Textile School where he was engaged in special work in the evening courses. He at one time owned and conducted his own store, but sold out to enter the Hood laboratory. He had full charge of the preparation of the many Hood specialties until his death, with the exception of a brief period when he went abroad as a special representative of the firm.

—**Jobu H. Cronin**, a prominent druggist of Lawrence, Mass., died suddenly Jan. 8. He was a native of Malden, Mass., and was about 50 years old at the time of his death. He first entered the employ of the late Charles H. Beedle, a Broadway (Lawrence) druggist, but since 1889 had been located for himself at the corner of Broadway and Cedar street.

—**Mrs. Bertha Krembs**, long a resident of Milwaukee and the mother of Ernest M. Krembs, Jr., and Max Krembs, two well-known druggists of that city, died recently at the Hanover hospital, following an operation. Mrs. Krembs was born in Cedarburg, Wis., Dec. 23, 1849. She leaves three daughters and three sons.

—**Charles A. Sieplein**, 42, proprietor of the Sieplein Drug Co. store in the Rose building, Cleveland, Ohio, is dead after a four-months' illness with anemia. Previous to his connection with the drug company bearing his name he was with the Opera House pharmacy and the Mayell-Hopp Drug Co.

—**Charles Ferger, Jr.**, died at his home, 131 West 11th street, Indianapolis, recently, after a few days' illness from pneumonia. He was identified with his brother, Edward Ferger, in a retail drug business embracing several stores. Mr. Ferger was 42 years old and unmarried.

—**George E. Bldgett**, former chief of police of Hancock, Mich., both a druggist in Hancock and the pharmacist at the Marquette prison, is dead after an illness of a little more than a week.

—**George L. Galbraith**, vice-president of the Coronet Phosphate Co., 99 John street, died recently at his home on Riverside Drive, after an illness of a fortnight. He was 47 years of age.

—**Peter Ludwig**, a young druggist of Vail, Iowa, committed suicide by drinking poison Jan. 7. Since the death of his wife last October, Mr. Ludwig had been subject to despondency.

—**Robert Repass**, of Dexter, Iowa, druggist, was found dead on the floor of the back room of the store in which he was employed, the young man having drunk carbolic acid by mistake.

—**L. C. Shepard**, 64, formerly a druggist in Potsdam, Parishville and Nicholville, N. Y., died in Somerville, Mass., on Jan. 10. He located in Massachusetts several years ago.

—**William Marx**, who was associated with his uncle in the firm of Marx & Rawolle, manufacturers of glycerin, at Red Hook Point, N. Y., is dead after a long illness.

—**Dr. Augustus Esenwein**, the oldest and perhaps the best-known pharmacist in Reading, Pa., is dead in his 80th year. He was well known as a charitable worker.

—**James A. Stuart**, formerly a druggist at Wheeling, W. Va., and a former resident of Paris, Ky., is dead from heart failure. He was 72 years of age.

—**Albert Barr Clark**, a druggist at Galesburg, Ill., for the past 44 years, died recently. He was a graduate of the Philadelphia College of Pharmacy.

—**Thomas Mays**, owner of a drug store at Middletown, Pa., committed suicide recently. He had removed from Renovo, Pa., 15 months ago.

—**James W. Sterry**, formerly of the firm of Weaver & Sterry, wholesale druggists, of New York City, died at Metuchen, N. J., Jan. 3.

—**George F. Jung**, for 40 years a druggist in Williamsburg, died in December at his home in Union Course, L. I.

—Thomas F. Dwyer, for 25 years engaged in the retail drug business at Ambia, Ind., died at his home recently from dropsy.

—Frank A. Wheeler, 65, proprietor of the Waukesha Soda Water Co., Waukesha, Wis., died recently of heart failure.

—Charles W. Curtis, 53, for many years bookkeeper for W. E. Armstrong & Co., Richmond, Va., is dead after a short illness.

—Charles Favreau, 62 years 11 months, is dead at Marlboro, Mass. For 25 years he was in the drug business in that town.

—Fridolin Streit, 40, a druggist of Houston, Tex., and for many years in business at Belleville, is dead.

—Dr. G. A. Holstern, who conducted a drug store at Ridgefield Park, N. J., died on Jan. 11.

—Isaac N. Hughes, 72, who for 30 years conducted a drug store in Canonsburg, Pa., is dead.

—Horatio Abbey, pioneer merchant and druggist of Kirkwood, Ill., is dead from diabetes.

—W. R. Koeneman, druggist, Beaman, Iowa.

## NEWS FROM ASSOCIATIONS

### National Drug Trades Conference.

*Immediate Passage of So-called Harrison Bill for the Control of the Importation and Sale of Narcotic Drugs Urged—Postal Amendments, Bichloride of Mercury Sales Control, and Other Topics Considered at Recent Sessions at Washington, D. C.*

FOR three days during the week of Jan. 16 sessions were held at Washington of the National Drug Trades Conference of delegates from the A.Ph.A., N.A.R.D., N.W.D.A., A.A.Ph.C., N.A.M.M.P. Dr. Martin I. Wilbert, Dr. Woodward, health officer of the city of Washington, and Chas. J. Lynn were given the privileges of the floor.

By resolution, the conference urged upon the newspapers the propriety of omitting the names of poisons used in suicides and murders; recommended the postponement of legal action in regard to the control of the sale of bichloride of mercury until the United States Pharmacopoeia and National Formulary committee shall have reported; and, further, by resolution, offered the following change in paragraph 5 of section 472 of the postal regulations:

Poisonous substances intended for internal or medicinal administration, when packed in metal containers, bearing the address of the sender, together with a label bearing the word "poison," may be admitted to the mails under first-class postage rates.

The "registered price act," so-called, was considered, but the Conference deemed it wiser simply to go on record as in favor of the principle of price maintenance, the general topic being referred to the executive committee. Treasury decision 33456 relating to shipments of cocaine in interstate traffic was also referred to the executive committee.

The following officers were elected:

President, John C. Wallace, New Castle, Pa.; 1st vice-president, Charles A. West, Boston; 2d vice-president, W. C. Abbott, Chicago; 3d vice-president, Charles F. Nixon, Leominster, Mass.; executive committee, James H. Beal, Scio, Ohio; James F. Finneran, Boston, Mass.; R. C. Stoffer, Norwich, N. Y.; C. M. Kline, Philadelphia; A. R. L. Dohme, Baltimore.

Considerable attention was devoted to the consideration of the Harrison anti-narcotic bill, and with the adoption of a number of minor changes the bill was recommended for enactment as promptly as possible. These changes were substitutions of the word "dispensing" for the word "administration" in several instances; deleting the word "registered under this act" from sub-section a of section 2 of the act. In sub-section b the word "pharmacist" wherever it occurs was changed to the word "dealer." A proposition to make the following amendment to sub-section a of section 2 was voted down,

despite the advocacy of the change by Frank H. Freericks:

"— (a) to the administration of any of the aforesaid drugs to the patient by or under the supervision of a physician, dentist or veterinary surgeon registered under this act in the course of his professional practice only. Provided, however, that the physician, dentist or veterinary surgeon shall personally attend upon such patient."

Several other changes were also voted down, and the section was allowed to stand as originally quoted in the bill.

The Conference then considered a number of bills before Congress referring the majority to the executive committee for consideration and report.

While in Washington many members of the Conference called upon the members of the sub-committee of the Senate Finance Committee to discuss with them the details of the Harrison anti-narcotic bill, and also upon Secretary of State Bryan in the interests of this legislation.

### NEW YORK BRANCH OF N.A.R.D. ORGANIZED.

R. M. McCutchen First President—J. H. Rehfuss Temporary Chairman—Finneran Advises Members.

A NEW YORK branch of the National Association of Retail Druggists, as yet unnamed, was organized at the New York College of Pharmacy on Jan. 22, Jacob H. Rehfuss, president of the N.Y.S.P.A., officiating as temporary chairman. Mr. Rehfuss appointed a nominating committee, consisting of Peter Diamond, R. M. McCutchen and Dr. Wm. C. Anderson. He also named Felix Hirseman, but the latter declined the honor, pointing out that he was not eligible. While this committee prepared its report, Mr. Rehfuss explained in brief the purpose of the meeting and the probable scope of the proposed organization. The following officers were unanimously elected:

President, R. M. McCutchen; 1st vice-president, Jacob H. Rehfuss; 2d vice-president, A. Klingmann; secretary-treasurer, Louis Berger.

Mr. Klingmann was first nominated for president, but positively declined, despite the urgent persuasion of Mr. Rehfuss and others. Mr. McCutchen would have preferred to eliminate himself as official material, but the members had learned how to voice their protests by this time and wouldn't hear of any such action.

Peter Diamond, Dr. Wm. C. Anderson, Alexander Gardner, Robert S. Lehman and Harry Schlesinger were elected members of the committee on by-laws and constitution. This committee will also decide upon a name for the organization.

President James F. Finneran, of the parent body, was the first of several out-of-town organization speakers to enlarge upon the benefits of a local branch. He suggested that committees be appointed to work on pressing local problems. In Boston, his own city, a telephone committee had done good work. Perhaps a similar committee could accomplish something in New York City. To succeed, a 'phone committee must be persistent. A committee on fraternal relations is an essential. The branch, too, should hold meetings once a month for the next four to six months—until the members get better acquainted with one another. There should also be an executive committee, the personnel of which should be representative of the many different centers of this city. Although all are not agreed, a nominating committee is a splendid thing for any organization, and Mr. Finneran had never yet found any fault with such an official body. A nomination committee might have gotten Mr. Klingmann to have served as chairman. A nomination committee can often persuade men to serve who from being at first reluctant to go to the front later develop latent intelligence and ability which they were unaware they possessed.

President Finneran quoted Mrs. Emma Gary Wallace in propounding a reply to the question often flung at him—what did he get out of all of his organization work? His answer was: "What do I put into the organization?" The speaker asserted that there was a necessity for a large National association of retail pharmacists. He did not believe that such men as Dr. Wm. C. Anderson should be cut out of this organization. The executive committee, he said, would bring in a report to the effect that these men will not be barred. On his way from the Drug Trade Conference at Washington Mr. Finneran had

stopped at Philadelphia. "The boys in Philadelphia will make the convention a big success," he asserted.

Speaking on the subject of propaganda, Mr. Finneran said he did not care how many detail men an organization had out, its members would not get official prescriptions unless they were prepared to fill them. "You must talk U.S.P. to your physicians." Mr. Finneran said that Professor Nixon, the next speaker, got all the prescriptions in his town calling for a certain N.F. formula, because the physicians thought it was "Nixon's formula." "The druggists must co-operate with the detail man, so that the doctors will know you are 'one of them.'"

In introducing Professor Chas. F. Nixon, Mr. Finneran told a humorous story about how the "druggist-farmer" had gone in for potatoes in his garden at Leominster, Mass., and had, at much expense and with great care, succeeded in raising a bounteous crop only to discover that the market was surfeited with the tubers. According to Mr. Finneran, Professor Nixon got 35 cents per bushel for potatoes which cost \$1 per bushel to grow.

Professor Nixon alleged that he invested what he lost on the potatoes in prize poultry—that, however, is another story. The speaker told how the retail trade had discovered some time ago that it had to take a part in National legislation. He alluded to the recent conference at Washington of five National organizations and elaborated on its work on the Harrison bill. Three N.A.R.D. delegates now object to the exemption of dispensing physicians from making records such as are required of the retail pharmacist. "In Boston," said Professor Nixon, "the larger part of the improper distribution of narcotics is done by the physicians. The contention of the retail pharmacists is that if the physician is performing the functions of a pharmacist, he should make the same records required of a pharmacist." The N.A.R.D. delegates also asked that the word "administered" be substituted for "dispense or distribute" in the provision now exempting the dispensing physician. "The dispensing physicians and their sources of supply will do all they can to oppose the bill."

Professor Nixon reported that under the bill, previous to the conference, a written order would not have been required of registered practitioners—"registered under this act." "How can the pharmacist tell this?" Violation incurs a penalty of \$2000 fine and imprisonment. The objectionable phrase was eliminated. The imposition of a revenue tax on physicians and pharmacists providing for different rights was unconstitutional. The bill was changed so that "a dealer" is substituted for "a pharmacist." Professor Nixon still believes that in this direction the bill is unconstitutional. The physician *administers* and the pharmacist *dispenses*. The speaker concluded by asking the members to get the influence of their Congressmen behind the measure—"shape their sentiment on the bills which are coming up."

Fred A. Hubbard, of Newton, Mass., had but one criticism to make of the National Drug Trade Conference. There is no opening for pharmacists from all the States—the organization is the right idea, but the State organizations should be invited to be represented and take part in the discussion. "The conference will shape legislation, but the retail trade should get together on what it wants and then go forward without any divided opinion. The time is ripe when all the retail druggists in the country should get together to obtain needed legislation. The anti-narcotic legislation is only the beginning."

J. Leyden White, of Washington, D. C., gave a rousing talk on price protection. "Price maintenance," he said, "is a superior term to price protection. Price maintenance will come under a new law within two years. Every court victory against the public has been read between the lines by the public. A registered price act is bound to come." Mr. White stated that he represented both the N.A.R.D. and the National Hardware Dealers' Association at the National Capitol. The latter is also a strong organization, and is fighting for price maintenance. Mr. White contended that the retail druggist must be broadminded in his efforts to obtain price maintenance. "No law will stand if it protects the retailer and his selling price and not the jobber, wholesaler and manufacturer. He concluded by reading an interesting tentative measure providing for the registration of the prices of all patented, copyrighted and trade-marked articles.

The meeting adjourned subject to call of the chair.

## H. V. ARMY HEADS N. Y. BRANCH, A.P.H.A.

Mrs. St. Claire Ransford-Gay's Paper Starts Warm Discussion—Revision Committee Is Criticised.

DR. H. V. ARMY was elected president of the New York branch of the American Pharmaceutical Association at the January meeting at the New York College of Pharmacy, called to order by Clarence O. Bigelow. The other officers elected were:

Vice-president, John Roemer; secretary, F. L. McCartney; treasurer, Dr. Joseph Weinstein; chairmen of committees: Education and legislation, Dr. Wm. C. Anderson; membership, Jacob Rehfuss; progress of pharmacy, Dr. George C. Diekmann; fraternal relations, Louis Berger.

Mrs. St. Claire Ransford-Gay presented an interesting paper on "The Pharmacopoeia and Its Limitations." The speaker alluded to the efforts made by large manufacturing houses to keep physicians abreast of the times and averred that pharmacists would accomplish like results if they could only profit by a central U.S.P. research laboratory. Physicians want elegant preparations and will prescribe to the exclusion of the U.S.P. There is not even a feeble effort in the U.S.P. to offset the detail man relative to coal-tar products.

Dr. Jacob Diner commiserated upon the fact that other professions profited by post-graduate courses but that pharmacy had no such advantages. "Some say pharmaceutical meetings take the place of post-graduate courses—maybe they do, more or less, mostly less." Dr. Diner observed that some pharmacists had got so they regarded the U.S.P. in the same light as the Constitution—"you shouldn't speak of it without taking off your hat." If age is any criterion, then some of the formulas are indeed sacred, and the N.F. is only less sacred and venerable.

The retrogression of pharmacy, asserted Dr. Diner, is due to the dishonesty of pharmacists—not directly—but in that they do not come out and own up to their own faults. "Would you take your prescription into the first drug store you came to? No!" The speaker said of the pharmaceutical associations that the attending pharmacists were in a contest for office, not a contest of brain and wit as in former years. The pharmaceutical journals were not honest: the editorial page too often had to sing the tune of the advertising manager. The pharmaceutical journals are afraid to speak the absolute truth about matters of the present time: they have one eye to their advertisers. Some of the questions the physicians are firing at Dr. Diner are: "Can you say every pharmacist is reliable?" and "Can you say every formula in the N.F. is reliable?"

Otto Raubenheimer, member of the Revision Committee, asserted that "we have the best pharmacopoeia in the world today, and I am proud of it. The next one will be better yet." Mr. Raubenheimer did not believe that the U.S.P. and N.F. were behind the times.

Dr. Joseph Mayer, who had previously tendered the report of the nominating committee, outlined the Kings County Pharmaceutical Society's method of fighting the proprietary manufacturer with his own weapons. "It is the constant hammering of the manufacturer's advertising which sells the proprietaries." Dr. Mayer then said that the standard for Castile soap which would be adopted as official was worthless. He thought that the Revision Committee had "fired" out the recent big batch of U.S.P. inclusions at one time in order that the pharmaceutical journals could not find space to publish them. They should be published every month.

John Roemer assisted in firing the "hot shot" at the U.S.P. Revision Committee. He asserted that it was a vote, not science, which determined the inclusion of articles in the U.S.P. The Revision Committee rests on antiquated prejudices of 100 years ago in revising the U.S.P. "If you are going to make the two books a link between the physician and the pharmacist you must include something the former wants to know. True, the pharmacist needs standards. Issue the Pharmacopoeia as a legalized book of standards for drugs. Pharmacists haven't the nerve to say certain preparations are worthless; they will put them up as long as the physicians prescribe them." Mr. Roemer offered a resolution, which was adopted by a majority vote, to the effect that the U.S.P. be made a book of standards for drugs alone, and that the N.F. contain compounded preparations. Dr. Army concluded the discussion by observing that many of the points upon which

the Revision Committee was assailed bore directly upon the instructions given to the committee by the U.S.P. Convention.

Upon Dr. Joseph Weinstein's motion it was decided that the branch should hold a joint meeting with the New York County Medical Society early this year and that the chairman of the committee on fraternal relations should direct his efforts to that end as soon as possible.

Dr. Dixon, as chairman of the special committee on the Missouri State Exhibition drug exposition, reported that he had advised the visiting physicians to attend a joint meeting in view of the nature of some of the exhibits. The branch would not participate in any way, shape or manner. The N. Y. S. P. A. will hold a propaganda meeting as such, and only pharmacists will be invited to be present.

Treasurer Weinstein reported a balance on hand of \$48.27.

Former secretary Hugh Craig telegraphed his best wishes to the members.

## Interesting History of Kaolin.

*Thomas J. Keenan, Editor of "Paper," Delivers Paper Before Kings County Pharmaceutical Society—New Official Designation in U.S.P. Requested.*

THOMAS J. KEENAN, editor of *Paper*, elaborated upon "The Interesting History of Kaolin and Its Uses" at the January meeting of the Kings County Pharmaceutical Society, called to order by President H. B. Smith and held at the Brooklyn College of Pharmacy. Mr. Keenan related the circumstances of his first introduction to that queerly-named substance, kaolin. He had a batch of nitrate of silver pills to make and, being puzzled how to prepare them without reducing the nitrate to oxide, consulted his chief, Dr. Charles Rice, who directed him to make a mass with kaolin and petrolatum, in the proportion of silver nitrate, 50; kaolin, 30; and petrolatum, q.s. to make 100 pills.

Since that time two revised editions of the U.S. Pharmacopoeia have made their appearance, and in the latest, that dated 1900, which became official in September, 1905, kaolin finds a place—not its use as an excipient for chemicals that react with organic matter, but as a proprietary kaolin poultice placed on the market in 1893.

Mr. Keenan traced the derivation of the word kaolin and told how vast beds of the clay had been discovered almost simultaneously in France, Great Britain and America. In the subsequent utilization of kaolin, pharmacists played a prominent part, though not along pharmaceutical lines. William Cookworthy, a pharmacist of Plymouth, Devonshire county, England, was probably the first to discover deposits of true kaolin in Europe. He appears to have fathomed the secret of making true porcelain, for in 1768 he took out a patent on his invention. The mark adopted by him for his chinaware was the astronomical figure for Jupiter, resembling the prescription symbol R.

In France the kaolin quarries that made Limoges famous were the accidental discovery, in 1765, of Mme. Darnet, the wife of a surgeon. Her husband took samples to a pharmacist at Bordeaux, named Villaris, who recognized the clay to be kaolin. This discovery led to the establishment of the remarkable porcelain works of Limoges.

Mr. Keenan pointed out that the Cherokee Indians were probably the pioneers in this country to engage in the mining of kaolin. A patent was applied for in England in 1744 for the production of porcelain from an earthy mixture called "unaker," referred to as "the produce of the Cherokee Nation of America."

The kaolin deposits in Cornwall and Devon, England, are still being worked on a large scale. In 1912 the United States imported 237,366 tons, valued at \$1,541,105. The American book paper industry consumes upwards of 200,000 tons annually. The total production of china clay in the United States for 1912 amounted to only 24,700 tons. The method of quarrying china clay both in England and America remains a somewhat primitive one. At St. Austell, in Cornwall, the mines are of residual character, the kaolin being found in the location of the original feldspar, and these are worked hydraulically. By means of great settling tanks, and a series of wooden baffles leading to these tanks, the kaolin is graded into different degrees of fineness and purity. The semi-fluid clay is transferred to drying sheds, furnished with

floors of hollow tile through which are led the hot gases from a coal or gas furnace. The damp clay is dumped directly on these tile floors where it dries and is afterwards shoveled off for shipment.

In the United States kaolin is mined in the foothills of the Southern Appalachians in Pennsylvania, Delaware, Virginia, Georgia, and in North and South Carolina. It occurs with or forms a part of a coarse granite, or pegmatite, consisting of feldspar and quartz in more or less intimate mixture. Since the rocky mass usually contains considerable quantities of quartz and other minerals, a deposit rarely averages more than 40 per cent. pure kaolin. Crystallized kaolin—thin six-sided scales—is of extremely rare occurrence.

The American deposits of kaolin that produce the purest and most preferred forms of china clay are sedimentary in origin. A washing machine, sand wheel, sand trough, mica troughs (the process being one of elutriation and decantation on a large scale), a concentrating tank and an agitator are the paraphernalia employed. In powerful filter presses the kaolin is pressed into cakes. The blocks are dried on racks in a covered building, in the more modern American plants the kaolin is dried by steam. The difficulty experienced by pharmacists in turning out a uniform quality of cataplasm can often be traced to a failure to dry sufficiently the powdered kaolin before incorporating it with the glycerin.

Dr. P. G. Unna, of Hamburg, the dermatologist, holds that the therapeutic action of *cataplasma kaolini* is due chiefly to the glycerin, and others have expressed a similar opinion. Unna contends in a recent article that by increasing the sensible water vapor, the cataplasm causes an increased flow of water to the superficial tissues and the serous soaking causes their softening. This may be true, but he has apparently overlooked the property of adsorption possessed by kaolin; in addition to its extraordinary powers for absorbing water, it may be supposed to have great selective action in absorbing the secretions of the tissues, normal and abnormal. It is well known that clays are capable of removing solid substances from solutions with which they may be in contact, certain bases and substances being held so that they cannot be washed out again.

Professor Remington is right, Mr. Keenan thought, in suggesting that the principal difficulty in making the cataplasm of kaolin is that of getting kaolin having uniform absorptive property. Flack (*American Journal of Pharmacy*, September, 1906), as the result of experiments with a number of samples of kaolin from reliable sources, established the fact that different samples of kaolin possess different absorbent properties, and he insists that this quality of kaolin makes it imperative that some modification as to the amount of glycerin used in the formula for cataplasm of kaolin should be allowed.

Kaolin finds other uses in pharmacy and medicine besides the cataplasm. These are touched upon by Hermann Schelenz, who, however, fails to distinguish the mineral from the argillaceous earths. In failing to distinguish clearly between bolus alba and kaolin, Schelenz keeps company with Hager and Dieterich, and he has authority in the pharmacopoeias of Germany, Austria, Belgium, the Netherlands, Japan and Switzerland, in which kaolin is given as synonym for Bolus alba. In the British, Norwegian, Swedish and our own pharmacopoeia, the substance is definitely described under its proper name.

Mr. Keenan concluded by suggesting that the society's delegate to the Pharmacopoeial Revision Committee recommend the adoption of a correct title for pure kaolin. Since the term kaolin is now rather loosely applied to any clay used in the white-ware industry, he suggested the adoption of the name kaolinite, which is already used by mineralogists to designate a distinct mineral formation consisting of hydrated aluminum silicate of the formula  $H_2Al_2Si_2O_7 \cdot 2H_2O$ .

Incorporated as a resolution, Mr. Keenan's recommendation was unanimously adopted by the members of the society. In the few introductory remarks previous to reading his paper, Mr. Keenan observed that *cataplasma kaolini* would have been thrown out of the U.S.P. by the physicians had it not been that their vote had been upset by the pharmacists.

Dr. Wm. C. Anderson, chairman of the legislative committee, reported that the usual Congressional labeling bills had come up and that the Blauvelt mercuric bichloride bill had been introduced. Locally, he advised that the members go slow as the Commissioner of Health may be succeeded at

any time. President Smith notified the members of the reduction of from \$5 to \$2 in the fee for the license for the sale of combustibles. Dr. Kassebaum delivered an interesting discussion of the society's propaganda work. T. J. France reported that a parquet floor had been laid in the alumni room and that a storage room for laboratory apparatus had been proposed in the basement. Mr. Kassebaum invited those present to attend the dedication exercises in the alumni room on the evening of January 29.

## Washington Branch, A. Ph. A.

*"Fakes" Severely Criticised, and a Proposition to Establish a Testing Laboratory Under the Auspices of the A.Ph.A. Seriously Considered.*

BY invitation of Dr. A. S. Cushman and H. C. Fuller, director and member of the Institute for Industrial Research, the December meeting of the City of Washington branch was held at the institute's new building, 19th and B streets, N.W. Dr. Cushman and Mr. Fuller opened and lighted the entire building to the members and guided them through its modern and well-equipped laboratories. Many delicate and intricate experiments and tests, relating directly to pharmacy and otherwise, now being conducted there, were explained and commented upon.

The committee on nominations recommended these officers: For president, Martin I. Wilbert; for 1st vice-president, W. S. Richardson; for 2d vice-president, Dr. Rodney H. True; for secretary, Henry B. Floyd; for treasurer, Wymond H. Bradbury; and for member of council, Dr. Lyman F. Kebler; and further recommended that the office of secretary and that of member of council be separate.

Mr. Wilbert declined the nomination for president. Discussion showed that the office secretary and that of member of council had been separated in 1912 and that the term of the present member of the council did not expire until the end of 1914. The committee then withdrew its recommendation concerning the separation of the office of secretary and member of the council, and also withdrew all its nominations except that for secretary and treasurer.

From the floor, W. S. Richardson was nominated for president, Dr. Rodney H. True for 1st vice-president and Dr. Henry E. Kalusowski for 2d vice-president. No other nominations being made, and one only having been made for each office. The acting president then declared the following officers elected: President, W. S. Richardson, 1st vice-president, Dr. Rodney H. True; 2d vice-president, Dr. Henry F. Kalusowski; secretary, Henry B. Floyd; treasurer, Wymond H. Bradbury.

H. C. Fuller presented a paper entitled "Conservation in Relation to Pharmaceutical Chemistry," describing clearly and forcibly existing conditions in medical and pharmaceutical chemistry and noting the persistency with which the manufacturer pursues the "Almighty Dollar." The "hit or miss" plan of mixing medicines, forming some new concoction to which is attached a high-sounding, valueless (and generally meaningless) name, with the hope that it will stay mixed and catch the fancy of the consumer, was lamented. Inadequate research work, insufficient therapeutic testing, incomplete analysis, and utter disregard for the well-established laws of chemistry are bringing and have brought into the market each year's thousands of valueless preparations which burden the shelves of the retailer. Yet he has to carry all of these because some smooth-tongued and gifted detail man has gotten one or two physicians in his neighborhood to write an occasional prescription for such mixtures.

The immense inroad made by a certain foreign firm manufacturing pharmaceuticals was commented upon, and the key of its success against American competition was attributed to the vast research work conducted by it. Not one of their preparations, it appears, is allowed to enter the market until its stability, therapeutic activity and exact chemical content has been definitely ascertained by most exhaustive experimentation.

The amount of research work done by American houses was compared with that of foreign and found to be all but nil. A remedy was suggested for the prevention of fakes and other evils, in having the American Pharmaceutical Association establish an extensive chemical laboratory where the pharmaceutical products offered could be analyzed for their

chemical contents and their therapeutic values ascertained. Reports of each analysis would be forwarded to its members and every man in the business soon would know to an absolute certainty what each preparation he is selling is, and what it can be expected to do.

Such a laboratory would immediately expose fakes and eventually, when its findings would come to have the faith of the entire public, fake preparations would no longer be marketable. Pharmaceutical manufacturers would exercise greater care before presenting new preparations and the claims of value for such products. The retail druggist would profit because his shelves would contain only valuable and marketable matter.

Mr. Fuller presented specimens of a number of preparations recently analyzed by the institute, and showed to what extent the public is fooled by well-written advertisements. A four-ounce bottle of diluted lactated pepsin, sold for a dollar, commanded much comment for under a copyright name it was sold as a brightener of the eyes and a beautifier.

Wrinkle-removers, sold for the same price, proved to be nothing more than pieces of inexpensive court plaster. Diabetic and other foods for which fabulous and mythical claims have been made, and for which enormous prices have been asked, proved to be nothing but cheap, roasted grains. Hair-removers, costing \$1.50 a box, amounted to about five cents' worth of rosin and balsam mixed. The alkaloidal claims for cod-liver oil also came in for criticism.

In the discussion which followed Dr. George W. Hoover stated that the Bureau of Chemistry has much unpublished information concerning these fakes, and if, as contemplated, a bulletin giving this information is published, much of general interest will come out and there will be some genuine surprises. There has been a decided improvement in the character of pharmaceutical products since the passage of the Pure Food Act, and another decade will bring forth even greater improvements, is his belief. The question of declaring various drugs, upon which Mr. Fuller touched, was discussed, and, in addition to the content declaration, it was suggested that the effect upon the system be outlined. Cocaine legislation, now so much discussed, furnished food for much controversy, the opinion of those present as to the ultimate effect of the legislation now proposed and recently enacted being about equally divided. The wasteful methods employed by our manufacturers was shown by example. Certain refuse thrown out now by chocolate manufacturers is worth \$100 to \$150 per ton, and lanoline, much finer than that now imported, can be made from the waste thrown out by woolen manufacturers.

Mr. Wilbert at this point called attention to the German Pharmacists' Association, which has been doing work of the character outlined by Mr. Fuller (its laboratories being located in the Berlin College of Pharmacy), and whose findings have been going to its members as bulletins.

"Commercial Alcohol in Germany" was the next subject presented by Dr. Rodney H. True, who outlined conditions which have led to the extensive alcohol industry in Germany. It appears that this industry is a part of a great economic undertaking commenced by Frederick the Great and which has had hearty Government support ever since. It was clearly shown that as an individual industry it was a failure, but as a part of an economic farming arrangement it had not been a failure. Potatoes are much grown in the eastern or sandy provinces of Germany in land which would be called poor here. Crops are rotated in the order of potato, grain and grass. The potato uses but little of the ash content of the soil and is deeply planted. While smaller than the American, it is higher in starch content and contains less water. The yield, with the deep planting noted, is about three times the average American crop, and it leaves the land in excellent shape for the grain to follow. In fact, the grain has been doubled by this means. Many of the potatoes are sent to the western provinces and to the cities, the major portion, however, going to the still. The mash left over is used to feed the stock. Altogether, this economic arrangement has been wonderfully developed, and, while no profit is obtained directly from the alcohol, it enters into this great plan as an inseparable and unreplaceable cog. The plans for disposing of the alcohol, the societies for its protection, and the peculiar conditions incident to this industry were all minutely and interestingly described. The American attempt to commar-

cialize alcohol, while by no means a success, to date has shown enough to warrant a continuation of the experiments already made. The effect of tax levies and the qualities of the potatoes came in for much good-natured comment and many well-placed witticisms.

The question of the location of the permanent home for the American Pharmaceutical Association was then brought to the attention of the branch. The proposed locations were discussed and much comment was made upon any attempt to locate the home out of Washington. Mr. Wilbert spoke very feelingly and strongly in favor of its being located in Washington, where it would be free from the influences of politics and near the national legislative body of the country. It seems to be the logical situation for such a home as is proposed. The following motion was then proposed, seconded and carried:

WHEREAS, It is proposed to provide a permanent headquarters or home for the American Pharmaceutical Association, and

WHEREAS, Efforts have been and are now being made to secure the location of this permanent headquarters in several widely separated cities, and

WHEREAS, The American Pharmaceutical Association is incorporated under the laws of the District of Columbia and is now operating under the general provisions of this incorporation,

Now, therefore, we, members of the city of Washington Branch of the American Pharmaceutical Association, would respectfully remind the officers of the parent organization that there are many and weighty reasons for locating the permanent home of the American Pharmaceutical Association in the City of Washington.

The secretary was also directed to bring this matter to the attention of the council.

The William Procter memorial was also considered, and it was urged that if it should be in the form of a statue, and that if the American Pharmaceutical Association built here, the proper place for the statue would be in front of the home. "Would he better in our front yard than in the back yard of some Government building," quoted Mr. Hilton, for he knows, as all Washingtonians do, that memorial statues of all but National heroes are placed in obscure parks and "lost" forever. There are a dozen such statues in Washington, of which no one ever hears and that few have ever seen; all are in a state of neglect.

Dr. Kebler, in closing, with well-chosen words thanked the branch for the honor which it had conferred upon him to elect him its president and for the hearty support he had received. In turn, a vote of thanks was tendered him for his excellent programme and ever-persevering efforts to better the branch.

A vote of thanks was tendered to Dr. Cushman and to Mr. Fuller for their kindness in tendering the use of the institute to the society, and it was directed that a note be recorded in the minutes of the motion.

#### HAVE UNTIL JULY 1 ON BICHLORIDE TABLETS.

#### Members of G.A.S. Hear That They Need Not Change Package at Once—Monthly Dues Are Raised.

AT the January meeting of the German Apothecaries' Society, George T. Riefflin discussed in brief the local mercuric bichloride tablet situation. He reported that there was no necessity for a change in package for these tablets until July 1, at which time the stock of this article on hand would be replaced by the manufacturers.

Communications were read by Corresponding Secretary C. Baum, the first being an invitation from Charles H. Heimerzheim, secretary of the trade matters committee of the N.Y. S.P.A., to participate in the drug and chemical exposition at Madison Square Garden. The Federation Internationale Pharmaceutique at The Hague, Holland, invited the society to affiliate with it. This request was referred to the scientific committee.

Recorder George Leinecker reported that the widow of former member H. Bosch had presented her husband's library to the

society. The thanks of the members will be expressed by the secretary. Paul F. Gebicke, custodian of the mortuary fund, reported that he had sent the widow of the recently deceased member, F. W. L. Cunz, of Fort Lee, N. J., a check for \$134, for the receipt of which Mrs. Cunz had sent a letter of thanks. At the suggestion of President Dr. C. F. Klippert, the members rose in memory to the deceased.

S. V. B. Swann, chairman of the legislative committee, read the essential paragraphs in the new weights and measures law. President Dr. Klippert explained some of the regulations of the new labor law, referring in particular to the employment of boys under the age of 14 years. Otto P. Gilbert, chairman of the entertainment committee, reappointed his associates, H. F. Allett, Felix Hirsman, Robert S. Lehman, George T. Riefflin and Hugo Kantowitz, upon that committee. Mr. Gilbert reported that the arrangements for the society's 63d anniversary, to be held at Terrace Garden, Feb. 12, were progressing and the occasion promised to be an enjoyable one. The entertainment will consist of a kommers including ladies. Tickets for the affair, which will be informal, will cost \$2 each, this sum including supper, beverages and hat check.

Dr. Wm. C. Alpers, chairman of the special committee on European trip, reported progress. Mr. Gilbert reported that the membership signs were ready for installation and that many of the members had already put in their orders for the same. First vice-president Paul F. Gebicke, in behalf of the committee appointed to consider the recommendations in the president's annual address, reported that he had placed Robert S. Lehman and George C. P. Stolzenburg on his committee. They had held a meeting at which it was recommended that the monthly dues for regular members be increased to 60 cents per month and the dues for associate members be made 30 cents per month.

Mr. Gebicke and his committee associates did not favor the appointment of a propaganda (membership) committee, but requested that the members act as such individually and ask their colleagues to attend meetings and to join the organization. The question of electing an honorary president was not acted upon. The report of the committee on president's address was accepted and action will be taken according to the by-laws.

A pamphlet was received from the Austrian Pharmaceutical Society announcing the 40th year of the existence of their organization. The secretary was instructed to acknowledge the same.

Professor Otto Raubenheimer delivered an interesting lecture on "Incompatibles," Messrs. Gilbert, Alpers, Roller and Gebicke participating in the ensuing discussion.

#### Cincinnati Branch, A.Ph.A.

The recent meeting of the Cincinnati branch was one of the most important ever held by that body, three of the laws enacted by the last Legislature—and seriously affecting the drug trade—coming up for discussion. The Legislative committee, consisting of Frank H. Freericks, chairman; William C. Lakamp and Ferd Zuenkelner drafted a letter which was later mailed to Gov. Cox, in which they protested against certain features of the Duffy narcotic law, the insecticide and fungicide law, and the agricultural commission law.

The insecticide law, according to this committee, cannot be enforced, as it provides for the registration of labels for every drug having the properties of an insecticide or fungicide. Further than this, it also provides a yearly license fee of \$20 for every maker of any such preparation. According to this law a druggist could not mix a vermin exterminator or similar household necessity without becoming liable for the manufacturer's tax. The branch approved of the intent of the law—to reach the manufacturers who in turn supply dealers—but urged its amendment to exclude its application to pharmacists and those who do not manufacture to sell to other dealers. The Duffy provisions have been stated in previous issues of the ERA.

The Agricultural Commission law takes from the Board of Pharmacy all of its powers except as an examining board, and places the enforcement of the laws pertaining to pharmacy, poisons and purity of drugs with a commission which does not profess to have and which cannot have the special knowledge necessary to intelligent enforcement. The legislative committee of the branch favored the establishment of the office of drug commissioner, which office, if need be, could come under the jurisdiction of the Agricultural Commission.

## How to Get a *Real* Profit.

Harry B. Mason Addresses New York College of Pharmacy Gathering, and Gives Details of Scientific Profit-taking.

PROFITS—what they are, and, what is more to the point, what they are *not*—was the keynote of the address and the discussion at the January meeting of the New York College of Pharmacy. That the average druggist not only does not compute his profits correctly but does not know how to do so was brought home to one of the largest gatherings of the year at the college, not only by the principal speaker, Editor Harry B. Mason, of the *Bulletin of Pharmacy*, of Detroit, but by the participants in the discussion that followed.

In beginning his lecture on "Profit in the Drug Business," Mr. Mason divided goods-pricing druggists into four classes, and, to bring home his deductions, traced the profit-making and taking history of a hair brush costing \$1. The druggist in Class No. 1, who kept no records, figured that he must make something on the brush, and he priced it at \$1.30. The druggist in Class No. 2, having read somewhere that it cost something to do business, tacked on from 25 to 30 cents to cover the "cost of business" item, and then added a little for profit. "He probably just about broke even," said Mr. Mason.

Class No. 3, like No. 2, supposed it cost something to do business, but he also desired a profit. So he charged \$1.35 for the brush, thinking when he did so that he was allowing 25 per cent. for the cost of doing business and a further 10 per cent. for profit. "His price," declared the speaker, "does include the cost of doing business, but does not include the profit."

Druggist No. 4 *knows*. He keeps accurate business records, and when he sells that hair brush gets \$1.54 for it. He gets 35 per cent. on the *selling price*, which amounts to 54 per cent. on the *cost price*. This man knows just exactly what he has to do to make money. Ten per cent. profit, after all, is but the average net profit—the margin on patent medicines, cigars and other lines is much lower, and to equalize this the druggist must get a higher net profit in other directions.

The study of prices and profits is essential to success, yet it is the point of greatest ignorance with the majority of druggists. Thousands of druggists are deceived and are not making as much money as they think they are. Every druggist should know four facts about his business—his percentage of expense, his percentage of gross profit, his percentage of net profit, and his entire income from the business as a whole. If he does not know, he is groping in the dark and may as likely fail as succeed. All he need keep record of are his (1) sales, his (2) purchases and his (3) expenses.

The druggist should check up his departments to see whether he is making money. If it takes him 10 minutes daily to do his regular bookkeeping he may perform this special checking in three minutes daily. A year's checking on any particular department will tell the story of that department. Indeed, the successful retail stores in this country are departmentized and every department has to pay its way. The small druggist cannot do this, but he can institute some control on the various lines he handles. Keep a record on the cigar department for one year and see if it pays. If you find that cigars are only paying 27 per cent. gross and the cost of doing business is 29 per cent., then you are losing 2 per cent. on cigars. Cigars, patent medicines, candy and certain other lines are easily wrapped and sold—it is difficult to determine their cost of sale.

If a year's records show a department is running below the cost of doing business—cut out the leaks, boost prices, do something. Study the situation and apply a remedy. The dribbling away of profits—"smokes on the house," candy for the girls, etc.—counts. It is absolutely impossible to do business wisely without knowing the facts.

At the end of the year an annual statement should be drawn up covering these facts:

(1) Total sales, (2) purchases, (3) stock increase or decrease as shown by the inventory, (4) cost of goods actually sold, (5) gross profits, (6) expenses, (7) net profits, (8) total income from the business, (9) inventory of stock and (10) inventory of fixtures.

No. 2, purchases, does not tell the entire story, said Mr. Mason. No. 3, the stock increase or decrease as shown by the inventory, should be deducted from or added to purchases

for the year. No. 4, cost goods actually sold, should be deducted from the sales and we arrive at No. 5, gross profits. Deduct expenses, No. 6, and we arrive at net profits, No. 7.

A proper expense account should include the following items:

(1) Taxes, (2) insurance, (3) fuel, (4) light, (5) water, (6) rent, (7) proprietor's salary, (8) clerk hire, (9) advertising, (10) telephone, (11) telegraph, (12) office supplies, (13) postage, (14) repairs, (15) delivery service, (16) donations, (17) subscriptions, (18) depreciation in stock and fixtures, and (19) losses in bad accounts.

The mistakes made by the druggist in making up his expense account are legion. If he owns the building he should charge for rent. He should charge for his salary as manager or proprietor. He should not neglect to take an inventory. Mr. Mason knew of cases where drug-store stocks have been \$2000 off from what the respective druggists thought they were. These druggists either made or lost that much. Every druggist should know his percentage of expense, which is obtained by dividing the total annual expenses by the total annual sales. For instance, with total expenses of \$3600 per year and \$12,000 total sales, his percentage of expense would be 30. The percentage of gross profit is obtained by dividing total gross profits for the year by the total amount of sales. If the gross profits were \$4800 on the \$12,000 total sales, the gross profit would be 40 per cent. His total income is discovered by adding the proprietor's salary, taken from the expense account, to the net profits for the year. Presuming that the druggist allowed himself \$1500 salary and that he made \$1200 net profit, his total income from the store would be \$2700.

These percentages, Mr. Mason explained, are all based on the selling price instead of the cost. Let us suppose that a druggist finds his percentage to be 28, and in pricing a given article he wants to cover this expense plus a net profit of 12 per cent., making a total or gross profit of 40 per cent. How does he arrive at the proper selling figure? The article, let us say, costs \$2.00. The unknown selling price represents 100 per cent., 40 per cent. of which is to be profit, and the remaining 60 per cent., therefore, the cost. The cost price of \$2.00 is accordingly 60 per cent. of the selling price to be determined. The problem may therefore be stated as follows:

$$\$2.00 : 60 :: X : 100,$$

and the answer is \$3.33. Thus a precise knowledge of selling cost and percentage of profit is a vital necessity in the pricing of every article in the store, and indeed in the conduct of the whole business if a druggist wants to make a store yield him a good income instead of doling out reluctantly a mere living.

Twenty-five drug stores, the proprietors of which Mr. Mason had personally canvassed, made gross profits ranging from 31 to 51 per cent. Their expense of doing business ranged from 18 to 35 per cent. He asserted that there was no excuse for this wide variation. There are, of course, reasons for some variation. Expenses in the city and country differ. Distance from the drug markets also has its effect. The fault in the case of unusual percentages of expense lies with the druggists themselves. The average expense of doing business was 24½ per cent., the average gross profits 38 per cent. Mr. Mason believed these averages to be typical—25 per cent. cost of doing business—35 to 40 per cent. gross profits.

Among those who discussed Mr. Mason's address were Dean F. J. Wulling, of University of Minnesota College of Pharmacy; chairman of this meeting, Felix Hirsman; Charles W. Holzhauer, Newark, N. J.; John W. Ferrier, C. O. Bigelow, Alderman James Weil, Dr. Jacob Diner and others. Dean Wulling felt complimented that he, a college professor, should be called upon to discuss a commercial subject. Professors generally were not supposed to know much about business. In his opinion, the pharmacist not a good business man would not be a good pharmacist. He enlarged upon the efforts of his institution to instill some idea of business methods in the minds of the students and also presented some amusing, almost sad, incidents of druggists who were utterly unable to figure percentages of profit, cost of doing business, etc.

Felix Hirsman told about the system he had installed in his first drug store. He had not used all of Mr. Mason's terms, but the rudiments were there. He knew what each department was doing. Charles Holzhauer thought the vital point of Mr. Mason's address was the determination of selling expense. He was very proud of his stock index system by

which he could tell instantly whether he could accept or decline a salesman's proposition.

John Ferner asserted that the greatest loss in his business was due to not watching the very small things and to thefts. The latter were divided into two classes, those committed by outsiders which were generally small, and those committed by the insiders. He also called attention to the criminal recklessness and spiteful destructiveness of some clerks after they had been scolded. He presented a method of marking merchandise in order to detect petty thievery.

C. O. Bagelow presented the expense percentage, percentage of net profit and percentage of gross profits in his business for the past 17 years. He observed that the pharmacist who ignores the points brought up during the meeting will not succeed. He must analyze his business.

The meeting was also the occasion of the presentation of a portrait of the late Edward Kemp, president of the college, 1896 to 1909, by his widow, and the reading of a biography of the late Timothy L. Woodruff by Thomas F. Main. Frank Larrington, editor of the *Inland Store-Keeper*, will deliver the third of the series of lectures on commercial pharmacy at the next meeting.

#### DR. WM. C. ANDERSON HEADS THE A.D.S.

Dean of Brooklyn College of Pharmacy Accepts Presidency—Members Approve Premium Coupon Plan.

DR. WILLIAM C. ANDERSON, dean of the Brooklyn College of Pharmacy, was elected president of the American Druggists' Syndicate, at that corporation's annual convention, held at Madison Square Garden, January 19 to 24, inclusive. Other officers elected are:

Secretary, C. H. Goddard (re-elected); treasurer, George W. Luft; directors to serve three years: Charles H. Goddard, G. W. Luft, Wm. C. Anderson, J. L. Weston and Sidney C. Yeoman.

By unanimous votes the members adopted resolutions providing for three features of particular interest in the development of the syndicate. The directors were authorized to increase the capital stock to \$10,000,000, according to a plan outlined by Secretary Goddard in his annual report. Only \$625,000 of the total increase will be made this year, and this will be offered to members on the basis of one share at the par value of \$10 for each four shares of old stock held. The old stock is said to be worth \$20 a share. No further issue will be made until the stockholders have been shown that the \$625,000 increase has been profitably employed.

The Board of Directors was authorized to devise rules and methods under which A.D.S. products may be sold to dispensing physicians.

The directors were vested with power to adopt a system of coupon premium sales at retail drug stores, the directors being given the discretion of making the system national or merely local.

A plan for uniting the A.D.S. and Aseptic Products Company stock was unanimously approved, the transfer to be on the basis of two shares of new A.D.S. stock for one of common A.P.C. and one new A.D.S. for one preferred A.P.C.

Secretary Goddard outlined a scheme by which he proposed to attempt co-operative shipping of freight by the Panama Canal to the Pacific Coast, thereby cutting down far Western freight expenses 50 cents per ton. He had circularized a large number of firms shipping to California and found that those which he had interested shipped a sufficient tonnage to justify the chartering of an A.D.S. ship. This investigation had also developed that it would be feasible to run an A.D.S. passenger ship through the canal to the Panama Exposition and to hold a convention on that occasion, Western members having earnestly solicited a meeting at the Exposition.

A matter which received the attention of the members was that of mutual fire insurance. It was pointed out that few companies take all the risk on drug store fire insurance and that those companies handling only drug store insurance saved 25 per cent. for the insured. The A.D.S., said Secretary Goddard, could save the druggist 33½ per cent. and still make money. Henry W. Merritt wished it understood that any action on insurance would be directed against the old-line companies and not those companies featuring only drug store insurance.

An interesting rumor during the latter part of the conven-

tion was that the business done during the Garden exhibition had about paid the expenses of the former, whereas last year's United Drug Company's convention had cost \$60,000.

#### EXPOSITION OCCASION OF PROPAGANDA MEET.

President Beringer and President-elect Mayo, of the A.Ph.A., and Dean Wulling Among Speakers.

PRESIDENT of the American Pharmaceutical Association George M. Beringer, President-elect Caswell A. Mayo, of the same organization; F. J. Wulling, dean of the College of Pharmacy of the University of Minnesota, and John Roemer, chairman of the N.Y.S.P.A. propaganda committee, were the speakers at a propaganda meeting for pharmacists held at Madison Square Garden on the evening of Jan. 22, under the auspices of the committee on propaganda of the New York State Pharmaceutical Association. President Jacob H. Rehfuess introduced Mr. Roemer, who asserted that propaganda in its general conception had been restricted to its relation between pharmacist and physician. It might be given a much broader definition. The pharmacist today, he observed, finds himself in the position where his commercial activities usurp the professional. Well directed propaganda would answer the question, "Who are the friends of pharmacy?"

President Beringer, the next speaker, in developing his subject, "Pharmacy," touched on the history of the profession, referring particularly to the animal origin of many of the drugs of the middle ages. He did not believe that pharmacists should apologize for the condition of pharmacy today. It has progressed with the age; the American pharmacist is living up to his share of responsibility. If the pharmacist of today is to be successful he must give attention to the commercial side. Mr. Beringer did not lose sight of the fact that all honor was due to the development of the scientific side of pharmacy. He had not seen anywhere as handsome a lot of preparations as was in the N.Y.S.P.A. exhibit.

The speaker alluded to the work being done on standards and remarked that it dovetailed with propagandic work. He asserted that it had remained for modern pharmacy to develop true pharmacognosy. The time will come, Mr. Beringer believed, when every pharmacist will want to bear his share in the development and progress of pharmacy—when every pharmacist will wear the A.Ph.A. button.

Dean F. J. Wulling spoke in his individual capacity as a pharmacist, and pleaded guilty to being an ethical pharmacist, but was broad-minded enough to know that pharmacy today necessitates commercial activity. There was no reason why pharmacy should not be rehabilitated and pharmacists practice pharmacy as physicians practice medicine. Pharmacists instal commercial features in their stores solely as a means of defence. He agreed with Mr. Beringer that pharmacists were living up to their best at the present time. Their activities, however, were twofold, due to the stress of circumstances.

Pharmacy needs a higher average of intelligence, was Dean Wulling's contention. Pharmacy is what pharmacists want it to be. Other callings are rising to higher planes; pharmacy should do likewise. The remedy is in the hands of the pharmacists. An essential to successful propaganda work is the outlining of a programme and the carrying out of the same. Results must not be expected for a year or so after the inauguration of the campaign. The pendulum will return when the pharmacists want it to.

From his experience in Minnesota, Dean Wulling was sure that results might be obtained wherever the pharmacists and physicians could get together and the former could demonstrate that they were able to put up prescriptions. The physicians want efficient pharmaceutical service. However, there is no reason for general complaint on the part of the physicians that they are unable to find competent pharmacists. They can find them if they will only look.

Caswell A. Mayo criticised the custom of hospital internes in prescribing "No. 23," "No. 25," etc. Relative to propaganda, it had been his experience that the weak point lay primarily with the pharmacist. As Professor Nixon had pointed out earlier in the week, the pharmacist too often cannot put up the very preparations which he induces the physician to prescribe. Mr. Mayo referred to the splendid propaganda work done by the Kings County Pharmaceutical Society. He was glad to see that the prices of prescriptions

were being put up in the better class of pharmacies. He commended the development of skill in scientific directions in order to free the pharmacist from the onus of commercial competition. The future of pharmacy, was his concluding observation, under intelligent propaganda, holds much promise for its followers.

Charles Huhn, of Minneapolis, opened the ensuing discussion, in which Henry P. Sandkoetter, of Chicago; Dr. Hy. J. J. Kassebaum, of Brooklyn, and others participated. Mr. Huhn described himself as a "shaving off the Board of Pharmacy of Minnesota." He told about the work with the physicians in his State and asserted that some of the boys launched into pharmacy had much better follow the plow. He stated that Dean Wulling was regarded as the little giant in pharmacy in Minnesota. One of his works was the building of a splendid pharmacy building at the university.

Mr. Huhn told how the pharmacists of Minnesota held get-together meetings with the physicians. They placed official preparations between the plates at the banquet board and solicited the criticisms of their guests. Employing these methods they were making progress. In conclusion, Mr. Huhn related how an effort to pass a most unreasonable anti-narcotic ordinance in Minneapolis had been forestalled by himself and other pharmacists, only, however, after the hardest of political fighting. An ordinance modeled after the Harrison bill was finally substituted for the obnoxious measure and passed. This new ordinance makes the physician as liable as the pharmacist. The public and some of the physicians object to the refill provision, but otherwise the ordinance is a success.

### Third Annual Meeting of N. A. M. M. P.

The third annual meeting of the National Association of Manufacturers of Medicinal Products will be held at the Waldorf-Astoria Hotel, New York City, Feb. 10-11, 1914. The first session will be called to order at 10 o'clock a.m. Tuesday, Feb. 10. The registration lists will be open at 9:30 a.m., and members, guests and fraternal representatives are requested to register as soon thereafter as possible. The banquet will be held Wednesday evening. Hon. Herman A. Metz, Ex-Comptroller of the City of New York and present Congressman from the Tenth District, New York, will deliver an address. Owing to the fact that another invited speaker has just been obliged to cancel his engagement on account of ill health, it is now impossible to state who his substitute will be; but one will be selected who will give entire satisfaction. Members are earnestly requested to be present and to come prepared to introduce any matter they think to be of mutual interest. It will greatly expedite the business of the association if propositions are put in the concrete form of written motions or resolutions, and submitted at the first session. There is every reason to believe that the coming meeting will be even more successful and profitable than the last.

### Drug Clerks' Association of Maryland.

At a meeting of the Drug Clerks' Association of Maryland, held last month at the Hotel Emerson, Baltimore, for the purpose of promoting the agitation in favor of better working hours and representation on the State Board of Pharmacy, letter were read from Drs. Howard A. Kelly, one of the most noted surgeons in the country; Hiram T. Woods, John M. T. Finney, who is hardly less well known than Dr. Kelly, and others, indorsing the aims of the clerks. Among those who made addresses also approving the objects the clerks seek were Dr. Thomas Buckler, Dr. Charles Caspari, Jr., David M. R. Culbreth, H. P. Hynson, Dr. B. E. Pritchard, Pittsburgh; Dr. W. S. Gilroy, Dr. George C. Blades, Delegate E. Milton Altfeld, of the Maryland House of Delegates, and Louis Samuels. Resolutions were adopted outlining the aims of the association to obtain a uniform workday of not more than 10 hours and not more than six days a week. Representation on the State Board of Pharmacy was also urged and much stress was laid on the movement to abolish the degree of assistant pharmacist. The organization is of the opinion that there should be only competent pharmacists and that no one who cannot qualify for this degree should be employed in a drug store.

The officers of the association, which grew out of a body affiliated with the Federation of Labor, but has no connection with it now, are: President, J. W. Kromcke; vice-president, R. C. Ward; treasurer, E. A. Powers; secretary, Christian Fiske; sergeant-at-arms, S. T. Lombard; executive board, C. H. Oertel, C. T. Freitag and W. S. Walb.

### Massachusetts Traveling Men's Auxiliary.

The annual banquet of the Traveling Men's Auxiliary of the Massachusetts State Pharmaceutical Association was held at Young's Hotel on the evening of Jan. 5, with a number of distinguished guests, including Hon. Frank J. Donahue, Secretary of State, and a graduate of the Massachusetts College of Pharmacy; Frank J. Campbell, president of the State Pharmaceutical Association; Charles F. Ripley, chairman of the State Board of Registration in Pharmacy, and James F. Finneran, president of the N.A.R.D. President Fred L. Carter, Jr., presided at the dinner, and Fred S. Lovis, of the Eastern Drug Company, was toastmaster. A pleasing feature of the dinner was the exhibition of "movies" taken last Summer of the State convention at Swampscott. President Ripley, in his speech, discussed the new pharmacy law which became operative with the new year, and which defines what a drug store is. He said the power to enforce the law lies with the local authorities as ever. Hereafter an unregistered clerk may be left in charge of the drug store, but he may sell only household articles, and at no time can he sell liquor. President Finneran urged the association to work for honest prices in the drug business, and to carry on the crusade which the National association has been waging now for 16 years. The attendance was about 100.

### AMONG THE ASSOCIATIONS.

About 30 members of the Wisconsin Pharmaceutical Travelers' Association met at the Hotel Blatz in Milwaukee, Dec. 29, and made plans for the entertainment features of the coming annual convention of the Wisconsin Pharmaceutical Association at Delavan Lake about the middle of June. Various committees were appointed to take up different phases of the work, and efforts will be made to make the Delavan gathering one of the most successful in the many notable conventions held by the Wisconsin Pharmaceutical Association. The travelers' organization always has charge of the entertainment, and never fails to arrange something novel and interesting.

At the annual meeting of the Rock Island County R.D.A. at Moline, Ill., the following officers were chosen for the association and the Ladies' Auxiliary: President, August Sundine, Moline; vice-president, H. B. Burt, Rock Island; secretary, Oscar Oberg, Rock Island; treasurer, John F. Schneider, Rock Island. Officers of the Ladies' Auxiliary were chosen as follows: President, Mrs. H. E. Rowe, Rock Island; vice-president, Mrs. A. C. Crosswell, Rock Island; secretary, Mrs. Charles Brunstrom, Moline; treasurer, Mrs. A. J. Reiss, Rock Island.

The Philadelphia Branch of the A.Ph.A. listened to efficiency addresses at the meeting held Jan. 6. J. Frank Dechant told how a drug salesman can succeed; A. E. Lobeck spoke on the general efficiency of drug stores and recommended a bonus for clerks as a means of getting them interested in the business. Thomas H. Brown explained a method by which the druggist can figure his profits every night after hours, and Ivor Griffith illustrated a talk in which he told of the value of advertising.

At the recent annual meeting of the Detroit Retail Druggists' Association at the Fellowcraft Club, the following officers were elected: President, J. H. Webster; 1st vice-president, O. W. Gorenflo; 2d vice-president, Leon Van Vliet; secretary, J. G. Hackney; treasurer, A. G. Riesterer; executive committee, W. A. Hall, D. E. Perrin, R. W. Rennie, Grant Stevens, G. W. Leacock, W. C. M. Scott, W. Travis, Dr. O. Arndt, J. F. Paddock and R. E. Bodimer.

The January meeting of Boston Chapter, W.O.N.A.R.D., was in charge of Mrs. Ethel T. Corner, chairman of the committee on household economics, and was held in the afternoon at the Hotel Vendome. Mrs. Margaret J. Stannard spoke on "The Education of Girls as Home Makers." and there were violin solos by Mrs. DeForest Smith. Social tea followed.

## Curbing Dispensing by the Physician.

FRED W. CONNOLLY, one of the most aggressive druggists in Greater Boston, has been in correspondence with the State Board of Registration in Pharmacy in regard to a proposed law which would make it illegal for the medical profession to dispense (except in case of emergency) as it is now illegal for pharmacists to prescribe.

F. W. CONNOLLY

Mr. Connolly urged the State Board to take up the matter in the interest of the druggist who now finds it hard to make a day's pay by a reasonable day's work.

The State Board, through the secretary, has replied to Mr. Connolly, stating that the proposal did not seem to be within its province, and suggesting that the Massachusetts State Pharmaceutical Association might be willing to take up the matter.

Mr. Connolly has replied with another letter, stating that he did not think the officers of the State association would have as much weight in the matter with a legislative committee as the State Board of Registration in Pharmacy

would have, but he says he thinks he could get the State association to endorse it. Continuing, Mr. Connolly says:

"I am willing to give the matter the greatest publicity, even to sending a copy of the letter to every druggist in the State. I believe the druggists would gladly exchange the liquor business, if they have any, for the medicine business, and I believe the temperance forces would be allied with us in this matter, and I know of another source of help."

"As far as the physicians are concerned, I do not expect the opposition which some fear. If this change is right, and I believe it is, what can they say? If the druggists realized what this meant every one in the State would be represented in it.

"Furthermore, I know physicians who are dispensing against their wishes, their judgment and their self-respect, forced to it as it were, by fear of competition. When they realize that all physicians are on the same footing in that respect they will welcome the idea with the same grace with which merchants received the adverse legislation relative to the use of trading stamps.

The real opponents to this effort will be the supply houses and we can 'lick' them, or make the fight too expensive, or both."

Mr. Connolly's original letter to the State Board of Registration in Pharmacy is as follows:

*To the Honorable the Board of Registration in Pharmacy:*

"Dear Sirs:—That it appears that there are hundreds of drug stores in Massachusetts which are unable to have a registered assistant makes it appear that there is something radically wrong. The casual observer would say that there were too many drug stores; but when we consider that some stores employ 50 persons, that suggestion does not answer the question.

"To my mind two factors contribute to this condition; either or both being remedied would enable the druggists to comply with the law. One is the maintenance of prices by law—which seems to be out of the question at the present time, but we are coming to it. The other is dispensing by physicians, which, I think, could and should be prohibited by law. They should administer when necessary, but not dispense. If your honorable board instigated and had this law enacted, it is your duty and privilege to also try to have a law passed which would enable honest, competent men to comply with the law.

"There is no question but that physicians dispense medicine other than that which they administer at the bedside. There is no question but that they renew a remedy which they have given a patient without altering it to meet changed conditions in the patient. There is little doubt that they replenish a remedy of their own dispensing without diagnosing the case anew.

"This added requirement on the part of the State for druggists makes it all the more apparent that the unrestricted use of all remedies including habit-forming drugs, drugs below

standard or even practically inert preparations by physicians should be stopped. If we compel physicians to use full strength preparations, if they dispense the danger is increased, because the majority of them are not pharmacists. Should an error occur, who is responsible? The commonwealth, of course, for not protecting her citizens with ordinary safeguards as far as possible. Furthermore, what real protection has a person in the hands of a dispensing physician? The physician diagnoses the case, he decides on the remedy, he supplies that remedy, or near it. If the patient dies, he attributes the cause and there the matter ends.

"What incentive has a physician to be very careful as to his compounding and dispensing beyond his own conscience? None whatever. Is that right? Is that taking proper precautions to protect the sick of our commonwealth? Why is so much care necessary to protect the public from the druggist's error?

"The druggist feels certain that should he be so unfortunate as to make a mistake it would very likely be detected and he would suffer the consequences. That is why most stores have a rule that all work be checked up by a second person.

"I am convinced that the physician who dispenses other than the single dose, which he administers at the bedside or in an emergency, should be required to employ a registered pharmacist to compound his medicines. If this law which now goes into effect, is a good measure it is good for every druggist, not to force one here and there, but everywhere, and unless enforced rigidly, it cannot be enforced at all, because the druggist who is compelled to live up to the requirements will probably insist that all others do likewise.

"When the druggists find it is insufficient to be registered and to have clerks registered, but the stores must be registered, naturally we will ask what protection is accorded us to enable us to practice pharmacy when we have complied with all of these requirements.

"I know that in the above statement I am expressing the sentiment of *many, many* druggists. You and I know how patient and long-suffering we are, but I feel certain that the time has arrived when we should make an active, aggressive move to obtain some rights for ourselves. Such is the spirit of the times. The public endorse anything whereby men may better their condition. Shorter day, with better pay, by legislation is very much in order these days.

"I think it devolves upon your honorable board to consider this matter carefully, and if deemed expedient to frame a bill setting forth the wrong to competent druggists and the danger to an innocent public in the present lax method of permitting physicians to compound and dispense medicines. This work should be done only by men especially trained for the purpose and patients should be protected to the extent of at least two persons handling and a written record of, the medicines which they take.

"The physician's '*Non Repetatur*' gives him absolute control of his prescription. Very truly yours,

"Boston, Mass., Jan. 5, 1914." "FRED W. CONNOLLY."

### A "Candy Kid" Con Man in St. Louis.

Telephone in drug store of Leo. M. Saul, 629 N. Kings highway, St. Louis, rings. Saul gets this message: "Send 3-pound box of candy to 5020 Delmar."

Druggist sends his clerk, William Walls, with \$1.80 box. Walls finds six-year old boy sitting on steps at 5020 Delmar.

"Is that the candy?" the boy asks.

"That's the candy," replies Walls.

"Do you want the money or shall we send it over?" asks the boy.

Walls replies that if it was all the same to the folks he would like to take the money along.

"Oh, very well," says the boy; "just wait here a minute and I'll go around the back way and get the money from mamma."

The boy retires around the back way. Walls waits for a while. Boy doesn't return. Walls rings the doorbell. Woman answers. Walls tells her he has just delivered the candy to her little boy. She is sorry, but she has not ordered any candy and she has no little boy.

Walls reports back to Saul without the \$1.80 and without the candy. Saul calls the police. The police begin a search for the candy kid "confidence man."

## SCHOOLS AND COLLEGES

### Valparaiso College of Pharmacy.

The Senior class has elected the following officers: President, W. R. Ferguson, of Indiana; vice-president, W. O. Speer, of West Virginia; secretary, K. Stine, of Indiana; treasurer, G. C. Chostner, of Missouri; yell master, A. R. Zack, of New Jersey; editor, C. M. Sisco, of Arkansas.

The Valparaiso Pharmaceutical Association has elected the following officers: President, G. C. Chostner, of Missouri; vice-president, O. B. Koger, of Kentucky; secretary, Floyd T. Timmens, of Michigan; treasurer, Rudolph Myers, of Indiana.

At a recent meeting of the V.Ph.A. an interesting address on pharmaceutical possibilities was given by Prof. Wisner, professor of pharmacy and materia medica, Valparaiso University.

### University of Michigan School of Pharmacy.

F. F. Ingram, Jr., B.S. (Pharm.), '11, gave a very interesting and instructive talk before the Prescott Club at its December meeting. The subject was perfumes and their manufacture. "Freddie" is particularly fitted to speak of these matters, having spent a year studying the subject in France.

Percy Mack, Ph.C., '12, who purchased the store of J. A. Tice in this city has built up a fine business in the past three months. Mack hopes to have one of the prescription stores in Ann Arbor very soon.

The Freshman class gave a smoker at the Michigan Union recently with short talks by President Weaver, Professor Stevens and Dr. Hubbard.

Professor A. B. Stevens spent New Year's with relatives in Defiance, Ohio.

Miss Ethel Person, Ph.C., '11, who is now a chemist with Merck & Co., Rahway, N. J., spent Christmas with her mother in Ann Arbor.

The second semester opens Feb. 9, and it is hoped that all have done good enough work to be permitted to remain the second semester.

### N.Y.C.P. Alumni Honor Dean Rusby.

The 18th annual dinner of the New York College of Pharmacy, Columbia University. Alumni Association, held at the Chemists' Club, was chosen as the occasion to celebrate the 25th anniversary of Henry H. Rusby's connection as dean of the institution, the 80 or more persons present having assembled to do him honor. A silver chocolate set was presented to Dr. Rusby by the Alumni Association. The college faculty gave him a silver loving cup. Professor C. P. Wimmer officiated as toastmaster, being introduced in this capacity by Dr. Joseph Weinstein, president of the association. The after-dinner speakers were W. H. Carpenter, provost of Columbia University; Dr. C. F. Chandler, vice-president of the college and professor emeritus of chemistry; Dr. Wm. Jay Schieffelin, who spoke in behalf of the college trustees; Professor George C. Diekmann, speaking for the faculty and who presented Dr. Rusby with the faculty's token of loyalty and fidelity, the silver loving cup; the dean, Thomas F. Main, secretary of the college, a founder, and honorary president of the association, and E. W. Runyon, '73.

### College of Pharmacy University of Minnesota.

The first semester closed on Jan. 24 and the semester examinations began on Monday, Jan. 26, and continued throughout the week. The regular work of the second semester begins Feb. 4.

The work in botany was reduced from six hours per week to four hours, to enable the class to begin work in the junior pharmaceutical laboratory in the subject of weights and measures and the physics of pharmacy. This work began about Dec. 1. The new instructor, C. H. Rogers, is conducting this laboratory work. The senior work in dispensing was increased somewhat last year and continued to the end of the first semester.

Among the new equipment received during November and December were 120 tablet-arm chairs, 32 additional steel storage lockers, 100 stools for the pharmacognosy laboratory, pharmacognosy steel chart-case, 15 steel portable drug bins, each of

approximately 100 pounds capacity, a series of animal cages for guinea-pigs, rabbits, dogs and roosters, a drug threshold, 3 additional drug-drying ovens, which have been connected with the two drying ovens already placed in the pharmacognosy plant laboratory basement, a 10 h.p. electric motor.

The supply of crude drugs for the work in pharmacognosy has arrived. In the neighborhood of 350 different samples were received, each representing the very best obtainable commercial drug. The order probably represents the finest assortment of vegetable drugs ever brought into the Northwest. The specimens with others already on hand have been arranged alphabetically in the new steel dust-proof drug drawers, of which there are 550. A sufficient quantity of each drug has been procured so that every student will be given a sample for his permanent collection and a quantity for drug powdering.

Practically the entire crop of official vegetable drugs, harvested from the medicinal plant garden the past season by the classes in pharmacognosy, has been packed into air-tight glass jars. A large amount of this material will be used for comparative work with commercial drug samples and for the manufacture of pharmaceutical preparations.

Professor W. H. Tait, now Kent Professor of Law at Yale and formerly President of the United States, will deliver a series of lectures at the University beginning early in March.

### Michigan C.P. Graduate Emulates Ford.

Thirty-two employees of the Tompkins-Coopernail Company, Utica, N. Y., owned by J. W. Tompkins, who have been connected with the company's store on Genesee street for from two to five years, have just been made the recipients of gifts of money from Mr. Tompkins aggregating the total of \$2000. Last August eight young women in the store were given a trip to Bermuda, all expenses being borne by their employer, approximating something over \$1000, thus making the employees during the year beneficiaries in the sum of \$3000 or more. Mr. Tompkins is a graduate of the class of 1877, University of Michigan School of Pharmacy. He was scheduled to attend the Michigan Club's annual banquet held at the Waldorf-Astoria Jan. 29. Mr. Tompkins spent four years in the drug business, retiring to go on a farm. The success of a country peddler, however, inspired his interest in a general merchandising business. He first attempted to peddle to the farmers, but failing in this established a general store at Saugerties. His present well-established department store is the outgrowth of that initial effort.

### B. C. P. to Hold Commencement in Academy of Music.

Thomas J. France, chairman of the committee on supervision and examination of the Brooklyn College of Pharmacy, has succeeded in securing the Academy of Music for that institution's commencement exercises to be held in May. Due to the academy being reserved for the presentation of opera during the past several years, the college had been obliged to hold its commencement in less commodious quarters.

### Philadelphia College of Pharmacy.

John R. Rippetoe, of New York City, delivered the sixth of a special series of lectures at the Philadelphia College of Pharmacy, his subject being "Applied Pharmacognosy." Mr. Rippetoe based his remarks upon his personal experience in the laboratories of the larger pharmaceutical manufacturing houses.

### JOHN WESLEY HYATT GIVEN PERKIN MEDAL.

At a well-attended meeting of the Society of Chemical Industry, held on Jan. 23, 1914, at Rumford Hall, New York City, the Perkin Medal for the year was awarded to John Wesley Hyatt, the inventor of the first practical method for making pyroxylin plastics without the use of solvents, and founder of the enormous industry represented by The Celluloid Company. In a masterly address, Professor Charles F. Chandler, of Columbia University, outlined the attempts made to produce nitro-cellulose plastics prior to Hyatt's work, and showed how Hyatt's method of applying heat and pressure obviated all the difficulties introduced by the use of solvents. Mr. Hyatt, who is still connected with the Newark firm, responded in a delightful vein full of humor. Mr. Frank Vanderpoel, one of Mr. Hyatt's co-workers, paid a warm personal tribute to the inventor as a man.

## BOARD EXAMINATIONS

### District of Columbia.

WASHINGTON, Jan. 20.—As a result of the recent quarterly examinations of the Board of Pharmacy of the District of Columbia the following have been licensed to practice pharmacy: William Armstrong, Byrd, Eugene Cecil Brockman, Andrew Bennett Brown, George Frederick Clayton, William Daniel Barnett and Arthur Daniels. The next examinations of the board will be held April 1 and 11.

### Massachusetts.

BOSTON, Jan. 20.—The Massachusetts Board of Registration in Pharmacy has organized by the selection of Charles F. Ripley, of Taunton, as president and Albert J. Brunelle, of Fall River, as secretary. Mr. Ripley succeeds William S. Flint, of Worcester, and is a former secretary of the board, and Mr. Brunelle succeeds F. J. McCormick, who retired from the board by reason of the expiration of his term. He is succeeded by William S. Briry, of Melrose.

The following persons have been registered as pharmacists: Charles F. Archer, Dorchester; G. A. Beane, Lynn; Leland H. McAvoy, Boston; William Meisner, Springfield; John C. Warwick, Boston; John J. Burns, Dorchester; John F. Fagan, Dorchester; Wm. J. Gilcrease, Lowell; Edward K. Adams, Norwood; Warren R. Colon, Dorchester; Ambrose M. Joyce, Quincy; Harry F. Keeney, Roxbury; Carl B. Carlsen, Cambridge; James A. Benson, Fall River; Maurice E. Cleary, Cambridge; Sylvia Gorshol, Chelsea; Freeman Phillips, Lynn; William J. Poisson, New Bedford; Alfred J. E. Schmidt, Newark, N. J.; Charles J. Tanner, New Bedford; William E. Warner, New York.

The following were granted Assistant Certificates—George J. Enwright, Lowell; Clarence U. Folster, Fairhaven; H. A. Macdonald, Somerville; Louis Kriesman, Somerville; Harry R. Campbell, Lowell; Edward F. Foley, Lynn; Charles A. Kidder, Lynn; George C. Schicks, Lowell; Thomas M. Barry, Lynn; Rodolphe C. Bonin, Lynn; Antonio A. Delage, Boston; Walter J. Hutchinson, Somerville; William H. Ryan, Waltham; George J. Watters, Somerville; C. W. Devanna, Malden; Lawrence Cunningham, Lawrence; Albert M. Fazioli, Everett; Willard A. Hodges, East Milton; Romeo G. Lavoie, Holyoke; Rodrigue Valliere, Holyoke.

### Nebraska.

CLEARWATER, Jan. 20.—The Nebraska State Board of Examiners has organized by the election of the following officers: President, D. J. Killen, Beatrice; vice-presidents, E. W. McConnell, McCook and S. E. Ewing, Creston; treasurer, Orel Jones, Oconto; secretary, J. Earle Harper, Clearwater. The examinations for the year will be held on the second Wednesday and the following Thursday of February, May, August and November. The next examination will be held in Omaha Feb. 11-12.

### New York.

The number of penalties paid the board during the month of December, also the character of the violations, was as follows:

Adulterated and deficient prescriptions.....	10
Adulterated and deficient pharmacopoeial products.....	12
Junior violations.....	5
Non-registration of pharmacy.....	1
Total.....	28 cases

### Vermont.

MONTPELIER, Jan. 20.—At the annual meeting of the Vermont State Board of Pharmacy the following officers were elected: President, E. G. McClallen, of Rutland; secretary, M. G. Beebe, of Burlington; treasurer, W. L. Gokay, of Bennington. The other members to complete the board are W. F. Root, of Brattleboro, and D. F. Davis, of Lyndonville.

### Washington.

That several drug stores in Spokane and other parts of the State of Washington are endangering the health and lives of customers by having prescriptions calling for potent drugs put up by unregistered clerks and by clerks who have even failed to pass the examinations before the board of pharmacy, was the statement of Secretary D. B. Garrison of the State Pharmacy Board at its session in January. "The board has decided to proceed against such cases as fast as possible by means of publicity before taking more drastic action," said Mr. Garrison. "We shall not wait until we have rounded up all the violators of the pharmacy board's ruling but shall give to the newspapers as fast as listed the names of stores and firms violating the law. As part of our new work we have raised the standard required of applicants, requiring that they attain a general average of 75 per cent. in all subjects, with not less than 60 per cent. in any one of them. Furthermore, four of the five subjects will have to be above 70 per cent. Our State pharmacy requirements are now as drastic as those of any State in the Union."

### Wisconsin.

MADISON, Jan. 20.—Out of 77 applicants, the Wisconsin State Board of Pharmacy granted 40 certificates, following the examination, which was concluded yesterday. The next meeting of the board will be held in Madison, April 14 to 17. Those granted certificates included the following:

Registered Pharmacist Certificates—Sr. M. Gonsalva Hunt, Milwaukee; Ernest H. Koehler, Milwaukee; Sigurd C. Helland, Ra-

cine; Alvin G. Kitzerow, Milwaukee; Arthur J. Richter, Fond du Lac; William J. Scheitinger, Milwaukee; Lester L. Jackson, Beloit; Sidney A. Ingersoll, Milwaukee; Fred K. Schmitt, Milwaukee; Ralph E. Lowell, Appleton; Henry Nutzhorn, Dallas; David S. Crocker, Iron River; Edward Fleming, Racine; Anton J. Socha, Edgar; Mathias H. Regner, West Bend; Harold W. Tuttle, Beloit. Assistant Pharmacist Certificates—Walter W. Klug, Milwaukee; Louis Seif, Neillsville; Earl T. Cunningham, Milwaukee; Ralph Kraft, Milwaukee; Leo J. H. Pasching, Eau Claire; Emil J. C. Wegner, Milwaukee; Henry T. Bellung, Appleton; Frank O. Fisher, Fond du Lac; Merritt R. Bach, Beloit; Harry A. Epstein, Milwaukee; Elizabeth Kucera, La Crosse; M. Lee Alberts, Milwaukee; Gustav H. Flagt, Park Falls; Victor L. N. Ziarnik, Milwaukee; Harry E. Sutherland, Sparta; Robert Ferber, West Allis; William D. McGuinn, Milwaukee; Edward W. Panter, Grand Rapids; Clarence C. Bennett, Jr., Milwaukee; Ernest Schultz, Columbus; Howard O. Schulz, Oconomowoc; Joel D. Leslie, Milwaukee; Martha A. Long, Waukesha; Frank X. A. Krawczak, Milwaukee.

### NEWS OF THE BOARDS.

The Iowa State Pharmacy Commission has been brought face to face with a question under the liquor laws and upon which the body must make a ruling. A druggist in Iowa, even if he has no permit to sell intoxicating liquors, may keep on hand "a sufficient quantity" of whiskey, brandy and wine to use as components of prescriptions. The question now is: How much is a "sufficient amount?"

Gov. Dunne, of Illinois, has appointed Thomas D. Gregg, of Harrisburg, that State, as a member of the State Board of Pharmacy, to succeed H. C. Christensen, of Chicago. Mr. Christensen was a Republican member of the Board for seven years. At its annual meeting the Board organized by the election of F. J. Provoost, president, and F. C. Dodds, secretary. L. L. Mzarek is vice-president.

There are 1801 registered pharmacists in Kansas, according to the report of the State Board of Pharmacy filed Jan. 7 with the Governor. The receipts during the year amounted to \$4385 and the expenditures \$4273.59. W. F. Henrior, of Wichita, is president, and W. E. Sheriff, of Ellsworth, secretary of the board.

The Washington State Board of Pharmacy has organized by the election of the following officers: President, Cornelius Osseward, Seattle, 1914; F. D. Marr, Tacoma, 1915; A. F. Maxwell, Pullman, 1916; V. T. McCroskey, Colfax, 1917; secretary, D. B. Garrison, Connell, 1918.

### NEW CORPORATIONS.

American Radium Pharmaceutical Co., Chicago; capital, \$10,000.  
National Co-operative Drug Co., New York; capital, \$1,000,000 (Delaware corporation); incorporators, H. K. Wood, J. F. Curtin and H. O. Coughlan, New York City.  
Mobra Chemical Co. (Delaware corporation); capital, \$250,000; A. N. Bowman, Jr., Scranton, Pa.; L. C. Heine, Bethlehem, Pa., and E. Collins, Jr., Edgewater Park, N. J.  
Gaffney Drug Co., Columbia, S. C.; capital, \$13,000; J. C. Creech, Jr.; J. A. Wood and C. L. Flack.  
McBirney Drug Co., Cincinnati; capital, \$10,000; H. E. Stoes, E. T. McBirney, E. H. Foster, T. A. Pacht and Earl Mann.  
Farmville Pharmacy, Farmville, Va.; capital, \$1000 to \$20,000; William E. Anderson, president; R. L. Paultt, secretary-treasurer.  
R. A. Ellington Drug Co., Inc., Murphy, N. C.; capital, \$10,000; R. A. Ellington, J. T. Taylor, J. H. Moore, J. O. Ragsdale, of Madison, and A. J. Ellington, of Reidsville.  
Pharmo Products Co., Chicago, medicines, medicinal compounds, drugs, etc.; capital, \$100,000; Nathan S. Smyser, Charles R. Young and Arthur A. Basse.  
Corner Drug Store, Abilene, Tex.; capital, \$10,000; incorporators, W. A. Bride, J. M. Magee and George R. Harris.  
McDuffie-May Drug Co., Nettleton, Miss.; capital, \$50,000.  
Ruby Drug Co., Ruby, S. C.; capital, \$3000.  
Pfaltz & Bauer, Inc., Manhattan; capital, \$75,000; H. Pfaltz, Newark, N. J.; F. M. Bauer, Rockaway Park; T. E. Price, Jersey City, N. J.  
Rocky Mountain Drug Co., Stevensville, Mont.; capital, \$5000; Lena Miser, John Dowling, S. S. Tilman.  
Purity Products Co., pharmaceutical chemists, Manhattan; capital, \$50,000; L. E. Orcutt, W. A. Morxley, A. G. Odell.  
Hinkle Pill and Tablet Co., Chicago; M. M. Franey, Asher J. Goldfine and Harry P. Munns.  
Enno Sander Seltzer and Soda Co., St. Louis; capital, \$75,000; Louis Meng and Otto J. Presser.  
The Nyal Co., Detroit, Mich.; capital, \$2,500,000; \$1,178,000 paid in.  
Wells Pharmaceutical Co., St. Louis; capital, \$10,000; Stanley W. Wells, L. C. Wells, Edwin J. French.  
C. J. Moffett Medicine Co., St. Louis; Walter R. Mayne and others.  
Dockum Drug Co., Wichita, Kan.; capital, \$40,000; Harry Dockum, Clyde Sanders, Ralph Quackenbush and Miss H. Ganzborn.  
Herb Juice Medicine Co., Jackson, Tenn.; capital, \$25,000; B. J. Lifsey, W. B. Lemmon and others.

### BUSINESS TROUBLES.

Harry T. Stirling, druggist, Quincy, Mass.; liabilities, \$1356; assets, \$450.  
Dougald Forsythe, druggist, Redfields, Iowa; assets, \$2108; liabilities, \$3107.05.  
Lloyd B. Huron, "Live Wire Drug Store," Tipton, Ind.; assets, \$3500; liabilities, \$8000.  
Adolphus C. Loewe, druggist, Maynard, Mass.; assets, none; liabilities, \$3347.93.

## Getting after the Sundries Sales.

*How F. A. Epstein, of Boston, Swells His Profits by Pushing Every Line He Carries in His Tremont Row Store.*

**F.** A. EPSTEIN, of the Epstein Drug Co., at 28 Tremont Row, is one of the "live wires" of Boston in the matter of merchandising. In fact, as has already been told in the ERA, Mr. Epstein is primarily a drug merchant, and the shop location, on one of the busiest corners in New England, where the tides of humanity flow past from the West and North Ends to the financial and shopping centers, while on the other side of the store the business which is drawn to the courthouse and State House flows past all day long is almost ideal. Then the further fact, that one of the busiest subway stations is opposite the store, increases its importance as a shopping center.

F. A. EPSTEIN

But the Epstein Drug Co. does not depend altogether on the fact that they have a good location to bring them business. Money was not spared to make the drug store attractive, both inside and out, and it has paid.

"I believe in signs," Mr. Epstein said, "both inside and outside. Too many druggists run back-shops and dingy places, gloomy inside and outside. I believe in signs and lights. We have just had all our signs made new, not only repainted, but entirely new signs. It cost a lot of money, but I believe it pays. I travel about the country a good deal by automobile, and I can tell the moment I see a drug store what kind of a merchant the owner is. If I see a drug store with bright yellow and black signs I know the druggist is a live wire.

"Every druggist, however, must make a study of his own location. We are able to do things and handle articles here that might not be done in Washington street or uptown. But if I were in a country town I would make a study of the situation and aim to meet the special conditions that existed there.

"The great thing is buying the right merchandise at the right price. Too many druggists measure merchandise as they do prescriptions. We aim to display only seasonable goods in our windows. Only in the hot Summer days would I put talcum powder in our show windows. On a cold day we display lung protectors, chamois vests, or hot water bottles, or other seasonable goods. On rainy days umbrellas are always among the leaders. And whatever we display I aim to make attractive in price. We will put a 49-cent water bottle in the window, and when the customer inquires for it we show it, and also show superior goods. But we aim to give the customer what he wants and just as quickly as possible. We have arranged the stock in the store so that service will be expeditious.

"The druggist, as truly as the merchant, must sell his goods as low as his competitor. If we couldn't do that I would go out of business. As a general thing, the small druggist is at a disadvantage on this point, but the buying clubs and the get-

together spirit that is growing in these days may help him.

"The ability to buy right merchandise at the right price is the secret of success. We have sold a great many rubber door mats—a \$1 door mat for 49 cents. I am finding toys very popular and profitable. Everybody loves children, whether they have them of their own or not, and customers who come in for one thing, seeing the toys, often buy them for the little ones at home. Moderate priced toys, 25 and 50 cents, are the most popular. We carry celluloid dolls, teddy bears, long-haired animals, red rubber animals, and they are all good sellers. We have sold 500 clocks at 39 cents in a week. They cost 28 cents.

"Once we made a specialty of fountain pens, but when everybody got into the business we dropped them and turned to other things. We still carry them, but do not attempt to specialize. We carry tea and coffee, one grade of each, both S. S. Pierce brands, and here, in Boston, that name sells them. I prefer to handle an article that sells well, and keeps moving, than to handle a less known article at a slightly larger profit, that does not sell itself.

"We have sold 1000 Duplex razors at 11 cents each that cost 12 cents. But that loss was more than made up in the sale of accessories—blades, brushes, soaps and pastes and toilet articles. Many a beginner came in here and bought a razor at 11 cents and then bought a complete equipment.

"We are about to put in law blanks and typewriter supplies, because here in this location I believe we can sell them. Stationery is a profitable line. We are selling japanned cash boxes at 39 and 49 cents. We constantly test new specialties. Here on this corner we have developed a power to sell many things which other places could not handle, and which once we could not have sold. It was an unattractive corner before we took it, and made it what it is. We will sell anything the people want. We are contemplating putting in a line of fancy groceries, like olives and pickles and sardines. We sell now on our fountain counter sandwiches and doughnuts and pie. We serve a cup of coffee, a doughnut and a piece of cheese for five cents. We always carry ham, chicken, cheese and sardine sandwiches, and all day long the counter is full.

"We aim to serve the people. We aim to get the right merchandise at the right price. Instead of being merely a drug store, the successful drug store of the future will be a department drug store."

## Being "On the Job" as a Cash Asset.

**T**HERE is a lesson in progressive merchandising in the action of the drug firm of Hilton & Hefner, Lock Haven, Pa., on two occasions recently, when a public demand was foreseen and crystallized into good, clean cash—several hundreds of dollars of new business going into the till.

Within a few days of the first of December last an announcement was made in the Pennsylvania newspapers that the new sanitation law which went into effect on Dec. 1 banished the roller towel among its other reforms. The following morning the enterprising young salesman from the Hilton & Hefner drug store called at all the hotels, barber shops, etc., and left a sample outfit of absorbent paper towels. This practical demonstration by the drug firm resulted in such a demand the next day for these goods that the stock on hand was completely sold, and a further supply was ordered by telegraph. But a sufficient supply was distributed to allow of the banishment of the roller towel over night. Glasses and tumblers were removed from the water spigots in wash rooms,

and from the ice-water tanks and coolers, and sanitary paper cups were substituted—and Hilton & Heffner took the business because they were sufficiently farsighted to have provided for the need.

"We got busy immediately," said Mr. Heffner, "and secured a nice lot of business as a result of being first in the field. All told, we cleared up several hundred dollars—nice, clean,

## The Passing of The Roller Towel

## HILTON & HEFFNER

UP-TO DATE DRUGGISTS  
Graduate Prescription Service Night and Day

*How Hilton & Heffner Advertised Paper Specialties.*

cash business—in a short time, and we have been getting repeat orders ever since."

Hilton & Heffner got into the parcel post delivery business almost at the outset. The firm had always had a good mail-order business, and with the advent of the new Government carrying system, advertised its advantages, and immediately offered to pay the postage on all parcel post orders sent them amounting in value to 50 cents or more. A special parcel post map of the United States with Lock Haven as the center of the first zone, together with a guide and the post-office regulations, was conspicuously displayed in the Hilton & Heffner windows, and were placed at the disposal of the public. Parcel post stamps were also placed on sale for the accommodation of the general public.

Hilton & Heffner go after business in many ways, but one of the most effective is advertising—timely, get-the-business advertising—which is combined with the use of circulars printed upon the firm's letterhead and neatly gotten up in imitation of typewriting. One of their recent circulars reads as follows:

DEAR SIR:

There are probably very few weeks in the year in which you do not find the necessity arises for something from the drug store for yourself or family, or for your stock or animal pets.

Procrastination is not only a "thief of time" but also of lives when sickness comes and the tendency to wait till someone comes to town has many times resulted seriously.

The establishment of the parcel post gives us the desired opportunity to render you better service and practically places our entire drug stock at your service without the necessity of making a special trip to town, or sending with a neighbor.

We have established a parcel post mailing department in our store and ask you to send us your orders by mail when you need anything in the drug line.

We will pay the postage on all orders sent by parcel post amounting to 50 cents or over, and can in cases of emergency send liquids in special mailing cases, of which we have a full supply on hand.

We have placed your name on our special mailing list and you will receive advertising matter and samples from drug houses manufacturing medicines of all

## Parcels Post Special

In order to extend as far as possible our sphere of usefulness in this section of the state, we will hereafter **PAY THE POSTAGE** on all parcels post orders amounting in value to 50c or over, anywhere in the first zone (any postoffice or rural route within 50 miles of Lock Haven).

Liquids in glass (patent medicines, prescriptions, etc.) are mailable on local R. F. D. routes without being enclosed in special container, and, in order to take full advantage of this provision, we have established a daily messenger service to Mill Hill, Rosecrans, Logan- too and Woolrich, so that we can send liquids of this character by mail to Lock Haven R. F. D. No. 1, Mill Hill R. F. D. No. 1 and No. 2, Salona R. F. D. No. 1, Flemington, Mill Hill, Salona, Rosecrans, Logan- too Chatham's Run, Woolrich and Castanea postoffices. Liquids in glass mailed to other postoffices will have to be sent in special containers, for which nominal charge will be made, which charge will be refunded on return of container.

## Hilton & Heffner

The Largest Drug Store in Clinton County

*The Announcement of Parcel Post Free Delivery.*

kinds. We do not send this list to any concern that is not reliable and whose goods we cannot recommend, and if you wish to try any of these medicines you can order them sent by mail.

If you have a telephone you can order by 'phone, as we have both Bell and Commercial 'phones. Remittances can be made by check, money order, or one or two-cent stamps, and we will give your orders prompt attention.

We are enclosing a special parcel post bargain list containing seasonable items which will show you the exceptional advantage you enjoy when purchasing from us. Our business is the largest drug business in this part of the State, and when you purchase medicines from us you are getting them in the freshest and best condition, as our stock is being replenished every week-day of the year, our records showing that over 400 different freight and express shipments were received by us last year.

We employ carefully trained college men in compounding prescriptions and manufacturing our medicines, and have the most up-to-date stock in this section of the State.

We would appreciate your business.

Very truly yours,

HILTON & HEFFNER.

Hilton & Heffner—"The Quality Drug Store"—specialize through a parcel post mailing department, a physicians' supply department, as a distributing depot for the State Health Department, and are wholesale and retail dealers in "medicines, chemicals, toilet articles, rubber goods, chamois and sponges, insecticides and spraying materials."

Promptness and efficiency are insisted upon and the key to their success in their mail order business is the announcement in a conspicuous place on their letterhead: "All orders sent out on first mail after receipt."

## Restricting the Sale of "Coal Tar" Drugs.

*Kansas City Retail Druggists' Association Inaugurates Movement to Prevent the Sale of Coal Tar Synthetics Except Upon Written and Non-Refillable Prescriptions—What Is Being Done Abroad.*

**L**AST May the Kansas City Retail Druggists' Association took the first action by any organized body of druggists in this country in regard to restricting the sale of coal-tar synthetic, narcotic and habit-forming drugs. This body took the ground that present laws and ordinances regulating the sale of such drugs are violated with impunity, and that as ordinances have proved ineffective the State Legislature should be asked for a law to control such sales absolutely. Such restriction was indorsed by the A. Ph. A. and the A. M. A. last Summer, following the action of the Kansas City association.

According to the figures compiled and presented by the association, the reported number of cases of poisoning by acetanilide, where administered by physicians, total 94 annually; by antipyrine, 68; by phenacetin, 43; with no notice taken of the many fatalities which have followed the indiscriminate use of such drugs by the laity. In the association's presentation of the case to the Legislature these statements were made:

"Physicians have come to use these drugs very guardedly as effects seem to be inexplicable. Immediate poisoning seems to result from reflex action before the drug can really enter the system; in other cases poisoning occurs by absorption of the unchanged drugs; others are poisoned by reactions which cannot be accounted for. The fact that these deadening drugs are poisons in the true sense of the word is recognized by members of the medical profession. Toxic effects may include cyanosis (blueness) of the nails, skin and mucous membrane, dyspnea, dilation of the heart, slow breathing, collapse, prostration, delirium, hallucination, nausea, vomiting, dizziness, syncope, hemorrhage, subnormal temperature, rash, eruptions and itching, redness and swelling, blindness, deafness, profuse perspiration, excessive nervousness, buzzing in ears, weakness, stupor, and death."

In seeking to make as complete a presentation of the evils resulting from the indiscriminate use of such drugs, the Kansas City association obtained letters from several American consuls in the European capitals; from Louis Nathan, the Parisian chemist; and from Dr. Harvey W. Wiley, formerly chief chemist of the United States Bureau of Chemistry at Washington. From these letters, through the courtesy of President A. N. Doerschuk, of Kansas City, the ERA is privileged to quote the following excerpts:

**DR. HARVEY W. WILEY:**

"I do not believe that coal-tar drugs should be used in any food product, nor in any medicinal product of which they are not an essential ingredient. All coal-tar dyes are made under such conditions as to render it almost impossible to predicate their composition. Especially are they likely to contain arsenic. My attitude in regard to these dyes, while I was in charge of the Bureau of Chemistry, was one of absolute prohibition. Not being able to secure this, I insisted that only a limited number should be permitted, and then only after they had been certified as being free from harmful ingredients.

"I attempted to bring prosecutions against those who used uncertified dyes, but I was prevented from doing so by my colleagues on the so-called Board of Food and Drug Inspection unless I was able to bring evidence that the particular dye in question was injurious to health. As the quantity of dye at my disposal was only that which was contained in the food product, such a determination was, of course, impossible. Thus the regulation became a dead letter, and the indiscriminate use of coal-tar dyes was permitted against my advice and earnest protest.

"The synthetic drugs which derive from coal-tar, and which exert such profound influence on the nerve centers and the circulation, in my opinion should also be strictly controlled, so as to be used only under the direct supervision of a physician. Acetanilide and phenacetin are types of this kind of product. These drugs, doubtless, have valuable qualities when administered to meet certain symptoms, which the physician alone should judge. Their indiscriminate sale, therefore, is a distinct and continuing threat to the community.

"I am in the deepest sympathy with all measures which tend to restrict to legitimate channels the traffic in powerful medicines and drugs, not only those of coal-tar origin, but no matter of what origin. I trust that your association will be successful in securing a strict control of this class of remedies."

### Withdrawn in Germany.

**A. M. THACKARA, American Consul-General, Berlin, Germany:**  
"The synthetic and sleep-producing drugs, such as veronal, veronal-soda, sulfonal, trional, medinal, etc., have been withdrawn from free sale as a result of incidents of poisoning following their use. Drug stores may sell these only on the presentation of a physician's order which must not be refilled. Antipyrine, acetanilide, phenacetin, migrainin, pyramidon, aspirin and salipyrine are only partially withdrawn but must be labeled according to restrictions. Regulations governing the sale of these medicinal preparations have been issued in the form of Imperial Cabinet orders after the workings of these preparations in question have been investigated at length in the Imperial Health Office."

### Secret Medicines in France.

**LOUIS NATHAN, Chemist, Paris, France:**

"Coal-tar products and synthetic drugs may be usually sold by pharmaciens in France to the general public without a physician's prescription. These drugs have not been the subject so far of legislation in this country, and none of them are included in the poison schedule. Notwithstanding, in the event of harmful or untoward effects arising from an overdose being taken by the purchaser of such drugs as sulfonal, veronal, trional, acetanilide, phenacetin, etc., there would be an official investigation and the vendor would be liable to a penalty. He would be prosecuted for infringing a law which dates from 1811, prohibiting the sale of secret remedies; and "secret remedies" are defined as any substance which is not inscribed in the French Codex, where these drugs are not found. This law is the "Sword of Damocles" hanging over every pharmacist in France."

**FRANK H. MASON, American Consul-General at Paris:**

"It may interest you to know that considerable agitation is making itself felt in this country in regard to the sale of this class of drugs as well as cocaine and opium, all of which are forbidden under an old statute. There is, however, a considerable quantity sold, it having been brought into the country by smugglers, and handled through unscrupulous druggists. Numerous arrests have been made, and the police are doing all in their power to track down and punish the very numerous class of persons who are making their living out of this traffic in soporific and poisonous drugs."

### Poisons in England.

**CLERK OF THE PRIVY COUNCIL:**

"The schedule of poisons which may be sold so labeled, only by registered chemists in England, as amended on the 12th of March, 1913, includes:

"Sulfonal and its homologues, whether described as trional, tetronal, or any other trade name or designation, and diethyl barbituric acid, and all other alkaline, aryl, or metallic derivations therefrom, whether described as veronal, proponal, medinal, or any other trade name, mark or designation. All such poisons must be sent out in bottles or packages rendered distinguishable by touch from ordinary containers."

**JOHN L. GRIFFITH, American Consul-General at London:**

"The scheduling of veronal, etc., as poisons was done because of the frequent cases of death and the many untoward effects resulting from its excessive use. Sulfonal and its derivatives were scheduled for the same reasons."

### Official Prescription Blanks for Narcotics in N. Y.?

Senator Boylan recently introduced into the State legislature a bill, drawn up by Charles B. Towns, which, if enacted, would prohibit any druggist from filling prescriptions containing chloral and cannabis indica or to sell medicines containing opium, morphine and its derivatives, cocaine, eucaïne, these drugs, except on official prescription blanks bearing the State seal furnished by the State Health Commissioner. A record is to be kept of the number of blanks issued to each physician, and each blank is to be numbered serially. The bill

also provides that the prescription shall not be filled 10 days after date of writing, the keeping of a record book, the giving of a certificate to the purchaser, the keeping of carbon copies of prescription and certificate, the furnishing of official order blanks to pharmacists, physicians and dentists for securing narcotics from wholesalers, etc. Revocation of the physician's or druggist's license is provided for violation of the proposed law, such violation also constituting a misdemeanor.

#### N.Y. DRUG EXPOSITION LARGELY ATTENDED.

N.Y.S.P.A. Features Traveling Propagandic Exhibit. State and Local Organizations Co-operate.

THE most successful drug exposition ever held in New York City at least in point of attendance, was that presented at Madison Square Garden, Jan. 20-26, inclusive. The main floor was entirely given up to the exhibits of various manufacturers and to the collective exhibition of the New York State Pharmaceutical Association. In getting up the latter feature the organization received the co-operation of the N.Y.R.D.A., the Kings County Ph.S., Westchester County P. A., G.A.S., and the Brooklyn Ph.A. The exhibit consisted of the N.Y.S.P.A. propaganda committee's set of official preparations, prepared by John Koerner, chairman of the committee, and which will later be shipped to various local organizations and to hospitals throughout the State. The Brooklyn College of Pharmacy presented an interesting exhibit of pharmaceuticals, chemicals and drawings prepared by its students, this exhibit being under the supervision of Dr. Hy. J. J. Kassebaum. An old wooden mortar 119 years old, and a metal mortar, the college mortgage having been burned in the latter some years ago, shared attention on the part of the public. A model dispensing table, over which was the caption, "Pharmacy for Pharmacists," was the contribution of J. Leon Lascoff. An interesting display of crude drugs, an exhibit of the foremost pharmaceutical journals, practical demonstrations of urinalysis by Dr. Joseph Weinstein and examples of the old-time and modern systems of prescription filing were other features of this unique, ethical pharmaceutical exhibit.

The National Pharmaceutical Society maintained a booth at which goods donated for its bazaar were sold. Dr. Brothers had charge of the American Medico-Pharmaceutical Association's exhibit. The Welch Grape Juice Company, of Westfield, N. Y., conducted one of its typical booths at which the "habit that won't get you" was advocated. The American Can Company, of this city, displayed a \$85 adding machine, the usual apparatus of this sort having a cypher added to its price. The same people also presented for the druggists' inspection all kinds and sizes of cans. The American Safety Razor Company, Brooklyn, demonstrated its "Ever-Ready" Safety Razor. A temple of borax was the feature of The Pacific Coast Borax Company, this city. Charles Nurnberg Co., Inc., New York, had an interesting exhibit showing the various steps taken in the preparation of their product, clinical thermometers. The Armstrong Cork Company, New York, displayed corks, of course, and P. C. Blakiston's Sons & Co., of Philadelphia, presented an interesting exhibit of medical, chemical and pharmaceutical text-books. In the N.Y.S.P.A. historical section Merck & Co. exhibited the mortar used by Merck in 1688.

Among other exhibitors and their products were:

M. H. Petigor, soda fountains; A. S. Campbell & Co., metal hot-water bottles; The Schwarzwaelder Co., rubber sheeting; The Paroubec Mfg. Co., wrist bandages; Candy Bros. Mfg. Co., Simplex Vacuum Mfg. Co., vacuum bottles; Eimer & Amend, automatic disinfection salsarsan apparatus; I. W. Lyon & Sons, tooth powder; Beech-Nut Packing Co., chewing gum; Advance Novelty Candy Mfg. Co., cough drops; Thaddeus Davids Co., poligraf lettering system; Dusal Chemical Co., seidlitz powders; Thompson & Morris Co., cellular express box; The Empress Mfg. Co., hair color restorer; Clysmic Spring Co., bottled water; "Prana" Carbonic Syphon Co., syphons, and Wentz & Co., advertising stamps.

A noticeable feature at the exposition was the laudable manner in which exhibitors refused to give out drug samples to other than druggists. The ERA representative overheard one exhibitor call back a lady and take back a sample she had collected, after having courteously advised her not to take samples of medicines about which she had no knowledge.

The crush became so great on Friday night of the exposition that the officers of the Fire Prevention Bureau feared loss of life would result in case of fire or accident. It was estimated that more than 15,000 persons were on the main floor and 6000 seeking to get into the building when the clearing order came.

### A Tea-Room in a Drug Store.

*New Departure in Oklahoma City Which Offers a Suggestion to Druggists Operating Soda Fountains With Luncheonette Adjuncts.*

ABSOLUTELY the latest idea in the equipment of a modern drug store has been adopted by the Clark Drug Co., 227 West Main street, Oklahoma City. Amid elaborate decorations of smilax, palms, holly and mistletoe the ladies of Oklahoma City were entertained on the opening day, each receiving a ribbon-trimmed package of chocolates and bonbons as a souvenir.

The store had been completely renovated, and a new room has been opened devoted to the service of the "cup that cheers and does not inebriate." This room is a gem. The walls are covered with lattice-work through which are entwined wistaria vines and their highly decorative clusters of purple blossoms. At the end of the room is a Japanese landscape, placed over a long mirror. At the right side of the room and opening from the central passage are little booths, in each of which four persons can be seated comfortably. The decorations are in Japanese style, and Japanese chimes are suspended at the entrance to each booth.

Another innovation is a ladies' dressing room adjoining the tea room. This is finished in pure white, and is equipped with toilet accessories, face powder, violet and toilet waters, and similar accessories with which to repair the ravages consequent upon a shopping trip. The kitchen, in which luncheonette dainties are prepared, is also finished in pure white, and this department is entirely separated from the main store, thus doing away with odors and the savor of viands.

On the opening day a full orchestra rendered a programme of popular music from noon till midnight.

#### A.D.S. Deserts Fifth Avenue for Times Square.

The Gray Drug Company, a subsidiary corporation of the American Druggists' Syndicate, has leased the corner store and two adjoining stores in the Fitzgerald building, at the southeast corner of Broadway and 43d street, for a period of 10 years at an annual rental said to be \$60,000. It is reported that the American Druggists' Syndicate will give up its display rooms and headquarters at 234 Fifth avenue in the very near future, the lease on these premises running out. The Gray Drug Company will feature A.D.S. goods. This new move on the part of the syndicate, or some of those behind it, will place its products in a part of the city now the scene of keen competition between Liggett, Riker-Hegeman and other independent stores. The space leased is 50 by 90 feet and extends south to the Broadway entrance of the Cohan theater. The lease includes about 5000 square feet of basement space, also a frontage in the subway station at that point.

#### N. Y. Consolidated Drug Co. Re-elects Directors.

At the recent annual meeting of the New York Consolidated Drug Company, held at the headquarters of the German Apothecaries' Society, 192 Third avenue, S. V. B. Swann, George C. P. Stolzenburg and Dr. C. F. Klippert were re-elected directors. George Leimecker, George Bruns, H. H. Blomeier and Otto P. Gilbert were elected members of the inventory committee. The reports of the officers showed that the past year had been very successful and the meeting was a very harmonious affair.

#### Eli Lilly & Co. Promotes C. R. Cosby.

C. R. Cosby, formerly manager of the New York branch of Eli Lilly & Co., has been promoted to be head of the special preparations department of that company at Indianapolis.

#### New York Retail Druggists Annual Banquet.

The New York Retail Druggists' Association held its annual banquet at The Elsemere, 82 West 126th street, on the evening of Jan. 30.

## LEGAL DECISIONS

### Conditional Sale—Bankruptcy—References.

**A** SODA FOUNTAIN was sold on a contract of conditional sale about five months before proceedings in bankruptcy were begun against the purchaser. The seller claimed the proceeds in the hands of the trustee. The contract of sale was never recorded as required by the law of Missouri, in which State the bankrupt resided. Three days before the proceedings were begun the bankrupt gave the seller a chattel mortgage upon the property somewhat in excess of the price in the contract, and this was duly recorded. In the interval between the contract and the mortgage the bankrupt incurred other debts in its business aggregating more than the value of the property in question. The seller claimed under the contract and the mortgage independently. It was held that the contract of sale, not being recorded, was void as to subsequent general creditors of the buyer and its trustee. As the bankrupt was hopelessly insolvent when the chattel mortgage was executed, and the claimant's representatives had reasonable ground to believe a preference was intended, and would result from the mortgage, it was held to be void as against the bankrupt's trustee. But it was held that the right of subsequent creditors to urge their objections to the contract and mortgage was defensive merely against the seller so as to invalidate a lien giving a preference on distribution on bankruptcy, and did not entitle the creditors to priority in the distribution of proceeds as against the seller. He was entitled, on filing his claim as a general one, to participate equally with the subsequent creditors in the distribution of the bankrupt's estate. (*L. A. Becker Co. vs. Gill*, 206 Fed. 36.)

### Validity of Sale by Bankrupt Partner.

One of the members of a partnership conducting a soda fountain business, while a bankrupt, joined in a sale of the stock and fixtures to the father-in-law of his partner and retired from the business, which was continued by his former partner alone, but in the firm name. On a petition by his trustee to have the sale set aside it was held that the fact that the partner who continued to carry on the business thereafter contracted indebtedness on the strength of his possession of the property afforded no ground for an attack by the bankrupt or his trustee on the validity of the sale. (*In re Young*, 206 Fed. 187.)

### Sale of Stock—Seller's Remedies—Right to Retain Advance Payment.

In an action to recover back the advance payment on the purchase of a stock of drugs, it appeared that the plaintiff contracted to purchase the defendant's stock, paying \$2500 in cash, and agreeing to pay the balance on delivery of the bill of sale when the statute relating to sales in bulk had been complied with, which would require at least five days. The plaintiff took possession and retained it for 24 hours. He then claimed that he had been induced to purchase by fraudulent representations, and demanded that the defendant take back the stock and repay the cash already paid. The defendant took charge of the store and continued to operate it in all respects as though no sale had been made or contemplated, selling a large proportion of the stock and purchasing new goods. It was held that the sale was entirely executory at the time the plaintiff repudiated it, and the defendant, having again taken possession before title passed could not enforce specific performance. His only remedy was an action for damages for breach of the contract to purchase. The seller would only be entitled to retain the advance payment as damages for the purchaser's breach of contract. That would ordinarily be the difference between the market value of the stock at the time of the sale and the contract price. But the defendant did not counterclaim for damages. All he asked was a dismissal of the case with costs. As he did not deny that he was placed in the identical position in which he was before the plaintiff took possession, his damages were only nominal. His action in retaking the goods and exercising acts of ownership over them constituted a waiver of his right to either sue upon the contract or bring an equitable action to enforce it. The plaintiff was held entitled to recover the advance pay-

ment made. (*McCrea vs. Ford*, Colorado Court of Appeals, 135 Pac. 465.)

### Scope of Employment—Unlicensed Clerk.

A master is not liable for every wrong which the servant commits while in the performance of his contract of employment. His responsibility only attaches when the servant is acting within the real or apparent scope of his employment and in line with his duties. Suit was brought against the proprietors of a drug store for injuries to the plaintiff due to the alleged negligence of an unlicensed clerk in putting pure trikresol on the plaintiff's arm, which was thought to be blood poisoned. The complaint alleged that after a physician who was in the store at the time had requested the clerk to prepare a 1 per cent. solution of trikresol for use on the plaintiff's arm, the physician left the pharmacy, and the clerk negligently, and because of his incompetency in undertaking to fill the prescription, prepared for and gave to the plaintiff a quantity of pure and unadulterated trikresol, which caused the injury complained of. It was held that the substantive act alleged was the supplying of a dangerous solution of medicine, when a harmless or beneficial one had been prescribed, and that this constituted negligence within the scope of the clerk's employment, for the result of which the master was liable. It was also held that the sale of the trikresol by the unregistered clerk was conclusive evidence of negligence under the Oregon Statute L. O. L. 4750, declaring that it shall be unlawful for any person to sell any drug, medicine, or chemical, or to dispense or compound any prescription of a medical practitioner, unless such person be a registered pharmacist, or a registered assistant pharmacist. Judgment for the plaintiff was affirmed. (*Goodwin vs. Rowe*, Oregon Supreme Court, 135 Pac. 171.)

### Recording Sale of Poisons—Construction of Statute.

The Delaware Statute, 24 Del. Laws, c. 140, 14, provides that before delivering to a customer strychnia, arsenic or corrosive sublimate or any poisonous compound, combination, or preparation thereof, "there shall be recorded in a book kept for the purpose the name of the article, the quantity delivered, the purpose for which it is alleged to be used, the date of delivery, the name and address of the purchaser, and the name of the dispenser." In the first case under the statute it appeared that the defendant had sold bichloride of mercury to a customer and entered the sale on a slip of paper showing the sales for the day, with other daily slips which were regularly put in an envelope kept in his safe. It was held that this was a violation of the statute; but in view of the defendant's evident desire to abide by the law, only the minimum fine was imposed. (*State vs. Hopkins* (Del.) 88 Atl. 473.)

### Sale of Cocaine—Proof.

On appeal from a conviction for an unlawful sale of cocaine it was held that if the sale was made upon the prescription of a physician, that fact lay particularly within the knowledge of the defendant, and consequently it devolved upon him, and not upon the State, to establish it. There was no direct evidence that the negro boy to whom the sale was made was not a physician or dentist; but the presumption was that he was neither, and therefore, if he was a physician or dentist, it devolved upon the defendant to prove it. There was a *prima facie* presumption that the person to whom the sale was made did not belong to the exceptional class of persons to whom the right to practice medicine or dentistry had been given; the presumption relieving the State from the necessity of proving the negative. (*Miller vs. State*, Mississippi Supreme Court, 63 So. 269.)

### Alteration of Contract After Delivery of Goods.

Action was brought upon a contract for the sale of a quantity of hair tonic to a drug store. The defence was alteration of the contract after delivery of the goods. The contract provided that the plaintiff agreed to contract with a certain advertising company for a certain number of lines of advertising, specifying the *Tribune* and *Journal* newspapers, which were published in the defendant's town, the advertising to be executed during a year following delivery of the goods. It further provided that the plaintiff agreed to take back at invoice price all goods remaining unsold in the hands of the purchaser "at the end of the Iowa advertising contract." The

defendant claimed that the word "Iowa" had been added to the contract after delivery, which was denied by the plaintiff. The jury found for the defendant. On appeal it was held that the alteration of the contract after delivery by the insertion of the word "Iowa" was material, since that made the rights of the parties depend, not upon the contract for advertising in the particular papers specified, but upon the termination of such Iowa advertising contracts as the plaintiff might have made. Judgment for the defendant was affirmed. (*Hessig-Ellis Drug Co. vs. Todd-Baker Drug Co.* Iowa Supreme Court, 143 N. W. 509.)

## DRUG LAWS AND RULINGS

**To Ban Hypodermics in Michigan.**—There is a National movement on foot to banish the hypodermic needle and syringe as a means of using cocaine and similar narcotic and habit-forming drugs. The use of such instruments may be regulated by Congress by a provision the Finance Committee is to add to some one of the opium bills now pending. At the next session of the Michigan Legislature an effort will be made not only to strictly prohibit the sale of heroin, morphine and similar narcotics, but also the hypodermic syringe, and Governor Ferris and other State officials, including several members of the State Health Board, are favorable to the plan and will indorse and work for such a bill.

**Pure Food and Drugs Act Defective.**—Officials of the U. S. Department of Agriculture declare that one of the serious limitations of the Pure Food and Drugs Act is that it permits the use of wood alcohol in remedies for external application. Under the definition of drug in the act, the authorities declare it is not possible for them to control cosmetics containing injurious drugs and remedies for obesity and leanness, or to prevent manufacturers from putting wood alcohol into external applications. Secretary Houston declares that additional authority should be given his department so that statements should be required of other drugs than those which must be specified now on the label.

**Dr. Dowling on Trail of Druggists.**—Dr. Oscar Dowling and the Louisiana State Board of Health have been investigating New Orleans drug stores, and declare that some druggists are not only filling prescriptions improperly, but are charging enormous prices. State Chemist George Taylor shows that some druggists charge 50 cents for a prescription that costs them three-fourths of a cent to fill. "This sort of thing is outrageous," said Dr. Dowling, "and these druggists should be exposed, and they will be just as soon as our investigations are completed. When Mr. Taylor has completed analyzing all the prescriptions that he has on hand the druggists who are found guilty of filling prescriptions otherwise than directed will be prosecuted under regulation No. 31 of the food and drug laws of Louisiana which became effective last July."

**Firm Name as a Trade Asset.**—The value of a long-established firm name as a trade asset is attested by the filing, coincidentally, of certificates with the county clerk at Grand Rapids, Mich., one dissolving an old corporation known as the Walter K. Schmidt Co., druggists, 306 Monroe avenue, the other being a notice of an amendment to the articles of association of another firm to the end that it may henceforth be known under the discarded name.

**Kansas City Drug Store Bars Under Fire.**—Commissioner of Police Reynolds, of Kansas City, has asked an opinion from the city counselor as to whether or not the police would be justified in going behind the prescription cases in drug stores to search for liquor. According to City Counselor Garner, under the statutes of 1909 no drug store is permitted to sell or give away liquor in any quantity under four gallons for any purpose except on prescription, and even then the liquor cannot be drunk on the premises, but that he did not think the police had the right of confiscation, as the offense is the sale.

**To Bar Circulars from Patent Medicines.**—The Government's right under the pure food law of 1906 to censor circulars enclosed in packages of medicine is to be passed upon by the Supreme Court. Officials of the Department of Agriculture claim that the public is being deceived every day

by exaggerated statements of the efficiency of nostrums to effect all kinds of marvelous cures. They claim the pure food law was intended to wipe out this evil, manufacturers on the other hand asserting that the pure food law merely authorizes the Government officials to regulate statements on the labels. In Omaha recently the Government seized 13 packages of patent medicines, each containing the statement on an enclosed circular: "We know it has cured and that it will cure tuberculosis," and a further statement that it was "effective as a preventative of pneumonia." The Federal District Court held the medicine misbranded under the pure food law. The manufacturer has appealed to the Supreme Court on the ground that the pure food law deals with labels and not with circulars, and, furthermore, that the law as interpreted by the Nebraska court is unconstitutional in so far as the court held that the law sought to give the Government a right to pass on opinions as to the curative effect of medicines.

**Boylan Measure to End Drug Habits.**—Senator Boylan, of New York City, has introduced in the Legislature at Albany a bill providing for the regulation of the sale of habit-forming drugs. The bill gives magistrates the right to commit victims of habit-forming drugs to hospitals for treatment. The Boylan bill in its provisions is similar to the law enacted last year, but applies to all habit-forming drugs. It provides that no druggist or pharmacist may fill out a prescription for any of these drugs except on a written order of a physician, and stringent regulations are prescribed, under which physicians can administer them. Hypodermic needles also cannot be sold except on written orders of physicians, and records must be kept of all prescriptions and sales of the drugs and the needles. The bill also provides that public officers having control of city or county hospitals must provide separate quarters for persons addicted to drugs who may be committed by magistrates. Punishment is provided in case drug patients violate the rules of the hospitals. Violation of the provisions of the measure by physicians, druggists or others whose business brings them in contact with drugs is made a misdemeanor.

**Tariff Rates on Small Packages of Chemicals.**—The provision in the new tariff law for the first time of the provision relating to the rate of duty on chemical and medicinal compounds put up in packages of 2½ pounds or less has called for new instructions from the Treasury Department, as follows: "Relative to the classification of ink, oil of sweet almond, oil of lemon, oil of orange, and other articles provided for by name in the Tariff act of Oct. 3, 1913, when contained in packages of less than 2½ pounds gross weight, in view of the specific provision in Paragraph 17 of the Tariff act that chemical and medicinal articles dutiable under the act, except soap, whether actually provided for or not, put up in individual packages of 2½ pounds or less, gross weight, shall be dutiable at a rate of not less than 20 per cent. ad valorem. It will be observed that this provision, which is a new one, does not impose a minimum rate of 20 per cent. ad valorem upon all dutiable articles imported in packages of 2½ pounds or less, but does impose such minimum rate upon articles which are chemical or medicinal compounds or combinations or articles similar thereto when imported in such packages. The department is accordingly of the opinion that all the articles provided for in Schedule A, whether by name or otherwise, except soap and sponges, are dutiable at not less than 20 per cent. ad valorem when imported in packages of less than 2½ pounds gross weight."

**Fighting Illegal Drug Sales in Los Angeles.**—A vigorous campaign against the illegal sale of drugs is being waged in Los Angeles, Cal., by the attorney for the State Board of Pharmacy, E. E. Leighton, who is assisted by State Inspector Jones. Several arrests have been made and prosecutions will follow. The arrests Attorney Leighton and Inspector Jones state, are only the beginning of a widespread campaign to stop the illegal traffic, and in order to relieve and cure the thousands of victims, a movement is now under way to secure a State building for patients to be treated. Plans are already in progress to induce the Legislature to appropriate \$20,000 for such an institution. "There are several thousand drug slaves now in California," said Inspector Jones. "In spite of increased difficulty in getting opiates the number of victims has increased. After the habit is once formed the slave will do almost anything to get the drug. Our aim is to force the price of these drugs so high, through con-

viction and jail sentences, that it will be unprofitable and too risky for anyone to try to sell them. We are after the peddlers." Attorney Leighton says he will ask for jail sentences for all persons prosecuted and convicted of peddling drugs. He also declares that the need for a home for those held in the grasp of the habit is imperative. He says a man should stay at least a year in a ward before being freed. When the drug victims are sent to the insane asylum they are usually there about two or three weeks and then escape, he asserts.

**Must Label Drugs Properly.**—The United States Supreme Court has declared for a broader enforcement of the pure food law regarding labeling of drugs and preparations containing poisons. It held that a headache remedy labeled "no acetanilide," but which contained acetphenetidin was misbranded.

**Regulation of Bichloride Sales Sought in Albany.**—The numerous deaths from poisoning by bichloride of mercury tablets have induced Senator Blauvelt to introduce a bill "Regulating the Sale of Bichloride of Mercury"—the essential feature of which is as follows: "It shall be unlawful for any person to sell any substance or compound known as bichloride of mercury, except upon the written prescription of a duly registered physician, which shall be retained by the person who dispenses the same, shall be filled but once, and of which no copy shall be taken by any person, and unless said substance or compound be in the form of cubes and colored green, so as to be readily distinguishable from non-poisonous tablets of similar appearance in common use. Any person who violates the provisions of this section shall be guilty of a misdemeanor." The act sets July 1 next as the date it would take effect.

**New Anti-Narcotic Law in Tennessee.**—The State anti-narcotic law, passed by the last Legislature, became effective Jan. 1. The law is very stringent in its provisions, limiting the amount of opium, coca leaves, or their derivatives a druggist may carry in stock to five ounces. Narcotics may not be sold except on the prescription of a physician. The Board of Narcotic Control has agreed that confirmed "dope fiends" can be issued certificates by physicians, allowing them a certain quantity of the drug for a stipulated period, as it is the purpose of the statute to prevent the spread of the drug habit rather than to effect a cure of those already addicted to it. The law in general prohibits the sale, giving away or otherwise disposing of opium, coca leaves or their derivatives except on physicians' prescriptions or by physicians, dentists or veterinary surgeons in the course of their professional duties. No druggist is allowed to keep more than five ounces on hand at one time. Druggists are required to keep a registry of all sales of the drugs. This registry is intended to be so complete that the drugs can be traced from wholesaler to consumer. These entries as well as physicians' prescriptions are to be kept two years. This is for the inspection of the food and drug department inspectors.

**Cocktails at the Prescription Counter.**—At the request of Prosecuting Attorney Sidener, the St. Louis police were instructed to watch for violations of the excise laws in drug stores. Sidener had been informed, he said, that in several drug stores anyone "on the inside" could obtain his favorite intoxicant by giving the soda youth the proper signal and that frequently customers were taken behind the prescription counter and served with cocktails and even champagne.

**Short Weight Campaign in Wisconsin.**—The campaign recently launched by the Wisconsin department of weights and measures against the alleged practice of some druggists, jewelers and dental dealers in using short weights has resulted in the confiscation of two large bottles full of defective weights from 16 drug stores about Wisconsin. These defective weights are said to be from 5 to 45 per cent. light. Chief Inspector Downing says that the practice of washing delicate weights with acid is responsible for much of the depreciation in weight. The State Department has equipped its field men with new sets of weights to test the measures.

#### GOVERNMENT WINS INSECTICIDE AND FUNGICIDE CASES.

WASHINGTON, D. C., Jan. 20.—The Government has recently secured judgments against a number of concerns for violations of the Insecticide Act. These

involve the misbranding or adulteration of insect powders, moth balls, roach exterminators and various other insecticides and fungicides shipped in interstate commerce. Following is a résumé of each case:

**"Persian Insect Powder."**—The Lewy Chemical Co., New York, N. Y., was charged with shipping a quantity of "Persian Insect Powder" alleged to be adulterated, in that it was not composed of the ground flower heads of the pyrethrum plant, but consisted for the most part of ground stems of the pyrethrum plant, the label indicating that the article was wholly Persian Insect Powder. Guilty; \$50 fine.

**"White Tar Moth Balls."**—A shipment of "White Tar Moth Balls" by the White Tar Co., of New York, N. Y., was held misbranded, in that the product did not possess the powers nor produce the effects claimed for it, and was manufactured in Belgium instead of New York, as stated on the label. \$10 fine.

**"Rat Bis-Kit Paste."**—The Rat Biscuit Co., Springfield, Ohio, was charged with the shipment of a quantity of "Rat Bis-kit Paste," alleged to be misbranded. Tests showed it to be ineffective for the extermination of roaches when used in the presence of other available food. Guilty; \$25 and costs.

**"Odell's Roach Powder."**—A quantity of an insecticide called "Odell's Roach Powder," alleged shipper J. Albert Odell, doing business under the name and style of the Pittsburgh Insect Exterminator Co., Pittsburgh, Pa., was shown by analysis to contain corn meal. Misbranding was charged. A plea of *nolo contendere* was entered; fine, \$25.

**"Conkey's Lice Liquid"**—"Conkey's Bug and Moth Killer."—A quantity of insecticide called "Conkey's Lice Liquid," shipped by G. E. Conkey Co., Cleveland, Ohio, was alleged to be misbranded for the reason that the contents of the packages were stated on the labels as two quarts, while examination of a specimen showed that the package contained less than two quarts. Misbranding of "Conkey's Bug and Moth Killer" was alleged because examination of specimens of the article showed that packages purporting to contain one quart contained less than one quart. Guilty; fine, \$10 and costs.

**"Dr. Hess Dip and Disinfectant."**—Misbranding of "Dr. Hess Dip and Disinfectant," shipped by G. Hess and J. L. Clark, of Ashland, Ohio, was charged for the reason that while the label on the package bore the statement "One Quart Dr. Hess Dip and Disinfectant," examination showed that the package contained less than one quart. \$10 and costs.

**"Orchard Brand Atomic Sulphur Fungicide."**—A quantity "Orchard Brand Atomic Sulphur Fungicide," shipped by the Thomsen Chemical Co., Baltimore, Md., was charged to be adulterated for the reason that its strength fell below the professed standard of strength under which it was sold. Guilty; fine, \$5.

**"Orchard Brand Arsenite Zinc."**—Adulteration and misbranding of a quantity of "Orchard Brand Arsenite Zinc," shipped by the Thomsen Chemical Co., Baltimore, Md., were charged for the reason that its strength fell below the professed standard of strength under which it was sold. Guilty; fine, \$5.

**"Orchard Brand Atomic Sulphur Combined with Arsenate of Lead."**—Adulteration and misbranding of a quantity of "Orchard Brand Atomic Sulphur Combined with Arsenate of Lead," shipped by the Thomsen Chemical Co., Baltimore, Md., was charged for the reason that its strength fell below the professed standard of strength under which it was sold. Guilty; fine, \$5.

**"Bordeaux Arsenate of Lead Mixture."**—Misbranding of "Bordeaux Arsenate of Lead Mixture," shipped by the Thomsen Chemical Co., Baltimore, Md., was charged for the reason that an examination of the keg containing the product showed it to contain 24 pounds of the article instead of 25, as indicated on the label. Misbranding was also alleged in that the article was an insecticide and fungicide other than Paris green or lead arsenate, and contained arsenic, and the total amount of the arsenic content was not stated on the label. Guilty; fine, \$5.

**"Bordeaux Mixture."**—Misbranding of "Bordeaux Mixture," shipped by the Thomsen Chemical Co., Baltimore, Md., was alleged for the reason (1) that the product was labeled "Bordeaux Mixture," when it was in fact a mixture of Bor-

deauz mixture and lead arsenate. (2) the contents of the package were stated on the label as 50 pounds when in fact they were considerably less, and (3) the article contained arsenic and the total amount of arsenic contained was not stated on the label. Guilty; fine, \$5.

**"Kerosene Oil Emulsion."**—Misbranding of "Kerosene Oil Emulsion," shipped by Benjamin Hammond, Fishkill-on-Hudson, N. Y., doing business under the name and style of Hammond's Paint & Slug Shot Works, was charged for the reason that analysis of a specimen showed that it consisted partially of water, which does not prevent, destroy, repel or mitigate insects, the name and percentage amount of such inert substance not being shown on the label. Guilty; the court suspending sentence.

**"Lime, Sulphur and Salt," or "Horicum."**—Misbranding was charged of "Lime, Sulphur and Salt" or "Horicum," shipped by Benjamin Hammond, Fishkill-on-Hudson, N. Y., doing business under the name and style of Hammond's Paint and Slug Shot Works. Analysis showed that it consisted partially of water and salt, which do not prevent, destroy, repel or mitigate insects or fungi, and the names and percentage amounts of such inert ingredients were not shown on the label. Guilty; sentence suspended.

**Lead Arsenate.**—Misbranding of a quantity of lead arsenate shipped by Fred L. Lavanburg, New York, was charged for the reason that the label indicated that the article contained 17.30 per cent. arsenic oxide, when as a matter of fact it contained only 12.35 per cent. arsenic oxid. Guilty; fine, \$25.

**Formaldehyde.**—Misbranding of a quantity of formaldehyde shipped by J. T. Baker Chemical Co., Phillipsburg, N. J., was charged for the reason that analysis of a specimen of the article showed that it consisted partially of inert substances (substances other than formaldehyde) which do not prevent, destroy, repel or mitigate insects or fungi. Plea of *non vult*; fine, \$25.

**"Sherwin-Williams Dry Powdered Arsenate of Lead."**—Misbranding of "Sherwin-Williams Dry Powdered Arsenate of Lead," shipped by the Sherwin-Williams Co., Newark, N. J., was charged for the reason that the label on the package bore the statement "One pound net weight," when as a matter of fact the net weight of each package was less than one pound. *Non vult*; fine, \$10.

**"French Bordeaux Mixture."**—A quantity of a certain fungicide designated "French Bordeaux Mixture," alleged to be shipped by Benjamin Hammond, Fishkill-on-Hudson, N. Y., doing business under the name and style of Hammond's Paint & Slug Shot Works, was charged to be adulterated and misbranded in that the label bore the statement: ". . . The preparation is the normal formula, with some 33 per cent. Copper Hydrate in the dried precipitate, . . ." while analysis of a specimen of the article showed it to contain only 18.84 per cent. of copper hydrate in the dried precipitate.

## Drugs and Chemicals at 1915 Exposition.

IN the Palace of Liberal Arts, at the Panama-Pacific International Exposition in San Francisco in 1915, will be found a remarkable exhibit of the equipment, processes and products of the chemical and pharmaceutical arts. In the official classification of exhibits this display constitutes Group 36, coming next to the sciences to which it is so closely allied, those of medicine and surgery, which make up the exhibit in Group 35. The chemical and pharmaceutical exhibit is divided into 22 classes, and from the most minute detail of laboratory equipment to demonstration of apparatus employed in treating waste matter from factories, by chemical or electrical methods, with a view to permitting their return to water courses or to the atmosphere, there will be presented a complete resumé of the progress made in the laboratories of the world, especially during the past 10 years.

An elaborate demonstration of the various biological products, such as bacterins, vaccines and tuberculin will comprise a class that will be of intense interest to a vast number of people. Equipment and processes used in the manufacture of vegetable essences; in the chemical treatment of animal substances and their products, soaps, candles, glycerin, etc., and the by-products of petroleum and coal-ter derivatives are to

occupy a prominent place. Apparatus and processes for the compression and liquefaction of gases, methods of drug adulteration and their detection, perfumes, cosmetics, essential oils and equipment and appliances will be displayed in detail.

The building in which the chemical and pharmaceutical exhibit will be housed is known as the Palace of Liberal Arts and is one of the eight main exhibition palaces of the exposition. It covers an area of 251,000 square feet. It was erected at a cost of \$344,180 and is a structure of great artistic beauty.

The Panama-Pacific International Exposition will be the largest and most wonderful enterprise of its kind. It will include among the buildings the vast Palace of Machinery, the largest frame structure ever built, covering 10 acres of ground; and the whole exposition represents an outlay of \$80,000,000, the greatest sum ever expended for such a purpose.

The Panama-Pacific International Exposition will enjoy the distinction of being the only maritime exposition ever held, fronting as the site does on the Bay of San Francisco and the Golden Gate, where the navies of the world will pass in review before the exposition grounds on the completion of their voyage through the canal. This is the event with which the exposition will open on Feb. 20, 1915, and for the greater part of a year will remain open to celebrate with all the world the building of the Panama Canal.

### Drug Trade Section Elects C. G. Euler.

C. G. Euler, of Antoine Chiris, was elected chairman of the Drug Trade Section of the New York Board of Trade and Transportation, at that organization's January meeting held at New York Drug and Chemical Club. Other officers elected are: Vice-chairman, Irving McKesson, of McKesson & Robbins; secretary, William F. McConnell, 203 Broadway; treasurer, William A. Hamann, of Roessler & Hasslacher Chemical Co. Dr. Henry C. Lovis, who retires as chairman after having served two consecutive terms in that office, was elected a director of the board as representative of the Drug Trade Section. The executive committee consists of Frank L. McCartney, of Sharp & Dohme; Charles A. Loring, Powers-Weightman-Rosengarten Co.; Frederick F. Watermeyer, Fritzsche Brothers; Paul H. Brickelmeyer, Henry Klein & Co., and Adolph Henning, of Lanman & Kemp. Various committee reports, mostly in the nature of recapitulations, were presented. Thomas F. Main, chairman of the legislative committee, reviewed the legislation of the past year.

### Dr. Ernst J. Lederle Succeeded by Dr. Goldwater.

Mayor Mitchel has appointed Dr. Sigis S. Goldwater to succeed Dr. Ernst J. Lederle as Commissioner of Health for New York City. Dr. Goldwater has been for some time superintendent of Mount Sinai Hospital. He was scheduled to take office February 1.

Dr. Goldwater graduated from the medical department of New York University. He entered Mount Sinai Hospital as an interne in 1903 and quickly worked his way to be superintendent. He is known as a good organizer. In 1913 he was vice-president of the New York Academy of Medicine.

### Mrs. Josephine B. Amend Dead.

Her mind disorganized from the strain of nursing her husband, the late Robert F. Amend, treasurer of Eimer & Amend, all through the illness which resulted in his death on Jan. 6, his widow, Mrs. Josephine B. Amend, recently threw herself from a window of her apartment on the 12th floor of the St. Urban, at Central Park West and 89th street. She was instantly killed.

### Daughter of William Jay Schieffelin Married.

Miss Margaret L. Schieffelin, daughter of Mr. and Mrs. William Jay Schieffelin, was recently married to Frederick Osborn, son of Mr. and Mrs. William Church Osborn, at the Madison Avenue Presbyterian Church. The ceremony was followed by a reception at the home of Mr. and Mrs. Schieffelin, No. 5 East 66th street.

### Ex-Riker-Hegeman Manager Buys Montclair Store.

John H. Hubley, until recently manager for Riker-Hegeman Co. at 42d street and Sixth avenue, has purchased the pharmacy of Robert Eastburn, 479 Bloomfield avenue, Montclair, N. J.

## FROM THE BUSINESS FIELD.

The Mashburn Drug Company, of Valdosta, Ga., gave their second annual 'Possum Supper to their customers in December. Quite a number of their guests who reached Valdosta in the early afternoon were given an automobile ride around the city. At 8:30 p.m. the guests were escorted to the New Valdes Hotel, where a sumptuous repast was spread, consisting of "possum and taters," birds, salads, etc. A. E. Dimmock, a Valdosta druggist, was toastmaster. Among those responding with toasts were Mayor Jno. T. Roberts, of Valdosta; Jno. Dickerson, of Jacksonville, who represents Eli Lilly & Co. in the State of Florida; C. L. Parks, representing H. K. Mulford & Co., Philadelphia, Pa.; Dr. E. P. Quillian, Clyattsville, Ga.; Dr. J. M. Hall, Douglass, Ga.; W. A. Bradley, representing the Cleveland Fruit Juice Co., Cleveland, Ohio; Senator W. L. Converse; Fred Bergstrom, of Bergstrom & Newberry; Dr. A. L. Johnston, and Russell Peeples, of Valdosta, Ga. Woods A. Caperton, sales manager for Eli Lilly & Co., Indianapolis, Ind., was a specially invited guest and he made the trip to Valdosta to attend this supper. He brought with him about 80 stereopticon views and two reels of moving picture films and immediately after the supper he gave those in attendance a "moving-picture trip" through the plant of Eli Lilly & Co. About 150 of the Mashburn Drug Co.'s customers were present and all expressed themselves as having had a most enjoyable time.

The National Co-operative Drug Company was organized recently at a meeting at the Planters Hotel in St. Louis, which was attended by about 65 St. Louis retail druggists. O. J. Cloughly, president of the St. Louis R.D.A., whose middle name is "work," presided. The company is to be a co-operative wholesale organization, and the retail druggists who are stockholders in it will buy their goods through the company on the plan of goods bought one week must be paid for the next. Monthly dividends will be paid to the members. The organization is patterned after the Cincinnati Drug Co., whose shares are said to earn 10 per cent. a month, and which has reached a \$500,000 business, it is said here. A like organization, the Chicago Wholesale Drug Co., is said here to have reached the \$1,000,000 mark in business. Philadelphia, Pittsburgh, Cleveland, Detroit and Washington have such wholesale organizations, the local druggists say, and now they are to have a company in St. Louis which will have branches in every city in the Union where there is no such organization. San Francisco druggists were reported to have \$25,000 waiting to invest in the St. Louis organization. One of the branches is to be in New York City. The leaders in the organization expect to have business moving within a few months. O. B. Thuma, of Cincinnati, is president. Subscriptions of stock amounting to \$75,000 were pledged at the Planters meeting.

The Lilly School for Salesmen held its 28th session at the home office of the company at Indianapolis holiday week. Morning and afternoon sessions were held with addresses by department heads and members of the scientific staff on practical subjects related to sales work. The many improvements and changes in manufacturing operations were explained by a trip through the laboratories. Papers on current topics pertaining to sales and detail work were also read and discussed. Dr. J. P. Buckley spoke on the use and technic of the dental preparations. Dr. John Uri Lloyd spoke briefly on Alcresta, the alkaloidal precipitant formerly known as Lloyd's Reagent. J. K. Lilly reviewed the history of the house of Lilly, appropriately illustrating his talk with lantern slides. On New Year's day the salesmen paid a visit to the Lilly biological farm at Greenfield to see the antitoxin and vaccine buildings, the purpose of which was explained by Dr. Rickards, assistant director. Various forms of entertainment included a theater party, smokers and a dinner at the University Club. The visiting salesmen entertained the home office department heads on one evening at the Indianapolis Chamber of Commerce, with a series of humorous sketches of topical interest.

Parke, Davis & Co., for their December posting class, brought to the home laboratories in Detroit a squad of 50 traveling representatives, from every section of the United

States and Canada. The "coaching" period was Dec. 8 to 19, inclusive. Four days were given to a study of the biological and research departments and their work, the remainder of the time being devoted to the general pharmaceutical line. Among the products receiving specific consideration were such leading specialties as the Phylacogens, Pituitrin, Coagulose and the improved Taka-Diastase. But the convention was not wholly given up to study and instruction. There was a theater party at one of the city's play-houses, an excursion to the company's biological farm at Rochester, where a dinner was served. Another dinner party was given at the Hotel Cadillac and included various department heads and others who delivered lectures before the "post-graduate" classes.

G. E. Dunbar, Lilly representative in New York City, led the firm's sales force for the year just ended in the sale of empty capsules, which entitles Mr. Dunbar to the distinction of being president of the Lilly Million Capsule Club for 1914. At a dinner at the University Club at Indianapolis, the first week in January, Mr. Dunbar was presented with a handsome gold watch-foh appropriately engraved as an insignia of his office. Membership in the Lilly Capsule Club is limited to those salesmen who sell over a million empty capsules a year to the retail trade, and a lapel watch chain and button is presented to each member. The club was started two years ago and its membership during that time has increased 80 per cent.

William C. Mason, a former watchman at the laboratories of Sharp & Dohme, manufacturing chemists, at Howard and Pratt streets, Baltimore, who pleaded guilty in the Criminal Court several weeks ago to stealing perfumery, hypodermic syringes, drugs and other articles to the value of perhaps \$100, has been sentenced to one year in the Maryland penitentiary. It is thought that Mason had confederates. Various arrests were made in Washington, Philadelphia and Baltimore at the time, but only in Washington was any considerable quantity of Sharp & Dohme's goods found. The Philadelphia raid disclosed thefts of considerable magnitude from other manufacturing drug houses.

The Wisconsin Pharmacal Co., at the 16th annual meeting held in Milwaukee recently, declared a dividend of 6 per cent. The report of E. G. Raeber, secretary and general manager, showed an exceptionally successful business during the past year. Officers were elected as follows: President, Christian Widule, Milwaukee; vice-president, Charles Pfeiffer, Plymouth; secretary, E. G. Raeber, Milwaukee; treasurer, Louis H. Kressin, Milwaukee. Directors, S. A. Eckstein, Milwaukee; Otto Hackendahl, Milwaukee; O. F. Menges, Madison; Charles Gieseler, Racine; A. W. Albers, Wausau. Stockholders of the company include druggists from all over Wisconsin. The plant and offices are located in Milwaukee.

The Eastern Drug Company's Employees' Mutual Benefit Association's 10th anniversary was observed Jan. 15 with a banquet at the American House, Boston, and nearly 100 members were seated at the tables. President W. R. Dolliver was toastmaster. The guests included William W. Cutler, secretary of the company; Councillor Daniel J. McDonald, Charles H. Perry and Fred S. Lovis, all of whom made brief after-dinner speeches. The following officers were elected: John Tomlinson, president; William E. Quinn, vice-president; Russell Spurr, secretary; John F. Miller, treasurer; P. A. O'Grady, James L. Dugan, G. M. Hutchinson, Herman Schatzl and Miss Verna McCarthy, executive committee.

The Mutual Pharmacal Co., of Syracuse, N. Y., at its annual meeting, Jan. 12, heard reports of prosperity during the year just closed and elected the following officers: President, William A. Curtin, M.D.; vice-president, George M. Price, M.D.; treasurer, Albert E. Larkin, Ph.B., M.D.; secretary, Thomas P. Farmer, M.D.; Executive Committee, Dr. Curtin, Dr. Price and Dr. Larkin. The Board of Directors consists of: William A. Curtin, M.D., Syracuse; William A. Groat, B.S., M.D., Syracuse; Albert E. Larkin, Ph.B., M.D., Syracuse; Thomas P. Farmer, M.D., Syracuse; George M. Price, M.D., Syracuse; Henry B. Doust, M.D., Syracuse; Henry J. Hunter, M.D., Iliou.

The United Pharmaceutical Co., a new corporation under the Massachusetts laws, has been formed by several officers of the United Drug Company. The capital is \$250,000. The plan of the company was outlined in President Liggett's report at the last annual convention of United Drug stock-

holders. Louis I. Stearns, a vice-president of the United, will be president of the new pharmaceutical company, for which a new building has been erected especially equipped for the manufacture of Kavalin pharmaceuticals. Other incorporators are Fred A. Rogers, James C. Brady, Byron M. Hyde, Louis K. Liggett and J. N. Stapp, Jr.

That St. Louis is becoming an exceedingly important drug center is indicated by the fact that in 1913 more than 40 concerns incorporated in that city, some of them being: The National Chemical & Mfg. Co., of Pennsylvania; R. L. B. Co., of Georgia; American Syrup and Preserving Co., of Kansas; The National Co., of Kansas City. Among new corporations formed during the St. Louis Match Co., \$500,000; National Tobacco Co., \$100,000; Eagle Brand, \$100,000; First Family Medicine Co., \$50,000; Dr. M. C. O'Connell, Medicine Co., \$100,000; St. Louis Pop. Co., \$100,000; Plastic Products Co., \$100,000; Kurusol Co., \$100,000; S. S. Co., \$100,000; Hammett Shoe Polish Co., \$50,000.

Parke, Davis & Co.'s Chicago branch sales representatives 51 in number, were in convention at the Sherman House Hotel, Baltimore, inclusive. Selling plans for the early months of 1914 were formulated. Lectures upon various phases of the company's elaborate research work—past, present and prospective—were listened to. Discussions of the newer scientific products, together with methods for their systematic detail among physicians, were entered into. Altogether it was one of the most profitable conventions, in all essential details ever conducted by this aggressive branch of Parke, Davis & Co.

Sharp & Dohme, manufacturing chemists at Howard and Pratt streets, Baltimore, have decided to build an addition to front about 75 feet on Pratt street and running back to Dover street, a distance of nearly 150 feet. The addition is to be of structural steel, with brick facing, and will conform in architectural appearance to the present buildings. The cost of the improvement is estimated at \$100,000. The new edifice will admit of a better arrangement of various departments and facilitate operations to a marked degree, also making possible an increase in the output of goods.

The Parker-Blake Co., of New Orleans, have purchased three pieces of property adjoining their big building at Fulton and Common streets, and the buildings thereon will be razed to make room for an addition of steel, concrete and brick to the present Parker-Blake structure. Arthur D. Parker is at the head of the company, and the house, which is one of the largest and most active in the city, has built up an enormous business. It is hinted that many thousands of dollars will be expended to make the plant the finest wholesale drug establishment in the entire South.

The Louis K. Liggett Co., of Boston and New England, announced on Jan. 1 over the signature of Mr. Liggett as president, a policy of free prescriptions for the worthy poor, as follows: "Our present to the people of Boston this year is: Free prescriptions to the worthy poor. Any reputable physician is authorized to send any worthy poor person to our stores for prescriptions, and we agree to fill them without cost. Nothing is required but a note from the physician, on his professional card, or on his prescription blank, that the patient is entitled to the assistance."

C. R. Kossat and Mrs. Henrietta Kossat, proprietors of the Kossat pharmacy in Milwaukee, have been made the defendants in a suit for \$100,000 brought in the Circuit Court by Albert B. Pregler, who claims that his wife died on May 24, 1913, as the result of her having become addicted to the use of laudanum and narcotics, alleged to have been sold to her by the Kossat pharmacy. Pregler claims that his wife became a slave to the drug habit after having purchased narcotics from the drug store.

The Louis K. Liggett Co. has taken a lease of a store in a new building at the corner of Brighton and Harvard avenues, Albany, Mass., and the new store will be one of the most attractive of the Liggett chain in the vicinity of Boston. The new Elizabeth store at Gratiot and Farnier streets, Detroit, is the 10th in the chain of Liggett stores in this country. It is under the management of James H. Cronin, and in some respects is the finest drug store in Detroit.

The Nyal Drug Co., New York and London Drug Co., a subsidiary of the firm of Frederick Stearns & Co., of Detroit, Mich., has been incorporated under the laws of Michigan

with a capitalization of \$2,500,000. Of the stock it is understood that \$1,675,000 is retained by the Stearns company, while the remainder will be offered for sale. According to the newspaper dispatch citing the incorporation of the company, capital stock amounting to \$1,750,000 has already been paid in.

The Eley-Robertson-Barlow Drug Co., wholesale druggists at Birmingham, Ala., has been purchased by the Collier Drug Co., which is a part of the Avery Drug Co. The newly purchased house will be run strictly as a wholesale business. It occupies a building newly built especially for it at 2205 Second avenue, four stories in height and covering a floor space of 25x140 feet. The Collier company is one of the old drug firms of Birmingham, having been in business for 27 years.

The Dravosburg Drug Co. has been formed at Dravosburg, Pa., a suburb of Pittsburgh, with a capital stock of \$5000. The incorporators are R. L. Patten, of McKeesport, Pa.; F. P. Sunday, J. W. Jones, G. W. Smith and E. A. Martin, all residents of Dravosburg. The company plans to operate the largest retail drug store in that place, which is the headquarters of a large boat-building business.

The A. Spiegel Co., operating three pharmacies in Milwaukee, has leased the building at 126-128 Grand avenue, now occupied by the Philip Gross Hardware Co., and after spending \$40,000 in remodeling the structure, will move its main store from the Plankinton block to the newly acquired building. The Plankinton block will be razed next Spring to make room for a new hotel, theater and office building.

A. F. Menges, prominent druggist of Madison, Wis., will erect a three-story building at Park street and University avenue, in order to give the Menges pharmacy on University avenue more room. The second and third floors will be divided into offices and apartments. It is expected the structure will be ready for occupancy next Fall.

The J. S. Merrell Drug Co. annual dinner for sales force and department heads was held Jan. 3 at the Hotel Jefferson, St. Louis, with George Merrell as toastmaster. The dinner was the concluding feature of a two days' session of the company's salesmen, and C. P. Walbridge, president of the Merrell company, made one of the principal talks of the evening.

A New Terminal Drug Store has been opened at the Michigan Central station at Detroit, Mich., as a concession of the Union News Co., of Chicago. There will be day and night service with a small room set aside as a "first aid room," and the traveler becoming ill suddenly will be assured of proper treatment.

M. Cora Dow, of Cincinnati, will open her 11th drug store in that city at the northeast corner of 6th and Main streets in the new Gwynne Vanderbilt building, April 1. Negotiations for a 10-year lease have just been concluded. The soda-fountain equipment will be the most expensive in Cincinnati.

The Apothecary Shop, the newest and most up-to-date drug store in Elizabeth City, N. C., was thrown open to the public for the first time in late December. Thousands of souvenirs were given away, and free ice cream was distributed.

Noyes Bros. & Cutler, of St. Paul, held their annual banquet for traveling men and heads of departments on Dec. 29, the affair being truly a "get together" festival. Winthrop G. Noyes presided, and 75 were present.

The Southern Drug Co. is a new manufacturer and distributor of drugs which has been organized at Jackson, Tenn., by T. F. Glass, Carl Williams, J. H. R. J. and F. W. Larwill.

The Gould Witch Hazel Company, of Boston, has been incorporated, with a capital of \$500,000, by Michael J. McLaughlin, Ernest J. Sanderson and William E. Ludden.

## RECENT FIRES.

- At Vienna, S. D., Sasse's drug store; destroyed.
- At Chaffee, Mo., Underwood & Martenson's drug store; total.
- At Seattle, Wash., Stewart & Holmes drug Co., drug warehouse purchased from Pacific Drug Co. about eight months ago; loss about \$37,000; insurance \$25,000.
- At Green Cove Springs, Fla., Consolidated Drug Co.; loss \$4000; partially insured.
- At Monticello, Mo., G. B. Knight drug store; J. B. Marchand drug store; loss almost total.
- At Snyder, Tex., Gravum Drug Co.; loss heavy.
- At Lake Village, Ark., R. N. Henry drug store; destroyed.
- At Thorsbury, Ala., A. K. Horn, druggist; loss heavy.

### Building a Demand for Pyorrhoides.

In introducing the Dentinol and Pyorrhoides method of treating pyorrhoea (Riggs' Disease), the Dentinol & Pyorrhoides Company of New York has sought the support of the dentists and physicians by methods which bear the most careful analysis of the purely "ethical" professional man, and yet have proved highly effective in familiarizing the professions with these products. Pyorrhoea until recently was considered a disease almost if not quite impossible, to overcome, but during the past seven years it has been demonstrated that it yields to the Dentinol and Pyorrhoides method. It is claimed by the manufacturers that Pyorrhoides so stimulates the blood circulation in the gum tissues that softness and bleeding are overcome; further it is asserted that Pyorrhoides removes the daily deposits that form tartar, and effectively checks the growth of bacteria, which are responsible for caries of the teeth.

The illustration reproduced herewith is from a booklet—"The Practical Method of Successfully Treating Pyorrhoea"—recently mailed by the Dentinol & Pyorrhoides Co. to all registered dentists in this country. Another interesting booklet just issued is "Oral Hygiene in Modern Therapy," which is filled with citations from medical authorities who trace a large proportion of diseases to oral sepsis, and emphasize the value of Pyorrhoides as a dependable prophylactic in febrile affections. This distribution of high-class literature to dentists and physicians is but a part of the publicity. The distinguishing feature is the Pyorrhoides Clinic, a permanent institution maintained at the New York headquarters of the company where dentists and physicians witness free of charge actual demonstrations of the efficacy of the Dentinol and Pyorrhoides Method, and receive instruction and assistance in the treatment and prevention of pyorrhoea and in general oral prophylaxis. A research department for bacteriological and other investigation, and a correspondence department for practitioners unable to visit the clinic in person are two important features of this work.

"Dollars for Druggists" is the title of a booklet recently mailed to dealers throughout the country. Aside from the information it gives relative to Pyorrhoides and its uses, it is also replete with sales suggestions. Druggists are requested to read the advertisement of the Dentinol & Pyorrhoides Co. in this issue, and send for a copy of "Dollars for Druggists" and the sales helps offered to make Pyorrhoides a business builder.

### Saving, Sanitation, Service.

"Puffer Sealed Fountain" is the scientific reply of a leading fountain manufacturer to the demands of State and civic authorities for absolutely sanitary conditions. The Puffer sealed fountain is built to meet hard usage, to do away with expensive plumbing bills, to banish dirt, dust and vermin. They are sealed at the factory by expert workmen, and are shipped all assembled without a single connection either for sewer or water to be made on the inside of the fountain. Every connection is brought to the outside, and yet every pipe or connection on the inside can be reached readily should occasion require. Plumbers invariably leave openings where dirt and insects may enter—the Puffer factory workmen seal up every connection. The result is real cleanliness, a reduction in plumber's bills, a big cut in the ice consumption, and a higher degree of efficiency in cooling due to the non-loss of the refrigeration agent by evaporation. The Puffer sealed fountain has no wood to decay or swell—marble, slate, metal and cork are the only materials used. Sealed fountains can be obtained in any size from 6 feet up, but where the fountain is over 12 feet it will be shipped in sealed sections, the entire foun-

tain being assembled at the factory and shipped *ready to use*. A new catalogue showing full-page pictures from photographs of the many styles of sealed fountains made by the Puffer company, together with complete details as to their tested economy, efficiency and profit-producing possibilities—as well as the terms upon which they are sold—will be sent to anyone mentioning the ERA.

### Obviates Poisoning by Bichloride of Mercury.

Brief mention was made in the January ERA of the new Antiseptic Leaves prepared by the Wm. S. Merrell Chemical Co., as a substitute for bichloride of mercury tablets. With the increasing number of deaths, due to careless handling and taking such tablets in mistake for harmless medicines, there has been launched a National movement toward establishing a legal shape and color for such bichloride tablets, their packing in special poison containers, etc. The Merrell company have solved the problem in a new manner by the invention of their Antiseptic Leaves, made in the shape of small blotters, which can be handled with safety, and which can never be mistaken for anything else. One full leaf yields 7.3 gr. of corrosive sublimate when immersed for two minutes in 16 ounces of water (a 1 : 1000 solution), and the leaves are scored in quarters for convenience, each quarter yielding 1.82 gr. when immersed in 4 ounces of water. The blotters are printed in red and bear a poison warning in letters an inch in depth. Another feature is that the accidental swallowing of a blotter, or even a small piece of it, is impossible, since the immediate action would be a rapidly enlarged tongue which would prevent the passage of the poison to the stomach. Medical authorities who have tested these new leaves agree that they offer a really safe method for dispensing bichloride of mercury.

### 26,791,000 Reasons Why Resinol Sells.

A \$300,000 sales campaign through 11 National magazines, 14 National weeklies, and advertisements three times a week in 506 daily newspapers, thus reaching 26,791,000 readers, is one of the cogent reasons advanced by the Resinol Chemical Co. to the druggists for the quick-selling powers of Resinol Ointment. This preparation is claimed to be the biggest-selling ointment advertised for skin troubles, and the advertisements have created a National demand of which the druggist takes advantage. In addition to the magazine and newspaper publicity the company is sending out a quarter million samples a year, in response to individual requests; has just mailed 300,000 booklets to druggists' lists; and advertises regularly in a score of drug and medical journals. A free Resinol moving picture slide with the druggist's name and address is another publicity feature. For further details as to sales plans, discounts, etc., see the company's advertisement elsewhere.

### Maplewood Mills Cotton Sold Direct.

In the interest of the retail druggist and the trade, and for the promotion of a still greater business in absorbent cotton, the Maplewood Mills of Fall River, Mass., have inaugurated a new sales policy—the entire production of these mills will now be sold direct to the dealer, thus eliminating the broker. Based on last year's business, this will mean a saving of more than \$19,000 to the retailers of the country, and while the Maplewood Mills will receive no more in cash for their output, they will be the gainers in saving of time, better credit arrangements, and fewer complaints, blunders and misunderstandings. Dealers who made a similar arrangement with the mills last year doubled their business in absorbent cotton and made a proportionately greater profit. Why not write the mills for prices, and then compare quality for quality and price for price with the goods you have been handling?

### Larger Net Profits from Ice Cream.

The Chocolate Cooler Co. is calling the attention of readers of the ERA to the cabinet system of keeping ice cream, claiming that the cabinet saves about two-thirds of the expense for ice, salt and labor, at the same time keeping the cream in better condition and with less waste. If you have never used their cabinet system a request to the Chocolate Cooler Co. will bring full information with details as to what others are saving by their use, as well as a catalogue and names of jobbers handling these cabinets. For the owners of cabinets who are looking for the most sanitary arrangement of ice-cream storage this company is putting out a line of porcelain jar ice-cream.

containers which will fit any style of cabinet, thus doing away with cans which are subject to rust and to wear, while porcelain can be kept spotlessly clean and absolutely sanitary at all times.

#### A Sideline That Pulls Trade.

Nearly everyone has a favorite magazine or periodical which he buys every week or every month—and some have half a dozen. In every town someone gets this business. A satisfied magazine buyer is always a customer for other lines, and, if he is satisfied with his treatment at a drug store magazine stand, will naturally turn to the cigar, confectionery, sundry or drug departments when in need of such articles. Magazines occupy but little space, require but small investment and can be handled with little expense or risk—yet they offer an excellent profit and they do draw trade to the store. Full particulars and information on how to open and run a periodical and magazine department will be sent at once by the American News Co. Use the coupon in their advertisement in this issue or mention the ERA.

#### Dustproof Seidlitz Powders.

The Dusal Chemical Co., Inc., is calling the attention of druggists to a line of U.S.P. Dust-Proof Seidlitz Powders which are packed in 12s, 10s, 8s, 1s and in bulk in a handsome four-color carton. Every powder is sealed in a dust- and moisture-proof wrapper, and the weight is on every wrapper and the number of powders on every package, thus conforming to every State weight and measure law. The Dusal company also manufactures a full line of effervescent salts, lithia, soda mint, soda mint and pepsin, soda mint and charcoal, buyer's label goods and private formulas. A postal card mentioning the company's advertisement in the ERA, and mentioning the quantities usually purchased, will bring interesting quotations to any druggist.

#### New Display Stand for Druggists.

A new idea in counter display has been originated by the B. F. Goodrich Co. for the development of sales in rubber sundries, water bottles, fountain syringes, etc. The device is a patented rack, 27½ inches high and 15 inches wide, finished in colors, and it holds boxes of various shapes and sizes, thus permitting frequent and easy changes. This form of display has the added advantage that the article on display with its box may be lifted out instantly to enable the customer to make a still closer examination. Many druggists have already availed themselves of the offer of the Goodrich company to send one of these new racks with each dozen of its red or chocolate No. 2 seamless molded water bottles, the "Yankee," "Won-peace" or "B.F.G."

#### Higher-Potency Taka-Diastase.

Parke, Davis & Co. announce that after years of experimentation they have doubled the strength of Taka-Diastase, the diastasic ferment the firm first marketed in 1895. During the 19 years which have elapsed the product has become recognized by the medical profession as an efficient agent in the treatment of amylicaceous dyspepsia, and the originators have constantly sought to improve the product. Once before its value was enhanced 50 per cent., and now by improvements in the methods of manufacture Parke, Davis & Co. have again increased its liquefying powers to such an extent that the improved Taka-Diastase "will liquefy 300 times its weight of starch in 10 minutes under proper conditions." Despite this improved efficiency the price has not been advanced.

#### Big Profits in Own-Name Specialties.

Through an advertisement in the ERA of D. C. Leo & Co., Des Moines, Iowa, a Virginia firm was led to give a sample order for a gross of cold tablets under their own label at a cost of \$9. From this sample order business so increased that from Jan., 1909, to July, 1913, a total of 1400 boxes of this preparation was sold with resulting profits of nearly \$3000 upon a total investment in goods of less than \$60. And this was only one Leo item. To the druggist who is interested in building up the most profitable type of business by featuring "own name" goods there is food for reflection in the D. C. Leo advertisement in this issue and that company will gladly send details to any reader of the ERA who mentions this journal.

#### Calendars Customers Consult.

Publicity which pleases customers, keeps the druggist's name before them at all times, with mutual benefits to both donor and recipient, is publicity that pays. In this class of publicity hundreds of druggists place the educational and weather-chart calendars issued by the Grand Rapids Stationery Co., of Grand Rapids, Mich., and the demand for these helps to business is increasing every year. A cut of a sample page of one of these calendars appears in the advertisement of this company elsewhere in this issue, and full details as to the cost, etc., will be given gladly by the company to anyone mentioning the ERA.

#### Wall Paper for 1914.

The new styles of wall paper for this season are very attractive and the manufacturers are introducing some specialties which add very much to the finish of rooms. The "Wall-Cut" Frieze is one of these that should be represented in every wall-paper line. They are refined in coloring and design, and recognized as highest quality of embossed cut-out decoration. These goods are manufactured by the Wallcut Bros. Co., 141-155 East 25th street, New York, who will be pleased to send samples and prices to any dealer who is interested if he will mention the ERA.

#### An Addition to the Sozo Family.

Hall & Ruckel, Inc., established since 1846, has purchased from the Tokalon Company, Inc., the oxygen deodorant known as "Sozo." The transaction included the trade-mark "Sozo" applying to all toilet preparations, and "Sozo" will now join the extensively known Sozo Shaving Cream, Talcum, Poudre de Riz, and the other Sozo preparations manufactured by Hall & Ruckel, together with their time-honored Sozodont dental specialties. This Sozo line is artistically packaged, and the quality of the goods themselves is in keeping with the Hall & Ruckel standards.

#### New-Skin Offer Expires This Month.

The "Free Goods Offer" on New-Skin, which was extended to Feb. 28, will positively be withdrawn on that date, but there is still time for druggists who have not taken advantage of the offer to secure the \$1 worth of free goods with the special \$4 assortment ordered through their jobber, as prescribed in the conditions. New-Skin is a ready seller and a "repeater," and this opportunity is worth investigating.

#### Barr Heads Westchester County Ph.A.

At the annual meeting of the Westchester County Pharmaceutical Association, held at the Sanford Inn, Yonkers, Jan. 14, John H. Barr, of Irvinton, was elected president, and J. B. Sackett, of Tarrytown, was re-elected secretary. Twenty-five members were present.

#### 100 Rats a Month

is a record for one trap in one establishment, but that is the number caught in a livery stable in Scranton, Pa., in one of the traps invented by H. D. Swarts, of that city.

#### AMONG THE ASSOCIATIONS.

The Philadelphia Association of Retail Druggists at their annual meeting Jan. 2 decided to inaugurate an advertising campaign, the work to be done through a special committee. The following officers were elected: President, A. G. Keller; 1st vice-president, William Carpenter; 2d vice-president, A. J. Frankberger; 3d vice-president, M. L. Lewis; secretary, J. H. Barlow; treasurer, George Fehr. R. W. White was chosen chairman of the executive committee of 14 members.

The January meeting of the Pittsburgh Branch, A.Ph.A., was held at the Pittsburgh College of Pharmacy, with the following programme: "Wild Flowers of Nearby Counties," by Attorney George B. Parker (illustrated with hand-colored slides); election of officers; report on proposed changes in the U.S.P., by Dr. Louis Saalbach.

More than 200 children of members of the Women's Club of the Allied Drug Trades of Chicago danced at a special party in their honor at the Hotel Sherman Jan. 2. The hostesses were Mesdames C. E. Douglas, Gustav Frank, H. C. McCracken, John Sutcliff, Fred Korte, George Lenx, F. C. Starr, A. E. Zuber and Miss Lillian Ryan.

# PATENTS AND TRADE MARKS

**FILTERING APPARATUS FOR LABORATORIES.**

**P**ERCY A. BOECK, assignor to the Norton Company, Worcester, Mass., is the inventor of the filtering apparatus shown in the accompanying illustration (Patent No. 1,081,574). The device comprises a funnel, an elastic band covering the rim and extending into the funnel, and a porous

1,081,574

cone conforming in shape to the interior of the funnel located within the same and wholly below the top thereof, and supported by the said elastic band.

**Dropping Bottle.**

This device, designed by a German inventor, Ludwig Kaufmann, assignor to Warmbrunn, Quilitz & Co., Apparate Bauanstalt, Berlin, Germany (Patent No. 1,082,531), consists of a dropping bottle provided with a discharge pipe and with a bent air pipe extending deep into the interior of the bottle, the air pipe being bent toward the wall opposite to the mouth of the discharge pipe and then in the opposite direction and terminating adjacent to the bottom of the bottle, and adapted to act as a siphon. As may be noted in the drawing, the inner end of the discharge pipe is bent in the form of a U and has a chamber formed in its inner leg to retain the liquid to form a seal. The air pipe is provided at a point above its inner end with a hole, said hole being too small to prevent the siphon action, but of sufficient area to allow the entering air to pass into the bottle without passing through the liquid.

**Cork Extractor.**

This novelty is the combination of a bottle having its neck formed with an annular depression, and a cork for the bottle having its outer face provided with an eye, of wire ring arranged within the depression of the bottle neck and having an outturned lip, a rod having one of its ends pivotally secured

1,084,422

to the lip of the ring to permit of the swinging of the rod upon the bottle neck, said rod having its free end formed with a V-shaped depression. The extractor member is adapted to be fulcrumed within the depression of the rod, while one of its ends is provided with a lip which is to be inserted within the eye provided upon the cork. The inventor is Joseph Gebhart, Zion City, Ill. (Patent No. 1,084,422).

**Prescription File.**

This prescription file, the invention of William F. Beard, assignor to M. J. Bowdish, C. A. White and J. S. Whittington,

Wichita, Kan. (Patent No. 1,084,527), presents some novel features. The specifications cover the combination with a drawer, a plurality of catches arranged in alinement longitudinally of the drawer, each of the catches being wholly within the plane of the drawer and having a downturned flange

1,084,527

terminally formed, with a downwardly opening notch, a rod designed to engage said notches and freely movable downwardly and vertically of the drawer, the rod being held within the notches solely by the upward pressure of the articles in the drawer.

**PATENTS.**

Granted December 16, 1913.

- 1,081,527—Lemuel S. Penn, Dayton, Ohio. Cosmetic.
- 1,081,564—Jacob Pfeiffer, Akron, Ohio, assignor to Miller Rubber Company. Nipple for nursing bottles.
- 1,081,491—Clarence Frederic Davy and Thomas Richardson, Fitzroy, New Zealand. Non-refillable bottle.
- 1,081,508—Albert K. Keller, Philadelphia, Pa., assignor to American Cork and Seal Company. Bottle-seal-assembling machine.
- 1,081,509—Friedrich Kuhles, Maywood, N. J. Non-refillable bottle.
- 1,081,555—Jared H. Plaisted, Melrose, Mass. Non-refillable bottle.
- 1,081,555—Henry M. Russell, Jr., Wheeling, W. Va. Closure for collapsible tubes and the like.
- 1,081,556—Fred E. Sanders, Chelsea, Mass. Bottle closure.
- 1,081,573—Percy Albert Boeck, Worcester, Mass. Porous article.
- 1,081,574—Percy Albert Boeck, Worcester, Mass. Filtering apparatus for laboratory use.
- 1,081,592, 1,081,897—Paul Ehrlich and Alfred Bertheim, Frankfurt-on-the-Main, Germany, assignors to Farbwerke vorm. Meister Lucius & Bruning, Höchst-on-the-Main, Germany. Medicinal preparation.
- 1,081,617—William John Knox, New York, N. Y., assignor to Knox Terpezone Company of America. Gaseous ozonids and their production.
- 1,081,777—Oscar B. Schellberg, New York, N. Y. Cork retainer.
- 1,081,785—Willard G. Steadman, Jr., Southington, Conn. Tooth-powder container.
- 1,081,856—William N. Moore, Pollard, Ala. Liquid sealed jar.
- 1,081,883—Warren E. Bailey, Smith River, Cal. Non-refillable bottle.
- 1,081,896—Harlan E. Eckler, Elyria, Ohio. Cuticle clipper.
- 1,081,897—Paul Ehrlich and Alfred Bertheim, Frankfurt-on-the-Main. Assignors to Farbwerke vorm. Meister Lucius & Bruning, Höchst-on-the-Main, Germany. Medicinal preparation.
- 1,081,906—Lules F. Hancock and Carroll E. Fisk, San Francisco, Cal. Label-moistening machine.
- 1,081,931—Anders Anderson Rosengren, Malmo, Sweden. Machine for sealing bottles.
- 1,081,939—Paul Scholz, Bergen, Norway. Opening device for cans, boxes or the like.

Granted December 23, 1913.

- 1,081,959—Nathan Grunstein, assignor to Chemische Fabrik Griesheim-Elektron, Frankfurt-on-the-Main, Germany. Manufacture of acetic acid.
- 1,082,020—John W. Freeman, Aleene, Ark., assignor of one-half to Squire C. Hodges, Arden, Ark. Non-refillable bottle.
- 1,082,041—Nathaniel Emmons Paine, West Newton, Mass. Tooth brush.
- 1,082,081—Francis E. Hufnail, Minneapolis, Minn. Process of making a medicinal composition.
- 1,082,116—William C. Arsem, Schenectady, N. Y., assignor to General Electric Company, a corporation of New York. Vulcanized glycerol resin.
- 1,082,125—John J. Kime, Lagrange, Ind. Insert-valve for bottle necks.
- 1,082,150—George J. Kelley, Attleboro, Mass. Atomizer.
- 1,082,189—Amos Calleson, assignor to Benjamin Adriance, Brooklyn, N. Y. Feed mechanism for bottle sealing.
- 1,082,301—Thomas Lynton Briggs and Henry F. Merriam, assignors to General Chemical Company, New York, N. Y. Apparatus for the manufacture of fuming sulphuric acid or oleum.
- 1,082,304—Henry J. Cary-Curr, assignor to E. H. Sargent & Co., Chicago, Ill. Extraction apparatus.
- 1,082,407—Guy P. Combs and Patrick J. Burke, Rochester, N. Y. Non-refillable bottle.

1,082,424—Alfred Hoffman, Brooklyn, N. Y., assignor, by direct and mesne assignments, to Alco Deo Company. Chemical process.  
1,082,482—Charles K. Teter and David A. Davies, assignor to The Teter Manufacturing Company, Cleveland, Ohio. Apparatus for heating nitrous-oxide administering appliances.

Granted December 30, 1913.

1,082,502—James J. Clifford, Green Island, N. Y. Demijohn washer.  
1,082,509—Emil Fischer, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. High molecular fatty acid containing arsenic.  
1,082,510—Emil Fischer, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Pharmaceutical compound.  
1,082,528—Matthew Albert Hunter, Troy, N. Y. Low-freezing liquid.  
1,082,529—James Simpson Island, Toronto, Ontario, Canada. Apparatus for forming oxides of nitrogen.  
1,082,530—Felix Kaufner, Bruckl, Austria-Hungary, and August Klages, Salbke, Germany. Apparatus for manufacturing mercury bichloride.  
1,082,531—Ludwig Kaufmann, assignor to Warmbrunn, Quilitz & Co., Berlin, Germany. Dropping bottle.  
1,082,555—Arthur Lee Ridley, Searsport, Me. Cork extractor.  
1,082,573—William Stone, assignor to E. I. du Pont de Nemours Powder Company, Wilmington, Del. Dissolved carbohydrate esters and process of making the same.  
1,082,574—Max Weiler, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Manufacture and production of oxycarboxydiarylcarbinols.  
1,082,602—Ernst Twitchell, Wyoming, Ohio. Process of manufacturing fatty acids and glycerin.  
1,082,681—William Edward Danner, Perth, Ontario, Canada. Tooth powder.  
1,082,777—John Henry Stringham, assignor to American Combustion Company, Jersey City, N. J. Nebulizer of liquids.  
1,082,780—Albrecht Thiele, assignor to Chemische Fabrik auf Actien (vorm. F. Schering), Berlin, Germany. Pharmaceutical compounds.  
1,082,808—Norman Hubbard, Elizabeth, N. J. Bottle holder.  
1,083,107—David B. Landers, Hollywood, Cal. Funnel.  
1,083,110—William H. Mannon, Ouray, Ohio. Non-refillable bottle.  
1,083,183—Theophil Bednarowicz, South Bend, Ind. Bottle filler.  
1,083,184—Walter E. Blackstock, Astoria, Ore. Non-refillable bottle.  
1,083,232—Roger William Wallace and Eugene Wassmer, London, England. Process for the production of ammonia.

Granted January 6, 1914.

1,083,327—Edwin S. Hopson, Russellville, Ky. Container stopper.  
1,083,355—Thomas A. Edison, Llewellyn Park, West Orange, N. J. Art of forming chemical compounds.  
1,083,389—James R. Dunn, Baltimore, Md. Bottle closure.  
1,083,518—Wilhelm Bauer and Alfred Herre and Rudolf Mayer, assignors to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Halogenated 2,3-Naphthatisins.  
1,083,529—Carl Fellerer, Freising, Germany. Atomizer.  
1,083,501—John C. Kising, Stockton, Cal., assignor of one-fourth to Arthur R. Kirkland, Stockton, Cal., and one-fourth to John L. Martin, Los Angeles, Cal. Toilet disinfectant.  
1,083,585—Carl Bosch and Alwin Mittasch, assignors to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Catalytic production of ammonia.  
1,083,589—John E. Buchner, Coventry, R. I. Process of producing formates and the like.  
1,083,698—Nils Nilson, Worcester, Mass. Non-refillable bottle.  
1,083,703—Fritz Rothe, Dessau, Anhalt, Germany. Method of producing ammonia and compounds of ammonia.  
1,083,768—William F. Stone, Woodbury, N. J., assignor to Star Seal Company. Bottle-sealing machine.  
1,083,802—John H. Castona, assignor to Castona Improved Process Co., Gulfport, Miss. Turpentine and resin extractor.  
1,083,849—Raymond Moloney, New York, N. Y. Stopper cap.  
1,083,873—Frederick William Burch, Pueblo, Col. Water bag.  
1,083,888—Albert Pietzsch and Gustav Adolph, Hoellriegelskreuth, near Munich, Germany. Process of producing hydrogen peroxide.

Granted January 13, 1914.

1,083,934—Eduard Kobner and Paul Fritzscheing, assignors to C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Hemoglobinometer.  
1,083,953—Maurice Switzer, New York, N. Y., and Joseph D. Lacroix, Baltimore, Md., assignors, by direct and mesne assignments, of one-half to The Wilson Distilling Company, New York, N. Y., and one-half to Herman Ellis, New York. Non-refillable bottle.  
1,084,243—Willis G. Young, assignor to Western Engineering Co., Chicago, Ill. Bottle holder.  
1,084,422—Joseph Gebhart, Zion City, Ill. Cork extractor.  
1,084,427—George A. Hanks, Yonkers, N. Y. Nursing bottle holder.  
1,084,436—Henry Howard, Boston, Mass. Process of making solid sodium bisulphite.  
1,084,457—Charles F. Madden, Beachmont, Mass. Bottle holder.  
1,084,510—Philip Edward Warren, New York, N. Y. Non-refillable bottle.  
1,084,527—William F. Beaird, assignor to M. J. Bowdish, C. A. White, and J. S. Whittington, Wichita, Kan. Prescription file.  
1,084,537—Walter I. Clark, Fort Scott, Kan. Tooth paste container.  
1,084,531—Fritz Klatte, assignor to Chemische Fabrik Griesheim-Elektron, Frankfurt-on-the-Main, Germany. Manufacture of esters and ethers of ethyldiene glycol and of vinyl alcohol.

NOTE—A, advanced; D, declined; C, correction; N, new.

**N**EW YORK, Jan. 24—Quiet conditions have prevailed during most of the time that has elapsed since our last report, but interviews with leading jobbers indicate greater activity and that the drug trade in common with other business enterprises is beginning to feel renewed confidence in the outlook for future commercial prosperity. During the past week mail and telegraphic orders were received from out of town in a larger volume, and some increase was noted in the demand from local buyers, this activity showing that buyers and consumers have begun to replenish depleted stocks in anticipation of increased business. Opium still continues to find a limited outlet, but prices remained unchanged at last month's quotations. Quinine is firm, while morphine has been

advanced, following the general upward trend noted last month. Orris root still continues firm in sympathy with conditions abroad, no quotable change in prices being reported. Spanish saffron is easier, while American has been advanced. Both oil of lemon and oil sweet orange are lower in consequence of developing weakness in Messina. Cocaine is lower, and codeine and its salts have been advanced. Russian cantharides are higher, while ergot prices have declined on increased offerings. Alcohol is in increased demand and firm at present quotations.

**OPIMUM**—Has been extremely quiet, but prices are unchanged at last month's quotations, \$6.25@ \$6.50 being asked for natural, and \$8@ \$8.20 for both granulated and U.S.P. powdered.

**MORPHINE**—Another advance is noted in price of this alkaloid, as also its salts, the schedule of quotations being as follows: Alkaloid, 1/8-oz. vials, per ounce, \$7.60@ \$7.25; acetate, 1/8-oz. vials, per ounce, \$5.70@ \$6; hydrobromide, 1/8-oz. vials, per ounce, \$6.25@ \$6.75; hydrochloride, 1/8-oz. vials, per ounce, \$5.70@ \$6; sulphate, 1/8-oz. vials, per ounce, \$5.70@ \$6; per ounce, \$5.45@ \$5.75; valerate, 1/8-oz. vials, per ounce, \$7.10@ \$7.35. This advance reflects the relatively high import duty now assessed on this alkaloid as a derivative of opium.

**CODEINE**—For the same reason this alkaloid of opium is also firmly maintained by manufacturers, and prices have been advanced to \$7@ \$7.30 per ounce for codeine, \$6.50@ \$7.10 for phosphate, and \$6.75@ \$7.35 per ounce for sulphate.

**COCAINE**—Has been considerably reduced in consequence of lessened demand, jobbers quoting \$3.95@ \$4.15 for alkaloid in 1/8-oz. vials, and \$3.20@ \$3.35 per ounce for hydrochloride; in 1/8-oz. vials, \$3.25@ \$3.40.

**QUININE**—Is meeting with a moderate demand and the market is firm at 26c. per ounce in 100-ounce tins. A development which will undoubtedly make for higher prices was the 10 per cent. advance paid on the 10,863 packages or 959,408 kilos of cinchona bark, which were auctioned at Amsterdam on Jan. 22.

**MENTHOL**—Quotations are unchanged, but the market is firm in consequence of an active inquiry and reports of diminishing supplies. Several large sales have been recently reported in this market.

**ERGOT**—Prices have declined on increased offerings, and reports that the new crop is exceeding expectations abroad. The quotations range from 80c.@ \$1.10 per pound for whole, and 90c.@ \$1.40 per pound for powdered.

**IPECAC ROOT**—Is easier and in better supply, Carthagena fetching \$1.85@ \$2 per pound for whole, and \$2.05@ \$2.20 for powdered.

**KINO**—Is meeting with a fair inquiry and prices have been advanced to 50c.@ 55c. per pound for whole, and 60c.@ 65c. for powdered.

**MANGANESE BROMIDE**—A revision of quotations shows lower prices for this salt, 23c.@ 20c. per ounce being asked. Manganese chloride, crystallized, is quoted at 30c.@ 55c. per pound, and hypophosphite at \$1.50 per pound.

**MERCURIALS**—Slight changes are reported in the quotations on the following salts: Bisulphate, 60c.@ 65c. per pound; mild chloride (calomel), \$1.04@ \$1.25 per pound; protoiodide (green), \$3.35@ \$3.50 per pound.

**OIL PEPPERMINT**—Is meeting with a fair demand and the market continues steady at \$4@ \$4.25 per pound for New York, \$3.90@ \$4 for Hotchkiss, and \$3.75@ \$4 for Western. A report from Michigan states that stocks in the country are smaller this season than those of any corresponding season of recent years, and the shortage in the production this year is certain to be felt later.

**OIL LEMON**—Has suffered another decline and is now quoted at \$3.35@ \$3.55 per pound. Advances from Messina state that considerable weakness has developed in this article there, while it is stated that importers here are making further concessions in the hope of increasing the waning purchasing operations of consumers, the most important period of the season for this product being well advanced.

**OIL ORANGE**—This product has also declined as a result of the continued diminution of purchasing operations, jobbers quoting \$3.70@ \$3.80 per pound for sweet.

**SAFFRON**—American safflower is in scanty supply and firmly held at 60¢ per pound. Still higher prices are predicted by some, owing to the increasing difficulties experienced in replenishing supplies in Mexico, the country of production. It is contended by some that there will be little if any saffron grown in that country next year. A revision of quotations shows a lower range of prices for Spanish (true Valerica), \$120 to \$135 per pound being asked. The market for this article is firm, however.

**SANTONIN**—Lacks quotable change, but an advance is expected by some in the near future.

**BALSAM TOBU**—Shows a slight advance over last month's quotations, 85¢ to 90¢ per pound being asked.

**VANILIN**—Is lower, 40¢ to 45¢ per ounce being quoted.

**TONKA BEANS**—Angostura are unchanged at \$2.25 to \$2.50 per pound. A recent cable from Venezuela states that prospects for next season's crop favor a yield of only 20,000 pounds, and it is predicted that prices will go higher.

**ACID METABIC**—Chemically pure is higher, jobbers asking \$4.25 per pound, and 35¢ per ounce in via's. Ammonium molybdate is also higher, 20¢ to 24¢ being asked.

**SARSAPILLA ROOT**—Cut Mexican root is still obtainable at last month's quotations—40¢ to 45¢ per pound for whole and powdered, but the market exhibits a very strong tone owing to the political situation in the country of production. For this reason there are some in the trade who predict a further advance in prices in the near future.

**BALSAM OF FR**—A scarcity of offerings from the primary sources of supply continues to be noted for Canada, although the demand is steady and prices remain unchanged at \$1.25 to \$1.35 per pound. Oregon is easier in a large way, with jobbers quoting 25¢ to 30¢ per pound.

**THYMOL**—Has advanced sharply, \$2.25 to \$2.60 per pound being the ruling jobbing quotations.

**CANTHARIDES**—Russian are in limited supply and quotations have been advanced to \$1.85 to \$1.90 for sifted, and \$1.95 to \$2.10 for powdered.

**CARDAMOM SEEDS**—Decorticated are lower, \$1.40 to \$1.50 per pound being quoted. Other grades are unchanged in price.

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director, ERA COURSE IN PHARMACY,

No. 3 PARK PLACE, NEW YORK.

Matriculation Number.	Graduates to Jan. 23, 1914.	Graduating Average.
7167—Henry J. Willett, Attleboro, Mass.....		92
7335—Alfred B. Overby, Lankin, N. D.....		97
7465—Gifford L. Potts, Elkton, Md.....		93
7658—Victor H. Hinkley, Bar Harbor, Me.....		94
7754—Ambrose Reid, Chicago, Ill.....		92
7756—Robert L. Conner, Sewanee, Tenn.....		90

### The Best and Most Practical Course.

"I consider the ERA COURSE the best and most practical of any work that I have seen on the subject for home study. It is truly a shorthand method of obtaining a general and practical knowledge of the most important points. Yet nothing has been left out that might make it incomplete. I would not part with the Lectures for many times what they cost me. I can furthermore recommend it most highly to anyone contemplating taking up a home course."—AMBROSE REID, Chicago, Ill.

The Kansas City Association of Retail Druggists has passed resolutions indorsing the action of the police commissioners in their efforts to stamp out the illegal sale of liquor in drug stores.

# ARE YOU SELLING LISTOGEN? ANTISEPTIC

If not, send us a list of the Doctors and Dentists who trade with you and order a small supply of LISTOGEN from your Jobber. We will send you Customers—plenty of them.

LISTOGEN is immensely popular because of its dual efficiency—its value as both a cleansing and healing agent. Its remedial properties find immediate favor with Dentists and Doctors generally, and they prescribe and recommend it where its use is indicated.

**SENDING POISONS THROUGH THE MAILS.**

THE recent arrest of the New York branch manager of Parke, Davis & Co. on the charge of sending poisons through the mails in violation of the regulations set forth in revised Circular No. 58 has caused the National Association of Manufacturers of Medicinal Products to advise its members and the trade generally, not to send, pending a determination of the issues in the suit, any opium or coca leaves, their alkaloids, salts, derivatives or preparations by mail, and that pharmacists, physicians, dentists and veterinarians be required to secure such medicinal preparations, "however urgent the case or however remote they might be from express or freight offices by other means of transportation."

The arrest of Mr. Smith followed the mailing of a quantity of heroin tablets by the New York branch of Parke, Davis & Co. to a Boston wholesale drug house, Carter, Carter & Meigs, a practice which was perfectly legal and especially provided for in Circular No. 58 up to about six months ago, when, it is claimed, the circular was revised and regulations issued that prohibit the transmission

of all poisons through the mails. A detailed statement of the arrest will be found in our news columns. Mr. Smith is out on bail, not under indictment, and the case is allowed to rest until the U.S. District-Attorney shall be instructed by the legal authorities at Washington as to the method of procedure.

We believe that the use of the mails should not be denied to manufacturers, wholesalers or pharmacists who desire to send to legally qualified practitioners of medicine medicines which are not poisons when used in therapeutic doses for legitimate purposes. To prohibit doctors and druggists from using the mails for this purpose is in many cases to further endanger the lives of the sick, to say nothing of the inconvenience and expense that will fall upon the doctor, pharmacist and patient if such shipments can be made only by such means as are afforded by freight and express companies.

Until this case is definitely settled, druggists will note that in general, all poisons are held to be unavailable under the postal laws. Section 472 provides:

"All kinds of poisons, and all articles and compositions containing poisons . . . , and all other natural or artificial articles, compositions or materials of whatever kind which may kill or in anywise hurt, harm, or injure another . . . are hereby declared to be non-mailable matter . . . ; but the Postmaster-General may permit the transmission in the mails, under such rules and regulations as he shall prescribe as to preparation and packing, of any articles hereinbefore described which are not outwardly or of their own force dangerous or injurious to health, life or property."

Pharmacists, jobbers and physicians should unite with the members of the National Association of Manufacturers of Medicinal Products in their endeavor to urge the Postmaster-General to promulgate reasonable rules to carry out the intention of Congress not to exclude medicinal preparations from the mail.

**TO HELP THE ARMY HOSPITAL CORPS.**

AN appeal to the pharmacists of the country to use their influence to promote the efficiency of the Hospital Corps of the United States Army is the subject of two letters appearing in the correspondence department of the ERA this month, the writers being Dr. George F. Payne and Professor W. B.

Day, respectively. The bills now before Congress for this purpose are House Bill No. 1 and Senate Bill No. 929, and they seek to remedy the conditions which make it difficult, if not impossible, to secure for the Hospital Corps the class of men necessary for the efficient performance of duties connected with the care of the sick and with sanitary science in general. The bills provide increased pay and establish a higher rank of non-commissioned officers, thereby affording opportunity for promotion such as compares in a measure with other staff corps of the army.

The pharmacist's usefulness has been recognized in other branches of the Government service, notably in the Navy and Marine Corps, where he has an opportunity to rise from the ranks and where he enjoys the status of a warrant officer. A proper recognition of the pharmacists in the army is only delayed by the procrastination of national legislators who find other measures more productive of immediate benefits, and thus postpone action on bills which are introduced for the benefit of pharmacists. The consideration that has been extended to pharmacists in the navy makes American pharmacists more willing to go into that branch of the service, with a consequent decrease in the number of aliens. This would also be the result in the army. So write to your Congressman and Senator favoring this important action. The capable pharmacist is as much of a necessity in the army as is the surgeon, and his reward should be in proportion to that of the medical man.

#### THE ANNUAL LEGISLATIVE EXHIBIT.

JUDGING by the number of bills relating to pharmacy introduced into the New York Legislature during the present session of that body, referred to in our news columns, drug and food legislation still continues to occupy the usual conspicuous place on the calendar. Viewed in its entirety, the bulk of this legislative "exhibit" is a veritable jumble, showing a lack of supervision on the part of the legislators themselves, and as great a lack of co-operation on the part of those who would be most directly affected by the enactment of such measures.

A careful study of the material presented in this "exhibit" is sufficient to convince almost anyone that much of the proposed legislation is useless or will prove impracticable, the good points being so obscured by the bad as to be almost indiscernible—useless, because the errors designed to be corrected are covered by laws now existing, and impracticable, because the proposed measure is put together so loosely that a traction engine could be driven through the most important provisions, with the result that they would prove futile for the very condition they were designed to correct. Such measures, if enacted into law, confuse the situation, and instead of being serviceable to the people of the State, they really afford an excuse for the commission of lawless acts.

This proposed legislation may be taken as typical of that which has faced and is facing the pharmacists in nearly every State. If any lesson is to

be drawn from such a representation it is that laws must be drafted that will stand the test of actual usage, and that when they are finally placed upon the statute books they must form an integral part of a uniform whole. To this end there must be greater co-operation on the part of pharmacists themselves, for under our form of government it is only by putting into practice the rule of providing the greatest good to the greatest number that they can hope to secure legislation that will give at least a minimum of what is desired as a basis for the ultimate acquirement of the maximum of what is needed. Undesirable legislation and failure are the products of misdirected effort, and the conditions which develop these handicaps to legitimate pharmacy will continue just as long as those whose interests are most at stake continue to work at cross-purposes.

#### WHAT THE REAL PROFIT IS.

PERHAPS in no more vital manner has drug merchandising changed during the past 25 years than in the methods of sales-promotion and profit-estimating—the profit-guessers are being eliminated and the profit-assurer is being substituted. In bringing this about no one influence has had more effect than the chain store, that departmentized business in which each branch, under its own manager, is expected to produce a profit, and at the same time sell many advertised articles at a cut rate.

Just how this is done, and successfully done, is an interesting chapter in the story of "Pharmacy in the Past Twenty-five Years" from the pen of President Louis K. Liggett, of the United Drug Company, the second instalment of which appears in this issue. This month's chapter in Mr. Liggett's history takes up the economic reasons for the establishment of the chain store, the costs of doing business, the estimation of overhead, the matter of salaries, and concludes with an explanation of "What the Real Profit Is," that should be framed and suspended over the desk of every druggist in this country. Mr. Liggett is a practical business man, and what he says of both chain store and retail drug merchandising methods is eminently practical and helpful—an epitome not only of how to make money in the drug business, but how to know what you have made and how to bolster up a weak department by forcing up profits elsewhere.

These are not trade secrets, 'tis true, but they might as well be in the case of the druggist who pays a dollar for an article, sells it for a dollar-thirty-three, and then imagines he is making a profit, when he is but coming out even in actual outlay and losing his time in addition.

#### REGULATING NARCOTIC SALES.

NEVER before in the history of legislation affecting personal license has there been such a determined attempt the country over to regulate the sale of habit-forming narcotic drugs. City ordinances, State laws and National acts, aimed at the control

of this traffic, and in many cases so stringent in their provisions that their enforcement would virtually amount to prohibition, have been proposed, and, in many instances, adopted.

The Harrison anti-narcotic bill, probably the most sweeping measure in its provisions ever drafted, has received the indorsement of the National Drug Trade Conference, members of which have taken such personal interest in the passage of the act as to confer with National legislators and urge upon the members of the Senate finance committee its immediate enactment.

The Duffey law in Ohio, the new Tennessee law, the State-wide campaign in California under recent anti-narcotic legislation, and the proposed National act—followed closely by the legislators of Michigan—to banish the hypodermic needle, except in the hands of a physician, are indicative not only of a widely-aroused public interest, but of a real demand for the strictest type of regulation of the sale and use of narcotics.

The druggists of the country are to be found lined up with the advocates of such regulation. There has been no hesitancy on the part of the retail pharmacist. He makes but one demand—and that perfectly fair and equitable: Under any law, ordinance or regulation, city, State or National, *place every dealer in narcotics*, whether physician, dentist, veterinarian or druggist, *upon absolutely the same basis*, subject to the same supervision, making no exceptions, but holding every dispenser of narcotics, whether dispensing physician or dispensing druggist, equally responsible under the law.

#### ECHOES OF THE TRIPARTITE PLAN.

THE announcement of the death of C. G. A. Loder, which occurred in Philadelphia last month and which will be found recorded elsewhere in this issue of the ERA, will serve to recall to many readers the suit instituted by him against the members of the National Wholesale Druggists' Association and others, charging them with violation of the Sherman anti-trust law, and contending that by the enforcement of the trade agreement known as the "tripartite plan" he was unable to purchase drugs and supplies through the customary channels of trade. The result of the litigation was favorable to him, although the "plan" was not finally abandoned until after the courts had ruled in the proceedings known as the "Indianapolis decision," that the combination was in restraint of trade.

The opposition of Mr. Loder to the "tripartite plan" was only an incident in the history of price-maintenance plans and trade agreements in so far as they relate to the conduct of the drug business. In the second instalment of his article on "Pharmacy in the Past Twenty-five Years," appearing on pages 100 and 101 of this number of the ERA, L. K. Liggett gives a short history of the "plan" and its operation, and tells how it was succeeded by the druggists developing their own line of goods to meet the cut-price competition which they them-

selves had developed and were responsible for. Here, then, is the beginning of the era of co-operative manufacturing as now practiced in the drug trade, and the conditions which produced the "tripartite plan" also had much to do with the development of the "chain store" system of drug stores. In other words, as viewed by Mr. Liggett, the chain-system store was and is a direct result of cut prices, a further result being the inauguration of co-operative effort among the leading cutters.

Another reference to the passing of the "tripartite plan" appears in Mr. Mayo's address, abstracted on another page of this issue. That gentleman finds in the decision which declared the plan "illegal" a word of comment, basing his reason therefor upon the action of the Supreme Court of the United States in introducing the word "reasonable" into the Sherman Act. There is in this construction an element of danger to personal liberty, if it permits a bureau chief or his subordinate to issue regulations or rules to "round out the law." In theory, at least, no legislative body can delegate to any individual or bureau official its power to enact laws, and any attempt to act in this direction is a menace to the rights of the individual under our form of government. To be sure, there must be in all progress a unity of action and a certain amount of centralization in the methods followed by the general government, but these should never be inconsistent with liberty or the fundamental rights of the citizen.

#### EDUCATION VS. LEGISLATION.

IN attempting to keep bichloride tablets from reaching a wrong destination—the digestive tract—lawmakers are setting up various hazards through which the tablets must pass, providing a kind of obstacle race to stop the deadly pellets somewhere in their course. Before the bottle leaves the retailer's shelf, its sale must be authorized by some competent person. Before the cork is taken from the bottle, the color or roughness of the glass halts the act. Before the tablet is dissolved or swallowed, the color of the material, the shape of the tablet, or a warning wrapper, puts us on guard. But nothing is done to prevent the next step, the actual swallowing, which can take place in the dark, away from all roughened bottles, and after the tablet has been unwrapped by another person. At the most important point in the whole course no obstacle is placed. If the tablet has won its way thus far, it has an excellent chance of finishing its race.

No mechanical means can prevent the raising of the hand to the lips, and the entrance of the tablet into the stomach, if its real nature is not suspected by this time. The preventive must be a psychological one. This means that there must be implanted in the mind of each individual an almost instinctive hesitation or suspicion before using tablets of any kind, a serious questioning as to whether the nature of the tablet about to be taken is known with absolute certainty. We do not think that enough importance has been attached to this phase of the matter. If an agent can be made operative at the

very last moment before the tablet is swallowed, or administered by another, we have a greater safeguard for the public health than all the restrictions and regulations now in effect or proposed. The subject must be brought vividly home to all who may ever come in contact with poisonous tablets, and this means everybody.

Fortunately, there need be no difficulty in carrying on an educational campaign to warn against the dangers of poisons in the home. Through our public schools nearly every home and individual in the land may be reached. Certainly the school authorities will be only too glad to co-operate in spreading this important knowledge before the younger members of every community, and through them the older persons can also be warned. In carrying on such a campaign, the druggist is the logical leader. He enjoys a certain prestige in his locality in regard to questions of public health, and can turn this standing to most excellent account by bringing before the minds of school children the ever-present necessity for care in handling all sorts of medicines. Such instruction, so far as we know, is given in all too few schools at present. Yet it is at least as important as the study of elementary physiology, the effects of alcohol on the system, and other bits of tabloid science. Every druggist should take an hour or so each week to give a talk before the school children of his neighborhood. No one is more competent to speak on the subject. The teachers can later drum the matter into the heads of their pupils, and the cautions can be passed on to the older members of every family. It is interesting to note that an identical view of the subject is taken by the National Association of Manufacturers of Medicinal Products, who, at their recent meeting, endorsed "a campaign of 'safety-first' education, for the purpose of eliminating the element of human carelessness on the part of the public, which carelessness no law or regulation can of itself correct." When the suspicion and fear of medicine has been made instinctive, a long step will have been taken toward warding off the dangers of poisons in the home, no matter whether these substances are easy or difficult to procure.

#### THE NEW ERA FORMULARY.

A good formula is an asset of intrinsic value to the druggist or manufacturer who can or will use it to extend his business along lines he can successfully control. When the number of formulas, all of them trustworthy, reaches the hundreds or thousands, as the case may be, the chances for success are correspondingly increased. Just such an opportunity for expansion is offered to the purchaser of a copy of the new edition of the ERA Formulary, now in press and soon ready for distribution.

This new book constitutes within itself a well-stored library of general information pertaining to processes and formulas for nearly 8000 preparations, specialties, toilet articles, veterinary remedies, family medicines, and technical materials which find a place or are used in the various de-

partments of human activity as exemplified in professional life, the arts, handicrafts or business pursuits of the present day. Each formula and process is supplemented by instructions for its manipulation, thereby eliminating guesswork on the part of the inexperienced operator, while every care has been taken to make the nomenclature uniform, to check the quantities given in each formula, and to make the index a ready guide to the contents of the book. As an adjunct to the laboratory of the pharmacist or manufacturer we can commend this volume, the full scope of which is outlined in the advertising pages of this journal.

## BOOKS REVIEWED

FOREIGN PUBLICATIONS, for Advertising American Goods. Washington. Government Printing Office.

This bulletin of 236 pages, issued by the Bureau of Foreign and Domestic Commerce, of the Department of Commerce, contains a compilation of reports transmitted by consular officers throughout the world, giving a list of foreign news and trade papers that may be advantageously used for advertising American goods. These publications represent the principal cities and towns in foreign countries, and beside information as to advertising rates, subscription price, circulation, etc., brief statements are given of the population, trade and industries of the various districts covered by the reports. Copies of this bulletin, which should interest every American manufacturer desiring to advertise his goods abroad, may be obtained of the Superintendent of Documents, Government Printing Office, Washington, D. C., for 25 cents each.

STATE "PURE DRUG" LAWS enacted since the passage of the National Food and Drugs Act, June 30th, 1906, Printed in December, 1913, by Bond Bros. & Co., Chicago.

This book of 337 pages is recommended to any manufacturer or dealer who wishes to have at hand the information covered by the above title and which is well brought down to date. Besides the various State "Pure Drug" laws, there is a reprint of the Federal Act as amended; the narcotic laws of the several States; the Canadian Proprietary Medicine law; the National and State insecticide laws, extracts from the pharmacy laws of the several States, net weight laws, advertising laws, sample distribution laws, stock medicine laws, and other laws relating to the drug trade. The book supersedes the previous issues compiled by the National Wholesale Druggists' Association and the Proprietary Association of America and for whose membership it has been primarily prepared. Druggists who do an interstate business will find in it the answers to many queries which concern them as manufacturers and shippers.

*Vierzig Jahre Oesterreichische Pharmazeutische Gesellschaft, 1873-1913.* (Forty Years of the Austrian Pharmaceutical Society.) This is the title of an attractive booklet of 62 pages, recently received from the Austrian organization, summarizing the activities of that body during the 40 years of its existence. The society was originated to supplement the efforts of the General Austrian Apothecaries' Society in conserving and forwarding the interests of the pharmaceutical profession. It has been very prominent in initiating legislation along these lines, and the present report seems to show that the society propaganda work has met with more than ordinary success.

*E. Merck's Annual Report, 1913.* The appearance of this volume is always an important event in pharmaceutical literature each year, and the present issue is even larger than any of its predecessors, comprising 524 pages. The leading article, on "Lecithin," brings out many uses for this substance which are not generally known, and contains a very complete bibliography. Another feature is a supplement of 19 pages, on the "Standardization of Digitalis Preparations," by Dr. R. Heinz,

of the University of Erlangen. The method adopted is a comparative one, based on the minimum lethal dose of strophanthin (ouabain) required to produce stoppage of a frog's heart in 12 hours, compared to the amount of digitalis, etc., needed to effect the same result in a closely similar frog. Further tests are made on mice, to determine the amount of active material which is likely to be destroyed in the gastric tract of patients, before the tonic effect is manifested. Blood pressure experiments on rabbits and cats, and a final test on cats, for tolerance, complete the series. A confusing typographical error has crept into the table on page VII. The words "in 10 minutes" and "in 1 hour" should be interchanged. Also "in 2 hours" should apparently read "in 12 hours." Other noteworthy articles are those on the newer digitalis preparations, radio-active compounds, and organotherapeutic preparations, the latter amounting to 26 pages. The edition of Merck's Report is limited, but usually a few copies are available for distribution among physicians and pharmacists who make application, enclosing 15 cents for postage.

## CORRESPONDENCE

### To Help the Hospital Corps.

To the Editor of the ERA:

I send you below an appeal to the pharmacists of the United States which will explain itself. I would appreciate it very much if you would publish it in your next issue.

Yours sincerely,

GEORGE F. PAYNE.

Atlanta, Ga., Feb. 10, 1914.

#### The Hospital Corps of the United States Army.

*An Urgent Appeal to Every Pharmacist in the United States.*

The American Pharmaceutical Association, backed by the pharmacists of the whole United States, have a bill now before the House, introduced by Representative Hughes, of Georgia, as Bill H.R. No. 1, and now before the Senate, introduced by Senator Bacon, of Georgia, as Senate Bill S. 929. These bills are identical and their text is as follows:

#### A BILL

*To promote the efficiency of the Hospital Corps of the United States Army.*

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, that the Hospital Corps of the United States Army shall constitute the enlisted personnel of the Hospital Corps now authorized by law, and shall consist of 30 sergeants-major at \$75 per month; three hundred sergeants, first class, at \$65 per month; sergeants at \$36 per month; corporals at \$24 per month; cooks at \$30 per month; privates, first class, at \$21 per month; and privates at \$16 per month, with such increase for length of service and other allowances as are or may hereafter be established by law.

As chairman of the committee on the Status of Pharmacists in the United States Government Service of the National Association of Drug Clerks and also as a member of the American Pharmaceutical Association, we wish to urge every pharmacist who reads this article to sit down immediately and write a brief letter and then make copies of it and send a copy to each of the members of the committee on Military Affairs of the House and Senate and urge that "You will please see that the Bill H.R. No. 1 and S. 929, which have been fully endorsed by the Surgeon-General of the U.S. Army (as you will see in his last report) is offered as an amendment and placed as a 'rider' on the army appropriation bill now before Congress."

The members of the Hospital Corps of the U.S. Army are now so poorly paid that many are leaving the service, as the positions in the regular army service pay better salaries; even the men who take care of the sick mules are better paid than those who take care of the sick soldiers. Anyone who is in a position to know will readily assure you of the difficulty of getting men in the Hospital Corps, and after getting them the

difficulty of keeping them there on account of the miserably poor pay.

Pharmacists are men of influence in every section; their stores are all in the towns and cities and each one is a nucleus around which cluster the leading sentiments and views of the community. The pharmacists not only of your State but of the whole United States are deeply interested in the matter. Every State government requires the pharmacist who practices pharmacy among the people to be examined and licensed by a State Board and to be an excellent type of man. With the present miserable salaries given the Army Hospital Corps, as just stated above, it is very difficult to get good men and still more difficult to keep them under present conditions. The Hospital Corps of your State troops are, of course, also in this same bad shape. Your help in this matter will be very much appreciated as we feel that present conditions are unjust to those in the military service, to the public, to the medical officers of the army and to the profession of pharmacy, which all true pharmacists wish to see secure the recognition which it deserves.

Yours fraternally,

GEORGE F. PAYNE.

*Member of the American Pharmaceutical Association.  
Permanent Chairman of the Committee of the National Association of Drug Clerks on the Status of Pharmacists in the Public Service of the United States Government.*

### Urge the Passage of Hughes-Bacon Bill.

To the Editor of the ERA:

The American Pharmaceutical Association, with the assistance of the National Association of Retail Druggists and the National Association of Drug Clerks is urging the passage of the Hughes-Bacon bill (H.R. 1, S. 929) intended to promote the efficiency of the Hospital Corps of the United States Army.

The purpose of this bill is to remedy as far as possible the conditions which make it difficult, if not impossible, to secure for the Army Hospital Corps the class of men necessary for the efficient performance of duties connected with the care of the sick and with sanitary science in general. The bill provides increased pay and establishes a higher rank of non-commissioned officers, thereby affording opportunity for promotion such as compares in a measure with the other staff corps of the army.

Pharmacists throughout the country are urged to write to their Senators and Representatives asking them to support this worthy measure. Act at once as the time is short. Just a few lines asking your Senators and the Congressmen from your district to support House Bill No. 1 or Senate Bill No. 929, as the case may be, will be sufficient—but *do it now*. The list of the members of the military committee who now have the bill at their disposal is as follows:

Military Committee of the House—James Hay, Virginia; S. Hubert Dent, Alabama; William J. Fields, Kentucky; Kenneth D. McKellar, Tennessee; William S. Howard, Georgia; Daniel J. Griffin, New York; Robert H. Gittins, New York; Warren Gard, Ohio; Frank T. O'Hair, Indiana; Frederick S. Deitrick, Massachusetts; Percy E. Quin, Mississippi; Daniel E. Garrett, Texas; Maurice Conolly, Iowa; William Gordon, Ohio; Julius Kahn, California; Daniel R. Anthony, Kansas; John C. McKenzie, Illinois; Frank L. Greene, Vermont; John M. Morin, Pennsylvania; Samuel B. Avis, West Virginia; Willis J. Hulings, Pennsylvania; James Wickersham, Alaska.

Military Committee of the Senate—George F. Chamberlain, Oregon; Gilbert M. Hitchcock, Nebraska; Luke Lea, Tennessee; Duncan U. Fletcher, Florida; Henry L. Meyers, Montana; Charles S. Thomas, Colorado; James K. Vardaman, Mississippi; James P. Clarke, Arkansas; Henry A. Dupont, Delaware; Francis E. Warren, Wyoming; Joseph L. Bristow, Kansas; Thomas B. Catron, New Mexico; James H. Brady, Idaho; William S. Kenyon, Iowa; Nathan Goff, West Virginia.

We are especially anxious to have letters from their constituents reach these committeemen.

W. B. DAY, *Chairman,*

*Committee on Pharmacists in the Government Service.*

The New ERA Formulary (\$5.00), now in press, contains nearly 8000 formulas

## II. Pharmacy in the Past Twenty-Five Years, by L. K. Liggett

It is often said that though they protested against it, the patent medicine manufacturers encouraged cut prices to increase the sale of their goods. Whatever the truth may be, it is certain that during the price-cutting period the patent-medicine manufacturers, as well as the cutters, were very prosperous.

Despite occasional lapses, it is characteristic of the average druggist to open the door before Opportunity knocks. To meet the loss of profit on individual sales due to cut prices (the druggists of those days did not realize the importance of volume in a retail business), the druggist endeavored to replace the advertised proprietaries which were the price-cutters' chief target, by manufacturing his own preparations. This gave the retail drug business a new direction and a new impetus. For several years pharmaceutical associations throughout the country devoted much time to the study of making and marketing store-made preparations.

Many pharmaceutical houses also began to manufacture non-secret preparations which they supplied to druggists who did not put up their own goods. These remedies were intended to compete with existing advertised proprietaries, and though their formulas were printed on the labels, and though the druggist's own name appeared on the carton as the "manufacturer," he knew practically nothing about them. Sometimes the druggist tried to shift the responsibility by printing a fanciful name on the package or by printing with his own name the statement "Sole agent for ——— (giving a certain territory)."

This business thrived for 10 or 15 years, but it failed of real success because the poor preparations sold under the druggist's name did not meet the changing demand of a wise public, and, also, because the system was one of deception and no honest druggist could sell the goods with any enthusiasm.

Besides the lessened profits due to price-cutting, the druggists were driven to concerted action by the extravagant claims made in the advertising of patent-medicine manufacturers. These wild claims reached a climax about five years ago, when the exposure of dishonest advertisers by some of the leading magazines increased public suspicion regarding even honest "patents."

### Spanish War Tax.

In 1898 came a great crisis in the cut-price war, when the American proprietary manufacturers tried to force the retail druggist to pay the Spanish War revenue tax on proprietary preparations, a tax which Congress intended should be paid by the manufacturer. The tax was bad enough, but the manufacturers made an extra charge to the retailer to cover the cost of affixing the tax stamps. The tax amounted to 30 cents a dozen on \$1.00 size packages, the rate for small size packages being less in proportion. The increased price, ranging from 30 cents a dozen, the actual cost of the stamps, to \$1.25 a dozen, was prohibitive.

The druggist could not pass the tax on to the public, who were tired of paying war bills, and the druggist was compelled to meet the loss. To remedy this injustice a National convention of protest was called, in October, 1898, by the Chicago Retail Druggists' Association. The meeting was held in St. Louis at a time when both the Proprietary Association of America and the National Wholesale Druggists' Association were gathered in that city.

### The Tripartite Plan.

As a result of this meeting the retailers, wholesalers and proprietary manufacturers, in order to protect themselves, adopted the so-called Tripartite plan. By this plan three-fourths of the druggists in any community were to fix the prices charged for proprietaries. Those selling below the fixed figure were to be blacklisted as "Aggressive Cutters." The jobbers would refuse to sell to boycotted firms, under penalty of having their own supplies cut off by the proprietary manufacturers. The question of what should constitute price-cutting in a given instance was left to the determination of the druggists who did not cut.

The Tripartite plan led to a reign of terror that lasted for several years. The "black list" of price-cutters not sufficiently meeting the needs of the association, a "white list" of wholesale druggists who refused to sell any goods to price-cutters

was established. This last move led to the National government's prosecution of the so-called "drug trust." After much litigation the courts ruled that the Tripartite plan was "a combination in restraint of trade." The officers were enjoined from further use of the plan, and the plan itself was abandoned in 1906.

During this whole period the development of the cut-rate stores was very rapid. In 1900 there were probably between six and seven thousand cities and towns in the United States in which daily or weekly papers were published; less than 500 were cities of over 20,000 population. These, of course, were the cut-rate cities, not necessarily all, but many of them, and they exercised a tremendous influence over the many towns and cities in the country. At a rough estimate, I should say that there were not in the United States at any time more than 150 cities and towns in which there existed an aggressive cut-rate drug business. By cut-rate, I mean the cutting of prices to the point at which there was practically no profit in the proprietary article. Such retail prices ranged from 59 cents to 69 cents for say, Pinkham's Compound, Peruna, and other items.

### Selling "Own Goods."

It was only in the largest cities that these prices obtained. Strange to say, the majority of the large cutters were not acquainted with one another, yet they were all pursuing almost the same tactics; that is, the development of their own line of goods to meet the cut-price competition which they themselves were developing. Large lines of proprietary articles were produced by all the leaders mentioned in my previous article—Jaynes, Jacobs, Dow, Evans, Marshall, etc., and their sole idea of profit was to hold expenses at the lowest possible margin and then sell the largest possible percentage of what they call their "Own Goods."

### Beginning of Co-operation.

It was this development of the retail business that brought about the co-operative plans that have enabled the retailers to do their own manufacturing, and that have in recent years forced the non-secret houses to become imitators. In order to bring about these co-operative plans it was necessary for the retailers to meet and know one another. And it was this meeting and knowing one another that brought about the idea that more than one store could be conducted successfully. Ten years ago you could count on the fingers of your two hands the firms conducting more than one drug store in the United States. Today, there are any number of firms that operate more than one drug store. Many of them operate whole chains; in fact, the chain-system store may be said to have developed as a business within the past five years, and it is a direct result of cut prices, followed, as I have stated, by the inauguration of co-operative effort among the leading cutters.

It is difficult to give credit to the actual chain-store pioneers because every druggist who operated more than one store was to that extent a chain-store druggist. But the first chain stores of any magnitude were those conducted by Charles P. Jaynes, of Boston. Mr. Jaynes sprang into prominence in 1890, and he was closely followed by the Hall & Lyon Company, of Providence. The stores established by Mr. Jaynes and those of the latter company are now included in the largest and most competitive chains in America.

### Effect of Chain Stores.

The chain store has been the subject of many attacks, but in all fairness I say that its influence on the retail drug business has been a good influence. It has its drawbacks, but as with all phases of evolution, these are outweighed by its advantages. The principal drawback of the chain store is the loss of personality, which is of such value to the individual druggist in small towns who comes into direct contact with his customers. To meet the loss of individual personality, the management of chain stores, must, if they are to succeed, substitute a corporate personality. This personality is expressed through the medium of better service, lower prices and a consciousness of responsibility as public servants. The large chain-store organizations have each a distinctive personality, which through uniformity in operating systems is as unmistakably expressed in each link of the chain as though that link were the property of a single druggist.

This service-personality, if I may call it that, of the chain stores is made possible by their enormous buying power which enables them to sell to the public at lower prices, and by the wider opportunities which they offer to young business men who can "make good," which attract to their employ clerks who are willing to give efficient service. In addition to these other advantages, almost all chain drug stores now maintain educational systems, and endeavor to teach the clerks in their stores how best to serve the public, as the public likes to be served. The clerks are also being educated in salesmanship; learning how to raise the individual sale from its nominal figure in the old drug store, to a very high figure in the chain store.

#### The Effect of Chain Stores.

I am often asked what is the effect of chain stores on those druggists who do not share directly in their benefits. The answer to that question is the human equation. For the druggist who prefers to spend his time railing against progress and new editions, the chain store offers no comfort. But the fault is in the man himself, who would have been discouraged and disgruntled by any new idea which threatened to joggle him out of the rut of old methods. The druggist, on the contrary, who has in him the stuff of which merchandisers are made, has learned a lesson from the chain stores. He has, so far as possible, adopted their methods of dealing with the public, adapting those methods to his local conditions. Realizing the handicap represented by the loss of individual personality, suffered by the chain stores, to which I have already referred, he throws the whole force of his own personality into his business, winning trade not by endless jeremiads against chain competition, but by interposing between his townspeople and the big city store, his own capacity to make friends.

This man is the hardest competitor the chain store has to meet. I have always maintained, and still maintain, that the chain stores can never defeat the individual druggist who attends to his own business and is perfectly willing to meet their competition, so long as they do not compete with him with the sole object of ruining his business for the purpose of gaining their own ends. So far the chain stores have never attempted to do that, and I am frank in saying that I do not believe they will ever attempt to do so, for the laws of the land will not permit competition of that character in this age.

Even those druggists who are not members of the chain-store systems or stockholders in co-operative manufacturing enterprises have learned the lesson of co-operation and have formed buying clubs. Many of these clubs are purely local, while others cover a wide field. In all of them the members find a leverage with which to secure price concession from jobbers and manufacturers, and in addition to the money saved, the druggists are brought more closely together, the friendships thus formed frequently serving as the basis for a closer co-operation developing in other directions. One of the most successful of these buying clubs is the Drug Merchants of America, with offices in New York City.

#### Store Systems.

The magnitude of chain-store business has necessitated the utmost economy of time and money in operation. The methods developed by the big stores are adopted by the smaller dealers, and throughout the trade there is a reaction against the rule of thumb and a demand for that definite knowledge without which real prosperity is impossible. The old way of conducting a drug store as a unit, bunching the profits from all classes of merchandise, and offsetting the total against the *approximate* expense of doing business has gone forever. The modern drug store is departmentized, and each department is required to pay its share of the store's running expense *in addition to a fair profit on its merchandise*. In the big stores departmentizing has been brought to such a point that practically the departments are independent of one another, the manager of each having to make his own good showing irrespective of his fellows, just as though he were an independent dealer in confectionery, cigars, stationery, rubber goods, or whatever the merchandise may be.

Even in the smaller stores departmentizing is the rule, where a few years ago it was the exception. At least four departments are practically universal—soda, candy, cigars and general merchandise. This segregation facilitates the ordering of goods, simplifies book-keeping, facilitates the keeping of inventory, obviates the loss formerly occasioned by dead stock, and enables the merchant to determine what goods sell the

best and pay the best profits. This definite knowledge is of direct benefit to the public, because it enables the druggist to sell on a close margin with the assurance that he is justified by the volume of sales.

Another effect of retail departmentizing has been to improve store service. Placed upon his own responsibility, the department manager in order to "make good" has been obliged to keep the service of his department on a par with that of the store as a whole. This service-ideal he has communicated to his employees, and the friendly rivalry between the several departments keys up the entire sales organization.

Of course, the location of a store and the character of the trade largely determine the amount of profit, but some druggists pay too high a cost of doing business. This is due to the fact that many retail druggists are poor business men, although one hesitates to say it. Often they derive their first knowledge of the condition of their business from the figures of the receiver when they go into bankruptcy. Some druggists cling to antiquated methods of book-keeping, neglect the annual inventory, and never know their actual profits because they do not figure costs correctly. This tendency is being rapidly corrected now-a-days, and one of the biggest factors in changing the druggist from a guesser into a man of business, has been the cash register, and later the various machines for tabulating figures and computing costs. The demand for such machines among retail druggists and the increasing use of typewriters in writing labels, the installation of cash-carrying systems, etc., are all symptomatic of the wonderful change in retail drug merchandising.

#### What Real Profit Is.

From observation, it would appear that the average drug store operates on a gross profit of from 35 to 38% on its sales. It has been my experience that too many retail druggists figure their profits on the cost rather than the selling price, and so when I say 38%, I mean the profit on merchandise that costs from 62 to 65 cents for each dollar of the selling price.

Chain-store profits range from 28% to 29% in New England, where there is a large sale of cigars at a very low margin of profit, but may be as high as 38% in New York City, where there is a large sale of sundries, toilet articles, etc. Also, the profit is largely affected by the volume of soda-water business that a man may do. As the average gross profit made in the soda department is 50%, soda has a marked influence on the total profit of the store, if it represents a large volume of the total sales.

From this gross profit must be deducted the expenses. It has been my experience that the expenses, rent, light, heat and power, in a retail store should average 6½%. A new store will not show that percentage. Sometimes it is almost twice as much, but if it is an established business, say three years old, its expense should range in the vicinity of 6½%; 5% for rent and 1½% for light and heat. This is the only fixed charge in a store; all the rest of the expense of doing business can be adjusted to the volume of sales. Formerly clerk hire cost 10%. In many cases it now runs as high as 13%. This is occasioned by increases in wages, shorter working hours and more holidays. After adding to the general expense such other expenses as advertising, soda-fountain supplies, glassware, paper, twine, and the numerous incidentals, it is very difficult to operate a store at much less than 25% expense; in fact, only the ideal store can operate on that basis. When depreciation is added, 28% is about the minimum expense, and thus the profit in the retail business can be estimated at from 2% to 10% or 12% on gross sales.

Charles R. Sherman, of the Sherman & McConnell Drug Company, Omaha, Neb., early discovered that where it might be necessary to sell a certain product at a profit of only 20%, other goods could be made to yield from 40% to 60%, so that by considering the profit margin of each item separately, the total profit of the business could be raised to the desired level.

*Many druggists do not realize that the 25% generally recognized as the average cost of conducting a retail drug business is really equivalent to 33½% on cost. An article which the druggist buys for \$1.00 and sells for \$1.33½ pays the cost of doing business, but nothing else; and if the majority of his items are sold on the same basis, it is costing him money—for time is money—to keep his name over his door.*

(To be continued)

## IV. Classical Discoveries in Pharmacy.

### THE DISCOVERY OF GLYCERIN.

THERE is no doubt that of all pharmacists who have made contributions to modern chemical knowledge, none has presented the world with so many or such important discoveries as the apothecary of Köping, Carl Wilhelm Scheele. To one who reads his note-books and chemical essays, there must always come a feeling of wonder that in the scant 140 years which mark the growth of chemistry as we are accustomed to think of it—chemistry freed from the superstitions and *ignes fatui* of alchemy—the gigantic science of today has had time to develop from the elementary stage revealed in the writings of the Swedish pharmacist. For there we find this young genius isolating for the first time a host of substances which are as familiar to the worker of the present as air and water; substances which, we are almost impelled to believe, must have been known in antiquity, so frequently are they met with in the daily occupations of the modern chemist.

Imagine an apothecary shop in which oxygen, chlorine, manganese, tartaric, lactic, citric and oxalic acids were unknown terms. Yet, until Scheele brought his all-conquering directness of experimentation to the attack on the natural bodies containing these elements and compounds, no investigator, so far as we know, had ever laid eyes on them. (We do not make an exception of oxygen, for although Priestley published the account of his own labors two years before Scheele's "Observations on Fire and Air" appeared, the latter is in all probability the original discoverer of this gas.)

Among the more important substances first prepared by Scheele is the "peculiar sweet matter," known to us as glycerin. The first account of the discovery appeared in Crell's *Chemische Journal* for 1779, page 190. In a subsequent letter to Dr. Crell, the Swedish chemist gives more details of his experiments. This letter was published in the *Journal* in 1784, page 99, and an excellent translation, here presented, is to be found in Thomas Beddoes's book entitled "The Chemical Essays of Charles-William Scheele" (London and Edinburgh, 1786).

*"Discovery of a peculiar sweet and volatile matter, which is a constituent part of expressed Oils, and the Fat of Animals."*

"Several years ago, upon dissolving litharge in olive oil, I observed a peculiar sweet matter, distinct from the oil floating on the surface, which, when inspissated and treated with nitrous acid, appeared to be a modification of the acid of sugar. I have since more particularly examined this peculiar phenomenon, and have discovered the sweet matter, as well in linseed oil, oil of almonds, and oil of rapeseed, as in oil of olives, and still more lately, both in hog's grease and butter. In my experiments I made use of the following process: One part of pulverized litharge was dissolved in two parts of some one or other of the unctuous substances above mentioned, and some water, the mixture being made to boil all the time. As soon as it was inspissated to the thickness of salve, the whole was left to cool, and then the water was poured off. The water was found to contain the sweet matter in question; and it is to be evaporated to the consistence of syrup. If the oil or fat be fresh, there does not appear any sign of dissolved calx of lead, on addition of the vitriolic acid; but should either the one or the other be old and rancid, some calx will then be dissolved, and should be precipitated by a proper quantity of vitriolic acid. If this inspissated matter be strongly heated, the vapors that arise take fire on the application of a candle. In order to make it pass over from the retort into the receiver, a degree of heat is required equal to that which must be employed for the distillation of vitriolic acid. One-half of the sweet matter goes over unaltered, in the form of a thick syrup, and still retains its sweet taste; what rises afterwards has an empyreumatic smell, and this is followed by an oil of a brown color. There remains in the retort a light spongy coal, which does not contain the smallest particle of lead. This sweet matter cannot be made to crystallize; nor, when mixed with water and set in a warm place, does it run into fermentation; for, after the mixture had stood for four months, tincture of turpentine did not undergo the least change when mixed with it. It will mix with tincture of caustic vegetable alkali, though

neither simple syrup nor honey will do this; but they attract the alkaline fat from the spirit of wine, and then fall to the bottom in the form of a thick mucilage. If nitrous acid be abstracted from off this unctuous sweet substance, it is at last, after many repetitions of the operation, converted into acid of sugar, and the nitrous acid is very much phlogisticated. It would seem to follow, from these experiments, that the sweet matter in question is combined with more of the principle of inflammability than sugar and honey.

"I have also boiled litharge with olive oil, separated from soap by vitriolic acid, with the same result; for I here likewise obtained the sweet matter. I likewise separated the oil from the common salve (*Empi. Simp.*); which must be done in consequence of the laws of double attraction. Let the salve be sliced and rubbed in a glass mortar, with a mixture of eight parts of strong spirit of wine and one part of oil of vitriol. This white mixture is to be poured on a filter, and water is to be added to the liquor that runs through, upon which the oil that was contained in the salve will be separated. I wished to recompose salve, by boiling this oil again with litharge; but it grew thick before it could be made to boil. From the water, which I took care to decant, I obtained some of the sweet matter so often mentioned, though, indeed, but in very small quantity."

### Present Status of the Pharmacopoeia.

By PROF. JOSEPH P. REMINGTON.

AT the recent annual meeting of the National Association of Manufacturers of Medicinal Products, held at the Waldorf-Astoria Hotel, Feb. 10 and 11, Prof. Joseph P. Remington, chairman of the Committee of Revision, presented an interesting address on "The Present Status of the Pharmacopoeia," which, in part, was as follows:

"I have generally been expected on occasions like this to make a few remarks about Pharmacopoeial revision, a subject which interests you materially. The work is going on rapidly now, and a large number of pages of the work are ready to go to press, but we had first to get rid of the easy questions, but when there are several thousand questions to settle, and you leave the hardest nuts to be settled at the end, a few of the hard nuts will take as much time as the main question."

Prof. Remington pointed out that among the subjects yet remaining to be decided is the question of whiskey, a problem hinging upon the manner in which whiskey is made official in the U.S.P. Anent pharmacopoeial publicity, he said that this was the first instance in the world where the leading features and tests of a pharmacopoeia would be published in the pharmaceutical journals practically before the book was published. There has never been a revision in the U.S. which has been so thorough and so open. The Food and Drugs Act has been the cause of renewed interest, and when one's pocket-book is affected the talk becomes loud.

The speaker brought up the question as to whether a manufacturer would be willing to permit his preparation to be admitted to the Pharmacopoeia, with tests of purity and identity, under another name? The Pharmacopoeia would not be likely to introduce a copyrighted name, or a name which is the exclusive property of an individual, corporation or firm. It would have to be introduced under a scientific name, for instance, take the illustration—*aspirin*—acetyl salicylic acid. That would make the name of that preparation free. But it would probably permit some other manufacturer to make under the official name something which would be sold as 'just as good' and it might be just as good. If the preparation was introduced with the consent of the manufacturer, he would probably be expected to supply tests. For a while, at least, it would be the same preparation, but has not the manufacturer the right, if he owns the preparation, to change the tests, or alter, maybe the color, or the strength, of his preparation, and that has been the main objection in previous revisions of the Pharmacopoeia to the introduction of patented or proprietary articles.

"The proposition to introduce widely-known and largely-used medicines, in which the manufacturer would certainly give up some of his rights and some of his profits, could only be introduced properly, I suppose, by the consent of the manufacturer; because if it were introduced without the consent of the proprietor under another name he would feel aggrieved,

and he would certainly look to the protection of his preparation by the usual procedure at law.

"An effort was made to get such consent—a trial was made 12 months ago—in order to see if a manufacturer would be willing to allow his preparation to be put in the Pharmacopoeia in any shape, and the result of the attempt was not encouraging. The manufacturer declined.

"Now, of course, the settlement of this question lies right at the foundation of the work. We cannot go to press until it is settled. For instance, if an article happens to be under the letter "A" at the very beginning of the book alphabetically we cannot make up any page-proof."

Speaking of other vital things in abeyance, Professor Remington referred to the question of volatile oils. "The volatile oils are now manufactured products. They are mostly distillates from odorless plants or parts of plants, and there is no question but that plants at different seasons of the year, different conditions of the weather and the climate, produce products which vary greatly. You will find in the present Pharmacopoeia, and you will undoubtedly find in the next Pharmacopoeia, a wide range of specific gravity in the volatile oils. Some of them vary to such an extent that the specific gravity as a test is practically worthless; after you have settled upon even a wide range of specific gravities, the same kinds of oils, which are perfectly genuine, are found to have a different specific gravity; they are lower than the lowest limit or higher than the highest limit of those which are known to be genuine. Genuine oils have been found which are sometimes laevogyrate and sometimes dextrogyrate. We do not realize and we do not know why these products from time to time should vary to such an extent, and, of course, after the Pharmacopoeia comes out some critic will say that there is an error in the specific gravity when it is put at 0.80. They will say that they have just distilled a lot of these oils which have a specific gravity of 0.93. They will say the 'angle of rotation is not so and so, but so and so,' and they will take an exceptional case, probably, to show that the Pharmacopoeia is not correct with regard to this particular specimen. This is a question which not only causes trouble in reference to the U.S. Pharmacopoeia, but every other pharmacopoeia in the world. We had the same debate at the Pharmacopoeial Congress at The Hague about this question of volatile oils."

Prof. Remington referred to the conference of dealers and distillers and rectifiers of volatile oils held several months ago in Philadelphia to discuss the subject of volatile oils. The Volatile Oil Committee is now considering the report of a committee appointed at this meeting. The speaker also pointed out the efforts which had been made to carry out the Pharmacopoeial Convention's resolution of publicity. He asserted that now is the time to send in criticisms. "We cannot be expected to keep the book open forever, and after a certain date—the date will be published—we cannot be expected, having already given plenty of time for these changes to be considered, to be held responsible for considering those which come in when it is too late. . . ."

Prof. Remington visited Dr. Tirard, editor and chairman of the Revision Committee of the British Pharmacopoeia, when in London last Summer. He saw the British Pharmacopoeia in galley proof. "They are well advanced there, but the Doctor told me they are held up, just as we are, because of some criticism and some difficulties, and I was able to effect harmonious relations with Dr. Tirard and a strong desire on his part for co-operation, so that when the two Pharmacopoeias in the English language are issued they will be, so far as possible, in accord."

The speaker was "very much shocked and disappointed" to find that the International Congress of Applied Chemistry had saddled the organization of the work on him to secure uniformity all over the world in all of the pharmacopoeias of the standards for medicinal chemistry. "If I ever get through with the Pharmacopoeia work and then try to get the chemicals of the world all harnessed together and all of uniform quality, I think I will be put out of business altogether." In conclusion, he pointed out that "never in the history of the world has there been such a spirit of co-operation among learned societies, scientific bodies, commercial bodies and others, and all who are interested in the making of standards of medicine, so that what 10 years ago would have been thought impossible is likely to be accomplished some day, as there is

every indication at the present time that there will be co-operative and united work on these problems."

## Peroxides and Perborates.

THE seventh special lecture of the 1913-14 series was given at the Philadelphia College of Pharmacy on February 9 by Dr. Herbert Philipp, of the Roessler & Hasslacher Chemical Company. The lecture was on "The Pharmaceutical and Industrial Uses of the Earth Alkali and Alkali Peroxides and Perborates."

Dr. Philipp explained the theory of peroxides and perborates by assuming that the active oxygen atom in the compounds is a tetravalent element instead of the ordinary bivalent element. Representing "R" as a bivalent metallic element, the structural formula for peroxides would be  $R=O=O$ . It is easily seen that in this formula the tetravalent oxygen can step out, as it were, leaving the ordinary compound with the bivalent oxygen atom. The various alkaline or alkaline earth bases of these compounds do not possess any additional virtue, acting simply as a carrier for the tetravalent oxygen.

Sodium perborate is the most widely used. When brought in contact with water it decomposes according to the following reactions:

From the reaction it is seen that sodium perborate has an alkaline reaction and in this way overcomes the irritating effect of hydrogen peroxide solutions, which are generally acid in reaction. Solutions of sodium perborate are unstable, losing the available oxygen, unless neutralized and preserved by acetanilide, salicylic acid, sulphanic acid or benzoic acid. The powder is stable under ordinary conditions, keeping better in pasteboard cartons than in sealed containers. So long as water is absent it remains stable when mixed with mineral fats and neutral inorganic salts, but rapidly decomposes when mixed with animal or vegetable fats and the terpenes.

This compound is the only one of its class that has been extensively used industrially, probably because of its relative cheapness. In bleaching it has several distinct advantages over solutions of hydrogen peroxide. It is more stable, and weight for weight it has seven or eight times the strength of the 10-volume solutions of  $\text{H}_2\text{O}_2$ . It can be used in bleaching the finest fabrics because of its mild alkalinity, which does not injure the fibre. It has been successfully used in laundry powders, as an oxidizer for organic dyes in dye works and also in analytical work.

Medicinally, it can be used wherever hydrogen peroxide is indicated. It is a valuable addition to dusting powders and is an efficient styptic. It has been suggested that tablets be made containing such a quantity of sodium perborate that when dissolved in a definite quantity of water a solution of  $\text{H}_2\text{O}_2$  of definite strength will result. To date no success has come from this suggestion because of the difficulty in making a stable tablet which will be quickly soluble in water. Sodium perborate is being used in the now fashionable oxygen baths.

The peroxides have been successfully used for the sterilization and preservation of foods, rectification and ageing of alcoholic beverages and for bleaching edible oils. They are too expensive, however, to take the place of the older and more economical processes. The peroxides have been exploited largely as cure for a host of diseases, but Dr. Philipp assured his audience that peroxides do not belong to curative medicine, but occupy a prominent position in preventive medicine. The peroxides of sodium, calcium, strontium, magnesium and zinc are the ones mostly used, magnesium peroxide being the only one that has been used to any extent as an internal remedy.

Sodium peroxide has been put up in fused blocks under the name of oxone. These blocks when immersed in water liberate pure oxygen and are used in an apparatus called an autogenerator. Dr. Philipp demonstrated the use of this apparatus for administering anesthetics in such a way that a patient would always receive a mixture of the anesthetic and pure oxygen in definite proportions and also as an emergency outfit for supplying oxygen in cases of asphyxiation.

The New ERA Formulary (\$5.00), now in press, contains nearly 8000 formulas.

## SELECTED FORMULAS

**Laxative Cold Tablets.**

Anilide .....	60 grains
Camphor .....	15 grains
Powdered capsicum .....	30 grains
Powdered ipecac .....	15 grains
Quinine hydrobromide .....	120 grains
Extract of cascara sagrada .....	30 grains

Mix and divide into 120 tablets.

**Liniment for Chilblains.**

Camphor .....	240 grains
Soap liniment .....	4 fl. ounces
Oil of cajuput .....	1 fl. ounce
Ammonia water .....	4 fl. drams
Tincture of arnica .....	1 fl. ounce
Tincture of cantharides .....	1 fl. ounce
Alcohol, enough to make .....	12 fl. ounces

Mix and apply.

**Earache Drops.**

Almond oil .....	1 fl. ounce
Chloral camphor .....	1 fl. ounce
Glycerin .....	1 fl. ounce

Mix.

**Red Cross Embrocation.**

Liniment of ammonia .....	1 fl. ounce
Liniment of turpentine .....	4 fl. ounces
Oil of amber .....	1 1/2 fl. ounce
Oil of turpentine, enough to make .....	6 fl. ounces

Mix.

**Toothache Wool.**

White wax .....	2 ounces
Carbolic acid, cryst. ....	1 ounce
Chloral hydrate .....	2 ounces

Melt the wax by heat, add the other ingredients, stir till dissolved, then immerse cotton-wool in the liquid.

**Rose Wash (Rose Injection).**

Zinc sulphate .....	1 dram
Tincture of catechu .....	4 fl. drams
Tincture of opium .....	4 fl. drams
Glycerin .....	1 fl. ounce
Rose water, enough to make .....	16 fl. ounces

Mix and dissolve.

**Cowslip Perfume.**

Oil of bergamot .....	160 minims
Oil of caraway .....	40 minims
Oil of lavender .....	20 minims
Oil of lemon .....	80 minims
Alcohol (90 per cent.), enough to make .....	10 fl. ounces

**Smokers' Tooth Powder.**

Salicylic acid .....	30 grains
Camphor .....	10 grains
Cuttlefish bone, in powder .....	120 grains
Hard soap, in powder .....	120 grains
Menthol .....	3 grains
Precipitated calcium carbonate .....	2 ounces
Thymol .....	10 grains
Oil of rose .....	4 minims

Mix according to art.

**Antiseptic Foot Powder.**

Oil of eucalyptus .....	2 drams
Salicylic acid .....	1 ounce
Powdered zinc oleate .....	1 ounce
Powdered boric acid .....	10 ounces
Powdered French chalk .....	12 ounces

Mix according to art.

**Chilblain Soap.**

Euresol .....	3 drams
Eucalyptol .....	3 drams
Oil of turpentine .....	3 drams
Soft soap .....	18 ounces

Directions for use: Rub the chilblains several times a day with the chilblain soap, but do not apply the soap to broken chilblains.

**Polishing Soap for Furniture.**

Soft water .....	3 quarts
Turpentine .....	2 quarts
Beeswax .....	3 pounds
Common soap .....	1 1/4 pounds
Litharge .....	3/4 pound

Slice the soap and dissolve in the water over a slow fire; melt the wax; stir the litharge well in the turpentine, and add to the melted wax. Continue the stirring for a few minutes, then pour into the soap solution and stir until incorporation is complete. Apply to the furniture with a piece of flannel and polish with a dry duster.

**Cleaning Powder for Glass.**

Prepared chalk .....	6 pounds
Powdered French chalk .....	1 1/2 pounds
Calcium phosphate .....	2 1/4 pounds
Quillaja bark, powdered .....	2 1/4 pounds
Ammonium carbonate .....	18 ounces
Rose pink .....	6 ounces

Mix thoroughly after reducing each substance to a fine powder, then pass the mixture through a muslin sieve. To use reduce the powder to the consistence of cream with soft water, then apply to the glass by means of a soft rag or sponge; allow the paste to dry on, then wipe off with a cloth and polish with chamois leather.

**Soap Bubble Liquid (Bubbleine).**

Powdered castile soap .....	1 ounce
Glycerin .....	2 ounces
Mucilage of acacia .....	1 ounce
Water, enough to make .....	8 ounces

Mix, make a solution and strain. It is claimed that one ounce or so less of this solution added to a pint of lukewarm water makes a superior bubble blowing compound, the bubbles made therewith being particularly "tenacious."

**Petroleum Brass Polish.**

Tripoli .....	16 ounces
Spanish whiting .....	16 ounces
Powdered pumice .....	8 ounces
Petroleum .....	2 ounces
Petrolatum, enough to make a soft paste.	

Mix into a paste, incorporating sufficient oil of mirbane to produce the desired odor.

**Zinc Phosphate Cement (for Dentists).**

Zinc oxide .....	120 grains
Nitric acid, a sufficient quantity.	

Moisten the zinc oxide with nitric acid; evaporate to dryness; calcine; cool and powder. When required for use, make into a stiff paste with phosphoric acid.

**Polish for Steel.**

Arsenous acid .....	1 1/2 drams
Elutriated bloodstone .....	1 1/2 drams
Antimony trichloride .....	6 fl. drams
Alcohol, 90 per cent. ....	1 pint

Digest at gentle heat, shaking frequently.

**Roup Powder for Poultry.**

Asafetida .....	4 drams
Black pepper .....	1 dram
Grains of paradise .....	1 dram
Dried ferrous sulphate .....	2 drams
Dried sodium sulphate .....	2 drams

Powder each separately and well mix. Incorporate a heaped tablespoonful with the morning feed of hot "middlings" or mash. The above powder is sufficient for 12 chickens.

**Remedy for Chicken Cholera.**

Iron sulphate .....	1 ounce
Capsicum .....	1 ounce
Black pepper .....	2 ounces
Calcium phosphate .....	8 ounces
Fenugreek .....	4 ounces
Sand .....	4 ounces

Reduce all to powder and mix well. An even teaspoonful is to be given with the feed for a dozen fowls.

## FOREIGN ABSTRACTS

### FROM EUROPEAN LABORATORIES.

#### Device to Prevent Poisoning by Hypnotics—Synthetic Rose Oil from Citronella—Hopf and Hopeine—Pyridine in Coffee.

CIMBAL reports an ingenious method of preventing poisoning by overdose of veronal, etc. He combines a certain amount of ipecac with the hypnotic, sufficient to produce violent vomiting if a fatal dose of the hypnotic is taken. Rhodinol is now being prepared from citronellol, and possesses all the properties of the natural product. This cheap source for rose oil may lead to important developments. A recent sensational murder case in Germany reveals the principal as one Hopf, who perpetrated a bare-faced fraud about 30 years ago, in connection with an alleged active alkaloid from hops. Guyer has found that tinctures of digitalis prepared from the laminae only are not of greater strength than those made from midribs, veins, etc., and that statements to the contrary in text-books are too dogmatic. Steinhorst, after examining a number of vegetable drug extracts, concludes that unless extraordinary precautions are taken, copper and tin are almost certain to be present in amounts which would not pass the official tests.

#### Pyridine in Coffee Infusions—

By distilling the infusion of roasted Mocha coffee, Payen obtained a liquid from which ether extracted an aromatic essence, which possessed the odor of coffee. This oil, called cafeone by Pelouze, was later investigated by Erdmann, who found in it traces of acetic acid and furfural, and an unstable nitrogen compound, together with certain substances resembling creosote. Bertrand and Weisweiler have again attacked the problem, working on 5 kg. of roasted coffee, and distilling it with steam. On concentrating the distillate, 1 or 2 cc. of a dense oil were obtained, and an aqueous solution. These two liquids had not only the characteristic coffee odor, but also an odor of amyl alcohol, furfural, and pyridine. The latter compound was isolated as the double platinum chloride and silicotungstate. Pyridine is present in greater proportion than any other of the constituents of coffee oil thus far isolated. From 200 to 400 mg. have been found per kg. of coffee. It is now to be determined whether pyridine plays an important part in the physiological action of coffee. (Bertrand and Weisweiler, Bull. Sci. Pharmacolog., 1913, p. 705.)

#### Stain for Tubercle Bacillus—

Under certain conditions, preparations of the tubercle bacillus do not give conclusive results with Ziehl's fuchsine reagent. In such cases Meillère recommends the following staining solution: Grübler's crystal violet, 2 g.; recently distilled aniline, 3 g.; 95 per cent. alcohol, 10 g.; glycerol, 5 g.; water, 90 g., to be prepared as needed. The material under examination is spread uniformly on glass plates, dried slowly at about 37°, and fixed by heating on a metallic plate held above a water bath. One or two cc. of the staining mixture are poured on and allowed to dry. After 15 minutes of heating, during which all possibility of superheating must be avoided, the preparation is decolorized by immersing in 10 per cent. nitric acid (by volume). It is not necessary to decolorize every particle of material. Next, the acid is removed by washing in water, then with dilute ammonia, and the process is completed by dehydrating with alcohol-acetone. The examination is made with oil immersion, without using a coverglass. If a coloration of the background is desired, dilute solutions of eosin, Bismarck brown, or aniline green are recommended. In short, whenever the Ziehl stain gives a negative or uncertain indication, staining with crystal violet should be resorted to. If the Ziehl stain were rigorously specific for tubercle bacilli, it could be used alone, but its specificity is still in question. (Meillère, J. Pharm. Chim., 1914, p. 23.)

#### Tincture of Digitalis—

Having occasion to prepare a tincture of digitalis from the laminae of the leaf alone, entirely freed from petioles, midribs, and veins, Guyer was led to examine the strength of such tinctures, to ascertain whether they were markedly more active

than tinctures from the rejected portions. The total solid content of two tinctures of official strength, one made from laminae only, and the other from petioles, midribs, and veins, was 5.87 g and 5.29 g. respectively. Physiological tests showed a relative strength of 18 to 15, the tincture from midribs being slightly weaker. Apparently there is no potential difference between the two kinds of tinctures. The only difference observable is a greenish-brown color in the tincture made from laminae, while the other is more brown than green. The special tincture was probably demanded because of dogmatic statements in text-books that only the separated laminae should be used. (Guyer, Pharm. J., 1914, p. 165.)

#### Perfumes from Lichens—

Attention is drawn to the need of investigating the odorous principles of lichens, with a view to using them in perfumery. As a basis for retaining odors in potpourris and sachets, the common reindeer lichen, *Cladonia rangifer* and *sylvatica*, appear very suitable. The tree lichen, *Evernia prunastri*, called oak moss in France, has been used for some years as a basis for perfumes. It is generally found admixed with other less fragrant lichens, but may be readily distinguished by the frond being gray on the outside and white on the under or channelled side. According to Gattefossé, the odorous principle is a phenol, lichenol, isomeric with carvacrol, and soluble in 3 per cent. sodium carbonate solution. A suitable basis for perfumes is obtained by extracting the lichen with a volatile solvent. (Parry, Perf. Essent. Oil Rec., 1913, p. 408; through J. Soc. Chem. Ind.)

#### Source of Lignum Nephriticum—

An abstract published some months ago stated that Müller had found "Lignum Nephriticum" to be derived from one or more species of *Pterocarpus*. Stapf has recently reopened the question, and concludes that the wood comes from *Eysenhardtia amorphoides*. This conclusion is based both on experiment and on a great deal of literary research. Sections of "Lignum Nephriticum" and *Eysenhardtia* show histological identity under the microscope, and infusions of the two woods give identical fluorescence phenomena. (Small, Pharm. J., 1914, p. 4.)

#### Detection of Turmeric—

It is well known that ground white pepper frequently contains a minute quantity of turmeric, about 0.05 per cent. It is added to give a slight yellow tinge. Microscopic examination will not yield absolutely definite results. The boric acid test will not show less than 1 : 1000. The material is extracted with boiling alcohol, the alcohol evaporated in contact with a silk fibre, and the fibre moistened with a dilute solution of boric acid and dried. By making a blank experiment at the same time, comparisons are possible. Bell's test is by far the best. One g. of diphenylamine is dissolved in 20 cc. of 90 per cent. alcohol, 25 cc. of pure sulphuric acid added, and the mixture cooled. If a drop of this reagent is spread on a slide, and the sample placed on the cover glass, and examined under the microscope, each particle of turmeric will be stained a fine purple. The test is extremely delicate. (Chem. Drug., 1914, p. 106.)

#### Hopf and Hopeine—

The German Hopf, recently sentenced to death at Frankfurt for poisoning his wife and children, was the perpetrator of an astounding fake discovery in 1885 and 1886, the announcement of the isolation of a narcotic alkaloid, hopeine, from American hops. The substance was stated to be a crystalline white powder, scarcely soluble in water, soluble in alcohol, and intensely bitter. It was put on the market by the Concentrated Produce Company, of London. Within a fortnight of the publication of the original article, which appeared in the *Pharmaceutische Zeitung*, three French chemists found the supposed hopeine to be identical with morphine. This was confirmed by two English chemists, but immediately afterward, Weissenfeld, another German, pointed out differences between the two alkaloids. Paul, then editor of the *Pharmaceutical Journal*, showed definitely that the substance was a mixture of morphine and cocaine, and characterized the swindle as

a pair of foolish impudence that almost passes belief." Hoff was in charge of the London office for some time, but disappeared on the day that Paul's paper was published. (Chem. Drug, 1914, p. 124.)

#### Mesothorium—

Since thorium-X and its solutions are perishable, and lose half their activity in four days, they cannot be kept in a drug store. In addition, their preparation offers great technical difficulties. The principal source of these substances is the Auer (Welsch) factories in Berlin. The factory must be informed of the daily dose it is desired to administer, in electrostatic units. The shipment is then made at intervals of three days. The amount of liquid calculated for the first day is less than for the second day, and the latter is in turn less than that for the third day. The content of active substance is so regulated that the correct amount is presented each day. The initial charge is also varied according to the length of time required for transport, being double as strong when the goods are intended for Lisbon, for example, as when they are to be used in Berlin. The price is changed with the dose, not with the initial amount of active material. It is about one mark for a daily dose of 100 units, and hence very much lower than for radium emanation, in addition to the preparations being much better tolerated by the patient. (Pharm. Ztg., 1914, p. 63.)

#### Lecithin and Lecithin Salts—

The instability of lecithin is well known, and there is no good reason for believing that the purer products are more stable than the impure. A lecithin prepared by the older scientific methods can be precipitated almost snow-white from its chloroform solution, contains over 8.5 per cent. of phosphorus, and shows the same decomposability as an impure preparation. Saponification seems to be the process most concerned in the decomposition. Lecithin is very sensitive to mineral acids, and much less so to dilute or weak acids. Pure, fresh lecithin is neutral, but becomes acid after a while. Many salts of lecithin with organic acids possess a rather marked stability. The neutral citrate, which has almost the same acid properties as citric acid itself, on account of the hydrate formula of lecithin, has much greater stability than lecithin itself. If moisture is excluded, the preparation keeps for more than a year. As the lecithin content is 93 per cent., the salt can be used for all purposes where lecithin would be prescribed. It is now to be placed on the market. (Laboschin, Pharm. Ztg., 1914, p. 63.)

#### Heavy Metals in Extracts—

The German Pharmacopoeia prescribes tests for the presence of copper and tin in the ashes of plant extracts. Steinhorst examined a number of such preparations which he had made with special care, and found none of them free from these metals. It was found absolutely impossible to prepare an extract free from copper, unless the entire surface of the vacuum pans, etc., used, could be scoured bright. As this is not possible when working on a large scale, slight amounts of copper must be expected in all such extracts. If tin is present as well, this indicates that the tin lining has been neglected. The amount of metals is proportional to the amount of acids in the plant extracts. A number of careful trials were made, with a vacuum apparatus which had been tinned extra heavily, but in almost every case metals passed into the extracts. On examining 35 extracts made by other firms, only two were found to be free of metals, and these were of the same plant, strangely enough. Many of them showed much more than traces of metals. (Steinhorst, Apoth. Ztg., 1914, p. 39.)

#### Gru-Gru Oil—

Gru-gru is the Trinidad name of *Acrocomia Sclerocarpa*, a tree growing on the poorest soil, and belonging to the same tribe as the coconut palm. The kernel of the fruit, about 5/8 inch across, contains about 50 per cent. of fat. The oil, obtained by hot-pressing the seeds, contains 12 per cent. more stearin than coconut oil, and has about the same value as palm oil. Soap made from the oil is almost white, and of good quality. The stearin would make a valuable edible fat. The tree is not at present cultivated in the West Indies, and the gathering of sufficient quantities of the nuts presents considerable difficulties. The oil might be used in the preparation of oleomargarine. (Knapp, J. Soc. Chem. Ind., 1914, p. 9.)

#### Rose Oil from Citronella Oil—

The researches of Barbier and Bouvaut, and Barbier and

Leser, showed that l-rhodinol is a stereo-isomer of d-citronellol, the two bodies differing in the position of the double bond. It is now possible to pass from one substance to the other, and the rhodinol thus made has properties similar to the natural rhodinol, including an odor of fresh roses. The optical rotation is as far to the right as that of l-citronellol is to the left. All three rhodinols are now known, the d-, l-, and i- forms. (Barbier and Locquin, Comptes rend., 1913, p. 1114.)

#### Administration of Guaiacol—

Guaiacol is probably not used nearly as much in pulmonary tuberculosis as it might be. This may be due to the fact that the doses heretofore have not been large enough, or the remedy may not have been given long enough and regularly. From long experience in bronchial cases, Mayberry finds that 5 minim doses three times daily for a few months are unsatisfactory, but by gradually raising the dose to 12 minims thrice daily for four months or more, highly satisfactory results were obtained. To overcome the objection that the drug impairs digestion, Mayberry gives it before meals, and has seen no harm from its use. A mixture of the following formula is used: Guaiacol, 1 fl. dram; alcohol, 1 fl. ounce; syrup of lemon, 1 fl. ounce; spirit of chloroform, 2 fl. drams; water to make 6 ounces. The dose is 1/2 fl. ounce three times per day. (Mayberry, Brit. Med. J., Jan. 10, 1914; through Pharm. J.)

#### To Prevent Poisoning by Hypnotics—

Cimbal recommends the combination of the hypnotic with ipecac, in such proportions that to the minimum lethal dose of the hypnotic is added the equivalent of 1 g. of ipecac in powder, tincture or infusion. The author finds that in women 0.6 to 0.9 g., and in men 0.9 to 1.2 g. of the drug suffice to induce vomiting, even when administered with strong narcotics. Small doses have only an appetizing effect. Veronal 0.3, phenacetin 0.2, ipecac 0.1-0.15 g., with or without codeine, is a typical formula of this sort. Medinal dissolved in infusion of ipecac is also employed. Cimbal believes that it would be an excellent thing if the chemical factories would turn out all the important narcotics and hypnotics in a form which would make their administration possible in the way described. (Cimbal, Münch. Med. Wochschr., 1913, No. 47.)

## NEW REMEDIES

*Hydrascenerion Zyma* is a titrated hydrastis preparation, used in uterine disorders.

*Jodglysol* is a colloidal solution of iodine and glycogen, to be used in injections as a substitute for iodine and iodides.

*Lytinol* is said to be "sodium dioxybenzene-aluminum iodo-hypoidate," and is used in gonorrhoeal urethritis.

*Methylene Blue-Silver* is a dark blue powder, easily soluble in water, and containing 27 per cent. of silver. It is used in injections, in doses of 0.1 to 0.4 g. Slight pain accompanies the injection. No secondary effects could be noted.

*Optochin hydrochloride* is a new protected name for ethyl-hydrocupreine hydrochloride, used in pneumonia and in ophthalmology.

*Papaverine "Roche"* promises to be therapeutically valuable. It has the effect of lowering the tone of smooth muscle, and hence has been used in acute uremic hypertension. The preparation comes on the market in tablets and ampules.

*Phenoval* is brom-valeryl-phenetidin, forming white, colorless and tasteless needles, insoluble in water, difficultly soluble in ether, acetone, benzene, and benzine, but easily soluble in chloroform, glycerol and cold alcohol. It melts at 149-150°. Its uses are as a mild hypnotic, and especially as a headache remedy, without antipyretic action. It is non-toxic and non-habit-forming and the dose is 0.5 g.

*Transpirol* is said to contain "homologues of benzenecarboxylic acid, as cinnamic acid, etc." It is used to allay the odor of perspiration and other secretions.

*Tricalcol* is used for increasing the calcium and albumen content of milk, and is stated to be a colloidal calcium-albumen-phosphoric acid compound.

*Vascosan* is a base for eye salves, which is said to overcome all objections hitherto raised to other bases of the same character.

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**Violet Toilet Lotion.**

(H.S.F.)—Two much-used formulas for "violet toilet lotion" are the following:

- (1)
- Ammonia water ..... 13 fl. ounces
  - Alcohol ..... 12 fl. ounces
  - Essence of violets..... 3 fl. drams

- Mix.
- (2)
- Stronger ammonia water..... 7 fl. ounces
  - Stronger tincture of orris..... 1 fl. ounce
  - Alcohol ..... 1 fl. ounce
  - Distilled water ..... 4 fl. ounces
  - Chlorophyll ..... q.s. to color

Mix and filter in a closely-covered funnel through tucum. As tincture of cudbear with alkalis gives a purplish tint or violet color, it is possible to give the shade desired to this preparation by substituting a little tincture of cudbear for the chlorophyll.

A violet odor can be imparted to almost any lotion by the addition of the synthetic ionone, which may be used in either the form of an alcoholic solution singly, or in combination with tincture of orris. A spirit of ionone used by perfumers to produce a violet odor is made by dissolving ionone (10 per cent. solution) in rectified spirit to make 20 fl. ounces, adding enough of this solution to the lotion to impart the degree of odor required. A violet tint may be imparted by the use of methyl violet, but the amount necessary to produce the shade desired should be determined by careful experiment.

**Female Regulator.**

(G.B.W.)—Most of the preparations of this character on the market under the above name or similar titles are constructed upon the type of the "compound elixir of cramp bark" of the National Formulary. Formulas from other sources are these:

- (1)
- Aletris or stargrass..... 1 ounce
  - Blue cohosh ..... 1 ounce
  - Cramp bark ..... 1 ounce
  - Helonias or starwort..... 1 ounce
  - Syrup ..... 2 fl. ounces
  - Alcohol ..... 2 fl. ounces
  - Sherry wine, enough to make..... 16 fl. ounces

Extract the drugs reduced to suitable powder with 16 fl. ounces of sherry wine previously mixed with the alcohol, and percolate until 14 fl. ounces of liquid are obtained. Mix the percolate with the syrup, and filter if necessary.

- (2)
- Fluidextract of motherwort..... 2 fl. ounces
  - Fluidextract of yarrow..... 3/4 fl. ounce
  - Fluidextract of rue..... 1/2 fl. ounce
  - Compound tincture of cardamom..... 1 fl. ounce
  - Compound elixir of dandelion, enough to make ..... 16 fl. ounces

- Mix.
- (3)
- Fluidextract of blackhaw..... 1 fl. ounce
  - Fluidextract of blue cohosh..... 1/2 fl. ounce
  - Fluidextract of golden seal..... 1 fl. ounce
  - Fluidextract of Jamaica dogwood..... 1/2 fl. ounce
  - Compound tincture of cardamom..... 1 fl. ounce
  - Tincture of cinnamon..... 1 fl. ounce
  - Compound elixir of dandelion, enough to make ..... 16 fl. ounces

Mix the fluidextracts with the tinctures and elixirs; allow the mixture to stand a few days and then run through a wetted talcum filter.

**Books on Radium.**

(W.A. Van W.)—The following are standard books on radium and radio-activity:

- Joly, Radio-activity and Geology.....\$3 00
- Raffety, Introduction to the Science of Radio-activity ..... 1.25
- Robarts, Practical Radium and Uses in the Treatment of Diseases..... 1.00
- Soddy, Interpretation of Radium..... 1.75
- Cameron, Radio-Chemistry ..... 1.00
- Jones, Electrical Nature of Matter and Radio-activity ..... 2.00
- Baskerville, Radium and Radio-active Substances 1.00
- Rutherford, Radio-activity ..... 4.00

As described in a recent issue of the *Journal of the American Medical Association* ("New and Non-official Remedies"), radium is a bivalent metallic element closely related to barium. It is strongly reactive, making it difficult to isolate in its metallic state and after isolation to keep in a pure state, as it reacts with air, forming the oxide, nitrite and finally the carbonate. On account of this activity it is only produced in the form of its salts, principally as the bromide, chloride, sulphate and carbonate. The most important property of radium is its radio-activity upon which depends its therapeutic value. Radio-activity is defined as "the property of spontaneously emitting radiations capable of passing through plates of metal and other substances opaque to ordinary light and having the power of discharging electrified bodies." A spontaneous disintegration of the atoms characterizes all the radio-active elements and it is in this transmission or splitting of the atom that the rays are shot out, some being material in nature, others electrical or of the nature of light. This spontaneous transmutation of radium is going on at a regular rate, which is independent of the state of combination of radium in the molecule of its compounds.

To determine the radio-active value of radium, use is made of its property of ionizing gases. Thus, when radium is allowed to act on the air in a charged gold-leaf electroscope the air becomes ionized and therefore a conductor of electricity and allows the charge to leak out, causing the leaf in the electroscope to move. By observing the rate of movement of the leaf in a calibrated apparatus the radio-activity can be determined. Quantities and concentrations of radium emanation are expressed in terms of "curies" and Mache units. A "curie" is the amount of emanation in equilibrium with 1 gram of radium; a microcurie, one millionth of a "curie," is the amount of emanation in equilibrium with 0.001 mg. radium and is equivalent to about 2500 Mache units.

The rays are divided into three groups, the alpha, beta and gamma, which differ in their velocity and penetrative power. The alpha and beta rays consist of minute particles of matter electrically charged and moving with a velocity almost equal to that of light. They are for the most part of relatively feeble penetrating power. The gamma rays are vibrations in the ether, very similar to X-rays, and of high penetrating power. Therapeutically, the last group is the most useful. Radium emanation is continuously given off from aqueous solutions of radium salts. It can be collected as it escapes from the solution, drawn off through the use of the mercury pump, or by other suitable means, quantitatively determined by either the alpha or gamma ray electroscope, brought into solution in water for internal or external use or be set free in an emanatorium for inhalation treatment. It may be collected into small glass containers and then used in place of the applicators prescribed under surgical use.

The compounds accepted by the Council on Pharmacy and Chemistry of the American Medical Association for inclusion in the forthcoming edition of "New and Nonofficial Remedies" are radium chloride and radium sulphate. While nearly pure

salts of this group are obtainable, the market supply is of a mixture of radium chloride and barium chloride, or of radium sulphate and barium sulphate, respectively, the mixtures being sold on the basis of their radium content.

#### Compound Syrup of White Pine.

(H. L. T.)—A standard formula for compound syrup of white pine may be found in the National Formulary, and the preparation made from it is the only one entitled to the name without other qualification under the Federal Food and Drugs Act. For the sake of uniformity you should use the N. F. preparation, but a formula in which fluidextracts are employed is the following:

Fluidextract of white pine.....	1 fl. ounce
Fluidextract of wild cherry.....	1 fl. ounce
Fluidextract of bloodroot.....	56 minims
Fluidextract of spikenard.....	64 minims
Fluidextract of balm of gilead buds....	64 minims
Fluidextract of sassafras bark.....	32 minims
Morphine sulphate .....	3 grains
Chloroform .....	64 minims
Purified talcum .....	2 drams
Water, enough to make.....	16 fl. ounces

Mix the fluidextracts with about 6 ounces of water and the purified talcum, and stir and agitate about 15 or 20 minutes. Transfer the mixture to a wetted filter, and when the liquid ceases to drop from the funnel, wash the contents of the filter with water until 8 ounces of filtrate have been obtained. In this dissolve the sugar and morphine sulphate by agitation and add enough water, previously passed through the filter, to make, with the chloroform, when added to the syrup, 16 fl. ounces. Lastly add the chloroform and shake thoroughly.

#### Milk of Magnesia.

(H. L. T.)—A standard formula for this preparation is given in the National Formulary, and the same remarks as to the use of the name on any other preparation than the N. F. product noted above apply to milk of magnesia. However, a so-called "improved formula" devised by S. L. Hilton, of Washington, D. C., and published in the ERA of May, 1911 (page 200), is the following:

Magnesium sulphate, U. S. P.....	350 grams
Sodium hydroxide .....	119 grams
Gelatin .....	0.150 gram
Distilled water, q. s. to make.....	1000 cc.

Dissolve the magnesium sulphate in 400 cc. distilled water, filter the solution through paper; dissolve the gelatin in 50 cc. of hot water and add this solution to the magnesium sulphate and then wash the filter with several portions of distilled water using in all not more than 250 cc.

Dissolve the sodium hydroxide in 400 cc. of distilled water; when the solution has cooled, add 300 cc. of distilled water, mix thoroughly, and when both solutions have cooled to room temperature, add the solution of sodium hydroxide to the solution of magnesium sulphate by some means that will deliver the solution of sodium hydrate in rapid drops. Stir the magnesium sulphate solution briskly until all of the soda solution is added then dilute with distilled water to make the mixture measure 3000 cc. Let stand until the precipitate has settled to the 1000 cc. mark on the container, siphon off the supernatant liquid and add 2500 cc. of water, stir well and set aside to settle again to the 1000 cc. mark, siphon off the supernatant liquid and dilute the magma with distilled water until it measures 4000 cc., stir well and set aside to settle to the 1000 cc. mark, draw off the clear liquid, mix the magma well and assay by the process given, diluting, if necessary, so that the preparation will contain 7.5 per cent.  $Mg(OH)_2$ .

For the assay process we must refer you to the issue of the ERA cited above. With this process and the assay method given it is claimed that a uniform product of definite strength can be made.

#### Face Powder.

(L. S. G.)—"Will you please publish in the ERA an A1 formula for a face powder, not a cheap article, but a powder of extra good quality regardless of price?"

As to what constitutes "an A1" face powder is largely a matter of individual preference, the exact cost of production

oftentimes bearing no definite relation to the price charged the consumer. However, here are some typical formulas from various sources from which you should be able to make a selection:

(1)

Bismuth subcarbonate .....	1 ounce
Zinc oxide .....	3 ounces
French chalk .....	4 ounces
Precipitated chalk .....	4 ounces
Corn flour .....	5 ounces
Perfume .....	a sufficiency

Mix thoroughly and sift. The powder may be tinted pink by the incorporation of a little carmine dissolved in ammonia water, while a "brunette" powder is made by admixture with sufficient burnt umber or sienna.

(2)

Whitest Venetian chalk.....	2 ounces
Rice flour .....	2 ounces
Zinc white .....	1 ounce

Mix and perfume with a sufficiency of the following:

Oil of bergamot.....	45 minims
Oil of ylang ylang.....	30 minims
Oil of neroli.....	30 minims
Eau de cologne.....	5 drams

Mix thoroughly.

Swan Down.

Zinc oxide .....	8 ounces
Powdered orris .....	2½ ounces
French chalk .....	10 ounces
Essence of musk.....	10 minims
Jasmine extract.....	60 minims
White rose extract.....	60 minims
Cassie extract .....	60 minims

Mix thoroughly, allow to stand in the air a short time, and pass through a fine sieve ("Pharmaceutical Formulas").

#### Soluble Antiseptic Powder.

(A. N. N.)—A typical formula "for a compound antiseptic powder that can be dissolved in water or be used in the dry form" is that for soluble antiseptic powder of the National Formulary. This preparation, according to the "Physicians' Manual of the Pharmacopœia," is said to be "similar in composition to the various antiseptic powders of more or less secret character sold under trade names." It can be used either as a dusting powder, or in 5 per cent. solution. For the sake of uniformity this is the formula that should be employed.

Formulas for compounds employed for a similar purpose are the following, the last one given being that for "compound alkaline powder" of the British Pharmaceutical Codex Formulary:

(1)

Boracic acid .....	10 ounces
Sodium baborate .....	4 ounces
Alum .....	1 ounce
Zinc sulphocarbolate .....	1 ounce
Thymic acid .....	1 dram

Mix thoroughly. For an antiseptic wash dissolve 1 or 2 drams in a quart of warm water.

(2)

Sodium bicarbonate, in powder.....	1 ounce
Sodium chloride, in powder.....	1 ounce
Borax, in powder.....	1 ounce

Mix. This powder is used to make a wash for the nose in catarrh, 30 to 60 grains being dissolved in 10 fl. ounces of warm water.

#### Black Leather Varnish.

(S. W. D.)—

Rosin .....	30 parts
Turpentine .....	30 parts
Oil of turpentine.....	30 parts
Sandarac .....	60 parts
Shellac .....	120 parts
Alcohol, 90 per cent.....	900 parts

Digest, then add—

Lampblack (previously triturated with a little alcohol) .....	15 parts
---	----------

Recommended as producing a satisfactory black which will not crack or peel off.

# WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

## IV. The Woman Pharmacist's Future.

### IN RELATION TO GOVERNMENT EXPANSION.

**W**E HEAR much about the economics of the home, the individual business, and the community under such names as domestic science, modern efficiency, civic improvement, and social service, but few—very few—are awake to the economics of national progress.

Your horizon and mine has widened within the last 10 or 15 years; so has that of Uncle Sam and Miss Columbia. If it were not so, if the Federal vision remained fixed, then the few who were successful in scrambling to the top of the ladder would stay there and the lower rungs would become much more crowded than they are now. As it really is, however, the ladder keeps growing longer and requiring more rungs so there are more places—more worth-while places, to fill.

#### Pharmacists a Growing Need.

Wherever there are people who are intelligent according to modern standards, health supplies, hygienic sanitation, medical and surgical needs must be met. With our increased possessions come increased opportunities. Alaska, Hawaii, Cuba, the Philippines, Panama, and territorial development, all spell opportunity directly and indirectly. Openings there are which the woman pharmacist can fill directly by seeking them, and when it is impracticable for her to do this, her brother pharmacist is called upon to serve, and so the place he has left is open to her. Indirectly, Government expansion has extended the field for her services.

But, to take advantage of these or any other opportunities, preparation must be made and the situation so thoroughly studied and understood that open doors will be recognized and, when the psychological moment arrives, entered. Sometimes people blunder into the right opening, but more often success is the result of definite, well-thought-out, and persistently-carried-out plans.

#### Commercial Enterprise Not Appreciated.

We have scarcely come to the point of appreciating the many fields of service opening up because of the wonderful commercial enterprise of our people both at home and abroad.

Some of our great pharmaceutical manufacturing houses maintain branches in London, Tokio, Melbourne, etc., and sometimes there are fine opportunities for the trained, specialized worker who would see something of the world and receive a good salary while doing it. American travel is now so extensive that American service in retail lines is also sought, so that the woman pharmacist with the germ of wanderlust in her blood need not feel obliged to remain at home and "to blush unseem" unless she so desires.

Then, too, in our own country the growing sentiment expressed in the modern slogans of "Safety First," "Quality," "Honest Goods," "No False Claims," etc., has been the means of many, many manufacturing firms, and wholesale and retail houses establishing individual or co-operative laboratories for testing the goods they offer for sale themselves or essay to buy of others. Foods, leather, false hair, silks, cotton, medicines, *ad infinitum*, are subjected to searching analysis, and the woman chemist again finds a new and profitable field open to her.

#### The Government Service.

The idea often prevails that profound and unusual attainments and a great deal of pull are necessary to gain an entrance to the Government service. And yet some positions go a-begging because people are afraid to tackle them or do not know of them. An expert needlewoman, for instance, was wanted to repair tattered and historic flags, and even after the Civil Service Commission sent application blanks broadcast for examinations for the vacancy, yet, it is stated, no one applied for the vacancy, although it offered suitable remuneration.

What does the Government hold in its gift of opportunities for the woman pharmacist? The answer today would be altogether too abbreviated tomorrow, for the service is constantly expanding. But there is no mystery about it. Every department has its head whose duty it is to serve the public. Every person has started toward success who takes time to commune with herself and to inquire—"What do I like to do?" "In what field lies my particular opportunity to use my professional knowledge to agreeable and profitable advantage?"

And having decided, lose no time in seeking authoritative information until the nearest avenue of entrance is discovered. Postage stamps are cheap, the mails swift and sure. For informational guidance, "Ask and ye shall receive," and having received it is necessary to act, not to be content with mere dreaming. The field is wide. Where will ye reap?

## A Successful Professional Woman.

**M**RS. DELLA MAE WRIGHT, of Algona, Wash., affords an excellent illustration of what may be done at home, using the means at hand for self-improvement. We cannot do better than to give you a glimpse of Mrs. Wright's work through her own account:

"I have always, since a little girl, been interested in pharmacy and always had a great desire to be in the drug business. I married into a family of druggists and doctors. My husband, his father, uncles and brothers are all druggists or doctors.

"In 1910 we opened this store in Algona, and I, besides helping in the store, began the study of pharmacy. I found it very difficult to get down to hard study and accomplish much without some system to go by, so in December, 1912, I decided to take up the ERA Course. I found it to be a very good and interesting system of instruction. Finished it in February, 1913. In September I took the Washington State examination and passed with honors. There were 28 applicants of whom only eight succeeded in passing. I was the only woman present, and I give much credit to the instruction I got through the ERA Course. I recommend it highly to anyone desiring to study pharmacy at home. At times while studying, I would feel discouraged and be tempted to give up, but would simply force myself to study. It is an easy matter for one to obtain a study at home, but it takes will-power and determination to keep it up day after day and complete a course such as pharmacy; but when it is completed and one successfully passes a State examination, one then realizes the old saying 'What is worth having is worth working for.' I expect to continue in the drug business as I think it one of the most desirable professions for a woman."

What Mrs. Wright has done, others may do if they will but heed what she says concerning the will-power and determination it takes to stick to any work once it is undertaken. Achievements worth while always cost effort and to the persistent and persevering belong the spoils.

## Sister Pharmacists.

There are many noble women serving as registered pharmacists in religious institutions. In some of these it is against the rule to publish individual histories or photographs, while

MRS. WRIGHT.

in others it is entirely permissible. A quotation from a recent letter will make this clear:

"Your letter addressed to Sister Augustine to hand and will say in reply that we, as religious workers, do not have our histories published.

"I can assure you we are very much interested in pharmacy and are pleased that other women are interested in this work also. We thank you for your kind letter and are sorry that we cannot comply with your wishes. Wishing you success, I am,

"Sincerely yours, SISTER THERESA, R.P.H.,  
"St. John's Hospital, Springfield, Ill."

From the above it will be seen that there is a large number of women pharmacists who are working patiently and helpfully for others, yet of whose work we shall never know.

We wish them happiness in their labor of love and in full measure, the ultimate reward of their self-sacrifice.

## An Illuminating Circular.

IT has been said that difficulties are something to overcome. That they may be overcome is shown by the experience of Miss Mary Kennedy, of Lawrenceburg, Ind., a successful woman pharmacist who has not been discouraged by adverse circumstances. After Miss Kennedy graduated from high school she cherished the hope of being a nurse, but as she was needed at home she was obliged to give up the idea for two years, when she was free to enter the Louisville City Hospital training school for nurses, from which she graduated in 1900.

After a year spent at Grady Hospital, Atlanta, Ga., she accepted a position to organize a training school at St. Joseph's Hospital, Savannah, Ga. After two years of this work she found herself very tired, and so decided to go into private work to better enable herself to teach all branches of nursing. A year of this work showed her that if she were to be an all-around expert, she must understand pharmacy, and entering the Southern College of Pharmacy, Atlanta, Ga., she graduated from that institution in 1905, and passed the State Board the same year. Her average was high enough to be recognized by States giving reciprocity. She is also registered in Indiana. While attending the college of pharmacy she spent her spare time nursing.

It now seemed best for her to return to her home town, and soon after her arrival her attention was drawn to a drug store for sale. Upon what was considered good advice, Miss Kennedy, assisted by her father, purchased this store without invoicing the stock. Subsequent investigation proved that the fixtures which had been represented as solid oak were mostly pine and there was considerably less than half the stock which they had been led to believe they would find. This was discouraging for the young lady who had agreed to pay 6 per cent. interest, taxes, and insurance upon fictitious values.

As Miss Kennedy had no experience in retail work, she was obliged to employ a registered man who proved to be dissipated. She was much discouraged to discover that drugs, toilet articles, etc., were being exchanged for strong drink at nearby saloons. She was forced to discharge this assistant, and conduct the business alone. She was working hard, carrying a heavy burden, and not gaining on the principal of her indebtedness although doing fairly well. Determined to improve the situation, she offered her services as a nurse to the local doctors in emergency and needy cases free of cost. This brought little response and again she was disappointed. Most

of the medical men dispensed their own drugs and so had little need of her.

After several more years of struggle people began to call on her as an emergency nurse in surgical and medical cases and she became acquainted with every one. She finally became assistant at major cases and gave anesthetics for minor cases.

It was not possible for her to go elsewhere as the failing health of her mother prevented, and upon her death Miss Kennedy pledged herself not to leave her father. Mr. Kennedy died a year ago. Along with her drug store work she accepted a position of visiting nurse for an insurance company the past year besides other special work. During the Spring Miss Kennedy was unfortunate enough to be in the flooded district and lost considerable, having had eight feet of water in the store, which is located on one of the prominent corners. Since this time she has moved to higher territory about one and one-half miles distant, where the prospects of a good business are very encouraging.

During the flood Miss Kennedy was the only woman to serve on the relief committee as chairman of furniture and fixtures. She investigated conditions in about 400 homes, and during the actual time of the flood visited all the sick in public places, box cars, etc., and signed applications for clothing and bedding for the needy.

At the request of the State Association for the Study and Prevention of Tuberculosis, she is now organizing a county society.

In speaking of her experience, Miss Kennedy says:

"I feel that my experience in the drug business has been wonderful, but for the burden I have had to carry, which at times seemed an impossibility. I would advise women to seek its study but would not like to see others share what I have shared. However, it has made me a better woman, a better nurse, and a better druggist. Perhaps more flattering positions would not have done this. As a profession for women, I could suggest nothing more interesting, but as a conductor of the business it all depends upon the woman, finance and location."

## Canadian Girl Gains Success.

MISS MARION LE PATOUREL, Phm.B., is associated with her father in his retail drug business in Burlington, a thriving place on Burlington Bay near the western end of Lake Ontario.

Upon finishing school, Miss Le Patourel found herself with a good deal of unoccupied time on her hands, and having long been at home in the store atmosphere, it was quite natural that she should give her father such assistance as lay within her power at this time.

Seeing her natural aptitude for the work, Mr. Le Patourel registered his daughter's name in the Ontario College of Pharmacy at Toronto and in due course of time she entered and successfully completed a very satisfactory course. She is now prepared to render material skilled assistance and to take her share of the responsibility.

Miss Le Patourel finds the work pleasant and not unduly taxing. If a hard day's work sometimes leaves her a bit weary, she reflects upon the advantage of association with her father and being able to regulate conditions and hours as seems best.

The Canadian woman pharmacist is rapidly coming to the fore, and by earnest, conscientious work is demonstrating her fitness for the work.

MISS MARY KENNEDY

MISS LE PATOUREL

## N. A. M. M. P. Considers Proposed National Legislation.

*Members and Guests of the N. A. M. M. P. at the Annual Banquet at the Waldorf-Astoria, New York City.*

**D**R. HENRY C. LOVIS, president of Seabury & Johnson, was unanimously elected president of the National Association of Manufacturers of Medicinal Products at that organization's third annual meeting held at the Waldorf-Astoria hotel, Feb. 10 and 11. J. K. Lilly, president of Eli Lilly & Co., was elected vice-president; Charles M. Woodruff, legal adviser for Parke, Davis & Co., secretary; A. R. Dohme, president of Sharp & Dohme, and Adolph G. Rosengarten, treasurer, Powers-Weightmann-Rosengarten Co., members of the executive committee.

In his annual address, President Frank G. Ryan asserted that the association should enter a protest in reference to the ruling that sandalwood used in making sandal oil for medicinal purposes shall pay a duty of 20 per cent. because the oil is used in the making of perfumes. "The proposed duty would entirely destroy an industry that even under the old tariff was only carried on in the United States for the purpose of securing a pure product and not from an economical standpoint."

President Ryan recommended that the association go on record as opposed to any change in the Food and Drugs Act which will repeal the so-called variation clause. He said: "To those who have not given careful study to this subject the suggestion may seem desirable; but when carefully examined it will be found that its effect will be very far-reaching, and, in fact, will prohibit the sale of large classes of medicinal products, such as the mother tinctures of the homeopathic physician, and specific tinctures of the eclectics, and any improved pharmaceutical or chemical product not conforming to the standards of the Pharmacopoeia or National Formulary, thus stifling all progress until such time as those in authority may see fit to recognize such improvements."

Mr. Ryan asked that the association indorse the Harrison bill and urge its passage by the Senate. He recommended that the organization approve of the Drug Trade Conference and continue to lend its support thereto. "The Harrison bill was the result of the work of the Drug Trade Conference in which this association was represented by a very active

committee. It is my opinion that the conference has more than justified itself and by its work has shown that it presents a clearing-house where all branches of the drug trade can meet on equal terms and present their views and formulate policies acceptable to all."

The decision of the Supreme Court on the question of control of retail prices by manufacturers of proprietary products did not appear to the president to be either wise or just. "Certainly nothing will more quickly kill a product or commodity proprietary in character than the cut-price sale of the same by department and retail stores. I am convinced that manufacturers should be given the right to control the retail price of their products." Mr. Ryan recommended that the association approve of the control of retail prices of proprietary products by the manufacturers thereof.

In pointing out the importance of diligent work to attain uniform Federal and State legislation, President Ryan referred to the condition brought about by the daily press with reference to the sale of bichloride of mercury as a good illustration. "We are very likely to have a score of different laws in various States and municipalities, each differing from the other, where in fact no law on the subject is necessary, the agitation of the subject having resulted from sensational newspaper articles which in themselves are the real cause of most of the deaths by the means referred to. \* \* \* Laws on the subject will not protect the care-less or the person bent on taking his own life."

On account of the increasing exportation of chemical and pharmaceutical products and the difficulty of protecting trade-marks in foreign countries President Ryan considered it desirable for the United States to become a party to the agreement for the registration of international trade-marks through the international bureau established at Berne, Switzerland. He recommended that the association do all in its power to bring to the attention of the proper authorities at Washington the desirability of the United States becoming a party to this agreement. In concluding his report, President Ryan also recommended that the dues for the present year be suspended.

Secretary Woodruff presented an extensive report which was

circulated in printed form among the members. Two firms joined the association during the past year and one withdrew; there are now 30 members. Mr. Woodruff pointed out that the organization's "relations with sister organizations have been exceedingly amiable, and have made membership in this Association not only a social but a commercial asset." He reviewed legislative work performed in behalf of the association during the past year, referring in particular to the defeat of disinfectant legislation in Missouri, the defeat of an Iowa measure that would have killed pharmaceutical industry in that State, enlarged upon the solicitation for cooperation in opposing disinfectant and anti-narcotic legislation in Pennsylvania, reported the protest by the secretary to President Wilson against the provision of the Civil Appropriation Act forbidding the use of any portion of the appropriation to prosecute violations of the Sherman Anti-trust law by certain classes, explained the status of the question respecting Cuban regulations of pharmacy, elaborated upon the attack upon the guaranty clause of the Food and Drugs Act and also presented pertinent information upon the poison postal regulation, Treasury decision No. 33456, the forced disclosure of trade secrets to Federal officers and miscellaneous matters.

In his report as chairman of the committee on legislation, Mr. Woodruff pointed out that the pure advertising legislation was one of those measures against which there can seem to be no reasonable objection, and yet for which there is no reason founded in sound government. The distinctions between public wrong and private wrong have been entirely lost sight of and a crime has been made of an act which naturally can never amount to anything more than a private wrong and for which a civil remedy has always existed. The message of Governor Haines of Maine in vetoing the bill deserves, reported Mr. Woodruff, to be preserved in the archives of the association. The Sherley amendment, net weight acts affecting drugs, uniform legislation, insecticide legislation, anti-narcotic legislation, and portending legislation. Mr. Woodruff's report was referred to the executive committee to report back to the whole association their recommendations at a subsequent session.

Mr. Woodruff, J. Fred Windolph and Frank R. Eldred were the association's delegates to the House of Delegates of the A. Ph. A. The first named presented the report of the delegation. Treasurer Henry C. Lovis reported a balance on hand to date of \$9,197. The report of the delegates to the National Drug Trade Conference, Adolph G. Rosengarten, Dr. A. R. L. Dohme and Charles M. Woodruff, was presented by Mr. Woodruff. In behalf of the executive committee Mr. Woodruff presented a number of resolutions which were unanimously adopted, the first referring to the U. S. vs. Parke, Davis & Co. suit for mailing heroin contrary to law. They were in brief:

**RESOLVED**, That this Association recommend to its members and the trade generally that, pending a determination of the issues involved in this suit no opium or coca leaves, their salts, derivatives or preparations be sent by mail; but that pharmacists, physicians, dentists and veterinarians be required to secure such medicinal preparations, however urgent the case, or however remote they may be from express or freight offices, by other means of transportation; and be it further

**RESOLVED**, That this Association, confiding in his sense of fairness and justice, respectfully petition the President of the United States to use his influence with the Postmaster General to give the drug trade and medical and allied professions the deserved relief contemplated by the Congress of the United States when it incorporated the present law in the penal code.

In the preamble to this resolution it is pointed out that manufacturers, wholesale and retail druggists have lawfully mailed orders of valuable therapeutic agents which in over doses may be considered poisons, to their respective business and professional customers, and that this custom so long and generally observed has never resulted in a single reported case of injury \* \* \*; that the manufacture, sale and use according to the direction of skillful physicians of medicinal agents, the most valuable of which are often virulent poisons in large doses, is universally recognized as humane and beneficent \* \* \*; that the various drug interests of the Country have been and still are urging the Postmaster General to promulgate a reasonable rule to carry out the intention of Congress not to exclude medicinal preparations from the mail; that the Postoffice department has repeatedly assured the trade that the mailing of medicinal preparations containing poisons in small proportions would not be considered as coming under the operation of the law; that manufacturers and dealers have been continuing a custom to the advantage of physicians and dealers, especially those in remote places not readily accessible \* \* \*, not dreaming they were violating in spirit or letter any positive law as they certainly were not any moral law, and that proceedings have recently been begun against one of the members of the association

for mailing an alleged poison, by reason of a package of narcotic tablets alleged to have been mailed to a regular wholesale druggist customer, notwithstanding the existing regulation which seems to admit narcotics to the mail.

By resolution, the association went on record as opposed to any provision in the U. S. P. or N. F. prescribing the shape, size or color of mercuric bichloride or other poisonous tablets, or shape, size or color of the packages in which they shall be furnished.

"Human ingenuity cannot devise any plan or scheme more likely to prevent poisoning by mistake than the manufacturers have already adopted; and we believe that the most effective way to further minimize the dangers attending the manufacture, marketing and dispensing of poisonous tablets is to enforce the present State laws when necessary, and above all, to inaugurate a campaign of 'safety first' education, for the purpose of eliminating the element of human carelessness on the part of the public, which carelessness no law or regulation can of itself correct."

The resolution expresses the belief that more can be accomplished by urging the public to keep poisons entirely out of the houses as much as possible, and suggests legislation making the possession of stated poisons, except in some special receptacle, suitably marked, a misdemeanor. The association heartily supported the resolutions passed by the National Drug Trade Conference requesting the newspapers of the country to omit details with respect to murders and suicides.

Relative to a recommendation anent duty on sandalwood logs contained in the president's address, it was resolved that it was the sense of the association that sandalwood logs should be so classified as to be admitted free of duty. Sophistication of sandalwood oil as found in the foreign markets for many years has caused some pharmaceutical manufacturers to import sandalwood logs from Mysore, India, and distil the oil exclusively for manufacturing purposes. It is now proposed to assess sandalwood in the log as a substance in the manufacture of perfumes 20 per cent. ad valorem, whereas the primary use of the logs as imported into the United States is for medicinal purposes.

The association reaffirmed its belief in the equity and justice of paragraph first of Section 7 of the Pure Food and Drugs Act, respecting drugs sold under names recognized in the U. S. P. and N. F.

"This section as it now reads entitles the druggist or physician to understand that any such drug conforms to the standards mentioned, unless notice of the actual standard be indicated upon the label. . . . The elimination from this paragraph of what is known as the 'Variation Provision' would change the entire purpose of the law and make the paragraph in intent and effect one to forbid a druggist from furnishing and a physician from purchasing a drug of a strength, either lower or higher, than in his judgment was preferable to that recognized in the U. S. P. or N. F. . . . The variation clause contained in the Federal Act has been incorporated in two-thirds of the States' laws and other States are gradually incorporating it in their laws, despite the opposition of factions this association believes to be either misguided or malevolent."

The above resolution expresses the protest of the association against the propaganda to eliminate the "variation clause," and urges upon "our Congressmen and the members of our State legislature to study the subject thoroughly and to consider well the effect of such elimination: . . . And we further urge upon the Legislature of those States which have not adopted the provision to do so as soon as possible, pointing out to them the fact that the provision without the variation clause has come to be a dead letter as founded in wrong and injustice and as probably unconstitutional in that, without any reason founded in public policy, it favors one class of drugs over another equally worthy."

The association approved Senate Finance Committee reprint of so-called Harrison Bill No. 6282, as amended by the National Drug Trade Conference at its recent meeting in Washington Jan. 13, 1914.

"And we request Section 6 of said bill be amended so that 1/2 grain heroin shall read 1/4 grain heroin; but we oppose efforts we understand are being made to make the term read 1/2 grain heroin, because in our opinion 1/4 grain is the proper exemption and meets every legitimate requirement of medicine and pharmacy; while it is the exemption usually allowed in State laws."

The association approved of the Drug Trade Conference, authorized its support thereto, authorized the continuance of the present delegates to the conference until after the first meeting of the conference in 1915, and the president was authorized to appoint three delegates whose terms of office shall begin immediately after the above extended terms of office, have been completed.

The executive committee was instructed to take what steps

may seem advisable to promote the joining of the United States of America as a party to the convention for international trade-marks through the International Bureau established at Berne, Switzerland.

The association reaffirmed its approval of the efforts of the National One-Cent Letter Postage Association at Cleveland, Ohio, to secure a rate of one cent on letters, etc., where the rate of two cents now prevails.

A memorial respecting the operation of the Federal serum laws was adopted. It pointed out that:

"In serum therapy the field of opinion is just as large with respect to product and processes. . . . This association holds that when Congress passed these Serum Acts it intended only to assure the public that serums, vaccines, toxins, antitoxins, etc., should be made by skilled experts under conditions insuring the highest degree of quality and purity and the greatest possible freedom from foreign contaminating substances; and to that end to license the laboratory rather than the product issued from the laboratory; to authorize a system of inspection and inquiry that should determine the efficiency of those by whom and the sanitary conditions under which these products were produced. It did not intend to grant any power to compel the disclosure of lawful trade secrets; nor the power to enter the field of controversy and exclude from commerce any product that in the opinion of the licensing power, was not efficacious, or not made by a favored process. . . . This association submits that the facilities possessed by the manufacturers are equal to those of the Government. . . . ; and that there is no reason founded in public policy why the processes and products approved by these experts should be officially condemned because their opinions may not conform to the opinions of those who, for the time being, happen to be in power. . . . Trade secrets disclosed to an official inspector soon become common property—a distinct discouragement to that initiative and enterprise which it is one of the objects of this association to foster and promote." (A penal provision should be introduced into the acts referred to to prevent the disclosure of information of the above character.) "This association further believes that these laws should be amended so as to make it clear beyond contention that nothing contained in them shall give the Secretary of the Treasury and the Secretary of Agriculture, respectively, or any officer or board operating under them, the power to compel any propagator or manufacturer to disclose his processes; or to follow and adopt a particular process; or to discard the marketing of a particular form of serum, toxin, vaccine, antitoxin, etc.

By resolution, the association petitioned Congress to pass H.R. Bill 10,310, introduced Dec. 11, 1913, and referred to the committee on patents as being absolutely necessary to correct the evils of the act approved Sept. 18, 1913, entitled: "An act providing for the free importation of articles intended for foreign buildings and exhibits at the Panama-Pacific International Exhibition, and for the protection of foreign exhibitors."

A resolution, proposed by John F. Queeny, of the Monsanto Chemical Works, was adopted and referred to the executive committee. It instructed the secretary to take up with the proper authorities in Washington the question if the ruling affecting saccharin should not be changed, so as to be in accordance with the findings of the Referee Board.

The subject of changing the date of annual meeting to the first week of February, instead of the second, due to Lincoln's Birthday falling in the latter, was left to the executive committee for action.

Delegates were received as follows: American Pharmaceutical Association, Prof. Joseph P. Remington; Proprietary Association of America, Orient C. Pinckney and Harry B. Thompson, attorney, the latter addressing the association; American Association of Pharmaceutical Chemists, George C. Hall, and National Association of Retail Druggists, Samuel C. Henry. Professor Remington also delivered an interesting address on "The Present Status of the Pharmacopœia."

The association held its annual banquet at the Waldorf-Astoria, about 55 members and guests attending. The speakers were Hon. Herman A. Metz, former Congressman Wm. S. Bennett, Chief Judge Isaac Franklin Russell and Caswell A. Mayo. Henry C. Lovis, the new president, was installed in office. Ex-president Ryan officiated as toastmaster. Congressman Metz talked on pending anti-trust legislation, and urged the members to keep in touch with the administration's measures in this direction as they would affect their business as well as all other commercial enterprises. Former Congressman Bennett made a speech full of wit and humor, but based his remarks upon the serious contention that now, more than ever before, is the time Congress needs "specialists," men who possessed intimate knowledge of the industry and trade with which they were connected. Judge Russell pointed out how difficult it was to discover the source of supply for the narcotics used by criminals detained in prison. He believed it would soon be made impossible to obtain narcotics

except in the legitimate channels of the drug trade. Mr. Mayo urged the necessity of well-conceived and effective legislation for the control of narcotic sales, deploring the tendency toward haphazard "regulation" on the part of legislators not well grounded in the facts as to the "evil" they were attempting to control.

Those who were present at the banquet, the majority of whom were also in daily attendance at the convention, were:

Edward Zink, of Eli Lilly & Co.; Ernest W. Bradford, P.A.A., Indianapolis; L. N. Upjohn, Upjohn Co., Kalamazoo, Mich.; Dr. Light; W. E. Upjohn, Upjohn Co.; A. M. Hance, Hance Bros. & White, Philadelphia; Oscar Smith, Parke, Davis & Co.; H. B. Thompson, P.A.A.; S. C. Henry, N.A. R.D., Philadelphia; B. L. Murray, Merck & Co., Rahway, N. J.; E. H. Nelson, Nelson, Baker & Co., Detroit; Robert J. Seabury, Seabury & Johnson, New York; Dr. Hy. C. Lovis, Seabury & Johnson; Judge Isaac Franklin Russell; Dr. A. R. L. Dohme, Sharp & Dohme, Baltimore; Hon. Herman A. Metz; Frank G. Ryan, Parke, Davis & Co., Detroit; Hon. Wm. S. Bennett; Charles M. Woodruff, Parke, Davis & Co.; Caswell A. Mayo, president-elect A.P.H.A.; Frank E. Halliday, N.W.D.A.; George C. Hall, A.A.P.C., Zemmer Co., Pittsburgh; George G. Williams, E. L. Patch Co., Boston; Wayland Stearns, Frederick Stearns & Co., Detroit; W. W. Jones; D. O. Haynes, D. O. Haynes & Co., New York; J. W. Drysdale, J. W. Drysdale & Co., London; R. C. Stofor, Norwich Pharmacal Co., Norwich, N. Y.; J. Fred Windolph, Norwich Pharmacal Co.; E. L. Benjamin, New York City; J. B. Dakin; Jesse L. Hopkins, J. L. Hopkins & Co., New York City; J. H. Cox, Tilden Co., New Lebanon, N. Y.; Chas. J. Lynn, Eli Lilly & Co., Indianapolis; C. A. Loring, Powers-Weightmann-Rosengarten Co., Philadelphia; Frank M. Bell, Armour & Co., Chicago; Romaine Pierson, New York; Frank L. McCartney, Sharp & Dohme, New York; Mr. Foy; T. E. Crossman; E. J. Kennedy, Jr., New York; W. P. Stearns, Stearns & White Co., Chicago; Dwight F. Scott, National Vaccine & Antitoxin Institute, New York; A. E. Remick, Bauer & Black, Chicago; Dr. A. S. Burdick, Abbott Alkaloidal Co., Chicago; H. J. Woodward, Allaire, Woodward & Co., Peoria, Ill.; H. C. Moore; Louis Ruhl, Roessler & Hasslacher Chemical Co., New York; George Simon, Heyden Chemical Works, New York; E. J. Moller; Robert Du Bois; John F. Queeny, Monsanto Chemical Works, St. Louis; Mr. Wasserscheid, Mallinckrodt Chemical Works, St. Louis; Chas. E. Caspari, St. Louis; Franklin Black, Charles F. Pfizer & Co., Brooklyn.

#### GETTING READY FOR THE N.A.R.D.

The Philadelphia Retailers' Association are making their plans for the National convention to be held in that city during the week of Aug. 17. The following committees have been appointed to take charge of the arrangements:

Local committee, Charles Refhuss, chairman; J. H. Barlow, secretary; D. J. Reese, treasurer; exhibition, M. D. Allen, chairman; R. W. White, S. B. Davis, J. H. Barlow; registration, D. J. Reese, chairman; F. W. Fluck, George W. Fehr, W. A. Carpenter; entertainment, Otto Krauss, chairman; W. E. Lee, O. W. Osterlund, Theodore Campbell.

The work is progressing rapidly and all indications point to a successful convention. The committee on exhibition have already received numerous applications for booths, some of the early birds being The Welch Grape Juice Co., Borden's Malted Milk Co., E. R. Squibb & Sons, Valentine H. Smith & Co., Johnson & Johnson, Smith, Kline & French, Colgate & Co., Tryalax Mfg. Co., DeVilbiss Mfg. Co. and the French Lick Springs Hotel Co.

#### BOSTON CHAPTER, W.O.N.A.R.D.

Boston Chapter of the W.O.N.A.R.D. met Feb. 19 at the Hotel Vendome, and the members were given an instructive lecture on "Mexico" by Mrs. Eudora Utley, who has spent much time in that agitated country. Music was furnished by Miss Mildred Noonan. At the social hour following Mrs. Jessie Waterhouse, Mrs. J. H. Green, Mrs. Trueman Hayes and Mrs. Bertha Morrison poured tea. Mrs. Adelaide M. Godding, 1st president of the W.O.N.A.R.D., was a guest, together with a number of presidents of women's organizations in Boston.

## MOSTLY PERSONAL

### Dr. W. A. Hoelscher, Fairy Godfather.

Dr. William A. Hoelscher, who was formerly a vice-president of the St. L. R. D. A., and is now the president, is one of those physicians who has made a success both of the practice of medicine and the conducting of retail drug stores. The biggest thing in Dr. Hoelscher's career is the fact that he

DR. HOELSCHER

has helped others to success in building his own success. When a very young man he often wished that some generous man of means would give him a boost on the road to a career, but that generous party didn't come around. Dr. Hoelscher buckled down to the grind, however, and determined to be that generous man he was looking for himself, and after a while he arrived. The man who had wished for a boost found in himself the man to give himself the boost and he boosted. Result, he soon had a drug store of his own. He built up his business until he had three clerks, No. 1, No. 2 and No. 3. His store organization was so proficient he could go right ahead with his medical practice, and he did for 15 years. During this 15 years he was adding drug store after drug store to a chain of stores, doing for other young men that thing he had once wished some other good fellow of means would do for him. His plan worked like this: After No. 1 clerk had worked several years and began growing a hardy ambition to own a store of his own, Dr. Hoelscher organized himself into a committee of encouragement and gave financial assistance to Clerk No. 1 in opening a store of his own. A year or so later Clerk No. 2, who had become Clerk No. 1 in Store No. 1, felt an ambition to have a store of his own. Again Good Fairy Dr. Hoelscher, remembering the day when he had wished for some one to give him a boost, revived that old committee of one—himself—which he had originally formed to set up the first Clerk No. 1 in business and then he set up the second Clerk No. 1 in a store of his own. There were now three Hoelscher stores. Old Clerk No. 3 had moved up to No. 2 and then No. 1, and pretty soon he was given a boost in a store of his own. And so it went on until 12 clerks had worked their way up to a store of their own, each receiving assistance from Dr. Hoelscher. This was how the Dr. Hoelscher chain of drug stores came into existence.

Says Dr. Hoelscher: "It wasn't purely a financial proposition; it was a mutual working together for myself and for the men successively in my employ whom I trusted. The remarkable thing about this experience is that not one of the men whom I boosted failed to make good. Of course, I was very careful. I demanded that my men be not only capable but also honest. A man may have great ability but if he is not honest, he won't make a success, or at least he won't do, and his employer soon finds him out. A man may be honest but not have ability. Now that is unfortunate. It takes both honesty and ability to succeed. I watched my clerks for these qualities. Sometimes a clerk was promoted to No. 2 before I found that he did not have just the business capacity I demanded or the proper understanding of his profession, but as a rule no man unfitted for the business got so far as No. 2 before I discovered his weakness in the drug business. You know, some men get into the drug business who have fine qualities in character and in business ability who are not just peculiarly fitted for success in the drug business. My policy worked so well that I always had good, even excellent, men in No. 1 clerkship. Now nearly all of the 12 have paid out, and I no longer have a big chain of stores. In fact, my principal interest now is in my old drug store, the Phoenix pharmacy, at Jefferson and Cass avenues."

Dr. Hoelscher has been for several years in the cigar jobbing business. He wanted to find a good business for his son, William A. Hoelscher, Jr., now about 18 years old. The lad

didn't take much to the drug business. Dr. Hoelscher got in behind him and pushed the cigar jobbing business of William A. Hoelscher Cigar Co., now located in North Third street, a few doors north of Olive street. Recently Taylor Stickney, of the Stickney brothers, who until a short time ago were in the cigar jobbing business in St. Louis, became associated with Dr. Hoelscher in the Hoelscher Cigar Company and Mr. Stickney is now the active manager. Dr. Hoelscher will now be able to retire to his drug store, his first and his real love, while Mr. Stickney guides his son through the cigar jobbing business. Mr. Stickney's former firm was one of the biggest jobbing houses in the country. The company will soon move to No. 311 North Broadway, in the heart of the business center downtown. There will be a retail department in connection with the jobbing business. Dr. Hoelscher, relieved from his duties in the cigar business, and with only the care of his drug store, will now be able to give his almost undivided attention to the affairs of the St. L. R. D. A.

### The Busiest Druggist in Milwaukee.

THE best-known druggist in Wisconsin? Why, Sol A. Eckstein, of course. And Mr. Eckstein enjoys the distinction of having been 40 years in business in one location—40 years on Jan. 16, 1914. Twoscore years ago, then a timid lad of 15, Mr. Eckstein entered the drug store

of I. N. Morton in Milwaukee, told the latter that he had seen a "Boy Wanted" sign in the window, and then further stated that he was the boy. He was. He was told to take his coat off and begin putting things to rights in the store—and he's had his coat off the greater part of the time since. He did not ask what his salary was to be. He wanted the job, and he was satisfied that the wages would be in keeping with what he did. He is in the same store today—but, he owns it. Before the end of his first week he was promoted from errand boy to cashier—that is, when he was not delivering parcels he was making change, and when there was nothing to do along either of these specialized lines he was sweeping the floors or washing bottles.

S. A. ECKSTEIN

A delivery boy in Milwaukee 40 years ago was a busy youth when he did go out. There were neither motorcycles nor electric cars, and there was but one horse car line—but boys did not get carfares often in those days. Mr. Eckstein was both intelligent and wideawake. He made no mistakes either in handling money or delivering parcels; he was honest; and his stipend at the end of the first week was just an even \$2. (Today he is paying errand boys two and three times this amount.)

As to his progress from errand boy in the Morton drug store to the presidency of the Wright Drug Co. at 112 Wisconsin street, why, ask any Middle West druggist. Mr. Eckstein is a true cosmopolitan; he knows his New York and his Chicago (and all the country in between and beyond); he belongs to many National associations, and the roster of his affiliations reads like a page from a directory. Read them: First vice-president of the National Association of Retail Druggists; president of Post B, Travelers' Protective Association; chairman press committee, Wisconsin division, T.P.A. (NO, this sketch did not come from the committee); chairman of the executive committee of the Milwaukee Druggists' Association; supreme representative of the Royal Arcanum; chairman of the Sane Fourth of July Commission; chairman of the legislative committee of the Wisconsin Druggists' Association. He retired from the presidency of the latter body a year ago, having held that office for two years, being the only president re-elected since 1887. Mr. Eckstein is also the president of the Temple B'ne Jeshurun.

—**Julius H. Kahn**, proprietor of Kahn's drug store, at DeKalb, Ill., was a boy to have gladdened the heart of Mark Twain. He was born in Quincy, Ill., in 1870, and people of that city still remember how when he was but a toddler he investigated the gas coming from a sewer manhole with a match he had purloined—and sent a whole block of catch-basin lids aeroplaning toward heaven, when the gas exploded. Not dismayed by this practical experiment in pyrotechnics he a little later touched a match to a pile of dry leaves in the streets and nearly burned the town down, since it was necessary to send across the Mississippi to neighboring towns to get fire apparatus to extinguish the resulting conflagration. But schooling turned his thoughts into other channels, and following his common school training he entered the School of Pharmacy of Northwestern University, from which he graduated in 1890 with honors, and was then made an assistant in the chemical department. At this time the old Honore building housed some of the best-known and most brilliant physicians and surgeons in the State, and they had a private drug store on an upper floor, which did not cater to the retail trade. Mr. Kahn was placed in charge of this, and when the building was torn down and the "staff" moved to the Venetian building in Washington street, Mr. Kahn retained his position as head of the drug room. He assisted in many experiments and was the assistant of Dr. J. B. Murphy, the famous surgeon, when the latter discovered "lumpy jaw." Having some trouble with his eyes, and determined to know what the trouble was, Dr. Kahn took a course in optics at the Northern Illinois School of Ophthalmology at Chicago. Later he began a course in medicine at the Chicago Medical College, but the illness of Mrs. Kahn forced him to leave Chicago and go to a smaller town. Later he went to DeKalb, where he purchased a store, and he is now recognized as one of the most enterprising pharmacists in that hustling city. He does not push patent medicines, but in his handling of side lines and in the operation of his soda fountain—one of the finest in the city—has made a reputation all through the State.

—**John S. Alley**, who has just been made vice-president of the Riker-Jaynes Co., was tendered a banquet Feb. 16 in the State suite of the Copley Plaza Hotel by the executives of 50 New England stores of the company. It was a rather informal affair, and the chief aim was to express to Mr. Alley the esteem in which he is held by his fellow workers in the Riker-Jaynes Company. And they did tell him so, and then they went further, and presented him with a beautiful diamond ring, a gift in which every executive present had a part. W. G. Swett, the dean of the organization, made the presentation speech, and Mr. Alley made a feeling and modest response. Mr. Alley is to be general manager of the entire chain of Riker-Jaynes stores in New England, and the Riker-Hegeman stores in Northern New York. His rise in the Riker-Hegeman-Jaynes syndicate has been steady and swift. He is a native of Marlboro, Mass., and went to Boston 16 years ago as a clerk in Jaynes drug stores, under the personal direction of the late C. P. Jaynes. He was promoted to manager, then buyer, and now will be general manager of more than 100 stores.

—**Fred W. Connolly**, a retail druggist at Dorchester, and instructor in pharmacy at the Franklin Union, contributed \$250 to Mayor Curley's "Boom Boston" fund, and Louis K. Liggett, president of the United Drug Company, contributed \$1000. Mr. Liggett was one of the features at a "boom" meeting Feb. 16, and, incidentally, he told the distinguished company of financiers and capitalists something of the difficulties he encountered in Boston when he was starting the United Drug Company. Boston bankers, he said, not only would not loan him money, but discouraged him in his project, so that for the first few years he had to do most of his banking in New York. Mr. Liggett has been appointed a member of the "Boom Boston" committee of 25 by Mayor Curley.

—**Philadelphia** druggists expressed considerable surprise when Gov. Tener failed to reappoint Dr. Christopher Koch as a member of the State Pharmaceutical Board. Dr. O. W. Osterlund, a druggist at 46th and Baltimore avenue, succeeded him. Dr. Koch was vice-president of the board, and for several years past has made a strenuous fight against violators of the drug laws. With Samuel M. Clement, Jr., a Philadelphia attorney, Dr. Koch prosecuted many cocaine and heroin venders, and he is credited with being directly responsible for curbing the traffic to a great extent. It is well known that

Dr. Koch met with considerable opposition while in office and that his opponents made determined efforts to oust him.

—**Ira H. Bander**, of Providence, R. I., manager of the Massachusetts stores of the Louis K. Liggett Co., was given a bachelor dinner Feb. 6 at the Hotel Westminster in Boston, in celebration of his approaching marriage. The dinner was arranged by C. A. Williams, manager of the cigar department of the United Drug Co., W. C. Watt and T. B. Langdon. Julius S. Kahn, of Brookline, was toastmaster, and H. R. Andrew, of Providence, and Fred L. Tompkins, of Brookline, were the chief speakers. The entertainment of the evening was provided by professional talent, and one of the features was the arrival of three huge marriage bells, out of which stepped, to the surprise of the party, three handsome young women.

—**Alvah P. Greave**, proprietor of the Eagle drug store, Boyertown, Pa., was severely burned recently through the ignition of a compound containing lard which he was preparing in the back room of his store. Throwing the blazing material under the water faucet he started for the cellar to quench the flames in his clothing, but failing to do this, rushed across the street to the hotel, where assistance was given him and the blaze put out, but not before he was severely burned about the face and hands. The fire did \$3000 damage to the store and stock, and six firemen were overcome by smoke.

—**John Graham**, the veteran druggist of Portage, Wis., has been engaged in the drug business in the same stand at Portage for the past 61 years. He is now almost 81 years old. Mr. Graham began business when Portage was only a village and was known as Fort Winnebago. A bank failure during the panic of 1873 swept away his possessions, just after he had completed the erection of the building which he now occupies. He rallied from this and other financial depressions and built up one of the most prosperous drug trades in central Wisconsin.

—**Roy Gunn**, a pharmacy clerk in Grove & Linger's drug store, at Main and Exchange streets, Buffalo, was badly mauled by gunmen, who entered the store, made a purchase, and, when his back was turned, covered him with a revolver. Gunn, however, grappled with the men and was badly beaten, after which the cash register was rifled of \$40. During the encounter one of the hold-up men bit Gunn in the cheek, lacerating it quite badly. He was given medical attention and removed to his home. The thugs got away.

—**William R. Copeland**, of New York, has been appointed chief chemist and bacteriologist for the Milwaukee sewerage commission at a salary of \$3600 per year. Mr. Copeland graduated from Harvard in 1892 and since that time has held numerous responsible positions throughout cities of the East. His last position before coming to Milwaukee was that of chief chemist and bacteriologist for the Metropolitan sewer commission of New York.

—**Mr. and Mrs. C. J. Lynn**, of Indianapolis, sailed for Europe from New York, Feb. 12. Mr. Lynn is general manager of Eli Lilly & Co., and while the trip is essentially one of business, Mr. and Mrs. Lynn will combine it with pleasure in their travels. Some little time will be spent in England, and an extensive tour of the Continent is planned. It is expected that Mr. Lynn will be absent several months.

—**Henry J. Landers**, druggist, 8204 Alabama avenue, St. Louis, and his wife and daughter and a nephew were awakened recently at 5 a.m. to find the store under their apartment on fire. The parents wrapped the baby in a blanket and with the nephew fled in their night clothes. The drug stock and house furnishings were destroyed and the building was damaged.

—**Harold Baebenroth**, manager for the past year of the Kenosha, Wis., store of the Kradwell Drug Co., of Racine, Wis., has resigned and has left for Minneapolis, where he has accepted a similar position. E. J. Hayek, with the Kradwell Drug Co. for the past seven years and recently manager of the company's Center street store in Racine, has succeeded Mr. Baebenroth.

—**Theodore Hoyer**, who a number of years ago was employed as a druggist by J. F. Sullivan, of Hurley, Wis., is now a teacher of languages in Tokyo, Japan, and was an eyewitness of the recent earthquake and volcanic eruptions in that country. After leaving Hurley, Mr. Hoyer entered the University of Wisconsin, where he graduated last June.

—**W. W. Curtis**, of Birmingham, Ala., recently visited New York. Mr. Curtis is one of Sharp & Dohme's general representatives, and has working under him about 20 salesmen who cover the Central Southern States. He reports trade conditions were quite satisfactory during 1913, and indicates that the druggists of his section are optimistic as to the present business outlook.

—**P. E. Herman**, general representative of Sharp & Dohme, with headquarters at Cincinnati, Ohio, recently visited the firm's laboratories at Baltimore. He was accompanied by two of his Kentucky representatives, Messrs. Oscar Paul and J. B. Severs. Before returning to their respective territories they visited New York and other Eastern cities.

—**Oscar C. Stockmeyer**, who has been connected with the Huber Bros. Drug Co. of Fond du Lac, Wis., for the past six years, has resigned to accept a position with a pharmacy at Two Rivers, Wis., his former home. He has been succeeded at Fond du Lac by Fred B. Staeben, formerly of Beloit, Wis., but recently of Milwaukee.

—**C. F. Wenneker** has been chosen as chairman of the Manufacturers' Committee of the St. Louis Business Men's League, and C. P. Walbridge as chairman of the Taxation committee. George R. Merrell is a member of the Legislation (Municipal) committee, and Vincent L. Price a member of the Commerce committee.

—**J. W. Drysdale**, of J. W. Drysdale & Sons, import and export commission agents, 16 Fish street Hill, London, England, is spending a few weeks in this country. Mr. Drysdale is well known to many large buyers of drugs and chemicals, many of whom have had business relations with him for the past 30 years or more.

—**Fred A. Hubbard** and Thomas W. White, both of Newton, and who are considered among the most prominent druggists of Massachusetts, had much to do with the organization of a board of trade in Newton, Mass., last month. Mr. Hubbard was elected president, and Mr. White one of the vice-presidents.

—**Harry B. Mason**, of Detroit, spoke at the Massachusetts College of Pharmacy recently, to an audience of 250 people, on "Business Accounting in the Drug Store." Dean Theodore J. Bradley was the chairman and a musical programme and refreshments were also features of the evening.

—**J. H. Sours**, a druggist of Olivet, Mich., had a narrow escape from losing his eyesight recently when some concentrated carbolic acid he was boiling exploded, following the addition of a little water. He was very badly burned about the face, but his glasses protected his eyes in large measure.

—**Joseph Brown**, of the drug firm of Rosseau & Brown, Woonsocket, R. I., has brought suit against the N.Y., N.H. & H. railroad for \$2000 for damages for injuries received by being crushed between a trunk and the baggage car of a train at Point Pleasant station, Webster, last September.

—**Miss Marie C. Reichel**, of Indianapolis, and Mrs. Bertha H. Ellis, of Terre Haute, Ind., were among those who were applicants for registration as pharmacists at the January examination given by the Indiana State Board of Registration and Examination in Pharmacy, in Indianapolis.

—**Irving P. Gammon**, former president of the Massachusetts College of Pharmacy, presided at the annual reunion of the Massachusetts Alumni Association of Bridgton Academy, at the Quincy House, Boston, on Jan. 20. Mrs. Gammon and Irving P. Gammon, Jr., were also present.

—**Charles Wright**, manager of the Hall & Lyon drug store in Essex street, Salem, Mass., has been transferred in line of promotion to one of the big Liggett stores in Boston, while Frank B. Sullivan has been transferred from Boston to the management of the Salem store.

—**Professor John Uri Lloyd**, of Cincinnati, was the principal speaker before the annual meeting of the Southwestern Ohio Eclectic Medical Association, held at the Hotel Sterling, Cincinnati, recently. He spoke upon the lives of many prominent medical men.

—**Charles F. Cutler**, president of the Eastern Drug Co., of Boston, and Stephen L. Bartlett, importer and agent of a Dutch chocolate, have both been re-elected trustees of the Home Savings Bank of Boston. Mr. Cutler is also a member of the investment committee.

—**Warren R. Potter**, who has been confined to the Brooklyn Hospital for more than two months, with typhoid fever, will be well enough to leave the hospital for his home at an early date. Mr. Potter is a member of the sales staff of Sharp & Dohme.

—**George Wagner**, who for the past four years has represented the National Ammonia Co. in New York and vicinity, has resigned his position to take up scientific farming. He was presented with a silver loving cup by his co-workers on January 31.

—**Lewis Marks**, United States Food and Drug Inspector for Eastern Kentucky, Tennessee, Georgia, Alabama and North and South Carolina, will hereafter make Chattanooga his headquarters, being located in the Federal building.

—**E. T. Curtis**, manager of the St. Louis branch of Sharp & Dohme, was a recent visitor in New York City. Mr. Curtis also spent several days in the firm's laboratories at Baltimore, Md., before returning to St. Louis.

—**Edgar E. Barnes**, a drug clerk of Indianapolis, was married to Miss Elizabeth E. Kretz, a stenographer of Cincinnati, Ohio, at the court house at Lawrenceburg, Ind., recently. They will reside in Indianapolis.

—**Wilhelm Bodemann**, who was taken ill with pleurisy the latter part of January, was well enough to attend the annual meeting of the Tampa-Cuba Cigar Co., at Tampa, Fla., where he was re-elected vice-president.

—**H. E. Hobbs**, a Meyer Bros. Drug Co. department manager, St. Louis, recently suffered an accident to one of his eyes, but it was stated at the big jobbing house that he was expected to recover full use of the eye.

—**Lewis C. Ladon**, a retail druggist at South Bend, Ind., recently inherited a package of old stocks and bonds. He took them to New York to determine their value and has received an offer of \$250,000 for them.

—**Fred Schmidt**, who was for a number of years connected with the drug store of Voss & Ehlers, of Cincinnati, has purchased the store of the late Fred Oswald at Wheeler and Warner streets, that city.

—**Harry E. Robertson**, manager of the Frederick Brown Co., No. 17 North 6th street, Philadelphia, has been confined to his room for several weeks, suffering from a severe case of rheumatism.

—**William G. Nebig**, a prominent Philadelphia druggist, at 18th and Susquehanna avenue, is making a tour of the Hawaiian Islands. It is expected that he will be away several months.

—**Henry L. Hudson**, holding to the motto, "The best is none too good for the sick," has made his drug store at 5600 Delmar boulevard one of the finest in the West End, St. Louis.

—**Edward W. Steinicke**, of 129 Vernon avenue, Long Island City, has opened up a branch store at Astoria. The building is new, and the store-room is very attractively fitted.

—**Dr. M. C. Cornell**, of Dallas, Tex., with Mrs. Cornell, were recent visitors at New York and Baltimore. Dr. Cornell has charge of Sharp & Dohme's sales force in Texas.

—**John M. Fallon**, one of the vice-presidents of the Ohio Valley Druggists' Association, has returned from Birmingham, Ala., where he spent a delightful 10-days' vacation trip.

—**A. H. Philips**, son of the well-known druggist, W. H. Philips, Morris Park, L. I., has accepted a position with the A. F. Douden pharmacy, of Jamaica, L. I.

—**L. F. W. Seifert**, the retired pharmacist of City Island, and his son, Carl, are absent from the city on a three weeks' excursion to Panama and the West Indies.

—**Martin Neumann**, of Astoria, L. I., has been suffering with the grippe for the last 10 days. We are pleased to report that he is able to be at his store again.

—**Miss Lorraine Meyer**, daughter of A. C. Meyer, of Meyer Bros. Drug Co., St. Louis, recently gave a dance party at the home, 3954 Flora boulevard.

—**Mrs. William E. Lee**, secretary of the W.O.N.A.R.D., held her annual reception to the Philadelphia chapter at her home in 24th street on Feb. 5.

—**M. Curiel**, of the Crown Cordial & Extract Co., is making a six weeks' trip to the Pacific Coast.

— **W. C. Hayhurst**, manager of the St. Louis branch of Parke-Davis, who was seriously ill for some time, is on the road to recovery.

— **Dr. E. A. North** and Dr. Moses Scholtz were speakers before the meeting of the Cincinnati Academy of Medicine at Cincinnati recently.

— **W. W. Chubbuck**, who is the proprietor of several stores along Rockaway Beach, is opening a branch store at Freeport, L. I.

— **Albert Plaut**, of Lehn & Fink, who has been abroad in the interests of his firm, is expected back in New York early this month.

— **A. M. Ochse**, sales manager, Meyer Bros. Drug Co., St. Louis, who has been ill, is reported recovering.

## OBITUARIES

### Samuel Jones Tilden.

**SAMUEL JONES TILDEN**, president of the pharmaceutical manufacturing house of the Tilden Company, New Lebanon, N. Y., and fiscal supervisor of State charities since June, 1912, died Feb. 17 at a hospital in Albany. He was 61 years of age and had been ill for more

than a year. He was a nephew of former-Governor Samuel J. Tilden, who was the Democratic candidate for President of the United States in the campaign of 1876, and although he was not able to participate in the exercises commemorative of the 100th anniversary of his uncle's birth on Feb. 8, he watched the procession from his window. He had spent the greater part of his life in New Lebanon, N. Y., as the executive head of the company founded originally by former-Governor Tilden, but he occasionally visited the branch offices of the company in St. Louis, in charge of Vice-President T. B. Glazebrook.

MR. S. J. TILDEN.

Mr. Tilden was appointed fiscal supervisor by Governor Dix.

### Constantine G. A. Loder.

**PHILADELPHIA'S** most widely-known druggist, Constantine G. A. Loder, died on Feb. 12, at his residence, 5104 Pulaski avenue, of pneumonia, after an illness of only one week. Mr. Loder's death came as a great shock to his many friends. He personally conducted the business at 16th and Chestnut streets up until the time

of his illness, and the store is now in the hands of his son-in-law, Edward Wiener, an attorney, temporarily.

Mr. Loder first came into prominence when he fought, first single-handed, and then with the aid of the Government, the so-called "Drug Trust," and obtained a verdict for \$62,214. At this time he was one of the most flagrant "rate-cutters" in Philadelphia. He thus incurred the enmity of the other druggists, both retail and wholesale. It was alleged by him that there was a combination formed against him, in violation of the Sherman Anti-Trust Act, which prevented him from obtaining certain supplies. He applied to the Government to take up

C. G. A. LODER

his case and, on their refusing, instituted a suit for \$100,000 against the National Wholesale Druggists' Association. After

all the evidence had been introduced the Government took up Mr. Loder's side of the case, and after a long legal battle was awarded the verdict. In a later case the Government used the same evidence. Much of the animosity towards him has been swept aside the last few years, as the result of retail druggists almost as a whole indulging in price-cutting to some extent.

Mr. Loder was born in Stroudsburg, Pa. about 64 years ago. He was educated there and entered a local pharmacy, where he learned the profession. He then went to Philadelphia in search of his fortune and located at 16th and Chestnut streets. His wife died several years ago. The body was buried from his late residence, 5104 Pulaski avenue, and the interment was in Woodland Cemetery. He was a member of the Manufacturers' Club, Business and Professional Men's Club, the Cedar Yacht Club and other organizations.

### Dr. Ray Vaughn Pierce.

**Dr. Ray Vaughn Pierce**, president of the World's Dispensary Medical Association, and founder and head of the Invalids' Hotel and Surgical Institute in Main street, Buffalo, died at his Southern home on St. Vincent's Island, Florida, Feb. 4. Death was due to paralysis, and he had been in a serious condition for two months before the end came. He was 74 years of age. Dr. Pierce went to Buffalo from Titusville, Pa. in 1867, where as a young man he began the practice of medicine, and soon afterwards began the manufacture of proprietary medicines, notably the Golden Medical Discovery. In 1877 he was elected to the State Senate as a Republican and served for two years. In 1879 he was elected to Congress and served until 1881. He was always interested in pharmaceutical affairs and was an active organization man with the proprietary medicine manufacturers, serving as president of the National Association of Proprietary Manufacturers from 1888 to 1894, and fighting energetically in the interests of price protection, at a time when price-cutting, if possible, was more energetic than at present. At the time of his death Mrs. Pierce, who was Miss Mary J. Smith, and his son Hugh, with the latter's wife, were with him, and they accompanied the body to Buffalo for burial, the funeral taking place from the hospital bearing his name under the direction of the Masonic order. Dr. Pierce was a high-degree Mason and was affiliated with Washington Lodge, 240, of Buffalo. He was also a member of the New York Yacht Club, the Buffalo Club, and a number of fraternal organizations.

### Frank S. Henry.

**Frank S. Henry**, founder and for many years the head of Williams Manufacturing Company, dealers in patent and proprietary medicines, Cleveland, Ohio, died at his residence in that city, Feb. 13, at the age of 68 years. The immediate cause of death was pneumonia, this developing, however, from a cold contracted at Hot Springs, Va., where the deceased had spent several months in the hope of recovering from an attack of arterio-sclerosis. Mr. Henry was born in Waterbury, Vt., Oct. 16, 1846, of old New England stock. On the breaking out of the Civil War he left school and entered the army, where he remained until the surrender of Lee at Appomattox. After the war he attended a business college at Poughkeepsie for a few months, but gave this up to become a commercial traveler with John F. Henry & Co., of Waterbury, Vt., New York and Montreal. He remained with this firm for more than 15 years, traveling in its employ all over this country and the rest of the civilized world. For more than 10 years Mr. Henry traveled for Hall & Ruckel, New York.

Mr. Henry established a proprietary articles and patent medicine business of his own in this city more than 20 years ago, but moved this enterprise to Cleveland, in which city he formed the Williams Mfg. Co. In this concern he was associated with W. A. Jewitt. Until recent years he was a frequent attendant at the N.W.D.A. meetings, of which organization his firm was an associate member.

### A. C. Meyer.

**A. C. Meyer**, head of the firm of A. C. Meyer & Co., manufacturers of Dr. Bull's Cough Syrup and other specialties, died Feb. 4 at his home in Roland Park, a suburb of Baltimore, after a short illness with pneumonia. His will, as probated at Towson, Baltimore county, leaves the entire estate, the value of which is not stated, to members of the family, in trust, two sons-in-law being named as trustees, with the Fidelity Trust

Company as their successor if it transpires that the business of A. C. Meyer & Co. is not capable of paying the annuities set out. The business in this event is to be sold and the proceeds turned over to the Fidelity Company, which is to invest the money and pay the widow one-half and the son and daughters each a tenth of the income. If the business is continued by the trustees, the latter are to pay the widow \$150 a month and each of the children \$80 a month, the net profits at the end of the year being divided in the same ratio. After some specific bequests the residue of the estate is left to Mrs. Meyer, who is also to receive among other property the warehouse on West Lombard street, where the firm formerly carried on operations. Some time ago it moved to South Baltimore into larger quarters.

#### Charles S. Erb.

Charles S. Erb, ex-president of the New York College of Pharmacy Alumni Association, a trustee of the College of Pharmacy, and at one time secretary of the New York State Board of Pharmacy, died Feb. 10, after one day's illness with pneumonia. Mr. Erb was of German parentage and was born in New York City in 1867. He received his education in the public schools, entered the drug business in 1881, and was graduated from New York College in 1886. For a number of years he conducted a store at the corner of 65th street and Amsterdam avenue, and later at 108 Amsterdam avenue. He was a tremendously hard worker and became very well known through his affiliations. In addition to his trusteeship of the College of Pharmacy he was for a number of years chairman of its property committee. He was ex-president of the Manhattan Pharmaceutical Association, a member of the New York State Ph.A., of the German Apothecaries' Society, and of the West Side Dispensary. He was a past master of Charity Lodge, F. & A.M., under whose direction the funeral services were conducted on the evening of Lincoln's birthday (Feb. 12). The interment was at the Lutheran Cemetery.

#### Charles H. Church.

Charles H. Church, dean of the druggists in New Bedford, Mass., and for 65 years connected with business in that city, is dead from bronchial pneumonia. He was born in New Bedford in 1830. As a youth he learned the business with Charles A. Clark, and in 1848 began his career as a druggist at Purchase and Middle streets. For a short time afterwards he worked at the Dr. Stevens' pharmacy in Boston, and then for a while in Brooklyn, N. Y., but he returned to New Bedford in 1852 and purchased the business at Kempton and County streets established by Warren B. Potter. Three years later he bought the store at Purchase and Middle streets, and he ran the two places for two years. As time went on he encouraged his sons, Frank H. and Harry M., to learn the business, and in July, 1881, he purchased the Otis pharmacy at Pleasant and Union streets, which he placed in charge of the boys, retaining at his old store Herbert A. Blackmer as clerk. Mr. Blackmer marrying a daughter of Mr. Church. Mr. Church was an enthusiastic baseball fan, a volunteer fireman, one of the founders of the New Bedford Druggists' Association, and its vice-president for a number of years.

#### Albert S. Bischof.

Albert S. Bischof, retired pharmacist, died Sunday, Feb. 15, at the residence of his son, Dr. Louis Bischof, 120 East 34th street. Mr. Bischof was born in Freiburg, Germany, nearly 82 years ago, where he also studied pharmacy. He came to this country at the age of 21, and almost immediately became known in pharmaceutical circles. Mr. Bischof was a very active member of the German Apothecaries' Society, and as a member contributed considerably to the uplift of the profession. On the occasion of the society's 25th anniversary he was chairman of the entertainment committee and much of the success of that celebration was due to him. Since 1866 he had been a member of the New York College of Pharmacy, from which institution four of his sons have graduated and at which a granddaughter now attends. The Rev. George C. F. Haas conducted the funeral ceremonies, which, besides the relatives, was attended by many friends of the deceased.

#### Dr. Samuel W. Freeman.

Dr. Samuel W. Freeman, who opened a drug store in Chelsea, Mass., Oct. 15, 1858, a store still continued by his son,

died at his home in Everett Feb. 20, in his 84th year. He was born in Limerick, Me., March 17, 1830, and graduated from Bowdoin College in 1854. Later he took the degrees of A.M. and M.D. from the college. He went to Boston upon the completion of his medical studies, and was appointed assistant port physician. The next year he engaged in the drug business on Broadway, Chelsea, where the business is still carried on by his son, Charles W. Freeman. In 1867 Dr. Freeman was elected to the legislature from Chelsea, and later he served the city as an overseer of the poor. In two weeks, on March 8, he would have observed his golden wedding anniversary. He is survived by a wife and two sons—Charles W. Freeman, Ph.G., of Chelsea, and Dr. George F. Freeman, U.S.N., a surgeon.

#### Henry T. Cutter.

Henry T. Cutter, of 871 Lexington avenue, New York, and the founder of the corporation which originally controlled the Hegeman & Co. stores, died recently at his home. He was a native of Newburyport, Mass., having been born there in 1830, was educated in the public schools of that town and as a young man was employed by the firm of Jordan, Marsh & Co., of Boston. During the Civil War he was the proprietor of a large drygoods store in Prince street, Manhattan, which he gave up in the early 70's to embark in a theatrical enterprise. For five years subsequently he was manager of the Chestnut Street Theater, Philadelphia. In 1878 he purchased the drug store of Hegeman & Co., at 203 Broadway, from John Nevin Hegeman, and incorporated it under the old firm name. Later the store was moved to 196 Broadway. Mr. Cutter disposed of the business in 1899, and since that time has been retired from all the activities of commercial life.

#### Conrad A. Speidel.

Conrad A. Speidel, a pioneer druggist of Rock Island, Ill., who had been a resident of that city for 55 years, is dead at the age of 85. He had been in failing health for several weeks, and death was due to the infirmities of age. He was a native of Wurtemberg, Schorndorf, Germany, and learned the drug business there. For several years he was a druggist at Vevey, Switzerland, and then came to this country and worked in a New York drug store. His next move was to Philadelphia, but in 1858 he went to Rock Island and entered the drug business under the name of Speidel & Glacius. He later made changes, but conducted one store in Rock Island for the period of 48 years. One son, Hugo, is a contractor at Paterson, N. J.

#### Aemilius R. Meisner.

One of the oldest druggists in Davenport, Iowa, Aemilius F. Meisner, 74, died at his home recently. For more than 45 years he had conducted a drug store in that city, first operating in 1869, at 416 West Second street. Selling his first store in 1873, he opened another, and later erected his own building at 1115 West Third street, where he was located up till the time of his death. He was born in 1839 at Kappein, Schleswig-Holstein, Germany, was a graduate of Melburg College, and came to America in 1860. He was a veteran of the Civil War.

#### O. N. Garrett.

O. N. Garrett, for 27 years a prominent druggist and senior member of the firm of Garrett & Ayres, Hillsboro, Ohio, and president of the Ohio Pharmaceutical Association in 1902, died very suddenly at his home on the eve of Jan. 1. Mr. Garrett was one of the solid, substantial business men of Hillsboro, and enjoyed the respect, confidence and esteem of all who knew him. His religion was exemplified in his daily life and was not, nor needed to be, heralded from the housetops. Of him it can be truly said the "world is better for his having lived."

#### George Elmer Torrey.

George E. Torrey, one of the best-known druggists in Haverhill, Mass., where he had been employed at the Holden drug store for 10 years, died at his prescription counter of heart disease recently. He was a native of Newburyport, Mass., was educated in the public schools, and learned pharmacy in Newburyport drug stores. He was a Mason and K. of P.

#### George A. Graves.

George A. Graves, a former president of the Chicago Retail

Druggists' Association, who had been actively engaged in the retail drug business in Chicago and adjacent territory for the past 25 years, is dead at the age of 47 years. He left a widow and two sons. His home was at LaGrange.

#### Thomas A. Bronson.

Thomas A. Bronson, a drug broker of 13 Gold street, New York, who was also well known throughout the country as a purchaser of ginseng and other crude drugs for export, died Feb. 24 at the New York Yacht Club, after a long illness. He was 73 years of age, and was born in Philadelphia. At the beginning of the Civil War he left Yale, where he was a student, and enlisted, joining a Pennsylvania artillery regiment. At the end of the war he started in business in Philadelphia, later moving his establishment to New York. His wife died in 1876.

#### Robert Van Sant.

Robert H. Van Sant, wholesale druggist at Oakland, Cal., and formerly at the head of drug stores at Atlantic City, Ocean Grove and Trenton, N. J., is dead at the age of 56. He leaves a widow and one son, Robert H., Jr.

#### OTHER RECENT DEATHS.

—Mrs. Geo. H. Landon, the wife of Geo. H. Landon, of Pocahontas, Va., died at the home of her daughter, Mrs. Floyd Black, of pneumonia. Mrs. Landon was married to Dr. Geo. H. Landon in 1865, just at the close of the Civil War. Dr. Landon is the oldest living druggist in the State of Virginia, having been a practicing druggist before and during the Civil War. To their union is left Frank P. Landon, a druggist at Charlottesville, Va.; J. A. Acton Landon, a druggist at Buena Vista, Va., and George Sibe Landon, a druggist at Pocahontas, Va. Two other sons are not druggists. Mrs. Landon was in her 74th year, having been born in Virginia, May 22, 1839.

—James G. Steele, a pioneer druggist of San Francisco, and formerly city chemist there, died Feb. 3. Just prior to his death he had completed a history of the California College of Pharmacy, which is now being published. He was born in Boston in 1833, and went to California in 1852 to engage in the drug business. He was located for a number of years in the Palace Hotel building in Market street, and for a time was secretary and a member of the board of trustees of the California College of Pharmacy. He was a charter member of the California Pharmaceutical Association.

—Dr. Robert Kennedy Duncan, director of the Mellon Institute of Industrial Research of the University of Pittsburgh, and an author of repute on industrial chemistry and radio-activity, is dead after an illness of several weeks. Previous to his connection with the University of Pittsburgh he had been affiliated with the faculties of Washington and Jefferson College and of the University of Kansas, where he was a member of the faculty of the School of Pharmacy. He was a member of many important chemical societies.

—Peter C. Kraemer, 29, a well-known Buffalo pharmacist, succumbed to an attack of heart failure, Feb. 3, at his home, 225 Monroe street. Mr. Kraemer had retired in apparently good health, but was attacked by heart disease and expired before the arrival of a physician. For the past five years he had been identified with the Sloan-Heegaard Drug Co., and was held in high regard by his firm and associates. He was prominent in social-fraternal circles.

—John E. Lambert, for many years engaged in the retail drug business in Indianapolis, died at his home in that city recently after a short illness from pneumonia. He was born in Rockville, Ind., in 1867 and was in the drug business in Indianapolis 18 years, having succeeded his father. Mr. Lambert had recently opened a new store at East Washington street and Tacoma avenue. The business will be continued by his son Harry.

—Simpson A. McConnell, proprietor of the Concord drug store at Concord, Mass., dropped dead in his store Feb. 10, of heart disease. He was 65 years old. For many years Mr. McConnell had been active in the civic and religious affairs of Concord, and had served as clerk of the Congregational (Trinitarian) Church, and treasurer of the Congregational Brotherhood.

—Dr. Jacob Frantz, millionaire president of the Dentist Supply Company, with office in the Emerson building, New York, died at his home in New Rochelle, N. Y., on Feb. 8, of Bright's disease. Dr. Frantz had lived in Wilmington years ago, and his brother, Dr. A. Frantz, of that city, is secretary of the Delaware State Board of Health.

—Albert Swisher, one of the most popular of Johnson & Johnson's sales force, died Feb. 16, at his home in Lancaster. He has been the Pennsylvania representative of the company for nearly 16 years and is known to druggists from one end of the State to the other. He was an active member of the Masonic and other lodges.

—C. W. A. Friedrich, a well-known patent-medicine manufacturer of Fond du Lac, Wis., died recently after a long illness, at the age of 58 years. Mr. Friedrich was born in Germany, and came to America with his parents at the age of 13 years. He had been engaged in the medicine manufacturing business for 30 years.

—Charles J. F. Lane died from apoplexy at his home in Indianapolis, Jan. 7. He was stricken at his place of business and was taken home where he died in a few hours. Mr. Lane was 56 years old and had been in the retail drug business for many years. A widow and three children survive.

—William T. Eberhart, of Latrobe, Ind., for more than 22 years in the employ of the Showalter Drug Co., died recently from the effects of a fall upon an icy sidewalk. He was a native of Fond du Lac, Wis., a graduate of the Philadelphia College of Pharmacy and a member of the B.P.O.E.

—Mrs. Mahlon T. Moon, mother of Richard Moon, a Camden, N. J., druggist, and of Clarence D. Moon, likewise a druggist, located at Riverside, the same State, died on Feb. 9, 1914, after an illness of several months. Mrs. Moon had a complete nervous breakdown.

—John W. Schleyer, 37, formerly a well-known druggist of Fond du Lac, Wis., the senior member of the drug firm of Schleyer & Ordway, died recently. He had been ill for more than a year. A few years ago he became traveling salesman for a wholesale drug house.

—Jonathan Philip Primley, of Evanston, Ill., formerly a retail druggist, but later engaged in the manufacture of chewing gum and the vice-president of the American Chicle Co., is dead at the age of 63 at his Winter residence at Pasadena, California.

—Frank J. Hromadke, the Trenton, N. J., druggist who jumped his bail bond while awaiting sentence for forgery, committed suicide by poison in St. Louis recently just as he was about to be arrested and brought back to New Jersey for sentence.

—William Hackenberger, 59, a graduate of the Philadelphia College of Pharmacy, and for 36 years a druggist at Cataqua, Pa., is dead. Of the three surviving children, William is a senior at the Philadelphia College of Pharmacy.

—George R. Brown, 77, a former druggist of Poughkeepsie, N. Y., but for 18 years a resident of Evanston, Ill., is dead. He leaves two sons, Frederick Brown, of Newburgh, N. Y., and Edward D. B. Brown, of Washington, D. C.

—Edwin M. Fitz, who for years was connected with the Smith, Kline & French Company, of Philadelphia, and recently with the Cohen Drug Co., died at his home in Collingswood, N. J., after a week's illness with pneumonia.

—Charles Houston, 77, a druggist of Ottawa, Ill., and well known as a druggist at Columbus, Ohio, where he was a personal friend of William McKinley and Mark Hanna, is dead. He was a 33° Mason.

—Thomas Joyce, formerly of the South Boston, Mass., drug firm of Cuddyer & Joyce, and until three years ago a prominent business man in that district, died in Portland, Ore., recently.

—Emil Kuester, a member of the German Apothecaries' Society, who conducted a store at 931 Third avenue, died on the 15th of this month. The deceased resided at 307 East 57th street.

—Wilbur Ralston, 57, a druggist of Springfield, Ill., and for 22 years with the Dodds' drug store in that city, is dead after a very brief illness. He was a native of Pennsylvania.

—Joe T. Parks, chancery clerk of Montgomery county, Miss., and formerly a druggist at Kilmichael, Miss., is dead.

—**Theodore V. Brown**, proprietor of the Red Cross drug store, West Santa Clara street, San Jose, Cal., was stricken with apoplexy while telling personal reminiscences to the school children on Lincoln's Birthday, and died five hours later. He served through the Civil War as a member of the Hospital Corps, was stationed for several years at Washington as chief pharmacist in the office of the Surgeon-General, and was later superintendent of the German Hospital at San Francisco. He had conducted his San Jose store for 12 years.

—**Roy Thompson**, who formerly conducted a drug store in Ottawa, Ill., and later with the firm of Thompson Bros., of Spring Valley, same State, is dead from typhoid-pneumonia.

—**Frank Walter**, a prominent young druggist of Knoxville, Tenn., died recently from erysipelas. While but 29 years old, he was one of the best-known druggists in his section.

—**Charles Danz**, a native of Peru, Ill., and for 16 years an associate of his brother, Martin, in the drug business under the name of Danz Bros., is dead at the age of 55.

—**Henry G. Daniels**, Cincinnati's oldest druggist, who had been established at Laurel and Central avenue for 50 years died at his home after a short illness.

—**Frank C. Sibley**, 70, a pioneer druggist at Ionia, Mich., and later for many years commissioner of the Ionia board of health, is dead after a short illness.

—**Malcolm Patrick**, 79, for many years a prominent druggist of Norwalk, Ohio, is dead of arterio sclerosis.

—**W. H. Miller, Jr.**, 38, a druggist of Anthon, Iowa, is dead after an operation for appendicitis.

—**Frank A. Grandle**, 47, a druggist of Centerburg, Ohio, is dead following an operation.

—**Austin Converse**, a former druggist of Richwood, Ohio, is dead at St. Petersburg, Fla.

## NEWS FROM ASSOCIATIONS

### Annual Convention of the A. Ph. A.

**P**LANS have been pretty well decided upon for the Detroit meeting of the American Pharmaceutical Association, to be held the week beginning Monday, Aug. 24. The Hotel Pontchartrain will be the headquarters, a hotel admirably suited to the purpose. It has a convention floor up at the top of the building, with eight or ten rooms of various sizes, thus being well adapted to the purposes of an organization like the A. Ph. A., which is split up into so many sections and auxiliaries of one kind and another. Furthermore, the convention floor of the Pontchartrain is so high up that it is away from the dirt and noise of the street on the one hand, and on the other, is subjected to the cooling breezes from the river.

The Detroit meeting, indeed, will be delightfully cool and pleasant. Detroit is not at all like the usual American city—hot and stuffy in the Summer. It is located on the Great Lakes, gets the benefit of the water breezes, and is furthermore a city of great beauty and charm. Thousands of people go to Detroit annually to spend their Summer vacations instead of frequenting the customary resorts. It is a city that everybody wants to visit who hasn't already seen it, while the man who has seen it is not satisfied until he can return to it again.

Many delightful features are planned for the convention. There will, of course, be the customary reception and ball on Monday evening. On Wednesday, from 4 to 6, there will be a reception for the ladies. The afternoon and evening of Thursday will be devoted to a boat ride tendered by Parke, Davis & Co., and many of the attractive spots will be viewed that have helped to make the environs of Detroit so noted. On Friday there will, in all probability, be an automobile ride to the parks and to the famous shore drive around Lake St. Clair. Other contemplated entertainments are a smoker for the men, and either a theater party or a ride to Bois Blanc Island for the ladies. Smaller entertainments for the ladies will be sandwiched in all through the entire week.

Detroit has come to be a great manufacturing center—famous in three particulars. In the manufacture of drugs,

stoves and automobiles Detroit unquestionably leads the world. It may be that some of those in attendance upon the convention will want to visit industrial plants in various lines. Thus, for instance, 10 or 15 people may want to go through the Ford or the Cadillac or the Packard automobile factory. Others may want to visit the Solvay Process Works or any one of a hundred other interesting places in the city. It is expected that arrangements will be made for a number of small strips of this kind if sufficient interest is shown by the members. It is up to them. If you are interested please write now to the local secretary so that he may get an idea of what is wanted. Address your letter to Leonard A. Seltzer, 32 Adams West, Detroit, Mich.

It may be interesting to note, too, that certain reforms are to be inaugurated at the Detroit meeting in the conduct of the convention business. All the sessions will be held in the day time, and the evenings will be left free for rest, recreation and enjoyment. The Council, only, will meet at that time, and this will give a chance for the Sections to begin their work in the morning promptly at 9:30. Mr. Seltzer, the local secretary, is working out a plan of bulletin-boards so that a member who is sitting in one Section may know what is going on in others at the same time, thus making for a maximum of interest. Promptness will be exercised all along the line, and there is every expectation that the Detroit meeting will be a hummer!

### N. W. D. A. at Indianapolis.

*Annual Meeting This Year Will Be Held in the Hoosier City During the Week Beginning Oct. 12—President Lattimer Appoints His Committees.*

**T**HE committee on time and place of the next meeting for the National Wholesale Druggists' Association has announced that the annual meeting of that body will be held at Indianapolis beginning Oct. 12. The chairman of this committee is William J. Mooney, of the Mooney-Mueller Drug Co., of that city.

The following committees have been appointed by President Lattimer for 1914-1915:

Arrangements and entertainment for Indianapolis meeting, 1914, William J. Mooney, of the Mooney-Mueller Drug Co., Indianapolis; arrangements and entertainment for the California meeting, 1915, C. F. Michaels, of the Langley & Michaels Co., San Francisco; commercial travelers and selling methods, Lee M. Hutchins, of the Hazeltine & Perkins Drug Co., Grand Rapids, Mich.; credits and collections, B. B. Gilmer, of the Southern Drug Co., Houston, Tex.; drug market, Charles L. Huisking, New York; employers' liability and workmen's compensation, James W. Morrisson, of Morrisson, Plummer & Co., Chicago; fire insurance, James W. Morrisson, of Morrisson, Plummer & Co., Chicago; legislation, Charles A. West, of Eastern Drug Co., Boston; local associations, William T. Bland, of the McPike Drug Co., of Kansas City, Mo.; membership, Benjamin A. Jackson, of the George L. Clafin Co., Providence, R. I.; memorials of deceased members, Harry J. Schnell, New York; paints, oils and glass, W. T. Harper, of J. W. Edgerly & Co., of Ottumwa, Iowa; prevention of adulteration, B. L. Murray, of Merck & Co., New York; proprietary goods, William P. Ritchey, of Bruen, Ritchey & Co., New York; rates and routes, William G. Cook, of the New York Quinine and Chemical Works, New York; trade-marks, F. K. Fernald, of the Dr. Miles Medical Co., Elkhart, Ind.; transportation, Lynn Fort, of the Lamar & Rankin Drug Co., Atlanta, Ga.; special committee on anti-narcotic legislation, Charles A. West, of the Eastern Drug Co., Boston; special committee on census of 1914, Harry J. Schnell, New York; special committee on railway rate question, Dr. William J. Schieffelin, of Schieffelin & Co., New York, and special committee on suits against members, Dr. William Jay Schieffelin, of Schieffelin & Co., New York.

### Chicago Branch, A. Ph. A.

The annual election of officers, reception of new members and social evening of the Chicago Branch of the American Pharmaceutical Association occurred in January at the University of Illinois School of Pharmacy. The newly-elected officers are as follows: President, J. H. Wells; 1st vice-president, W. B. Day; 2d vice-president, Wm. Gray; 3d vice-president, Maurice Miner; secretary-treasurer, F. N. Gathercoal; com-

mittee chairmen: Practical pharmacy, I. A. Becker; medical relations, Dr. Bernard Fantus; publicity, L. E. Warren; legislation, H. C. Christensen.

The secretary-treasurer reported receipts during the year of \$80.00, expenditures of \$67.61 and a cash balance of \$24.90. There were received 20 new members during the year. The total membership is 136, of which 86 are druggists, 17 members of pharmaceutical manufacturing houses, 14 teachers in pharmaceutical schools, 4 editors of pharmacy journals and the remainder chemists or engaged in allied industries.

An especial event of the evening was the welcome extended to new members. Secretary Thos. Potts introduced Hugh Craig, recently installed editor of the *Journal of the National Association of Retail Druggists*, and moved his election to membership in the Chicago branch. The motion was carried by acclamation. Professor Day introduced H. W. Colson, J. A. Dorjahn, Mrs. Mary Zwick, George Kraemer and A. E. Anderson as new members. They were each pleasantly received by the company. Wm. Gray was congratulated upon his recent election to life membership in the A.Ph.A. Mr. Potts, in introducing Mr. Craig, took occasion to speak of the great need among retail druggists for reliable formulas covering the great number of unofficial preparations and household remedies. He spoke of the proposed A.Ph.A. Book of Receipts and said that the A.Ph.A. was derelict in not having published such a work 10 years ago. He mentioned the attempt now being made by the N.A.R.D. to remedy this pressing need of the druggist by furnishing to the retail drug trade not only practicable, reliable formulas for a number of household articles, but also in supplying suitable labels in small quantities at a very low price to retail druggists for these preparations.

Mr. Craig expressed his pleasure in uniting with the Chicago branch and assured us that he expected soon to be as much at home here as he had been for seven years in the New York branch. During the seven years in New York he had not missed a branch meeting and as this, his first meeting with the Chicago branch in January followed within a month the last branch meeting in New York, his record was still intact.

Professor Day took occasion to review some of the accomplishments of the branch during the last seven years. He brought out the fact that when the branch was organized in Chicago the city already possessed one of the strongest and most active local druggists' associations in the world, the C.R.D.A., that the N.A.R.D. maintained its headquarters here with all of their great activity, that the social side of things pharmaceutical was ably cared for by the Social Drug Club, now known as the Chicago Drug Club, and that our city possessed that most unique of all pharmaceutical organizations, the Chicago Veteran Druggists' Association, which especially attracted the older druggists. The Chicago branch, therefore, upon its organization, chose as its special line of work the presentation and discussion of: (1) Legislative matters affecting pharmacists, (2) the revision of our national standards, the U.S.P. and N.F. and (3) original or improved unofficial formulas. Much good work along each of these lines has been accomplished. In addition, the branch usually devoted one evening each season to a popular lecture and one evening to social events.

Under the able direction of Mrs. M. M. Gray and Miss Rose Schmid, refreshments were served and the meeting adjourned with many expressions of felicitation over "an evening well spent."

#### The Mo. Ph. A. at Pertle Springs.

The Missouri Pharmaceutical Association will hold its 36th annual meeting at Pertle Springs for four days, beginning June 16. The date has for many years been the second week in the month, but a change has been made in order to accommodate those who have children graduating from the public schools, which close the second week in June. It is anticipated that an increased attendance will result on account of the later date of the meeting. This is the 13th meeting at Pertle Springs (Warrensburg). The first convention at that place was held in 1888. Missouri pharmacists are partial to Summer resorts and this will be the 26th out of 36 meetings to be held at such a place. One of the remaining 10 meetings was held in tents near a city. The Mo. Ph. A. congratulates the Ill. Ph. A. on deciding to meet at a Summer resort in 1914.

The Mo. Ph. A. was organized primarily to secure a pharmacy law, and has been busy ever since that time trying to

improve the legislation and prevent undesirable enactments. Since the passage of the present law the members have been inclined to let well enough alone. This is an off year, as the Legislature does not meet. It is not likely that much time will be devoted to the discussion of legislation.

The U.S.P. IX is being anticipated, and William Mittelbach, of Boonville, is chairman of the committee which has submitted a number of recommendations for the use of the Committee on Revision. The National Formulary is very popular in Missouri and O. J. Cloughly, of St. Louis, is chairman of the committee. Mrs. M. M. Whitney, of Kansas City, will report on "Drug Adulterations." At one time the report on Trade Interests was a feature of the Mo. Ph. A. meeting. J. A. Kinder, of Cape Girardeau, is now chairman of the committee and promises an interesting and instructive paper at the June meeting. Professor Francis Hemm, of St. Louis, is chairman of the committee on Papers and Queries and reports that practical papers, discussions, exhibits and demonstrations will be a feature this year.

The Board of Pharmacy will hold an examination at Pertle Springs the day previous to the opening of the Mo. Ph. A. meeting. R. A. Doyle, of East Prairie, is a new member of the board. He is expected to take an active part in the 1914 meeting of the Mo. Ph. A. meeting. The entertainment feature so long prominent at Mo. Ph. A. meetings will be under the direction of ex-president Lorenz A. Seitz, of St. Louis. President Edward G. Schroers, of St. Joseph, belongs to the business type of retail pharmacists, but also appreciates and gives due attention to the professional side of the calling. His administration is being marked by progress along the several lines of activities in pharmacy.

#### Wisconsin Ph. A.

The Wisconsin Ph. A. is taking an active part in the campaign being waged in Wisconsin against fraudulent advertising, and the association is officially represented in the central vigilance committee, which has been organized by representatives of all the leading trade associations in the State, for the purpose of seeing that the new Wisconsin reform advertising law is strictly enforced. "We want to convince the buyer that the best goods for him are advertised goods; and that is why we must convince him that advertised goods are honest goods, and why we have organized to prevent fraudulent advertising," said A. M. Candee, chairman of the vigilance committee. "Our vigilance committee hears complaints of misleading advertising and investigates them. We have looked into more than 25 complaints, and in cases where necessary, we have had the advertisers rewrite their copy to eliminate objectionable features. Sometimes the signs on the buildings misrepresent facts. At other times the price tags and window display advertising are misleading, and sometimes it is the advertisements in the newspapers that are objectionable. We have to be especially vigilant against fake concerns which open up from time to time. We keep them out pretty well. We do not want to resort to prosecutions and suits. We prefer constructive, rather than destructive activity. If we can induce the advertiser to eliminate objectionable claims, we think we have accomplished more than we would by invoking the law against him."

#### Maine Ph. A.

In an endeavor to make the annual meeting of the Maine Ph. A. at Bangor of more interest and of more real practical value, the section on papers has decided to offer money and goods prizes aggregating \$65 for the best papers on any subject relating to ethical or professional pharmacy, commercial pharmacy, biological products, apparatus required, the advantages of a college training, etc. Several special prizes are offered for the best papers on: "My Best-paying Side Line"; "Shall We Take Prescriptions Over the Telephone?"; "Are Long-hour Days Imperative in the Drug Business?"; "Methods of Combatting Cut Prices"; "What Shall We Display in Our Windows?"; "Is the Narcotic Law of 1913 Working Successfully?"; "Compounding Difficulties I Have Encountered"; "Why I Am in the Drug Business."

#### Connecticut Ph. A.

The midwinter meeting of the Connecticut Pharmaceutical Association was held in New Haven, Feb. 10, with an unusually large attendance. Considerable was said concerning the laws

relating to the control of the sale of narcotics. John A. Levery, of the State Pharmacy Commission, "answered questions," that is, instead of making an address on narcotic and poison laws, he gave a great deal of pertinent information in response to queries from his audience. Thomas F. Main, of New York, told of the efforts being made to control the interstate shipment of narcotics, and expressed the belief that the Harrison bill, now pending, would check the traffic to a large extent. C. P. Gladding, of Hartford, spoke for the legislative committee of the State association, and predicted a national law to control drug traffic. The matter of price-protection and the control of the retail price by the manufacturer developed considerable discussion, with the result that a committee to consider the subject was appointed by the chair.

#### Massachusetts Ph.A.

The midwinter session of the Massachusetts Pharmaceutical Association was held at the Bay State Hotel, Worcester, on Feb. 9, the time being devoted to the consideration of some 85 bills which affect pharmacy or pharmacists, now before the State Legislature. One hundred and fifty members of the association gathered from various sections of the State, and after the report of the chairman of the legislative committee, Fred A. Hubbard, of Newton, took up the bills separately and either indorsed or rejected them. About half the measures discussed were declared satisfactory to the druggists. The association was very strongly opposed to the sale of narcotics, and the slogan of the gathering was "Restrict both the pharmacist and the outsider in the sale of narcotics." Prof. Chas. F. Nixon, of Leominster, reported on the progress of bills affecting the drug trade in Congress. Officers are chosen at the Summer convention, which will be held either at Swampscott or Nantasket at a time yet to be decided upon. This midwinter meeting is for the purpose of considering legislation, and it was declared to be one of the most successful yet held by the Massachusetts body.

#### BICHLORIDE BILL MAY PASS AT ALBANY.

##### N. Y. Branch Members Learn About State Legislation—Dr. Diekman Reports Progress of Pharmacy.

A BRIEF report on the local legislative situation was made by John Roemer at the February meeting of the New York branch of the American Pharmaceutical Association, held at the New York College of Pharmacy. Mr. Roemer outlined the provisions of the Towns-Boylan anti-narcotic bill which would, if enacted, restrict the sale of all narcotics. Mr. Towns had failed to pass this measure last year and had this year enlisted the help of Mrs. Wm. K. Vanderbilt. Mr. Roemer thought that Mr. Towns was sincere and that there was nothing ulterior in his motives: "His success lies with the pharmacists and the legislature." A member of the branch had been at Albany when the mercury bichloride tablet bill had come up in committee. It was very likely that the measure would have to go through with a possible provision relative to sale on prescription.

Dr. George C. Diekman, chairman of the committee on progress of pharmacy, reported interestingly upon a number of new developments—called attention to the adulteration of oleic acid with paraffin and fish oils, enlarged upon a process for the detection of sesame oil, explained a suggested estimation for morphine and presented a brief of an article on the substitution of tincture of iodine in surgical practice. Some interesting notes of false nux vomica seeds and false buchu leaves and observations by two authors on the mixture of cow butter and yellow wax, were other subjects touched on by Dr. Diekman.

Dr. Jacob Diner made some interesting observations relative to the recent exposition at Madison Square Garden. The members had found themselves in a very embarrassing position and he trusted the incident would prove a valuable lesson. His remarks were to the effect that the branch should not permit some of its interested members to drag that body into a commercial enterprise.

Mr. Roemer read a paper upon the subject, "Value of Present Methods of Water Analysis in Relation to Disease." He enumerated the uses for water—commerce, manufacture, drinking purposes, fisheries, etc. The utility of water, he asserted, was due to its powers of solution. The ability to determine the fitness or unfitness of water required the highest

development of chemistry today. Research has evolved methods and developed standards. Bacteriology, however, has shattered many of the ideas current during the chemical water analysis period. The speaker touched on two classes of water, rain and surface, and stated that the organic matter in water was of vital concern to the analyst. He described the ammonia and chlorine determination processes. In analyzing water, the topographical features of its source, the "survey," should be considered. In water analysis there are certain fixed standards which are not to be exceeded.

Dr. Joseph Weinstein reported a balance in the treasury amounting to \$67.

#### ENACT HARRISON BILL, DRUGGISTS PETITION.

##### Kings County Ph.S. Members Unanimously Adopt Resolution to Advance Anti-Narcotic Measure.

PRESIDENT H. B. SMITH called to order the February meeting of the Kings County Pharmaceutical Society, held at the Brooklyn College of Pharmacy. By resolution, unanimously adopted, the members requested the United States Senate Finance Committee to report out the Harrison bill, and especially requested Senators Root and O'Gorman to give their personal efforts to securing the immediate enactment of that measure. In the words of the resolution, the bill "has been held in the Senate Finance Committee for several months for reasons beyond our knowledge." T. J. France, chairman of the committee of supervision, called attention to the fact that the Brooks' weights and measures law was now in effect.

In behalf of Dr. Wm. C. Anderson, chairman of the legislative committee, who was absent, J. H. Reffuss reported that the new police commissioner was not prepared to state his position on the subject of Sunday drug store sales. The commissioner did say, however, that he would see that the law was observed. According to Mr. Reffuss, the "one day of rest in seven" law will be enforced, but technical violations will for a time be overlooked. A statement to this effect had been secured from the deputy commissioner. Mr. Reffuss further pointed out that, according to the ruling of Attorney-General Carmody, the labor law superseded the 132-hour provision of the pharmacy law, and that Commissioner of Labor James M. Lynch will not allow that a prescription clerk is a "manager" or a "superintendent."

Mr. Reffuss presented a schedule which he said complied with the law, and which he asserted the Commissioner of Labor believed to comply with the law. The schedule is as follows:

Monday (1), Tuesday (2), Wednesday (3), Thursday (4), Friday (5), Saturday (6), Sunday (7) *day off*; Monday (8), Tuesday (9), Wednesday (10), *day off*; Thursday (11), Friday (12), Saturday (13), Sunday (14).

That the members should not drop the labor law question without a fight was Mr. Reffuss' opinion. The next thing would be an eight-hour day, which would mean two men to a store. "They are lifting the burden from the clerk and putting it on the proprietor." The members, he said, should oppose the labor law because in its operation it does not give the clerks as much time off as under the pharmacy law. In living up to the law neither the clerk nor the proprietor is benefitted. An attempt will be made to amend the pharmacy law so as to make it supersede the "one day of rest in seven" law.

Mr. Reffuss concluded by asserting that the society should have a man at every hearing in Albany to rebut all objections, to needed legislation. One man finds it exceedingly difficult to successfully handle the situation at a well attended hearing. N. Y. S. P. A. bills before the present Legislature aim to change the phrase "may appoint" in the pharmacy law in reference to appointment to the Board of Pharmacy by the Board of Regents to "must be appointed"; to do away with the sale of pink strychnine tablets, and to prevent the giving away of premiums. The bill providing that the owner of a pharmacy must be a regularly licensed pharmacist will not be pushed, upon advice of counsel.

#### Drug Trade Section Would Amend Postal Regulation.

At the February meeting of the Drug Trade Section of the New York Board of Trade and Transportation, the legislative committee was authorized to present the following proposed

amendment, as a substitute provision for paragraph 4 of the regulations under Section 472 of the Postal Law:

"Medicinal preparations which contain poisons in sufficient quantity and form, in combination with other ingredients to be used exclusively as a curative or remedial substance and which are not dangerous or injurious to life, safety, health or property may be admitted to the mails for transmission in the domestic mails when enclosed in packages in conformity with the conditions prescribed in Section 474; provided that the article mailed bears a superscription of the manufacturer thereof, or dealer therein, or of the licensed physician, pharmacist, dentist or veterinarian preparing or prescribing the same."

#### G.A.S. CONSIDERING MEETING WITH DOCTORS.

**Chairman N.Y.S.P.A. Propaganda Committee Offers Assistance—Dr. Eugen Friedmann Lectures.**

**P**RESIDENT DR. CHARLES F. KLIPPERT called to order the February meeting of the German Apothecaries' Society, which occasion was marked by an unusually good attendance. S. V. B. Swann, chairman of the legislative committee, presented an extensive and very comprehensive report on prospective State legislation. The features of this report are presented on another page of this issue. Corresponding Secretary C. Baum read a communication from John Roemer, chairman of the N.Y.S.P.A. propaganda committee, in which the latter solicited the views of the society as to holding a joint meeting of physicians and pharmacists under its auspices. Mr. Roemer's committee was ready to carry out any suggestions which the society might make and if desirable would supply supplementary speakers for the occasion. The matter was referred to the scientific committee, of which Otto Raubenheimer is chairman. Felix Hirseman praised the activity of Mr. Roemer in the advancement of propaganda.

Otto Raubenheimer, in his capacity as chairman of the scientific committee, announced that the lectures on the programme for the coming year would be equally as interesting as those presented last year. Several well-known authors had promised to address the society. Mr. Raubenheimer also introduced Dr. Eugen Friedmann, who delivered an interesting lecture on "The Future of Pharmacy," a brief abstract of which is presented below on this page. During the ensuing discussion the subject of the sale of goods in drug stores on Sunday was brought up. George T. Rieffelin reported that Alderman Curran had said there was no city ordinance for the regulation of sales on Sunday. Among those who discussed Dr. Friedmann's lecture were Alderman Fred Trau, Felix Hirseman, George Huether, Charles H. Lowe, Charles F. Schleussner, H. L. Rehse, S. V. B. Swann, Otto P. Gilbert, Emil Roller and others.

Mr. Hirseman called attention to the fact that some of the suggestions anent propaganda made by Dr. Friedmann had been tried years ago and, he was sorry to say, without success. The certification of pharmacies, he asserted, could not be carried out successfully. The Board of Pharmacy was the only proper authority for the suitable inspection of pharmacies and for the uplift of the profession. Mr. Roller called attention to the difficulties and expense which would attend proper propaganda. He praised the interesting remarks of the speaker. All those who discussed the lecture favored propaganda. President Dr. Klippert thanked the speaker in behalf of the society.

Robert S. Lehman, treasurer of the European trip committee, reported that there was no doubt as to the success of the trip. Those who wish to go along should send in their applications at once: the desirable bookings are being rapidly taken up. By letter from Cleveland, Dr. Wm. C. Alpers, chairman of the above committee, expressed the hope that the society would consider him as coming under the constitutional provision, "in the vicinity of New York City," and would continue his membership.

A resolution introduced by Ex-President Charles F. Schleussner condemning the director of a local German theater for presenting a play which he considered unpatriotic, was unanimously adopted. The chairman of the press committee was instructed to have the resolution published in the daily press.

Louis Berger reported that he had met Wilhelm Bodemann, an honorary member, at Tampa, Fla., and that the latter had instructed Mr. Berger to convey his greetings to the society.

The greetings were appropriately received, President Dr. Klippert taking occasion to toast Mr. Bodemann in response to his good wishes.

Dr. Friedmann deplored the dwindling of the prescription business in the average drug store, and stated that this was largely due to the druggists themselves. The time has come when the physicians must be inspired with greater confidence, so that they will be more willing to prescribe, and cease to encourage the traffic in ready-made patent medicines. Messrs. Roemer and Rehfuss have already begun a propaganda among the various hospitals, endeavoring to get the pharmacists and physicians to call the attention of students to the value of the various drugs and chemicals and their combinations. As a further means of increasing prescription work, it is advisable to visit physicians personally, and set forth the objects of the propaganda.

A heavy handicap in America is the almost total ignorance of the therapeutic agents on the part of physicians, which naturally prevents them from writing proper prescriptions. To combat this the best means is a pocket formulary, such as has been issued by the Deutscher Apotheker-Verein, of Berlin. This work contains 576 formulas for prescriptions, carefully classified. In getting up such a formulary, the co-operation of the most prominent hospital heads and physicians is needed. In Germany almost every physician possesses one of these books. Another question is, can every pharmacist put up a prescription *lege artis*? Or are the physicians right when they say, "We are forced to prescribe patent medicines, because we are not sure that a prescription will contain what we order"? This is partly true, and must be changed. Confidence on the part of the physician, and absolute reliability on the part of the druggist are the foundations for any success.

#### GERMAN APOTHECARIES CELEBRATE.

**Society Marks 63d Year of Existence by Holding Kommers, Banquet and Dance at Terrace Garden.**

**I**T was a jolly gathering that celebrated the 63d anniversary of the German Apothecaries' Society, held at Terrace Garden on the evening of Lincoln's birthday. The celebration this year was in the nature of a *kommers*, and included the ladies. This feature was followed by a banquet in the large dining room of the Garden, which was appropriately decorated with American and German flags. Nearly 200 persons sat down to the repast. Dancing concluded the programme.

The *kommers* began at 10 o'clock. Otto P. Gilbert, chairman of the entertainment committee, officiated as the *praeses* and showed his experience in the customs of German students by greeting the members and guests in Latin. He ordered the first salamander as a toast to the ladies. This was followed by a song, "Frauenlob," composed by one of the members, Herman Weller. The well-known comic, Hugo Feix, gave several recitations and songs. His scientific paper on "La Grippe" would not have passed in any medical examination. Miss Irene Ferency sang two songs. She was accompanied by C. W. Wagner.

The second general song by the assemblage, entitled "A Surprise," was composed by President Dr. Klippert. Mrs. George Haustein, a niece of an old-time member, Paul Arndt, played several selections upon the violin, earning considerable applause. F. J. Budelmann, a baritone, sang several songs which were well received. "Our Trip to Europe," was the title of a song composed by Otto P. Gilbert and sung by all. "The Life of a Pharmacist," written by Mr. Weller, was the last general song.

Following the *kommers*, the members, led by the president, marched to the dining room, where five long tables had been arranged and an excellent supper was served. President Dr. Klippert took occasion to greet those present and to give particular praise to Mr. Gilbert for his work as chairman of the entertainment committee in preparing this festival. He thanked the artists who had made up the evening's programme and concluded by toasting the guests, the members joining in heartily in the latter ceremony. Paul Arndt was the only other speaker. He also praised the entertainment committee for its activities and concluded by toasting its members with a "Hoch sollen sie leben."

The banquet ended about 1:45 a.m., the younger element present having been long anxious for the dancing to begin. At 4:30 o'clock the strains of "Home, Sweet Home" concluded

the third feature of the celebration, and even then some of the dancers deemed it "too early" to go home.

The committee which arranged for the celebration consisted of Otto P. Gilbert, chairman; Henry F. Albert, Felix Hirsman, Robert S. Lehman, George T. Rieffelin, Carl Wippermann and Hugo Kantrowitz, the last-named acting as floor manager.

#### Women's Pharmaceutical, Pacific Coast.

The January meeting of the Women's Pharmaceutical Association of the Pacific Coast was held at San Francisco. The chairman of the committee on papers had prepared an elaborate programme for the evening and many new points on the preparation of tincture of cudbear, prescription compounding and a serviceable label varnish were discussed. An interesting paper on "Radium" was read by Dr. Barbat-Winslow; Miss Low read a paper on "Emetine Hydrochloride," and Mrs. Kane presented a paper on "Lloyd's Reagent." Mrs. White showed samples of alcresta, tasteless strychnine tablets, morphine and berberine. The following officers will serve the association for the ensuing year: Mrs. R. E. White, president; Miss Clarissa Roehr, 1st vice-president; Miss Ethel E. Nelson, 2d vice-president; Dr. J. E. B. Winslow, secretary; Mrs. A. D. Kane, treasurer. The February meeting of the association was held in San Francisco Feb. 27.

#### N.Y.R.D.A. Holds Banquet Later Than Usual.

The annual banquet of the New York Retail Druggists' Association was held recently at the Elsemere, East 126th street, Dr. Joseph Weinstein officiating as the toastmaster. The feature of the occasion was the presentation of a beautiful diamond-studded watch charm to Peter Diamond, the gift being in appreciation of the work Mr. Diamond has done in behalf of the organization. Among the speakers were Caswell A. Mayo, president-elect of the A.P.H.A.; J. Leon Lascoff, member of the Board of Pharmacy; John Wall, also on the board, and others. Following the banquet, dancing was enjoyed.

#### THE CHICAGO DRUG CLUB.

The first monthly meeting of the new year was held by the Chicago Drug Club at the new Hotel Sherman, which, when it was the old Sherman House, was the headquarters for the Social Drug Club of Chicago, from which the present organization sprang. All of the living charter members and the "old guard" turned out and mingled with the younger generation in celebrating the "Home Coming Night" of the club in its new headquarters.

The surprise of the evening came when Mr. Comstock, of the well-known firm of Wohl & Comstock, presented the club with a framed steel cut of an emblem which was received with so much favorable comment and appreciation on the part of all those present that on motion made by Mr. Keim, this emblem was unanimously adopted as the official insignia of the club. Presiding Officer Henry Schaper and Mr. Potts both in short talks expressed the appreciation and thanks of the club to Mr. Comstock and his firm.

One of the early presidents and pioneers in the club's history, the Hon. Fred Kellett, presided as toastmaster during the social session. Messrs. Quales, Fry, Larson, Hoelzer and Pelikan, as past presidents, addressed the club and spoke feelingly of their happiness to again find themselves near the spot where the original organization was founded. John Schwalbke, the faithful worker and financial secretary of the club, gave one of his interesting talks on the history of the organization. The speaker of the evening, Hugh Craig, the new editor of the *Journal of the N.A.R.D.*, received a rousing welcome. Among others who addressed the meeting were Dr. Pritchard, Messrs. Roth, Keim, Potts and McCracken.

The usual high-class programme of cabaret entertainers was presented by the efficient chairman of the entertainment committee, A. Hergert, which enlivened the evening and made "Home Coming Night" a decided success. The annual reception and ball, a Valentine party, was held at the Hotel La Salle, Feb. 13.

#### Boston Druggists' Association.

The Boston Druggists' Association, the oldest organization connected with New England pharmaceutical interests, held its annual dinner at Young's Hotel. At the annual business

meeting, which preceded the dinner, the following officers were elected: President, William S. Briry; treasurer, George H. Ingraham; secretary, Harry C. Wiggin; executive committee, Fred L. Carter, Jr., Charles F. Ripley, H. E. Bowman, Azro M. Dows, Robert C. MacGowan, Alfred H. Bartlett and Charles C. Hearn; membership committee, C. E. M. Harrington, A. L. Mackusick, James O. Jordan, Ralph R. Patch and Theodore J. Bradley. The following were elected to membership: George E. Grover, of Somerville; Newton C. Smith, of Medford; W. H. Corliss, M. E. Nourse and R. E. McLaren, of Boston.

About 70 members sat down to dinner, which was served at 6:30. The special guests were E. Elmer Foye, vice-president of the Old Colony Trust Company, of Boston, and Hon. Albert P. Langtry, of Springfield, former Secretary of State. Mr. Foye spoke on banking and its modern methods. Mr. Langtry spoke on "Destruction of Old Methods of Government," and he said that while he was probably the father of the direct primary law, he felt that a great mistake had been made in entirely doing away with the State convention. The people are reasonably well informed regarding the qualifications of the candidates for Governor and often know considerable about the candidates for Lieutenant-Governor, but he ventured the prediction that where the candidates last Fall were not holding the offices and seeking renomination not one voter in a hundred had the slightest idea of their respective merits. He contended that State conventions of the different parties should make the nominations for secretary of State, treasurer, auditor and attorney-general, and that the wisdom of the delegates would be greater than the wisdom of the people. He believed the delegates to these conventions should be chosen under the direct primary.

#### Boston A.R.D. Annual.

The annual dinner of the Boston Association of Retail Druggists was held at the American House, with about 75 members present. The board of officers was re-elected, and the members showed their appreciation of the services of President Frank F. Ernst by presenting him with a large electric table lamp. The other officers are: John J. Tobin, 1st vice-president, Frank E. Wingate, 2d vice-president; J. W. Kilgore, 3d vice-president; L. W. Griffin, treasurer; Charles H. Davis, secretary. The special guests were Albert J. Brunelle, secretary of the State Board of Registration in Pharmacy; and James F. Finneran, president of the N.A.R.D. Mr. Brunelle discussed the new State registration law, which defines a drug store, and limits and prescribes the duties of an unregistered clerk. Mr. Finneran discussed the value of organization, and as an illustration spoke of the recent conference in Washington on the narcotic bill, which was satisfactory to all interests except the retailer, and this, he pointed out, was because the retailer had not been represented through an organization at the conferences and meetings when the bill was discussed and framed. Since the recent conference, however, said Mr. Finneran, the unsatisfactory features of the bill had been eliminated, and it is now satisfactory to all parties. Mr. Finneran spoke of honest prices, and pointed out how the work of the N.A.R.D. for the past 16 years is now supplemented and reinforced by many other retail organizations.

#### BALTIMORE DRUG EXCHANGE.

The Baltimore Drug Exchange at its annual meeting in January at the Hotel Emerson, not only elected officers and transacted other business of a somewhat routine character, but discussed various matters of legislation which will claim attention this Winter during the session of the Maryland Legislature. One of these matters is a draft of amendments to the State Pure Food and Drug Law, designed to bring the statute more in harmony with the National act. The members of the exchange are entirely convinced of the sense of justice exercised by the State Pure Food Commissioner, who enforces the law under the direction of the State Board of Health, and the attitude assumed by that body has given much satisfaction because of its moderation and evident desire to proceed along the lines of equity and practicability. But the exchange is also disposed to look to the future, when an official less intimately in touch with the drug trade as a business and as a profession may be in office, and when the law might be used, as the members of the exchange are

informed it is used in some States, as an instrument of persecution and graft. The draft has been discussed with Dr. Caspari and members of the State Board of Health, and is said to have their full approval, all differences that existed having been adjusted. Another bill that received consideration at the meeting is one providing for the sanitary inspection of abattoirs, ice-cream factories and a large number of other establishments, which are engaged in the manufacture of food products. The provisions of this bill also have been gone over with the health authorities, and have their approval.

The annual reports were read and passed upon and various other matters were disposed of.

The election of officers resulted as follows:

*President*—James E. Hancock, of John F. Hancock & Son.

*1st Vice-President*—A. E. Mealy, of Gilbert Bros. & Co.

*2d Vice-President*—Joseph Owens, of Carr, Owens & Co.

*Secretary*—J. Emory Bond, of Parke, Davis & Co.

*Treasurer*—Dr. A. R. L. Dohme, of Sharp & Dohme.

*Executive Committee*—A. C. Meyer, of A. C. Meyer & Co.; W. M. McCormick, of McCormick & Co., and J. L. Hines, of the Emerson Drug Company.

The business meeting was followed by a dinner on the mezzanine floor, at which addresses were made among others by John B. Thomas, of the Thomas & Thompson Company, speaking for the Maryland Pharmaceutical Association; R. E. Lee Williamson, of Lee Williamson & Co., representing the Baltimore Retail Druggists' Association, and Harry F. Lindeman, president of the Calvert Drug Company, and others.

The new president of the exchange, James E. Hancock, is junior member of the firm of John F. Hancock & Son, manufacturers of medicated lozenges, tinctures and other pharmaceutical products, at Howard and Baltimore streets. Mr. Hancock has been president of the Maryland Pharmaceutical Association and has taken a most active interest for years in the efforts of druggists to advance their interests professionally and otherwise. He has also been energetic in looking after legislation at Annapolis, and his election to head the Drug Exchange, it is felt, will give that body a progressive head who is in close touch with the latest developments at Annapolis, where the General Assembly meets.

#### Pennsylvania Rexall Club.

The 12th annual State convention of the Pennsylvania Rexall Club met at the Fort Pitt Hotel, Pittsburgh, Pa., with 75 members present. In the evening they attended the Nixon theater. There were two business meetings, and the session ended with a banquet at the Fort Pitt Hotel. The Rexall Club is made up of the agents for Rexall remedies in all sections of the State, each druggist being a stockholder in the United Drug Co., of Boston, which is the parent company. As only one druggist in a town is a Rexall agent, the selection of such a representative is a matter of the most careful investigation by the United Drug Co. The May Drug Co. is the local representative and incidentally, it is the third largest stockholder in the United Drug Co.

#### Baltimore Branch, Am. Chem. Society.

At the February meeting of the Baltimore branch of the American Chemical Society, James H. Payne, chemical engineer of the Meade Laboratories, Inc., read a paper on "The Use of the Rotary Kiln in the Manufacture of Chemical and Metallurgical Products." He showed a great many new uses to which the rotary kiln is being adapted, not only in the manufacture of new products but also in the utilization, in many industries, of what have been considered waste products. Frank M. Boyles, chief chemist of McCormick & Co., read a paper on "The Detection of Ethyl Alcohol in Essential Oils." Mr. Boyles gave an outline of the methods applicable for the detection of alcohol in such products as oil of lemon, and detailed certain precautions to be observed in making chemical examinations of essential oils. He also emphasized the extreme care that must be observed by chemists in drawing conclusions from the results of their analyses of products that come within the scope of the Pure Food and Drugs Act.

#### Philadelphia Druggists Want Parcel Post Pay.

The Philadelphia Retail Druggists have rebelled against the Government ruling that all city sub-stations should take parcel post packages without any additional remuneration. It is

claimed by the president of the Philadelphia association, Albert G. Keller, that if the druggists accept the ruling it will mean that they must take on extra clerks just to handle the packages. He called attention to the fact that during Christmas week the sub-stations were practically swamped, and that in regular seasons the demands would be exceedingly great upon them. About half of the stations already take parcel post packages and they have not received anything for their extra work. Mr. Keller puts it: "We do not intend to work for the Government for nothing, and anyone who does is foolish. We have forwarded the Postmaster what we think is a fair demand and we expect him to act on our suggestion. If he does not, a large number of druggists will give up their stations sooner than be bothered with the additional labor involved."

#### Philadelphia Drug Club.

The annual election of the Philadelphia Drug Club resulted as follows: Joseph H. Jolly, president; George D. Feight, vice-president; Charles C. Buchanan, treasurer; Elmer H. Bobst, secretary. These committees have been appointed: House, George D. Feight, chairman; Elmer H. Bobst and Joseph H. Jolly, membership, chairman, Edward Weaver; George Berkhart and Fred Jones; finance, chairman, William C. Fleck; John Jolly, Jr., and George W. Chapman; trustee fund, David J. Reese, chairman; entertainment, Otto Krauss, chairman; J. J. McCollough, C. V. Mangan, Frank C. Turner, Thomas E. McGuire, Charles Rehfuuss and Peter S. Rohn. The Board of Governors is composed of: John F. Belsterling, George W. Fehr, C. W. Haviland, Frank W. Smith, S. B. Davis, D. J. Reese, T. T. Eckman, A. J. Staudt, Penrose Jones, J. I. Reinhardt, E. T. Hahn, John Jolly, Jr., and L. H. Davis.

#### Kansas City Drug Club.

The Kansas City Drug Club held its first regular meeting since being granted as a corporation by Judge Southern, of the Circuit Court, at the K.C. College of Pharmacy, 712 Wyandotte street. Plans of work for the year were outlined and the following officers were installed:

A. N. Doerschuk, president; James E. Harris, vice-president; C. E. Griham, secretary; L. F. Zuber, treasurer; managing trustees, Jos. C. Wirthman, W. M. Federmann, C. E. Zinn, J. W. Giesburg.

The old K.C. Retail Druggists' Association, which this club has succeeded and which has been in existence some 30 years, met at the same time and resolved to disband, turning over all assets to the new Kansas City Drug Club.

#### Three D's Banquet at Far Rockaway.

The doctors, dentists and druggists of the Rockaway peninsula, which includes Woodmere, Cedarhurst, Lawrence, Inwood, Far Rockaway and Rockaway Beach, held their second annual banquet at the Far Rockaway Club on Tuesday evening, Feb. 10, at which 50 were present from the different professions. Dr. J. Carl Schmuck, dean of the medical and allied professions in that section, was toastmaster. During the dinner there was professional entertainment and the after-dinner speakers were: Dr. J. Diner, Fordham Medical College, "Better Relations Between the Druggists and Doctors"; Dr. Andrews, of E. R. Squibb & Sons, "Medical Specialties as an Auxiliary to the Practice of Medicine and Pharmacy"; Nelson B. Hatch, editor *Medical Economist*, "Accounts and Collections"; F. A. Lowe, president of the Druggists' Association, "Pharmacy." The druggists have had their association, which is incorporated under the name of the Long Island Botanical Association for the last nine years. Each year they hold an annual dinner and at least one business meeting. Now they are enlarging the dinner by including the doctors and dentists. The committee of arrangements this year was: Wm. Chubbuck, of Rockaway Beach; F. D. Doolittle and F. A. Lowe, of Far Rockaway, and E. M. Raeder, of Cedarhurst.

#### Drug and Chemical Club Elects Governors.

At the recent annual meeting of the New York Drug and Chemical Club the following were unanimously elected members of the Board of Governors to serve three years: Robert H. Adams, Carlton O. Pate, Herbert B. Harding, Clarence G. Stone, Julius F. Van Riper and William H. Phillips.

### AMONG THE ASSOCIATIONS.

The Cincinnati Penslar Club gave a banquet recently at the Metropole Hotel, with 75 present. The real object of the banquet was to show druggist guests from Canada what a success this club has had in Cincinnati. Among the guests were Alexander Stewart, president of the Ontario College of Pharmacy; W. F. Graham, of Ottawa, Canada; J. A. Smith and M. J. Warner, of Edmonton, Canada; J. S. Sonner, of Knoxville, Tenn., and F. W. Keyser, of Kansas City. The Penslar Club was organized only about five months ago, and it now has a membership of 50 druggists. Some of the prominent speakers during the banquet were Edward Ohm, Cincinnati representative of the Nelson Baker Company, of Detroit, Mich.; Mr. Bolles, of the Weatherhead Drug Company, and president of the club, and H. J. Dusterberg, of the Ohio Valley Druggists' Association. Mr. Kellar, of the Weatherhead Drug Company, acted as toastmaster.

The Minneapolis Drug Club has pledged its support to the movement to put an end to the illegal sale of cocaine, heroin, morphine and their derivatives, this action following an address last month by Frank R. McDonald, superintendent of the workhouse, reporting on his campaign among the prisoners last year. Dr. Edwin L. Newcomb, professor of pharmacognosy at the University of Minnesota; C. S. Harrington, of St. Paul; Dr. G. P. Dunn, of Winnipeg; Dr. J. O. Taft and William Brinkman, of Minneapolis, were speakers.

More than 250 members of the Chicago Chapter, W.O.N.A.R.D. attended a card party at the Hotel LaSalle, Feb. 10, the proceeds of which were devoted to the Druggists' National Home at Palmyra, Wis. Mrs. Richard Voge, chairman of the philanthropy department of the chapter, was in charge of the exercises, and she was assisted in receiving by Mesdames S. J. Kuflewski, G. Frank, Horace Nelson, Thomas Sweeney, A. L. Coppock, J. A. Mahaffy, John Chwatal, George H. Rahlfs and H. A. Yates.

President Frank H. Tupper, of the Maine Pharmaceutical Association, has announced the following committees for the next convention of the association which will be held at Bangor in June: Transportation, M. L. Potter, Danforth, chairman; S. R. Crabtree, Island Falls; F. H. Neal, Fairfield; entertainment, C. H. Davis, Bangor; C. M. Brown and C. E. Walmsley, Bangor; W. Clement Mutty, Old Town, and F. E. Miller. The next convention of the Maine Ph.A. is the 47th annual.

The Cincinnati Central Drug Clerks' Association held its installation of newly-elected officers at the Metropole Hotel. There were about 100 present, including many members of the Ohio Valley Druggists' Association. Emil Kraft was toastmaster. Retiring President Robert Schulz and Frank Burg, the newly-elected president, made addresses. Robert Wetterstroem, E. J. Hegeman and William Schultz also gave short talks. The feature of the evening was a cabaret show.

The 200th anniversary of the Springfield Pharmacists' Association was celebrated by a banquet at the Highland Hotel in that city at which druggists from Springfield, Holyoke and Worcester were present. The following officers were elected: President, William C. B. Merriam; vice-president, A. E. Sunter; secretary-treasurer, P. V. Erard; executive committee, C. P. Thompson, E. F. Leonard, D. F. Keefe and B. Balch.

At the annual meeting of the Minneapolis Retail Druggists' Association, E. A. Tupper was elected president; Henry Buehler, vice-president; George Williams, secretary; W. D. Savage, treasurer, and Stuart Gamble, A. W. Thompson, J. F. Danek, L. E. Schmidley and Carl Schmidt, executive committee. This association was organized 16 years ago and meetings are held on the first Thursday of each month.

The Philadelphia Drug Exchange has elected the following officers for the ensuing year: President, John Ferguson; vice-president, Harry B. French; secretary, Joseph W. England; treasurer, Edward H. Hance. The election preceded the annual banquet at which the speakers were the Rev. Robert Hugh Norris, George W. Norris, Henry Houck, Harry B. French and Prof. Paul M. Pierson, of Swarthmore.

The Cumberland County (Me.) Ph.A. has elected the following officers: President, F. E. Robbins; 1st vice-president, L. J. Maguire; 2d vice-president, C. A. Vallee; 3d vice-president, John C. Otis; 4th vice-president, H. R. Washburn; secretary, E. W. Murphy; treasurer, James A. Broe; executive committee, Asa F. Abbott, John C. Otis, L. J. Maguire, E. F. Weed and F. H. Power.

At the annual banquet of the Akron (Ohio) Drug Clerks' Association, W. R. Hower, chief inspector of the Ohio State Food and Drug Bureau, was the guest of honor and gave a talk on the enforcement of the pharmacy and narcotic laws.

The annual banquet of the Cumberland County Pharmaceutical Association was held at Riverton Park (Portland, Me.), Feb. 4.

At the 40th annual meeting of the Rhode Island Pharmaceutical Association at Providence, 15 new members were elected, and the following officers were chosen: President, George T. Armstrong; vice-president, Edward D. Robbins; secretary, Clarence Bowmer; treasurer, Earl H. Mason; executive committee, A. J. Johnson, Jr., H. A. Pearce and E. S. Blumenkranz.

A. M. Dows, president of the Lowell (Mass.) Pharmaceutical Association, was the presiding officer at a recent dinner at which Charles F. Ripley, president of the State Board of Pharmacy; Fred A. Hubbard, chairman of the legislative committee of the State association; Fred O. Lewis, Frank J. Campbell and A. E. Moors were the speakers.

The annual euchre and dance of the Ohio Valley Druggists' Association was held at North Cincinnati Turner Hall, and was a marked success. There were many good prizes given out, and all had a good time. Henry J. Dusterberg was chairman of the committee who arranged the affair.

The Order of White Elephants gave their annual midwinter entertainment in Indianapolis in January. The association consists of retail and wholesale drug clerks, and is 26 years old. The programme included a banquet and cabaret performance.

The St. Louis R.D.A. has elected the following officers: President, Dr. William A. Hoelscher; 1st vice-president, B. C. Huger; 2d vice-president, Otto Hanser; treasurer, G. F. Hausgen. Secretary Stockhausen was re-elected.

On Tuesday, Feb. 17, the St. Louis Retail Druggists' Association members had their wives with them at the regular meeting of the association at the Planters Hotel, both for the business meeting and the luncheon.

The St. Paul Retail Druggists' Association gave its first card party and dance of the season at the Hotel Ryan, Feb. 6. The Travelers' auxiliary and the Ladies' auxiliary had charge of the programme.

The Iowa Ph.A. will meet at Burlington for its annual convention on June 9, 10, 11. It is expected that there will be at least 1000 in attendance.

The annual meeting of the Vermont Ph.A. will be held at the Hotel Vermont, Burlington, during the week of July 8.

### Tampa-Cuba Cigar Company Holds Annual Meeting.

President H. B. Guilford, of Rochester, N. Y.; Secretary and General Manager Ernest Berger, of Tampa; Treasurer Emilio Pons, and Vice-President Wilhelm Bodemann, of Chicago, were re-elected to their respective offices at the recent second annual meeting of the Tampa-Cuba Cigar Company, held at Tampa, Fla. The directors, with the exception of Walter Rothwell, of Hatboro, Pa., who resigned, were re-elected. The new director is T. P. Taylor, of Louisville, Ky. J. T. Treasure, Salt Lake, Utah, succeeded E. O. Engstrom, Pittsfield, Mass., as a vice-president. Among others present at the meeting were Louis Berger, of New York City; J. H. Beal, Scio, Ohio; Hy. W. Merritt, Plain, Pa.; Charles H. Huhn, Minneapolis, and D. W. Ramsaur, Palatka, Fla. Plans were ratified for the erection of a new factory to cost at least \$60,000. The company also declared a 10 per cent. cash dividend and decided to manufacture in bond.

### First Fine Under Massachusetts Drug Law.

The new Massachusetts drug-store law, which defines what a drug store is and requiring such a store to obtain a license from the State Board of Pharmacy, has had its first prosecution. On Jan. 13, when W. H. Whittaker, proprietor of a drug store at 102 Ferry street, Malden, applied for a license to conduct a drug store, the State board refused to issue such a license. Notwithstanding such refusal, Mr. Whittaker continued to carry on the business, and he was summoned into the Malden court, on complaint of Joseph Buswell, agent of the board. The court found Whittaker guilty of the charge against him and imposed a fine of \$15. The case has been appealed.

## SCHOOLS AND COLLEGES

### DR. W. C. ALPERS DEAN AT WESTERN RESERVE

Dr. William C. Alpers, a prominent pharmacist of New York City, and one of the editors of the *Deutsch-Amerikanische Apotheker-Zeitung*, has been appointed professor of pharmacy and dean of the pharmaceutical school of Western Reserve University, at Cleveland, Ohio. Dr. Alpers succeeds T. Bernard Tanner, P.D., and assumed his new duties Feb. 1. His professional attainments require no comment, and the new appointment is a proper recognition of Dr. Alpers' labors in the interests of pharmacy. Born in 1851, in Germany, Dr. Alpers was educated at Hanover and Göttingen, and came to this country in 1872. He began his career as a teacher in New York City, and later opened a pharmacy at Bayonne, N. J. In 1894 he became a member of the New Jersey Board of Pharmacy. A few years later he opened a professional pharmacy at the corner of 31st street and Broadway, New York City, where he continued until 1906. Dr. Alpers has been very prominent in German-American pharmaceutical and social activities in this city, and he has the heartiest wishes for a long and useful future from his wide circle of friends and acquaintances. He will continue his work as editor of the *Apotheker-Zeitung*.

### University of Michigan School of Pharmacy.

E. H. Woodhouse, of Friendship, N. Y., has been appointed assistant in micro-botany for the second semester. Mr. Woodhouse is a candidate for the Ph.C. degree this year.

L. S. Mitchel, who completed all work for the B.S. (Pharm.) at the end of the last semester, recently took the United States Civil Service examination for food chemist. Mitchel tells us that there was not a question which had not been thoroughly covered in the food and drug course. Mitchel is now registered in the Graduate School.

We have recently had letters from Prof. L. S. Blake, Auburn, Ala.; D. K. Strickland, chemist, Parke, Davis & Co.; C. L. Dougherty, chemist, Merck & Co., and H. C. Eiseman, chemist, W. S. Merrell Co., all of whom received their B.S. (Pharm.) in 1913. Eiseman writes in that rare humorous style, giving much valuable advice, especially valuable to all beginners.

Prof. L. S. Blake expects to return to do work toward his Master's degree in the Summer session.

Dr. W. S. Hubbard addressed Phi Lambda Upsilon, the honorary chemical society, recently, on the work given in the course in food and drug analysis, showing a number of valuable instruments used in the course. Dr. Hubbard lectured at Three Oaks, Mich., Feb. 19, and at Otsego, Mich., Feb. 20, his subject being "Foods: Their Adulteration and Detection."

### Medico-Chirurgical College, Department of Pharmacy.

Walter Rothwell, Eastern representative of the American Druggists' Fire Insurance Company, delivered a very interesting lecture, "Fire Insurance as Applied to the Retail Drug Store," to the students of the Department of Pharmacy recently.

The February meeting of the Alumni Association of the Department of Pharmacy was held at the College Club, 1721 Arch street. The attendance was above the average for this midwinter meeting, and many interesting topics were brought up for discussion. The nominations for officers resulted as follows:

President, Heber W. Youngken, Ph.G., '05; 1st vice-president, U. G. Ruff, Ph.G., '09; 2d vice-president, I. Subin, Ph.G., '08; corresponding secretary, R. P. Fischelis, Ph.G., Phar.D., '11; recording secretary, B. G. Goodhart, Ph.G., '07; treasurer, B. Sprissler, Ph.G., '07.

Directors (3 years), M. M. Smith, '13; W. Dorszewski, '12; L. Weiszgerber, '11; E. Youngken, '08; (2 years), W. C. Crist, '08; J. L. Ruhl, '08; H. B. Roshon, '08; W. W. McNeary, '07; (1 year), W. E. Smith, '06; R. W. Moss, '06; T. B. Bordener, '05; H. G. Lilly, '00.

The Gamma Chapter of the Beta Phi Sigma Fraternity held its annual dance Feb. 17 at the Wynnefield Country Club.

The annual convolve of the Beta Phi Sigma Fraternity will be held during the first week of March at the Home of the Alpha Chapter, University of Buffalo, Buffalo, N. Y.

On Feb. 3, Dr. W. W. McNeary addressed the members of

the junior class in pharmacy on photography. This lecture was of special interest because of the recent impetus given to the sale of photographic supplies as well as the developing and printing of pictures by retail druggists. Dr. McNeary interestingly described the method of preparing plates, films and other supplies, and then demonstrated how developing and printing can be made a source of profit to the druggist.

### College of Pharmacy, City of New York.

The annual meeting for the election of officers of the New York College of Pharmacy will be held on Tuesday evening, March 17. President Butler has appointed the following nominating committee to prepare a list of candidates for the offices to be filled: William P. Ritchey, Henry C. Lovis, O. G. Kalish, Caswell A. Mayo, F. K. James, Ewen McIntyre, F. A. H. Anger.

At the close of the routine business Frank Farrington, of Delhi, N. Y., editor of *The Inland Store-Keeper*, will give the third of the series of this year's lectures. His topic will be "Advertising for Retail Druggists." It is seldom that the college has had such a large audience as was present to hear the lecture given by Harry B. Mason, and it is hoped that all pharmacists in and about New York will consider this a cordial invitation to attend the lecture to be given on March 17.

A dance was held by the students of the college in the university gymnasium Jan. 31. Almost 100 couples attended and the success of this, the first dance of such magnitude given by the students, is due to the untiring efforts of the student committee, composed of J. Paulonis, chairman; B. Maslon, B. J. Davis, M. Levine, D. Franceschi, L. V. Mango, F. A. Frawley, J. Mendiola, J. Friedlieb, J. Sesta, H. Hammer and M. Stewart. Dean Rusby personally took a great interest in the dance and appointed as a faculty committee Drs. Wimmer and Leslie, to give whatever aid was possible to the students. Financially, the dance was also a success, and the surplus was turned over to the library committee of the college for the purchase of new books.

The following men have been taken into the fraternities:

*Phi Chi*—G. C. Aronstamm, Charles Dougherty, William Neergaard, Alfred G. Young, L. N. Brown, Geo. N. Graves, Duncan N. Rose.

*Kappa Psi*—F. J. Andrews, L. Feltus, W. A. McBride, I. Richmond, A. E. Thompson, A. C. Burnett, R. Finello, H. E. Miller, J. Troy.

*Tau Epsilon Phi*—E. S. Bellis, Jerome Martus, D. Svigelsky, Benj. E. Wallach, Jerome Ettinger, Benj. Maslon, H. F. Strongin.

The classes have held their election of officers with the following results:

*Senior Class*—President, Joseph Goldstein; vice-president, Louis V. Mango; secretary, M. H. Dixon; treasurer, Mason Stewart.

*Junior Class*—President, Alfred G. Young; vice-president, N. Chapman; secretary, Miss May O'Connor; treasurer, Miss Helen F. Roudin.

*First Year University Class*—President, William McBride; vice-president, H. E. Miller; secretary, Charles O'Hagan; treasurer, H. F. Strongin.

### Buffalo Druggists Favor Sunday Closing.

Eighty per cent. of Buffalo druggists who claim the University of Buffalo as their alma mater, are in favor of Sunday closing and are anxious to do all in their power to clamp the Sabbath lid on the city's pharmacies. This fact came out at the 26th annual banquet of the Alumni Association of the Buffalo College of Pharmacy at the Hotel Statler, Jan. 29. Seventy-five members were present. Most of them are owners of stores; the rest are managers and chief clerks. The few who oppose Sunday closing voiced their acceptance of the partial closing idea, but all agreed that Sunday closing is inevitable. The pending Albany law which would prohibit doing business on Sunday except by a few dispensaries, brought on the discussion. The vote resulted four to one in favor of closing. Numerous speeches were made dealing with the question, the consensus of all being that it was a matter of progressiveness, which might take years of labor to bring about. George L. Flanders, counsel to the State Commission of Agriculture, delivered the main address, after which a programme of vaudeville was enjoyed. One of the most pleasing numbers was contributed by Miss B. Hedden, of the

pharmacy class of 1914. These officers were elected at the business meeting: President, Paul E. Burgdorf; vice-president, Mrs. Bertha Lathbury; secretary, William E. Lemon; treasurer, Charles Gauger; historian, Dr. Richard M. Morgan.

#### University of Buffalo Exercises, Washington's Birthday.

The annual University Day exercises of the University of Buffalo were held Feb. 23 at the Teck Theater. Dr. Charles William Dabney, president of the University of Cincinnati, gave the principal address, his subject being "The Municipal University." Chancellor C. P. Norton was chairman of the event, and numerous addresses, songs and musical selections made up a pleasant programme. President Dabney's theme was particularly timely for Buffalo, as municipal control of Buffalo's college of medicine has been a mooted subject for some time. Cincinnati has been successful in this regard, maintaining a university for its young men and women.

Dr. Charles W. Bethune has made several death masks of Dr. Roswell Park, Buffalo's eminent surgeon, whose death occurred recently, and will make a bronze tablet for the Academy of Medicine and a bust for the University of Buffalo.

#### University of Oklahoma School of Pharmacy.

The students of the School of Pharmacy were favored recently with a visit from the State drug inspector, Dr. W. G. Short, of Durant, Okla., who made a very entertaining address to the boys. He said that the cigarette-smoking boy or man was a failure as a druggist, and although he knew of more positions than he could find men to fill, he would not recommend a man who smoked cigarettes. Dr. Short emphasized the need of accuracy and efficiency behind the prescription counter. He said that to know that you are right and then to do the right thing is worth more than a few dollars a man might make by doing unethical things.

The first of a series of four lectures on "First Aid" was delivered in the University Chapel by Dr. Floyd Bolend, of the State Hospital Corps at Oklahoma City. These lectures are under the auspices of the Stockonian Pharmaceutical Society and will prove to be of great value and be of great benefit to all who may hear them. Dr. Bolend, who is a graduate of our School of Pharmacy in the class of 1901, is captain of the Hospital Corps of the city and enjoys the distinction of having the most efficient organization of its kind in the United States.

#### N.Y.C.P. Alumni Annual Ball.

The 19th annual ball of the New York College of Pharmacy Alumni Association was held on the eve of Lincoln's birthday at the Hotel Majestic, 72d street and Central Park West. The affair was well attended and was a success. The beautiful ball room was decorated with the electric signs of the fraternities and with flags and pennants. The music was furnished by Van Baar's orchestra. Among those present were: Frank N. Pond, Mr. and Mrs. N. S. Kirk, Mr. and Miss Kantrowitz, Dr. and Mrs. Wimmer, Mr. and Mrs. Goodman, Mr. and Mrs. Hostmann, Mr. and Mrs. L. Weiss, Mr. and Miss Propper, Mr. and Mrs. Rothstein, Dr. and Miss M. Weil, Dr. Weinstein, Dr. Ballard, Dr. Schaefer and Messrs. De Zeller, McCarty, Starr, Wall, Berning, Holmann, Roon and others. Mr. Hostmann headed the committee of arrangements.

#### Franklin Union of Boston.

The Franklin Union class in Pharmacy of Boston shows a gain of 25 per cent. in attendance over last year. The junior and senior pharmacy classes are conducted by Fred W. Connolly, a druggist of 35 years' experience in the business. The course is planned to start at the very beginning and includes talks on store management. The botany and materia medica class was started by Dr. Monteith, who through business changes was obliged to resign. He was succeeded by Mr. Preston, who is now in charge. The pharmaceutical chemistry class is conducted by John W. Calnan, who is also in charge of the department of industrial chemistry and pharmacy. Mr. Calnan is a consulting chemist, a graduate of M.I.T. and a specialist in teaching applied chemistry.

#### Harrison Bill Reported Out of Committee.

H.R. bill 6282, known as the Harrison anti-narcotic bill, has been reported favorably from the Finance Committee of the United States Senate.

## IN AND ABOUT PHILADELPHIA.

H. E. Landau, formerly of Gettysburg, Pa., has bought the store of C. A. Eckel at 11th and Lehigh avenue.

E. K. Cope, of Germantown avenue and Norris street, has returned to his place of business after a short illness.

The Philadelphia "vice squad" has rounded up another illegal distributor of narcotics, James Ramsey, 25, of No. 504 Rector street, Roxborough, whom they accuse of having systematically stolen many thousands of dollars' worth of cocaine and heroin from Hance Brothers & White by whom he was employed as foreman. Antony Hance, the senior member of the firm, appeared as the chief prosecutor against the prisoner.

Harry Swain, owner of two large Philadelphia drug stores, has added another to his chain, having purchased Charles E. Shillito's store at Haddon Heights, N. J.

At the annual meeting of the Philadelphia Board of Trade, Miers Busch, of Shoemaker & Busch, was appointed a member of the executive council.

Bamford & Kemp, druggists, have moved from their store at 446 Penn street, Reading, Pa., to the southeast corner Fourth and Penn streets, Reading.

Caldwallader D. Balburne, who recently incorporated his business at 52d and Walnut streets, has sold the good-will and stock of "The Balburne Pharmacy" to William F. Koch, a former clerk.

W. G. Wignall has purchased the store of Dr. C. B. Donges at Fourth and Berks streets. Mr. Wignall was formerly associated with Richard H. Lackey as clerk. The doctor will devote his time to his medical practice in Camden, N. J.

Robert J. Service, a former city salesman for Smith, Kline & French, has accepted new territory. He now covers New Jersey between Camden and Newark, and expects to make his home in Trenton, N. J., after March 1. He succeeds Harold J. Baker, who will now cover Baltimore and Washington and points South, and who in turn replaces C. P. Donnel and George Miller, who recently resigned.

At the annual meeting of the Philadelphia Wholesale Drug Company, Frank J. Rohman was elected president; H. C. Blair, vice-president; Dr. A. T. Pollard, secretary, and H. Z. Krupp, treasurer. The board of directors includes H. J. Seigfried, S. C. Henery and H. C. Chapman.

The Philadelphia Druggists' Bowling League race for first place is getting close and the gaps between the teams are being gradually closed. The firms that have teams in the league are: Smith, Kline & French, Philadelphia Wholesale Drug Co., H. K. Mulford Co., Eckman Mfg. Co., H. K. Wampole Co., Eli Lilly Co., the Chemical Co. and the Drug Club.

The Hoffman-LaRoche Chemical Works have opened an office in Philadelphia at No. 504 Arch street, in the heart of the drug district, with Elmer H. Bobst in charge. Mr. Bobst has been in charge of the Hoffman-LaRoche interests in Philadelphia for three years, but hitherto has worked directly from the New York office.

#### Druggist Prosecuted by County Medical Society.

Morris Lederman, head of the Standard Pharmacy Company, 2d street and the Bowery, was held in \$100 bail for trial by special sessions, his firm being charged with "advertising the services of a physician." It is claimed that Lederman filed a certificate of trade name stating that he was doing business as the Standard Pharmacy Company. The medical society contends that a single individual under such a certificate cannot conduct a business which the law of the State prohibits a corporation from entering.

This firm, it is stated, featured the treatment of venereal diseases. The prosecuting officer declared its physician received \$600 per month for his services and that the company cleared approximately \$10,000 per year. The physician's fee was collected in the price of the prescription when filled by the druggist.

John Dyer, 37 Wall street, is the society's attorney.

#### Drug Trade Bowlers Will Not Meet at Sweeney's.

The tournament of the American Drug Trade Bowling Association will be held on the Columbia alleys (on the Boardwalk), Atlantic City, N. J., May 8 and 9. The change of the alleys is due to the removal of Sweeney's alleys, and inability to get the alleys for the usual time. Headquarters will be the "Strand."

# BOARD EXAMINATIONS

## California.

SAN FRANCISCO, Feb. 20.—The following applicants were granted registration at the recent examination of this board. The next examinations will begin in Los Angeles on April 8, 1914, and in San Francisco on April 15, 1914:

Licentiate—Mervin H. Horton, Milton P. Duffy, George C. Wentz, Stewart T. McGee, Leo C. Cross, Lee Roy Carlisle, Jas. H. Haigh, Edward A. Franks, Glenn F. Coleman, Ernest G. Kurup, Carl Jacob Stadler, Ralph H. Glezen, Thomas J. Hitchcock, Edward M. Lusty, Daniel L. Dineen, Thomas Bartholomew, P. S. Pope, Clyde J. Stuart, C. Fred B. Klarer, Fred B. Mack, Charles Norford, Samuel B. Azhderian, Carl Selkin, Harold D. Clark, W. Frank Sedgely, Francis H. O'Brien, Blanch M. Hesse, Herbert F. Mauerhan, H. R. Lincoln, John G. Viebrook, Donald T. Weimer, Otto B. Lensing, Ralph H. McGarvin, Curtis T. Schreyer, Don M. Munger.

Assistants—Leslie B. Higgs, Frank M. Smith, Anthony V. Bresani, A. C. McCullough, Ernest E. Roemer, Earl F. Hearing, Geo. H. Walker, Guy S. Young, Charles E. Hoffman, L. C. Henderson, Isadore A. Melnick, Frank H. Borchard, George H. Saltmarsh, R. B. Bagnall, Jacob Spooner, Samuel E. Weinberg, Augustus J. Affleck, William E. Weldy, Carl E. Kratt, Rinaldo L. Puccinelli, George H. Bolton, Clifford E. Banks, Will J. Allum, Reginald H. Winter, Fred E. Smith, John E. Machado, Carl H. Warnock, Ronald W. MacCorkell, A. L. Wilke, Geo. A. Jeffery, Alfred Mathews, W. H. Davisson, Morris H. Rosenberg, Nicholas J. Phelan, S. Henry McManaway, Yee Lang Fu, Edson J. Harsh, W. Earl Lawrence, Geo. T. Pomeroy, Waldo Throop, Frank Carlisle, Paul Arp, Thomas F. Blake, Michael W. Conway.

## Delaware.

WILMINGTON, Feb. 20.—At the January examinations by the Delaware Board of Pharmacy, five were granted certificates as pharmacists out of a class of fifteen, as follows: Eli S. Keyser, Wilmington; Seth S. Sawtelle, Harrington; Norman L. Kislung, Bel Air, Md.; Jacob S. Keyser, Philadelphia, Pa.; Carl E. F. Schauer, Bayonne, N. J.  
The next meeting of the Board will be held at Newark, April 1.

## Illinois.

CHICAGO, Feb. 20.—At the January meeting of the Illinois State Board of Pharmacy held in Springfield, 14 of the 62 applicants for registered pharmacist and three of the nine candidates for assistant pharmacist passed successful examinations. Their names follow:

Registered Pharmacists—Theo. R. Behrens, Chicago; S. R. Burg, Argo; Geo. S. Carpenter, Harvey; Harry R. Ehlert, Springfield; Harry Goldstine, Chicago; Harry E. Johnson, Chicago; O. D. Lattman, Chicago; C. A. Logan, Elizabeth; R. W. Merschat, Chicago; Claus Rohweder, Tuscola; Jos. H. Skaggs, Des Moines; Ralph L. Stein, Chicago; Herman Viehmann, East St. Louis; Fred D. Wilson, Chicago.

Assistant Pharmacists—R. E. Bigelow, Chicago; Jacob A. Long, New Berlin; Sister Earnesta Minder, Springfield.

The next meeting of the board for the examination of applicants for registered pharmacist will be held in Chicago on Tuesday, March 10, at 9 a.m., at 31 West Lake street. The next meeting of the board for the examination of applicants for assistant pharmacist will be held in Chicago on Thursday, March 12, at 9 a.m., at 31 West Lake street.

The next apprentice examinations throughout the State will be held on Friday, March 6.

## Massachusetts.

BOSTON, Feb. 20.—The State Board of Registration in Pharmacy has granted certificates of registration to the following:

Ernest A. Carlson, Bridgewater; Louis H. Boyle, Randolph; Norman S. Cook, Provincetown; Ralph K. Howland, North Billerica; Aime J. Lachapelle, Turners Falls; Walter A. Stout, East Boston; Simon J. Cohen, Boston; Walter J. Cullinane, Boston; Charles P. Norton, Great Barrington; Armand C. Poirier, New Bedford; Joseph C. Lynch, Jamaica Plain; Frank E. McGrath, Fall River; Charles F. Ohrenberger, Dedham; Arthur O. Batson, Cambridge; Albert H. P. Byers, Lynn; Charles A. Cronin, Lawrence; Frederick W. Nelson, Boston; John P. Shannon, South Framingham; Frank A. Burke, Dorchester; Peter McNiff, Salem; Mary T. Cunningham, Holyoke; Lee A. Hegerman, Worcester; Joseph Himmel, Lynn; John J. Moran, Fitchburg; John T. Sparks, Dracut; William J. Walsh, Quincy; Fred S. Delay, Rockland; Frank E. Duffy, Fall River; William T. Gray, Fall River; William E. Jennings, New Bedford; Vernon L. Strout, Waverly.

Assistant Pharmacist—Francis H. Farrell, East Gloucester; Fred E. Hines, Dorchester; Rodolphe B. Huot, Fall River; Thomas H. Forest, Fall River; Frank E. Littlefield, Swampscott; Thomas H. McDonald, Belmont; Warren L. Parker, Cambridge; Manuel G. Andrew, Cambridge; Lloyd E. Burnett, Dorchester; Irving F. Clement, Wellesley; John Francis Clifford, Dorchester; William A. Gordenstein, Springfield; Joseph R. Lyonnais, New Bedford; Perley Gordenstein, Brookline; George A. Webster, Medford; Philip O. S. Morse, Brookline; William H. Donovan, East Weymouth; Ahlin, West Somerville; William H. Donovan, East Weymouth; James P. Flynn, Northampton; Max Goldbard, Worcester; Louis E. Kelley, Fall River; Philomene Lacouture, Fall River; John F. McGrane, Ashton; Walter E. McQuinn, Somerville; Louis Rosen, Boston; Fred H. Works, Salem; James L. Flynn, Fall River; Issa Naman, Stamford, Conn.; Wilfred Smith, Fall River; Joseph Weinrebe, Boston; Joseph F. Laliberte, Boston; Abraham Sollogub, Boston; Joseph P. Sweeney, Springfield; James E. Templeton, Westfield; Edward J. McGrath, Cambridge; Joseph F. Devine,

Boston; Oscar I. LaForest, New Bedford; Joseph T. Lantagne, Lowell; James J. Mattimore, Worcester; Almont R. McLaren, East Boston; Clarence H. Rushton, New Bedford; David C. Barker, Somerville; Ezra Saillant, New Bedford; Pasquale F. Lombardi, Boston.

## Minnesota.

MINNEAPOLIS, Feb. 20.—Licenses for 10 pharmacists and 23 assistant pharmacists were granted by the State Board of Pharmacy, as follows:

Registered Pharmacists—H. H. Blaustein, O. H. Erickson and A. R. Ude, Minneapolis; W. I. Appel, A. H. Olson and C. P. Sattler, St. Paul; S. Batnett, Austin; A. Erickson, Rushford; G. R. Nelson, Duluth, and A. L. Young, Canton.

Assistants—Nathaniel Bentson, M. Henney, B. C. Rotegard, J. E. Sheady and J. R. White, Jr., Minneapolis; J. A. Albachten, C. A. Borgstrom, L. M. Foley, J. F. Logar and F. P. Ritschell, St. Paul; A. F. Lundquist and H. H. Schade, Duluth; J. J. Andre, Anoka; E. Backer, New Ulm; K. H. Covell, Atwater; Joseph W. Gebhard, Winsted; H. L. Hamilton, St. Louis Park; G. H. Lindert, Norwood; O. A. Madsen, Reeder, N. D.; L. A. Norin, Kokato; F. W. Reed, Vinton, Iowa; Joseph Rohor, New Prague and H. Roen, Menomonie, Wis.

## Missouri.

KANSAS CITY.—The list of successful candidates at the examination given by the Missouri Board of Pharmacy at Jefferson City in January, follows:

Registered Pharmacists—Thomas O'Donnell, St. Louis; Fred G. Messerschmidt, St. Louis; Jacob W. Ryburn, Chillicothe; T. S. Whiting, St. Louis; Jos. W. Hunolt, Moberly; John H. Burns, St. Louis.

Assistant Pharmacists—Nelson Jay, Kansas City; C. H. McDonald, Rocky Comfort; Homer L. Blankenbaker, Kansas City; Byron Beatty, Kirksville; Albert W. Mueller, St. Louis; Ernest L. Haller, Boonville; Chester W. Lieder, St. Louis.

The next meeting of the Board of Pharmacy will be held in Kansas City the second Monday in April. Applications must be in the hands of the secretary at least five days previous to date of examination. Application blanks will be furnished upon request.

## New Jersey.

BRIDGETON, Feb. 20.—The following candidates were successful at the January examinations. The next examinations will be held at Trenton, April 16-17:

Pharmacists—Charles N. Asher, Brooklyn; Adam S. Baczynski, Brooklyn; Floyd E. Bellisfield, Trenton; Julius I. Bitterman, Jersey City; Matthew Blair, New York; Domenico E. Bonanno, Asbury Park; Tycho O. Clausen, Carlton Hill; William Dembling, New York; Arthur Ebischbach, Philadelphia; Harold Friedman, Passaic; Baron A. Gardner, Brooklyn; William X. Gebele, Brooklyn; Max Gitow, New York; Josef Goodman, New York; John G. Graef, Jersey City; John Grassi, Jersey City; Harry H. Hagny, Newark; John H. Hayes, Philadelphia; Walter W. Lawson, Rahway; Martin J. Lennon, East Orange; Meyer Levy, Hoboken; Aaron London, Atlantic City; James W. Lynch, Atlantic City; Camillo Manfredi, New York; Harry F. May, Avon; Clarence Mosby, Philadelphia; William A. Nelson, Perth Amboy; Howard L. Pendleton, Rahway; Ladislaus A. Rominecki, Mount Holly; Samuel Schwartz, Bayonne; Frederick F. Schmidt, Elizabeth; Luigi Scelfo, Passaic; Alfred Stadelmann, Poughkeepsie; Stanley E. Sutton, Woodbury; Isaac Teplow, Bayonne; Edward O. Turner, Atlantic City; George P. Watman, New York; Benjamin Williams, New York; Thomas A. Zimmerman, New Milford; Otto J. Zuccarelli, New York.

Assistants—Walter W. Arnold, Camden; Hyman Berger, Brooklyn; Thomas P. Brynes, Elizabeth; Harold S. Cannamacher, Newark; Charles B. Everlockner, Burlington; Ralph E. Finello, Jersey City; Raymond G. Gilney, Coatesville, Pa.; Jacob M. Jacobs, Paterson; Walter A. Kulnen, Paterson; Charles A. Muller, North Bergen; Louis J. Strehl, Paterson; Albert Watman, Bayonne.

## New York.

The number of penalties paid the New York Board during the month of January, 1914, also the character of the violations, was as follows:

Deficient pharmacopoeial products.....	14
Adulterated and deficient prescriptions.....	6
Junior violations .....	3
Equipment violations .....	3
Total .....	26

## Ohio.

COLUMBUS, Feb. 20.—Following is a list of the successful applicants at the examination held in Columbus, Jan. 13-14, by the Ohio Board of Pharmacy. There were 78 applicants who applied for pharmacist's examination and the following were successful:

Registered Pharmacist—John E. Lonis, R. W. Terry, Chas. Lehner, H. H. Kennedy, R. G. Clark, C. T. Shelus, all of Columbus; Bertha Kleinknecht, N. H. Keller, Louis Tischbein, Jr., J. J. Wittenberg, W. C. Cox, all of Cincinnati; W. N. Albee, L. M. Voegtly, W. M. O'Leary, Jos. Lear, M. A. Cosgrove, R. J. Caldwell, Arthur Price, R. C. Cameron, all of Cleveland; Carl Ritter, C. W. Ridgway, Dayton; T. C. Flick, M. C. McArtor, East Liverpool; C. E. Mieding, I. H. Hobing, O. M. Woodburn, Youngstown; R. B. Willson, Picketon; W. B. Webber, Medina; J. M. Galbreath, Greenfield; J. R. Spangler, Shelby; John E. Slade, Batavia; W. M. Miller, Hamilton; F. B. Piper, Niles; C. E. Geringer, Wauseon; J. C. Wakefield, Clairton, Pa.

Assistant Pharmacist—J. S. Seigel, Jos. Butnik, S. M. Savange, L. G. Albee, A. H. Bedford, H. Levine, J. A. Howenstine, G. E. Kurtz, R. J. Parkin, I. H. Goldstein, H. M. Schur, A. A. Borek, Clayton Zeidler, C. F. Dvorak, L. F. Yeager, A. Butnik, all of

Cleveland; C. J. Ross, H. H. Lähke, A. J. Boger, Geo. Wingerberg, E. A. Lehr, L. M. Simms, all of Cincinnati; R. F. Boyd, R. D. Cunningham, Columbus; G. F. Marcum, Merrill Swain, Hamilton; U. E. Faucher, Pickerington; C. H. Bonsky, Canton; R. E. Wyre, Orrville; R. S. Haines, Mansfield; E. J. Wurster, Portsmouth; E. T. Parrish, Warren; B. C. Christen, Toledo; L. X. McE. Lima.

The next examination will be held in Columbus the week of June 15.

At the January meeting the board reorganized by electing the following officers for the year: President, A. L. Flandermeyer, Cleveland; vice-president, C. O. Hoffman, Arcanum; treasurer, F. H. King, Delphos; secretary, M. N. Ford, Columbus.

### Vermont.

BURLINGTON, Feb. 20.—The 19th annual meeting of the Vermont State Board of Pharmacy was held at the State House at Montpelier. Seven candidates appeared for examination and of these two were given full registration as follows: E. Floyd Libbey, Rutland; W. E. Lampman, Hyde Park, Mass. Three Assistants certificates were issued as follows: E. L. Holden, Proctor, Vt.; A. St. Pierre, No. Cambridge, Mass.; G. P. Hudson, Quechee, Vt.

The following officers were elected for the ensuing year: President, E. G. McCallen, Rutland; secretary, M. G. Beebe, Burlington; treasurer, W. L. Gokay, Bennington. The other two members of the board are W. F. Root, of Brattleboro, and D. F. Davis, of Lyndonville, who has just been reappointed for another term.

The meetings for examinations will be April 15, July 7, October 14, January 12.

### Virginia.

RICHMOND, Feb. 20.—At the January examination of the State Board of Pharmacy there were 31 applicants for Registered Pharmacist. The following were successful:

H. R. Hammer, Lynchburg; B. F. Bowles, Richmond; G. L. Miller, Charlottesville; H. E. Crabtree, Bristol; A. A. Arnold, Cape Charles; W. M. White, Portsmouth; W. T. E. Smith, Richmond.

The following applicants for Registered Pharmacist were given the Registered Assistant Pharmacist certificate: W. E. Strole, (M.C.V.) Richmond; J. W. Chambers, (Col.) Buckingham; J. L. Stephens, (col.) Raleigh, N. C.

There were seven applicants for Registered Assistant Pharmacist certificate, and the following was successful: W. C. McNow, Richmond.

The next examination will be held in Richmond April 21.

### Washington.

CONNELL, Feb. 20.—D. B. Garrison, secretary of the State Board of Pharmacy, has announced the following candidates successful at the recent examination held in Spokane: Will C. Wassell, R. G. Stevens, Gus Huch, Seattle; K. H. Ferry, Starbuck; W. F. Belcourt, Tahiti Islands. By graduation: James H. Kamiah, Idaho; R. M. Walker, Seattle; Warrel, Spokane; W. W. Wilson, E. M. Johnson, Metaline Falls.

## NEWS OF THE BOARDS.

A. L. Flandermeyer, of Cleveland, has been chosen president of the Ohio State Board of Pharmacy for the coming year; C. O. Hoffman, of Arcanum, was elected vice-president, and F. H. King, of Delphos, treasurer. M. N. Ford, of Columbus, was re-elected secretary. A class of 106 applicants for pharmacists' certificates was examined in January.

At the January meeting of the Minnesota State Board of Pharmacy Herman Rietzke, of St. Paul, was elected president, and Edward A. Tupper, of Minneapolis, secretary.

Members of the Indiana State Board of Pharmacy have been in conference with Gov. Ralston in regard to plans for a working organization whereby alleged violation of the anti-cocaine law, passed by the last Legislature, could be prevented. Board members who have been investigating local conditions in Indianapolis and elsewhere in the State have found a condition of affairs which, they say, warrants drastic action on the part of the authorities.

The Florida State Board of Pharmacy has organized by the election of W. D. Jones, of Jacksonville, as president; H. H. D'Alemberte, of Pensacola, vice-president, and D. W. Ramsaur, of Palatka, secretary-treasurer. The other member of the board is Leon Hale, of Tampa. Ernest Berger, of Tampa, the retiring president, who declined re-election, is still a member of the board, of which he held the presidency for seven consecutive terms. He announced that pressure of business forbade his longer holding the office, and a vote of thanks was extended to him for his services during his term of office. Mr. Jones, Mr. Berger's successor, is one of the foremost druggists in the State. There is no one druggist who stands higher in the estimation of the profession in Florida, and the board is to be congratulated on his elevation to this important office. In executive session the by-laws of the board, regulating reciprocal exchange, were amended as follows: (1) "The applicant for registration by reciprocal exchange from another State board must have practiced as a registered pharmacist in the State from which he applies at least one year since his registration in said State. (2) He must furnish with his application a certified copy of the proofs of experience, filed by him when he took the examination in the State from which he applies, or the original employers' affidavits proving experience. (3) The Florida board reserves the right to pass upon and reject any application in which the applicant falls below the moral, professional or educational standard set by the Florida board." The secretary, in reporting the routine work of his office, noted the much improved conditions throughout the State, and the generally stricter compliance with the pharmacy laws, particularly as regards the

operation of drug stores by registered pharmacists. The next examination of the board will be held in Jacksonville, June 8 and 9, 1914.

The Massachusetts Board of Registration in Pharmacy's report for the year shows that the commission has been self-sustaining, having a balance of \$982.61. During the year 521 candidates were examined, of whom 139 received certificates as pharmacists and 111 as assistants. The board stated in the report that the druggists in the State felt they were suffering from unfair competition and unfair trade practices. The board therefore recommended the passage of an act similar to the one now in force in New Jersey, the first section of which reads as follows:

"It shall be unlawful for any merchant, firm or corporation, for the purpose of attracting trade for other goods, to appropriate for his or their own ends a name, brand, trade-mark, reputation or good-will of any maker, in whose product said merchant, firm or corporation deals, or to discriminate against the same, by depreciating the value of such products in the public mind, or by misrepresentation as to value or quality or by price inducement, or by unfair indiscriminate between buyers, or in any other manner whatsoever, except in cases where said goods do not carry any notice prohibiting such practice, and excepting in case of a receiver's sale, or a sale by a concern going out of business."

Four St. Louisans recently passed examination by the State Board of Pharmacy at Jefferson City: Thomas S. O'Donnell, 4834 Labadie avenue; Fred G. Messerschmidt, 2225 Cherokee street; T. S. Whiting, 2950 Dickson street; John H. Burns, 2825 Pine street. Others who passed: Jacob W. Ryburn, Chilli-cothe; Joseph W. Hunolt, Moberly. Two St. Louisans passed as assistant pharmacists: Albert W. Mueller, 756 Dover Place; Chester W. Lieder, 1239 Sidney street. Others: Nelson Jay, Kansas City; Homer L. Blankenbaker, Kansas City; C. H. McDonald, Rocky Comfort; Byron Beaty, Kirksville; Ernest L. Haller, Boonville.

## NEW INCORPORATIONS.

J. S. Tyree, Chemist, Inc., a Delaware corporation; to manufacture Tyree's Antiseptic Powder; capital, \$1,000,000; incorporators, J. S. Tyree, G. A. Lewis, Washington, D. C.; G. D. Hopkins, Wilmington, Del.

Mermaid Specialty Co., Inc., Manhattan; capital, \$100,000; G. W. Frazier, J. V. Stoppelbein and D. F. Morris, New York City. West Coast Pharmaceutical Co., Seattle, Wash.; capital, \$25,000; F. M. Harris, G. E. Banks and Nellie Collier.

G. P. McDermott & Co., Indianapolis; capital, \$25,000; R. O. Willett, K. V. McDermott and G. P. McDermott. Waterloo Chemical Co., Blackhawk county, Ia.; capital increased to \$25,000; F. E. DeMott, president.

Empire Drug Co., Bayonne, N. J.; capital, \$10,000; Joseph Steiner, Isidor Sternick and Joseph Adler.

Garlington Pharmacy Co., Inc., Birmingham, Ala.; \$2000; J. B. Garlington, W. T. Garlington and Flora Garlington.

Blauw Brothers, New York; drugs, medicines and toilet articles; \$10,000; W. H. Blauw, J. Max Blauw and Ernestine Klinzing. Peruna Co., Columbus, Ohio; decrease in capital from \$500,000 to \$100,000.

Holmes & Blakely, Spartanburg, S. C.; \$12,000; Henry M. Holmes, president and treasurer; George D. Blakely, vice-president and secretary.

People's Drug Co., Johnson county, Tenn.; \$5000; R. F. Wright, J. L. Cottrell, R. E. Donnelly, D. H. Donnell and R. A. Donnelly.

Red Cross Pharmacy Co., Logansport, Ind.; wholesale and retail drugs; \$15,000; M. B. Lairy, Logansport; J. S. Lairy and George H. Babcock.

Yum Drug Co., Durham, N. C.; \$25,000; to manufacture medicines and do a general drug business; Verne Pea, W. H. Crowell, L. L. Tilly.

United Medical Co., Shelbyville, Ky.; \$10,000; William Hackworth, May F. Rothchild and J. Salinger.

Camphor Imp'tg. & Mfg. Co., Jersey City; chemists, druggists, etc.; \$200,000; G. A. Anderson, Brooklyn; E. A. Buck, Arlington; A. Dinkelspiel, East Orange.

Columbus Drug Co., Columbus, Mont.; \$20,000; Dr. F. M. Nelson, L. S. Chañin and L. D. Roy, Jr.

Balbirnie Pharmacy Co., druggists and chemists, Delaware corporation; \$25,000; H. E. Latter, W. J. Maloney and O. J. Reichard.

Ideal Compound Co., Delaware corporation; \$50,000; C. H. Bishop, C. J. Jacobs, H. W. Davis.

Berkeley Drug Co., Boston; Albert L. Wyman, Everett G. Priest, William C. Rogers; \$5000.

Hoover-Lott Drug Co., Galesburg, Ill.; \$10,000; Judson W. Hoover, Kathryn D. Hoover, Harvey V. Lott and Mabel A. Lott.

## RECENT FIRES.

At Elgin, N. D., Davenport Bros. drug store; loss \$7000.

At Greenwood, Neb., Yeast Drug Co.; loss total.

At Oviedo, Fla., D. D. Daniels' drug store; loss complete.

At Bronson, Tex., Rushing Forse Drug Co.; loss \$6300; insurance—\$4000.

At Earl, Ark., Earl Drug Co.; total; \$8000.

At Geddes, S. D., St. Marie drug store; destroyed.

At Seymour, Ind., Central Pharmaceutical Co.; loss \$4000.

At Prentiss, Miss., Model drug store; loss \$4500.

At Waltham, Mass., Tickton pharmacy; loss \$5000.

At Fitchburg, Mass., Fitchburg Drug Co.; loss \$2000.

At Bovertown, Pa., Alvah P. Greaves drug store; loss \$3000.

At Wildwood, Fla., Fleece & Gray drug store; loss heavy.

At Brookline, Mass., John L. McGown, drug store; loss small.

## Drug Manager Arrested for Shipping Poison in the Mails.

*How Parke, Davis & Co. Came Under the Ban; How the Post-office Rules Conflict; and How the U.S. District-Attorney Awaited Instructions from Washington.*

WHEN the United State Postoffice Department within six months reverses its own regulations as to the mailing of poisons, directly forbidding in Circular 58, new edition, what it permitted in Circular 58, old edition, and, after arresting the New York manager of Parke, Davis & Co. on the charge of sending poison through the mails, drops the charges and frees Mr. Smith by orders from the legal department at Washington to the U.S. District-Attorney—then, is it not time to ask *why the arrest was made, and what shall be done to prevent a repetition of such seeming persecution?*

Oscar W. Smith, New York manager for Parke, Davis & Co., was held in \$1500 bail on Feb. 9 on the charge of sending poisonous drugs through the mails. The case was dropped by order of the U.S. Attorney-General on Feb. 25.

George H. Adams, inspector in charge of the U.S. Bureau of Chemistry in Boston, went to the wholesale drug firm of Carter, Carter & Meigs, and, in the course of his inspection work, ordered a package of heroin tablets. Not having the size desired in stock, Carter, Carter & Meigs sent an order to Parke, Davis & Co.'s New York branch, the tablets were sent to Carter, Carter & Meigs by parcel post, and by them delivered to Inspector Adams. The latter, who desired the tablets to learn if they conformed with the requirements of the Pure Food and Drugs Act, reported with the samples to the Department of Agriculture at Washington, in accordance with his routine, and that department, noticing that the goods had been sent from New York to Boston by mail, notified the Postoffice Department. The arrest followed. The first newspaper reports were to the effect that the postoffice authorities had used Carter, Carter & Meigs as "stool pigeons" to obtain the heroin from Parke, Davis & Co. in accord with some mysterious programme of drug exclusion following the newspaper hysteria over the appointment of the Mrs. Vanderbilt anti-narcotic morality commission in New York. The facts as stated above indicate no such "conspiracy," but rather the lack of any definite ruling or understanding on the part of the postoffice officials as to the meaning of the regulations governing the mailing of drugs. Such is the confusion in the department that an appeal has been made to the Postoffice Department by U.S. District-Attorney Marshall of New York to interpret the conflicting provisions of the law, that he may carry the Parke, Davis case to some conclusion.

In general, all poisons are held to be unmailable under the postal laws. Section 472 of the present Laws and Regulations states in part:

"All kinds of poisons, and all articles and compositions containing poison, . . . and all other natural or artificial articles, compositions or materials of whatever kind which may kill or in anywise hurt, harm, or injure another, . . . are hereby declared to be nonmailable matter . . .; but the Postmaster-General may permit the transmission in the mails, under such rules and regulations as he shall prescribe as to preparation and packing, of any articles hereinbefore described which are not outwardly or of their own force dangerous or injurious to health, life or property."

In accordance with the power bestowed in the latter part of the preceding section, Paragraph 4 of the same section states: "Medicines and anesthetic agents, which are not outwardly

or of their own force dangerous or injurious to life, health, or property, and not in themselves unmailable [on account of improper classification, or as coming under the section relating to obscene and immoral matter], may be admitted to the mails for transmission in the domestic mails when enclosed in packages in conformity with the conditions prescribed in Section 474. *Provided*, That the terms "medicines" and "anesthetic agents" shall not be construed to mean poisons: *Provided, further*, That the article mailed bears the label or superscription of the manufacturer thereof, or dealer therein, or of the licensed physician, surgeon, dentist, or veterinarian preparing or prescribing the same."

Circular 112, issued by the New York Postoffice, and relating to the parcel post, also contains these regulations, which are applicable, however, to all classes of mail. N. Y. Circular 58, new edition, covers the same ground. In these circulars all poisons are barred from the mails.

But a former edition of Circular 58 specifically *permitted* the mailing of poisons, provided they were not to be used as abortifacients, etc., and were properly packed. The former circular, which was revised in July, 1913, reads as follows:

"Medicines composed in part or wholly of poison or poisons, and anesthetic agents, which are not outwardly or of their own force dangerous or injurious to life, health, or property, and not in themselves unmailable, may be admitted to the mails for transmission in the domestic mails from the manufacturer thereof or dealer therein to licensed physicians, surgeons, pharmacists and dentists, and not otherwise, when inclosed in packages in conformity with the conditions prescribed in Section 496 [now Section 474]: *Provided*, That the package bears the label or superscription of the manufacturer of or dealer in this article."

Hence the recently revised Circular 58 completely reverses the position taken in the former edition of the same circular. Those who are not familiar with the recent changes of the postal regulations would believe that poisons were mailable between wholesalers and retailers, but not between retailers and consumers, whereas, the new regulations prohibit the use of the mails for transporting poisons under any circumstances.

In a statement issued Feb. 13, Frank G. Ryan, president of Parke, Davis & Co., thus presented his side of the case, his position being that of Oscar W. Smith, his New York manager, and of many other manufacturing pharmacists who, naturally, would be affected by the interpretation of the law under which the arrest was made:

"The order of heroin tablets which was filled by our New York branch for Carter, Carter & Meigs, wholesale druggists of Boston, would not have been refused by a single manufacturer or jobber in the United States. It is plain on the face of the whole affair that the action of our branch was taken innocently and with no thought of violating the law, even technically. The only result will be now to cause great inconvenience to the pharmacists and physicians of the United States. *If they are to be denied the use of the mails and the parcel post for the perfectly legitimate transportation of drugs required in the practice of medicine they will simply have to be content with service by freight and express.* The additional inconvenience and expense will fall upon the doctor, the pharmacist and the patient."

## Personal Liberty in Danger.\*

By CASWELL A. MAYO, PH.G.

*President-elect of the A.Ph.A.*

OUR legislators, even more than our judiciary, are losing sight of the traditional principles which should govern all legislative enactment. As pointed out in the admirable address by Mr. Justice Cullen before the Bar Association of the State of New York, "There is a strong tendency in courts, in legislatures, and, worst of all, in the people themselves, to disregard the most fundamental principles of personal rights."

The absurd and unconstitutional restrictions on personal liberty imposed in the so-called eugenic laws is another instance in point. Every student of civil law, or even casual reader of history, knows that the imposition of restrictions to marriage merely means an increase in illegitimate births. The agitation may be helpful only in so far as it arouses the conscience of the individual to the enormity of the crime which is committed by the marriage of diseased persons, but such restrictive acts as that passed in Wisconsin can only do harm.

Every student of history remembers with horror the brutality of the old English penal law which provided capital punishment for more than 200 offences. The same spirit is now shown in making felonies and misdemeanors of all sorts of acts which of themselves are not criminal. Mr. Justice Cullen has pointed out that we now have more than 200 felonies and more than double that number of misdemeanors exclusive of duplications, the titles of which bring the number in the index of the Penal Code of the State of New York up to more than 600. No citizen may hope to avoid committing some statutory misdemeanor every day of his life. The mere fact that some of these statutes have been held to be invalid is the best confirmation of my criticism, for the enactment of laws which are either not capable of enforcement or which are basically unjust is a most serious matter, for such legislation tends to bring all laws into contempt.

Our learned friend, Chief Justice Russell, has spoken of the horrors of drug addiction and has referred with just execration to the men who pander to this vice. I am glad to have this opportunity to assure him that the pharmacists of the United States were the first to recognize the dangers incident to the traffic in these drugs and to move for the proper safeguarding of this traffic. In confirmation of this statement I wish to inform him that at the meeting of the American Pharmaceutical Association held in St. Louis in 1901, I, myself, offered a resolution pointing out the regrettable increase in the illegitimate use of habit-forming drugs and providing for the appointment of a committee to investigate this subject in the following words:

*Resolved, That a committee be appointed to consider the question of the acquirement of drug habits, and the best methods of legislative regulation of the danger. (Vol. 49, page 465, Proceedings of the American Pharmaceutical Association for 1901.)*

The agitation then begun has been kept up ever since by the American Pharmaceutical Association and has received the support of every organized body of pharmacists throughout the United States, and an anti-narcotic measure drafted in accordance with the findings of this committee by Prof. J. H. Beal, and known as the "Beal Model Law," has formed the basis of legislation enacted in more than 40 States of the Union.

The National Drug Trades' Conference, an organization representing every branch of the drug trade, is largely responsible for the present form of the Harrison anti-narcotic measure, and has done everything within its power to bring about the enactment of this bill, which, in conjunction with the local laws in force in every State, will, if properly administered, go far towards abating the illegitimate use of these habit-forming drugs. To the credit of pharmacy, let it be said that the only open opposition which this measure has encountered has come, not from pharmacists, but from an organization composed of physicians and lawyers.

Our personal liberty has been further endangered by bureau-

cratic law. All will recall the surprise manifested by lawyers and laymen alike when the Supreme Court of the United States read the word "reasonable" into the Sherman act, too late, alas, to prevent the Indianapolis decision on the "tripartite plan." This learned court has just rendered a decision which goes further in the direction of imposing additional restrictions than did the introduction of the word "reasonable" in the opposite direction. Under this latest decision a bureau chief, or, presumably, any subordinate acting in his name, may, in issuing regulations for the enforcement of a law, issue regulations which "round out the law." It seems to me, and I believe that any serious student of the law will agree with me in this, that the giving of permission to any executive official to "round out" any statute of Congress in accordance with his own personal interpretation of the objects of that statute is a blow at the liberty of the individual which may, in the hands of over-zealous or injudicious officials, go far in the abridgement of the constitutional rights of the American citizen to life, liberty and the pursuit of happiness.

It would seem, therefore, that the citizen should take careful note of these tendencies in the courts, in the legislatures, and in the executive officials as portending a loss of that personal liberty which has been the boast and pride of the United States for the past century and more. Shall we sit silent while courts, legislatures and bureaus rob us of that inestimable heritage of personal liberty received as a precious heirloom from the founders of this republic. No, a thousand, a million times, No! We speak not for ourselves alone, not only for the citizens of this great country now living, but for the millions yet unborn to whom we owe an obligation to pass on unharmed and unrestricted the personal liberty handed down to us by our own fathers.

## New Jersey's New Pharmacy Bill.

*Abstract of the Proposed State Pharmacy Law, Known as Assembly Bill No. 282, Introduced Feb. 3.*

THE new Pharmacy Act of the New Jersey Pharmaceutical Association, as drafted and amended under the sponsorship of the Legislative committee of that body, has been introduced in the New Jersey Legislature by Mr. Fisk, and is known as Assembly Bill No. 282. The committee is made up of S. D. Woolley, Ocean Grove, chairman; J. C. Gallagher, Jersey City; George M. Beringer, Camden; Isaac J. Keuper, Trenton; David Strauss.

The provisions of the bill in many respects are more in keeping with the trend of the times than are those of the present law, although the best features of the present law are retained, including the provision for continuous triennial registration, with a 50-cent fee. The new draft contemplates reciprocal registration with States having a standard equal to that of New Jersey, and also includes graduation from an acceptable school or college of pharmacy as a prerequisite to registration in pharmacy. Some of the more important features of the bill, which differ somewhat from existing stipulations, or which are repetitions of good features of the present law are:

The board shall examine into each application for license to sell drugs and medicines as a licensed storekeeper or as a vendor—as provided for in the act—if in their judgment the applicant is qualified as a proper person to engage in such selling of drugs and medicines and such a license is not a detriment to public health or morals.

After the passage of the act every pharmacy must display on a sign in letters at least an inch in height on the exterior of the store or on the window or door so as to be read from the outside the name of the proprietor or owner and the name of the pharmacist registered as such by the State Board of Pharmacy, and it shall not be lawful for any person to be in charge of more than one pharmacy at the same time or to display his or her name as such on more than one pharmacy, under penalty of fine and costs of prosecution.

Applicants for examination for registration must show a certificate from the State Commissioner of Education showing that such applicant before entering a college of pharmacy had obtained an academic education consisting of at least one year's completed study in an approved high school or its equivalent, and shall have had at least four years' practical experience in a pharmacy where prescriptions are compounded and drugs

\*From an address delivered at the annual banquet of the National Association of Manufacturers of Medicinal Products at the Waldorf-Astoria Hotel, New York, Feb. 12, 1914.

sold at retail—with a two-years' credit for equal time spent at a school of pharmacy in lieu of store experience—said applicant to be a graduate of a school of pharmacy complying with the rules and regulations of the New Jersey board.

Every registered pharmacist or assistant pharmacist shall once in three years during his or her practice of pharmacy in New Jersey renew his or her registration, paying at the same time a renewal fee of 50 cents.

Causes for removal of registration certificate are: Not of good moral character; registration secured by fraud or misrepresentation; use of narcotics or alcoholic stimulants to an extent unfitting certificate-holder for duties; mental disease.

Every pharmacy in the State to keep on hand at all times a copy of the latest Revision of the U.S.P., the latest edition of the N.F., and a copy of the latest edition of the Homeopathic Pharmacopoeia of the U.S., under penalty of fine and costs.

Impersonation of an applicant for registration before the board at the time of examination is made subject to fine and imprisonment.

After the passage of the act it is made unlawful for any storekeeper in a town or place of not more than 1000 inhabitants, or within three miles of a pharmacy, to sell, offer for sale or give away any of the poisons enumerated in the schedule of the act; or any patented or proprietary medicine known to contain any such ingredient.

The proprietor of any store or establishment other than a pharmacy who shall sell or offer for sale any drug, medicinal article or patented or proprietary remedy must first procure from the Board of Pharmacy a license as a licensed storekeeper in drugs, said license to contain a schedule of such drugs and medicinal preparations as shall be permitted to be sold in original packages as put up by and bearing the label of a registered pharmacist of a reputable pharmaceutical manufacturer.

The act makes unlawful any hawking or peddling any drug or medicinal preparation unless said vendor is licensed by the Board of Pharmacy as an itinerant vendor, with a license fee of \$10, and with the proviso that the drugs and medicines so vend are of proper composition and not detrimental to public health.

All drugs to be sold at retail must be labeled in legible English so as to show what the package contains; this section, however, does not apply to the compounding of prescriptions nor to patent or proprietary medicines sold in the original packages.

The act provides that the State Board of Pharmacy shall adopt a schedule of what in their judgment are the most suitable antidotes for the various poisons, such a schedule of antidotes to be printed and one copy mailed to every person registered on their books, and to any other person applying for the same.

Under the poison sections of the act it is provided that: It shall be unlawful for any person, firm, or corporation to sell, furnish, give away or deliver any chloral hydrate, opium, morphine, codeine, ethylmorphine (dionin), diacetyl-morphine (heroin) or any salt, derivative or chemical compound or any of the foregoing or any preparation, admixture or compound containing any of the foregoing or their salts, derivatives or chemical compounds, except on the original written order or prescription of a duly licensed practitioner of medicine, dentistry or veterinary medicine. It is provided, however, that such provision shall not apply to preparations containing opium and recommended and sold in good faith for diarrhoea or cholera, each bottle or package of which is accompanied by specific directions for use, or to the powder of ipecac and opium, commonly known as Dover's powder, when sold in dosage forms and properly labeled, or to liniments, ointments and plasters containing opium and plainly marked "for external use," or to the sale of laudanum for legitimate purposes to persons not addicted to its habitual use.

The Board of Pharmacy shall have the right to accept the certificates of the pharmacy boards of other States in lieu of examination, provided that such other States have an equivalent standard for registration, and further providing that such exchange of certificates is reciprocal.

Misbranding under the act will be deemed to exist if the package or label bear any statement, sign, or device regarding such articles, ingredients or substances which shall be false or misleading in any particular, or is falsely branded as to

State, Territory, country or locality in which it is manufactured or produced.

#### Other New Jersey Drug Legislation.

A bill has been introduced in the Senate, and referred to the Committee on Public Health, which provides that on and after the passage of the act it shall be lawful for any registered or licensed physician, located as a practitioner of medicine and surgery in any city, town, borough or village (not exceeding 1000 in population) to engage in the practice of pharmacy in such city, town, borough or village, with all the rights, powers and privileges of a registered pharmacist.

Assemblyman George L. Burton, of New Brunswick, has introduced a bill in the House of Assembly to amend the public health act regarding the sale of habit-forming drugs and drugged patent medicines. Habit-forming patent medicines containing large percentages of alcohol, cocaine, morphine, etc., are specifically mentioned in the bill and their exclusion provided for. The bill, Mr. Burton declares, is aimed particularly at heroin, since after a personal investigation he has found that the police are powerless to deal with the drug habit in the Eastern part of the State.

#### NEW BICHLORIDE ORDINANCE FOR NEW YORK

##### Measure Adopted by Board of Health Provides for Sale on Prescription—Takes Effect March 1.

At a meeting of the Board of Health of the Department of Health of New York City, held February 17, 1914, the following resolution was adopted:

WHEREAS, Bichloride of mercury, otherwise corrosive sublimate, a poison, has frequently been taken by mistake and loss of life has resulted therefrom, therefore be it

Resolved, That section 67a of the Sanitary Code be, and the same is, hereby amended to take effect March 1, 1914, so as to read as follows:

Section 67a. No person shall sell or offer for sale at retail, bichloride of mercury, otherwise known as corrosive sublimate, in the dry form except upon the prescription of a duly authorized registered physician or veterinary surgeon, and then only in tablets of a particularly distinctive form or color, labeled POISON upon each tablet, and dispensed in sealed glass containers conspicuously labeled with the word POISON in red letters.

This section does not apply to any preparation containing one-tenth of a grain or less of bichloride of mercury.

#### "Six Days Shalt Thou Labor, and Do All Thy Work."

According to James L. Gernon, mercantile inspector of the Department of Labor, offices at 381 Fourth avenue, no employee, coming under the new "one day of rest in seven" law, may work more than six consecutive days without having 24 hours off. The employee may take advantage of as many days of rest as may be allowed him, but after six consecutive days of work he must again be allowed 24 hours of rest. The spirit of the law may be that the employee get one day off a week, but Mr. Gernon doubted if the department had any authority to enforce the law in any other manner than that dictated by its letter. This interpretation puts an end to the arrangement of allowing drug clerks every other Sunday off, unless the employer cares to occasionally give them more than one day off in seven. One day in seven does not mean one day every calendar week. Mr. Gernon informed the ERA representative that one druggist had been fined \$20 for not observing the law and that prosecutions were being conducted against others. "No one, however, has been brought into court without first being warned of what he was doing."

#### Prof. Raubenheimer Leaves Journalism.

Prof. Otto Raubenheimer has resigned as editor of the *Practical Druggist* and will hereafter devote his time to the work of the revision of the Pharmacopoeia and National Formulary, to teaching in the department of pharmacy of the University of the State of New Jersey and editing its bulletin, and last, but not least, to the management of his pharmacy and laboratory, 1341 Fulton street, Brooklyn.

## DRUG LAWS AND RULINGS

**Skull and Bones for Alcoholic Beverages.**—Assemblyman Knapp, of Chemung, N. Y., has introduced in the New York State Legislature a bill to insert in the penal law a new section—1745-a—making it unlawful to sell beverages containing more than 2 per cent. of alcohol, unless the container is specially labeled with a skull and crossbones and this inscription: "This preparation contains alcohol, which is a habit-forming irritant narcotic poison." The size of the type in which the labels are to be printed varies with the size of the container, and violations of the provisions of the act are punishable by fine—not less than \$5 nor more than \$50—or imprisonment for not less than five nor more than 50 days—or both. Each sale of a container without the specified label is to constitute a separate offence.

**New Connecticut Labor Law Puzzles Druggists.**—Since the new State laws regarding the employment of minors under 16 years of age, and women, went into effect a number of Waterbury (Conn.) druggists have seriously considered a change in schedule with the opening at 8 to 8:30 instead of 6:30, as in the past, and closing at 10 or 10:30 instead of 11 to 11:30. "The rub is expected on the earlier closing proposition," declared a prominent druggist, "and yet the hours of the druggists and their clerks are altogether too long now."

**Drastic Prohibition in West Virginia.**—That the prohibition lid will be closed down tight in West Virginia after June 30, was the declaration of Governor Hatfield and State Tax Commissioner Fred O. Blue at a recent conference at Charleston, attended by members of the State Board of Health, State Board of Pharmacy, State Board of Dental Examiners, West Virginia Medical Association, and West Virginia Pharmaceutical Association. The meeting was for the purpose of exchanging views between the Governor and Tax Commissioner, who will enforce the law, and the druggists, physicians and dentists, on whose authority intoxicants will be sold after the prohibition amendment becomes effective. The conferees agreed that the letter of the law will be enforced, and that the only intoxicants to be manufactured and sold within the State will be "pure grain alcohol for medicinal purposes, pharmaceutical, scientific and mechanical purposes, and wine for sacramental purposes by religious bodies."

**Jersey Druggist Sued Under Wood Alcohol Act.**—Charging that Druggist Charles W. England, of 54 Fourth street, Newark, violated the provisions of the act of 1912, which prohibits the sale of any article intended for internal or external use, which contains wood alcohol, the State Department of Food and Drugs of the State Board of Health has entered three suits against the druggist to collect \$300 penalties. England was charged with selling essence of peppermint, Jamaica ginger and a patent medicine containing wood alcohol. He is engaged in both the wholesale and retail manufacture and distribution of various articles.

**Wants Interstate Drug Law.**—Following the introduction of the so-called Boylan bill at Albany, Charles B. Towns said that he expects soon to have a bill introduced in Congress restricting interstate traffic in habit-forming drugs. In speaking of the proposed State law, which would bar from practice any physician addicted to the use of drugs, Mr. Towns said: "There is a real necessity for this provision. Drugs may spoil a surgical operation. They may induce a doctor to neglect imperative calls. The medical profession itself at present does nothing to protect the public against the irresponsible doctor. The first step for the Federal Government will be to require the registration of all importers and manufacturers of habit-forming drugs and of all druggists. Then the Government must require an accounting of all drugs imported or manufactured. The law which practically prohibits the importation of opium for smoking has resulted in the loss of \$1,500,000 annually to the Government and an increase in the vice of opium smoking. It is possible to do much without international action. The Federal Government and State legislation would wipe out 95 per cent. of the drug evil."

**Bichloride Bill in Maryland.**—A bichloride of mercury anti-poison bill has made its appearance in the Maryland

Legislature. It was introduced in the Senate by Dr. Eugene Jones, of Montgomery county, a practicing physician, and requires that antiseptic tablets containing more than one-tenth of a grain of bichloride of mercury shall be distinctively shaped, colored and marked. The bottles into which they are put must have the word "Poison" blown in them on one side, while the other is to bear a label with the word "Poison" in conspicuous letters. Dr. Jones thinks that these precautions will serve to prevent many fatal accidents that now occur through the unintentional taking of bichloride tablets. Violations of the proposed statute are to be punishable by fines of \$25 to \$100 or by imprisonment for 30 to 90 days, or both, in the discretion of the court.

**Physicians Blamed by Tennessee Commissioner.**—Dr. Lucius B. Brown, State Pure Food and Drugs Commissioner of Tennessee, stated recently that from his information fully nine-tenths of the drug addictions are caused by the carelessness of physicians in issuing prescriptions for habit-forming drugs. Since the new State anti-narcotic law became effective January 1, up to the date of the interview, the department had issued 85 permits to have prescriptions refilled. One woman while waiting her turn to see Dr. Brown fainted and the services of a physician were required to resuscitate her. Another woman wanted 960 grains of morphine for a month's use. Dr. Brown asks that all physicians use the utmost care in issuing prescriptions for habit-forming drugs.

**To Hit Sellers' Fraud.**—The measure to prevent or punish misrepresentation in the sale of goods, which passed both houses of the New York Legislature last year, but was vetoed by Gov. Sulzer, has again been introduced through the efforts of the United States Trade-Mark Association. This bill has the support of the Merchants' Association as well as that of the American Specialties Manufacturers, N.W.D.A., Stove Manufacturers, American Bottlers' Protective and National Confectioners' associations. Two purposes are kept in view in the proposed legislation. The first is to make oral misrepresentations a criminal offence the same as written ones are now. The other is to give a party aggrieved who has been injured by the misrepresentation the right to recover in a civil action a penalty of \$100 for each offence. The persons who would be affected, in the language of the proposed law, are those who "shall knowingly sell, offer or expose for sale any article of merchandise, and shall orally or by representation, name, or mark written or printed thereon or attached thereto or used in connection therewith, or by advertisement, or otherwise in any manner whatsoever make any false representation as to the person by whom such article of merchandise or the material thereof was made, or was in whole or in part produced, manufactured, finished, processed, treated, marketed, packed, bottled, or boxed." If enacted into law, this bill would do for the State of New York exactly what a number of the business men wish done by the Federal Government, as stated before the Legislative Committee of the Merchants' Association at a recent hearing.

**To Stop Misleading Advertisements.**—A bill making it a misdemeanor to circulate misleading advertisements of any nature by any means was passed recently in the Council, the upper house of the St. Louis Municipal Assembly, by a unanimous vote of the 12 members present. The bill was in its original form, despite the request of several merchants and advertising experts who appeared at a public meeting and urged that the word "misleading" was too indefinite and might render innocent advertisers liable to conviction when no deception was intended. As an example, the common term "solid gold" as applied to 10, 14, or 18 karat gold might be held to be "misleading," it was said.

**Druggists' Weights Short in Milwaukee.**—The campaign which has been started in Milwaukee by the city sealer's department, under the auspices of the Wisconsin State department of weights and measures, against short-weight scales of druggists and jewelers, has resulted in disclosing many cases of defective apparatus. In his first day's work for the city sealer's department, R. W. Cunliffe, a chemical engineer, appointed a special deputy for the work, found 26 short-weights in downtown drug stores in Milwaukee. Officials of the city sealer's department say that the short weights do not necessarily indicate that druggists have been trying to defraud customers, but that many of the weights, having been used for a number of years, have dropped below their designated weight,

and the druggists have paid no attention to it. Mr. Cunliffe will inspect every drug store in Milwaukee and will then give his attention to the scales in the jewelry stores.

**Got Extra Price for His Whiskey, Hence It Was Medicine.**—A. M. Clauder, a Cincinnati druggist, charged with the violation of his liquor license, has been discharged, cleared, by the Cincinnati municipal court. A resident of the neighborhood went to the drug store and told Clauder that he was ill with cramps and wanted some whiskey and ginger. Clauder gave it to him as medicine and charged him 25 cents—10 cents is the average price for whiskey in that section of Cincinnati—and when Clauder was taken before the court the judge held that the price charged was sufficient evidence that the whiskey combination was sold as a medicine and not as a beverage.

**To Regulate Bichloride Sales.**—Senator Egan, of Hudson county, N. J., has introduced a bill in the New Jersey Assembly making it unlawful to sell corrosive sublimate or similar poisons except on the prescription of a physician.

**New National Opium Laws.**—Under the new opium laws, drawn for the purpose of wiping out the traffic in opium for smoking, smoking itself, and the use of the drug for other than medicinal purposes, a fine of \$10,000 or imprisonment for five years, or both, is possible as a penalty for violations of the law. A tax of \$300 a pound is provided on the drug as manufactured for smoking.

**Fighting Doctors in Drug Stores.**—The County Medical Society has begun a legal conflict with some 400 drug stores in New York City by the arrest of Morris Lederman, head of the Standard Pharmacy Co., 2d street and the Bowery, charged "with advertising the services of a physician"—which is contrary to law. Lederman was held in nominal bail, and the case will be carried to the highest courts. John Dyer, attorney for the County Medical Society, claims there are more than 400 drug stores which employ physicians to give advice to and examine customers on their premises, and that the advertising of such services constitutes a breakage of the law.

**Sale of Playing Cards Violates Sunday Law.**—The proprietor of a Providence (R. I.) drug store has been placed on probation for having allowed merchandise to be sold in his store on Sunday. A clerk employed in the store sold a pack of playing cards, after the proprietor had been warned by the police that such sales must not be made on Sunday.

## New York Bills Affecting Druggists.

NOT for a long time have there been so many bills before the New York Legislature which affect, directly and indirectly, the pharmacists of the State. The anti-narcotic agitation, and the effort to secure a law governing the sale of bichloride of mercury which shall be fair to all concerned, are both responsible for this influx of proposed legislation. We publish herewith the more important bills by title, with brief abstracts of their provisions:

### ASSEMBLY BILLS.

*To amend the penal law, in relation to public traffic on Sunday (No. 59. Int. 60. Phillips):*

Except in cities of more than one million inhabitants, all manner of public or private selling or offering for sale of any property on Sunday is prohibited, except . . . Milk, ice and soda water may be sold in places other than where spirituous or malt liquors or wines are kept or offered for sale; Passenger tickets, newspapers, drugs, medicines and surgical appliances may be sold in a quiet and orderly manner at any time of the day; Act shall take effect immediately.

The Phillips bill, according to report of J. H. Rehffuss, presented at February meeting of Kings County Pharmaceutical Society, is a Sunday "blue" law backed by the Sunday Observation Conference of New York. The original idea of those interested in it was not to include the drug stores, but to get after the delicatessen shops. Mr. Rehffuss pointed out that in order to keep a drug store open on a Sunday an expense of at least \$8 was incurred, due to clerk hire, etc.: druggists would have to sell other articles than drugs in order to accommodate the public by keeping open for drug sales. A committee called upon members of the above conference, but nothing of advantage to the retail drug trade came of the interview. The conference representatives requested the so-

ciety members not to oppose the bill. At the society's meeting various members expressed the opinion that the enactment of the bill would only serve as an entering wedge to make similar provisions for New York City.

*To amend the penal law, in relation to selling poison without label, and recording the sale (No. 204. Int. 204. Knapp):*

It shall be unlawful to sell at wholesale or retail, furnish or offer for sale, any package, bottle or other holder containing any article, preparation or compound intended or commonly used for beverage purposes which contains more than 2 per cent. by weight of alcohol unless the same shall bear on the outside thereof a special label on which shall be printed in red the skull and crossbones commonly used to designate poison and the following words: "This preparation contains alcohol which is a habit-forming irritant, narcotic poison," such special label to be on the same side as the general label, if any, containing the name and description of the article. Bill provides for three classes of containers and legibility of type used for each class. Violation shall constitute a misdemeanor; penalty, not less than five dollars nor more than fifty dollars or imprisonment not less than five days nor more than fifty days or both. Each bottle or container sold, etc., without special label shall constitute a separate offense.

The Knapp bill, according to Mr. Rehffuss, would tend to depreciate the value of the "poison" label.

*To amend the penal law, in relation to the sale or possession of cocaine or eucaine (No. 210. Int. 210. Sufrin):*

It shall be lawful for a licensed pharmacist or a licensed druggist to sell or dispense alkaloid cocaine or its salts or alpha or beta eucaine or their salts in the following cases: (1) Upon the written prescription of a physician duly registered and licensed to practice in the State of New York; (2) to a licensed dentist upon his or her written order. Bill further provides that total amount dispensed to dentist shall not exceed 30 grains upon one written order and order shall be retained by person dispensing drug. Dentist required to keep same records as is required in the case of a purchase in the original package, with the exception of the omission of the statement that the same was sold and purchased in the original package.

The Sufrin bill, No. 210, was explained and approved at Kings County Ph.S. meeting. New York Board of Trade and Transportation Drug Trade Section legislative committee was instructed to consult with District Attorney's office relative to this bill. The present cocaine law permits purchase of cocaine by dentists in original packages. Opinion on the subject was divided at the Section's last meeting, one member in particular being decidedly of the opinion that a registered pharmacist should be permitted to sell to dentists.

*To amend the penal law, in relation to permitting labor and secular business on Sunday by certain persons (No. 211. Int. 211. Sufrin):*

No person, who belongs to a religious faith, according to the tenets of which any other day of the week than Sunday is observed by its members as a Sabbath or day of rest, and who actually refrains from secular business and labor on such other day, or from sundown on Friday to sundown on Saturday, shall be liable to prosecution for carrying on secular business or performing labor on Sunday, when so conducted as not to disturb other persons in observing Sunday as a Sabbath or day of rest. Nothing herein shall be construed to permit any person to carry on business or perform labor on more than six days in any week. To take effect Sept. 1, 1914.

The Sufrin bill, No. 211, was characterized as "religious" by the Kings County Ph.S. members and it was unanimously decided to "leave it alone."

*For preventing the manufacture or sale of adulterated or misbranded or poisonous or deleterious foods, drugs, medicines, and liquors, and for regulating traffic therein, and to provide for the appointment of a commissioner of food and drugs and his assistants, to define their powers and duties and to repeal all acts relating to the production, manufacture, and sale of foods, drugs, medicines, and liquors in conflict herewith (No. 279. Int. 279. Nelson):*

Provides for appointment of a commissioner of food and drugs; term, four years, salary, \$5,000 and necessary expenses; duties, enforcement of all laws regarding manufacture or sale of adulterated, misbranded, etc., food, drugs, medicines and liquors (as defined in the bill) and to prosecute all violators. Governor shall appoint, as required, a food standard commission to determine and adopt standards of quality, purity, etc., for food products for this State. Commission to consist of three members, one the above commissioner, who shall serve without extra pay, and one of whom shall be a representative of the New York food manufacturing industries, and one of whom shall be a food chemist; remuneration, \$15 per day for not over 30 days in one year, and expenses. Bill also authorizes appointment one assistant commissioner at \$2500 per year; one chief chemist at \$2000 and expenses; one attorney, \$3000 and expenses; one chief clerk, \$2000 and expenses; one assistant clerk, \$1800 and expenses; three stenographers, \$720 each;

to inspect, \$150 per annum first two years' service, \$1600 for third year and \$100 annual increases until maximum of \$1800 is attained, and expenses. Commissioner is authorized to appoint one bacteriologist at \$150 and expenses, and three analytical chemists, salaries ranging from \$1200 to \$1800, as per years of service, and expenses, and one laboratory janitor at \$720. Bill is lengthy and should be obtained from Assembly clerk by those interested.

The Nelson bill was opposed by the Kings County Ph.S. on the ground that the Department of Agriculture already had in hand the regulation of the sale and manufacture of food and drugs. Mr. Kehluss did not think that the bill would make much headway at this session as it had too much opposition. According to S. V. B. Swann, this bill, if enacted, would supersede the pharmacy law as to misbranding, etc., of drugs.

*To amend the penal law, relating to the delivery of distilled or rectified spirits, wine, fermented or malt liquors, within the State of New York, and to require all packages of or packages containing distilled or rectified spirits, wine, fermented or malt liquors, to be labeled on the outside or cover so as to show plainly the name of the consignee, the nature of its contents, and the quantity thereof (No. 337. Int. 335. Gillett):*

*To amend the penal law, relating to the delivery of liquor in places where its sale is forbidden by the liquor tax law (No. 338. Int. 336. Gillett):*

### SENATE BILLS.

*To amend the public health law, in relation to certain habit-forming drugs (No. 35. Int. 35. Boylan):*

No pharmacist, druggist, apothecary or other person shall fill prescriptions containing opium, morphia, coca leaves, cocaine, alpha and beta eucaine, chloral hydrate, their salts, derivatives, or preparations except upon the written order of a physician, as provided in this bill. State commissioner of public health shall prepare and furnish to local health boards official prescription blanks, serially numbered in duplicate . . . , upon which must be written the date, name of person to whom prescription is issued, prescription in full and name of person issuing prescription; . . . All prescriptions written for narcotics named above must be written on these blanks. Sale at retail of enumerated drugs without first receiving from purchaser an official prescription blank, properly filled out and signed by a duly licensed physician, shall be unlawful. Prescription blank shall be filled at time of receipt and no prescription shall be filled more than 10 days after date of writing. It shall be filled but once. No copy shall be made, dispenser keeping original and filing same in a separate file. Date, name and address of purchaser and name of dispenser must be entered in a book and a certificate stating name and address of person furnishing drug, name and address of physician, and amount of identity of drug, must be given to purchaser, official certificates to be furnished by commissioner of health.

This bill also provides for official order blanks for the purchase of enumerated drugs by dentists, pharmacists or veterinarians. It shall be unlawful to sell, furnish or dispense to any physician, druggist, veterinarian or dentist any of the enumerated drugs without first receiving an official order blank. This blank shall be retained by the person or corporation making the sale and shall be kept in a separate file or book and an entry made in a book, stating name and address of purchaser and name of person making sale. All physicians, druggists, veterinarians and dentists shall keep on record name and address of each person to whom any of the enumerated drugs are administered or disposed of and such record shall be preserved for four years and be kept open for official inspection. Violation, a misdemeanor.

Physician prescribing or administering any of enumerated drugs to patient for period of more than three weeks shall consult physician designated by board of health, or with another physician, and obtain consent . . . and also make a report in writing to the health officer . . . on a form . . . furnished to all local boards of health. Bill makes sale at retail to any person other than physician, dentist or veterinarian, of hypodermic syringe or hypodermic needle, without first receiving an official prescription blank, unlawful, and provides for records of these sales that are made. Violation, a misdemeanor.

Any license issued to any physician, dentist, veterinarian, pharmacist or registered nurse, may be revoked upon proof that licensee is addicted to use of any habit-forming drug or drugs, after giving licensee reasonable notice and opportunity to be heard. Conviction of any of the violations authorizes officers or boards having licensing power to revoke license of practitioner. Any violation of article constitutes a misdemeanor, except where otherwise provided by any special law or statute.

The Boylan bill was reported by S. V. B. Swann, chairman of the German Apothecaries' Society's legislative committee, as not likely to pass. Mr. Swann called particular attention at the last meeting of the G.A.S. to the extensive scope of the bill and the provision for the revocation of licenses.

*To amend the penal law, in relation to public traffic on Sunday (No. 204. Int. 204. Wheeler):*

Concurrent with Assembly bill No. 59.

*To amend the public health law, in relation to the sale of*

*bichloride of mercury (No. 243. Int. 242. Heffernan):*

No pharmacist, druggist or other person shall sell at retail bichloride of mercury except upon the prescription of a physician. If sold in tablet form, the tablets shall be colored blue and be triangular in shape.

The Heffernan bill is in several respects identical with the Blauvelt bill. Both measures require that mercury bichloride be sold only upon a physician's prescription. Both measures, too, would regulate the shape and color of bichloride tablets. Hearings have been attended by representatives of different organizations and the prescription provision strenuously objected to. The amendment of the local Health Board ordinance so as to require a physician's prescription for the sale of this article is interesting in the consideration of these bills. The Drug Trade Section went on record as opposed to the Blauvelt bill, since it would prohibit all transactions between manufacturers and wholesalers, among jobbers, and between wholesalers and retailers. It would prohibit the dispensing of bichloride by pharmacists in all forms except that specified. A telegram was sent to the Committee on Codes at Albany requesting a hearing for the suggestion of amendments. A few of the objections to the Blauvelt bill, expressed at the February Kings County Ph.S. meeting, were that the public would be required to go to a physician whenever bichloride was to be used for any purpose and that bichloride in the specified form would not be adaptable to all uses. Blauvelt bill was backed by a local daily newspaper.

*To amend the penal law, in relation to the sale or possession of cocaine or eucaine (No. 270. Int. 270. Frawley):*

Unlicensed possessor of heroin, etc., shall be guilty of a felony, unless possession is authorized by certificate. Possession of heroin by licensed pharmacist, druggist, etc., in any other than place scheduled in record constitutes a felony, provision being made, however, for quantity required by physician, dentist and veterinarian in his practice. Violation, a felony. Thirty days after passage quantity of heroin on hand must be recorded in a book. If amount on hand exceeds allowed quantity no more purchases must be made until amount on hand shall be reduced by lawful disposition to an amount less than that prescribed. Due notice in writing must be made to State department of health. Violation, a felony. It shall be unlawful to have in any pharmacy or drug store more than one and one-quarter ounces of heroin for each duly registered pharmacist regularly employed, provided that no more than five ounces may be carried in stock under any conditions. Practitioners also limited. Violation, a felony. A person convicted of a felony for a violation of any provision of this section shall be punishable by imprisonment for not less than five years nor more than 20 years.

The Frawley bill raises the status of violation from misdemeanor to felony. Kings County Ph.S. representative pointed out at Albany that the minimum imprisonment of five years should be eliminated. "Nothing is left to the discretion of the court: a druggist might be guilty of a technicality."

### BOYLAN BILL NOT DRASTIC ENOUGH.

ALBANY, Feb. 25.—At a hearing today before the Senate Public Health Committee, several speakers pointed out that the Boylan bill in its present form will overthrow much of the good which was done by the anti-cocaine law passed last year. A section should be added making possession of the drug a crime, and the scope of the bill should be enlarged to include all habit-forming drugs. Howard C. Barber, of the Society for Prevention of Crime, made some startling revelations of the extent to which harmful drugs are now being used by school children in New York City. Other speakers were R. K. Smither, of the Erie County Pharmaceutical Association; J. G. Wischerth, of the Kings County Pharmaceutical Society; Arthur L. Wardle and William T. McConnell.

As a tangible result of the new anti-drug movement fostered and supported by Mrs. W. K. Vanderbilt, a committee of five has been appointed to draft a new anti-narcotic law for New York State. The committee, consisting of Judge Edward Swann, Ernest K. Coulter, Mrs. Vanderbilt's attorney; J. P. Atkinson, a chemist of the Board of Health; Dr. Robert A. Hatcher, of Cornell, and Floyd M. Wilmot, assistant district attorney, recently went to Albany to protest against certain provisions of the Boylan bill. The crusade was organized on Jan. 30, at a meeting held in Judge Swann's chambers, which was largely attended by attorneys, representatives of the drug and medical interests, and many social workers. Great emphasis was laid on the fact that local or State regulations are of little avail, and many strongly endorsed the speedy passage of the Harrison bill as the best remedy for the present.

**DRUG STORE FOR WELL PEOPLE.**

The Wilmarth Show Case Co., 1552 Jefferson avenue, Grand Rapids, Mich., have done something new—they have gotten out a booklet with a punch in it, a business-builder, filled with horse-sense, beautifully printed, on colored stock. Taking as its text the advice "Cater to the Well—the Sick Will Come to

You," the booklet treats of the old-fashioned druggist, the place of confidence in business, the ideal drug store, problems for the drug-store designer, soda-water department, selling tobacco and cigars, etc., etc., from the viewpoint of the successful business man and not alone from that of a specialty manufacturer. Of course, the Wilmarth company are in business to sell show cases and fixtures, and the reader of this booklet is not allowed to forget it—but this fact is not thrust into the face of the reader in every paragraph. Take this extract from the chapter on cigars and tobacco, for instance; is this not the epitome of the retail tobacco business?

"To build up a profitable cigar trade you must, 1st: Keep your stock in prime condition; 2d: Display it most attractively. A cigar is like a human—'Delightful' in life but only 'substance' in death. The process that kills it from thirst, or the process that drowns it takes all the good it contains, and leaves only a mass of inflammable material, or a water-clogged bunch of weeds. The delicate aroma has fled. No process can restore it. It cannot be denied that the average druggist does not give the attention that he should to the care of his cigars. He fails to maintain cigars and tobacco at their highest 'smoke value.' From the time the seed is planted the tobacco weed receives the most painstaking care and attention from the planter, the warehouseman and the manufacturer. The growing and handling of the plant is most scientifically done. The utmost vigilance is used to keep the temperature and the humidity just right, with the result that the goods leave the manufacturers' hands in as perfect condition as human skill can attain. Then the retailer too often carelessly throws away the value of the stock by his methods and handling. The values carefully stored up in the leaf through the long months of its preparation may be destroyed over night. The form remains but the delicate flavor is gone. For the particular customer the dealer will open a fresh box. Both know that the fresh box does actually furnish better cigars. To so conserve 'smoke value' that the last cigar in the box will be as good as the first is the reason for Wilmarth cigar fixtures." Why not send for a copy of the booklet, and read the rest of this?

**Royal Purple Grape Juice, J.H.S.**

The J. Hungerford Smith Co. are meeting with great success in the sale of their Royal Purple Grape Juice. It is distinctively a quality beverage and is being adopted by dealers who want the best. The discounts offered on Royal Purple are unusually liberal and the 1914 advertising offer is

most complete. The two-page advertisement on Royal Purple in this issue gives some idea of the new factory and the extreme care that is exercised in the manufacture of this beverage from the time the grapes are gathered until the juice is bottled. The Royal Purple Pages, which form part of the window trim, are unique and attractive and will do much toward advertising and increasing sales. In our advertising pages next month J. Hungerford Smith Co. will announce a new sundae they have just perfected, the best, they claim, of all their leaders.

**A Show Case That Sells Goods.**

We are illustrating herewith a silent salesman show case which is given free to dealers ordering a specified assortment of strings for musical instruments from Buegeleisen and Jacobson, of New York City. This outfit yields a return

of more than \$36 on an investment of a little more than \$10, and a handsome profit. The show case sells the goods if adequately displayed. For further details see advertisement in this issue.

**Intestifermin Tablets.**

Intestifermin, recommended for the treatment of intestinal auto-intoxication, according to the manufacturers, is a combination of the new bacterium Glyco-Bakter, Peptolyticus discovered by Professor Metchnikoff, and the bacteria of Yoghurt, and is claimed to be the preparation that contains the two necessary bacilli in pure and active form for introduction into the intestinal tubes for the elimination of pathological bacilli and noxious secretions which are being constantly formed in our bodies and tend to develop those diseases known under the general name of "auto-intoxication." Intestifermin is put up in tablet form in bottles only, by the Hygiene-Laboratorium, G.m.b.H., Berlin, the sole agent for the U.S. and Canada being The Berlin Laboratory, Ltd., this city, to which requests for pamphlet by Dr. de Souza, of Dresden, on "Intestinal Auto-Intoxication, Its Causes and Its Prevention," and other literature relating to this interesting subject should be sent.

**Immunization by Means of Serobacterins.**

According to trustworthy reports of bacteriologists and clinicians, Serobacterins are destined in a great measure to supplant other means of immunizing against and treatment of many infectious diseases. By their use, it is claimed, there is secured a great gain in time over the older methods of bacterial therapy, and whether in prevention or treatment, the time

of the utmost value. In a few days, for instance, by typho-serobacterin, the practitioner may now secure for his patient immunity against typhoid, where with the old typhoid vaccine the treatment for immunization took nearly a month. Of course, great care is advisable in the selection of a sensitized vaccine or serobacterin, and for this reason only the product of the manufacturer of highest professional character should be chosen. The Serobacterins of the Mulford Laboratories comply with all these requirements, and to post-graduate druggists should send to the H. K. Mulford Co., Philadelphia, for a copy of the *Mulford Digest* for December, which contains a complete review of the literature of this interesting subject. This copy should be read and then kept for future reference.

#### Lilly Bichloride Tablets Pioneers.

No one is more eager to safeguard the public in the sale of bichloride tablets than the average fair-minded druggist and the imposition of so many restrictions and regulations makes it hard to comply with the law in all of its phases and continue to do business. Since Eli Lilly & Co. introduced Diamond Antiseptics several other manufacturers have offered bichloride of mercury tablets of special design supplied in special containers, so that now if legislation of any kind is needed all that should be done is to prohibit the sale of bichloride of mercury in the shape of the ordinary round or cylindrical medicinal tablet. Nine years ago Eli Lilly & Co. placed in the market Diamond Antiseptics. Every reasonable precaution was exercised. The tablets were of unique shape, the bottle had rough edges and a diamond shape. Each tablet was marked poison on both sides. These tablets were pioneer safeguards against the accidental misuse of bichloride of mercury.

#### New Size Package of Platt's Chlorides.

To meet the constant demand for a smaller and more convenient package of Platt's Chlorides, the manufacturers are now putting up this odorless disinfectant in small and large size bottles. The new size is very convenient and will be advertised extensively for general household use. A special introductory offer is being made by the manufacturer, Henry B. Platt, by which in consideration of display and distribution of advertising material to be sent direct by the maker, the retailer will receive a number of the new small size bottles free. Platt's Chlorides have been used by the medical profession and in the hospitals for 34 years, and are in steady demand. See the advertisement for details of new window display contest.

#### Rubber Sundries and Surgical Specialties.

The Lee Tire & Rubber Co., of Conshohocken, Pa., manufacturers of rubber goods for the trade, are calling special attention in their advertisement in this issue to their facilities for turning out products of the highest quality and durability, due to the efficiency of their manufacturing department and the use of material used. This company makes a specialty of "own make" goods, and will furnish any druggist with high-class rubber products and sundries of every description with the druggist's name on the medallion. Trusses and elastic hose, the latter knitted for form, and made in special sizes on request, are also part of the Lee line; a postcard request will bring a catalogue, and further information and prices will be sent gladly to any one mentioning the ERA when writing.

#### Selling Nifty-Nibbs.

Nifty-Nibbs, the candy castor oil, without the castor oil

taste, "look like, taste like and smell like any other chocolate"—a great advantage in pushing their sales for children. The part the children play in creating a demand for this new candy cathartic is emphasized in the new cut-out of the Therapeutic Specialty Co., which is printed in four colors, in handsome combination of gold, brown, red and black. The principal figures on the cut-out are a dainty little miss who is holding out a Nifty-Nibbs to a baby whose arms are outstretched. The little girl is saying: "You'll like it, too," and baby looks as if she would. No youngster who sees the cut-out could resist the appeal—and the mothers among drug-store patrons will also be attracted by this clever advertisement of the "chocolate creams with the castor oil hidden in them."

#### A Story of Ether.

"The Purest Ether, the Best Container," is a figure of speech you see in the leading pharmaceutical and medical journals. It refers to Parke, Davis & Co.'s ether for anesthesia and the dropper container which somebody has called an inspiration. Parke, Davis & Co. decided to market the anesthetic a number of years ago. The anesthetic itself is said to have taken more than a year of time and numberless experiments to insure the requisite degree of purity. There still remained the problem of "the perfectly satisfactory container," and this resolved itself into the loss of another year of time. Parke, Davis & Co.'s ether can enable the physician to administer the anesthetic by the drop method. It obviates the use of special apparatus—wicks, notched corks, dropping-tubes and other devices, and is a hermetically sealed package.

#### A 10-Cent Size of Major's Cement.

The Major's Cement people have been putting up a 10-cent size for some months. Occasionally there is a customer who only wants a little of it to mend one or two articles, so for that reason it is good business for the dealers to handle the 10-cent size as well as the 15-cent size, and place an order for a small quantity with their jobber. The display box is a great success. It helps to remind the people of the broken articles they have at home and in that way it helps to dispose of the goods. The Major Mfg. Co. offer to refund the money you paid for the cement if any of it is left on hand after a reasonable time, so in that way the retailer is perfectly safe to order a dozen of each size, 10 cents and 15 cents.

#### Coffee as a Drug Store Specialty.

There are a number of drug stores which are making money and building an exclusive clientele by handling a fine line of coffee and teas. Thousands of pounds are sold by New York drug firms every year, with resulting satisfaction to customers and to the store management. The E. R. West Coffee Co., with branches in New York, Chicago and St. Louis, is advertising a special line of full-flavored, high-grade coffee, packed in the whole bean, ground, pulverized or assorted, at prices which will interest any druggist who sees the possibilities of this side line but who is looking for a high-class, dependable product.

#### Profit-making Fixtures.

Jac. Lederer, Inc., Chicago, manufacturers of Peerless fixtures and fountains, are seeking converts—they are anxious to convince druggists of the profit-making possibilities in modern fixtures, and will gladly answer any requests for further information along this line. The possibilities which lie in proper display of merchandise have only just begun to be realized—the big chain stores were among the first to grasp the real possibilities of the idea—and in the Middle West the Lederer line has proved most effective and satisfactory. For further details see their advertisement in this issue.

#### March Winds Bring Freckles.

Now is the time to feature a freckle-remover—something that is efficacious, that will not injure the skin, that will sell and sell again, at a good profit. With the advent of March winds sensitive skins begin to freckle, and possessors of sensitive skins are usually sensitive about freckles. Why not couple the weather conditions and reasonable specialty? That's the way to get the public coming to you. When you consider a freckle cream, you naturally think of Stillman's. See the advertisement of the Stillman Freckle Cream Co. in this issue.

### An Electric Sign on Free Trial.

Nothing could be more fair than the offer made by the Reflecto Electric Sign Co., of Indianapolis, in their advertisement in this issue. This company makes electric signs of every description, which are sold, rented or leased by arrangement, and are calling attention to an all-steel, double-faced sign, 2 by 7 feet, with hangers and flasher which they will ship to any point in the United States, satisfaction guaranteed, or return at the company's expense. See the advertisement for further details as to price, number of lamps, etc., and be sure to mention the ERA when writing.

### Sodium Acid Phosphate Monobasic.

This is a new compound, brought to the attention of the medical profession through the New and Nonofficial Remedies. It has the chemical formula  $\text{NaH}_2\text{PO}_4 \cdot \text{H}_2\text{O}$ , and is said to be very effective in rendering the urine acid, a desirable condition in connection with the use of hexamethylenamine. It is given in doses of from 1 to  $1\frac{1}{2}$  grams frequently repeated, until the desired effects are produced. The Mallinckrodt Chemical Works have already placed the article on the market, and druggists desiring it can order the "M.C.W." brand through their wholesale druggists.

### The Lancaster Glass Co.

The Lancaster Glass Co., Lancaster, Ohio, are makers of glassware—good glassware, plain and decorated. They are making a specialty of high-class, artistically-designed glassware for the soda fountain, and readers of the ERA who are interested are requested to write for special wholesale druggists' catalogue, mentioning the ERA when so doing.

### Indexed Pocket State Maps.

The Rand, McNally line of indexed pocket State maps and shippers' guides, which locate all cities, towns, post-offices, etc., etc., have been found ready sellers by druggists who carry books, stationery and periodicals. The new edition for 1914 is now ready, and can be ordered by any druggist through his jobber.

## FROM THE BUSINESS FIELD.

The H. & J. Brewer Co., of Springfield, Mass., and Waterbury, Conn., have been petitioned into bankruptcy. The difficulty, it is stated, is due to the fact that the Waterbury stores had not been operated at a profit until recently. It is understood that all the claimants will be satisfied. The H. & J. Brewer Co. is one of the oldest and best-known drug companies in Western Massachusetts, and was established by D. Chauncey Brewer on the site of the present Springfield store in 1819. He conducted the business along for six years and then took his nephew, Henry Brewer, into the firm, the store then being conducted under the name of D. C. & H. Brewer. In 1832 another nephew, James, was taken into the business, and shortly after that, on the death of the founder of the firm, the name was changed to H. & J. Brewer, which has been retained to the present. In 1907 the company was incorporated under the name of the H. & J. Brewer Company. E. O. Hapgood is the president and S. S. Pease is the treasurer. Although it was established as a retail store, a wholesale business was begun early in the history of the firm and has assumed so large proportions that it has separate quarters. A new building at 404 Dwight street for the wholesale department was occupied in the Spring of 1911. The offices of the company are also located there. The original building in which D. Chauncey Brewer established his apothecary shop on Main street was burned in 1844. The building erected on its site is still occupied by the retail store.

### A Quarter of a Century With Parke, Davis & Co.—

On Jan. 31, John C. Spratt celebrated his 25th anniversary in the service of Parke, Davis & Co. by giving a dinner to the officers and principal executives of the house at the Detroit Club. Mr. Spratt entered the employ of the company on Feb. 4, 1889, as order clerk. Thanks to a thorough knowledge of the drug business acquired through 15 years of practical experience in the retail trade, a genius for work and a capacity for administrative responsibilities, he rose rapidly from one position to another until (in 1894) he assumed the important

duties of manager of the traveling service and general business departments. Few men are better known to the drug trade of the country. The anniversary dinner was a particularly happy affair. Speeches were made by Frank G. Ryan, president of the company; George Hargreaves, treasurer; O. W. Smith, manager of the New York branch; William F. Whelan, manager of the Buffalo office, and James E. Bartlett, Harry L. Russell, John M. Francis and James Wilkie, of the Detroit laboratories. Joseph Helfman was toastmaster. Mr. Spratt was the recipient of a handsome chest of flat silverware, a gift from the assembled guests, the presentation speech being made by Harry Skillman. Two beautiful gold-headed canes were also presented to him—one from Sydney H. Carragan, of the New York staff, the other from the representatives of the Buffalo depot.

**Parke, Davis & Co.'s Annual Meeting.**—The annual meeting of the stockholders of Parke, Davis & Co. was held in Detroit and was followed in the evening by a dinner given by President Ryan at the Pontchartrain Hotel. Subsequently the company's branch managers conducted a four-days' business session at the laboratories, discussing various questions of trade policy and propaganda for the further development of the business, the following-named being in attendance: O. W. Smith, New York; G. L. Genz, Chicago; B. A. Parsons, Kansas City; S. G. Steiner, New Orleans; J. E. Bond, Baltimore; C. L. Kerr, Minneapolis; W. F. Whelan, Buffalo; Joseph Litster, Pittsburgh. The consensus of opinion among these managers was that business conditions and prospects had improved notably in the 60 days immediately preceding the meeting, and that there is every reason to look forward to the coming year as the most prosperous in the company's history.

**The American Druggists' Fire Insurance Co.** directors at a meeting held in Cincinnati Feb. 11, re-elected the following officers: President, Charles H. Avery, Chicago; vice-president, L. G. Heinritz, Holyoke, Mass.; treasurer, George Kauffman, Columbus, Ohio; secretary, Frank H. Freericks, Cincinnati. An increase of business of 25 per cent. for the year was shown, and a 9 per cent. dividend declared. The other newly-elected directors are: James H. Beal, Scio, Ohio; Walter Rothewell, Hatzboro, Pa.; Louis C. Hopp, Cleveland, Ohio; N. S. Kahn, Baltimore, Md.; W. S. Elkins, Jr., Atlanta, Ga.; E. B. Heimstreet, Palmyra, Wis.; George O. Young, Buchanan, W. Va.; Dr. A. O. Zwick, Cincinnati, and Dr. W. C. Anderson, Brooklyn, N. Y.

**The Yahr & Lange Drug Co.**, the well-known wholesale drug house of Milwaukee, which has purchased the six-story building, now occupied by the Bradley & Metcalf Co., at the corner of East Water and Chicago streets, will begin remodeling the structure immediately after the present lease expires on June 1. A month will be spent in transforming the interior of the building into a modern wholesale drug house, and the company expects to occupy its new home by Aug. 1. The building is 100 x 125 feet in dimensions and will be especially adapted for use by a wholesale drug business.

**The American Druggists' Syndicate** has purchased the eight-story brick loft building in Long Island City, which it has been largely occupying, and upon which it has held an option. The building has a depth of 180 feet and a frontage of 175 feet. The sale included the boilers and shafting and other machinery and equipment, and was made subject to two mortgages aggregating \$150,000.

**John Wyeth & Brother, Inc.**, of Philadelphia, announce that their Minnesota branch, formerly in charge of J. H. Marvel, who was also in charge of the Chicago branch, but who died in the early Winter, is now under the direct supervision of the home office, the address, as before, being 223 East Fourth street, St. Paul, Minn.

**The Miller-Jones Drug Co.**, the largest and most progressive drug company in Southern Colorado, has purchased another store, the Depot store at B street and South Union avenue, Pueblo. The Miller-Jones Co. is incorporated for \$50,000; J. C. Miller is president, and Walter A. Jones, secretary and treasurer.

**The United Supply Syndicate of America**, of Philadelphia, has been incorporated with \$150,000 capital to manufacture and deal in drugs and chemicals.

**The Grimes-Mills Drug Co.**, of Winston-Salem, N. C., has been incorporated with \$10,000 capital.

# PATENTS AND TRADE MARKS

## DIAPHANOUS CAPSULE.

**M**ARTIN H. SMITH, New York, is the inventor of the capsule reproduced in the above illustration (Patent No. 1,087,843). As described in the specifications, the invention is a capsule of a diaphanous material filled with a liquid medicine and provided at its inner face with a raised identification mark of the same diaphanous material as the

1,087,843.

1,086,995.

capsule, and integral therewith, the capsule and the liquid medicine having approximately the same index of refraction to render the said identification mark particularly undiscernible from the outside.

## Poison Bottle.

This device is the invention of William Chapman, Mesaba, Minn., and consists of a poison bottle having its neck provided with an annular flange having diametrically disposed vertical grooves, a stopper removably fitting in the neck and provided with an upper annular flange co-extensive with the flange of the neck, said stopper having a vertical bore, a locking member removably mounted on the stopper and provided with depending vertical lugs which are insertible through the groove in the flange of the neck, the stopper being mounted for rotation in the neck whereby to permit the lugs of said member to engage against the flange of the neck. A spring carried by the member and extending through the bore of the stopper exerts its tension against and ejects the member when the lugs are aligned with the grooves. The bottle is shown in the above illustration (Patent No. 1,086,995).

## PATENTS.

### Granted January 20, 1914.

- 1,084,609—Alexander M. Clark, Pittsburgh, Pa. Liquid container.  
 1,084,704—William F. McKay, Newark, N. J. Non-refillable bottle.  
 1,084,826—Linford S. Stiles, Brooklyn, N. Y. Non-refillable bottle.  
 1,084,840—Jean M. A. Brun, Salles, and Gaston M. Dauris, Mios, France. Pot for collecting resin.  
 1,084,927—Cornelius P. Carroll, Columbia, La. Dispensing and measuring apparatus.  
 1,084,944—William R. Leonard, Cincinnati, Ohio. Liquid container.  
 1,084,965—Perley H. Roberts, Rochester, N. H. Toothbrush holder.

### Granted January 27, 1914.

- 1,085,251—Frank Gade, Fredsville, Iowa, assignor of one-half to Andrew M. Hansen, Cedar Falls, Iowa. Bottle.  
 1,085,295—Charles G. Patterson, assignor by mesne assignments, to The National Advertograph Company, Limited, Toronto, Canada. Automatic label printer.  
 1,085,378—James W. Chapman, assignor to Manning, Bowman & Company, Meriden, Conn. Perculating device.  
 1,085,380—Walter S. Downham, Wheatley, Ontario, Canada, assignor of one-sixth to Adam T. Bell and one-sixth to Michael Steele, Travoistock, Ontario, Canada. Whey emulsion.  
 1,085,404—Charles W. Corey, Malden, Mass. Liquid server.  
 1,085,416—Walter P. Harper, assignor of one-half to The Castana Improved Process Co., Laine, Miss. Process of extracting products from wood.  
 1,085,560—Patrick Flynn, Big Creek, Cal. Bottle indicator.  
 1,085,582—Raymond Fritz, assignor of one-half to Eugen Seydel, Trenton, N. J. Non-refillable bottle.

### Granted February 3, 1914.

- 1,085,622—Achille Martel and Joseph A. Thibault, Fraserville, Quebec, Canada. Non-refillable bottle.  
 1,085,626—Edward W. Mueller, Bensenville, Ill. Funnel.  
 1,085,789—Edgar C. Bennett, assignor of one-half to Oscar E. Jones, Dayton, Ohio. Fluid dispensing apparatus.  
 1,085,875—Frederick Pope, New York, N. Y., and George M. Pope, Mount Pleasant, Ga.; said George M. Pope, assignor to Ella M. Pope, Boston, Mass.; said Frederick Pope, assignor to Southern Manufacturing Company, Pittsburgh, Pa. Method of distilling wood.  
 1,085,899—Homer O. Fisher, Cleveland, Ohio, assignor to Rice and Adams, a Copartnership, Buffalo, N. Y. Bottle filler.  
 1,086,006—David Weiss, Cleveland, Ohio. Toothbrush.  
 1,086,149—Alois Low, Vienna, Austria-Hungary, and Ernst Fischer, Charlottenburg, Germany. Process for the manufacture of glue, gelatin and the like.  
 1,086,193—Prosper J. Maignen, Philadelphia, Pa. Antiseptic.  
 1,086,294—Fridolin Hefti, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Bromodiethylacetylsocyanate.  
 1,086,313—Samuel C. Bond, assignor to Bond Bottle Sealing Company, Wilmington, Del. Unstopping machine.  
 1,086,324—Charles H. Hammond, assignor of one-half to John S. Markoe, Baltimore, Md. Non-refillable bottle.  
 1,086,339—Prosper J. A. Maignen, Philadelphia, Pa. Antiseptic.

### Granted February 10, 1914.

- 1,086,360—Denis A. Flavell, Jersey City, N. J. Weighing and filling machine.  
 1,086,372—William J. Knox, New York, N. Y., assignor, by direct and mesne assignments, to Knox Terpezco Company of America. Pinene ozonide.  
 1,086,373—William J. Knox, New York, N. Y., assignor by direct and mesne assignments, to Knox Terpezco Company of America. Cinnamic aldehyde ozonide.  
 1,086,381—Walter E. Masland, assignor to E. I. du Pont de Nemours Powder Company, Wilmington, Del. Preparation of alcohol from chlorhydrocarbons.  
 1,086,392—Edmund Morris, assignor to Wilmarth Show Case Company, Grand Rapids, Mich. Glass locking device for show cases.  
 1,086,509—Daniel L. Chandler, Ayer, Mass. Process of manufacturing toothbrushes and bristle-holders therefor.  
 1,086,541—Arthur C. Lailer, South Portland, Me. Bottle holder.  
 1,086,645—James J. Charvat, Chicago, Ill. Stopper extractor.  
 1,086,724—Gustave O. Matter, assignor to John W. Mackay, Portland, Ore. Poison bottle indicator.  
 1,086,881—Clemens Zollner, assignor to Chemische Fabrik auf Actien (vorm. E. Schering), Berlin, Germany. Glycolic acid esters of 2-phenylquinolin-4-carboxylic acid.  
 1,086,976—Morris Abramovitz, Baltimore, Md. Gravity and syringe apparatus for intravenous injection of drugs.  
 1,086,995—William Chapman, Mesaba, Minn. Poison bottle.  
 1,087,043—John Nathan, Cotoleone, Cal. Non-refillable bottle.  
 1,087,060—James Gilson, Providence, R. I. Disinfectant device.  
 1,087,095—Samuel C. Bond, assignor to Bond Bottle Sealing Co., Wilmington, Del. Method for the manufacture of bottle closures.

### Granted February 17, 1914.

- 1,087,122—Isaac D. Kellet, New York, N. Y. Non-refillable bottle.  
 1,087,145—Walter Schoeller and Walthar Schrauth, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Preservative coating composition.  
 1,087,239—John G. Hume, Duns, Scotland. Means for use in chemical analysis.  
 1,087,267—Roy Lee LeWright, New Duluth, Minn. Non-refillable bottle.  
 1,087,271—Emerson A. Bolen, Morris, Ill. Fluid-discharging device.  
 1,087,349—Henry C. Braun, Kings Cross, London, England. Means for stopping bottles.  
 1,087,412—Oskar Unger and Eugen Molineux, assignors to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Process of producing quinzarin.  
 1,087,437—William F. Doerffinger, Halesite, N. Y., assignor, by mesne assignments, to Niagara Alkali Co. Apparatus for the manufacture of stannic chloride.  
 1,087,472—John C. Uhllein, Watertown, N. Y. Non-refillable bottle.  
 1,087,477—Harry Wilson, assignor to Pacific Kelp Co., San Francisco, Cal. Process of obtaining potash salts from kelp.  
 1,087,515—Philipp Sprenger and Aegidius Tschudi, Basel, Switzerland, assignors to The Hoffmann-LaRoche Chemical Works, New York, N. Y. Casein calcium and process for producing the same.  
 1,087,774—Otto Johnson and Nels Rundgren, Oak Park, Ill. Non-refillable bottle.  
 1,087,840—Clifton W. Simmons, Norfolk, Va. Non-refillable bottle.  
 1,087,843—Martin H. Smith, New York, N. Y. Capsule.  
 1,087,845—James H. Stevens, Boston, Mass. Salvarsan needle.  
 1,087,907—Philip Publicker, Philadelphia, Pa. Distilling apparatus.  
 1,087,909—Harry D. Cullery, assignor to Automatic Machinery Co., Terre Haute, Ind. Automatic feeder for bottle filling, capping and labeling machines.

NOTE—A, advanced; D, declined; C, correction; N, new.

NEW YORK, Feb. 23.—Trading in the general list of drugs has been more active during the past two weeks than at any time since the beginning of the year, though consumers have confined their purchases to the staples actually needed for immediate demand. Mail and telegraphic orders are coming in more freely, however, and some improvement in local trade is reported. As shown by the above list, numerous changes have been made in quotations, the most noteworthy being the advance in opium, atropine, celery seed, calendula flowers, resublimed iodine, menthol, morphine, oils of cubeb, fennel, sandalwood, rochelle salt, green strophanthus, and strychnine and its salts. Among the declines are medicinal acetone, true benzoic acid, arrowroot, Tonka beans, calamus root, chloral hydrate, chloroform, flaxseed, cleaned and ground

ginger root, oils of birch, chaulmoogra, lavender, lemon, orange, synthetic wintergreen, and wormseed; strontium nitrate, thymol, Chian turpentine, thymol and bay and Carnauba wax.

**OPIMUM**—The advance in the price of opium embraces all varieties, the upturn being the result of the increasing cost of importation and diminished stocks here. Natural is quoted at \$6.40@ \$6.85 per pound, granulated at \$8.25@ \$8.35, and U.S.P. powdered at \$8.15@ \$8.25.

**QUININE**—Is meeting with a good demand at the recent advance on the basis of 26 cents per ounce in 100-ounce tins. The revised schedule of prices for the various salts shows the following advances: Quinine alkaloid, 66c.@70c. per ounce; acetate, 68c.@72c.; bisulphate, 34c.@38c.; hydrobromide, 60c.@65c.; hydrochloride, 58c.@63c.; lactate, 66c.@71c.; salicylate, 59c.@64c.; sulphate in 1-oz. vials, 31c.@36c., and tannate, 35c.@40c. A strong undertone obtains in all markets for the salts, a condition that is traceable to the price maintenance agreement between Java bark producers and the European manufacturers of salts. The exports of cinchona bark from Java during January amounted to 1,528,000 Amsterdam pounds against 1,307,400 in same month 1913, 1,307,400 in 1912 and 1,421,000 in 1911. The stock of quinine in London Jan. 31 last was only 3,365,712 ounces against 3,635,488 ounces Jan. 31, 1913.

**COD LIVER OIL**—Norwegian is meeting with a fair demand, the market showing a downward tendency, and quotations at \$26@ \$30 per barrel; less, \$1.10@ \$1.15 per gallon. Cable advices at hand report the total catch this year to be 3,100,000 fish yielding 2670 barrels of oil. For the corresponding date last year the total catch was 6,500,000 fish yielding 4770 barrels of oil.

**CELERY SEED**—Prices have advanced sharply both here and abroad, jobbers now quoting 34c.@38c. per pound. Advices from Marseilles are to the effect that there has been extensive Winter killing of the new crop, owing to unusually low temperatures.

**ERGOT**—Hamburg advices state that spot stocks of Russian are very light and that the market there remains very firm despite increased offers for shipment. Quotations for all varieties range from 75c.@ \$1.20 per pound for whole, and 85c.@ \$1.45 for powdered.

**ANISE SEED**—Star is firmer, owing to increased cost of importation and diminished stocks here, jobbers quoting 26c.@33c. per pound.

**COPAIBA**—Is meeting with a moderate demand and quotations are higher for all varieties, South American being quoted at 70c.@75c. per pound, and Para at 75c.@85c.

**MENTHOL**—The market reflects a stronger tendency and prices show a decided upward trend, crystal being quoted at \$4.10@ \$4.25 per pound.

**BELLADONNA LEAVES**—German continue to move upward owing to scarcity and dealers are now quoting 38c.@45c. per pound, according to quantity.

**TONKA BEANS**—Angostura are lower in spite of the fact that advices from Venezuela indicate that the next crop will not exceed 20,000 pounds. Predictions are freely made that prices are likely to advance considerably within a short time.

**VANILLA BEANS**—A revision of quotations indicates a slight advance. A further advance is not unexpected, however, as the Mexican government has announced the levying of an export duty of \$2 per kilo, equivalent to 40c.@50c. per pound.

**THYMOL**—A diminution of supplies is reported, with jobbers quoting \$2.40@ \$2.50 per pound. An advance is also noted in the quotations for thymol iodide, \$5 per pound being asked.

**OIL PEPPERMINT**—Western advices are bullish, predicting higher prices ultimately. The market is steady, however, at the prices quoted last month.

**OIL LEMON**—Prices still continue to decline, jobbers quoting \$3.10@ \$3.25 per pound, and this, too, in the face of advances noted in primary markets. It is stated that extract makers are still holding aloof from the local market.

**OIL LEMONGRASS**—Higher prices prevail, \$2@ \$2.25 per pound being asked.

**OIL ORANGE**—Sweet is lower, \$3.50@ \$3.60 per pound being the ruling quotations. The Valencia orange crop is reported to have been damaged from 10 to 80 per cent. by recent frosts, and many German and English houses have suspended shipments.

**OIL SANDALWOOD**—True East Indian oil is higher, quotations ranging from \$6.50@ \$7 per pound. An interesting ruling has

been made by the United States Treasury department to the effect that the oil is properly entitled to entry free of duty instead of being assessed for duty at an advalorem rate of 25 per cent. as an "aromatic substance used in the manufacture of perfumes and cosmetics."

**CHLOROFORM**—Quotations have been reduced to 25c.@48c. per pound. Severe competition from abroad is noted here and prices may be further reduced.

**CHLORAL HYDRATE**—Present quotations show a decline, 55c.@65c. per pound being asked.

**STRYCHNINE**—Notwithstanding keen competition among domestic manufacturers, jobbing prices show an advance, as follows: Acetate, 1/8-oz. vials, per ounce, \$1.60@ \$1.70; alkaloid, powdered, 1/8-oz. vials, per ounce, \$1.20@ \$1.30; nitrate, 1/8-oz. vials, \$1.55@ \$1.60; sulphate, 1/8-oz. vials, \$1.20@ \$1.25.

**STROPHANTHUS SEED**—Green is meeting with some demand and is higher, 90c.@ \$1 per pound being asked.

**OIL LAVENDER**—Mitcham is higher on a marked diminution of spot goods and jobbers have advanced prices to \$3.75@ \$4.

**ROCHELLE SALT**—A revision shows a lower range of quotations, 19 1/2c.@ 21 1/2c. being asked, according to size of order and seller.

**OIL TANSY**—Scarcity of supplies and an increasing demand have influenced an upward trend in quotations, \$4.40@ \$4.75 per pound being asked.

**OIL WORMSEED**—Baltimore is in much better supply, with quotations reduced to \$4.00@ \$4.25 per pound.

**SILVER NITRATE**—Notwithstanding a drop of 1/4c. in the price of bar silver, quotations for nitrate are higher, 44c.@50c. per ounce being asked. Fused cones is quoted at 60c.@63c. per ounce, and stick (lunar caustic) at 48c.@52c. per ounce.

**HOPS**—Lower prices prevail, quotations ranging from 30c.@32c. per pound in bulk, and 35c.@40c. per pound in 1/4- and 1/2-pound packages. Lupulin is slightly higher at \$2.65@ \$2.85 per pound.

**CAMPHOR**—Considerable activity has been noted in this article abroad, demand from India being a factor, and the market is firmer here, although jobbers' quotations remain unchanged. The total exports of camphor from Formosa from April to December 31, 1913, are estimated at 4,500,000 kin, or 6,000,000 pounds.

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director, ERA COURSE IN PHARMACY,  
c/o D. O. Haynes & Co.,  
NO. 3 PARK PLACE, NEW YORK.

*Matriculation Graduates to Feb. 24, 1914. Graduating Number. Average.*

### From Our Appreciative Students.

"It may be some pleasure to you to know that with the aid of your ERA Pharmacy Course and no other training, I recently passed the Michigan board for full papers."—R. J. BARNES, White Cloud, Mich.

"I received the examination papers today, and will say that I am more than pleased with the results I obtained on them. I can recommend the Course as a very interesting and systematic one for the man who has to put the greater part of his time in a store."—CHARLES E. McHALE, New Orleans, La..

**THE PHARMACEUTICAL ERA**  
 PUBLISHED ON THE FIRST OF EACH MONTH.

**OFFICIAL VEGETABLE AND ANIMAL DRUGS.**

A SECOND instalment of proposed new descriptions and standards, and of changes in descriptions and standards for incorporation in the new Pharmacopoeia, has been issued by the Committee of Revision, a part of which, in somewhat condensed form, is presented in this issue of the ERA. These descriptions and changes, following the abstract of changes relating to chemicals, more than ever confirm the belief that the new Pharmacopoeia will be pre-eminently a book of standards, and as such will better answer the needs of the Food and Drugs Act in giving specific information as to the variations in the character of different samples of official drugs.

In the entire abstract about 120 drugs are named, of which cantharides and cochineal are of animal origin. In all instances the effort is made to employ definitions that shall say what constitutes a good drug, one noticeable feature being the specific language used in the descriptions, and in the case of certain drugs, the amount of inert matter allowable being always given, as, for instance, in the case of aconite, "not more than 5 per cent. of stem-

bases or other foreign matter should be present." That these requirements will strengthen the hands of the authorities in enforcing the provisions of the Food and Drugs Act is evident, a situation that has not always been met in the application of the present standards in controlling the importation of drugs. Another important innovation is the introduction of microscopical descriptions and tests for powdered drugs, a recognition on the part of the Committee of Revision that this is the commercial form in which many drugs are sold, and also of the fact that the average pharmacist, even should he manufacture his own galenicals, no longer powders or grinds his drugs for such uses.

Viewed as a whole, there is sufficient reason for the belief that the scope of the next Pharmacopoeia will be broad enough to cover most of the needs of such a book and, also, that the committee has followed very closely the principle originally adopted as a basis of admission of drugs, viz., that an article should have therapeutic value or be of pharmaceutical necessity; that is, be essentially necessary in the manufacture of official preparations that are recognized as having therapeutic value. As new additions to the list of proposed official drugs agar-agar, condurango and petroselinum fructus are noted; while definitions have been extended to cover the different varieties of aloes, Sumatra and Siam benzoin, short and long buchu, Spanish and Russian licorice, Savanilla, Para and Peruvian rhatany and the varieties of pilocarpus. These facts also reflect the belief that an effort has been made to evolve a Pharmacopoeia which should represent the highest degree of commercial attainment in the matter of official substances in their natural and manufactured forms.

**SYSTEMATIZING DRUG STORE EXPENSE.**

In addition to purveying satisfactorily to the varied requirements of the drug store patron, the druggist must make a satisfactory profit or go out of business. Into this profit enter many factors, which even now are not taken into consideration generally. Some few druggists realize what *net profits* include, others are still satisfied to pay their debts from the income derived from the sale of goods—keeping the invoices on spindles or in the drawer of a desk—and pocket what of the balance

they "think they can spare" as their salary, after clerk hire, rent, light, insurance, etc., have been paid.

That this course of procedure is neither business-like nor scientific is evident even to the layman, but its fallacies are brought home to readers of this issue of the ERA by two writers, one the head of one of the largest and most prosperous drug chains in this country—Louis K. Liggett; the other, Prof. Selden G. Martin, head of the Bureau of Business Research of Harvard University. Mr. Liggett emphasizes departmentizing, and separation of department costs and profits as an essential to the modern chain store; Prof. Martin takes the viewpoint of the business expert, and from collected data drawn from a systematic study of many retail stores—shoe stores in this instance—makes certain deductions as to percentage of sales expense, turn-over, rent, etc. These deductions he has found valuable as a basis upon which the average shoe retailer can work, and he states succinctly: "A man with the best accounting system may know exactly where he is at, *but he does not know where he ought to be.*" From these collected data he can deduce "where he ought to be" from the combined commercial practices of others in the same line of business.

Unfortunately the Harvard Bureau of Business Research has not been able to make a similar study of the drug business, since Prof. Martin frankly admits the complexity of the business has deferred such an investigation until "more plant and staff" are at the disposal of the bureau. Prof. Martin, however, does draw one striking analogy between the retail shoe business and the retail drug business, upon which we should be glad to have the opinions of practical drug men. We quote his own statement:

"The more I look into the prescription business the more I am impressed with its analogy to the repair business of a shoe store, or the plumbing business of a hardware store, in that not only is merchandising done but also manufacturing, so that not only is the original store expense incurred, but also a manufacturing expense. In shoes we have found stores saying that their repair department yields them a profit of 15 per cent.—by which we have found they meant *gross* profit—when the expense of the store proved to be 22 per cent., so that *they were really losing some 7 per cent. on the repair business.*"

Prof. Martin finds that the average stock turn-over in the retail shoe business is between 2 and 2.5 times per year; Mr. Liggett states that many successful chain drug stores are able to turn over their stock six times a year. A comparison of the two articles will show other interesting points of agreement and difference in deduction, although basically both gentlemen are much nearer agreement than would be supposed from the above quotations. We most heartily commend these studies of business methods so interestingly presented, in the interest, to quote Prof. Martin, of their "influence toward a more scientific conduct of the drug business." When business theorist and successful business man both treat of the same general topic, each from his own standpoint, without knowledge that the other is to be quoted, the

result from the reader's viewpoint cannot but prove helpful and suggestive.

#### SWAT THE FLY NOW!

UNDER the above slogan boards of health and sanitarians in general have been endeavoring to arouse the public to the danger of permitting house-flies to breed unchecked and to carry their burdens of filth and disease through communities. As a disseminator of disease, this insect holds a pre-eminent place, restricting his field of operations to no country or clime, the kind of disease that he shall spread making no difference to him, for so long as he is permitted to carry his full burden, any old load of contagion will satisfy him.

How he does work to live up to his opportunities! If fly-blown fecal material is buried under several inches of sand, the fly will crawl through the sand and complete his development! In short, he breeds and feeds upon the carcases of the dead and the excreta of the living, and then carries his loathsome load back to the habitations of man. Voracious, dangerous and ubiquitous, he contributes his full share to the spread of typhoid fever, hookworm disease, diarrhoea, dysentery and various other maladies. Why should he not be exterminated?

The time to kill flies is NOW, and to show how vital it is to kill the Winter flies and their incalculable possibilities, the Committee on Pollution and Sewerage of the Merchants' Association of this city has issued a card of warning from which we take the following "live wire" paragraphs:

Capture every one of the filthy little pests you can find.

A single fly is capable of depositing 150 eggs at one time and of producing five or six batches during its short life.

The progeny of a single pair of flies, assuming that they all live, if pressed together at the end of the Summer would occupy a space of over 14,000,000 cubic feet.

This would be equivalent to a building as large as the Woolworth building.

Swat the fly! Do it NOW!

#### THE HARRISON NARCOTIC BILL.

WE hold no brief for the Harrison narcotic bill, so-called (H.R. 6282), and from the first have been more in sympathy with the efforts of the so-called "come-outers" of the N.A.R.D. and other National and State organizations, as headed by Mr. Freericks, formerly counsel for the National body of retail druggists. And our opposition was and is upon the same grounds as those advanced by the objectors whom we have cited—that any measure to control the importation, manufacture and sale of narcotic drugs in this country should apply equally to the physician and to the druggist—that no favoritism should be shown either by exemption or other legal evasion of responsibility.

In this position we are still confirmed. Nothing has been effected in the way of amendment to the original bill, passed by the House, and since amended and before the Senate, to alter our belief. The bill as it stands is plainly a compromise meas-

ure; it does not wholly please either the manufacturer, the druggist, the physician or the officials by whom it must be enforced should it become a law. There is a feeling on the part of many that "it is the best to be expected just now," and hence should be adopted, but this is not good sense nor good politics—and politics has played a larger part in the pulling and hauling of this measure during the past three years than is generally realized.

But the bill as it stands is largely the work of the Drug Trades Conference, representing every branch of the drug trade, and their recommendation is entitled to weight.

While we have not favored the measure because we deemed it erred in privileges vouchsafed the physician as against the druggist, members of the former profession are opposing it upon the ground that it encroaches on the right of the States to assess taxes, etc., yet the real spirit of the opposition can be seen in the statement by the Society of Medical Jurisprudence that the "tendency of the bill is not enhanced in the slightest degree by the inclusion of physicians among those who are required to register and pay the annual tax"—in this case the moderate sum of \$1 a year!

These protests by physicians are not confined to the fraternity, for to our personal knowledge the drug press is being circularized with statements urging "more leeway in the supplying of registered physicians by manufacturers" with the drugs in question, and by statements of the "hardships entailed upon the physician in rural districts and upon those depending upon his services" by the license requirement. One of these circular letters states bluntly that the "bill does not allow a physician to supply himself with the morphine and cocaine required in his office practice or in making visits *without first registering with the internal revenue department and supplying himself with order blanks,*" etc., as required of the druggist, when by paragraph (a), section 2, of the bill, a physician, dentist, or veterinary surgeon, while required to register once, at a cost of \$1, are *exempted from the provisions* requiring the use of order blanks.

There are sufficient grounds for objection to the measure—notably that in regard to exemptions, one-fourth grain of morphine allowed, and but one-twelfth grain of heroin—without necessitating incorrect statements and absolutely false deductions in regard to its provisions.

#### THE SALVARSAN CONTROVERSY.

It is difficult, at this distance, to form a clear idea of the motives which have led Dr. Dreuw, of the Berlin Police, to attack Professor Ehrlich's salvarsan, and to demand that an ordinance be passed prohibiting its use in doses greater than the official maximum for arsenic. Dr. Dreuw lays great emphasis on the 275 deaths reported to have occurred after the administration of salvarsan, many of the symptoms apparently being those of arsenical poisoning. In his defence, Ehrlich points out that the remedy has been used in more than

one million cases, and that if he did not think the advantages far outweighed the disadvantages, he would not allow the preparation to be used for another instant. Professor Ehrlich's attitude, in the face of Dreuw's somewhat violent attacks, has been frank and dignified, and he has stated that he is largely deterred from making a more vigorous defence by the certain knowledge that all such efforts would be instantly turned against him, and ascribed to venial motives. The two men have drawn together two large camps of followers, and the affair is widely discussed in the newspapers. Certain authorities at the University of Strassburg have lined up with Dr. Dreuw, while the majority of the medical profession are still with Ehrlich. The agitation has led to interrogations in the Reichstag, and to the withdrawal of salvarsan from free commerce except through the apothecaries—a cause of much rather undignified gloating on the part of some of the "Apotheker" journals, who stand ever ready to make the most of any advantage gained over the hated "Drogisten."

#### IS PRICE MAINTENANCE NEARER?

PRICE maintenance as a commercial policy is, perhaps, nearer accomplishment than ever before in this country. Through the efforts of the American Fair Trade League, the N.A.R.D., and the National Hardware Dealers' Association, and particularly through the writings of the Ingersolls of the watch firm of R. H. Ingersoll & Bro., and of Louis D. Brandeis, through the great National weeklies, the subject has been brought home to the purchasing public in a manner which has created a growing sentiment in favor of fair prices.

The majority of thinking purchasers believe that the manufacturer of Nationally advertised goods is entitled to protection in the price he establishes for those goods, on the ground that promiscuous price-cutting inevitably leads to substitution of other than the goods demanded, to the loss of both the purchaser and the manufacturer. Price protection is not an upbuilder nor upholder of monopoly—it simply means the protection of the manufacturer and the purchaser in the handling of any advertised *named* commodity. It will not raise the price on "own make" goods, on unlabeled products, or substitutes. The "something just as good" can be sold just as it is at present, but it will be sold in fair competition with a standard product upon which the price is established.

There are, at the present time, several bills before Congress which aim to establish the right of the manufacturer of advertised products to stipulate the retail price of these products. One of the best-known of these bills is "A Bill to Prevent Fraud and Unfair Competition in the Sale of Patented, Trade-marked or Copyrighted Articles." This bill has the indorsement of the American Fair Trade League, the N.A.R.D. and the Hardware Dealers' Association. In addition there is House Bill "H.R. 13305," introduced by Representative Stevens, of New Hampshire, which is entitled: "To Prevent Discrimination in Prices and to Pro-

vide for Publicity of Prices to Dealers and to the Public." This bill seeks merely to legalize contracts between manufacturers and dealers in articles of commerce produced under a trade-mark or special brand, and would restore to manufacturers the rights supposedly possessed by them prior to the Dr. Miles Medical Co. decision and similar findings by the U.S. Supreme Court. The third bill—the Metz bill—which is designed to prevent discrimination by establishing "uniform prices for uniform commodities" is, perhaps, unique in that it is preceded by a preamble which defines such terms as "uniform commodity," "proprietor," "dealer at wholesale and retail," and "consumer," a glossary that would have solved several legal problems in the past had such definitions been established.

With so general an attempt to secure the passage of some enactment which shall establish the right of the manufacturer to market advertised goods at an advertised rate, there is more than a ray of hope for the manufacturer who has been a victim of what have been aptly designated "trade pirates," and for the druggist who has been forced by aggressive price-cutters to slash his retail prices to such an extent that he loses money on nearly every sale of advertised goods.

#### PUT THE HOME ON ITS FEET FINANCIALLY.

THERE is a general feeling on the part of the druggists of this country that the Druggists' National Home at Palmyra, Wis., is deserving of general support as one of the most helpful philanthropic institutions any druggist could assist—and this feeling is based upon something more than sentiment. Yet, while there have been many subscriptions from the larger manufacturing firms, and smaller subscriptions from associations and individuals, there has not been the united support from the druggists themselves that should have been vouchsafed.

The honor for the initiative in the foundation of this Home is due the National Drug Clerks' Association; the plan was thought out by them, and it was their money that made the purchase possible, but the enterprise has lacked the positive support of the National associations of manufacturers, jobbers and of employers—and, it is to be feared, this fact has had more or less influence in deterring druggists from more general and more generous contributions. There has been too much of a feeling "that it may be best to wait and see what will be done with the Home."

Now, the real test is approaching—it is absolutely necessary to make a payment on the property on or before April 8, a payment sufficiently large to convince the original owner that the druggists of the country are back of the institution and that the entire purchase price will be raised in due course of time. Since the advantages of the Home have been so well advertised other parties have entered the field and are seeking to purchase it, and while donations to the Home fund are still coming in, they are not in sufficient number or amount to aggregate the sum necessary for this payment, and pay the

running expenses of the Home at the same time.

The trustees of the Home, therefore, have taken a step which, if carried to its natural conclusion, will remove the Home forever from the field of insecure charity by donation and place it upon a self-sustaining basis: They have tendered the Home and the management of the same, without any reservation whatever, to the executive committee of the National Association of Retail Druggists, and this committee will meet in Chicago, April 6, to decide the matter.

It seems eminently fitting that such an institution should be truly a National trust, rather than the pet philanthropy of any one organization, and should the N.A.R.D. take over the property there will be no question as to the continuance of the institution as a permanent feature of the work of the banded druggists of the country, whether manufacturers, jobbers, retailers or clerks. It would be deplorable should the Home, after its happy inauguration, be allowed to pass from the hands of the druggists, and there is no doubt that, with the backing of the membership of the N.A.R.D., and the financial stability insured by its management by this National body, the druggists of the country will come forward and remove the institution from the category of the financially uncertain.

The Home should be a permanent institution, supported by a sinking fund and by its earnings. The N.A.R.D. can make it so, and we sincerely trust that some such solution of the vexed problem will be reached, and reached at once.

#### PURE SCIENCE AND PRACTICAL RESULTS.

LESS than one hundred years ago, hydrogen peroxide was added to the rapidly growing list of interesting chemical compounds, discovered by pioneers all over Europe in their daring excursions into every corner of the domain of science. Nowadays, as one of the most widely used household remedies and prophylactics, hydrogen peroxide affords an excellent refutation of the theory that "pure" science is not "practical." When Thenard set out to study the effect of acids on barium peroxide, he was in no wise interested in the practical uses to which his discoveries might be put. For half a century it was not known that the new compound was useful, except in so far as it had been of aid to further chemical work. Then Richardson gave it prominence by demonstrating its value as a disinfectant, and "practical" men were probably ready to admit that the "theoretical" researches of Thenard were justified. But practical men have never yet offered a means of ascertaining beforehand what discoveries will be made, nor have they furnished a criterion by which the worker in pure science can direct his efforts so as to produce practical results. Until such relief is forthcoming, investigators will continue to push their inquiries in every direction, not only as pioneers, cutting a rough trail through new country, but also as patient and accurate surveyors and explorers, recording with minute care all the expe-

riences they meet, whether along the main traveled road, or while following the side-trails.

### THE NEW ERA FORMULARY.

THE wonderful advances made in applied technology will be vividly brought home to the pharmacist who will take the pains to compare his copy of the first edition of the ERA Formulary, published in 1893, with a copy of the new edition just off the press. The former has earned a meritorious reputation and we would not speak disparagingly of it. But with the passing of the years, new methods and processes are required to meet the wants of a new generation; new forms of treatment and medication are needed with our increase of knowledge of the causation of disease; in fact, new articles are needed in all directions, as the utilitarian necessities of mankind become more specific. Cognizance of this progress has been taken in the preparation of the material for the volume, which is essentially new.

Of the nearly 8000 formulas presented, more than 5000 did not appear in the previous edition, while those which have been retained have been recast and better adapted for the purpose designed. Pains have been taken to make the nomenclature employed in all the formulas uniform and definite, and to supplement each formula or process with instructions for manipulation, so as to eliminate the element of guesswork on the part of the operator. In the nine divisions of the volume are formulas and processes which will appeal to the manufacturer, the pharmacist, the physician, the veterinarian, and to workers in all departments of professional, industrial, and household economics.

A relation of these salient points is sufficient to suggest to many manufacturers and pharmacists ready means of extending their businesses by the fabrication of specialties for which there is a demand. The large number of such preparations on the market is indisputable evidence of this demand, as also the fact that articles of this character yield good financial returns. As an adjunct to the laboratory of the manufacturer, druggist, soda-fountain operator, veterinarian or individual in search of general household technical helps, we can commend this book, the full scope of which is outlined in the advertising pages of this journal.

## BOOKS REVIEWED

**QUALITATIVE CHEMICAL ANALYSIS.** A laboratory text treating of the common elements and their compounds. By Anton Vorisek, professor of analytical chemistry, College of Pharmacy, Columbia University, in the City of New York. With a plate of spectra, tables and three text figures.  $9\frac{1}{2} \times 6\frac{1}{2}$  inches. 226 pages. Cloth, \$2 net. Philadelphia. P. Blakiston's Son & Co.

This book is offered to meet the needs of students whose time for the study of analytical chemistry is limited, and to this extent it presents a concise course of qualitative analysis of the commonly occurring compounds and their chemical constituents that should prove serviceable to the pharmacy student. In the arrangement of the volume the study of the basic components is begun with the alkali metals, while the discussion of the mechanism of reactions in solution is placed at the end of the book.

Among some of the features which differentiate the author's scheme from that followed in similar works are: Reactions are represented by equations arranged vertically and close together with their description; manganese is classified with the third group, and its precipitation completed with hydrogen dioxide; nickelous and cobaltous hydroxides are oxidized directly with bromine, and potassium cyanide solution is used to partly separate them; the mutually reacting acidic ions are enumerated; the oxidizing anions are detected with potassium iodide, the reducing ones with iodine solution; cadmium nitrate is employed to separate sulphide, ferrocyanide and ferricyanide from the rest of the members of the second (silver nitrate) group of acid ions, and to isolate tartaric and citric acids. A procedure for the identifications of the acidic ions which provides for interferences by other ions is also developed. So far as we have observed, the author's definitions are comprehensive and intelligible, and his analytical schemes are in accord with the latest developments and practical applications of chemical methods to analysis.

**OLD AGE DEFERRED.** The Causes of Old Age and Its Postponement by Hygienic and Therapeutic Measures. By Arnold Lorand, M.D., Carlsbad, Austria. Fourth edition. Translated, with additions, by the author from the third German edition. Royal 8vo., 480 pages. Cloth, \$2.50. Philadelphia, F. A. Davis Co.

This book will appeal to physicians, pharmacists, business men, in fact, to any individual of a thoughtful disposition; for all are interested in means, if any there may be, which shall prolong their days to the furthest limit. The author is candid in his statement that it is impossible to create a young man out of an old one, but he believes that it is quite within the bounds of possibility to prolong the term of youthfulness by 10 to 20 years; in other words, that we need no longer grow old at 40 or 50, and we may live to reach 90 or 100, instead of dying at 60 or 70. This result is to be brought about by the observance of certain hygienic measures and by improving the functions of a certain few of the glandular structures in our bodies, providing incurable organic disorders have not already too gravely compromised these main organs. In this consideration, the so-called "ductless glands" play an important part, and their relation to the general economy has been made the subject of careful study by the author, his results and the conclusions based thereon being very fully elaborated in this work.

Some of the more interesting chapters for the average laymen, although the whole book will appeal, are those on heredity and longevity, on the causation of old age, the hygiene of the skin, on rational clothing, on the advantages of an open air life and of breathing exercises, food hygiene, uses of stimulants, hygiene of sleep, on married life as an important means of prolonging life, the prevention of premature old age, etc. In short, whatever may be the opinion of the reader he will not fail to derive some benefit from the numerous hints given for the preservation of health and prolongation of life.

**A HANDBOOK OF USEFUL DRUGS.** Prepared under the direction and supervision of the Council on Pharmacy and Chemistry of the A.M.A. Paper, 167 pages. Printed by the American Medical Association.

This contains a selected list of important drugs suggested for the use of teachers of materia medica and therapeutics and intended to serve as a basis for the examination in therapeutics by State medical and examining boards, the descriptions and information given being prepared after a due consideration of the needs of teachers in preparing students for such examinations. The book presents a brief but practical discussion, from the modern viewpoint, of the properties, pharmacologic action, therapeutic uses and doses of the drugs named in the list, with the pertinent observation that "an intelligent and critical use of these selected drugs will prove their general sufficiency and show that many drugs now discussed in text-books are superfluous, and that many newly discovered or widely exploited proprietary preparations have no advantages over those contained in this book." The body of the work is supplemented by a table showing the recorded solubility of substances included in the list of important medicaments, a pharmacologic index based on Professor Cushny's "Pharmacology and Therapeutics," a feature that will surely appeal to practitioners, and a very comprehensive index.

**INK MANUFACTURE**, including Writing, Copying, Lithographic, Marking, Stamping and Laundry Inks. By Sigmond Lehner. Translated from the German of the 5th edition by Arthur Morris and Herbert Hobson, B.Sc. (Lond.). With three illustrations. Second revised and enlarged edition. Crown 8vo., 171 pages. \$2.50. London, Scott, Greenwood & Son; New York, D. Van Nostrand Co.

According to the author, this edition of his work on the manufacture of ink is claimed "to contain the whole of the reliable information available at the time of going to press," a claim that will appear reasonable to anyone who will take the pains to examine this volume. In Germany it has met with great success, having passed through five editions, and in its English form it will surely appeal to those interested in the manufacture of ink, but who are not familiar with the original tongue. In scope, the book is very comprehensive, including not only processes and formulas for making the different varieties of ink, but positive and helpful information concerning the properties of the raw material entering into their manufacture. There are formulas for writing inks of all kinds and colors, hectographs and hectograph inks, methods of preserving inks, making typewriter inks, lithographic inks and pencils, stamping inks, laundry bluing, etc. Pharmacists will find this work a valuable addition to their reference libraries.

**PHARMACEUTICAL BOTANY**. By Heber W. Youngken, Ph.G., A.M., assistant professor of botany and pharmacognosy at the Medico-Chirurgical College, member of the American Pharmaceutical Association, etc. Edited by F. E. Stewart, M.D., Ph.G., departments of pharmacy and chemistry, Medico-Chirurgical College, etc. Illustrated. 12mo., 106 pages, flexible cloth. \$1 net. Philadelphia, P. Blakiston's Son & Co.

This book is particularly designed for the pharmacy student who is required to take up the subject of botany during his first year in college. In this book enough of the subject, in the author's opinion, is given to serve as a botanical preparation for pharmacognosy and materia medica, that is, a presentation of the structural and systematic aspects of the science. The book is divided into two parts, Part I being devoted to the morphology (gross and minute) and, to a less extent, the physiology of the angiosperms. Part II deals with the taxonomy of plants, mainly but not wholly of medicinal value, together with parts used and the names of the official and non-official drugs obtained therefrom. Students who have thoroughly mastered the principles as set forth in this volume should be in possession of sufficient information to intelligently comprehend the botanical descriptions of the Pharmacopoeia.

**THE TREATMENT OF RHEUMATIC INFECTIONS**. Svo., 134 pages. Cloth. Press of Parke, Davis & Co.

Assembled under the above title in book form are a number of the various articles that have appeared in medical and other literature relating to "phylacogens," their preparation and administration, and more particularly to "rheumatism phylacogen," the specific phylacogen indicated in the treatment of rheumatism and rheumatic infections. As stated in this book, the word "phylacogens" is used to distinguish the modified bacterial derivatives manufactured by the above-named company according to the process of Dr. A. F. Schafer, of Bakersfield, Cal., who first presented his discovery to the profession in 1910. The principle upon which the use of this new therapy is founded is that of the theory of multiple infections. The term "phylacogen," as explained in the text before us, is coined from two Greek words meaning "phylaxin producer," phylaxin being the name applied by Harkin to a defensive proteid found in animals that have acquired an artificial immunity to a given infectious disease.

**ANNUAL REPORT OF THE SURGEON-GENERAL OF THE PUBLIC HEALTH SERVICE OF THE UNITED STATES, 1913**. Published by the U.S. Treasury Department, Washington, D. C.

This volume gives a detailed report upon the operations of the United States Public Health Service for the year 1913, taking up the following divisions: Scientific research and sanitation; foreign and insular quarantine and immigration; domestic (interstate) quarantine; sanitary reports and statistics; Marine hospitals and relief; personnel and accounts, etc. In

it we find that at the beginning of the fiscal year there were on duty 46 pharmacists: 16 of the first class; 21 of the second, and 9 of the third class. At the end of the year, through resignation and promotion, there were still 46 pharmacists on duty, but they were rated as follows: first class, 16; second class, 24; third class, 6. Of particular interest are the chapters relating to the study of contagious diseases, to pellagra, etc.

**NEW AND NON-OFFICIAL REMEDIES, 1914**. 352 pages. Cloth, 50 cents; paper, 25 cents. Chicago. American Medical Association.

Most of our readers are familiar with this useful annual, which contains a list of medicinal substances examined by the Council on Pharmacy and Chemistry of the American Medical Association prior to Jan. 1, 1914, and accepted for inclusion in the list of remedies under the above title. Comparison with previous volumes shows that the number of remedies accepted for such publication is increasing, and physicians and pharmacists who wish to know something of the therapy or pharmaceutical character of these remedies will find this an authoritative handbook of reference. An interesting section of the book is the list of references to proprietary and unofficial articles not admitted to this book, but which have been discussed in the *Journal*, the annual reports of the Council and of the A.M.A. Chemical Laboratory, and also the last edition of the association's publication, "The Propaganda for Reform."

**PROCEEDINGS of the Tenth Annual Convention of the National Association of Boards of Pharmacy, 1913**.

This volume is uniform with those of preceding years and contains the annual meeting held in Nashville last year. According to the secretary, the New Hampshire Board of Pharmacy has been added to the list of members since last report, while the boards of the District of Columbia, Oregon and Ohio have withdrawn, making the total membership now on the roll 38, of which 31 are active and 7 associate. Among the subjects reported in the volume is the full text of the report of the advisory committee appointed to investigate the status of examinations among the various State boards of pharmacy, with the end in view of determining the conditions under which reciprocal registration can be furthered.

*The Chemist and Druggist Diary, 1914*.—American pharmacists have no work which exactly corresponds to that issued annually under the above title by our well-known English contemporary, *The Chemist & Druggist*, of London, the volume before us marking the 40th year of publication. From the commercial viewpoint the contents represent the widest possible scope of pharmacy as a business, while "professionalism" is reflected in the translation by Dr. Salzmann, president of the Deutscher Apotheker Verein, of the formulas for German galenicals which are given in the "Ergänzungsbuch zum Arzneibuch für das Deutsche Reich"; the list of new remedies introduced during the year preceding publication; the National insurance acts of 1911 and 1913, including an "insurance dispensing dictionary"; a digest of inland revenue duties, trademark registration, British excise duties, and a very interesting department called "the chemist's lawyer," or "trade statutes put pithily." Add to the features named the 14 pages of "buyers' guide," an index to the goods advertised in the *Diary*—more than 12,000 items—and one begins to realize something of the comprehensiveness of this annual and its obvious usefulness to the British pharmacist. The *Diary* is sent postpaid to all subscribers of the *Chemist & Druggist*.

*Dentists' Diary, Lehn & Fink, New York*.—The first number of the *Dentists' Diary*, published last year, was more or less of an experiment, but such was its reception that a second edition of this useful, cloth-bound volume has been issued for distribution by the publishers. In addition to many memoranda pages, and monthly calendar pages with a complete system of records, the book contains such technical material as: Abbreviated terms in common use in prescriptions, dosage for children, diagnostic aids, comparison between temperature and pulse, emergency drugs, weight and measure equivalents, comparative table of common and scientific names, common boiling points, etc., etc. The oral hygiene movement is given considerable attention, and the keynote of the entire work is usefulness and authoritative statement.

### III. Pharmacy in the Past Twenty-Five Years, *by L. K. Liggett*

A FACTOR, the importance of which is only now being realized, in considering this question of retail profits is the druggist's relations with local bankers. The average retail druggist in small towns maintains a ridiculously small bank balance. He fails to realize that personal integrity is

LOUIS K. LIGGETT.

not enough to establish credit, and that the banker, being human, is not receptive to suggestions from would-be borrowers, whose accounts are carried on the books at a loss. The failure to borrow money from the banks at opportune times accounts for the fact that so many druggists fail to take advantage of cash discounts.

The cost of this neglect is shown by the fact that were all bills rendered to a merchant doing a \$10,000 business discounted, he could save from 1% to 2%, sometimes more. And this he could do by having an extra \$600 in his business. His gross purchases would scarcely exceed \$6500

per year, and this amount divided by 12 shows monthly purchases of \$550. If he watches closely, a druggist can average to save 2% on his purchases by taking all his discounts. Two per cent. on \$550 is \$11.00 per month or \$132 for the year, which is equivalent to 1½% additional profit on his total sales. The necessary \$600 he can borrow at about 6% per annum, or \$36 per year. It will therefore pay any druggist to establish credit for himself at his own banks.

Stock investment in the average drug store will range from \$3000 to as high as \$30,000 or \$40,000, depending entirely upon the volume of business and upon the location of the store; that is, its distance from the central market. A man in one of the largest cities of Colorado, outside of Denver, is compelled to carry considerable stock because many of his items he is unable to secure from local jobbers. This is true of cities in Ohio and of other localities which depend upon New York for part of their market. Where a store is close to its market a druggist can make arrangements with one particular jobbing house that carries a good stock. Such a store is able, when properly managed, to turn its stock in from 60 to 90 days' time. Many successful chain stores are able to turn their stocks six times a year. The more frequently stock is turned the more there is to be made in the retail business.

#### Salary Bonuses.

There is much discussion of the question of paying commissions or salary bonuses to clerks. Some druggists contend that the clerk with the right spirit should be willing to render the best service of which he is capable in return for a fair salary. Undoubtedly this is true, and it is to their credit that most drug clerks do give honest service even where no commissions are paid. But it is human nature to work with a lighter heart, and therefore more efficiently when financial cares are lifted. Worry may be a spur to certain exceptional men, but to most of us it is a positive deterrent. And experience shows there is no better way to develop merchandising efficiency in the sales force, secure for customers more prompt and courteous service, and increase the volume of business, especially on long-profit goods, or goods the sale of which the druggists control, than the payment of commissions. The average commission paid to clerks is from 3% to 5%, but on long-profit exclusively controlled goods, and slow-moving stock, the usual commission is never less than 5%, and sometimes more.

The objection sometimes raised that the paying of commissions tends to make the clerks over-anxious to sell goods on which commissions are granted, and that their zeal antagonizes customers is occasionally justified. But where this results the fault is not with the commissions but with the training of the clerk. A properly trained sales force is stimu-

lated to greater efficiency by the granting of bonuses, and the public actually benefits in the way of better service. The clerks who cannot stand prosperity, as the phrase is, soon eliminate themselves, and would ultimately do so were no commissions paid.

#### Rewards to Clerks.

In more recent years retail druggists, instead of paying commissions, are developing suggestive salesmanship by offering prizes to the clerk who is able to sell, say a tooth brush with a can of tooth powder; a comb with a hair brush; or a bottle of hair tonic with a comb and hair brush. Personally, I feel that a study of this character of work will do more toward making merchants of the average retail druggists than anything else.

George C. Lyon once told me that it cost him one dollar for every new customer he got into his store. If that is true, a great deal is being lost by retail druggists who do not take advantage of the customer when he is in the store by suggesting to his mind things he might want to buy, but would not think of.

#### Reinvested Profits.

The druggist who makes money in his business is for some psychic reason often an easy prey for wildcat schemers. Money which should be turned back into his business for the purchase of bigger stocks, the installation of new equipment, the enlargement of the premises, or even the purchase of new stores is frittered away on Balloon Common or Lemon Preferred. It ought to be axiomatic that a business capable of yielding a profit is a good investment for that profit.

One of the evil tendencies now happily rapidly passing away, but which not so long ago helped to lessen confidence in the drug business, was the granting of discounts, and the paying of commissions to doctors in return for their prescription business. This custom in addition to its bad effect on the laity, tended to destroy confidence between the physician and the druggist, as all secret and unfair arrangements kill faith among the participants.

#### Our Debt to the Past.

Yet profit is not the only thing, and we must not forget our debt to the professional pharmacists of an earlier day. Underlying the success of the modern merchandising drug store, are the high ideals, self-sacrifice and broad human sympathies of those so-called "old school" pharmacists, who, with spirits ever young, reached out the light of their faith to their successors. The druggist of today is doing wonderful things, but his success depends upon his ability to secure public confidence, and that confidence, in turn, is freely given because the old-time pharmacist preserved his integrity unflinching, blind to temptations, and finding in arduous work well-done his truest reward.

#### Advertising.

To realize the tremendous change that has taken place in pharmacy in the past 25 years, one need only compare the advertising of that day with the splendidly conducted newspaper campaigns, not only of the chain stores, like Dow's, of Cincinnati; May Drug Company, of Pittsburgh; Owl Drug Company, San Francisco; but individual druggists, such as A. R. Otis, Kendallville, Ind.; Meyer Bros. Company, Fort Wayne, Ind.; W. A. Pierce, West Chester, Pa.; The Axt Drug Company, Fort Madison, Iowa; Boyson Drug Company, Cedar Rapids, Iowa; M. F. Newcomer & Son, Toledo, Ohio; Dockum Drug Company, Wichita, Kan.; Allen & Cochran, Ottawa, Ont.; J. D. McKee, Guelph, Ont. I could name dozens of other druggists who have found that advertising pays, if it is the right kind of advertising. But in advertising the retail druggist must adopt an individual policy and adhere to it.

The advertising of retail druggists vividly illustrates their awakened merchandising instinct. Most of the copy is forceful and convincing, well displayed, and presented through the best available medium. Such advertising is a complete refutation of the charge sometimes made that the passing of the ethical idea would mean the passing of ethics, in the other sense of that word. In the advertising of every successful druggist of today the note of honesty sounds with growing insistence. The advertising has, too, a distinct educational

character. "Reason-why" copy is becoming more and more the rule. The old impossible claims and superlatives have given place to sane argument. Public confidence is sought and won by offering merchandise on its merits.

This is equally true of all the advertising literature distributed by the progressive druggist—circulars, booklets, folders, almanacs, bill-boards, and also of the text matter of the labels on his merchandise.

#### Effects of National Advertising.

The big national advertising campaigns conducted by the manufacturers of leading popular articles are linked up with the retail distributors by means of artistically arranged window displays, the display of signs, and the use of local newspaper space backing up the national campaign. Even where the nationally advertised goods are sold by all druggists, this linking up with the campaign is profitable, but the druggists' greatest opportunity to benefit by advertising of national character comes when he joins one of the great co-operative manufacturing buying and selling organizations, for whose goods he has the exclusive agency. For then all the business created by that portion of the national advertising done in his locality comes to him, and in backing up the national campaign, he does not create a demand which his competitors can supply.

In no line of business, perhaps, does advertising prove more productive than in the retail drug business. Yet it is only a few years since the druggist began to realize his opportunities in this direction. While the druggist remained a professional man, he had few incentives for advertising. People came to him because they had to, and most of his merchandise was not of a character which lent itself to display, either in type or in his windows. But largely as a result of dry goods store competition, to which I have already referred, in more recent years, the druggist has been obliged to add side lines which could be advertised profitably. Of course, it works both ways, and one could as soon answer the question "Which came first, the hen or the egg?" as to say whether side lines stimulated advertising or the reverse.

#### First Side Lines.

Probably the first side lines in early pharmacy were tea, coffee and tobacco. Tea and coffee found their way into the grocery store, tobacco into the tobacco store. Twenty-five years ago the druggist began to bring tobacco back, and since then it has formed a more independent and larger department in the drug store.

#### Soda Fountain.

Twenty-five years ago a glass of soda was likely to be an uncertain quantity. Today the use of pure fruit juices, either uncolored or containing harmless coloring matter, is made necessary by the Pure Food and Drug Law passed in 1906. That law was by many druggists anticipated; by all, or practically all, it has been welcomed and gladly obeyed. It has been said, and not without reason, that the splendid fountain service in the typical modern drug store has been one of the biggest factors in promoting the temperance cause. If you doubt it, go into almost any big city store at the noon hour and watch the crowd of clear-eyed, keen-witted business men who call for luncheonettes, egg or milk drinks, or ice-cream sodas, which are served in clean glasses by immaculately clad dispensers who know their business.

It is no wonder that the soda business of the wide-awake druggist increases by leaps and bounds. The growing demand for sanitary drinking fountains, and the widespread study of hygiene are recognized in the drug store, and the public is glad to pay the price of perfect service.

#### Confectionery.

One of the most successful side lines ever introduced by retail druggists was confectionery. A decade ago you could buy in the typical drug store gum drops, peppermint balls, molasses sticks, and black licorice. Today you can buy boxed and bulked goods in limitless varieties. And you can buy them with an easy mind, for they are made under sanitary conditions, in clean, light, airy factories, this "fünick'ness" being partly due to the Pure Food and Drug Law, but more than anything else to the higher ideal of public service which impels the retail druggist, almost without exception, to anticipate laws and popular demands, and to give the buyer more than he asks, finding his reward in service first and in profit afterward.

It is, perhaps, impossible to place the date of the first candy department conducted by retail druggists, but doubtless the

honor belongs to Boston, or at least New England, which has been for so long a time the center of the confectionery industry.

#### Perfumes and Toilet Articles.

Perfumes and toilet articles have always been part of the retail druggist's business. In the large cities the so-called "class pharmacy" did a very large business on imported perfumes, but with the advent of the department store in these cities the perfume and toilet goods business was largely removed from the drug store to the department store. In recent years, particularly in the past five years, I have noticed throughout the country an increasing toilet goods business in the stores of progressive merchants. There is no reason why the druggist, keeping open more hours, should not have a larger opportunity for the sale of these items than the department stores, and if his business is so conducted as to appeal to well people, the ladies will use the store as a shopping center. And when a druggist secures the ladies' trade, it is very easy to take back what rightfully belongs to him—the toilet goods and perfume business.

#### Optical and Photographic Goods.

Though the profit is large, the amount of business represented by optical goods in most retail drug stores is such a negligible quantity that it need not be considered. This is not the case, however, with photographic supplies, the gross profit of which averages 30% or more, and in which the volume of business in many stores is very large. The development of amateur photography by the leading manufacturers who have placed their agency with retail druggists has been a great stimulant to the business. In addition to his sale of cameras, the druggist makes money on accessories, and if he knows when he is well off, he also conducts a developing and finishing department, thus encouraging amateurs to take more pictures, and consequently buy more films, by removing one of their chief troubles.

Even without considering the actual profit it unquestionably pays to sell cameras and photographic supplies, because it brings into the store people who can spend money for luxuries.

#### Surgical Instruments.

While there is a comparatively small demand for surgical instruments in the drug store, it does not pay any druggist to carry them. They should be sold by the specialty store. After a long acquaintance with numerous retail druggists who conduct a surgical instrument department, I am convinced that if an accurate record is kept of the investment and the interest on the investment in such a department, it will appear that not a dollar has ever been made by the druggist in selling surgical instruments.

It is much better to substitute for the surgical department a stationery department. The stationery department at the present time is one of the druggist's most rapidly growing side lines. A few years ago the average drug store carried a few numbers of paper, a few pencils, and a few pens. Today the up-to-date merchandising druggist conducts a stationery department as complete as that of the average department store, and often more up-to-date. Many retail druggists tell me that stationery is one of the most easily established and successful departments they have.

#### Public Service.

For the same reason the far-seeing druggist will, when possible, maintain in his store a telephone booth. He will sell stamps, weigh letters, do up packages, act as a bundle checker; he will often maintain a telegraph office, serve as bill collector for gas companies, and in general do what he can to be of real service. And all this pays. The space occupied by these various activities could not be better used, and the service rendered brings to the store people who while coming with no intention to buy, are certain to make an excuse for so doing, if only to lessen their sense of obligation to the druggist.

#### The Prescription Department.

The general feeling among druggists is that the prescription department is very profitable. My knowledge, based upon figures, is that it is not such a profitable department, and has not been profitable for the past 10 years. In fact, each year it becomes less and less profitable, not necessarily in all stores, but in the average stores throughout the United States.

There was a time when 60% to 65% gross profit could be made in the prescription business. Today it is very difficult to get 45%, owing to the fact that many prescriptions are written for nothing more than such established proprietary

articles, as Gude's Peptomangan, Fairchild's Essence of Peppine, etc. The day of compounding has gone by, and it was compounding that made the prescription department profitable. Those retail druggists who have kept prescription costs tell me that there is very little left in the prescription business, and yet it is a department, which, if properly conducted, requires a heavy investment.

#### Old Druggist Passing.

And now, what is the ultimate effect of this diversification of the retail druggists' business? Is the purely prescription pharmacy extinct or soon to become so? The question—Could a druggist confining himself to a prescription business remain in existence today?—is sufficiently answered by the experiment conducted in New York a few years ago. A purely prescription pharmacy was opened at that time, and though a very large business was transacted it proved unprofitable without the side lines, which are the main source of income in the merchandising store.

Has the so-called ethical druggist passed into oblivion? To this question I think the answer is affirmative, and it is unwise to harbor vain regrets. In a retrospect of the past 25 years I can see many characteristics, many elements that I would, were it possible, incorporate in the modern retail drug store. For the pioneers in this business were splendid workers, men of real nobility, who thought the sacrifice of time and money and all that made life worth living, a small price to pay, if thereby they could maintain their profession at the level of their ideals. They won public confidence by the integrity of their character and their fair dealing. They have left that confidence to us as our heritage.

While I glory in the wonderful progress that is being made by the drug merchants of today; while I believe that the drug business is on an ascending arc of evolution; while I see ultimate good, even in those tendencies which others deplore, yet I am firmly convinced that the real success of the drug business depends not upon departmentizing, the solving of the overhead problem, frequent turnovers, advertising and all the rest of it, so much as it depends upon the extent to which we prove worthy of our heritage, and whether or not we give it into the hands of our successors unscathed.

(THE END)

*NOTE—This noteworthy contribution to the literature of drug-store merchandising was begun in the February issue of the ERA. If any of our readers have failed to read either of the earlier instalments we would earnestly recommend their careful perusal, since they are authoritative, helpful and of unusual interest.—Ed.*

## Possible Applications to the Retail Drug Business from the Experience of the Bureau of Business Research.\*

By SELDEN O. MARTIN.

**M**Y SUBJECT tonight is "Possible Applications to the Retail Drug Business from the Experience of the Bureau of Business Research," consequently it might be well for me to give you a brief idea of just what the experience of this bureau has been.

The Graduate School of Business Administration at Harvard University is in its sixth year of operation in its work of teaching business. In its third year it came to the conclusion that more precise and reliable information about business was necessary, and the Bureau of Business Research was established. The field of business covers production—the making of things; distribution—the selling of things; and administration—the facilitating of the making and selling of things. It chose at once the field of distribution in which to work, because of the fact that less scientific work was being done in distribution than in production, and the opportunity for work therein consequently seemed greater; and, furthermore, frankly because of the present popular interest in that field of business.

Without giving you too much in detail the evolution of its processes of selection, I would say that finally one commodity

was chosen about which to learn everything about its distribution, both retail and wholesale, and by mail, and all the variations of these methods. And the commodity chosen finally was shoes, as being a commodity not so complex, for example, as a commodity like hardware or a commodity like drugs, and yet one employing all the modern methods of distributing—the old and orthodox method from the manufacturer to the wholesaler, from the wholesaler to the retailer and from the retailer to the consumer; the more modern method of direct from the manufacturer to the retailer, or direct from the manufacturer to the consumer through his own stores, or direct to the consumer by mail. There are also the problems of chain stores, both local and interstate, in the shoe business.

#### Early Work Done in Two States.

The retail end was begun with. There was much more friction to encounter and suspicion to overcome, but after all the retailer occupies a position between the consumer and the manufacturer and wholesaler that enables him to get a point of view on the operations of both, and with a substantial amount of information from the retailer it is possible to get information and in larger quantities, because of their more centralized operations, from wholesalers and manufacturers. The work was begun in the Summer of 1911 in Ohio and Wisconsin. After retailers had been satisfied by correspondence and through trade papers that our work was bona fide many of them were willing to help, but so many variations in bookkeeping were encountered that it was difficult to make full use of their help.

Some kept their books in one way, and some in another; some charged themselves with rent when they owned their own stores, and some did not; some charged themselves with a salary for their time, and some did not; some kept sufficient books, and some kept only a spindle file of invoices. Upon the return of the agents from their field work in the Fall of 1911 it was very evident to them that a uniform set of accounts was necessary before information from which important deductions could be made could be obtained. Preparation of that accounting system was at once initiated. A committee composed of successful shoemen and eminent accountants, together with members of the school's staff, worked upon that system and finally the Harvard System of Accounts for Shoe Retailers was evolved, correct in theory and practice.

The next two years were devoted to introducing that system into the shoe trade. So successful has this work been that the first edition of the system was put out of print, and in preparing the new edition we have taken the opportunity to revise it in the light of our three years' experience with 650 stores in 26 States. It now looks as if it is becoming standard in the shoe trade.

#### Getting the Actual Facts.

Now, important as this system is, and as important as the influence is that it seems to be exerting in the shoe trade, it nevertheless was only an incidental necessity to our work—very important, but incidental. Our real object is to get actual facts about business, and our object here was to get the actual facts about the distribution of shoes, and in this case about the retailing of shoes. The accounting system was devised to be sure that the information we received as to the expense of retailing shoes was correct, and furthermore, to be sure that the expense item of A, in New York, could be compared with the expense item of B, in Chicago. Take, for example, the expression "selling expense." I will ask anyone in this audience to think if he would be sure of what anyone meant by "selling expense" without further definition when he conversed with him. We have standardized those definitions. For example, under selling expense we have first, the wages of the sales force; next any extra payments, bonuses, commissions or otherwise made to the sales force; next advertising; and finally wrappings and miscellaneous selling expense. We have standardized the definition of each one of those terms and put them in a pamphlet with an index, so that the accountant, bookkeeper, or proprietor can look in that index and know in an instant as to exactly where such an item belongs in selling expense, or not in selling expense at all.

This was not all we wished to learn about shoes. We wished to find out how shoes were bought, whether from the wholesaler or from the manufacturer, whether the retailers were tending to buy from more or fewer manufacturers or wholesalers, whether the number of lines, styles and sizes which they were carrying tended to increase. We wished to know what the fundamental departments of their sales were in much

\*An address delivered at the New York College of Pharmacy, March 17, 1914.

the same as we would ascertain and establish fundamental principles of expense.

#### Analysis of Business in 130 Stores.

We have presented in Bulletin No. 1, on page 14 of which we present the general statement of expenses and lowest operating expenses, a number of interesting expenses that we encountered, and a number of interesting divisions of those expenses, such as sales force, advertising, and rent. We furthermore presented figures showing the results from our analysis of the businesses of 130 stores. These figures have not been changed in any substantial degree by information from 650 stores since—figures that should be standards to be aimed at. For example, we found the percentage of rent to net sales ranging from 1.8% to 14.0%, but a marked number centering—not averaging, but centering like shots about a bull's eye—around 5%; and then a more efficient group, and enough of them to indicate that it was entirely possible to attain a percentage concentrating around 3%.

Now, what is the concrete application of this? In a nutshell it is this: A man with the best accounting system—and we encountered many good systems—may know exactly where he is at, but he does not know where he ought to be at. For example, suppose a shoe retailer finds his rent to amount to 7% of his net sales. By the use of this bulletin he knows that it should be as low as 5%, and that it is not impossible for him to reduce it to 3%. He may do this by increasing his sales by whatever method he may adopt, or by changing his location. Similarly with his sales force. I have in mind now a certain important retailing firm in Philadelphia that by the use of our figures has been able to devote its attention to reducing the percentage of its sales force expense, which it had not previously known was higher than normal. Thus, by this method is the individual shoe retailer furnished with the results from many shoe retailers without knowing from whom. We find ourselves, for the collection of such confidential information, in the position of a non-competing and trusted third party.

#### Stock-turn and Average Sales.

We also secured some surprising results as to stock-turn, the number of stock-turns per year ranging from 1 to 3.6, with a normal stock-turn of 1.8 and an attainable stock-turn of 2.5. We also found the annual sales of the average salesperson ranging from \$5000 to \$16,500, with the normal annual sales per sales-person in cities of over 100,000 of \$10,000.

We have now secured wholesaling figures showing the wholesaler's expense by departments of sales force, warehouse charges, advertising, rent, etc. These figures have not as yet been published. Before we leave the retailer, however, we wish to furnish him with a stock-keeping system, and for this we have been gathering material the country over.

So much for a condensed analysis of our work on the distribution of shoes, with especial attention to the retailing of them. We have also made preliminary investigations of the retailing of hardware, groceries, and clothing in Boston and vicinity, and it is probable that we shall conduct a more thorough investigation of one or all of those commodities in the near future.

#### Application to the Drug Business.

Now what are the applications of all this to the distribution of drugs, and especially to the retail drug business? The drug business is undoubtedly complex. I say this frankly, since it has already been suggested to the bureau that we make a study of drugs similar to that which we have made of shoes, and we have demurred until such time as we had more plant and staff for our work. The inventory of one drug store showed over 7000 kinds of stock, mind you, not articles, but kinds of stock. Hardware has nearly as complex a stock as the drug business. Some of its plumbing service may be in some respects compared to the prescription service of the drug store, in nature at least.

As we have worked on these different commodities we have been struck with certain things in common in the experience of the retailers of commodities apparently so different. For example, only recently, in going over the expense statement of a retail druggist I was surprised to find his sales force expense running so close to the normal sales force expense of the shoe retailer. His was 8.3%, and I find in our table here that the normal sales force expense of the shoe store in a city of 100,000 is 8%.

The applications that I think can be made from our expe-

rience I have divided into: 1. *Departmentalization of receipts or sales.* 2. *Departmentalization of expense.* First as to the departmentalization of sales. The problem of establishing departments in a business is one as much of avoiding too many departments as of establishing them, and having those departments fundamental. For example, I have in mind one drug store that maintains its soda and tobacco in separate departments, but carries its prescriptions and proprietary medicines in one department. So far as our experience goes, I would rather have tobacco and proprietary medicines together, dissimilar as those commodities apparently are, than to have proprietary medicines combined with the prescription department. The more I look into the prescription business the more I am impressed with its analogy to the repair business of a shoe store, or the plumbing business of a hardware store, in that not only is merchandising done but also manufacturing, so that not only is the original store expense incurred, but also a manufacturing expense. In shoes we have found stores saying that their repair department yields them a profit of 15%, by which we have found they mean gross profit, when the expense of the store proved to be 22%, so that they were really losing some 7% on the repair business. I am aware of the system which has been introduced by the National Association of Retail Druggists to standardize the charges for prescriptions, by the method of charging first for the container, then for the material, then for the dispensing fee, based according to the number of ounces, the first ounce being, of course, the most expensive. This is in accord with the best cost accounting practice, and is another witness of the progress of scientific methods in distribution as well as in production.

#### What Departments in a Drug Store?

In our work with shoe retailers we have encountered those selling as low as \$12,000 a year, and those as high as \$800,000; the latter was practically a shoe department store, and the former was conducted by a man and his wife. In the drug business the same range of stores would undoubtedly be encountered. I imagine, however, that the typical business consists of a proprietor and one or two clerks, doing a business of from \$15,000 to \$20,000 a year. Let us then find what departments we would apply to such a store, departments for which it would be advisable to have at least a departmentalization of receipts by separate cash registers. One department, in my mind, would be prescriptions, because of the absolutely different character of the department, involving the time of skilled men. The other department that I should make would be soda, which you will all agree is essentially different, and the balance, such as proprietary medicines, tobacco and candy could be lumped together, because most of it is in package form and involves simply the ordinary selling ability akin to the selling of package goods elsewhere, whether in grocery stores, hardware stores, or wherever it may be. As the store increases in volume these should undoubtedly be separated into a department for tobacco, a department for proprietary medicines, and a department for candy, because of certain differences in the seasonal character of the business and certain differences in profit. But for the smaller store one must balance against the advantage of knowing these separate departments the expense of getting this knowledge, which expense must be borne by a comparatively smaller volume of business.

Certain forms of expense in retailing a man knows with little trouble, such as rent, and insurance, and loss from bad debts. Those that should be kept separate; here, of course, first are wages, which I believe even in a small store should be apportioned at least once in six months between buying, selling and managing; buying expense includes time given to examining stock, making out orders, and time spent with drug travelers; selling, under sales force expense, includes the time given to selling, showing and wrapping the goods, and advertising, practically as we have defined it—newspaper, circular and display; and managing, which includes office supplies and office force, if any are employed. The proprietor should not fail to charge the business with a salary equal to what he would receive from another employer, nor, if he owns the store, should he fail to charge his business with a rent equal to the rent another would pay for his store.

#### Sales Force Records by Individuals.

Certain other important items that I believe every drug store, no matter how small, should have are: Records of its sales force by individuals, showing the sales of each per year, and

records of stock-turn. A certain druggist, with whose figures I have come in contact, has his sales force selling on the average \$8200 a year. Because of the low unit of sales one would not expect the volume of sales per sales person to be as high as in the retail shoe trade, not within \$2000 of it. I have in mind a shoe store that was amazed to find its sales force averaging only \$7000 per year, when they realized that other shoe stores of the same kind and volume of business had sales averaging \$10,000 per year. One of the first tests of efficiency of any shoe store, if in a city of over 100,000, is whether its sales force is averaging \$10,000 per year. Our experience with clothing, grocery, and hardware retailers shows that the same average could be applied there, and I have no doubt that it could also be applied in the drug business.

The most practical way to obtain stock-turn is your average inventory divided into the *cost of your sales*, not into your sales. Just what the proper turn-over should be in the drug business we have not yet accumulated enough data to state. I should imagine that it would be lower than in shoes, because of the larger variety of stock. In hardware, which has a very great variety of stock similar to drugs, we have found stock-turns ranging from 1 to 4.3. The average seems to be somewhere between 2 and 2.5 per year.

Without having made the study of the drug business that we have made especially of the shoe business, and less intensively of clothing, groceries, and hardware, I think that the foregoing is of practical application to the retail drug business; and if it is, and has any influence toward a more scientific conduct of any of your businesses in the future, which is for the public interest as well as for your interest, I shall be much gratified.

## Changes in the New Pharmacopœia.\*

*Condensed Abstract of Proposed Definitions and Standards Relating to Drugs of Vegetable and Animal Origin submitted by the Committee of Revision for incorporation into the next edition of the Pharmacopœia.*

**F**OLLOWING the recommendations of the United States Pharmacopœial Convention, the Committee of Revision has issued a second abstract of proposed new descriptions and standards and of changes in description and standards for incorporation in the forthcoming edition of the Pharmacopœia.

This abstract is designated as Part II, and the text relates to most of the drugs of vegetable and animal origin. Below is presented in somewhat condensed form the first part of this important contribution, but enough is given to clearly indicate the prominent characteristics and trend of the new Pharmacopœia in so far as they may relate to descriptions of drugs. One strongly noticeable feature is the specific language used in the descriptions, in the case of certain drugs going so far as to name the limit of inert matter allowable, as for instance the quantity of stems in belladonna leaves shall not exceed 10 per cent. Many other examples might be cited, but this is enough to show that the new Pharmacopœia will more than ever be a book of standards, and as such will have a most important bearing upon the importation of foreign drugs. Another important innovation is the introduction of microscopical descriptions and tests of powdered crude drugs, a recognition of the fact that this is the commercial form in which most drugs are sold, and also of the fact that the average pharmacist no longer powders and grinds his drugs, even should he be enough of a manufacturing pharmacist as to make his own fluidextracts and tinctures.

Of the new drugs noted in the following list are agar-agar and *condurango*, while provision is made for all of the commercial varieties of aloes, Sumatra and Siam benzoin, and short and long buchu. The descriptions of the cinchona have also been modified and additional tests are given. Other noticeable innovations will occur to the reader familiar with the present Pharmacopœia on perusing the condensed abstract presented herewith and to be continued in next month's ERA.

**Acacia**—The air-dried gummy exudation of *Acacia Senegal* Willdenow, and other African species of *Acacia*. In oval, more or less spheroidal tears or in broken, angular fragments

from 2 to 30 mm. in diameter, varying from whitish, yellowish-white to light amber-colored. Slowly and almost completely soluble in twice its weight of water, the solution having a slight, characteristic odor. The requirement that it should not reduce alkaline cupric tartrate V.S. is omitted. Powder: Not more than 1 per cent. should be insoluble in water (limit of plant tissues, sand and dirt). The powder should contain not more than 15 per cent. of moisture.

**aconitum**—Not more than 5 per cent. of stem-bases or other foreign matter should be present. More or less conical or fusiform, from 4 to 10 cm. in length, from 1 to 2 cm. in diameter at the crown; externally dark brown or grayish-brown, smooth or longitudinally wrinkled, the upper end with a bud, remains of bud-scales or stem-scars, the other portions with numerous root-scars or short rootlets; fracture short, horny or somewhat mealy; internally, bark light or dark brown, 1 to 2 mm. in thickness, cambium zone usually 5- to 8-angled, with a small fibro-vascular bundle in each angle, pith whitish or light brown, 2 to 7 mm. in diameter; odor very slight; taste sweetish, soon becoming acid and developing a tingling sensation, followed by numbness. Under the microscope transverse sections made near the middle of the tuberous root show an epidermis replaced by a layer consisting of one or more rows of cells with blackish-brown walls; a primary cortex of 8 to 15 rows of parenchyma and characteristic stone cells, occurring either singly or in small groups; a more or less modified endodermis; a secondary cortex, consisting chiefly of starch-bearing parenchyma and interspersed with a few small fibro-vascular bundles; a more or less star-shaped and characteristic cambium with from 5 to 12 collateral fibro-vascular bundles; and a pith composed of large parenchyma cells filled with starch. Powder: Grayish-brown; starch grains numerous, spherical, somewhat plano-convex, single or 2- to 5-compound, the individual grains from 0.003 to 0.015 mm. in diameter and frequently with a central cleft. Ash not exceeding 6 per cent.

**Agar-Agar**—The dried mucilaginous substance extracted from *Gracilaria* (*Sphaerococcus*) *lichenoides* Gréville and other marine algae growing along the eastern coast of Asia, particularly several species of *Gelidium* or *Gloiopeltis* (Class Rhodophyceæ). Mostly in bundles from 4 to 6 dm. in length, consisting of thin, translucent, membranous, agglutinated pieces from 4 to 8 mm. in width; externally yellowish-white or brownish-white, shiny; tough when damp, brittle when dry; odor slight; taste mucilaginous. A fragment mounted in water and examined under the microscope gradually becomes more transparent, showing a granular structure and a few diatoms, notably the frustules of *Arachnoidiscus Ehrenbergii* Baillon, which are disk-shaped, from 0.100 to 0.200 mm. in diameter, and also fragments of the spicules of sponges; upon the addition of iodine some of the granules or hyphal-like portions are colored bluish-black. Insoluble in cold water, slowly soluble in hot water. A solution made by boiling 0.100 gm. of agar-agar in 100 cc. of water, upon cooling, should yield no precipitate upon the addition of tannic acid T.S. (gelatin) and should not produce a blue color upon the addition of iodine T.S. (starch). One part of agar-agar boiled for about 10 minutes with 100 parts of water, and replacing the water lost by evaporation, should yield a stiff jelly upon cooling. Powder: Pale buff; when mounted in water and examined under the microscope it shows transparent, more or less granular, striated angular fragments. In some mounts occasional frustules of diatoms are present; with iodine T.S., fragments for the most part are colored bright red, certain more or less definite areas being stained bluish-black. Ash not exceeding 5 per cent.

**Aloe**—Definition: The inspissated juice of the leaves of *Aloe Perryi* Baker, yielding *Socotrine Aloes*; or *Aloe vera* (Linné) Webb, yielding *Curacao Aloes*; or of *Aloe ferox* Miller, yielding *Cape Aloes* (Fam. Liliaceæ). **Socotrine Aloes**: In yellowish-brown to blackish-brown, opaque, or smooth and glassy masses; fractured surface somewhat conchoidal; sometimes soft or semi-liquid; odor aromatic or saffron-like, never fetid or putrid; taste nauseous, bitter. Not less than 50 per cent. of *Socotrine Aloes* should be soluble in cold water, the solution being of a yellowish color. Powder: Very dark brown; when mounted in one of the fixed oils and examined under the microscope it shows yellowish or reddish-brown, irregular, or angular fragments. Upon the addition of nitric acid, it yields a yellowish or reddish-brown solution. **Curacao Aloes**: In orange to blackish-brown, opaque masses; fractured surface uneven, waxy, somewhat resinous; odor characteristic but not

\*Permission to use granted by the Chairman of the Board of Trustees, United States Pharmacopœial Convention.

aromatic as in Socotrine Aloes. Not less than 60 per cent. of Curacao Aloes should be soluble in cold water, the solution being of a purplish-red color. Descriptions and tests are also given for the several varieties in powdered form. Ash not exceeding 4 per cent.

*Althaea*.—The root of *Althaea officinalis* Linné (Fam. Malvaceæ) deprived of the brown, corky layer and small roots, and carefully dried. Root: Usually cut into small pieces about 5 mm. in diameter, of a uniform grayish-white color and otherwise having the characters of entire roots, etc.; odor slight; taste sweetish, mucilaginous. Powder: Whitish; starch grains, numerous, from 0.005 to 0.020 mm. in diameter, usually with a long cleft at the point of origin of growth; sclerenchymatous fibers in groups, the walls being quite thick and more or less lignified; tracheæ with scalariform thickenings or with bordered pores; calcium oxalate crystals few, in rosette aggregates, 0.020 mm. to 0.030 mm. in diameter. Add 1 gm. of *Althaea* Root to 10 cc. of cold water, allow it to stand with occasional stirring, and filter it through cotton; a pale yellow colored mucilage should be obtained, which should be neutral to litmus, and colored a deep yellow on the addition of a few drops of potassium hydroxide T.S. The mucilage should not have a sour or ammoniacal odor. Ash not exceeding 8 per cent.

*Amygdala Dulcis*.—Powder: Creamy-white, exhibiting numerous very small oil globules, 0.001 mm. or less in diameter, larger oil globules and crystalloids, the latter sometimes with adhering globoids; fragments of parenchyma of endosperm, containing oil globules and aleurone grains; also occasional fragments of seed-coat with characteristic, more or less scattered, large elliptical, thin-walled, strongly lignified epidermal cells and narrow, closely spiral tracheæ. Starch grains are absent. Ash not exceeding 4 per cent.

*Amylum*.—Taste slight, characteristic. Residue on incineration changed from "not more than 1 per cent." to "not more than 0.5 per cent."

*Anisum*.—Definition requires the dried ripe fruit with not more than 3 per cent. of foreign seeds and other vegetable matter. Fruit: The cremocarp broadly ovoid or pyriform, laterally compressed, 3 to 6 mm. in length, 2 to 3 mm. in breadth; mericarps usually cohering and attached to a slender pedicel 2 to 12 mm. in length, summit with a ring-like disk and 2 projecting, diverging styles; externally grayish or greenish-gray, seldom grayish-brown, slightly pubescent; each with five light brown, filiform ridges and in cross-section with from 15 to 45 vittæ or oil tubes; odor and taste agreeable and aromatic. Powder: Yellowish-brown, consisting of numerous irregular fragments of pericarp showing portions of the yellowish vittæ, fragments with tracheæ and sclerenchymatous fibers of crepophore; cells of endosperm filled with aleurone grains, 0.006 mm. in diameter, each usually enclosing a rosette aggregate crystal of calcium oxalate 0.002 mm. in diameter; non-glandular hairs 1-celled, from 0.025 to 0.200 mm. in length, either straight or curved and with numerous, slight, centrifugal projections on the outer surface. Ash not exceeding 10 per cent.

*Apocynum*.—The dried rhizome and roots of *Apocynum cannabinum* Linné (Fam. Apocynaceæ), with not more than 5 per cent. of stems and other foreign matter. Cylindrical, somewhat branched, of varying length, from 3 to 10 mm. in thickness; externally reddish-brown to grayish-brown, longitudinally wrinkled and occasionally with transverse fissures, having vertical sides, extending through the bark; fracture short; internally, bark light brown, 1.5 to 3 mm. in thickness, wood faintly radiate and with large tracheæ, a small pith occurring in pieces of the rhizome; almost inodorous, taste starchy, afterwards becoming bitter and somewhat acrid. Powder: Light brown, starch grains numerous, from 0.003 to 0.015 mm. in diameter, spherical, ellipsoidal, ovate, pyriform or more or less irregular, sometimes more or less altered, swollen, and with a hyaline central cleft; numerous fragments of strongly lignified wood-fibers, associated with tracheæ mostly having bordered pores, occasionally with spiral thickenings; fragments of cork layer few, the walls being of a reddish-brown color; an occasional fragment with laticiferous tissues; stone cells few or absent. (*Apocynum* and *androsemifolium* Linné.)

*Arnica*.—Florets: Consisting chiefly of the tubular and ligulate flowers, occasionally with the involucre and receptacle present; involucral bracts narrowly lanceolate, about 1 cm. in length, dark green and pubescent; receptacle slightly convex, deeply pitted and densely short-hairy; ray flowers bright yellow,

the ligulate portion, 2 cm. in length, more or less folded lengthwise, 3-toothed, 7- to 12-veined, pistillate; tubular flowers perfect, reddish-yellow, stamens without a tail-like appendage (distinguished from anthers in flowers of *Inula Helenium* Linné, which have two bristles or long tails at the base). Powder: Yellowish-brown, pollen grains numerous, from 0.025 to 0.035 mm. in diameter, spherical, triangular in section and spinose; non-glandular hairs of three kinds. Ash not exceeding 9 per cent.

*Asafoetida*.—The gum-resin, obtained by incising the rhizomes and roots of *Ferula Asafoetida* Linné and *Ferula fetida* Regel and of other species of *Ferula* (Fam. Umbelliferae) indigenous to Persia and adjacent countries, yielding not less than 60 per cent. of alcohol-soluble constituents. A soft, putty-like mass, sometimes almost semi-liquid, or in irregular, more or less pliable hard masses composed of agglutinated tears of variable size embedded in a yellowish-brown or dark brown matrix, or in loose, ovoid tears, from 1 to 4 cm. in diameter, the surface being sometimes streaked a violet, yellowish-red or brownish-red and with a few vegetable fragments; when fresh the mass is either soft or tough, becoming hard and occasionally even brittle on drying; the surface of the freshly fractured tears is milky-white and opaque, changing gradually to a pinkish or reddish-purple or even reddish-brown on exposure; on moistening with water, the tears become milky-white; odor persistent, alliaceous; taste bitter, alliaceous and acrid. Various chemical tests are given. Ash of the gum-resin not exceeding 15 per cent. Powder: Powdered *asafoetida* may be prepared by drying the gum-resin over freshly burnt lime or by exposing it to currents of warm air until it ceases to lose weight, and then reducing it to a powder at a low temperature. Diluents of starch or magnesium carbonate may be added in order to maintain the powdered form. The color of powdered *asafoetida* is light brown. Not less than 50 per cent. should be soluble in alcohol. Ash of the powder not exceeding 30 per cent. Assay: Place about 10 gm. of *asafoetida* in a tared, 250 cc. Erlenmeyer flask, determine the exact weight of the drug, add 100 cc. of alcohol, and, having connected the flask with an upright condenser, boil the mixture in the flask during one hour or until the drug is disintegrated completely. Then transfer the contents of the flask to two counterpoised, plainly folded filters, one within the other, so that the triple fold of the inner filter is laid against the single side of the outer, and wash the flask and filter with consecutive, small portions of boiling alcohol until the washings no longer produce a cloudiness when dropped into water. Collect and reserve the mixed alcoholic solutions and dry the filters and flask to a constant weight at a temperature of about 115°C. Now determine the weight of the residue on the filter and in the flask and calculate its percentage from the amount of *asafoetida* originally taken. This percentage of alcohol-insoluble material, when subtracted from 100, will give the percentage of alcohol-soluble constituents contained in the *asafoetida*.

*Aspidium*.—The "uncomminuted rhizome and stipes" should be collected in the autumn, freed from the roots and dead portions of rhizome and stipes and dried at a temperature not exceeding 70°C. Usually with the blackish-brown outer layers removed; rhizome 1 to 3 cm. in thickness, cylindraceous and nearly straight, or curved and tapering toward one end, usually split longitudinally, roughly scarred with remains of the stipe-bases, or bearing several coarse longitudinal ridges and grooves, stipes cylindrical, 3 to 5 cm. in length, about 6 mm. in thickness, nearly straight, or somewhat curved, tapering toward one end, and with occasional elongated patches of the still-adhering, blackish-brown outer-layers; fracture short, pale green in the inner half, the texture rather spongy, and exhibiting in an interrupted circle from 6 to 12 vascular bundles, each surrounded with an endodermis; odor slight; taste sweetish, astringent, bitter and acrid. Ash not exceeding 3 per cent.

*Aurantii Amari Cortex*.—Rind from "unripe" fruit of *Citrus Aurantium amara* Linné. In narrow, thin bands (ribbons), or more often elliptical, flattened, more or less curved pieces (quarters), varying from 3 to 6 cm. in length; odor fragrant; taste aromatic and bitter. Powder: Yellowish-white or light brown; fragments of parenchyma cells numerous, the walls from 0.004 to 0.012 mm. in thickness; few fragments of tracheæ with close spiral markings or simple pores; occasional membrane crystals of calcium oxalate in monoclinic prisms, from 0.020 to 0.035 mm. in diameter. Powdered bitter orange peel should

be colored yellowish upon the addition of potassium hydroxide T.S. Ash not exceeding 7 per cent.

*Aurantii Dulcis Cortex*—The outer rind of the fresh, ripe fruit of *Citrus Aurantium sinensis* Gallezio (Fam. Rutaceae). The outer, orange-yellow layer recently separated by grating or paring and consisting of epidermal cells, parenchyma cells of the sarcocarp, with chromoplastids, oil reservoirs and globules of volatile oil; odor highly fragrant; taste pungently aromatic.

*Belladonnae Folia*—The dried leaves and tops with not more than 10 per cent. of stems; usually much twisted and matted together; leaves much crumpled, when soaked in water and spread out, from 6 to 20 cm. in length, 4 to 12 cm. in breadth, broadly ovate, summits acute, margins entire, narrowed into the long petioles; upper surfaces brownish-green; lower surfaces grayish-green, epidermis more or less papillose and slightly hairy; flowers with yellowish-purple, campanulate corollas; fruits globular; fruits dark green or greenish-brown, subtended by a dark green calyx, and with numerous small seeds; odor distinct, heavy, especially on moistening; taste somewhat bitter and acrid. Stems of variable length, not exceeding 7 mm. in diameter, longitudinally wrinkled, older parts smooth and usually hollow, younger parts flattened and finely hairy. Powder: Dark green, consisting of irregular fragments of leaf tissues and woody elements, calcium oxalate in sphenoidal micro-crystals; hairs few, the non-glandular being simple 2- to 5-celled, and the glandular with stalks of 1 to 3 cells; tracheae with annular, spiral, scalariform or reticulate thickenings and with bordered pores; starch grains and pollen grains few; occasional fragments of the stems of belladonna with long, thin-walled and slightly lignified bast-fibres. Raphides should not be present (leaves and stems of *Phytolacca decandra* Linné). Ash not exceeding 20 per cent.

*Belladonnae Radix*—The dried root with not more than 10 per cent. of its stem-bases; cylindrical or somewhat tapering, usually split into longitudinal pieces, of 0.5 to 2.5 cm. in thickness; externally pale brownish-gray, longitudinally wrinkled, outer layers of the periderm rather soft, frequently abraded, and thus showing lighter patches; fracture nearly smooth, mealy, and emitting a characteristic puff of dust consisting chiefly of starch grains; internally whitish, with cambium zone and yellowish wood wedges; nearly inodorous; taste sweetish, afterwards bitterish and strongly acrid. Chemical and microscopical tests are given. Powder: Light-brown; starch grains numerous, from 0.003 to 0.030 mm. in diameter, spherical, plano-convex, polygonal, and 2- to 6- or more compound; sphenoidal micro-crystals numerous, from 0.003 to 0.010 mm. in length; fragments of cork cells and tracheae with wood-fibres few. Occasional fragments of stems of belladonna showing long thin-walled and slightly lignified bast-fibres. Ash not exceeding 7 per cent.

*Benzoinum*—A balsamic resin obtained from *Styrax Benzoin* Dryander, and other species of *Styrax* (Fam. Styracae) growing in the East Indies, and known in commerce as Sumatra Benzoin and Siam Benzoin. Sumatra Benzoin: In blocks or lumps of varying size, made up of tears, compacted together with a reddish-brown, reddish-gray, or grayish-brown resinous mass; tears externally yellowish or rusty-brown, milky-white on fresh fracture; very hard, becoming soft on warming; odor aromatic, upon digesting with boiling water, suggesting the odor of cinnamic acid or storax; taste aromatic and slightly acrid, the resin gritty on chewing. Not less than 75 per cent. of Sumatra Benzoin should dissolve in alcohol; the alcoholic solution, upon the addition of water, should become milky and give an acid reaction to litmus. Ash not exceeding 2.5 per cent. Siam Benzoin: In pebble-like tears of variable size, compressed, yellowish-brown to rusty-brown externally, milky-white on fracture, separate or very slightly agglutinated; fracture short; odor agreeable, balsamic, vanilla-like; taste slightly acrid, the resin becoming plastic on chewing. Not less than 90 per cent. of Siam Benzoin should dissolve in alcohol; the alcoholic solution upon the addition of water should become milky and give an acid reaction to litmus. Ash not exceeding 2 per cent. Tests which apply to both Sumatra and Siam Benzoin are given.

*Buchu*—The dried leaves of *Barosma betulina* (Thunberg) Bartling and Wendland, known in commerce as short buchu; or of *Barosma serratifolia* (Curtis) Willdenow, known in commerce as long buchu (Fam. Rutaceae), with not more than 10 per cent. of stems and other foreign matter. Short buchu: Rhomboidally oval or obovate; from 9 to 25 mm. in length

and 4 to 13 mm. in breadth; summit obtuse, and recurved; margin somewhat serrate or finely dentate with an oil gland at the base of each tooth; the base more or less wedge-shaped; yellowish-green, some being light brown; glandular punctate; both surfaces papillose, under surface longitudinally striate; petiole 1 mm. in length; texture coriaceous; odor and taste characteristic, aromatic and mint-like. Long buchu: Linear-lanceolate, 2.5 to 4 cm. in length, 4 to 6 mm. in breadth, summit somewhat rounded or truncate with an oil gland at the apex; margin sharply serrate and glandular, otherwise resembling short buchu. Stems in both short and long buchu about 1 mm. in diameter, yellowish-green or brownish-red, cylindrical, longitudinally furrowed, with prominent leaf-scars nearly opposite to each other and giving the stems a jointed character. Ash not exceeding 4 per cent.

*Calumba*—In circular or oval disks attaining a diameter of 9 cm. and seldom exceeding 22 mm. in thickness, or in longitudinal or oblique slices attaining a length of 30 cm., a breadth of 35 mm. and a thickness of 16 mm.; externally brown and roughly wrinkled; cut surface varying from yellowish-brown to grayish-yellow, with a few interrupted circles of fibro-vascular bundles, the transverse slices distinctly radiate in the outer portion and with a dark cambium, central portion often depressed; fracture short, mealy; odor slight; taste slightly aromatic, very bitter. Powder: Greenish-brown to grayish-yellow; starch grains numerous, mostly single; stone cells few with irregularly thickened, strongly lignified, coarsely porous walls and containing one or more prisms of calcium oxalate 0.010 to 0.030 mm. in length or numerous sphenoidal micro-crystals. Ash not exceeding 8 per cent.

(To be continued)

## Classical Discoveries in Pharmacy. V.

### THE DISCOVERY OF OXYGENATED WATER. (HYDROGEN PEROXIDE.)

LOUIS JACQUES THÉNARD, the discoverer of hydrogen peroxide, was one of the best known of the French school of chemists who contributed so largely to science during the first two decades of the last century. A pupil of Fourcroy and Vauquelin, he became a professor in the Collège de France at the age of 27, and the successor of Vauquelin at the Sorbonne. In 1810 he succeeded Fourcroy as a member of the Academy. It was before the latter body that the remarkable memoirs on hydrogen peroxide were read. The articles are to be found in the *Annales de Chimie et de Physique*, 8, 306; 9, 51, 94, 314, 441; 10, 114, 335; 11, 85, 208; 50, 80 (1818, 1819, 1839).

Thénard did his work so thoroughly that with a very slight modification the method he employed for making peroxide of hydrogen is in use 100 years later.

The first report of his experiments is entitled: "Observations on some new combinations between oxygen and different acids," read before the Academy July 27, 1818.

"It is in treating peroxide of barium with acids that I have succeeded in making these new combinations, which for the most part are very remarkable, and worthy of fixing the attention of chemists.

"The first that I have observed is that which nitric acid can form with oxygen. If one moistens peroxide of barium, prepared by saturating baryta with oxygen, it breaks up, falls into a powder, and becomes slightly heated. If, in this state, it is diluted with 7 or 8 times its weight of water, and if one gradually pours on it dilute nitric acid, it dissolves easily on shaking, without any gas being set free, so that the solution is neutral, or without action on litmus or turmeric. By then adding to this solution a suitable quantity of sulphuric acid, there is produced an abundant precipitate of sulphate of baryta, and the filtered or decanted liquid is merely water charged with oxygenated nitric acid.

"Subjected to the action of heat, it is not slow in disengaging oxygen; but its decomposition is only complete if it is maintained at boiling for some time; it follows from this that it will be difficult to concentrate it by heat without altering it. The only means by which I have succeeded consists in placing it in a capsule, under the receiver of an air pump, placing under this receiver another capsule full of lime, and evacuating

to about 10 or 12 centimeters. I have thus obtained an acid concentrated enough to give, on distilling it, 11 times its volume of oxygen gas, while previously it gave at most one volume and a half.

"Guided by the preceding experiments, I also examined the action of silver peroxide on the deutoxide of barium. I confess that I believed this would result water, chlorine, and a liquid state of oxygen. It was entirely otherwise: I obtained oxygenated hydrochloric acid, which I isolated by means of sulphuric acid."

As is now known, Thénard was in possession of solutions of hydrogen peroxide containing large amounts of nitric and hydrochloric acids. His idea of the state of combination of the oxygen is evidently somewhat analogous to our modern views regarding the various "per-" acids. But his concepts of chemical composition were still vague; he apparently made no clear distinction on between changes in concentration and changes in composition, as is shown by his next experiments. In a second paper, entitled "New Observations on Oxygenated Acids and Oxides," read on Sept. 14, 1818, Thénard recorded his attempts to prepare a more concentrated oxygenated hydrochloric acid. Starting with the dilute solution prepared as above, he added silver sulphate, which precipitated the hydrochloric acid and left a solution of oxygenated sulphuric acid. Then a small amount of hydrochloric acid was added, less than before, and the sulphuric acid was removed by barium hydroxide. Thus all the oxygen originally present was thought to have been forced to combine with less acid than before, or, in other words, the degree of oxygenation of the acid was increased. The fact that a gradual increase was possible proves that the "oxygenated acids" were not true chemical compounds, as no gradual change in composition is possible with compounds—it must take place in definite stages.

Thénard also found that silver oxide decomposed his new substances, instantly setting free all the oxygen. On this fact he based a eudiometric method of assay.

An important statement follows, foreshadowing certain work which was to prove that the acids, as such, had nothing to do with the combinations of oxygen in his solutions. "I have already made several attempts to know if oxygenated acids could take up more oxygen if they contained more acid, or if the water, by its amount, did not have some influence on the greater or less oxygenation of the acid. My trials have not yet permitted me to solve this question completely."

The effect of many metallic substances is described in a third communication, under date of Oct. 5, 1818. Silver, gold, silver oxide, gold chloride, mercuric oxide, and lead and manganese dioxides were studied. It was found that violent effervescence took place when these bodies were brought in contact with a solution of an oxygenated acid, and that in some cases the metallic oxides were reduced. Finely divided silver was shown to be unchanged after the oxygen was set free from the solutions. When the oxygenated acids were neutralized with caustic potash, Thénard believed that the salts in solution were also oxygenated, but he found that these neutral or alkaline solutions were much less stable than the acids themselves. On adding silver oxide to an oxygenated nitrate, "the oxide sets free oxygen still more rapidly than silver; it is decomposed and reduced; the silver is entirely precipitated, and one finds in the liquid only the ordinary neutral nitrate of potash. Now, in these decompositions, the chemical action is evidently zero; we must therefore attribute them to a physical cause; but they are not dependent on heat or light; whence it follows that they are probably due to electricity." This hypothesis, advanced as an explanation of the now well-known catalytic effects of the metallic substances employed by Thénard, shows remarkable insight into the nature of the phenomena he had before him.

In a fourth treatise, entitled "Observations on the Influence of Water in the Formation of Oxygenated Acids," Thénard attacks the problem referred to above. "I have shown, in my first research on oxygenated acids, that on bringing silver oxide in contact with oxygenated hydrochloric acid, all the oxygen of the latter was set free instantly; and that, on the contrary, all remained in the liquid if, in place of silver oxide, I used that oxide united with sulphuric, nitric, phosphoric or fluoric acid, etc. What conclusion should be drawn from these experiments? That the oxygen can unite with acids through the intermediation of water, and that it did not unite to water alone; for, if this latter union was possible, why should it not

have taken place as the hydrochloric acid was being destroyed by the silver oxide? But it is evident that this manner of reasoning can no longer appear exact, since I have demonstrated that oxide of silver, silver, and many other substances had the property of producing chemical changes by a purely physical action. New researches must therefore be made to assure ourselves whether water alone is not susceptible of being oxygenated.

"At first I took some oxygenated hydrochloric acid, and added gradually some oxide of silver, so that the acid was completely destroyed, without having any excess of oxide; each time that I added oxide there was produced a very marked effervescence, and as a result the filtered liquor, that is to say, the water, retained no oxygen.

"I then attempted the oxygenation of water by oxygenated sulphuric acid and baryta. To this end I gradually poured baryta water into oxygenated sulphuric acid, taking care to agitate the liquid constantly. When I approached the saturation point, I noted that the effervescence, which up till then had not been noteworthy, became very lively, and the sulphate of baryta was precipitated in flakes. I finished the saturation as soon as possible and filtered. I obtained a liquid containing neither sulphuric acid nor baryta; at least it did not precipitate with nitrate of barium, nor with sulphuric acid. Nevertheless, it contained much oxygen. Evaporated to dryness, it left only a scarcely appreciable residue, which had probably no influence on the oxygenation of the liquid. The water, accordingly, appears capable of being oxygenated, and I know already that it can take up more than 6 times its volume of oxygen.

"Oxygenated water, placed in a vacuum, does not give up the oxygen which it contains; it becomes concentrated, and finally vaporizes. Plunged in a freezing mixture, it congeals without changing, while it loses all its oxygen at a heat of 100°. Brought in contact with silver oxide, it reduces it immediately, while giving up its own oxygen, so that the effervescence is very considerable.

"But if the water is capable of being oxygenated, do oxygenated acids really exist?"

This question is negated by all of Thénard's subsequent work. The remaining articles on hydrogen peroxide tell of his endeavors to saturate water with oxygen. At first he describes a solution containing 41 times its own volume of oxygen, obtained by concentrating a solution under the air-pump. Then the ratio was raised to 120 volumes. "At what point will the absorption of oxygen stop? Will it be when the oxygen is equivalent to one-half of that in the water, or to the whole of that in the water?" A sixth communication informs us that a concentration of 400 volumes of oxygen has been reached. This solution, "placed on the skin, soon attacks the epidermis, bleaches it, and causes violent prickling for some time. It has a taste which seems to be at the same time astringent and bitter, and which is a little like emetic."

Finally, a paper read on March 29, 1819, describes the achievement of his purpose. "I have succeeded in saturating water with oxygen. The quantity it is then found to contain is 850 times its volume\* or double that which belongs to it. In this condition it possesses very special properties; the most remarkable are the following:

"Its density is 1.453; thus, when it is poured into unoxygenated water it is seen to flow through that liquid like a kind of syrup, although it is very soluble in it. It attacks the epidermis almost at once, bleaching it, and producing a prickling, the duration of which varies according to the layer of liquid applied; if this layer is too thick, or if it is renewed, the skin itself may be attacked and destroyed. \* \* \* In addition to silver oxide, there are many oxides which act violently on oxygenated water: such are peroxide of manganese, of cobalt, the oxides of lead, platinum, palladium, gold, iridium, etc. A number of finely divided metals likewise give rise to this phenomenon. I have again had occasion to recognize very plainly that acids render oxygenated water more stable. Finely divided gold acts with great force on pure oxygenated water, and nevertheless it is without action on that containing a little sulphuric acid."

\*850 is the figure given in the first account of this saturated solution. A subsequent correction states that 616 volumes of oxygen were found. This is somewhat short of saturation, as about 650 volumes are required. The specific gravity of pure hydrogen peroxide has since been found to be 1.4996.

## FOREIGN ABSTRACTS

### THE LATEST FROM EUROPEAN LABORATORIES.

#### Pure Distilled Water—Test for Synthetic Methyl Salicylate—Detection of Caramel—Examination of Cacao Butter.

**B**ARLADEAN, who has been agitating the necessity for using distilled water, in ampules, etc., absolutely free from any objectionable impurities, suggests two comparatively simple methods by which the pharmacist can prepare such water. Umney gives a test for synthetic oil of wintergreen, which is said to be very reliable, distinguishing between oil of wintergreen, oil of birch, and the artificial product. A method for separating strychnine from quinine, using the salicylate procedure, is given. An article by Manz reviews the present forms in which vanadium is used in pharmacy. Patein, after a careful study of the effects of calomel, believes that there is no danger of the formation of mercuric chloride in the stomach, unless for some reason the gastric juice can become alkaline, and that the purgative action of calomel is not due to a partial decomposition in the stomach.

#### Examination of Cacao Butter—

The determination of the melting point is accurate only if the melted fat is allowed to harden in the capillary tube for at least three days. Freezing temperature is not necessary for hardening, but 10° should be maintained. The directions of the D. A.-B. V will not give accurate results. The addition of 30 per cent. of coconut oil does not affect the melting point much, but 20 or 25 per cent. of tallow can be shown, as well as 2 per cent. of white wax, or even 1 per cent. of carnauba wax, which raises the melting point to about 37°. The ether test is not very sharp in detecting the presence of tallow, especially when the temperature is a little high (15°-20°). At the latter temperature 20 per cent. of tallow can scarcely be detected with certainty. If the temperature is maintained at from 15° to 17°, the test is much sharper. Still more accurate is Filsinger's alcohol-ether test. Two g. of fat are melted in a graduated tube and shaken with 6 cc. of a mixture of 4 parts of ether and 1 part of alcohol, and allowed to stand at room temperature. Pure cacao butter gives a permanently clear solution. By keeping the temperature carefully between 15° and 17°, 5 per cent. of tallow may be detected. Björklund's test is most sensitive. Three g. of fat are heated to 18° with 6 cc. of ether, in a closed test tube. If wax is present, the liquid is turbid. If the solution is clear, it is placed in ice water at 0°, and the time observed in which a turbidity forms. Tallow causes a turbidity before 10 minutes, while pure cacao butter requires 10 or 15 minutes. Grossly adulterated cacao butter is rarely met with at present. (Bohrisch and Kürschner, *Pharm. Zentralhalle*, 1914, p. 191.)

#### Preparation of Pure Distilled Water—

Water free from any objectionable impurities may be obtained by the following methods, the first being preferable: A 10- or 15-liter flask is filled with the middle runnings of ordinary distilled water, and made slightly alkaline with potassium or sodium hydroxide. Enough permanganate is then added to produce a violet or deep red color. The mixture is allowed to stand about six months in sunlight. The clear water is then carefully siphoned into the distilling flask, and distilled, the first and last quarters being rejected, and the middle portion being received in a hard glass or platinum vessel. This distillate is then acidified with an acid sulphate, to retain ammonia, and again distilled. The middle runnings are taken as before, and contain no volatile or solid impurities. The second method consists in treating carefully distilled water with permanganate to redness, adding 2 or 3 drops of strong sulphuric acid, allowing to stand several days, boiling for a short time, and allowing to settle. The siphoned liquid is then slowly distilled, the first and last runnings being rejected. The distillate is next treated with barium hydroxide, and distilled as before. In regard to the use of Jena glass, the author states that this variety becomes more and more insoluble, the longer it is in contact with hot water, and that a point is

reached when it can be said to be practically insoluble. Impurities in the air of the work-room must be eliminated, and smoking is above all to be avoided. (*Barladean, Münch. Med. Wochschr.*, 1913, No. 29.)

#### Detection of Caramel—

As is well known, oxymethyl-furfural gives characteristic reactions with resorcin-hydrochloric acid, beta-naphthol-sulphuric acid, and phenol-sulphuric acid. But since certain samples of overheated honey gave the same reactions, and as caramelization had probably taken place in the heating, Schenk thought it likely that the above-mentioned tests could be used for detecting caramel in general. The coloring matter or solutions are shaken with ether, which is evaporated, and the tests applied to the residue. The phenol-sulphuric acid test is very sharp, and valuable for confirmation. The ether extract is treated in a porcelain dish with 10 drops of a 5 per cent. ethereal solution of phenol, and 5 cc. of concentrated sulphuric acid are added after evaporation. An orange-yellow color is produced by caramel. Caramel in brandy, wine and vinegar is easily detected, even in very small amount. Fifty cc. of a liquid colored pale yellow with caramel were concentrated on the water bath to a few cc., shaken with ether, and the test carried out on the residue. The reaction followed at once. In concentrating weak solutions, care must be taken to prevent the formation of furfural products from carbohydrates already in solution. (*Schenk, Apoth. Ztg.*, 1914, p. 202.)

#### Poisoning with Oil of Cedar—

A serious case of poisoning with oil of cedar is recorded from Canada, where a woman nearly lost her life through taking a teaspoonful of the oil in order to induce abortion. When seen by the author the patient presented the comatose aspect of profound alcoholic intoxication. The odor of the vomit having indicated the nature of the poison, the stomach was washed out, and the patient recovered. The misuse of the oil for this purpose and its toxic properties should put pharmacists on their guard (*Jobin, Bull. Med. Quebec*, through *Pharm. J.*)

#### Test for Methyl Salicylate—

In an editorial note, the *Pharmaceutical Journal* reprints the following test, suggested by the *Perfumery and Essential Oil Record*, for added methyl salicylate in oil of wintergreen: To 5 drops of the oil in a test tube add 5 drops of a 5 per cent. alcoholic solution of vanillin, and 1 cc. of alcohol. Shake well, and add 2 cc. of concentrated sulphuric acid and mix thoroughly. Typical samples of oil of *Gaultheria procumbens* give an intense crimson color, oil of *Betula lenta* a deep blood-red, doubtful samples a reddish-brown color, while synthetic methyl salicylate gives a yellow color. The shade of color will allow one to distinguish between pure oils and those which are grossly adulterated, but it cannot yet be said that the test may be made a colorimetric one.

#### Destruction of Organic Matter—

A retort of Jena glass is used, with a volume at least 4 times that of the material to be oxidized. Add a mixture of equal parts of concentrated nitric and sulphuric acids, equal in cc. to the weight of the material in g. Dry substances should be made into a paste with water. Place the neck of the retort under the hood, and all inconvenience from fumes is avoided. After the reaction in the cold has subsided, heat over an asbestos gauze with a small flame. Introduce into the tubulure a small stemless funnel, of such size as just to admit the stem of a dropping-funnel, the latter preferably provided with a bulb below the stopcock. Add nitric acid through the funnel, which should reach to within 5 mm. of the bottom of the retort. Regulate the temperature and flow of acid so that charring is prevented. A clear brown liquid results. Stop the addition of nitric acid, and heat until a colorless liquid is obtained. From 250 g. of material only a few cc. of solution are formed, the sulphuric acid being removed by evaporation. For the arsenic test, the liquid is diluted, and boiled to destroy nitrosyl-sulphuric acid. One liter of milk was oxidized in 6 hours, using 400 cc. of acid. Various solid materials were

destroyed in from 3 to 6 hours, taking from 50 to 250 g. of the substance. (Kerbosch, J. Pharm. Chim., 1914, p. 158.)

#### Adulteration of Saffron—

The detection of substances such as flour, barium sulphate, sodium carbonate, and sodium nitrate, is comparatively simple, and the presence of these bodies in commercial saffron is becoming rare. A microscopical examination is necessary to detect vegetable substances with characteristics resembling those of saffron. In some cases the fraud is very difficult of detection. One of the most useful chemical tests depends on the reaction of the coloring matter, crocin, a glucoside, and concentrated sulphuric acid. A blue coloration is at first formed, but it changes rapidly to a red-brown and red-violet, which disappears in 12-24 hours if allowed to stand where the acid can absorb moisture. Dilute acid containing 60 per cent. sulphuric acid does not produce the color. The blue color may be made permanent by use of phosphomolybdate. Prepare a solution of sodium phosphomolybdate (10-20 per cent.) by dissolving the salt in water and adding 5-10 per cent. of a mineral acid. Take about 0.1 g. of sample, place upon a watch glass or in a porcelain capsule, add a few drops of reagent and stir with a glass rod. The same test may be used microscopically. The fact that the reagent is more active after it has aged is explained by assuming a gradual dissociation of the phosphomolybdic acid. (Verda, Mitt. Lebensm. Hyg., 1913, p. 222; through C. A.)

#### Vanadium and Its Pharmaceutical Uses—

Vanadium forms a number of compounds with oxygen, of which two give valuable salts: First, vanadic anhydride,  $V_2O_5$ , used as such or in metallic salts; second, a basic oxide  $VO(OH)$ , which forms salts with acids. The therapeutic uses of vanadium are not very wide at present, which is in part due to a scarcity of material, and partly to our lack of knowledge of the properties of the compounds. However, a number of combinations are now employed. Among them is a preparation containing vanadic oxide, blood salts, hemoglobin, and peptone from muscular albumen. Vanadioform is a surgical powder, containing oxides of zinc and of vanadium. Vanadosine is a solution containing vanadium and arsenic. Vanadozone consists of vanadic oxide, perhaps with dermatol. Citrozone is an effervescent powder, with citrate of sodium and a small amount of vanadium pentoxide. Nervone is citrozone with 10 per cent. of lithium bromide. Urosyline is citrozone with 10 per cent. of quinic acid, and is used in gout. Oxydasine consists of 2 volumes of glycerol with 1 volume of a solution containing one-half per cent. of vanadium. The ethers of orthovanadic acid may also be used for the preparation of analogous substances. (Manz, Pharm. Ztg., 1913, p. 901.)

#### New Test for Peru Balsam—

One drop of balsam of Peru is shaken thoroughly with about 5 cc. of petroleum ether, then about half of the mixture poured away, and 5 cc. of ether mixed with the remainder; sulphuric acid is then added, drop by drop, shaking vigorously after each drop, and adding not more than 10 or 15 drops in all. Genuine Peru balsam gives a beautiful violet to cornflower blue color in the lower layer, increasing in intensity. Most artificial Peru balsam gives either no color or quite different shades. The author considers that genuine and factitious samples can only be differentiated by the use of many quantitative and qualitative tests, and that the examination of this article should include the determination of the acid and saponification values, percentage of cinnamoin and its saponification value, and the tests with carbon disulphide and petroleum ether as given in the Swiss Pharmacopoeia. (Dieterich, Ber. d. Pharm. Ges., 1913, p. 622; through Pharm. J.)

#### Action of Ferments in the Plant—

Reviewing the very numerous and important results brought to light in the last three years regarding the action of emulsin, etc., on sugars, alcohols and glucosides, the authors show that these studies considerably elucidate the role of these substances in the vital processes of nutrition in the plant. The same ferment has been shown to be capable of both hydrolysis and synthesis of glucosides. In neither case is the process complete. The action is greater in proportion to the mass reacting, and *in vitro* an equilibrium is reached, indicated by the cessation of hydrolysis. But the least modification in the amounts of glucose or glucoside starts the enzyme action in one

direction or other. It is hence easy to understand how, in the active living cell, equilibrium is never attained. For instance, glucose formed is consumed by the growing tissues of the plant during germination or active vegetation. The same ferment which builds up the store of glucoside is, at the proper time, the agent of its destruction. In the laboratory this removal of glucose may be accomplished by yeast, and the whole of the glucose acted on by the enzyme may be used up. These processes are much more complex in the plant than the simple example given above. Other ferments are simultaneously performing synthetic and hydrolytic actions, and forming other compounds which interfere with the equilibrium. (Bourquelot and Bridel, Compt. rend., 1914, p. 206; through Pharm. J.)

#### Estimation of Strychnine With Quinine—

The mixed alkaloids are obtained in the usual way, by extracting with ether-chloroform, acid, and ammonia. After weighing, they are dissolved in 50 cc. of 10 per cent. sulphuric acid. Five cc. of potassium ferrocyanide solution (4 per cent.) are run in drop by drop, stirring well, and the mixture set aside for a few hours. The precipitate is filtered on a small filter and washed slightly with a few cc. of sulphuric acid. It is then washed into a small separator by means of 10 cc. of dilute ammonia water and a spritz bottle, and extracted three times with chloroform. The shakings are placed in another separator, and extracted with three portions of 20 per cent. sulphuric acid; then the precipitation, etc., is repeated until the chloroform extracts are obtained. Evaporate the solvent carefully, dry the strychnine and weigh. To obtain the quinine unite the two filtrates, make up to 250 cc., and estimate the quinine in an aliquot part. About 0.1 g. of alkaloids should be present in the beginning. (Simmonds, Analyst, 1914, p. 81.)

#### Aether pro Narcoosi—

According to recent investigations of Herzog, ether for anesthesia should never be packed in bottles with an unprotected cork. Impurities in the cork pass into the ether much more rapidly than is suspected. These impurities may be detected by the potassium hydroxide test, which consists in placing a few freshly broken fragments of that reagent in a quantity of the ether contained in a stoppered cylinder. Aldehyde, vinyl alcohol, and cork extractives are shown by the color developed, the first two slowly giving a yellow color to the potash, while brownish spots appear. The third impurity colors the alkali yellow in a short time. A much sharper test for aldehyde and vinyl alcohol is with Nessler's reagent, which reveals the merest traces. Cork extractive, on the other hand, gives no very characteristic reaction. The nature of the substance causing the yellow color is not known. At any rate, vanillin does not give the color. (Herzog, Apoth. Ztg., 1914, p. 68.)

#### Action of Reagents on Calomel—

From an extended chemical and physiological study, Patein draws the following conclusions: Hydrochloric acid alone does not attack calomel; in the presence of oxygen, traces of mercuric chloride are formed. Alkaline chlorides may also give unweighable traces. Chlorides or lactates already in solution do not change calomel, and those formed by adding alkali to an acid solution act only when alkalinity is reached. In that case two kinds of products result, some soluble in water, and others in dilute hydrochloric acid. The gastric juice must first become alkaline, and then must again become acid in order to dissolve the decomposition products. *In vitro*, in the presence of a large excess of ammonia, ammonium chloride seems to increase the proportion of soluble mercuric compounds formed from the calomel. Sodium chloride protects calomel against the decomposing action of sodium carbonate. Animals which had ingested calomel with sodium chloride gave a normal purgation, without any toxic symptoms. The purgative action of calomel cannot be attributed to a partial decomposition in the stomach. When administered in gluten globules which are insoluble in the gastric juice, a reliable purgative effect is obtained. (Patein, J. Pharm. Chim., 1914, p. 113.)

#### Water-Soluble Petroleum Mixture—

If petroleum is shaken with terpineol, and the solution treated with triolein and caustic potash in excess, the reaction mixture is soluble in alcohol, and gives a clear liquid when diluted with water. The reaction takes place in a few minutes, and no boiling is necessary. Other fatty oils may be used; the best are those rich in olein. The solutions are said to have valuable bacteriocidal properties. (Doenhardt, Pharm. Ztg., 1913, p. 266.)

? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**National Boards of Pharmacy.**

(H.R.B.)—The active members of the National Association of Boards of Pharmacy, as given in the last volume of proceedings of that organization, are the boards of pharmacy in the following States: Alabama, Arkansas, Arizona, Connecticut, Delaware, Florida, Georgia, Idaho, Illinois, Indiana, Iowa, Kansas, Kentucky, Maine, Maryland, Massachusetts, Michigan, Missouri, Nebraska, New Mexico, North Dakota, Oklahoma, South Dakota, Tennessee, Texas, Utah, Vermont, Virginia, West Virginia and Wisconsin. For information concerning sample examination questions used by the Maryland Board of Pharmacy we suggest you correspond with Ephraim Bacon, secretary, 30th and Calvert streets, Baltimore.

**Lice on Poultry.**

(J.B.M.)—The following formulas taken from the new edition of the ERA Formulary have been recommended for making powders for the extermination of lice on poultry:

- (1)
- Sulphur ..... 4 ounces
  - Tobacco dust ..... 6 ounces
  - Cedar oil ..... ¼ ounce
  - White hellebore, powdered..... 4 ounces
  - Crude naphthol ..... 1 ounce
  - Powdered chalk, enough to make..... 2 pounds

- (2)
- Sulphur ..... 1 ounce
  - Carbolic acid ..... ¼ ounce
  - Crude naphthol ..... 1 ounce
  - Powdered chalk ..... 1 pound

- (3)
- Sublimed sulphur ..... 20 pounds
  - Fullers' earth ..... 8 pounds
  - Powdered naphthalin ..... 2 pounds
  - Liquid carbolic acid..... ½ ounce

Mix thoroughly and put up in half-pound tins or boxes. For use, sprinkle about the nest.

Some poultry raisers state that as a rule powders are not as effective as a wash would be, a work on veterinary medicine recommending that the fowls be washed daily with wormwood boiled in water, the coop to be sprinkled with the infusion. Another remedy is to dust into the feathers sawdust moistened with petroleum ether (benzine), or carbolic acid. The hen-house should be whitewashed with a solution of lime to which a little carbolic acid has been added. To remove lice from the coops, try the following:

Crude carbolic acid, 1 fl. ounce; water, 15 fl. ounces. Wash the woodwork with this mixture and sprinkle in nests and on the floor.

**Analgesic Balm.**

(T.B.A.)—As we understand it, the "analgesic balm" for the relief of rheumatic, neuralgic, gouty and other pains, put out by various manufacturers, is a remedy in ointment form containing menthol, methyl salicylate, camphor or similar combinations. A formula for a preparation of this character appears in the British Pharmaceutical Codex under the name "compound methyl salicylate ointment," or "analgesic ointment," which is as follows:

- Methyl salicylate ..... 10 ounces
- Menthol ..... 2 ounces
- Eucalyptol ..... ¼ ounce
- Oil of cajuput..... ¼ ounce
- White beeswax ..... 3¾ ounces
- Hydrous wool fat..... 3¾ ounces

Mix the wool fat with the melted beeswax, gradually incorporate the menthol and liquids, previously mixed by trituration, and stir until cold. The quantities given are by weight.

An "analgesic paste," which may be put up in collapsible tubes, is the following:

- Methyl salicylate ..... 8 ounces
- Menthol ..... 1 oz. 262½ gr.
- Stearic acid ..... 1 oz. 262½ gr.
- Sodium carbonate ..... 54 grains
- Glycerin ..... 92 minims
- Distilled water, a sufficient quantity.

Melt the stearic acid on a water-bath, add the sodium carbonate dissolved in the glycerin and 300 minims of distilled water, stir until effervescence ceases, heat until a clear liquid is obtained, and make up the weight to 6 ounces 175 grains with warm distilled water; pour the mixture into a wide-mouthed bottle containing the methyl salicylate, in which the menthol has been dissolved; shake until a creamy product is obtained and transfer to collapsible tubes.

A liniment of similar remedial effect is this one:

- Menthol ..... 1 ounce
- Oil of eucalyptus ..... 2 fl. ounces
- Essential oil of camphor..... 5 fl. ounces
- Methyl salicylate, enough to make..... 20 fl. ounces

Dissolve the menthol in the liquids. This liniment is miscible with either spirit or oil, and is used to paint over rheumatic joints or neuralgic areas, the parts being covered subsequently with flannel or gutta-percha tissue.

**Powdered Insecticides for Plants.**

(J.B.M.)—The most common insecticide in powdered form for most small shrubs is white hellebore, preferably diluted with from 5 to 10 parts of flour and dusted on the plants through a muslin cloth or with a powder bellows. Various arsenical compounds—Paris green, London purple, lead arsenate, etc., are similarly diluted and applied in dry form, the character of the diluent and the particular degree of dilution depending upon the kind of insects and plants to which the mixture is to be applied. But for an all-round insecticide for many of these pests there is nothing more effective or safe than kerosene emulsion or the well-known Bordeaux mixture, formulas for which are given at length in the new edition of the ERA Formulary.

**Preparation of Carbolated Lime.**

(S.G.)—A typical formula for preparing carbolated lime is that recommended by M. Proskauer (A.Ph.A. Proceedings, 1897, page 667), which is as follows: Triturate 8 parts of crude carbolic acid and 10 parts of gypsum together; the mixture is then carefully mixed with 80 parts of calcium hydrate and spread out in thin layers in the air until it becomes red, when it is preserved in well-closed vessels. The so-called "phenated lime," said to be largely used in Russia as a disinfectant under the name "chaux phenique," is prepared by thoroughly slaking three parts of lime with five parts of water and adding under constant stirring and in small portions, 2 parts of gas tar. The yellowish-brown mass thus produced is mixed with water and used in liquid form.

These formulas serve to call to mind the mixture of "carbolic acid clay" recommended by the late Dr. C. O. Curtman many years ago for destroying parasitic insects upon plants and for disinfecting purposes. It is made as follows:

- Clay in powder..... 80 parts
- Impure carbolic acid..... 20 parts
- Mix thoroughly.

For disinfecting purposes cresol combinations have largely superseded the use of carbolic acid; in fact, most of the "carbolic" powders of commerce contain crude cresol mixed with an earthy base. If lime be used the powder becomes pink on keeping, but it is often artificially colored in addition. A silicate base, such as kaolin, does not become pink on keeping. As commonly used, according to most authorities, the disinfecting properties of such powders are almost negligible.

**Manufacture of Liquid Soap.**

NOTE.—The formula you submit is a modified version of the formula of Mr. J. Wilbert in a paper read before the American Pharmaceutical Association which is to be found in the "Proceedings of the Association." It is evident that you did not use the same quantities of ingredients as in the original formula, and this is the cause of the difficulty was due to the fact that you used the same quantities in your operations. We think that you should use Mr. Wilbert's formula and directions as given in the original paper. Thus:

Sodium carbonate	40 grams
Sodium hydroxide	40 grams
Alcohol	500 cc.
Distilled water	250 cc.
Essence of rose	an equal quantity to
Essence of ylang-ylang	2500 cc.

The saponification is preferably a glass stoppered bottle, 850 cc. capacity. Dissolve the sodium hydroxide in 25 cc. of distilled water, add the alcohol, and then add the carbonates in three or four portions, shaking vigorously after each addition. Continue to agitate the mixture occasionally, until saponification has been completed. Then add the remaining portion of distilled water, and mix. According to Mr. Wilbert the only precautions that are at all necessary are to use U. S. P. grade of ingredients, and to be sure that saponification is complete before adding the remaining portions of the distilled water. The water used must be absolutely free from soluble salts of the alkaline earths or the heavy metals, and for this reason it should be, preferably, freshly distilled. After you have prepared the soap as above, you can dissolve in the mixture the following:

Potassium carbonate	15 grams
Terpineol	6 cc.
Evergreen A.	enough to produce a grass-green color.

The use of distilled water is imperative, as hard water contains lime and other salts which tend to hinder saponification, and it is possible that water of this character may have been used and therefore caused the precipitation reported by you.

**Cold Laxative Tablets.**

(A. J. E.)—We cannot give the formula for the proprietary preparation, but the following taken from the ERA Formulary and other sources are typical of the combinations of this character put out by various manufacturers:

(1)

Dover's powder	60 grains
Quinine hydrobromide	48 grains
Aloin	3 grains
Cascara	12 grains
Tincture of acacia, U. S. P., 1800	12 minims

Mix and make into 24 tablets.

(2)

Quinine sulphate	40 grains
Acetanilide	80 grains
Tincture of gelsemium	40 minims
Aloin	2 grains
Podophyllin	1 grain
Capsicum	10 grains

Mix and make into 40 tablets.

(3)

Acetanilide	48 grains
Quinine hydrobromide	24 grains
Dover's powder	12 grains
Resin of podophyllum	12 grains

Mix and make into 24 tablets.

**Wasserman Reaction.**

(J. C. P.)—This test is one employed to show whether a patient has syphilis or not, and a considerable knowledge of physiological chemistry is necessary to a full understanding of the theory on which it is based. The reagents usually employed are red blood corpuscles and the corresponding hemolysin (amboceptor), since the interaction is shown by a visible change, hemolysis, and if no reaction occurs the mixture remains unchanged. In other words, if a mixture be made of the blood serum of a syphilitic patient, an emulsion of animal lipoids, and complement, it is found that the complement becomes absorbed or fixed, so that if the mixture be tested for complement by the addition of red blood corpuscles and the corresponding hemolysin, no hemolysis will occur. If, on the

other hand, the patient has not syphilis, no fixation of complement will occur, the complement will be left free to act, and will produce hemolysis when the corpuscles and hemolysin are added.

The Noguchi test for syphilis is a modification and simplification of the Wasserman test and involves the use of "amboceptor paper," a solution of "antigen," and "complement"; the latter is to be obtained from the blood of a guinea-pig. As described in the last edition of "New and Non-Official Remedies," just published by the American Medical Association, "amboceptor" is obtained by injecting washed human blood corpuscles (erythrocytes) into rabbits, at intervals of from five to seven days, over a period of five to six weeks. Ten days are allowed to elapse before the last injection. The rabbits are then bled and the serum collected. Filter paper is now saturated with this serum and allowed to dry. The paper is cut in strips and set aside until wanted for use. In this form amboceptor will keep for a considerable length of time. The amboceptor paper is standardized by measuring its specific activity. The measure of specific activity consists in finding the amount of amboceptor necessary to cause hemolysis in 1 cc. of suspended human red corpuscles, one drop of blood in 4 cc. normal saline solution with 0.02 cc. of fresh guinea-pig serum. This is incubated at a temperature of 37°C. for one hour. The quantity of paper necessary to cause hemolysis under these conditions is known as one unit. In the syphilis test two units are employed.

Antigen is made by rubbing liver or heart tissue with sand and extracting with absolute alcohol. Macerate 10 grams of tissue in 100 cc. of alcohol for one week at 37°C., shaking the container every day. Filter until clear. Evaporate the filtrate. Dissolve the resulting extract in ether. Pour this solution into a large quantity of acetone. The acetone precipitates certain lipid substances which are then collected and redissolved in methyl alcohol in ratio of 3 per cent. This constitutes the antigen solution. For use mix one part of this with 9 parts 0.9 per cent. sodium chloride solution. This dilution should not cause hemolysis in an amount of 0.4 cc., and 0.4 cc. should not inhibit hemolysis. For the serodiagnosis of syphilis according to the Noguchi system, H. K. Mulford Co., Philadelphia, have placed on the market the test of amboceptor paper and antigen in a package which is accompanied by full directions for use.

**Perfume for Cold Cream.**

(J. M. I.)—"Will you please give me a suitable perfume which is lasting and delicate for cold cream?"

The particular odor that shall be given to any cold cream is largely a matter of personal preference. In most of the cold creams made after the type of the official cold cream, rose is the predominating odor, and one which no doubt appeals to the average individual. However, other combinations are not difficult to suggest, and we submit the following, the first formula being taken from the ERA Formulary:

(1)

Oil of bergamot	15 minims
Oil of rose	15 minims
Oil of neroli	10 drops
Oil of ylang-ylang	2 drops
Oil of orris	1 drop
Tincture of musk	5 drops
Cumarin	3/4 grain
Vanillin	3 grains

The cumarin and vanillin should be dissolved in a little oil of sweet almond, mixed with the other perfume substances, and the mixture then incorporated with the cold cream.

(2)

Oil of neroli	15 minims
Otto of rose	45 minims
Cumarin	15 grains
Oil of rose geranium	8 minims
Essence of ambergris	5 minims
Oil of ylang-ylang	4 minims
Oil of orris	2 minims

Mix. The quantity of perfume (either formula) necessary to use with a given weight of any cold cream should be determined by careful experiment. Combinations of terpineol, heliotropin, ionone or other so-called "synthetic" perfumes can also be suggested.

# WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

## V. The Woman Pharmacist's Future.

### SOCIAL BETTERMENT.

THE woman pharmacist renders such valuable special service that she can scarcely ignore the opportunity of exerting her influence in many parts of the community role. Not only will she be able to help along worth-while movements but she will keep herself in touch with the progress of the day and add greatly to her own prestige as well. The argument will be advanced by many that she has no time for the work of social betterment and that conditions differ greatly in communities of different sizes.

The objection regarding time or lack of it will not stand because we can all find time to do the things we want to. Besides, she need not assume those parts of the work in hand which call for the execution of many details; some one with more leisure can usually be found to attend to these.

We owe a duty to the locality we call home—the duty of helping make it better. No one is so busy that she cannot find time to give place to an informative window card, take charge of the sale of a few tickets or Red Cross Seals or occasionally attend a meeting of other women and add her part to the general helpfulness. Women are sensible creatures—usually, and they do not expect the impossible of a business co-worker. On the other hand, they appreciate the interest and effort made to help along a good cause.

Communities do differ, but it is mostly in size. Good people are to be found everywhere and everywhere warm hearts are ready to respond to the right sort of an appeal. The country, the village, the town and city are all awake to their possibilities. Leaders are needed and people in the ranks as well. The woman pharmacist will find her place if she looks for it.

Among the country-wide popular movements of the day with a distinct point of contact are the Fly-Prevention Campaign; the war upon Tuberculosis and the Sale of Red Cross Seals as a means of raising money; the work of the Housewives' League toward the end of reducing the cost of living, securing full weights and measures, and clean, pure foods; regulation of Child Labor; conservation of youth through organizations like the Camp-Fire Girls and Boy Scouts; Woman's Suffrage; co-operation of parents and teachers for elevation of Educational Standards and better equipments of School Plants; the encouragement of Social Centers; Clean Milk; Civic Improvement Movements; prevention of noise in Hospital Zones; Clean-up undertakings; Fire-Prevention Education; Musical and Dramatic Associations; Furthering Vocational Education and Helpfulness; a Woman's Board of Trade as a moral and civic power; encouragement of Libraries and the placing of special lines of books; Scientific charity work; Social Science; Sanitation in home and community; Consumer's League work; Fresh Air Schools and Camps; Household Chemistry; Bacteriology of every-day life; Micro-organisms as a help and as a menace; First Aid work; Care of the Sick; Emergency Supplies, etc., etc., ad infinitum.

The point of contact may be found in every one of these somewhere, because it is in greater or less evidence. The work may be furthered intelligently by many quiet means, so that as in a recent case which came to the writer's attention, there was a wail of dismay when the capable, although quiet woman pharmacist decided to change her place of residence. "What shall we do without her?" was only varied by the thought, "She has been a power in our midst. We have all come to look up to and to depend upon her!"

Ways and means are matters of individual solution, nevertheless a few thoughts concerning general principles may prove suggestive.

Arouse the "sanitary conscience" by distributing in store packages free literature which may be had for the asking or for small cost. You are justified in stamping your name and address upon these if you wish. Local and State Boards of Health, Federal departments, special organizations, etc., all

may be drawn upon for this material. Secure the co-operation of the local press. Prepare a short write-up descriptive of the community interest you are pushing and hand it to your favorite newspaper. Make it breezy and not too long. Tell them it is news and they will be glad to print it.

Are the Boy Scouts or Camp Fire Girls somewhat in evidence about you? Do you realize what it will mean in the course of 10 years if several thousand young people in *your town* have been trained in these sound life principles? Do you know they will be an army which will never forget your interest? Isn't it worth while to encourage them by some means? A prize either from the store or from some organization for the best essay dealing with the menace and extermination of the fly, on what could be done to beautify the town, or the medicinal plants growing within a radius of 10 miles, would prove of marked value in creating a direct personal interest.

Is the school in your ward trying to raise money for a swimming pool? Devise some means to help along and keep a bulletin in the window which shows daily progress of some sort.

Do you love music and have little time for the melody of sound? Have a good time in your recreation hours and make the good time count. A single woman in the city where I live was in exactly this position. She brought the idea to others—a chorus of 200 voices was speedily assembled to produce the light opera "The Tuneful Liar." Everybody had expert training, a grand, good time, and the tidy proceeds of a fine entertainment were turned over to a worthy object.

The great danger of the professional woman where hours are long is that she will get into a rut. If she does, she becomes a mere cog in the business machinery. Now a cog serves a good purpose, but it has to be operated by the brains of some one else. To take an active interest in the social betterment about us is to have a heart attuned to the throbbing of human life, to keep young although the frost touches temples and lines of care begin to show.

The law of the Camp Fire is not unworthy of our own emulation:

"Seek Beauty,  
Give Service,  
Pursue Knowledge,  
Be Trustworthy,  
Hold on to Health,  
Glorify Work,  
Be Happy."

## A Profitable "Calendar Day."

A very interesting account of a successful special day has been received from Mrs. F. E. Morrison, of Brantford, Ont., Canada. Mrs. Morrison and her husband are both pharmacists and are associated in business.

"Calendar Day" is an annual event in the Morrison store, which enjoys a residential location. It was started with the thought of overcoming the habit of so many patrons going uptown to the large department stores to look around and eventually buy their Christmas presents.

In September Mr. and Mrs. Morrison begin to take the names and addresses of all customers, thoroughly revising the mailing list at the same time. As each patron comes in he or she registers name and address in a large book kept for the purpose. These names are arranged elsewhere in alphabetical order. "Calendar Day" is scheduled for a date when the store is at its best and the Christmas goods are on display. The objects of the day are:

*First*—To get people into the store when Christmas goods are in evidence.

*Second*—To secure an up-to-date mailing list.

*Third*—To put into the hands of the customers samples of "own" preparations and goods which the druggist would popularize.

Four—To spend as little time as possible in giving away the calendars.

Each person who is registered is notified by postal card of the date of "Calendar Day" and requested to come and get the calendar reserved for him. Mrs. Morrison says:

"This year 'Calendar Day' was the best day in the history of our store and it made the week the best week we have had. We found that very few came for the calendars without buying something else. We were careful in giving out our samples and they have brought good results.

"We gave a sample of 'Floral Cream' (our own preparation) and a sample of a good soap to most of our lady customers. To others we gave samples of a good talcum powder or tooth paste. To some of the men we gave samples of a good shaving stick and the 'Floral Cream,' to others the shaving stick and talc. For our former customers we had a Veterinary Book with the samples."

This idea is an eminently practical one and might be worked to good advantage anywhere with such variations and adaptations as would suit the locality.

### An Efficient Connecticut Graduate.

**O**PPORTUNITY does not rap at everyone's door. Sometimes it has to be sought, but once it is overtaken it is a prize heartily appreciated. Miss Phebe W. Merwin, of Saybrook, Conn., is making a success of pharmacy. She was born in Durham, that State, and lived on a farm in that place and attended the public school there until 15 years of age. Having to earn her own living, she then obtained a position as salesgirl in a drygoods store. Here she continued to work for several years, meanwhile hoping to fit herself for a better paying position.

Bookkeeping appealed to her, and so she took up the study of that subject, finally obtaining sufficient proficiency to secure a position as bookkeeper in a large drug store. Gradually the work about her began to interest and fascinate. She talked the matter over with her employer, and he gave her the chance to work in the store as well as

MISS MERWIN.

to do the book-keeping.

Miss Merwin immediately cast about for some opening whereby she could use her few spare hours to further her knowledge of pharmacy. She found such a means in the ERA Course in Pharmacy. She was in earnest and she applied herself. That tells the story why and how she came to graduate from the Course on Oct. 17, 1913.

In Miss Merwin's own words, she says: "The Course has helped me so much that I am now earning a good salary and hope in the near future to obtain my State license, the application for which is now on file with the State Board of Pharmacy.

"It gives me great pleasure to recommend the ERA Course to girls who want to better themselves as there is no reason why women pharmacists should not be more numerous. They have an equal chance in this business."

### SUCCESSFUL LECTURER ON PHARMACOLOGY.

Miss Grace Irene Harper, Ph.G., a graduate of the University of Pittsburgh in 1905, is now filling the responsible position of lecturer on Pharmacology in the New York Medical College and Hospital for Women. This institution is located at 17-19 West 101st street, New York City. The annual announcement of its 51st session, 1913-1914, shows this institution to be in a flourishing condition. The college is fortunate in being able to secure Professor Harper as a member of its faculty.

### Mrs. Bertha W. Lathbury, of Buffalo.

**M**ORE than one efficient woman pharmacist owes the beginning of her interest in the work to having married a pharmacist. Mrs. Lathbury received her education in the Buffalo public schools, then entered the Buffalo Normal. Graduating in 1901, she taught school in Alden, New York, for three years. Showing marked aptitude not only as a teacher but in administrative work, she then succeeded to the position of the preceptress of the Sloan Union School at Sloan, this State.

For seven years she helped mould the lives of the young people who passed in steady procession through the school. Matrimony came next, for the charming young lady teacher's heart had been won by Ellis T. Lathbury, who was a pharmacist.

As was natural, Mrs. Lathbury spent more or less time in the store during her spare hours each day, enjoying the contact with the work more and more. At last she determined to master thoroughly the technical part of pharmacy, so she took a course at the University of Buffalo. She entered in the Fall of 1911 and graduated in May, 1913.

Mrs. Lathbury was awarded the Peabody Prize of \$50 for attaining the highest standing in the senior work. There were three other women graduates in the class, Miss Grace Belliotti, Miss Lucy Garasee and Miss Dorothy Dee, now in Paris, France. Miss Belliotti and Miss Garasee are the only Italian women in Buffalo having a college degree of any kind.

Mrs. Lathbury enjoyed her college work very much and considers the course given at the University of Buffalo as excellent. As an experienced educator, her opinion is of peculiar value. She considers pharmacy a very desirable calling for women, as the work is pleasant, variable, within their physical capability, the compensation is generally more than the remuneration for ordinary work, and the profession is not overcrowded. Besides this, Mrs. Lathbury points out the great opportunities for research work.

MRS. BERTHA LATHBURY.

### MRS. STOVER ENTERTAINS.

Noticing a recent entertainment given by Mrs. Charles A. Stover, one of the past presidents of Boston Chapter No. 1, calls to mind the prominent part many W.O. women are taking in club affairs. This is well, for it gives an opportunity to bring the work of the W.O. to favorable attention. A notice taken from the *Boston Herald* follows:

"Mrs. Charles A. Stover, vice-regent of Old Belfry Chapter, D.A.R., entertained the members of the chapter and a number of guests, yesterday afternoon at her home, 51 Trowbridge street, Cambridge. Mrs. Edward Synge, the regent, presided at the formal exercises, which included a lecture by Anna Sturges Duryea on "A Hundred Years of Peace"; a short paper by Mrs. Phillips, a member of the chapter; songs by Mrs. Hugh McKay, soprano, and piano solos by Miss McKay, who was also accompanist. Among the guests were Mrs. John Ameer, president of Cantabrigia Club, and other members of the official board."

### CLEANSING THE BOTTLE FOR THE BABY.

"As soon as the bottle used by baby is empty, it should be thoroughly washed with cold water, then cleansed with borax and hot water (tablespoonful of borax to pint of water). The empty bottle should be put upside down on a shelf. The bottle should be boiled just before filling for the next feeding. The nipple should be thoroughly washed after each nursing with hot water, and when not in use should soak in borax water in a covered glass; the nipple must be rinsed in boiling water just before the baby uses it."—*New York Department of Health Instructions.*

## SELECTED FORMULAS

### Persian Hair Restorer.

Vinegar of cantharides.....	1 ounce
Milk of sulphur.....	½ ounce
Glycerin .....	10 ounces
Oil of rose.....	10 drops
Water, enough to make.....	2 pints

Mix well and apply at night with a soft sponge.

### Eucalyptus Foot Powder.

Boric acid .....	4 ounces
Starch .....	8 ounces
Zinc oxide .....	4 ounces
Oil of eucalyptus.....	3 fl. drams

Mix.

### Antiseptic Soothing Cream.

Carbolic acid .....	10 grains
Camphor .....	10 grains
Anhydrous wool fat.....	4 drams
Cacao butter.....	2 drams
Soft paraffin .....	12 drams

Melt the cacao butter and wool fat, and when cooling, but still transparent, add the camphor and carbolic acid which have been previously liquefied by rubbing together.

### Liniment for Whooping Cough.

Oil of amber.....	4 fl. ounces
Oil of eucalyptus.....	1 fl. ounce
Essential oil of camphor.....	2 fl. ounces
Liniment of camphor.....	13 fl. ounces

Mix.

### Whooping Cough Mixture.

Ammonium bromide .....	60 grains
Wine of ipecacuanha.....	3 fl. drams
Syrup of tolu.....	2 fl. ounces
Compound tincture of cardamoms.....	1½ fl. drams
Tincture of senega.....	30 minims
Distilled water, enough to make.....	4 fl. ounces

Mix. Dose, ½ to 1 fl. dram.

### Spray for Chronic Catarrh.

Terebene .....	4 drams
Oil of pinus pumilio.....	2 drams
Oil of tar.....	2 drams
Oil of cubebs.....	2 drams
Beechwood creosote .....	3 drams
Oil of sweet almonds, expressed, enough to make .....	4 ounces

Use in a nebulizer. Useful in all chronic catarrhal affections and coughs with much expectoration.

### Fothergill's Asthma Mixture.

Ammonium iodide .....	2 drams
Ammonium bromide .....	3 drams
Syrup of tolu.....	3 fl. ounces
Tincture of lobelia.....	5 fl. ounces

Mix. Teaspoonful every 1, 2, 3 or 4 hours.

### Instantaneous Liniment.

Oil of wormwood.....	1 dram
Oil of sassafras.....	2 drams
Oil of cinnamon.....	2 drams
Chloroform .....	4 drams
Olive oil, enough to make.....	4 ounces

Mix. Beneficial for sprains and stiffness of the joints.

### Spleen Powder.

Quinine sulphate.....	60 grains
Iron sulphate.....	60 grains
Magnesium sulphate.....	2 ounces
Powdered ginger.....	5 drams

Mix well and divide into 100 powders.

### Remedy for Seasickness.

Ammonium bromide .....	120 grains
Sodium bromide .....	240 grains
Syrup of orange.....	1½ fl. ounces
Distilled water, enough to make.....	3 fl. ounces

Mix. Dose, 1 fl. dram.

### Compound Elixir of Saw Palmetto.

Fluidextract of saw palmetto (34% alcohol) .....	250 cc.
Fluidextract of corn silk (15% alcohol) .....	250 cc.
Oil of santal.....	7 cc.
Alcohol .....	360 cc.
Glycerin .....	380 cc.
Orange-flower water .....	760 cc.
Talc .....	30 gm.

Mix and allow to stand with occasional agitation for a week, then filter.

### Liquid Court Plaster.

(1)

Pyroxylin .....	5 drams
Camphor .....	1 dram
Acetone .....	12½ ounces

Dissolve the pyroxylin and camphor in a bottle in 10 ounces of acetone, adding enough more acetone to make the product measure 12½ fl. ounces.

(2)

Pyroxylin .....	1 dram
Oil of cloves.....	½ dram
Amyl acetate .....	5 drams
Benzole .....	4 drams
Acetone, enough to make.....	20 drams

Dissolve and mix.

### Improved Cantharidal Collodion.

Cantharidin .....	1 part
Castor oil .....	40 parts
Acetone .....	40 parts
Strongest collodion .....	900 parts

Rub up the cantharidin in the oil, heating carefully to hasten solution. Let cool, and add the acetone, and finally incorporate the collodion. If desired, the preparation may be colored by the addition of 10 parts of tincture of hemp.

### Transfer Liquid.

Soft soap .....	½ ounce
Pearlash .....	¼ ounce
Distilled water .....	10 ounces

Dissolve. Lay the print which it is desired to transfer (which should be recently printed) on a flat surface and wash with the liquid, using a brush. Lay a piece of unglazed paper over the wet picture, then another piece of paper, and rub hard and evenly with a blunt instrument, such as the bowl of a tablespoon, until a sufficient depth of color has been obtained, then dry on a piece of blotting paper pressed with a heavy book. The transfer will have a very artistic tone.

### Scouring Soap Powder.

Silica, powdered .....	60 parts
Sodium carbonate, dried .....	15 parts
Oleic acid .....	13 parts

Mix and add, all at once, the following solution:

Caustic soda .....	2 parts
Water .....	22 parts

Stir well until a granular powder is formed. Then place in shallow trays for 24 hours in a warm room, and reduce to a moderately coarse powder by sifting.

### Silver Polishing Soap.

White hard soap.....	10 ounces
Water .....	12 ounces
Prepared chalk .....	2 pounds

Cut the soap small and dissolve in the water by means of heat. Then work the powdered chalk into the mass, mixing to an even paste; press into molds of the desired size and shape.

### Orange Wine.

Boil 40 pounds of sugar for 15 minutes with 13¼ gallons of water. At the same time press out and filter the juice of 75 oranges and mix it, together with the rinds, with the sugary fluid after the latter has been cooled off to about 85°F. The mixture is then poured into a cask and frequently stirred during three or four days, when the cask is bunged and placed in a cellar for six months, when the wine is drawn off.

## Jottings from Great Britain.

*The Sale of Poisons—The New Pharmaceutical Federation—Other Things Pharmaceutical from Our London Correspondent.*

THE annual report of the Registrar of the Pharmaceutical Society, which has just been issued, shows that last year there was a great increase—as compared with previous years—in the number of cases of alleged irregularities in the sale of poisons, which the Society's law department was called upon to investigate. More than 1600 complaints were investigated, and in 306 cases it was found necessary to institute legal proceedings against offenders. The most common offence consisted in the sale of poisons by unqualified persons, but such irregularities as the sale of a poison improperly labelled and the use of the title "chemist" by non-registered persons had to be dealt with. The large number of cases which require investigation seems to suggest that any relaxation of supervision on the part of the Pharmaceutical Society might result in irregularities involving some danger to the public health.

Several cases are mentioned in the report of sales of preparations which, if compounded according to the formulæ of the British Pharmacopœia, would have contained poison, but which on analysis were found to contain no poisonous ingredients. The object of unqualified sellers of these spurious compounds is to evade the Pharmacy Acts, but this method of evasion brings the perpetrators into the meshes of the Merchandise Marks Act, under which the Pharmaceutical Society has proceeded in such cases.

The practice is a dangerous one, because the purchaser of the spurious article, finding the ordinary dose does not produce the desired effect, may take a larger dose and continue to do so after procuring the genuine product from a duly qualified pharmacist. The report shows that the number of names on the current register of chemists and druggists is 16,608, an increase over the number previously registered, which in turn showed an increase over the previous year.

There is also an increase in the number of members of the society and in the number of registered apprentices who are preparing for the qualifying examination. This increase in the number of young men entering the calling of pharmacy should, if it continues, provide in due course an adequate supply of clerks. During the past year there has been a lack of assistants, due to the increased amount of work thrown upon the pharmacists by the National Insurance Act.

### The Pharmaceutical Federation.

As a result of the working of the Insurance Act, local pharmacists' associations have for some time past been considering what scheme of reorganization would be the best to meet the changed conditions. Delegates from these associations in all parts of the country met the Council of the Pharmaceutical Society recently, and after a prolonged private conference adopted a scheme by which all the associations throughout the country will become federated. There will be a committee, called the Pharmaceutical General Committee on Insurance. Some changes in the local associations themselves will be necessary as the conference decided that in future the association's areas should be continuous with the areas of the local insurance committees. As a result of this new system of organization pharmacists become a united body and their position is, therefore, considerably strengthened.

### Golden Wedding of Mr. and Mrs. J. M. Richards.

A large and distinguished company met at the Cecil Hotel, London, to do honors to Mr. and Mrs. John Morgan Richards, on the occasion of the celebration of their golden wedding, their many friends having invited them to a banquet. The banquet was presided over by Sir George Riddell, and among those present were the American Ambassador, the American Consul-General, Lord Curzon and others. After the banquet the chairman read the following telegram from Queen Mary, addressed to Mr. and Mrs. Richards:

\* . . . . . \*  
: Please accept my best wishes for :  
: your golden wedding day.—MARY R. :  
\* . . . . . \*

The chairman then presented them with a service of gold plate, consisting of a large centerpiece, bearing a massive rose bowl, and two fruit dishes, and an album containing the names of the contributors, prefaced by the Queen's telegram. Mr. Richards, in expressing his thanks, was visibly moved, as was Mrs. Richards, and she also made an admirable speech. Mr. Richards has spent nearly half a century in London.

### The Proprietary Medicine Inquiry.

With the reassembling of Parliament, which has just taken place, interest in the proprietary medicine inquiry, which was instituted by the Government some time ago, is renewed. The committee has been formally reappointed, and as no more evidence is to be heard it is expected that the report will be not long delayed. There is, of course, a number of rumors concerning the nature of the forthcoming reports, but, of course, no one can possibly know what the committee is going to recommend. It is not improbable, however, that the committee may recommend the prohibition of the advertisement of cures for cancer, consumption and other diseases that are at present considered to be incurable, and also urge a strict censorship of advertisements of remedies for female ailments. It is not thought likely that the committee will recommend the disclosure of the formulas of secret remedies, but in this matter the committee may not be in general agreement. In view of the fact that the sale of proprietary medicines in Great Britain has a turnover of more than \$12,000,000 a year the report is awaited with some interest, both by the agents of the American houses and by English proprietors.

### Huge Payments to Doctors and Pharmacists.

Speaking at a public dinner the other night, the Chancellor of the Exchequer said that there were 22,500 general medical practitioners in Great Britain. The number of these who are doing insurance work is more than 20,000. Last year nearly \$22,500,000 was distributed among them in payment for this work, the average for each doctor being \$1150. This is, of course, in addition to what the doctors made in their private practice, so that the profession of medicine in this country can be said to be booming. The sums paid out to pharmacists for medicines and appliances supplied to insured persons amounted to nearly \$5,000,000.

## NEW REMEDIES

*Coleolo Serono* is a 5 per cent. solution of cholesterin in oil, used in anemia.

*Cusylol* is a soluble citrate of copper, forming a blue crystalline powder, dissolving in 3 parts of water. Solutions under 1 per cent. are fairly stable. The substance also appears in other forms suitable for ointments, topical applications, etc. They are used in ophthalmology, with or without boric acid.

*Ferrescasan* is a liquid containing iron saccharate, glycerophosphates, and a small amount of cacodylic acid.

*Jecolein* contains 60 parts of specially prepared cod liver oil, 22.5 parts of milk, 12 parts of sugar, 2.5 parts of aromatic oils, and 3 parts of glycerin.

*Nylocithin* contains glycerophosphoric acid and iron nucleinate.

*Pektasol* is an alcoholic solution of cane sugar with some wood tar.

*Salvarsan-Copper*, also known as  $K_{50}$ , is a yellowish-red powder, which must be kept in sealed ampules under an indifferent gas. It is used in an alkaline solution, like 606, the dose being 0.1 g. Intravenous injections are used. Has been employed in malaria, amebic dysentery, and lepra.

*Strophena-Zyma* is an isotonic solution of the active glucoside of strophanthus seeds, marketed in ampules.

*Testiodyl* is an iodine-albumen combination, prepared from coagulated blood albumin. It is not split up in the stomach, but is acted on in the intestines. Used in syphilis, it replaces other iodine medication, and is well tolerated. The dose is 2 tablets of 1 g. each, given three times a day, the tablets containing 15 per cent. of iodine.

*Wigu* consists of 25 g. of formic acid, 1 g. tincture of saffron, 10 drops of rosemary oil, 5 drops of methyl salicylate, 10 g. of glycerin, and alcohol to make 100 g. It is used in gout and rheumatism.

# NEWS SECTION

## MOSTLY PERSONAL

### Fred Mansfield, Pharmacist-Financier.

**S**EVEN men who were trained in pharmacy or are now engaged in it as a profession, have been elected to positions of honor and trust in the Massachusetts State government. One of them, Frank J. Donahue, is a graduate of the Massachusetts College of Pharmacy and is serving his second term as Secretary of State.

Fred W. Mansfield, who served in the naval service during the war with Spain as an apothecary, is the State Treasurer and Receiver-General.

Senator Hugh H. O'Rourke is a practicing pharmacist and is the only member of the profession in the upper legislative branch.

John J. Gilbride, of Lowell; Charles A. Legro, of Palmer; Fred O. Lewis, of Lowell, and Thomas W. White, of Newton, are all registered pharmacists and are actively engaged in the business today and are all members of the lower branch of the Legislature.

Secretary of State Donahue is making himself conspicuous in the reform of election laws, a subject in which he is a recognized expert.

State Treasurer Mansfield has attracted to himself a great amount of attention because of the innovation he introduced in the matter of selling State bonds. During the recent campaign for election he declared over and over again that if elected he would sell State bonds over the counter to the people direct, without the profit of the middleman. He was elected to office, and at once the Attorney-General issued an opinion declaring it illegal to sell bonds over the counter, and calling attention to the statute which required the State Treasurer to advertise for bids. Mr. Mansfield said nothing. He was inducted into office, and when the time came for issuing bonds, the amount being in excess of \$6,000,000, he caused advertisements to be inserted in the newspapers announcing that he would receive bids for the bonds, in any amounts or in whole. When the time came for opening the bids bankers and brokers assembled as usual to learn of the result and the awards. Mr. Mansfield opened the bids in public and announced that he would have a statement at 3:30 that afternoon. At the appointed time he announced that he had under the right given him by the statute, rejected all the bids, and that he now proposed, in conformity with the pledge made before election, to sell the bonds over the counter. At once there was a great howl from brokers. Mr. Mansfield remained serene. He pointed to his ante-election promises, made publicly and repeatedly, pointed to the statute requiring him to advertise for bids, which he had done, and then pointed again to the statute which permitted him to accept or reject the bids,

F. W. MANSFIELD

as he deemed best. Within a week nearly the entire issue of more than \$6,000,000 bonds had been sold over the counter.

### Pharmaceutical Personalities.

— Bernard H. Miller, of the Miller & Arthur Drug Co., of Quincy, Ill., has been in the drug business for just half a century, and in honor of this event the employees of the company gave him a "surprise call" and presented him with a gold watch and chain, those present being C. A. E. Koch, secretary and treasurer; M. J. Reed, Adam Schmitt, Alois Elzi, F. E. Nussle, Ben Welsch, George J. Murphy, George Reiert, H. J. Wheeler, Albert Riggs, Carrol Wagy, Lyman Wagy, Clem Strothoff, August Wachter, Con Rummenie and Miss Louise Bates. Mr. Miller was born in Germany, and was brought to this country by his parents in 1849. He was originally a newsboy, selling papers on the steamboats as they touched at Quincy, but on March 1, 1864, he entered the employ of druggist A. Zimmermann. Then he went to St. Louis and obtained employment with Jacob S. Merrell, who later founded the Merrell Drug Co. When the St. Louis School of Pharmacy was opened Mr. Miller became one of the first students. The cholera swept St. Louis in 1866 and Mr. Miller returned to Quincy and entered the drug business there. In 1869 he entered into partnership with George Terdenge and for a time operated a store at Ninth and Broadway. In 1874 they became associated with Aldo Sommer, the firm name becoming Sommer, Miller & Terdenge. Later they purchased Mr. Sommer's interest, and took in Albert Sellner, the firm name changing to Miller, Terdenge & Co. Mr. Terdenge then withdrew in 1879, and William A. Arthur was taken in, the firm becoming Miller, Arthur & Sellner. Later the last-mentioned partner sold out and the firm became Miller & Arthur. It was incorporated in 1900. Mr. Arthur sold out, and his interests were taken by C. A. E. Koch and E. Percy Brown. Mr. Miller is a prominent figure in Quincy, vice-president of the Chamber of Commerce and one of the chief organizers of the Young Men's Business Association. Aldo Sommer, who is 84 years of age, is the oldest druggist in Quincy, and Mr. Miller is the next oldest.

— Ernest C. Marshall, of Boston, has taken up his residence in Columbus, Ohio, and assumed his duties as advertising manager and associate editor of the *Journal of the American Pharmaceutical Association*, which is published there. Mr. Marshall is a native of Boston, where he has passed his life. He entered the drug business at the age of 14, is a graduate of the Massachusetts College of Pharmacy, and has been both vice-president and a trustee of that institution. He has also been president of the Alumni Association of the College. He joined the A.Ph.A. in 1875. From a political standpoint, his life has been a busy one. He was a member of the Boston Common Council for two years, a member of the Boston School Board for three years, and has also been Institutions Commissioner and Penal Institutions Commissioner for Suffolk county (Boston). He has been president of the Massachusetts Ph.A., of which he is a life member; of the Boston Druggists' Association, the Suffolk Drug Co., and the Suffolk Drug Club. For a number of years he was the Boston correspondent for the *Journal of the N.A.R.D. (N.A.R.D. Notes)*, and he wrote the New England letter for the journal with which he is now associated. He is a member of the Pilgrim Publicity Association, the leading body of New England advertising men, and has been engaged in newspaper and advertising work for more than a decade. Mr. Marshall is an enthusiastic worker and

is missed deeply in Boston, although he will be a valuable acquisition to the drug circles of Columbus, and the State of Ohio, for no one city—even Columbus—will be able to crib, cabin and confine his efforts for the *Journal* and for the A. Ph. A.

—“Roy” Oldham, of Baltimore, as he is known familiarly to his many friends in and out of the drug trade, was visited recently by employees of the city department of the Henry B. Gilpin Company, wholesale druggists, of which department he is the head, at his home in Catonsville. Their object was to extend their best wishes and pay a tribute of esteem on the occasion of his 39th birthday, and the affair had been planned with such secrecy that Mr. Oldham did not have the slightest inkling and was taken completely by surprise. Mr. Oldham had been purposely detained elsewhere, and when he reached his residence he found the guests awaiting him in the reception room, the dining room set for refreshments and these two apartments, as well as the lower hall, trimmed with smilax and cut flowers. The decorations had been arranged by the visitors with the help of the family. A string orchestra composed of employees, and headed by Luther C. Dawson, played “Auld Lang Syne,” at the conclusion of which George P. Dittus, acting as spokesman, presented to Mr. Oldham a handsome floral horseshoe, nearly four feet high, with the words, “Good Luck” set in electric lights. The recipient responded with much feeling, and afterward there was more music and all hands sat down to enjoy the delicacies provided. Mr. Oldham’s connection with the Henry B. Gilpin Company dates back 22 years, when he entered the employ of Gilpin, Langdon & Co. at the age of 17. When, in 1904, the present company was formed to take over the wholesale drug business of the old firm, Mr. Oldham became one of its principals. He is widely known, not only in the drug trade, but outside of it, and has established a big reputation as an entertainer. His negro stories are hugely enjoyed and he is a welcome addition to any company which he may favor with his presence. With it all, he has the reputation of being a good business man, who holds the confidence of his associates and the cordial good-will of those under him. He was “born and raised” in Virginia, and it was doubtless there that he acquired such an intimate acquaintance with the negro character and its peculiarities, which he is able to present in his stories. Mr. Oldham is an enthusiastic automobilist, a Mason, Knight Templar and member of the Baltimore Athletic Club. Those present at the birthday gathering included George P. Dittus, John Bell, Luther C. Dawson, Herman Franzke, Chester Helen, Norman Brooks, Howard Lehr, Harry Hoffman, William Crawford, J. H. Crawford, Frank Dillfelder, John Duer, Herman Mentzel and Miss Mary A. Thompson.

—Harry B. Mason, of Detroit, editor, business specialist, and drug man, address-maker-in-chief at many State conventions, and lecturer upon “How to Make Money in the Drug Business—with full details as to accounting for the overhead,” has come before the public, in new guise. On March 3, at the John S. Gray branch of the Detroit Public Library, he lectured on “Charles Dickens,” making the point that the circumstances of the early life of the author were the mold in which his art and his nature were cast. “His father, John Dickens,” said Mr. Mason, “was a navy pay clerk, whose genius for impetuosity has been rendered immortal in Micawber. The boy had a poverty-stricken youth, filled with misery and suffering, and not the least of his agony came when he worked at a bench in the window of a blacking factory in full view of the passersby. For months, too, he and his family lived in Marshalsea prison, into which his father was thrown as a debtor. The result of such experiences was, despite their harrowing nature to a boy of such sensitiveness, that Dickens became the great interpreter of the poor and the large-hearted portrayer and friend of the needy. Not only was Dickens’ early life essential to his art because it gave him the specific kind of training he needed above everything else, but because it gave him material for his great galaxy of novels. There was in his early life scarcely a scene, a name, an incident, or a character that was not afterwards reproduced in his work.”

—Gustave Klutow, druggist at 2400 Webster avenue, the Bronx, got into the newspapers recently by routing a masked and armed hold-up man who faced the druggist with drawn pistol while the proprietor of the store was at work back of the prescription counter. “Throw up your hands,” was the command, and Mr. Klutow did so. Leaving the druggist with

hands up the robber backed away to the cash register, and was lowering his pistol hand to depress the key opening the money receptacle when the druggist hurled the pestle, with which he had been compounding the mixture, at the thief’s head. It missed the mark, but broke several bottles filled with drugs and chemicals. As the thief dodged he was grappled with by the proprietor and the two men rolled about the floor and against the cabinets, knocking down bottles and turning the orderly drug store into chaos in a few moments. In the struggle Mr. Klutow got hold of a bottle of turpentine, knocked off the neck of the container and poured the contents over the face of his assailant, who dropped his pistol and struggled from the store, shouting and rubbing his hands over his face. He got away, for there wasn’t a policeman in sight. Mr. Klutow has the black mask as a souvenir.

—George Smith, of Seymour, Conn., is a typical New England druggist with a record of 44 years in business. He went to Seymour in the Spring of 1870 and was with the firm of Bradley & Lum until 1871, when he bought out the drug store in Davis’ block, then owned by Dr. Davis, who removed to Wallingford, where Mr. Smith remained until June, 1902, when he removed to the handsome store in the Canfield building, opposite the R. R. passenger station, where he has since remained. He married Julia M. Weller, of Watertown, Jan. 20, 1868, and has one son, Clarence G. Smith, who is associated in business with his father. Mr. Smith was for 15 years registrar of vital statistics, is a veteran fireman and has served as foreman of Citizen Engine Co., is a trustee of Nonnawauk Tribe, I. O. R. M., a charter member of Humphrey Lodge, K. of P., of Seymour, and a member of Federal Lodge, F. & A. M., of Watertown.

—Albert Plaut, president of Lehn & Fink, has returned from his European trip, and reports an exceedingly interesting series of visits to the leading commercial centers of Germany, France and Great Britain. Martin Gerbing, manager of the Lehn & Fink works, accompanied him. Mr. Plaut found business in drug and chemical lines on about the same footing as a year ago. He found, however, that the political unrest on the Continent and increased taxation there had somewhat curtailed business, although dividends of the leading companies are still relatively large. He referred particularly to the 5 per cent. income taxes levied upon rich and poor alike in Germany as a burden compared with which the income tax in this country is an object of congratulation, saying: “Taking it as a whole, the citizen and subject in Europe is being taxed to a far greater extent than the citizen of this country in order to obtain such protection as that afforded every person in the United States, and is also restricted in his business operations by business unrest such as we have never known.”

—Dr. P. Samuel Stout is chairman of the committee having in charge the proposed raising of a fund of half a million dollars to secure an improved location for the Philadelphia College of Pharmacy, building, equipment and endowment fund, prior to the celebration of the 100th anniversary of the founding of the college in 1821. The other members of the committee, active and ex-officio, are: O. W. Osterlund, R. H. Lackey, W. L. Cliffe, J. W. England, E. F. Cook, W. H. Poley, F. P. Stroup, H. C. Blair, M. R. LaWall, secretary; Howard B. French, president of the college; George M. Beringer, chairman of the Board of Trustees, and Joseph P. Remington, dean of the college. In addition to this executive committee a general committee of 100 or more, with local sub-committees and chairmen, will assist in the work.

—George R. Merrell, vice-president of the J. S. Merrell Drug Co., St. Louis, is a member of the Business Men’s League committee on publication. Merrell P. Waldridge, 2d vice-president of the Merrell company, and Vice-President George R. Merrell are members of the membership committee, and the latter is also on the postal committee. President C. P. Waldridge, of the drug company, is a member of the river improvement and National Guard committees. A. B. Lambert, president of the Lambert Pharmacal Co.; E. W. Rose, president of the E. W. Rose Medicine Co., and F. M. Switzer, president of the Missouri Candy Co., are members of the membership committee.

—Percy N. Hall, a druggist for 18 years, has been elected chairman of the Westfield (Mass.) Board of Selectmen. He was born in Turners’ Falls, and after his schooling entered the drug business. His store is at the corner of Elm and School

streets, Westfield, in a building of which he is the owner. He has been in Westfield nearly eight years, and prior to that time was employed in Turners' Falls, Shelburne Falls, Holyoke and Springfield. He is connected with several of the local clubs and lodges and has served as secretary of the Westfield Board of Trade. He was at one time chairman of the Republican town committee in Shelburne Falls and has served in the same capacity in Westfield.

—**Gilbert R. Parker**, of Providence, R. I., has retired from the drug business after having conducted a drug store in Odd Fellows block, Olneyville, since 1886. He sold his business to Claude Flowers, who has acted as manager of the store since Mr. Parker's appointment as a member of the Board of Control and Supply, and the latter's acceptance of the secretaryship of that body. Mr. Flowers learned the business with Mr. Parker, and is a graduate of the Rhode Island College of Pharmacy and Allied Sciences. Mr. Parker was one of the first druggists to open a store in what is now the annexed district of Providence. He was first associated as a partner with Walter Saunders.

—**Lynn Fort**, manager of the Lamar & Rankin Drug Co., Atlanta, Ga., and one of the best-known drug men in the New South, believes that this will be a good business year. The February figures for his house, for instance, showed a healthy increase over those for last year. Mr. Fort says: "I can see no chance of business being other than good in Georgia for the next six months, because the next six months' business will be done on the basis of the present conditions. The business after that time will depend on this year's crop. I traveled through Middle Georgia recently and the progress made by the farmers indicates that the crop returns will be satisfactory also."

—**Prof. Emile F. Pernot**, Oregon and Portland bacteriologist, has taken the chair of bacteriology at the North Pacific College of Pharmacy, Portland, and is instructing students in the departments of pharmacy and dentistry. He has devoted his time to the study of bacteriology for the past 30 years, and began his studies with Dr. Pearson, of Philadelphia. He was the discoverer of tuberculosis in fowls, and was the first to find rabies and hog cholera in Oregon. For 19 years he was with the Oregon Agricultural College, and for 13 years has been State Bacteriologist of Oregon, filling that office since its creation.

—**Dr. H. M. Whelpley**, of St. Louis, has been elected president of the Cahokia Mound Association, organized in St. Louis. The object of the association is to induce Congress to buy and maintain the great Cahokia mound and smaller man-made mounds in the vicinity as a National park. Cahokia Mound, built by the Mound Builders, is said to be the largest prehistoric work in America. Dr. Whelpley has been leading in the effort to have this mound preserved, together with the more than 60 smaller mounds in an area of about 760 acres in Madison and St. Clair counties, Ill., across the river from St. Louis.

—**Mrs. Eugene T. Senseney**, who was the chief ally of State Food and Drug Inspector F. H. Fricke, of Missouri, in his endeavor to clean up grocery stores, restaurants and drug stores in St. Louis, has been appointed a deputy prosecutor by Prosecuting Attorney Sidener. She is the only woman in St. Louis ever appointed to such an office. She has worked for 12 hours a day for the past three months in instilling ideals of cleanliness and sanitation, and it is said she is particularly pleased with her badge of office, as it is indicative of the authority she now has to enforce her commands.

—**Herman A. Gralike**, proprietor of Gralike's pharmacy, 2263 South King's highway, near Old Manchester road, St. Louis, beat the Spring poets to it—he broke into song while there was snow on the ground. He didn't try to have his effusions published. He did what no poet is supposed to do—he did a practical thing. He printed his poems neatly on cardboard and strips of paper and set them in his show windows in attractive positions. The poems caused a lot of favorable talk. Persons riding by there in street cars spoke of the signs on reaching downtown.

—**Miss Elizabeth K. Meyer**, daughter of Theodore F. Meyer, president of the Meyer Bros. Drug Co., St. Louis, was married recently to Newton McDowell, a St. Louis insurance man. The wedding was to have taken place some time ago but diphtheria, followed by scarlet fever, confined the bridegroom to his home, and postponement followed until such time as

Mr. McDowell should have recovered fully. The first plan was for an elaborate wedding, but the ceremony was a quiet one at the home of the bride.

—**F. R. Burch**, who until recently was manager of the prescription department of Dodd's Drug Co., Buffalo, has joined the sales force of Sharp & Dohme. He has been assigned the Albany and Hudson River territory, with headquarters at Albany. Mr. Burch is a graduate of the Buffalo College of Pharmacy, and while he had not previously had any road experience, his thorough knowledge of the retail drug business, coupled with his energy and tactfulness, assures him success in his new field.

—**W. A. Caperton**, sales manager of Eli Lilly & Co., called upon the Lilly salesmen and friends in the jobbing trade in St. Paul and Minneapolis early in March. Mr. Caperton also spent several days in Chicago introducing R. A. Whidden, recently promoted to the managership of the Chicago branch of the company. Mr. Caperton was accompanied by William McGibbon, formerly of the Chicago branch, and now manager of the Missouri River department of the Lilly company.

—**F. K. Easterwood**, one of the best-known druggists in the Meadville section of Pennsylvania, celebrated his 25th anniversary as a proprietor there on March 6, he having purchased a new stock and opened a store at Park avenue and Chestnut street on March 6, 1889. Altogether he has had 37 years' experience in the drug business in different parts of the country, in New York State, Laramie, Wyo.; Salt Lake City, Utah, and Rochester, N. Y.

—**Fred F. Kempf**, one of the druggists at Boyson's, Cedar Rapids, Iowa, has been receiving many congratulations upon the wall panels he has painted for the soda grill, which is one of the most famous in the West. Mr. Kempf is the window trimmer and card writer for the store as well as a clerk in the drug department. The pictures reproduced are of Charles Schreyvogel's Western scenes, "My Bunkie," "Doomed," "The Scout" and the "Last Drop." The work is considered excellent in detail and in the fidelity in coloring and drawing to the famous originals.

—**John J. Seiberz**, who has been president of the Louisville (Ky.) Retail Druggists' Association for three terms, is one of the most energetic workers in the Bluegrass State. He has been a member of the Public Relations Committee of the N. A. R. D. for several years, and was at one time president of the Louisville College of Pharmacy. He is the Kentucky representative of the Tampa-Cuba Cigar Co.

—**Miss Marie C. Reichel**, 4130 North Senate avenue, Indianapolis, was the only girl to take the examination for full registered pharmacist at the recent examinations of the State Board of Pharmacy, and passed with the highest grade. She was formerly employed in a North Side pharmacy, and is at present a teacher in a local school of pharmacy, having followed the business for a number of years.

—**Jack J. Hinman**, Indianapolis city chemist for the last two years, has accepted the position of assistant director of the epidemiological laboratory of the University of Iowa at Iowa City. Dr. Charles S. Woods, until recently medical counsel for Eli Lilly & Co., is director of the laboratory as well as State epidemiologist and professor of preventative medicine in the University.

—**C. S. Porter**, chairman of the committee on papers and queries of the Kentucky Ph. A., is making energetic preparation for the presentation of a diversified and unusually important collection of papers at the meeting at Lexington, June 16-18. "Live subjects" only will be discussed, and it is stated that eminent physicians will be asked to participate in the discussions.

—**Edmund Wilson**, proprietor of the City drug store at Belfast, Me., has sold out to Norman A. Reed, of Portland and Belfast, the transfer to take place the first of this month. Mr. Wilson went to Belfast as a clerk in the City drug store 26 years ago last January, purchased the business in 1900, and has since conducted it. He will take a long vacation.

—**Ernst O. Engstrom**, proprietor of the Engstrom pharmacy, North street, Pittsfield, Mass., and well known through his affiliations with National organizations and through his association with Boards of Pharmacy work, addressed the Massachusetts College of Pharmacy students on March 4, taking as his subject "Pharmacies in Europe."

Carl Meyer, of St. Louis, secretary of the National Association of Dispensary Druggists at the annual convention at Houston, Texas, March 19, 1913. Other members named: L. K. Irwin, of Dallas, Texas; J. S. Nancarrow, Texas; Mrs. E. G. G. Smith, of St. Mary's, Waterloo, Ont.; J. B. G. Jones, of St. Louis; St. Louis, secretary and treasurer of the Missouri Dispensary; W. L. Wellford, Memphis, Tenn.; W. L. Hamer, of St. Louis; M. H. Ritzler, of St. Louis; M. H. G. Hazard, of St. Louis; J. E. Murphy, of St. Louis; and Dr. J. M. G. Jones, of San Francisco.

T. Howard Embert, of St. Louis, March 18, appointed receiver of the St. Louis Drug Supply Co., 449-A Equitable building, St. Louis, Mo., which has been adjudged a bankrupt by the Federal District Court of the United States Court, Eastern District of Missouri, St. Louis, Mo. Embert will act until a receiver is appointed. The liabilities are put at \$8448, \$8173 and \$1000 in assets of \$7200.

Wesley C. Foster, Jr., who has completed his life as a pharmacist in his drug store in Pittsfield, Mass., has purchased a store in Maryland. He has been with the Engstrom store for many years. For 1 year he was the collector for the Republic of Cuba and he was presented with a gold charm by members of the order when he left Pittsfield.

Frank E. Frost, for five or six years secretary of the Ohio State Board of Pharmacy, during which time he prosecuted a number of druggists for selling cocaine, was arrested recently on the charge of having committed the same offence. He gave his occupation as a physician and pharmacist when arraigned. He was discharged by a jury.

Julius A. Haag, of Haag Brothers, operating a number of drug stores, has bought a business block at 37 Illinois street, Indianapolis, for \$6200. During the last month Haag Brothers opened a new store at Illinois and Pearl streets to take the place of the one closed on account of the razing of the old Occidental Hotel building.

E. M. Partridge, druggist, of Miller's Falls, Mass., observed his 25th anniversary as a business man there on March 24 by inviting the people of that community to his store. Practically the entire population turned out to do him honor, and, incidentally, to take home the candy and cigars so generously distributed by Mr. Partridge.

Dr. P. N. Evans, professor of chemistry at Purdue University, spoke on "Sentiment in Science" at the annual banquet of the Indiana section of the American Chemical Society at the Severn Hotel, Indianapolis. An extra edition of a "newspaper" was circulated and this contained a number of clever "hits" on the members.

A. M. Hopper, with Mrs. Hopper, recently moved into their new home at 71 Middletown street, Jamaica, L. I. Heretofore Mr. Hopper has resided in Brooklyn, but, as his territory can be worked to much better advantage from Jamaica, he decided to purchase a home and make his permanent headquarters in that place.

G. Barrett Moxley, president of the A. Kiefer Drug Co.; W. J. Mooney, president of the Mooney-Mueller Drug Co.; and Charles J. Lynn, general manager of Eli Lilly & Co., have been elected to the governing board of the wholesale trade division of the Indianapolis Chamber of Commerce.

Dr. E. C. McMeel, of Delmar, Iowa, after more than 27 years as a druggist in that town, has sold his establishment to E. W. Westphal, of Olin, and retired. As both druggist and physician he was one of the best-known men in the country. He has been recommended for the postmastership.

Former Mayor Cyrus P. Walbridge, president of the Merrill Drug Co., St. Louis, has been elected president of the Sons of the American Revolution in St. Louis. The annual banquet of the society, to commemorate the battle of Concord and Lexington, will be held April 18.

M. Daniel Berthelot, son of the famous chemist, Marie Berthelot, and a professor at the École Supérieure de Pharmacie de Paris, was recently elected a member in the section of pharmacy of the Académie de Médecine of Paris, taking the place of the late M. Yvon.

Edward T. Grenacher, who retired recently from the proprietorship of the Christie Drug Co., of Quincy, Ill., to go with his family to the Pacific Coast, was given a farewell banquet by his friends 50 or more being present at a spread at a Quincy restaurant.

Daniel R. Jones, Milwaukee, operating one of the busiest downtown pharmacies in Milwaukee, is preparing to install a new automatic soda fountain in his store at 122 Wisconsin street. Plans are now being received. Mr. Jones has a big fountain trade and the new equipment has become absolutely necessary.

Otto W. Osterlund, recently appointed a member of the Pennsylvania Board of Pharmaceutical Examiners, was tendered a congratulatory banquet by friends at the Philadelphia Drug Co., March 16. Forty or more were present.

I. A. Hirschberg, of the Hirschberg Company, druggists' sundries, Ansonia, Conn., declares that the practice of using nationally advertised goods to pull trade on the rest of their lines of sundries is a method becoming less and less effective.

William J. Mooney, president of the Mooney-Mueller Drug Co., has been appointed chairman of the emergency relief committee and a member of the insurance committee of the Indianapolis Chamber of Commerce.

H. H. Clifford, of New York City, is named as one of the co-operators of the Physicians' Research Laboratory, a \$125,000 concern chartered to finance expeditions into South America in search of medicinal drugs.

M. B. Lairy, J. S. Lairy and George H. Babcock have organized the Red Cross Pharmacy Co. to conduct a retail pharmacy at Indianapolis, Ind., and the company has been incorporated with \$150,000 capital.

O. J. Cloughly, whose term as president of the St. Louis R. D. A. expires recently, has been presented with a gold medal by the members of that organization as a token of their appreciation of his services.

Clarence Dotten, who has been manager of the Bristol Conn. Drug Co.'s Main street store in Ansonia, has purchased a drug store in Fair Haven and will be both manager and proprietor.

Mr. and Mrs. G. Barrett Moxley, who spent a month in the Bermuda's, have returned to their home in Indianapolis. Mr. Moxley is president of the A. Kiefer Drug Company of that city.

T. A. Miller has been appointed by Gov. Henry C. Stuart to succeed himself as a member of the Board of Pharmacy of Virginia for the term of five years, beginning March 1, 1914.

E. H. Mayne, H. Bruning and D. E. Ushkow are the incorporators of the David Laboratories, manufacturers of drugs, etc., a new \$100,000 New York corporation.

Henry S. Mayer, who is associated with his father in the drug firm of Peter Mayer & Son, Marshalltown, Iowa, has been married to Miss Gladys Leota Arnold.

D. N. McMillan, for a number of years Northwestern representative of the Arlington Chemical Co., Yonkers, N. Y., has been transferred to Michigan territory.

Benjamin A. Lillianthal, of New York, has been appointed pharmacist in the State Department of Health by State Health Commissioner Biggs.

William G. Breitenpohler, secretary and treasurer of the Al. W. Pauley Drug Co., and Miss Minnie West, of St. Louis, were married recently.

Wm. Simon, professor emeritus of the Maryland College of Pharmacy, of Baltimore, is giving lectures at various places on color photography.

James Franklin Gallagher, a druggist of Dayton, Ohio, has been married to Miss Frances Roberts, of Shelbyville, that State.

Harry E. Christena, of the A. Kiefer Drug Co., Indianapolis, has been elected president of the Marion Club in that city.

W. R. Potter, who for more than three months has been ill with typhoid fever, has sufficiently recovered to return to business.

J. P. Mahon, Jr., has been elected president of the Texas Drug & Medicine Co., Newton, Texas, a \$100,000 corporation.

F. K. Fernald, secretary of the Dr. Miles Medical Co., Elkhart, Ind., was a recent visitor to the New York drug trade.

William H. Kahre, manager of the Lilly branch, St. Louis, is out after undergoing a surgical operation.

## OBITUARIES

### Alfred G. Yeomans.

Alfred G. Yeomans, well-known in this city as president of the one-time firm of Reid, Yeomans & Cubitt, which until a year or so ago conducted the pharmacy at 140 Nassau street, died March 17 at East Millstone, N. J. Mr. Yeomans never fully recovered from a nervous breakdown which took him from his business several years ago, and it was upon his recent return from a trip of less than a month's duration to Panama that he was taken down with cramps of the stomach. He was ill only a week or so when death ensued, the immediate cause being heart trouble. Mr. Yeomans was at one time in the employ of Hegeman & Co., at 196 Broadway. In 1900 he joined the firm of Reid, Yeomans & Cubitt, opening a drug store at 140 Nassau street. The anniversary celebrations, which were featured by the giving away of thousands of souvenirs and the consequent assembling of crowds requiring the special attention of the police, were characteristic of the methods employed to get the New York public to enter this basement drug emporium. In 1909 Mr. Yeomans, in partnership with W. L. Snow, opened the drug store in the Washington Irving apartment at Broadway and 151st street. At one time Mr. Yeomans was also connected with drug stores in Brooklyn, one of these at 752 Union street, now being conducted as Reid & Yeomans. At the time of Mr. Yeomans' breakdown in 1911, the management of the Nassau street store was in the hands of his brother, Sidney C. Yeomans, of Chicago, the latter remaining in charge until its sale to the present proprietors.

### Henry A. Elliott.

Henry A. Elliott, the Nestor of the Baltimore drug trade, died March 9, after an illness of several months with heart disease and paralysis, at his home, 821 North Arlington avenue. Mr. Elliott was 83 years of age and the oldest pharmacist in the Monumental City. For half a century he conducted a drug store at Pine and Lexington streets, with his brother under the firm name of H. A. Elliott & Bro. The name remained unchanged after the death of the brother. About 1901 Mr. Elliott retired from active pursuits, the event being made the occasion for a testimonial banquet given by a large number of his colleagues in the profession. Mr. Elliott was one of the founders of the Maryland College of Pharmacy, now the Department of Pharmacy, University of Maryland, and for years the 1st vice-president of that institution. He also held membership in the Maryland Pharmaceutical Association and in the American Pharmaceutical Association, taking an active interest, in fact, in all things designed to promote the welfare and the progress of pharmacy. He was an intimate friend of Dr. John F. Hancock and other leaders of the profession in Baltimore, and was held in the highest esteem. At the time he was taken ill he was preparing for the celebration of his diamond wedding in June. The wife survives. There are no children.

### Fred N. Oxley.

Fred N. Oxley, traveling and general representative for Seabury & Johnson for the past 16 years, died in the Henrotin Hospital, Chicago, recently, at the age of 66. He was suffering from a complication of diseases. The funeral services were held in Chicago on March 13, and the Chicago branch of Seabury & Johnson was closed during the services. The body was taken to his former home in Worcester, Mass., and the interment was in the family plot at Ashland, same State. Mr. Oxley began as a druggist in Worcester, and after entering the wholesale branch of the trade traveled throughout the country, from one end to the other, and became one of the best-known salesmen in the United States. He was a member of the Chicago Veteran Druggists' Association, and was a regular attendant at the sessions of the N. W. D. A., N. A. R. D. and A. Ph. A. and its branches. He was particularly prominent in Illinois in connection with the Travelers' Auxiliary to the Illinois Ph. A.

### James T. State.

James T. State, a well-known druggist of Portland, Me., formerly of the firm of Butler & State, but of late years in

business for himself, is dead at the age of 47. He was formerly a printer. His affiliations were many. He was a Past Grand Knight, Past State Deputy, and a trustee of the Knights of Columbus and as a State delegate represented that order in several National conventions. He was also a member of the St. Vincent de Paul Society, the Portland Typographical Relief Society, Cumberland County Pharmaceutical Association, the Maine State Pharmaceutical Association, the Argonauts Association and a director in the Apothecary Publishing Co. He took an active interest in all that pertained to the retail drug business, and was a member of the committee on legislation for the State association.

### H. F. West, Sr.

After an illness of less than a week, H. F. West, Sr., one of the best-known drug men in Mississippi, and a native of Jefferson county, where he had been in the drug business all his life, died recently at Natchez. He was the proprietor of a drug store at Fayette when a young man, and later engaged in the same business in Natchez. About 25 years ago he began to travel for Finlay, Dicks & Co., of New Orleans, and he had but recently associated himself with the Parker Blake Company, of New Orleans. He was one of the best known traveling men in his State, and had served as president of the State Ph. A. and of the Travelers' Protective Association of Mississippi.

### Isaac Astor Jennings.

Isaac A. Jennings, 49, of the drug firm of Jennings & Brown, and Jennings & Co., Pittsburgh, is dead after a three days' illness. He was a graduate of Lincoln University with the degree of A. B. and also a graduate of the Philadelphia College of Pharmacy. In 1898, in company with his former schoolmates, the late Edward P. Brown and brother, Dr. John Brown, he established the first Afro-American drug store in Western Pennsylvania, known as Jennings & Brown's store, and located at 1010 Wylie avenue.

### Mrs. Alice Good.

Mrs. Alice Good, the wife of Prof. J. M. Good, pharmacist and member of the St. Louis College of Pharmacy staff for years and former president of the St. Louis R. D. A., died recently at her home, 3734 Westminster place. Mrs. Good was stricken with pneumonia a week before her death. She went to St. Louis in 1869, the year of her marriage, and was 70 years old. She left one daughter, Mrs. Theodore Conzelman. A sister, Mrs. A. H. Mason, came from the South for the funeral.

### Dr. J. T. Kinsler.

Dr. J. T. Kinsler, a pioneer druggist of Omaha, Neb., is dead following a stroke of paralysis. He was 71 years of age. He was a druggist in Omaha a number of years ago, with a store in the U. S. National Bank building at 16th and Farnam streets. He later left the city, only to return again. He was a member of the Knights of Columbus, Elks, Military Order of the Loyal Legion, and of the G. A. R.

## RECENT DEATHS.

— **James Curtley Simmons**, of Graham, N. C., is dead, after a long and prosperous career as a druggist. He was born in Dawson, Ga., Nov. 10, 1861, and beginning in boyhood as a clerk he went into the drug business for himself in Newton, N. C., in 1888. For the past 18 years he had conducted a successful pharmacy—the Simmons Drug Co., and afterwards the Alamance Pharmacy—in Graham. He also took an active part in municipal affairs, serving as first clerk of the fire department and for two terms as mayor. To his vigorous policy are due some very substantial improvements in the town. He was buried with Masonic and Pythian honors, and the services were attended by the local fire department in a body. He leaves a widow, two sons and two daughters.

— **Bernard Gilpin**, a brother of H. B. Gilpin, president of Gilpin, Langdon & Co., drug millers, and of the H. B. Gilpin Co., wholesale druggists, at 300 West Lombard street, died March 1 at a Baltimore hospital after an illness of five months. Mr. Gilpin, who was a son of the late Bernard Gilpin, a member of the old firm and afterward the senior,

was a member of the Western Sportsman, and had also followed ranching and hunting an enthusiastic hunter. With him H. B. G. was his habit years ago of spending weeks at a time to chase the big game of the Rockies and the Western States.

—**James T. Davis**, of Bowling Green, Mo., a druggist, recently died of cancer of the stomach in St. Luke's Hospital, St. Louis. He had visited St. Louis to get a diagnosis of his condition and was preparing to return home when death came. He leaves a widow and mother in Bowling Green, children, Miss Louise Davis, a kindergarten instructor in the O'Fallon school, St. Louis; Miss Dorothy Davis, of Bowling Green; Fred Davis, a chemist, of Bartlesville, Okla., and Robert Davis, a student in the University of Missouri.

—**LeRoy Seth Kellogg**, 72, retired business man and druggist of Westfield, Mass., is dead after a short illness. He went to California as a soldier, was a 1st lieutenant of the 42d Massachusetts Volunteers during the Rebellion, and in 1885 opened a drug store in Nassau, Rennselaer county, N. Y. Previous to that time he was in the drug business in Castleton-on-the-Hudson, and a former drug store of his in Little Falls is still conducted under the old name of Kellogg & Carrier. He was a Mason.

—**Glasecock Barrett**, 51, a well-known druggist of Augusta, Ga., is dead following a stroke of apoplexy. A member of one of the best families in Georgia, following his education, he entered the wholesale drug business with his father, the Hon. William Hale Barrett, and after a few years became the head of the firm of Barrett & McMaster. Subsequently he discontinued the drug business and went to Atlanta as a State official, and later became the manager of the Round Bale Cotton Co.

—**Kurt Pabst**, well-known in former years in New York pharmaceutical circles, died recently in Germany. While resident in America he was a member of the New York press clubs, German and American. He was the society editor of several German dailies published in this country. He was also active at one time upon the editorial staff of a Chicago daily. When he came to this country he was a pharmacist. He died at the age of 47 years. His birthplace was Eisenach.

—**William Bender**, 57, a retired pharmacist, formerly in business in Milwaukee, died recently at the home of his sister, Mrs. Henry J. Deuster, in Green Bay, Wis. Mr. Bender had made his home with his sister during the past year. Mr. Bender had been engaged in the drug business in Milwaukee for nearly 40 years and for many years had been located at 874 Greenfield avenue. He is survived by three brothers and one sister.

—**Thomas S. McConaughy**, 52, a druggist of 202 South Main street, Washington, Pa., is dead of heart disease, having been found dead in his store by a customer who entered for a prescription. He was born in Washington, had conducted the same store for the past 15 years, and previous to that had been employed as a druggist by L. S. Vowell. He was known as the "dry druggist," as he would not fill a prescription for intoxicants.

—**Mrs. Emma Shepard Carter**, wife of Dr. Melville Carter, president of the Resinol Chemical Company, of Baltimore, died recently at her home, 2900 North Calvert street, after a short illness of heart failure superinduced by diabetes. She was born near Winchester, Va., and was a daughter of William Henry Gold, a prominent educator of Frederick county, Va. Besides her husband, two sons, four brothers and three sisters survive.

—**John S. Draper**, 70, one of the oldest drug travelers in the Middle West, and for many years president of the Henry M. Rubel Co., of Cincinnati, for which he traveled, is dead following a stroke of apoplexy. He was a native of Adams, Jefferson county, New York, and for many years lived in Oskaloosa, Iowa. He was a 33° Mason. The funeral was held at Perry, Iowa, where he died.

—**Theodore W. Rohrbach**, 62, a well-known druggist of Baltimore, is dead after an illness of two years. For 40 years he had conducted drug stores in various sections of that city, and he was one of the oldest pharmacists there. He was born in Dresden, Germany, and his father, the late William Rohrbach, was for more than 50 years a director of the Dresden mint.

—**Acheson Calvin Anderson**, 56, for years in the drug business in different parts of Pennsylvania, died recently at the Mercy Hospital, Pittsburgh, after a short illness with pneumonia. Mr. Anderson went to Pittsburgh about 10 years ago and organized the Anderson Drug Co., which he conducted until his death. He was a member of several fraternal organizations.

—**Roy Thompson**, one of the best-known druggists of Bureau county, Ill., died in Spring Valley, his home city, recently, after an illness of but one week with pneumonia. He was a member of the Thompson Bros. Drug Co. His late father, E. G. Thompson, was for many years druggist and postmaster at Spring Valley.

—**Henry F. Beverforden**, a native of Germany, and for many years a druggist in business at Calhoun and Grand streets, Fort Wayne, Ind., died March 10, from dropsy. He went to Fort Wayne in the early 70's, and learned the drug business in John Wagner's drug store. He started in business for himself in 1877.

—**George Maxwell**, a native of Marion, Pa., who in 1865 entered the drug business with his brother at Champaign, Ill., is dead at the age of 74. The firm of Maxwell Bros. was the second drug firm in Champaign. Until 10 years ago, when he retired, he owned drug stores in Farmer City and in Litchfield.

—**Morris K. Sweitzer**, 55, for 27 years manager of the various stores controlled by the Caswell-Massey Pharmacy Co., and who for the past two years has been the lessee of the Freeman pharmacy, Amsterdam avenue and 82d street, is dead following a paralytic stroke. He was a native of Wilkes-Barre, Pa.

—**James Courtney Henning**, a pioneer druggist of Minneapolis, and a former president of the Minnesota Pharmaceutical Association, is dead at the age of 68. He was a native of Steubenville, Ohio, in 1846, and went to Minnesota 18 years later. He lived for many years in Stillwater.

—**Turner Adams Bowen**, president of the Bowen Drug Co., of Newport, News, Va., is dead of peritonitis, having been ill but two hours. He began life as a soda clerk in Klor's pharmacy, later studied pharmacy, and finally, after clerking for several years, entered business for himself.

—**William N. Allen**, one of the best-known business men in Havana, Ill., and a druggist in that town for more than 40 years, is dead after an illness of several months. He was born in Mason county 64 years ago, and had retired from active business at the age of 60.

—**Thomas B. Yates**, senior member of the drug firm of Yates & Dillon, who operated a store in Chillicothe, Ohio, for some time, is dead at the age of 80. He retired from the drug business some time ago and had prospered in the abstract and real estate business.

—**Mrs. J. A. Huegel**, mother of Henry O. A. Huegel, of St. Louis, president of the Missouri R.D.A., and former president of the St. Louis R.D.A., died of apoplexy while at a social function recently at Jefferson City, Mo. Mrs. Huegel was 67 years old.

—**A. C. Van Gilder**, 76, a prominent druggist of Point Pleasant, W. Va., who had been in bad health for a number of years, is dead. For 40 years he conducted a drug store in Point Pleasant, and he was, as a result, known all over West Virginia.

—**D. S. McKean**, head of the firm of D. S. McKean & Co., patent medicine manufacturers, 129th street and Park avenue, New York, died March 8 from heart disease at his home in New Rochelle. He was 61 years of age.

—**Willard S. Pugh**, postmaster and for many years a druggist at Greenfield, Ind., died at his home in that city recently at the age of 52, and leaves a widow and one son. He was 17 years a druggist in Indianapolis.

—**L. M. Ream**, 68, of Columbus, Ohio, is dead as a result of injuries received by falling from a street car. He had been in the drug business for 54 years, entering it as a boy of 14, and had a pharmacy at 779 East Long street.

—**W. A. Stanford**, 62, a druggist in Iowa, Florence, Kan.; Marion, Kan., and Wichita, same State, is dead from diabetes. In 1904 he left the drug business and became associated with a building and loan association.

—**E. A. Fink**, druggist, of South Bend, Ind., who was fatally shot by a would-be hold-up man, died about three weeks later. His assailant was a mere youth who simply intended robbery.

—**J. Leo Richards**, a druggist of the Woodlawn section of Pawtucket, R. I., is dead after a lingering illness. He was a native of Pawtucket and active in many church and fraternal organizations.

—**E. A. Fox**, a druggist, of Central Lake, Mich., was found dead recently in the basement of his store. He was 45 years of age, and leaves a widow and two children.

—**George Peters Vierling**, 80, for many years engaged in the wholesale drug business in Evansville, Ind., and known throughout the entire Ohio Valley, died March 10.

—**William McDonnell**, 29, formerly the owner of a drug store in Florence, Mass., in partnership with his brother, John, is dead after a long illness.

—**Charles E. Vestal**, who for many years was a traveler for the A. Kiefer Drug Co., Indianapolis, died at his home at Knightstown, Ind., recently.

—**Dr. John Warren King**, proprietor of King's drug store, Vicksburg, Miss., is dead. He was a descendant of the founder of Vicksburg.

—**Homer McBride Harr**, a druggist of Center Junction, Iowa, is dead by his own hand, following despondency due to the death of his wife.

—**Frank A. Merriam**, 38, a druggist of Malden, Mass., is dead after a fortnight's illness. He was a member of many fraternal orders.

—**David Pringle**, 64, a member of the firm of Maxim, Pringle & Brush, makers of soaps and perfumes, is dead.

—**Arthur E. Howard**, 38, owner of a drug store at 4455 North Clark street, Chicago, is dead from poison.

—**Albert S. Padrick**, 68, one of the best-known druggists in Kinston, N. C., is dead.

—**Harry P. Gylsen**, 33, a druggist, of New York City, is dead.

—**W. C. Funk**, 35, a druggist at Corydon, Ind., is dead.

One of the convention evenings will probably be devoted to a "smoker," with proper entertainment.

As for the general attractions by land and water, there is probably not another city on the Continent that offers the varied pleasures which Detroit holds out to the tourist and delegate. Belle Isle, connected by bridge with the city proper, is one of the most beautiful parks in the world. Surrounded by the two arms of the Detroit River at almost equal distance from the American and Canadian shores, its outside drive is one long feast, charming every inch. The county of Wayne, in which Detroit is situated, is famous for its fine cement motor roads. In every direction one may drive for miles over the smoothest of highways. The facilities for rowing, sailing, and all-day steamer excursions across Lake Erie or Lake St. Claire are ideal.

"Where to go" is the perplexing question where there is such an embarrassment of riches and the time is limited. Fortunately, the visitor to the August convention will be spared the necessity of choosing, for he will have the benefit of a carefully planned programme in the hands of men who thoroughly know the local field.

## Change of Date for the N. W. D. A.

The committee on arrangements for the National Wholesale Druggists' Association has been forced to change the date for the 1914 convention from the week of October 12 to that of September 21. This is due to the fact that a visit to French Lick Springs had been planned as one of the principal features of the entertainment programme and that it was found impossible to make the trip and be suitably accommodated at the time originally set for the convention. The 1915 meeting will be held in Southern California, and, while it has not been definitely decided, it is now thought that Del Monte will be the city chosen. C. F. Michaels, of the San Francisco firm of Longley & Michaels, is chairman of the committee having the 1915 meeting in charge, while William J. Mooney, of the Mooney-Mueller Drug Co., of Indianapolis, is looking after the executive end of the Indianapolis convention.

## NEWS FROM ASSOCIATIONS

### A. Ph. A. at Detroit.

In preparing for the August meeting of the American Pharmaceutical Association the various committees on entertainment, finance, and ladies' programme have gotten down to real work, with every determination to make the 1914 convention the banner meeting of the association. They have ample "steam" and funds at their disposal, backed up by the very rich attractions which Detroit offers as a convention city.

The Michigan travelers for the drug trade, headed by Frank Kerr, are making it possible to send the *Journal of the Detroit Retail Druggists' Association* to every druggist in the State. Each issue bears some interesting article or announcement pertaining to the August meeting.

It is expected that the visitors will wish to catch some glimpses of the huge industrial plants which have made Detroit the greatest manufacturing center in the world for drugs, automobiles, and stoves. The committee are shaping their arrangements so that small groups can make their own selections for sight-seeing at their convenience. Those desiring it will be welcome to inspect the world-famous Ford plant, or any of the large stove works, or the well-known manufacturing pharmacists.

Entertainment is to be provided for each evening during convention week, if this can be done without prejudice to the work of the various sections.

In addition to the regular steamer excursion to the St. Claire Flats, in which all the delegates and ladies will participate, a special boat ride is on the carpet, for ladies only, to charming "Bob-lo" (Bois Blanc), at the mouth of the Detroit River, where dinner will be served. Theater parties, card parties, and automobile rides will not be overlooked, though the committee are not yet able to make definite announcements.

### Druggists' National Home.

Pharmacists in New York City and vicinity have two methods offered them of assisting in the work of the Druggists' National Home—and we bespeak a general participation in both methods: They can contribute direct to the funds of the Home or can participate in the forthcoming bazaar, entertainment and ball at Saengerbund Hall, Brooklyn, April 14, 15 and 16. All the funds obtained from this entertainment and ball will go direct to the Home funds, and the programme, under the direction of the Retail Druggists' Protective Association, will be a most interesting one. Enough has been promised in the way of donations to more than cover the cost of the fair, and the programme committee—one of the strongest ever appointed in charge of a similar event in this city—are planning to turn over a handsome sum to the Home at Palmyra. It is not all up to the committee, however—let every druggist do his part for such a worthy charity. If you are willing to help, apply to the officers of the Retail Druggists' Protective Association, or to any one of the following members of committee: William T. Creagan, president; J. De Neergaard, treasurer; Thomas Lamb, corresponding secretary, 84 Court street, Brooklyn; programme committee: E. J. Woelfle, chairman; E. A. Ancelin, C. R. Avery, H. C. Bentheim, C. O. Bigelow, G. Brower, S. Bulkeley, L. Berger, M. D. Cadman, W. T. Creagan, G. R. Crist, O. Dieckmann, C. M. Davidson, R. Devine, L. J. Dilberger, S. E. Dorn, C. O. Douden, E. L. Ennis, D. C. Eccles, M. D., C. Friedgen, P. S. Gehris, A. Gardner, G. A. Grunbok, H. E. Hall, W. H. Hanson, H. Jacobs, T. Johnston, J. Kirkeby, H. J. Kempf, N. P. Kirk, J. L. Lascoff, V. Lind, A. G. Manulis, F. J. Morrisey, J. De Neergaard, S. L. Neier, A. Nyeboe, W. Pruss, F. Prager, C. H. Platt, F. H. Plate, R. Quassman, J. Roemer, C. Rubin, F. S. Ryer, R. W. Reid, O. Raubenheimer, J. H. Rehuss, E. Simon, S. Schoenfeld, J. Schmidt, F. Schaefer, G. C. Snyder, A. M. Schwallie, H. Sullivan, F. A. Sandman, J. Tenglesen, W. G. Turner, E. Wisbeck, O. Wicke, J. G. Wischerth, A. G. Wilson.

At a meeting of the Druggists' National Home, held in Chicago on March 9, it was decided that in view of the general feeling of the drug fraternity of the United States that the Home should be taken under the jurisdiction of the National Association of Retail Druggists, the following action should be taken: The trustees tendered the Home and the management of the same to the executive committee of the N.A.R.D., without any reservation whatever. The executive committee of the Retail Druggists' Association will hold a meeting at Chicago on April 6, to decide what shall be done in regard to accepting the offer.

Donations are still coming in to the Home, but a large payment must be made by April 8, and it is urged that would-be donors be generous in assisting the trustees at this time when money is more urgently needed than ever before. In writing to the ERA, Supt. Heimstreet says:

"Since we have advertised the place so well, other parties are trying to get the property, and we must pay for it at once in some way. Is there not some firm or manufacturing house who would make a loan for two years? It would be the biggest advertisement any firm ever had. Are there not 50 among our 48,000 druggists who would loan us \$1000 each? Won't some big-hearted firm make this loan secured by mortgage? It is very humiliating to the trustees to beg in this way, when it is for the public good, and we now make this last appeal to the drug fraternity.

"Won't you help us and see if there is not some way to get this \$50,000 at once? We have received recently from Fredk. Stearns & Co., \$100; Solon Palmer, \$100; Foster Milburn & Co., \$100; Borden Condensed Milk Co., \$500. Many have written us that as soon as the Home is under the jurisdiction of the N.A.R.D. they will contribute. But action must be taken at once."

## TRADE CUSTOMS ATTACKED AND DEFENDED.

### Members Drug Trade Section Hear Argument Favoring Marketing of Fir Balsam by Liquid Pound.

CHAIRMAN C. G. EULER called to order the March meeting of the Drug Trade Section of the New York Board of Trade and Transportation, held at 203 Broadway. Irving McKesson, chairman of the committee on tares, called attention to the Knight Assembly bill No. 490, which measure would amend the State weights and measures law so that exemption from labeling with the net weight of contents would be extended in the case of liquid goods of 2 fl. ounces, and under, the present limitation, to 6 fl. ounces and less. Mr. McKesson also advocated the changing of the trade practice of buying and selling fir balsam by the barrel on a basis of 8 liquid pounds. This practice was not understood by all dealers, and, moreover, the balsam was subject to a change in specific density of from a quarter to three-eighths of a pound to the gallon. This was due to the change in temperature to which it was subjected. He favored marketing on the basis of the liquid pound and would apply this to both the Canada and Oregon balsams. The matter was referred to the committee on jobbing druggists, and it is probable the trade will be circularized as to their attitude toward the proposed change.

Mr. McKesson favored the continuation of the trade custom relative to transactions in crude drugs valued at 10 cents or less per pound. This custom, he reported, has apparently been superseded by a provision of the New York weights and measures law which provides that sales in all instances be made on strictly net weight basis. The regulations made by Dr. Reichmann for the enforcement of the law provided for certain tolerances and variations and embodied all the provisions of the Section's book of tares, excepting the "10-cent rule," which permits the sale of crude drugs valued at 10 cents or less per pound on a basis of gross for net weight.

New York State houses would be at a distinct advantage, Mr. McKesson contended, in competing with out-of-the-State houses. If the purchaser should make reduction for actual or average tare the margin of profit for the seller would frequently be wiped out. Mr. McKesson recommended that dealers in the drugs coming under the law be urged to observe the "10-cent rule" until a suitable change in the law might be obtained or the observation of its present provisions be made general and compulsory. This matter was referred to committee on tares for action.

Frank L. McCartney, chairman of the executive committee, pointed out that some of the mercuric bichloride tablets now manufactured were too small to be stamped "poison," as required by the new Board of Health ordinance.

Dr. H. C. Lovis, chairman of the legislative committee, thought that he voiced the sentiment of the drug trade in asserting that the limitation placed on preparations containing heroin in the Harrison bill had been made too low. It should be one-quarter instead of one-twelfth grain. He approved the prohibition of the sale of hypodermic syringes and needles, except upon prescription. He recommended that the Senate be requested to amend Section 6, so as to provide for the sale of heroin in combination with other drugs in preparations to the extent of one-quarter of a grain. The legislative committee was given power to act in this matter.

To the committee on freight rates was referred the recent raising of Western freight rates on essential oils and phosphoric acid in carboys. Chairman Euler and C. A. Loring, chairman of the above committee, brought this subject before the Section.

## National Association, Boards of Pharmacy.

*Meeting of the Executive Committee together with the Advisory Committee, at Tampa, Fla., Feb. 20, 21.*

A JOINT meeting of the executive and advisory committees of the National Association of Boards of Pharmacy was held at the Tampa Bay Hotel, Tampa, Fla., Feb. 20 and 21. The following report is written from the minutes of the meetings as prepared by Acting-secretary C. E. Zinn and furnished through the courtesy of Ira B. Clark, of the publicity committee of the association.

The opening session of the committee was called to order by President E. Berger, of Tampa, with Mr. Berger, Mr. J. C. Burton, of Stroud, Okla.; L. C. Lewis, Tuskegee, Ala., and C. E. Zinn, of Kansas City, Mo., present, Secretary A. F. Sala being absent on account of illness. Mr. Zinn was elected secretary pro tem. Mr. Berger introduced President Ben J. E. Freer, of the Tampa Retail Druggists' Association, who welcomed the delegates to his city in a brief address, which was responded to by Mr. Zinn. Letters were read from President W. D. Jones and Secretary D. W. Ramsaur, of the Florida State Board of Pharmacy, who cordially greeted the delegates and expressed their regret at their enforced absence.

Messrs. H. C. Christensen, of Chicago; E. L. Brandis, of Richmond, Va., and Charles Geitner, of St. Louis, all of the advisory committee, were present and were invited to participate with the executive committee in its deliberations.

The report of the executive committee was called for and through Chairman J. C. Burton the following facts were presented:

Through the assistance of J. W. Gayle, of the Kentucky State Board of Pharmacy, the National association has been legally incorporated in Kentucky, an object the association has been seeking to accomplish for several years, as the incorporation gives the association a legal right to a seat in the next U.S. Pharmacopoeial convention. The Kansas State Board has become a member of the National body since the last meeting at Nashville. The copies of the annual proceedings were issued earlier than usual and sent to every State board of pharmacy, every college of pharmacy and every pharmaceutical journal in the United States. A great deal of effective work has been done by correspondence, both by the executive and advisory committees, with resulting increase of interest.

Following this report the president read letters from Ist Vice-President M. G. Beebe, of Burlington, Vt., and from 2d Vice-President John Culley, Ogden, Utah, both of whom offered valuable suggestions which were much appreciated by the members of the committee.

The secretary was instructed to call in all reciprocal blanks now in the hands of the various boards of pharmacy, to reimburse the boards the amounts paid for the same. New blanks were ordered printed with the understanding that in future all blanks must be obtained by applicants from the National secretary, and that a fee of \$5 must accompany each request. A motion was adopted to instruct the advisory examination committee to immediately take up the work of visiting boards of pharmacy during the examinations by such boards, under the direction of the president.

At the session of the advisory examination committee, with Chairman Christensen in the chair, a number of letters and questions received by the chairman in response to requests sent to secretaries of boards of pharmacy to send questions used by them, as required by article 5 of the by-laws, were read. The chairman presented two sets of questions as an illustration of the wide difference between the two examinations, showing clearly that one was entirely too elemental in character while the other was extremely theoretical, and entirely lacking in balance or distribution and practically useless in so far as they would enable one to determine the fitness of the candidate. The communications and questions were generally discussed, especially with reference to changes and suggestions deemed necessary in order to facilitate the bringing about of more uniformity in question and methods of examination. The chairman was instructed to take up by correspondence with the different board members and secretaries the advisability of making the changes necessary in order that examinations may become more generally uniform.

The communications received from the deans and faculties of colleges of pharmacy in reply to letters from the chairman asking them to give their ideas and suggestions with reference to examinations held by boards of pharmacy were read, many useful suggestions were presented and the committee was instructed to follow up this correspondence in order that this useful information may be received as soon as possible.

The chairman explained that much work had been done looking toward the preparation of sample sets of questions, and it was shown that a meeting of the committee was necessary in the near future in order that questions might be tabulated and methods devised. The importance of visiting a number of States that are members of the association with the view of suggesting changes in methods of conducting examinations, and non-members with a view of having them become members was discussed, and the importance of this personal contact with board members clearly shown.

At the final session of the executive committee it was the sense of the meeting in regard to the work of the advisory examination committee that much good had been accomplished. It was evident from the examination questions submitted to this committee by the different States that the differences in these examination papers vary to the extent that many changes must be made by a number of States in order to bring about uniformity consistent with the requirements of reciprocity. The good judgment of the National association in establishing this committee was apparent. The plans for aiding and suggesting improvements in examination methods and questions were approved.

The advisory examination committee was instructed to meet at the earliest possible date, at St. Louis, that city being considered the most accessible and economical place to devote such time as may be necessary to the tabulation and work of completing questions and methods, the same to be available to the members of the National association in accordance with the instructions of the Nashville convention.

The chairman of the advisory examination committee was requested to notify all members of boards of pharmacy members of the National association upon the completion of their work, advising them that the questions were available on request.

The chairman of the executive committee was designated to draw an amendment to the constitution, permitting honorary members to serve on committees of the National association, the same to be presented at the Detroit meeting.

The secretary was directed to revise the list of officers and members of all boards of pharmacy in the United States, same to be incorporated in his annual report at the Detroit meeting.

A vote of thanks was extended to President Berger and the druggists of Tampa, as well as to the daily press, for the many courtesies shown to the members of the committees during the meeting.

#### City of Washington Branch, A.Ph.A.

THE February meeting of the City of Washington Branch of the American Pharmaceutical Association was held at the National College of Pharmacy. More than 30 members and guests were present at 8:15, when President W. S. Richardson called the meeting to order, and this number was considerably augmented by late arrivals. Mr. Richardson introduced Martin I. Wilbert, of the Hygienic Laboratory, Public

Health Service, whose subject was announced as "What the American Medical Association has done, and what the American Pharmaceutical Association proposes to do, with regard to the Patent Medicine Problem."

Mr. Wilbert entered a general and most enthusiastic discussion of his subject, outlining the history of the growth of the patent medicine business, the efforts of the American Pharmaceutical Association to curb this growth, the efforts of the press to control it, and the manner in which the American Medical Association has dealt with it. It was pointed out that the American Pharmaceutical Association had, as early as 1853, recognized the evil of the growing patent medicine business and had then adopted resolutions for its suppression. Each passing 10 years seemed to revive interest in this subject, but nothing more definite than a number of good resolutions has resulted to the present time. Judging from the manner of appointment of the present committee, the conditions leading up to its selection, and the attitude of the association, however, it was stated that it would be unfair to believe the present interest temporary, but, on the contrary, every indication points to the accomplishment of good. The conditions under which the American Medical Association undertook its work against patent medicines, and how this work is being carried on, Mr. Wilbert elaborately detailed. A number of the publications of that association to enlighten the public in this crusade were exhibited and discussed. These were passed around for inspection.

S. L. Hilton, J. Leyden White, Dr. F. B. Campbell, Dr. Henry E. Kalusowski and a number of others praised the American Medical Association for its stand, and pledged themselves to heartily support our association in its combat against this evil.

The secretary, Henry B. Floyd, then read a paper covering his observations with regard to the laboratory equipment of local pharmacies. The scarcity of proper reference works, the inaccuracy of scales, weights, graduates and containers, and the utter lack of sufficient laboratory equipment was lamented, and the belief was expressed that the only remedy for these conditions rests in a new pharmacy law, by pharmacists, and for pharmacists. Numerous inaccuracies which have caused unthinking, but wholly conscientious, druggists to be haled into court were cited, and the avoidance of similar mistakes outlined.

A very vigorous discussion, lasting more than an hour and a half, followed, when the meeting was adjourned.

#### Chicago Branch, A.Ph.A.

PROF. JOSEPH P. REMINGTON honored the Chicago Branch of the American Pharmaceutical Association with a visit and led the discussion of the evening on "Progress of Pharmacopoeial Revision." The meeting was very well attended. Many pharmacists, chemists, editors, teachers and students from the pharmaceutical schools of Chicago and vicinity, all friends and admirers of Prof. Remington, were present.

Prof. Remington brought out the fact that the revision of U.S.P. VIII is nearing completion and that U.S.P. IX will undoubtedly be in the hands of the publishers this year, possibly by July 1. He spoke of the large publicity being given to the work of revision and referred to the fact that according to the wish of the 1910 convention, all changes in and additions to the text of the new Pharmacopoeia are to be published for comment and criticism before the matter goes to the printer. These changes and additions in the text of the chemicals have already been published (see J.A.Ph.A. for Dec., 1913), the copy of the text for the crude drugs will be published during March and April and the material on the volatile oils and pharmaceuticals will immediately follow. The final date for the reception of criticisms by the Revision Committee will be announced with the last of the copy.

Prof. Remington spoke of the inclusion of Mercuric Chloride Tablets in the U.S.P. and the selection of the most desirable form for their administration. The subject is exceedingly important and suggestions are wanted. The definition of a "Poison" has been put up to the Committee of Revision and the Professor humorously offered a prize of a \$5 gold piece for a definition that would be acceptable to the committee. He discussed the admission to the Pharmacopoeia of substances known as protected, proprietary or patented, and was inclined to oppose the admittance of such substances.

The address of Prof. Remington was received with much applause. Then ensued a very interesting and profitable discussion of the address. Wilhelm Bodemann, member of the Committee of Revision, extended a welcome to Prof. Remington.

Dr. Bernard Fantus, pharmacologist at the U. of I. Medical College, questioned the advisability of any tablet form, particularly a colored tablet, for dispensing bichloride, especially in view of the increasing use of candy medicaments in tablet or lozenge form.

Fred Meissner, of the U.S.P. Board of Trustees, believed that the present attention given to the dangers of bichloride tablets was largely due to newspaper notoriety and that if newspapers editors could be persuaded to omit the name of the poison in the published accounts of suicides the danger of suicidal waves from particular poisons would be largely averted. In his extensive experience as a retail pharmacist he had never personally known of an accidental poisoning from bichloride.

Secretary Thos. Potts, of the N.A.R.D., spoke very strongly against the bichloride tablet, stating that the U.S.P. should not recognize it and that this extreme poison should never be sold except on physician's prescription and then only in solution.

Secretary Light, of C.R.D.A., said that the sale of bichloride tablets could be regulated in Chicago by city ordinance just as had been done in the case of phenol, cocaine, heroin, etc. He stated that recently a newspaper reporter came to him in regard to the sale and use of heroin in Chicago and had been informed that members of the C.R.D.A. strictly adhered to the municipal code. Later the reporter attempted to buy heroin in 27 drug stores located in different sections of the city and in every case was refused the drug.

C. P. Van Schaack, of the wholesale trade was warmly in favor of some regulation over the sale of bichloride.

Editor Hugh Craig, of the *Journal of the N.A.R.D.*, endorsed the idea that corrosive mercuric chloride should be sold only on physicians' prescriptions. He referred to the suicidal cycles, lately phenol, now bichloride, next something else, each fostered by newspaper notoriety. He favored the addition to the U.S.P. of definite and important medicaments even if patented.

Prof. W. B. Day referred to Dr. Cohen's famous definition of a dose—"A dose is enough," and said then that a poison might be defined as "A poison is too much."

Dr. H. M. Gordin, member of the Revision Committee, humorously defined a poison as those substances listed by a suitable committee of learned gentlemen as such. Prof. Remington refused him the prize.

Prof. A. H. Clark, of the Revision Committee, said that the wide divergence of opinion as brought out in the discussion of the evening on one or two topics only illustrated some of the difficulties Prof. Remington, as chairman of the committee, had to overcome in harmonizing on many subjects just as great differences of opinion in the committee. He was sure that U.S.P. IX, however, will rank, as does now U.S.P. VIII, the premier pharmacopoeia of the world.

Prof. George D. Timmons spoke of the U.S.P. doses, which Prof. Remington had criticised as of no legal value, and held that the average doses were of much value to teacher and student, pharmacist and even physicians.

Prof. C. W. Patterson favored the radical regulation of the sale of bichloride tablets and expressed, he was sure, the opinion of the entire audience, his pleasure in hearing the very interesting and instructive address and discussion of the evening.

Prof. C. M. Snow spoke of the very complicated formula proposed for fluid extract of squill. Prof. Remington thanked him for the criticism and again asked for comments favorable or unfavorable on the text as now being published, stating that such comments would invariably receive the attention of the committee.

Secretary Gathercoal, of the Chicago branch, announced the subject of the March meeting "The Preparation of Diphtheria Antitoxin." Dr. H. M. Letton will lead with an illustrated lecture on the subject. All present, as well as others interested in this subject in Chicago and vicinity, were invited to attend the March meeting.

He moved a vote of thanks to Prof. Remington for his very generous service to the branch on this occasion. There was a unanimous response in a rising vote.

At the March meeting of the Chicago branch an illustrated

lecture on the "Production of Diphtheria Antitoxin," by Dr. H. M. Letton, of the Research Laboratory of Parke, Davis & Co., was a feature. Dr. Letton displayed with the lantern some 50 very fine views, fully illustrating each important step in the process of preparing antitoxin. His lecture, remarkable for its clearness and interesting detail, was very favorably received. The lecture was followed by a discussion which included not only diphtheria antitoxin but also the present therapeutic status of antitetanic serum, typhoid vaccine and other serum products. The meeting adjourned with a hearty vote of thanks to Dr. Letton.

## N.J.P.H.A. COMMITTEE AMENDS PHARMACY ACT

Measure Is Reported Out of Committee and Is Now Before Assembly—Bars Up on Laudanum Sales.

THE new Pharmacy Act of the New Jersey State Pharmaceutical Association, drafted and amended by that organization's legislative committee, consisting of S. D. Woolley, Ocean Grove, chairman; J. C. Gallagher, Jersey City; George M. Beringer, Camden; Isaac J. Keuper, Trenton, and David Strauss, Newark, has been reported out of committee and is before the State Assembly. The measure is known as Assembly bill No. 282. The following amendments, all proposed by the above-named committee, are now under consideration:

Strike out in the title the words "and an act entitled." "A supplement to an act entitled 'An act for the punishment of crimes (Revision 1898),' " approved April thirteenth, one thousand nine hundred and eight."

### Section 4:

Page 6—line 9—after the word "employment" insert the words "of apprentices," after the word "stores" strike out "of apprentices."

### Section 6:

Page 6—line 5—strike out the words "a college" and insert the words "the school."

### Section 10:

Page 9—line 1—at end of line insert "or the license of a storekeeper in drugs, or the license of an itinerant vendor of drugs."

Page 9—line 3—after the word "Jersey" insert "upon notice in writing to such applicant for or holder of a license or certificate and after a hearing thereon."

Page 9—line 11—strike out the word "of repeated violations" and insert "twice of a violation of Section 17 of this act, or the holder of a certificate or license has been guilty of continuous and willful violations."

### Section 10:

Page 10—line 5—strike out "to undergo."

Page 10—line 6—strike out "or either" and the quotation marks after "both."

### Section 15:

Page 11—line 2—after the word "English" insert "affixed," after the word "show" insert "from the outside."

### Section 16:

Page 11—line 2—after the word "mind" insert "or under the influence of liquor."

Page 13—line 40—after the word "till" insert "altered or," after the word "rules" insert "or the laws of the State of New Jersey."

Page 13—line 57—strike out the quotation marks after "years" and insert a period.

Page 13—line 58—strike out the word "or" and insert "Provided, further, that the provisions of this section of this act shall not apply."

Page 14—line 82—strike out "bella donna" and insert "belladonna."

Page 14—line 83—insert a comma after the word "colchicum."

### Section 17:

Page 15—line 2—strike out "betaoucaïne" and insert "betaucaïne."

Page 16—line 31—strike out the word "less" and insert the word "not more."

Page 16—line 36—strike out the words "to preparations containing opium and recommended and sold in good faith for diarrhoea or cholera, each bottle or package of which is recommended by specific directions or use, or." On line 41 strike out the quotation marks after "use" and the words "or to the sale

of laudanum for legitimate purposes to persons not addicted to its habitual use" and insert a quotation mark after "use."

Page 16—line 54—strike out the word "and" and insert the word "or."

Page 17—line 82—strike out the word "provision" and insert the word "section"; on line 84 strike out the words "and undergo an" and insert the word "or"; on line 85 strike out the words "or either," and the quotation marks after "both."

#### Section 21:

Page 21—strike out this section from line 1 to the end of line 12 on page 22 and insert the following:

"21. It shall be the duty of the Prosecutor of the Pleas in their respective jurisdiction to prosecute all violations against the provisions of this act before a proper and competent judicial tribunal and wherever this act provided for the imposition of a money fine only, such Prosecutor of the Pleas shall in the name of 'The Board of Pharmacy of the State of New Jersey' institute and prosecute such offender in any court of competent jurisdiction therefor; and such money penalty when recovered and all other fines when imposed under the provisions of this act and paid, shall be by such Prosecutor of the Pleas promptly transmitted to the said Board."

#### Section 25:

Page 22—lines 7-8-9—strike out the word "An Act entitled 'A supplement to an act entitled 'An act for the punishment of crimes (Revision 1898)'" approved April thirteenth, one thousand nine hundred and eight."

### G.A.S. PROCEEDINGS ROUTINE IN NATURE.

#### Letters of Thanks Received from Families of Deceased Members—Destitute Colleague Is Assisted.

THE proceedings of the March meeting of the German Apothecaries' Society, called to order by President Chas. F. Klippert, were mostly of a routine nature. Treasurer Robert S. Lehman reported that the expenses for the recent 63d annual celebration had totaled a little under the sum of \$100. Letters were received from the families of the recently deceased members, Albert S. Bischof and Emil Kuester, thanking the society for its floral tributes.

F. A. Bongartz submitted a letter from a destitute colleague who requested aid, and described the case as a worthy one and solicited the assistance of the society. Felix Hirseman moved that the sum of \$25 be appropriated for this purpose, but George T. Riefflin suggested that the members present contribute. Considerably more than the sum named in the motion was raised, and Mr. Bongartz was requested to present the money to his colleague. The members rose in honor of the memory of the deceased members, Charles S. Erb, Emil Kuester and Albert S. Bischof, the last-named, as was pointed out by President Dr. Klippert, having been one of the oldest members of the society and in former years one of the most active.

Paul F. Gebicke, custodian of the mortuary fund, reported that Messrs. Bischof and Kuester had been members, and that checks had been sent to their families. Fred Schaefer, in connection with the presentation of this report, argued on the advantages of the fund to the families of deceased members. Upon his suggestion, himself, and Messrs. Gebicke and Diehl were appointed as a committee to give the fund wider publicity.

S. V. B. Swann, chairman of the legislative committee, stated that there was not much to add to his extensive report of the previous meeting, except that the commissioner of weights and measures is again placing difficulties in the way of the pharmacists. The local Pharmaceutical Conference has the matter in charge. Mr. Swann called attention to the passage in the State Assembly and Senate of the working-men's compensation bill and stated that the measure would very probably be signed by the Governor. It had been amended only in so far as concerned the appointment of commissioners to represent the various parties.

By vote, the by-laws and constitution were changed so that the monthly dues for regular members are now 60 cents, instead of 50, as previously, and 30 cents for associate members, instead of 25. This action was taken as a result of the conference held by Messrs. Gebicke, Lehman and Stolzenburg on the recommendation made by the president in his recently presented annual address. Members will be notified by circular relative to the change.

Otto P. Gilbert, chairman of the entertainment committee, recommended that the annual Summer outing be held at Witzel's Pavilion, College Point, as usual, the date to be Thursday, June 18. Definite arrangements for this event were left to the entertainment committee.

George T. Riefflin reported that a conference had been held with a N. Y. C. P. Alumni Association committee for the purpose of arranging the dates of the society's annual celebration and the alumni association's annual ball so that they would not come so close together. This year the two events were only a night apart, an inconvenience to members who wished to attend both.

Robert Lehman, treasurer of the European trip committee, again urged the members desiring desirable cabins to make early application for the same.

The periodicals and magazines which have accumulated during the past year were sold at auction to the members by President Dr. Klippert. George Leinecker, recorder of the society, arranged the "mags" for the sale. A vote of thanks was extended to these officers for their work in connection with the sale.

Martin Heldt, 1272 Boston road, was proposed for membership.

### DR. CURT WIMMER LECTURES ON COLLOIDS.

#### Norwich Pharmacal Co.'s Offer of Coffin Shape for Tablets Accepted—Propaganda Meeting of N. Y.

Branch to be Held in May.

THE feature of the regular monthly meeting of the New York Branch of the A. Ph. A., held at the College on March 9, was an intensely interesting and comprehensive lecture on "Colloids and their Importance in Pharmacy," by Dr. Curt Wimmer, of the College. About 50 members and visitors were present.

After disposing of routine preliminaries, in the course of which Treasurer Joseph Weinstein reported a balance of \$99.87 in the treasury, Chairman Army called for the report of the committee on legislation, which was read by Dr. Mayer, in the absence of the chairman, Dr. Wm. C. Anderson.

Mr. McElhenie read a letter from G. M. Beringer, president of the Council, which favored the adoption of the coffin shape as the official form for tablets of mercuric chloride in the new edition of the U. S. P. It was announced that the Norwich Pharmacal Company, of Norwich, N. Y., which holds the patent and proprietary rights in this form of tablet, had magnanimously offered to assign all its rights to the A. Ph. A., without cost to the association. All necessary legal transfers would be made by the company, so that it would be illegal for anyone to use the coffin shape for any form of medication or other preparation except bichloride. The regulation of the shape or color of bichloride tablets was opposed in a letter from Hugh Craig, forwarded by President Beringer, in which Mr. Craig took the position that all regulation in this direction was useless, as 95 per cent. of deaths or "accidents" from bichloride are from suicidal attempts, and persons bent on self-destruction will use coffin-shaped tablets as quickly as any others. In reply, President Beringer pointed out that although Mr. Craig's statements were largely correct, he seemed to have missed the point of the proposed regulation. A distinctive and official shape for mercury tablets is only one safeguard, but a very important one. It was then moved and seconded to accept the offer of the Norwich Pharmacal Company, which motion was passed, as well as a vote of thanks for the public spirit and generosity shown by the firm. The question was raised as to whether the sale without prescription of any other soluble and poisonous compound of mercury, such as the cyanide, would be an infraction of the present ordinance. No one seemed to have definite information on this point.

Mr. Berger, for the committee on professional relations, reported that as the season was very far advanced, no joint meeting with the County Medical Association would be held, but that a propaganda meeting in May would be arranged, at which it was hoped Professor Remington would be present to tell about progress with the new Pharmacopoeia.

The report of the committee on the progress of pharmacy, by Dr. Diekman, included accounts of the determination of acetoacetic acid in urine; the determination of albumen in urine in the presence of hexamethylenetetramine by the Esbach

method, the necessity for testing for free iodine in preparing cod liver oil, and the use of perfectly fresh oil. Dr. Dickman also reported several adulterations. Parinol wax was found by two German investigators to contain no wax at all, being a mixture of spermaceti, tallow, and paraffin; while "Boranium berries" were not berries, but a compound of invert sugar, glycerol, and peppermint oil, exploited as an obesity cure.

In the discussion, Otto Raubenheimer commented on the first two papers, while Dr. Weinstein stated that the Esbach method was fast becoming obsolete, and both he and Dr. Mayer favored the acetone method for albumen. John Roemer was of the opinion that great accuracy was not a desideratum in albumen tests. The mere fact of the presence of albumen in urine was the most important thing from the standpoint of diagnosis, and hair-splitting accuracy was wasted.

Dr. Wimmer traced the development of our views of colloidal substances, showing that the scientific study of these bodies is only about 15 years old. Graham made the first comprehensive investigations of colloids, forming the name for the new substances from the Greek "kolla"—glue. Graham prepared colloidal solutions of chromium hydroxide and other metallic compounds. In the nineties, Bredig changed many metals into the colloidal state, and about the same time the invention of the ultramicroscope gave an additional impetus to the study. It was soon seen that Graham's division of all substances into crystalloids and colloids was no longer valid, as practically all bodies were capable of assuming the colloidal state under proper conditions. According to Ostwald's classification, all substances experimented with are called dispersoids. These are divided into coarse suspensions, in which the diameter of the particles is greater than  $0.1 \mu$ ; true colloids, where the diameter is between  $0.1 \mu$  and  $1 \mu$ ; molecular solutions, where the particles are of a still smaller size; and ionic solutions, the last two classes being the true solutions. Nine cases of colloidal solutions are possible theoretically, according as we have a solid, liquid, or gas dissolved in a solid, liquid, or gas. The case of a colloidal solution of a gas in a gas is not known, however.

Among these possibilities, the cases of a solid in a liquid, or a "suspensoid," and of a liquid in a liquid, or "emulsoid," are by far the most important. The suspensoids are represented by the colloidal solutions of silver used in medicine. They have practically the same viscosity as water, the particles show the Brownian movement, and are charged electrically, and can be coagulated by oppositely charged particles, such as the ions of an electrolyte.

The emulsoids are exemplified in a solution of albumen in water. They evince great viscosity, which has a very large temperature coefficient; show pseudo-fluorescence, carry no electric charge, and have the power of gelatinizing or swelling.

In preparing colloids, we can pass either from the coarse suspensions, or from the molecular solutions. By grinding osmium with water, it passes into colloidal solution. Light is also effective in forming colloids, to some extent, as is shown with silver. The electric current is the means most commonly employed for producing colloidal solutions of metals, and most of the metallic solutions now on the market, are prepared by the action of an electric current under water, acting between suitable metallic electrodes.

Of great importance to the pharmacist is the inability of colloidal substances to pass through semi-permeable membranes. Dr. Wimmer showed many forms of modern dialyzers, and illustrated his remarks by experiments, all of which "worked."

Among the general properties of colloids are the Brownian movement of the particles, caused either by gravity, or by the bombardment of the particles by the molecules of the solvent; the lack of osmotic pressure; and the Tyndall effect, seen when a beam of light is passed through a colloidal solution. The low osmotic pressure and non-effect on freezing and boiling points indicate an enormous molecular weight. The sign of the colloidal particles depends on the solvent, some substances having a positive charge in water, for instance, but a negative sign in oil of turpentine.

Gelatinization of colloids is caused by a change in hydration, and can be brought about by concentrating, or by adding an electrolyte. Jellies are now thought to be spongelike structure, with interstices filled with colloidal solutions. The coagulation of colloids can be shown by adding sulphuric acid to a solution of ferric hydroxide. The electric charges of the colloidal par-

ticles are neutralized by the positive hydrogen ions of the acid, and the customary red precipitate of ferric hydroxide comes down. Adsorption is another phenomenon displayed by colloids. It is due to the enormous development of surface, which affects the surface tension of the surrounding solvent.

Many interesting reactions may be carried out in jellies. It is then noticed that the reactions always take place in rings. This phenomenon is probably connected with the annular structure of wood in trees, the layers in agate, and the laminae of oyster shells.

Most of the common articles and materials in daily use are colloidal in nature. Man himself is a complicated colloidal system, "polyphasic and heterogeneous." The kitchen is a veritable colloidal laboratory, and scientific cookery must study the reactions of colloids in meats and other foods. The chemistry of beer is now based almost entirely in colloidal reactions, and it is possible to predict what type of beer will be produced from any given materials or processes. The color of gems is due to traces of colloidal matter, such as chromium and manganese.

Directly connected with pharmacy are such effects as enzyme reactions, which take place in colloidal systems; and the serum and other tests, such as the Wassermann reaction, while most physiological processes are colloidal phenomena. Many colloidal metals, as silver, copper, iron, vanadium, are now employed therapeutically, and many more compounds are being studied. Catalytic actions are in some cases due to colloids. Dr. Wimmer estimated that about 80 per cent. of all pharmaceutical preparations are colloidal, including tinctures, extracts, emulsions, liniments, resins, etc. Cold cream is a colloidal solution of several solids and liquids, while Monsel's solution is a colloidal solution of ferric hydroxide in ferric sulphate. The ferric hydroxide used as an antidote for arsenic acts by adsorption, and not chemically. When the antidote is prepared so as to carry the same electric charge as the arsenic, it is no longer effective.

The lecture was discussed by Messrs. Roemer, Diner, Raubenheimer and Mayer, and a vote of thanks was tendered Dr. Wimmer and his assistant, Dr. Jeannot Hostmann.

## BICHLORIDE ORDINANCE "ABSOLUTE FARCE."

This the First Administration in Which Druggists Could Not Get Hearing Before Health Board.

DR. WILLIAM C. ANDERSON, chairman of the legislative committee, presented an interesting report at the March meeting of the Kings County Pharmaceutical Society, called to order by President H. B. Smith. Dr. Anderson stated that study of the recently enacted Board of Health mercuric bichloride ordinance had shown that the measure is "an absolute farce." He pointed out particularly that no distinctive form or color of tablet was specified, and that the last paragraph of the ordinance had evidently never been completed since it excepted "any preparation containing one-tenth of a grain or less bichloride of mercury."

"Never in any previous administration," asserted Dr. Anderson, "have druggists been denied a respectful hearing by the Board of Health. Even this has been denied by Dr. Goldwater. The ordinance gives signs of having been drawn up by a subordinate. The measure provides only for sale at retail; a physician can sell or give away the tablets."

"The Blauvelt Bill, No. 5, has been reported out of committee and is now before the Senate. A circular letter had been sent to members of the Senate objecting to the bill upon seven different points." These points were as follows:

1. Confining bichloride sales to physicians' prescriptions places an unnecessary burden and expense upon the public without accomplishing the object sought.

2. The physician is the only one who would benefit by such a regulation.

3. The act permits physicians to dispense tablets of any color or form, thus eliminating the educational advantage of a specific color or form.

4. The boxes and envelopes used as containers in compounding prescriptions of this drug and the dispensing of the same by physicians, which is permitted under the act, offer the greatest danger of accidental poisoning.

5. Bichloride of mercury is extensively and necessarily used for other than medical purposes and purchasers for such other purposes should not be compelled to pay a doctor's fee in

order to conduct their usual business, which is no concern of the doctor and in which his services are not required.

6. Morbidly inclined people who wish to commit suicide will do so regardless of the restrictions placed around the sale of any drug or other article capable of destroying human life, and if they prefer bichloride of mercury as the means of carrying out their desires, will not hesitate to pay the doctor's fee to obtain it.

7. A law that would simply specify that bichloride of mercury in tablet form when sold, dispensed or given away, by any person, should be in glass containers and of a specified shape and color would be reasonable and just, and effective in protecting the public, and be free from the earmarks of filling someone's coffers without requiring necessary service therefor.

"The Boylan-Kerrigan narcotic bill," said Dr. Anderson, "is not likely to pass. It is strenuously opposed by physicians who do not want their patients to know what narcotics are being prescribed for them. It probably won't pass this term."

Dr. Anderson presented an outline, printed copies of which were distributed among the members, showing just what legislative measures affecting the retail drug trade were opposed and which ones were favored. The bills opposed are the Blauvelt Senate, No. 5; Heffernan Senate, No. 243; Wheeler Senate, Phillips Assembly, No. 59; Knapp Assembly, No. 204; Frawley Senate, No. 270; Boylan Senate, Nos. 26, 35 and 331; Kerrigan Assembly, No. 439; Dubamel Senate, No. 375, and Nelson Assembly, No. 279. The bills favored are the Suffrin Assembly, No. 210; Walters Senate, No. 427; Seelye Assembly, No. 607; Nelson Assembly, No. 457; Ahearn Assembly, No. 712; Ahearn Assembly, No. 713.

Speaking on the Blauvelt bichloride bill, Jacob H. Rehffuss, president of the N.Y.S.P.A., stated that according to recent Board of Health statistics, 11 deaths had resulted from just 34 cases where this poison had been taken accidentally. "Some of these cases were undoubtedly suicides and the families have concealed the facts."

Mr. Rehffuss doubted if the Walters bill could ever be gotten out of committee. This bill if enacted would make the pharmacy act supersede the "one day of rest in seven" law. "The State association legislative committee is not entirely to blame for present conditions," asserted Mr. Rehffuss, discussing the manner in which the labor law had been passed without protest. "The Board of Pharmacy is as much to blame as anyone. The board members should take more interest in these things."

In closing the discussion of the legislative situation, Dr. Anderson called attention to the Stevens bill, H.R. 13305, relating to price registration. "This legislation would be a great advantage to the retail drug trade."

Upon the suggestion of Adrian Paradis, a resolution was unanimously adopted approving the recommendations of Dr. E. H. Bartley, made at the recent joint propaganda meeting at the college and which related to the propriety of providing shorter names for U.S.P. and N.F. preparations. The resolution was referred to the Kings County Medical Society for its approval. The secretary was directed to write a letter of thanks to John Roemer, chairman of the N.Y.S.P.A. propaganda committee, for his work in connection with the joint meeting referred to above.

Treasurer Adrian Paradis reported a balance on hand amounting to \$326. Wm. F. Morgan, who has charge of the society's detail work, was appropriated the sum of \$100.

#### M.A.R.D. TAKES STAND ON PENDING MEASURES

##### Members Oppose the Frawley Bill and Favor the Stevens Bill—Mass Meeting at New York C.P.

THE Metropolitan Association of Retail Druggists went on record as opposing the Frawley bill and as favoring the Stevens' price maintenance bill, at a meeting held March 24, at the New York College of Pharmacy. The members also recorded their opposition to the present Board of Health bichloride of mercury ordinance. In the absence of President R. M. McCutcheon, 1st Vice-President Jacob H. Rehffuss called the meeting to order and Secretary-Treasurer Louis Berger officiated in his official capacity. Mr. Berger asked that his offices be separated and that a new treasurer be elected. Henry E. Oates was elected.

Dr. Wm. C. Anderson introduced a resolution to the effect that the association hold a mass meeting in the college building

to further the advancement of the Stevens price maintenance bill, and that the American Fair Trade League be requested to co-operate toward making the affair a success. The members unanimously concurred and Friday, April 3, was set as the probable date for the mass meeting. Dr. Anderson, Louis Berger and Alexander Gardner were appointed as a committee of arrangements. Dr. Anderson stated that prominent speakers would be secured from Washington and that the Fair Trade League would interest the other trades. Besides favoring the Stevens bill by resolution, the members were instructed to inform their Senators and Congressmen relative to their attitude.

A set of by-laws, prepared by Peter Diamond and read by Dr. Anderson were adopted as a whole as amendments to the by-laws of the old Metropolitan Association of Retail Druggists. The name of the old organization was retained for the reason that the old charter may be utilized and the members thus be relieved of individual responsibility. Furthermore, a fund of \$50 or more is on deposit in a local bank to the credit of the old M.A.R.D. Secretary Louis Berger thought that by reviving the old organization this sum could be secured. Chairman Rehffuss and others at first favored a new name.

According to the revised by-laws, any registered pharmacist who is a member of the N.A.R.D. is eligible for membership, but must be passed upon by a committee. The president, vice-president, secretary and treasurer will serve one year. Chairmen of committees constitute the board of trustees. Meetings will be held on the third Tuesday afternoon of March, June, September and December. Ten members constitute a quorum. The annual meeting will be the December meeting. The chairman may call special meetings upon the written request of 10 members. Ernest Berger, of Tampa, Fla., formerly president of the Florida State Board of Pharmacy and now president of the National Association Boards of Pharmacy, was present as a guest.

#### Minnesota Ph.A.

The 30th annual convention of the Minnesota Ph.A. was held at the West Hotel, Minneapolis, in February, with a large attendance and marked interest. Nearly 500 persons registered, including the members of the Travelers' Auxiliary, and visitors. The gathering was welcomed by President W. A. Abbett, and by Mayor Wallace G. Nye, of Minneapolis, himself a pioneer druggist. The reports of officers showed the association to be larger than a year ago, and in better financial condition. There were a number of interesting addresses, including one by Prof. J. P. Remington, of Philadelphia. The following officers were elected: President, Max Menzel, Pipestone; 1st vice-president, Miss Evelyn Williams, Minneapolis; 2d vice-president, R. J. Messing, St. Paul; 3d vice-president, S. B. Carlson, Willmar; secretary, Dr. E. L. Newcomb, Minneapolis; treasurer, L. J. Aberwald. The following were nominated for appointment to the State Board of Pharmacy: R. J. Messing, St. Paul; M. D. Martin, Northfield; W. A. Abbett, Duluth; F. M. Parker, St. Paul; E. W. Reitzke, St. Paul. The Travelers' Auxiliary elected the following officers: President, W. R. Mandigo; 1st vice-president, T. J. McMillan; 2d vice-president, W. B. Fields; 3d vice-president, Walter Strickland; secretary, G. Hammond Brown. The Northwestern Branch of the A.Ph.A., which met at the same time, elected the following officers: President, C. T. Heller, St. Paul; vice-president, A. D. Thompson, Minneapolis; secretary and treasurer, Prof. E. L. Newcomb, Minneapolis; executive committee, A. J. Kline, Minneapolis; F. M. Parker, St. Paul; W. S. Smetana, Hopkins; F. A. Usher Smith, St. Paul; representative to the Council of the A.Ph.A., Dean F. J. Wulling.

#### Minneapolis Drug Club.

The Minneapolis Drug Club held its March meeting on the 2d at the Camels' Club. A club dinner was served at 6:30 p.m. after which the members got down to an earnest discussion of the propositions recommended by the board of directors. The following important propositions came up for discussion:

The National Drug Clerk, official publication of the National Association of Drug Clerks, invited the Minneapolis Drug Club members to participate in the work of the association and a motion was made before the club endorsing the work of the National Association of Drug Clerks and author-

ing the secretary to cause a fee entered for each of the drug clerk members of the Minneapolis Drug Club, one year's subscription to the *National Drug Clerk*.

The recommendation of the executive committee that prizes be offered to drug clerks for original papers to be read at the regular meetings of the club was acted upon favorably and a 1st, 2d, and 3d prize were offered for a paper entitled "How Can I Increase My Personal Efficiency?" This paper to be read at the meeting on April 6.

A round table discussion on the proposed Pure Food and Drugs Law, to be held in Minneapolis the latter part of 1914, brought out many new ideas and valuable suggestions. The club voted unanimously its endorsement and each member pledged his hearty support to the committee in charge.

The matter of a Question Box was brought up, and this important institution was authorized. Druggists, clerks, and travelers will send in their questions to the secretary who will turn them over to the proper chairmen of committees, questions to be answered either by mail or at the regular meetings.

The club unanimously voted to organize a Ladies' Auxiliary, to be under the directions and classification of the Entertainment and Athletic Section. The organization of the Ladies' Auxiliary will take place on April 17, at which time the club voted to have a dollar dinner to members and guests at 7 p.m., after which there will be dancing and cards. This meeting will be held at the Camels Club.

The Minneapolis Drug Club is growing rapidly in numbers and the high personnel of its membership indicates that it has struck a keynote in Northwestern druggdom.

One of the pleasant surprises at the 30th annual meeting of the Minnesota State Pharmaceutical Association was the music furnished by the Minneapolis Drug Club orchestra at both the banquet and the ball. The practice evening of the orchestra is Thursday of each week at the secretary's office, and any druggists, clerks or travelers who desire to affiliate with the orchestra are invited to come up to practice.

The officers of the club are most sanguine as to the final results and everything seems to indicate that the club will be in financial condition to undertake the furnishing of club rooms at an early date.

Correspondence from other drug clubs is invited, and druggists, clerks or travelers passing through Minneapolis are cordially invited to call at the secretary's office.

#### N.Y. Conference for Hearing on Bichloride Ordinance.

By resolution at a recent meeting of the New York Pharmaceutical Conference, Secretary Mayo was instructed to write Commissioner of Health Dr. Goldwater and to request a hearing with the latter on the new bichloride of mercury ordinance. To put it crudely, the delegates present, Messrs. Russell, Latham, Weinstein, Bigelow, France, Mayo and Anderson "ripped the ordinance to pieces." The best criterion of gross inexperience in legislating, they considered the last paragraph, which exempted the application of the ordinance "to any preparation containing one-tenth of a grain or less of bichloride of mercury." They also inquired as to the meaning of "a particularly distinctive form or color" as applied to bichloride tablets. Opinion was divided on the propriety of giving up without a fight the right to sell the tablets except on prescription.

#### Pittsburgh Branch, A.Ph.A.

B. E. Pritchard, secretary of the Pittsburgh branch of the American Pharmaceutical Association, in an address before that body at the March meeting, said police and State officials had proved themselves unable to cope with the increase of deaths from poisons taken accidentally and with suicidal intent. He said it would become the duty of the druggists to protect the public against poisons if adequate laws regulating their sale could not be secured. The statement was made during a discussion of the bichloride question, in which Messrs. Pritchard, Louis Saalbach and F. J. Blumenschein participated.

Dr. Louis Saalbach declared the druggists of America set the standard which was afterward adopted by the Government and incorporated in the pure food and drugs act.

#### Philadelphia Branch, A.Ph.A.

At the annual meeting of the branch March 3 at the Philadelphia Drug Club, the following officers and committees were elected:

President, Prof. L. Fullerton Cook; 1st vice-president, Samuel C. Henry, 2d vice-president, Prof. Julius W. Sturmer; secretary, Robert P. Fischelis; treasurer, M. M. Osborne; committees: Practical pharmacy, Charles H. LaWall, W. Wilson McNary and Ambrose Hunsberger; professional relations, William L. Cliffe, Franklin M. Apple and Dr. F. E. Stewart; membership, A. J. Staudt, William E. Lee and Quintus Hoch.

#### AMONG THE ASSOCIATIONS.

The Michigan State Rexall Association has elected the following officers: President, E. W. Austin, Midland; 1st vice-president, J. A. Skinner, Cedar Springs; 2d vice-president, Roy Burlingame, Dowagiac; secretary and treasurer, James A. Beukema, Grand Rapids. The executive committee, each member the chairman of a department, is as follows: J. E. O'Donoghue, Negaunee, candy department; Harry McGowan, Ionia, to let articles department; E. Matthews, Ypsilanti, stationery department; Charles P. Baker, Battle Creek, soda fountain department; A. T. Putnam, Manistee, rubber goods department; D. G. Look, Lowell, cigar department; Von M. Furniss, Nashville, universal side lines department; Charles H. Frantz, Bay City, specialty sales department; T. A. Goodwin, Ithaca, general advertising; E. A. Sepull, Alpena, window and counter display department; F. W. Millard, Adrian, salespeople and salesmanship; D. A. Hagans, Monroe, drug store finance. The next meeting will be held in Detroit.

C. Y. Stollenwerck, of Greensboro, has been elected president of the Alabama State Rexall Club. The other officers elected are: A. M. Riley, Andalusia, 1st vice-president; E. E. Cale, Pratt City, 2d vice-president; T. Wood Throckmorton, Guntersville, 3d vice-president; John T. Roe, Mobile, secretary-treasurer. The next place of meeting has not yet been selected. The chairmen of the committees follow: John M. Martin, Bessemer, candy; W. C. Brady, Jackson, toilet goods; Louis Howle, Pell City, stationery; J. R. Dowling, Gadsden, rubber goods; H. F. Shackelford, Brewton, soda fountain; E. H. Bingham, Tuscaloosa, cigars; Cicero Rudd, Lineville, unusual side lines; U. Beach, Geneva, general advertising; L. L. Crump, Birmingham, window and interior displays; T. E. Gilbert, Athens, special sales; E. E. Cale, Pratt City, salespeople and salesmanship; J. W. Payne, Scottsboro, drug-store financial problems.

Representative druggists from Burleigh, McLean, Kidder, Emmons and McIntosh counties, N. Dak., were in session in the Capital City recently and organized for mutual benefit. At the last State meeting of the Druggists' Association, the State was divided into districts and the 10th was designated to comprise the above-named counties. A committee was appointed to draft a constitution and by-laws, also to determine a name. This committee will report later, which report will be considered at the next meeting, which is to be held in Bismarck on June 10. Only two officers were elected at this meeting, they being Burt Finney, president, Bismarck; F. C. Malloy, secretary, Max. The object of the organization is the advancement and betterment of the profession of pharmacists.

At the March meeting of the Long Island Drug Club, much enthusiasm marked the evening. A good attendance was present and 10 new members were elected. The games-amusement committee have arranged for various events: For April, a musicale and dance; May and June, baseball contest of five games; July, day's outing on Staten Island; August, three swimming contests; for the Fall a minstrel show and dance. The club will participate in the bazaar and ball to be held at Saengerbund Hall, April 16, by the various pharmaceutical associations in the interest of the National Druggists' Home.

The 25th Ward Retail Druggists' Club, of Chicago, indorsed Lee M. Ped'go, a member, as Democratic candidate for Alderman. The officers elected are: President, Frank Ahlborn; vice-presidents, Henry Lyons, A. W. Adamack and A. Maguire; secretary, L. J. Conrad; treasurer, Edward Pembertly; directors, John Sutcliffe, H. W. HOLLANDER, Charles Thiel, F. S. Kruger, Carl Warner, N. Sime, A. E. Hartke, J. H. Hogan, W. L. Lentz, Oscar Malone, Frederick Provost, C. A. Thayer and E. Buesah.

At the annual meeting of the Minnesota Rexall Club F. M. Parker, of St. Paul, was elected president of the club; E. M. Threadway, Duluth, vice-president; C. W. Brenner, Stillwater, secretary. Thomas Voegeli, of Minneapolis, was toastmaster

at the banquet. Responses were made by C. A. Jack, Princeton; J. H. Beise, Fergus Falls; J. A. Connel, Luverne, and B. L. Benson, of Fargo, N. D.

The 13th annual dinner of the Troy Pharmaceutical Association was held at the Rensselaer Hotel, Troy, with addresses by the Rev. Thomas H. Sprague, Senator George H. Whitney, John B. Holmes, Frank T. Russell and Edward Loeb, president, and Frank J. Smith, secretary, of the Albany Drug Club. President Ezra Stillman, of the Troy association, was chairman.

The Ladies' Auxiliary of the Milwaukee Pharmaceutical Association recently entertained the Milwaukee druggists at a dancing and card party in Colonial hall in that city. The programme was opened with a grand march led by George H. Kesten, president of the Milwaukee Ph.A. Most of the leading druggists of the city and their wives were in attendance.

At the recent meeting of the Worcester County (Mass.) Druggists' Association, the following officers were elected: President, Herbert E. Davis; vice-president, W. H. Morse; treasurer, A. C. Woodward; secretary, B. C. Cutler; executive committee, Walter S. Doane, Peter B. Moriarty, Frederick H. Fenwick, James Gearin and A. W. Andrews.

The fourth annual party of the Grand Rapids Drug Club was held in the St. Cecilia ballroom with 80 couples participating. A "souvenir" march, in which costly souvenirs were pressed upon the guests of the evening, was a feature, and was led by the president, E. D. DeLaMater and Mrs. DeLaMater.

More than 200 members of the Woman's Club of the Allied Drug Trades of Chicago attended a luncheon and card party at the Hotel Sherman for the benefit of charities supported by the organization. Mrs. George Mathison was in charge.

The St. Joseph County (Ind.) Drug Association has elected the following officers: President, F. A. Schiffer; vice-president, Louis Steinkohl; secretary, Paul E. Wolter; treasurer, Henry L. Spohn.

The Dallas County (Tex.) R.D.A. has elected the following officers: President, Jacob Schrodt; vice-president, J. C. Coulson; secretary-treasurer, L. O. Robertson.

While no official announcement has yet been made it is understood that the June meeting of the Massachusetts Ph.A. will be held at Swampscott.

A movement to organize the druggists of Flushing, L. I., has been started by James E. Shepherd, who has a drug store at 41 Wilson avenue.

Half a hundred members of the Memphis Drug Club attended the first annual banquet of that organization.

## SCHOOLS AND COLLEGES

### LASCOFF EXPLAINS "ANALYSIS STATEMENT."

Outlines His System of Daily Accounting Before N.Y. C.P.—Others Discuss Prof. Martin's Address.

**J.** LEON LASCOFF, a member of the New York State Board of Pharmacy, approved of the modern departmentizing of the drug store and advocated for utilization by the druggist a daily statement—an "analysis statement"—as it was defined by Prof. Selden O. Martin, the speaker of the evening, on the occasion of the March meeting of the New York College of Pharmacy. Prof. Martin's address appears in full in the editorial section. Mr. Lascoff explained to the college members that his system showed each day the balance brought forward from yesterday, the cash taken in on bills collected, how many prescriptions were filled during the day, the amount of candy, cigars, etc., sold; cash drawn from the bank, charges made, "unfortunately, or otherwise," he carried 600 accounts; returned goods, errors registered, petty expenses, merchandise account, cash account (salaries, etc.), cash deposited (checks deposited), balance at the close of business, checks at the close of business, goods bought per bills, etc. This statement told at a glance all the important facts of the daily business. Examination of the statement by one unused to it might prove puzzling, but it required only five minutes per day to make out and Mr. Lascoff had been utilizing this form of statement during the past 14 years.

Prof. Martin asked Mr. Lascoff if he kept a record of the sales made by each salesman. In towns of 100,000 or over, each shoe salesman should sell \$10,000 of goods per year. Considering the large number of comparatively small sales made in the average drug store, this amount of sales per salesman could not be expected in a drug store. Nevertheless, he was surprised to find that one drug store employing six salespersons had averaged \$8000 per year each. Mr. Lascoff replied to the effect that he had once attempted an analysis of sales per salesman, but had found it practically impossible to adapt such an analysis to such a complex business as that of the drug store. Prof. Martin approved of Mr. Lascoff's "analysis sheet" because by its use he knew his own business; but, on the other hand, it did not tell him what the business should be.

Caswell A. Mayo, who introduced the members participating in the discussion, presented some interesting statistics on "turnovers," these having been compiled by a monthly magazine. According to the magazine, the grocery business made on an average of 10 turn-overs of stock per year, department stores seven, variety goods six, drug business four and a half (Mr. Mayo dissenting), dry goods four, hardware three and a half, furniture three, shoes two and one-tenth, clothing two, and jewelry one and a half. Mr. Mayo pointed out that the druggist should cut down his slow-moving stock to a minimum and put in stock that turns over quickly.

Reuben R. Smith asserted that it was his practice to know his daily receipts. He thought that it was a serious mistake for one man to try to take charge of two or more stores. It were better to give one store its proper attention. He concluded by expressing the opinion that opportunities in the drug business were better than ever before. He regretted that retail druggists had not previously had the benefit of the accounting experience which has been presented at the last several college meetings.

D. T. Larimore stated that in his business accounting was simplified by the fact that he sold no candy, cigars and some other articles handled by practically all drug stores. Several years ago he had employed an expert accountant who had devised a simple accounting scheme for his business. A day book, journal, etc., were features of this system and all accounts went through a general ledger. He asserted that any business required minute attention. He advocated the cash register as simplifying the keeping of accurate accounts.

"The little man is the one who needs help," was the assertion of David Costello. Mr. Costello told how a drug store had been departmentized by a corporation. The departments inaugurated were as follows: Prescription, drugs, old goods, proprietaries, bristle goods and toilet specialties, soda, candy, cigars, etc. A cash register was installed. The breaking up of the store into departments, he said, was impossible for the small druggist.

Charles Holzhauser presided.

### "Blizzard Class" Dinner.

March 12 was the 26th anniversary of the celebrated "blizzard," which was a unique event in the weather history of New York. It was on that memorable day in 1888 when 88 students took and passed their examination at the New York College of Pharmacy, and in the "Blizzard Class" a great many pharmacists originated who made a mark in the scientific and commercial world. The members of the class on March 12 of each year hold a reunion and celebrate by a dinner the blizzard and their examination. This year they came together at a dinner at Terrace Garden, New York City. The speakers were: Prof. Charles F. Chandler, an honorary member; Felix Hirseman, ex-president of the New York State Pharmaceutical Association, and David Strauss, member of the New Jersey State Board of Pharmacy. Dr. Walter S. Reed is president of the class, and Prof. Geo. C. Diekman is secretary-treasurer. To the regret of all, the latter was unable to be present on account of illness. The dinner committee consisted of the following members: August Diehl, chairman; Phillip Matty, Emil Weiss, Otto Raubenheimer, Frederick P. Tuthill, David Strauss and W. Pitt Rich. In addition to the above, the following were present at the reunion and dinner: S. V. B. Swann, Fritz Schaeffer, L. N. Brown, of Sag Harbor; F. A. Frawley, of Bangor, Me.; Dr. Walter S. Reed, of Long Branch, N. J.; Dr. Leopold Freiburger, Dr. A. S. Slonaker, Prof. Fred P. Tuthill, Prof. Otto Raubenheimer, David Strauss, of New-

ark. A. T. Brown, of Sag Harbor, L. I.; August Diehl, Phillip Matty, G. F. Von Kummer, C. W. Bartlett, Emil Weiss, W. Oettinger, W. G. Kugler, F. A. Kalkbrenner, J. G. Reeves, C. A. Schein, A. Volland, C. W. Trautmann, of Jersey City, and Fred Plump, of Freeport, L. I.

#### First N.Y.C.P. "Student Night" a Success.

Prof. Curt P. Wimmer delivered the opening address at the first of a series of "Students' Nights," held recently at the New York College of Pharmacy, this initial affair being made possible by the final rounding into tone of the college glee club, the mandolin club and the orchestra. Prof. Wimmer introduced Prof. H. E. Crampton, of Columbia University, who talked on "Academic Spirit." Coach Lush, in charge of the Columbia baseball nine, talked to the students in an interesting vein. He was followed by L. Roudin, who recited. H. Wirklich, '14, led the Columbia songs, which were illustrated by the stereopticon. M. Hochberg was applauded for his impersonations and George Leich for his tenor solo. The programme was interspersed with selections by the various musical organizations. The musical organizations consist of the following members: Glee club—H. Wirklich, director; M. Markowitz, G. Portoghese, F. A. Frawley, E. A. Baldwin, A. Galateria, F. T. Fletcher, D. W. Odell, E. L. Moadinger, B. Geiger, S. Horowitz, W. A. McBride and S. R. Drapkin; mandolin club—A. Galateria, director; S. J. Wu, D. Franceschi, E. Franceschi, M. DeLalla, J. J. Green and J. Lione; A. Weinstein, 1st violin; S. Anzalone, 1st violin; J. Windt, orchestra—E. A. Atwood, piano; F. E. Ambrose, 1st violin; 2d violin; A. Lambert, 2d violin; J. Sciacca, 1st cornet; A. M. Dixon, 2d cornet; T. E. Kinane, trombone; Dr. C. W. Ballard, cello, and T. McGranaghan, drums.

#### New York College Notes.

The annual meeting of the college was held March 17, and the following officers were elected for the coming year: President, Nicholas Murray Butler; 1st vice-president, Charles F. Chandler; 2d vice-president, William J. Schieffelin; 3d vice-president, Albert Plaut; treasurer, Clarence O. Bigelow; secretary, Thomas F. Main; assistant secretary, Edward W. Runyon; trustees to serve three years, Max J. Breitenbach, Frederick K. James, Jacob Weil, Robert S. Lehman, Irving McKesson.

The next regular meeting of the college will be held Tuesday, May 19, at which the last of the series of practical talks on profit in the drug business will be given. All retail pharmacists are cordially invited to attend.

#### College of Pharmacy, University of Washington.

The February semester brought an increase of 12 new members.

M. V. Veldee, Ph.C., '11, B.S., '13, assistant in bacteriology and who is now working on his master's degree, recently passed a United States Civil Service examination for bacteriologist. Mr. Veldee passed with a very high grade.

The annual ball given by the Pharmacy Club was very well attended by the students, as well as alumni and others, and all reported a most enjoyable time. The dance was certainly a grand success, from start to finish, and this was due to the untiring efforts of the social committee, composed of the following members: S. B. Kinne, chairman; May Otteson, Henrietta McNerthney, B. H. Carroll and G. W. Nelson. Dean and Mrs. C. W. Johnson and Professor and Mrs. A. W. Linton acted as patrons and patronesses.

The University of Washington basketball quintet have just arrived home after a very successful tour of Oregon. They won four games out of six played, and have to their credit so far this year a list of 10 victories and only two defeats. The pharmacy department takes a special interest in this form of athletics by possessing an excellent representation in the person of O. B. Schreuder, who is one of the cleverest basket shooters on the team.

The next meeting of the Washington State Board of Pharmacy will be held in the Pharmacy building of the University of Washington on April 2 and 3. At this time examinations for registration will be given and it is reported that many aspirants will be present, due to the recent ruling of the board, that all persons wishing to take the State Board examination after July 1, 1914, must be graduates of one of the Conference Schools. This will mean a greater increase in the number of

students here at the university and it will also tend to raise the standard of the future pharmacist. Our motto: "Upward, outward, onward."

At a recent meeting of the Pharmacy Club the following officers were elected for the coming semester: H. F. Sewell, president; Miss May Otteson, vice-president; Miss Clara Henry, secretary; T. E. Kinne, treasurer; Jeffrey Hilton, sergeant-at-arms; J. C. Palmer, corresponding secretary. President Sewell later appointed the following committees to serve during the ensuing semester: Social committee, Chas. D. Donahue, chairman; Miss McNerthney, R. H. Geil, B. E. Umbarger and M. H. Filz, Programme committee, H. H. Lamb, chairman; Miss Hilton and H. A. Kumpinsky.

#### University of Michigan School of Pharmacy.

The second semester opened Feb. 9 with 110 students registered for the year.

Prof. C. O. Hill, Ph.C., '93, who is the head of the Organic Chemistry Department of the University of Tennessee, visited friends in Ann Arbor during February.

The senior class gave a very enjoyable dance at the Packard Academy March 6.

The sophomore class elected these officers recently: R. G. Arner, Kimersburg, Pa., president; A. J. Halgren, Escanaba, Mich., vice-president; O. A. Brines, Algonac, Mich., secretary, and E. W. Chrysler, Littleton, Col., treasurer.

Dean A. B. Stevens was recently elected chairman of the local section of the American Chemical Society.

#### University of Illinois School of Pharmacy.

The 54th commencement of the University of Illinois School of Pharmacy (Chicago College of Pharmacy) will be held at Howard's Theater, Chicago, on Wednesday afternoon, April 22, at 2 o'clock. The principal address will be made by Prof. John Uri Lloyd, of Cincinnati, the well-known author and scientist. George F. Canham will deliver the valedictory. President Edmund J. James, of the University of Illinois, will confer the degrees. There are 42 students in the graduating class, including two young women. On the evening of Commencement Day a banquet will be given in honor of the graduating class by the Alumni Association of the School. Arrangements for this banquet will be made at the annual meeting of the Alumni Association, which is to be held this month. An informal dance was given by the Alumni, Phi and Chi Chapters of the Kappa Psi Fraternity, at Warwick Hall, 47th and Forrestville on Friday evening, March 6. The annual banquet of these three chapters of Kappa Psi was held at the LaSalle Hotel Friday evening, March 20.

At the November meeting of the Illinois Board of Pharmacy three senior students, J. C. Garrity, P. J. Gouwens and Wm. Garside became licensed pharmacists. At the January meeting three more, Harry Goldstine, H. E. Johnson and R. W. Merschatt qualified for the R. P. paper. This is a creditable showing for the class, but resulted in the loss of three students, Messrs. Gouwens, Goldstine and Garside, who left school to engage in business.

#### Buffalo College of Pharmacy.

The second annual alumni dinner of the Rochester district for the graduates of the Buffalo College of Pharmacy living in that section of the State of New York was held at the Powers Hotel. Five members of the faculty went on from Buffalo, headed by Dean Gregory. The others were Prof. A. P. Sy, and Instructors Richard F. Morgan, Charles H. Gauger and Ray M. Stanley. Some important questions were discussed, among others the Sunday closing of drug stores. On this topic there seemed to be a general willingness to close if other mercantile establishments were also prevented from doing business. The total attendance was about 30. At the conclusion of the meeting F. M. Kline was elected president and George M. Gilbert treasurer, and a committee to make the necessary arrangements for next year's meeting and dinner.

The second annual banquet of the alumni of this college was held at the "Yates" Hotel, Syracuse, N. Y. The city itself furnished something less than one-half of the attendance, the others coming from surrounding towns, some journeying from as far as Oswego and even Watertown. There were present from the faculty Dr. Willis G. Gregory, dean of the college; A. P. Sy, professor of chemistry, and Frank E. Lock, professor of pharmacology. After a fine spread the toast-

master, Herbert G. Wright, introduced the toast list with a humorous speech. The other speakers bandied each other with jokes and stories and a most enjoyable evening was spent by all present. The committee in charge of the affair was Cedric P. Wells, chairman; Seymour H. Bliss and Pascal Lansing Gilson. There were present as guests Warren L. Bradt, secretary of the State Board of Pharmacy, who spoke on "Drug Store Conditions in New York State," and Wayne B. Bissell, member of the State Board of Pharmacy, who spoke on "The Condition of Pharmacy in Syracuse." To secure a repetition of this happy event a permanent organization was effected with Herbert G. Wright as president and Cedric P. Wells as treasurer.

#### College of Pharmacy, Iowa State University.

Phi Delta Chi has initiated G. E. Mace, '15, of Washington; E. W. Headington, '15, of Des Moines, and C. E. Jacobs, '14, of Iowa City.

F. W. Bahnsen, of the firm of Hartz & Bahnsen, wholesale druggists of Rock Island, Ill., gave a most instructive and entertaining talk to the students of the College recently, emphasizing the opportunities of the present and the qualities necessary for success in the drug business.

The Mortar and Pestle Society has elected the following officers: President, Elsie Campbell, of Clinton; vice-president, G. E. Mace, of Washington; secretary-treasurer, Susan Blake, of Fort Dodge. Following the election, Prof. R. A. Kuever and Prof. Zada M. Cooper gave a spread to the members present. At the February meeting Miss Maude Wieland read a paper on "Advertising," using many advertisements as illustrations, among them some furnished by Mr. Harwood, of the University publicity department and secretary of the Associated Advertising Clubs of Iowa.

Mr. Curwen, of Gerts, Lombard & Co., of Chicago, gave one of the most interesting and instructive lectures ever given at the college, Feb. 14, on the subject of brushes, their manufacture and sale. Mr. Curwen illustrated his lecture by samples from stock. It is generally conceded that Mr. Curwen is one of the best posted and most successful salesmen of brushes on the road and advantage was taken of the opportunity by many of the druggists of Iowa City to hear him.

#### St. Louis C. of P. Alumni's Election.

Jerome A. Wilkerson was elected president of the Alumni Association of the St. Louis College of Pharmacy at the recent election. Mr. Wilkerson is vice-president of the J. A. Pautey drug store, 14th and Madison streets. He is also president of the St. Louis branch of the American Pharmaceutical Association and secretary of the St. Louis Drug Club. Mr. Wilkerson is only 25 years old.

Other alumni officers elected were: Carl T. Buehler, vice-president; E. A. Sennewald, field secretary of the R.D.A., 2d vice-president; Martin J. Noll, recording secretary; A. S. Benz, corresponding secretary; Ben Griesedieck, registrar. The board: W. C. Bolm, William Tritschler, Dr. W. D. Aufderheide, A. S. Ludwig and Otto C. Hanser. The election and the installation of officers was held at the College of Pharmacy.

A banquet at Lippe's followed, at which W. C. Bolm was toastmaster.

Addresses were made by officers, retiring and new, and by W. D. Delkeskamp, president of the St. Louis Drug Club; H. O. A. Huegel, member of the committee on the Golden Jubilee of the St. Louis College of Pharmacy, and Dr. Henry M. Whelpley.

This is to be an exceptionally important year for the alumni. The St. Louis College of Pharmacy will celebrate its 50th anniversary with an elaborate programme next November, when men prominent in pharmacy from all sections of the country are expected to visit St. Louis.

#### Massachusetts College Alumni Banquet.

The 45th annual meeting and dinner of the Alumni Association of the Massachusetts College of Pharmacy was held at the American House, Boston, with an attendance of 60 members. President William H. Acheson presided. Officers for the ensuing year were elected as follows: Prof. Elie H. LaPierre, president; R. Albro Newton, 1st vice-president; G. W. Russell, 2d vice-president; T. J. Connors, 3d vice-president; Leon A. Thompson, secretary; John Glancy, treasurer; Howard A. Smith, auditor; Dr. Frank Piper, Dr. Alfred

Balch, Dr. T. J. O'Brien, Edward Stacy and Paul C. Klein, executive council.

#### Creighton College of Pharmacy.

The senior class of the Creighton College of Pharmacy held its annual banquet at the Hotel Loyal with the entire class of 60 members present. Those of the faculty in attendance and who gave brief talks to the graduates were I. C. Arledge, dean of the pharmacy department; Rev. W. P. Whelan, S.J., supervisor of the professional departments; Messrs J. E. O'Brien, J. C. Forbing, Floyd Harley, Floyd Marshall and Dr. H. F. Gerald. C. B. Fricke, formerly a faculty member, now a druggist in Council Bluffs, and Dean Paul Martin, of the law college.

Forty-five diplomas conferring the degree of "Graduate of Pharmacy" were conferred by President Eugene A. Magevney, S.J., at the annual commencement exercises of the senior class of the pharmacy department.

The conferring of degrees followed an interesting programme by the university orchestra, the glee club double quartet, and a piano solo by Frank W. Hodek, pharmacy student, and pianist for the glee club.

Anson H. Bigelow, member of the faculty of the law department, was the speaker of the evening. "Service to One's Fellowman" was the theme he emphasized. In the class roll are two women, Mrs. E. L. Rolph, of South Omaha, and Miss Genevieve L. Hayes, of Franklin, Neb. Both were among the 15 honor students of the class, who averaged 90 per cent. or better for their 14 months' work, and were accordingly not required to take the final school examination.

#### Brooklyn Drug Clerks Prefer Pharmacy Act.

At a joint meeting of the Alumni Association and the student body of the Brooklyn College of Pharmacy, held at the college building, the following resolutions were adopted, drug clerks and students only, voting:

*Resolved*, That the drug clerks be exempt from all labor laws and that the Pharmacy Act alone shall govern the working hours of employees in a pharmacy.

*Resolved*, That we petition the New York State Pharmaceutical Association to secure the amendment of the Pharmacy Act as follows:

A drug clerk shall have at least every alternate Sunday off, *all day*, and from noon on one (1) week day in *each week*.

Those present at the meeting summed up their position to the effect that they wished to come under the provisions of the Pharmacy Act and not under those of the Labor law.

#### University of Minnesota School of Pharmacy.

The new school of pharmacy building at the University of Minnesota was dedicated by President George E. Vincent. More than 200 members of the Minnesota State Pharmaceutical Association, faculty members and students attended the exercises. Addresses were made by Dr. Fred J. Wulling, dean of the college of pharmacy; Prof. J. P. Remington, of Philadelphia, and Arthur Donrohr, of Winona. The new building is four stories in height and cost \$125,000.

#### Philadelphia C. of P.

E. H. Cone, of Atlanta, Ga., delivered a talk on "Modern Pharmacy and How to Make It a Financial Success" to the Senior Class of the Philadelphia College of Pharmacy, recently. Mr. Cone defined advertising as being salesmanship on paper. He divided retail drug-store advertising into three kinds. These are: Outdoor, including billboards and street cars; direct, including hand-bills, circular letters, etc.; and newspapers. For outdoor advertising the retail druggist's storefront is the best and cheapest. He advocated the use of catchy slogans and such things as will give the store an individuality. As an example of the latter he mentioned that he used a purple wrapping paper for his store, but that in a short time other merchants used the same paper. To this he put an instant stop by advertising that "The Purple Package Comes from Cone's." When a merchant wishes to get new business he should at first try to get that which is easiest, and this is always that business which passes a merchant's front door. Mr. Cone emphasized the fact that unless you give service advertising is a needless waste of money. He claimed that the secret in holding a customer's trade was to give every one individual attention so far as practical and, above all, acknowl-

edge every customer when he or she steps up to the counter. Mr. Cone displayed a number of very catchy placards and also some lantern slides which he used with success in local moving-pictures shows. His best-paying advertisement has been a neat booklet which he changes monthly and mails to every charge customer, assuring himself in every case that it is mailed to his customer's home and not the office, where it would undoubtedly find its way to the waste basket.

The ninth special lecture was delivered at the college March 9, by Dr. John T. Anderson, director of the Hygienic Laboratory, United States Public Health Service, on "The U. S. Public Health Service and What It Is Doing for the Public Health." He said that the service was a part of the Treasury Department, its origin being in the Marine Hospital Service. It has gone through successive stages of advancement and development until now it is composed of seven divisions, each in charge of an assistant Surgeon-General. The Service has a personnel of 2,000 men; of these 450 are physicians and 50 are pharmacists. The Service concerns the pharmacist, particularly by reason of the work it does in the standardization of drug products and its co-operation with the U. S. P. and N. F. Revision Committees. The Service maintains a number of hospitals throughout the United States and Insular possessions. These hospitals take care of newly arrived immigrants, although certain ones conduct investigations as to the cause, cure and control of diseases, such as trachoma, leprosy, typhoid and yellow fever, pellagra, malaria, small-pox and bubonic plague.

An interesting talk on "Drug Store Advertising" was given at the college by M. P. Gould, of New York City, who said that the hardest problem for a business man was to know when not to advertise. It is a waste of money to advertise when business is dull. The right time to advertise is when business is naturally increasing, then continuing when business drops off instead of treating advertising as a luxury and eliminating it. Advertising is a method of selling, a trade accelerator and also the cheapest form of salesmanship. In selecting a store good judgment is necessary, so that it will be a store capable of being advertised. A good drug store requires four things: (1) Proper location of store; (2) right kind of store to fit location; (3) right stock for the trade; (4) good clerks. The least of a drug clerk's duties should be the actual handling of merchandise and the most of the duties should be the understanding of human nature. This is something which must be learned by instinct and cannot be obtained from books. Before advertising any business, that business should have done something worth while talking about. After these remarks Mr. Gould offered to answer any questions relating to the subject and several interesting discussions resulted.

The "Pennsylvania Dutch" Club, composed of P. C. P. students, had their first annual banquet March 9. The officers of the club are: "Johann" Hoffman, president; "Heinie" Heckenberger, vice-president; "Karl" Kutteroff, treasurer, and "Villie" Rupp, secretary. The affair was conducted in "Pennsylvania Dutch" style. Thirty members attended. After all had filled themselves to their capacity the evening was spent in making speeches and telling stories in their favorite tongue. "Pennsylvania Dutch."

#### College of Pharmacy, University of New Jersey.

The third of the special lectures on "Prescriptions 3000 Years Old," delivered at the College of Pharmacy of the University of the State of New Jersey in Jersey City was of unusual interest. It was delivered by Dr. Felix Von Oefele, of New York City, who is a recognized authority on medicine and pharmacy of old Egypt, Babylonia and Assyria. Dr. Oefele had received two stone tablets from Yale University containing cuneiform inscriptions which are probably some of the oldest prescriptions in the world. In his lecture, the speaker gave an outline of medicine and pharmacy in Egypt, and especially in Babylonia, which was the seat of culture and science in that early period. Dr. Oefele has made the study of cuneiform script as well as that of hieratics and hieroglyphs a specialty and showed a number of records dating back to 1500 B. C. The lecture was well received by members of the faculty and by the post-graduate and senior classes and by pharmacists and physicians as well as the public of Jersey City. Dr. Von Oefele was given a vote of thanks for his lecture which he promised to continue in the near future.

#### The Largest Drug Store in Iowa.

The largest drug store in Iowa is probably the most undiscovered drug store in Iowa. It is located in the University of Iowa hospital at Iowa City, and serves not only the patients in the hospital and the out-clinics, but it also serves as a practical training ground for the seniors in the university's College of Pharmacy. During the year just ended more than 45,000 drug orders were filled by these seniors under the direction of Prof. R. A. Kuever. This dispensary was installed a year ago and has been so successful that it will be increased in size this Spring. On an average, over 125 drug orders are filled each day including Sundays. Of the antiseptic preparations, 100 barrels of mercuric chloride—a total of 5000 gallons—were used, enough to supply 100 of the ordinary drug stores in Iowa for one year. More than 500 gallons of hydrogen peroxide were also used. Among the great hospitals in the United States there are few which have the dispensary facilities now in operation at the university hospital. Probably none excel in such facilities. The dispensary is a means of saving the State of Iowa from 25 to 50 per cent. on all materials used. Incidentally, it is a means of training thoroughly the senior pharmacists in practical work.

#### Valparaiso University, Department of Pharmacy.

The Pharmaceutical Association has elected the following officers: Geo. Hugi, president; H. L. Mayo, vice-president; Max Meyer, secretary; D. D. Hite, treasurer.

Following the election of officers J. M. Barrett, of the N. A. R. D., gave a very interesting talk on "Co-operation and Legislation," pointing out the many instances where co-operation of the druggists gave him very large returns, and by working together the druggist could have the laws of his State, in regard to drugs, drug selling, etc., made to suit himself; and if he did not work in harmony with the other brother druggists he could gain nothing. He related the number of laws the Indiana legislative committee got through the druggists and the number they had fought and defeated; for instance, the law of a doctor practicing 10 years in the State of Indiana would be registered a druggist on application to the board of examiners without examination. The bill was defeated through the good work of the Indiana legislative committee, of which J. M. Barrett is chairman.

#### University of Maryland.

The Department of Pharmacy, University of Maryland, at Baltimore, has decided to put a baseball team into the field this Spring, the officers elected being as follows: President, Sterling; vice-president, H. C. Brooks; secretary, B. Kellogg; captain, H. C. Brooks, and manager, J. F. McCleary. The players who desire to try out for the nine included Brooks, of last year's university team; J. Morgan, of Columbus, S. C.; Kellogg, of the Cumberland Athletic Club; F. Lee, of the Danville High School; Jacobs, of the Chase Athletic Club; Carroll, of Loyola; Brickman, of Ruxton; S. Rodnas, of the Cuban High School; Musgrove, of the Young Men's Athletic Association; Auston, of the Polytechnic Institute of Baltimore; O. Benner, J. McCleary, S. Demarco, Patterson, A. Wordan, Wolfe, B. Parlett and Roderic.

#### Closing of Drug Store P. O. Sub-Stations Opposed.

The Clerks in Charge Association, said to represent 150 retail druggists in whose stores are the numbered sub-stations of the local post-office, has protested to Acting Postmaster Woods and Representative Calder against the proposition that the numbered stations be closed and that 16 carrier stations be established in place of the former. The association has also applied for a minimum yearly wage of \$800 for each clerk. The services of an assistant at \$500 per year in a few of the busiest stores where mail is handled is another contention. This appeal is based upon the work the clerks have done gratis in the parcel post department.

#### Southern College of Pharmacy.

Thirty-three students of the Southern College of Pharmacy received diplomas at the commencement exercises of the college at the Atlanta Theater recently. Dr. Dunbar H. Ogden, pastor of the Central Presbyterian Church, delivered the commencement address. Thomas H. Jeffries, chairman of the board of trustees, conferred the diplomas.

# BOARD EXAMINATIONS

## Kansas.

ELLSWORTH, March 20.—The fourth quarterly meeting of the State Board of Pharmacy was held in Wichita, Feb. 11 and 12, at which time there were 47 applicants in attendance for the examinations. Of this number 25 were successful and received certificates as follows:

Pharmacists—H. J. Woodford, Topeka; Arthur P. Davis, Greenburg; Lawrence M. Wimmer, Liberal; Karl R. Ziegelsch, Salina; L. B. Smythe, Holton; Lance C. Hill, Lawrence; G. Allan Hibbard, Medicine Lodge; Errett E. Phillips, Marion; Elsie Loyd, Ft. Scott; Clifford Brockhoff, Hiawatha; Stanly Meyers, Concordia; Glen Reck, Norton; Phil Sherwood, Sabetha; Robert E. Sydenstricker, Dodge City; C. A. Redmond, Topeka; W. T. Garvie, Topeka; Vernon V. Vliet, Wichita; Fred Darville, Hiawatha; Frank Pedroja, Lincoln; Dale Mayswinkle, Kansas City; E. R. Whitney, Kansas City; Oscar Geyer, Herington; Robert Noll, Atchison; Carl C. Lappin, Mulvane. Assistant—Donald Fulton, Abilene.

The next quarterly meeting of the board will be held in Hutchinson, May 14 and 15.

## Louisiana.

NEW ORLEANS, March 20.—Seventeen students of pharmacy at Tulane qualified as registered pharmacists at a recent examination held before the examination committee of the Louisiana State Board of Pharmacy. They follow: Clifton P. Besse, Emile Jos. Burvant, Louis P. Bucksell, J. Maurice Broussard, Frank M. Callaghan, Louis B. Gaines, L. M. Hanemann, Oliver J. Hebert, A. B. McArthur, John B. Michon, Frank J. Nuccio, Paul J. Poche, Geo. P. Richards, M. W. Stewart, Louis A. Storkton, Herman Sprecht and E. Barton White. Qualified assistants—C. R. Breaux and Wm. Henry Grebe.

## Massachusetts.

BOSTON, March 20.—The Board of Registration in Pharmacy has issued certificates of registration to the following:

Charles L. Byron, Lynn; William D. Kelley, Cambridge; John E. Mesquita, Taunton; John F. O'Brien, Malden; Harold F. Clough, Framingham; Carl Albert Dahlen, Boston; Thomas Willard Burke, Quincy; George C. Fairhairn, Somerville; Nicholas E. Dyer, Boston; Edward G. Nagle, Brookline; Ross B. Perry, Dorchester.

Assistant certificates have been granted to the following: Joseph A. Bedard, New Bedford; Manuel J. Bettencourt, New Bedford; Charles H. Burnham, Wakefield; David Gorman, Worcester; Frederick J. Hogan, South Boston; Humphrey V. Minahan, Lawrence; William H. Quinlan, Taunton; George A. Riley, Roxley; William J. Feeley, New Bedford; Oscar C. Ayotte, Leominster; Irving H. Coffin, Edgartown; Edwin R. Greene, Attleboro; Francis J. McGuigan, No. Cambridge; John Reinhardt, Concord; Valentine F. Tristran, Lowell; Joseph A. Garry, Haverhill; Henry C. Blue, Boston; Paul Coen, Lynn; Harold A. Killela, Leominster; George L. LaMontagne, New Bedford; Thomas J. Loughlin, So. Boston; Frank A. Mahoney, New Bedford; Frank L. Manning, Fall River; Frank C. Moulton, Salem; Leo J. Podolsky, Roxbury; James A. Sweeney, Melrose; Robert A. Broughton, Springfield; Richard W. Daniels, Waltham; Max L. Dokton, Cambridge; John Firth, Jr., Springfield; Herbert B. Howard, Southboro; Joseph Rosen, New Bedford; Walter E. Young, Natick.

## New York.

ALBANY, March 20.—At the January examinations of the New York State Board of Pharmacy the following candidates were successful:

Pharmacists—Orval W. Lee, Stanley Hlavac, Harry Josephsberg, Louis Rothenberg, Harold L. Benton, Harry Flaxman, Elmer H. Hessler, Maurice Parelhoff, Arthur Sachs, Theodore M. Silverman, S. R. Merrill Bensen, William Dembling, William X. Gebele, Benjamin Ginsburg, Maximilian Nemes, Alfred G. Stadelmann, Samuel Katz, Jacob Moskowitz, Thomas J. Travers, Jacob M. Bloch, Jacob Davick, Matthew Blair, Jacob Joffe, Samuel Cohn, William F. Miller, Charles L. Gesell, James Feld, Nathan Leibell, William J. Rabinowitz, James A. Sussman, all of New York; Logan K. Palmatier, William M. Lithgow, Samuel Aker, Ignatius M. Rudminas, Ralph F. Spaulding, Archie W. Hyde, all of Albany; Ephraim E. Lisitzky, Irving C. Beischer, Roland J. Pettit, Michael Strozzi, Henry McHarg Clarke, Paul W. Jones, Russell K. Chrisman, Jacob Weinstein, Paul J. Swider, Lawrence F. Prouty, Albert R. Noy, Jr., all of Buffalo.

Druggists—Thomas E. Kinane, Edward A. Gurry, George Chicken, Donato Lamouaca, David L. Stewart, Martin C. Kerwin, Frank A. Lorzaw, Ettore De Fulgentiis, all of New York; Jacob Bernstein, Mary R. Hughey, Bessie May Judd, John D. Hakes, Wallace Ray Austin, Carl E. Bastian, Chester J. Borst, Neil E. Morgan, Jesse H. Dildine, Clare T. Getman, Lynn E. Akins, Claude T. Spaulding, Harry A. Tuller, Fred D. Delbridge, Fred R. Voorhes, Granville C. Scroxtton, Frank W. Tyler, Darwin D. Morey, Leo J. Kaminsky, Ellis E. Burdick, Joseph Algase, Henry W. Shoemaker, Lester E. J. Jorgerty, Hugh Judd, all of Buffalo; Stanley J. Fisher, John G. Van Nortwick, Raymond M. Ostrander, William D. Hyde, Herbert S. Underwood, Harold J. Smith, Roland R. O'Neil, Francis Le Roy Brower, Herbert E. Reynolds, Francis B. O'Neil, Francis Le Roy Ostrom, Edwin J. Payne, Roy Abernethy, Emanuel Brunt, Augustus T. McKinstry, Robert R. Ireland, Charles H. Koon, Paul A. Gallup, H. Curtis Grupe, David B. Ashton, all of Albany.

The number of penalties paid the board during the month of February, 1914, also the character of the violations, are as follows:

Adulterated and deficient prescriptions.....	7
Adulterated and deficient pharmacopoeial products....	13
Junior violations .....	4
Label violations .....	1
Methyl alcohol present.....	1
Sale of proscribed drugs.....	2

Total ..... 28 cases

## Oklahoma.

OKLAHOMA CITY, March 20.—At the regular meeting of the Oklahoma State Board of Pharmacy, at the Chamber of Commerce in Oklahoma City, for the examination of candidates for certificates as registered pharmacists, those making the required grade and securing certificates were:

J. B. Boyett, Stuart; Wm. L. Barber, Carlsbad, N. M.; J. L. Cherry, Tyrone; Nova B. Carroll, Cambridge, Neb.; Owen R. Dyar, Wray, Colo.; John W. Flynn, Frederick; Geo. A. Hibbard, Medicine Lodge, Kan.; G. Truman Ingalsbe, Onaga, Kan.; Geo. W. Jehlik, Wichita, Kan.; Miss Anna A. Kempin, Corning, Kan.; Wm. E. Montgomery, Norman; John T. Poe, Wilburton; E. E. Phillips, Blackwell; Lewis E. Roderick, Kingfisher; Chas. A. Ryoal, Okemah; John E. Sturdivant, Arnett; Vernon V. Vliet, Wichita, Kan.; Ray C. Woodson, Douglas, Kan.; Mrs. Nora M. Walker, Murray; John W. Wright, Collinsville; Thomas L. Warford, Higbee, Mo.

## Texas.

SAN ANTONIO, March 20.—At a meeting of the Texas Board of Pharmacy held in San Antonio, there were 47 applicants in waiting to take the examination. The following were successful, and certificates were ordered issued to them:

Leon C. Maner, Sweetwater; Valeriano Palomo, Laredo; Willie P. Woody, Galveston; L. R. Stachowiak, Galveston; W. Ira Jones, Galveston; E. S. Kuykendall, Llano; Chester C. Currie, Galveston; Thomas C. Boucher, Galveston; J. M. Fletcher, Jr., Dallas; J. A. McInnis, Llano; John R. Oates, Baskell; Jose L. Calderoni, Brownsville; S. A. Hoerster, Galveston; Harry Deathe, Dallas; B. B. Lewis, San Antonio; W. E. Dickinson, Fort Sam Houston; R. E. Finley, Blackwell; A. W. Loeffler, Galveston; Henry M. Ryan, San Antonio; Henry M. Barkley, Galveston; Alonzo G. Hervey, Galveston; J. L. Grant, Floresville.

Houston was selected as the next meeting-place, and the date was set as May 19.

## Vermont.

ST. ALBANS, March 20.—Recent applications for registration as pharmacists who have been granted certificates were: Registered pharmacist, F. E. Libbey, Rutland; Warden E. Lampman, Hyde Park, Mass.; assistant pharmacist, Edgar T. Holden, Proctor; Gerald P. Hudson, Quechee; Arthur St. Pierre, North Cambridge, Mass.

## NEWS FROM THE BOARDS.

The new Alaska Pharmacy law, which was approved April 26, 1913, is similar in many of its provisions to the pharmacy laws of California, Oregon and Washington.

The Governor appoints the members of the Alaska Territorial Board of Pharmacy, two for each of the four judicial divisions, for one, two, three and four years. The law makes it unlawful to compound or dispense drugs, medicines or poisons, or to conduct a pharmacy or a drug store, wholesale or retail, unless the person in charge shall have been registered by the Alaska Territorial Board of Pharmacy. In order to become a registered pharmacist in Alaska a person must be either a graduate or a licentiate in pharmacy or able to pass a satisfactory examination before the Territorial board. Examinations are held, at least, semi-annually. The board is disinclined to recognize any certificates from State boards or diplomas from colleges of pharmacy without examination until it shall be in a position to reciprocate with the other State boards. The present board of pharmacy is made up of the following: 1st division, Wm. E. Britt, Juneau; Floyd E. Ryus, Ketchikan; 2d division, W. B. Kirk, Nome; William Ramsey, Council; 3d division, Wm. H. Caswell, Valdez; E. V. Boyle, Cordova; 4th division, F. M. Dunham, Fairbanks; R. T. Kubon, Fairbanks. The officers of the board are: President, William Britt, Juneau; vice-president, William H. Caswell, Valdez; Floyd E. Ryus, secretary and treasurer.

The Indiana State Board of Registration and Examination in Pharmacy has begun an extensive investigation in all parts of the State of reported illegal sales of habit-forming drugs and of intoxicating liquors. The Indianapolis police department also has begun a searching investigation of alleged illegal sales of habit-forming drugs in that city. Under the system of monthly reports from wholesalers, jobbers and manufacturers, the State board can easily trace the sales of morphine, cocaine, etc.

That 10 of the 30 successful candidates for licenses as registered pharmacists made up a "jack pot" of \$300, and bought copies of the examination questions given by the Iowa State Board of Pharmacy in its regular test on Jan. 21, were the charges which aroused the Iowa State Attorney and which led to several arrests. The leak was traced directly to the linotype operator in the State printing office where the questions were handled, and later

W. E. BRITT

the apparatus owner by having bought the questions through a middleman at a cost ranging from \$10 to \$35 each. One of the "middle men," a clerk in a Des Moines drug store, was fined \$50; the prime mover in the fraud was fined \$125, while the linotype operator was only collected \$12.50 for his share of the spoils—was fined \$5.

Six passes, every record made for 12 years—and perhaps for a longer period. Sister Ernesta Minder, one of the pharmaceutical staff of St. John's Hospital, Springfield, Ill., furnished the examinations for the grade of assistant pharmacist at the February session of the Illinois State Board of Pharmacy with the remarkable score of 50 points out of a possible 600. These points, as given out by Secretary Fred C. Dodds, of the State Board of Pharmacy, were distributed as follows: Pharmaceutical and chemical problems, 90; chemistry, 100; pharmacy, 97; materia medica, 98; dispensing, 28; oral, 88; average, 93 1/3.

But 2 out of 68 test prescriptions, distributed among New Orleans druggists, by the Louisiana State Board of Health, were made accurately, according to the report of the State Analyst and his assistant to the State board. The prescription called for 2 gr. boric acid and 2 ounces of distilled water. The prices obtained for this prescription varied from 5 to 50 cents, with the higher prices predominating. The druggists failing to fill the prescription properly were called upon for an explanation, and the result was surprising, as the majority blamed their scales. One very frank individual admitted that he had no weight smaller than 4 grains in his place of business.

The Kentucky Board of Pharmacy, in its annual report just issued, charges that violations of the law regulating the sale of cocaine in that city, make it impossible to suppress the vice in Louisville. The board says: "It is a source of the deepest regret that violations of the law continue without abatement in the territory just across the Ohio river from Louisville, and while this condition exists it is obviously impossible to successfully suppress the use of the drug in Louisville. That the State of Indiana will persistently permit this condition to exist in the face of the most positive evidence of these violations, is exceedingly discouraging. Cocaine is still being sold in New Albany, evidence again having been obtained. The facts were turned over to the Indiana board, but no action has been taken. Energetic disclaimers have been made by Indiana authorities since the publication of this report.

Secretary W. W. Ellis, of the Mississippi State Board of Pharmacy, has given official notice that the next examination held by the State Board of Pharmacy will be at Jackson, April 17.

David E. Hadden, chairman of the Iowa State Pharmacy Commission, has announced that the board is about to wage a legal war against dealers who offer for sale toilet preparations which contain alcohol. An investigation of the sale of drugs by mail has been going on for months with the result that the board has secured a great deal of evidence, and it is stated that a number of firms which do a large mail order business in that State will be prosecuted.

W. P. Thomason, of Guntersville, and W. E. Bingham, of Tuscaloosa, both members of the Alabama State Board of Pharmacy, are stirring up the Birmingham officials to put an end to the illegal drug traffic in that city. Mr. Bingham stated after a conference with the police department: "Birmingham is a great center of the traffic. We heard evidence of one negro woman who has bought about \$10 worth of the drugs each day and peddled them out. Birmingham supplies most of the drugs for the State and for a large part of the territory between here and New Orleans. There is some evidence to indicate that there are several illegal doctors in Birmingham who are writing prescriptions for drugs for those who should not have it. There is a law whereby a doctor can write a prescription for a drug for a habitual user, but this is very much abused. The campaign which has been started is bearing results, and with the co-operation of the various officials, we believe that the traffic can be stopped to a large extent."

## Gathered in Philadelphia.

**A** GREAT many changes have taken place in the numerous branches of H. K. Mulford Co., of Philadelphia. Vice-President Mulford, in speaking of the aspect for 1914, says: "This is going to be the greatest year in the career of our company. This can be verified by simply looking over the daily sales reports of the branch houses, which show very few days in the past months of the present year that have fallen below the corresponding day in 1913." Among the changes are the following: L. C. Nichols, formerly with J. Wyeth & Bros., of Cleveland, is Detroit representative. H. L. Chapman, formerly in charge of the Denver branch, has been transferred to Cleveland, and the office in Denver has been filled by Frank Griebbling. H. H. Whyte, sales manager of the company, is now on an extended tour of the Middle West and Pacific Coast. Secretary E. V. Pechin has just returned from a month's trip through the South. C. Knox, formerly in charge of the Central American trade, has been made general manager of the Spanish Export department with headquarters in Philadelphia. F. L. Magnuson, for several months the Western New York representative, has been transferred to the West Virginia territory with headquarters at Wheeling. H. A. Smith, of the Spanish-American sales force, has been assigned Pennsylvania territory with offices in Pittsburgh. Dr. C. F. Kirken-

dall, for several years the local representative in Cincinnati, is with the New York City branch. New additions to the forces are: Thomas J. Ahern, for the past 11 years retail manager of the Kapely Drug Company, at Hartford, Conn.; T. R. Heller, of Wilkes-Barre, Pa.; Dr. C. W. Phillipy, formerly in the service of the State Board of Agriculture, as special representative on Nitro-Germ; Dr. C. A. Noiret, late of the Public Health and Marine Hospital Service in Cuba, has entered the company's service in Alabama, with headquarters at Montgomery. The company's ranks, while thought to be intact, were visited by cupid. The victim was J. Munro, manager of the Mexico City branch, who took advantage of the opportunity to leave Mexico and journey to New York, where he was married to Miss Ellen Brooman White, of New York City.

Two of Philadelphia's most prominent wholesale druggists have been selected to serve on the standing committee of the Philadelphia Chamber of Commerce. H. K. Mulford, vice-president of the H. K. Mulford Co., is on the harbor and navigation committee, and the banking and currency committee, and Harry B. French, president of the Smith, Kline & French Co., is chairman of the municipal affairs committee.

It is feared that Edwin F. Gray, formerly a student at the Medico-Chirurgical College and a resident of Philadelphia, has been put to death by the rebel forces during the present Mexican trouble. Mr. Gray, whose residence is at 3623 North Ninth street, formerly conducted a drug store in Philadelphia, but when the Spanish-American War broke out he enlisted in the navy and since that time has been a soldier of fortune.

## Twentieth Century Merchandizing.

**T**HOMAS V. WOOTEN, former secretary of the N.A.R.D. and now secretary-treasurer of the International Association of Rexall Clubs, gave an address recently before the Boston Y.M.C.U. class on business efficiency and salesmanship, that was an eye-opener. He urged all druggists to get away from the idea of serving only that part of the population that is sick and whose incomes are consequently reduced, and to cater for the other nineteen-twentieths who are well and prosperous. The lecture was illustrated with a display of goods furnished by the United Drug Co., which converted the stage of Union Hall into a modern drug store. Mr. Wooten said in part:

"We are going to tell how we can change an ordinary druggist into a 20th century drug merchandiser by means of making him a stockholder in our company and getting him to do things in the Rexall way. We bring this about, of course, by disillusioning him in respect to his own future, because the average druggist has been taking a losing trick so long that he is discouraged.

"We show him that he must serve the whole population instead of the one-twentieth of the population, that is sick. He has chosen the one-twentieth of the population, who are sick and whose incomes are reduced. He must take in addition to this twentieth the other nineteen-twentieths, who have money to burn in their pockets. The drug business has possibilities which there is only one way to realize, the 20th century merchandising method.

"He must make a transformation in his own business by getting out and pushing instead of waiting for business to come to him. He must get back from the department stores the business which they have taken away from him by their superior methods. He must give better service than anybody else, so that when it comes to a race between himself and other people who are handling the same line of goods, he must stand in the forefront by his satisfactory equipment, and by his method of doing business.

"Our salesmen will sell to an ordinary druggist the Rexall proposition and then about two years later we will find out what changes have taken place in his business from the man's own lips. He will be asked to come to the meeting of the State Rexall Club, an organization which is formed for the purpose of mutual interchange of experiences on the part of these successful merchandisers, the Rexallites of the State. At this meeting, two years after he has taken on the proposition, the druggist will discuss with the club his ideas of the Rexall Club work and his own experiences from the time that he was a hopeless ethical druggist to the time when he had become a successful drug merchandiser."

# TRADE SECTION

## The Sale of Candy in Drug Stores.\*

By WILLIAM A. ROBINSON,

Manager of the factory of the Druggists' Mfg. Association.

WEBSTER gives the following definitions of the word "Drug": 1. "An ingredient used in medicine." 2. "A narcotic." 3. "An unsalable article."

Undoubtedly all of these definitions are correct, and I am of the opinion that it takes considerable merchandising ability to convert a knowledge of drugs and the legitimate pursuit of the drug business into sufficient cash to pay the rent and leave a balance on the right side of the ledger without material assistance from some outside source. To be sure, the druggist deals in sundry items, such as hot water bottles, on which the customer wants a 12-months' guarantee, tooth-brushes guaranteed to last indefinitely, unbreakable combs which are promptly returned to him if broken, no matter how, and numberless other items, all either lasting indefinitely, or supposed to.

The druggist, to pay the enormous rents for which he obligates himself to obtain preferred positions, must cast about him for some quick-moving merchandise to help meet these obligations, and my belief is that candy is the best possible medium for this purpose. It takes very little of his valuable merchandising space, is easily obtained and with very little special preparation can be attractively displayed. A candy stock can be made to turn itself from 15 to 25 times per year and at a very satisfactory profit each time. Take the usual course of a sale of a pound of candy. The buyer takes it home and no more than gets into the house before the suspicious bulge in his pocket is noted and at once demand is made on him for it. Immediately thereafter consumption begins and satisfaction comes only when the bottom of the box appears. There is no guarantee as to its lasting qualities asked and none expected, the only stipulation being that it be good candy.

Practically all candy is good, the principal difference being in the manner of packing. I speak of the staple brands of regular manufacturers, not eliminating the much abused 29-cent package. This grade of candy when first put upon the market was undoubtedly of the 40-cent bulk grade, and properly used on Saturdays only as a potent advertising medium. Some of the less experienced druggists, however, did not have the nerve to turn down sales during the other six days of the week at 29 cents or make the customer pay the regular 40-cent price, with the result that they not only lost the advertising advantage, but lost money besides, and in trying to remedy this last defect began selling chocolates that were not only worth less than 40 cents per pound but were worth less than 29 cents. I personally believe the 29-cent Saturday special a good proposition, if correctly handled, but a bad one otherwise. I also believe that a retailer selling less than 100 pounds a week is wasting his time in handling it at all and is hurting his regular candy business.

Now in reference to the care of candy, especially chocolates. Did you ever stop to consider that the responsibility of the manufacturer ceases as to its care when you purchase his goods? The average silent salesman show case is fine for showing merchandise, but is a veritable hot-house and is constructed exactly like one. It is all glass, practically air-tight, and is very frequently directly in the path of sunlight some

part of the day. Why shouldn't it be hot; and if hot, why shouldn't it melt chocolates? This is very easily remedied, and some of the more progressive case manufacturers are making a ventilated show case for confectionery. You can easily remedy it yourselves by having a wire screen three or four inches wide placed on a frame at either end of your case, thus allowing a circulation of air over your goods. I am frequently asked, "How about chocolates in the Summer time?" The answer to this is easy. Don't sell them. Give your customers a rest and they will come back all the more hungry in the Fall. "Yes, that is fine, but I have the case, and don't want to go out of this branch of the business at all." To meet this I would say that there are lots of candies, other than chocolates, that can and do stand hot weather. I have in mind the 10-cent, 15-cent and 25-cent bottles of various hard candy sticks, balls, cuts, etc., gum drops in attractive packages, druggists' wafers, chewing gums and many others equally as good, all confectionery, and all profitable. With a little forethought and ordinary merchandising sense this department will pay the year round.

Now a few words about the manufacturing end of the business. The detail of one factory is much like another. The sugar is cooked, beaten into fondant, flavored, cast into centers, dipped into chocolate and packed into its various packages. All of this costs money, but from this point on the real expense begins to mount up, the principal item being printers' ink. Your customer doesn't eat this, but he pays for it. If you don't think so look over the advertising appropriations made by some of the larger houses. The second item of expense, in which some houses include their advertising appropriation, is the selling to the retailer. A good deal of this is caused by the retailer not having the courage of his convictions, or you might say by lack of loyalty to any one manufacturer or brand of goods. He wants to please each customer, giving each his special chosen brand of goods, thereby making his individual business of little value to any one manufacturer, or else he uses slipshod methods in buying, such as allowing his stock to become either too small or too large, both equally undesirable: or his desire to be a good fellow and buy from each good fellow that comes along necessarily makes his orders small, thereby increasing the proportionate cost of dealing with him. This item alone adds from 5% to 15% to the cost of goods, all of which must fall on the consumer or retailer, or both, a goodly portion of which would be eliminated if the retailer would use a little care in selecting his one or two lines and then buy them persistently and continuously so long as their standard was maintained, giving the manufacturer the co-operation and support to which he is entitled.

As I said before, the operation of making candy is one of detail only, and if you are satisfied with a house's business methods and product, help it and it will help you. The manufacturer has much to contend with, finances, labor, constant watchfulness as to cleanliness and sanitation, constant demands for new varieties of nuts, flavors, etc., constant watch of market conditions, for just the minute the source of supply finds their particular article being generally used, up goes the price, which must be met by either a satisfactory substitute or a new source of supply, attacks by sensational writers or newspapers and a thousand and one other items.

I want to speak specifically concerning sensational newspaper stories. The National Confectioners' Association maintains a committee, aided by a legal force, to hunt down the source of the stories generally headed, "Poisoned by eating candy," and in over one hundred cases investigated not a single one

\*A special lecture given at the Massachusetts College of Pharmacy on Jan. 9, 1914.

and the fact that in many cases the stories have been exaggerated.

Some time ago a representative of an allied industry came to Boston for the purpose of getting financial assistance from the New England confectioners to fight the then new Pennsylvania Pure Food Law. He was asked why we should fight it. His answer was, "So that you can sell your goods in that State." As we had formulated Pure Food Laws of our own in 1885, and since that time had been taken we could not see why we should fight it, and did not contribute, and to my knowledge there have been but two convictions of New England confectioners and these both on technicalities. I consider this more than remarkable when there was last year over \$400,000,000 of confectionery made in New England and sold the world over. These look like pretty large figures, but here are some larger ones, for the United States made last year 8,000,000 pounds of candy, 160,000,000 of which were made in New England, giving employment to between 35,000 and 40,000 people.

I might go on to tell you the difference between cocoas that come from different countries. Why especially dark, sweet cocoas can only become so by either burning or coloring during the process of converting it into coating, why the supply is not increasing with the demand, and many more of the so-called secrets incident to the manufacture of chocolates, but I fear I might be criticised by some of my fellow manufacturers, so will close by saying it is an interesting subject and will be well worth the time spent in your college library that it will take to look it up.

### Parcels Post Pointers.

Here are a few tips for the benefit of druggists and their customers, and relating to the parcel post. Questions are often asked in regard to these minor matters, and definite knowledge on the points involved is valuable:

Books may be sent by parcel post on and after March 16, 1914. The rate of postage will be, for parcels weighing 8 ounces or less, 1 cent for each 2 ounces or fraction thereof, while on those weighing over 8 ounces the regular pound rates will apply.

In New York City, uninsured parcels weighing 4 ounces or less may be mailed at the ordinary package boxes, and at all numbered stations, as well as at the General Postoffice and carrier stations.

In measuring packages, it is simplest to use a six-foot tape line. Lay the tape along the greatest length of the parcel, and so much of the tape as is not used for the length represents the greatest girth permissible.

Articles classified as third-class matter may not be sent by parcel post. Photographs, circulars, cards, calendars, and other printed matter carry a rate of 1 cent for each 2 ounces or fraction thereof.

Parcels containing two or more classes of matter are chargeable with postage at the rate applicable to the highest class of matter included.

Parcels cannot be registered for domestic destinations, but may be insured.

To send parcels by special delivery, add 10 cents in stamps, or a special delivery stamp. If ordinary stamps are used, write "Special Delivery" on the package.

If parcels are to be sent as first-class matter, they should be sealed, or otherwise closed against inspection. Weight limit is 4 pounds.

Parcels must bear the name and address of the sender, preceded by the word "From." The address and name of sender may be written on tags, but should also appear on the wrapper of the package for use in case the tag is detached.

Permissible inclosures with parcels are invoices, showing the price, style, stock number, size, date of order, initials or name of salesman and checkers; directions for taking medicine written on labels attached to the bottle or package; printed matter descriptive of the article mailed; and a single order form, mainly in print, may be inclosed with a parcel.

The Boston Drug Company, with a capital of \$50,000, has been incorporated by John L. Richardson, George M. Parkner and William I. E'Hot.

## LEGAL DECISIONS

### Agency Contract or Absolute Sale.

**A**CTION was brought for goods sold and delivered, to recover for certain proprietary medicines alleged to have been sold by a proprietary medicine company to the defendant, Bates. The defendant Eastgate guaranteed the contract. The plaintiff was the owner by purchase from the receiver of the medicine company. The vital question in the case was whether the contract, which was in writing and complete in itself, was a contract of absolute sale, making Bates liable, upon its termination, for the stipulated price of the goods which he ordered.

The contract recited a desire on the part of Bates to purchase of the medicine company, on credit and at wholesale prices, for the purpose of selling again to consumers, certain medicines and other goods manufactured or distributed by the medicine company, paying his account in instalments as provided in the contract. Bates was to sell no other goods than those sold by the company, was to sell at retail prices fixed by the company, and was to pay on the basis of the wholesale prices fixed by the company. He was to remit to the company in cash each week an amount equal to one-half of the receipts of his business, of which he was to submit weekly reports. Upon the termination of the contract he was to settle in cash within a reasonable time the balance due the company on account. The company agreed to fill and deliver his reasonable orders, provided his account was in a satisfactory condition, and to charge current wholesale prices, and to notify him promptly of any change in wholesale or retail prices. It agreed to pay any license fee required by the State or county. It agreed to furnish advertising matter, reports and other blanks. It agreed to give, free of charge, instructions and advice by letter, bulletins, and otherwise, as to the best method of selling products to consumers. Bates and his guarantor were to be released from the contract at any time by paying in cash the balance due the company on account. The contract was to continue so long only as his account and amount of purchases were satisfactory to the company. Concurrently with this contract it was agreed, by another contract in writing, that so long as Bates worked continuously selling the company's medicines it would not sell to anyone else to peddle in Cottonwood county, Minn., but if the contract was terminated the company might sell as if the agreement had not been made. The so-called guaranty was a guaranty of "the honest and faithful performance of the said contract."

The court construed the contract not to be an absolute sale contract, making Bates liable for the wholesale price of merchandise unsold when the company terminated the contract, but to be in the nature of an agency contract, notwithstanding that it did not expressly provide for a return of the merchandise unsold. Judgment for the defendants was therefore affirmed. The court stated that it had found no case construing a contract precisely like this one. (*Barkerville vs. Bates*, Minnesota Supreme Court, 143 N. W. 909.)

### Void Ordinance Licensing Sellers of Soft Drinks—Recovery of License Fees Paid.

A firm of druggists in a city of the fourth class in Kentucky were engaged in selling soft drinks as a part of their business. In April, 1910, at the solicitation of a number of persons who were engaged in that business, or that desired to engage in it, in the city, the board of councilmen adopted an ordinance providing for licensing the sale of soft drinks in the city, fixing the license fee at \$200 per annum, payable quarterly. The firm in question obtained the required license, and continued to do business thereunder for 18 months, during which period they paid license fees aggregating \$300. In September, 1912, the firm brought action against the city to recover that sum, upon the ground that it had been paid through mistake, and collected without authority of law. The want of authority upon the part of the city to collect the license fee appeared, for the first time, shortly before the action was brought, when the firm discovered that the ordinance of April, 1910, was void, because the yeas and nays of the vote upon its adoption had not been recorded in the journal of the proceedings of the board of council.

The rule in most jurisdictions is that money paid under a mistake of fact can be recovered, but money paid under a mistake of law cannot be recovered. But it has long been settled in the Kentucky courts that in that State money paid under a mistake of law may be recovered. The court of appeals of the State upholds the wisdom of the Kentucky rule on the ground that one is as much more inclined to make a mistake of law than a mistake of fact. One of the modifications of the Kentucky rule, however, is that illegal taxes paid voluntarily may not be recovered; but, if they are paid under compulsion, which exists whenever they are collectible by summary process of fine and imprisonment, they come within the general rule and may be recovered. When taxes can be collected by suit only, and are voluntarily paid, an action to recover them cannot be brought. All the requisites of a compulsory payment appearing in this case, judgment for the defendants was reversed and the cause remanded for further proceedings consistent with the opinion of the appellate court. (*Spalding vs. City of Lebanon, Kentucky Court of Appeals, 160 S. W. 751.*)

#### Sale of Undivided Interest in Stock—Bulk Sales Law.

The sale of a half interest in a stock of goods by a merchant for the purpose of taking the vendee into partnership is held to be within the purpose and reason of the Tennessee Bulk Sales Law (Acts 1901, c. 133), requiring that notice shall be given to creditors, etc., since it very materially changes the relation of the vendor's creditors to the stock, if such sale is valid. Before the sale a creditor could levy upon the whole stock. After the sale, if valid, the creditor could not levy upon any of the stock, but only upon the vendor's interest in the whole, and in order to obtain this he would have to file a bill in equity and have an accounting with the new partner. So the former owner of the stock might admit three new persons into the business, and so reduce his own holding to a one-fourth interest, and so on as to small fractions—at the same time putting the proceeds into his own pocket and holding them beyond the reach of his creditors. (*Daly vs. Sumpter Drug Co., Tennessee Supreme Court, 155 S. W. 167.*)

#### Contract for Sale of Drug Store Fixtures.

An offer and acceptance for the sale of drug store fixtures were in the following form: "We propose to furnish and erect complete in your store at Charleston, W. Va., the following fixtures: 25-foot wall case (McLean style); 18-foot tincture shelving; 11-foot patent medicine case; 6-foot tobacco case and humidior; 6-foot mirror; 12-foot RX work counter; 12-foot RX partition; 18-foot 6-inch settee, upholstered in green leather; 7-foot 6-inch mirror above settee; 14-foot 6-inch "L" case; 36-foot cases; 5-foot wrapping counter, glass front and sliding floor; 10-foot laboratory table. Exposed parts of alcove in solid and veneered mahogany, all glass bevel plate and all mirrors No. 1 grade same, metal back; all cases to be all plate—plate shelves 10-inch marble base; finish—best quality, hard polished and rubbed. Complete plans, specifications and details to be submitted and approved by purchaser Price, \$2145. Bernard Glecker Co., per Leon Shipman. Accepted: Jas. A. Carr, Carr's Drug Store." In an action for damages for breach of the contract by the defendant, the defendant argued that until complete plans, specifications and details were submitted by the plaintiff and approved by the defendant, the contract was incomplete, not binding on, and therefore revocable by either of the parties. The court did not agree to that conclusion, because Carr did not give the plaintiff an opportunity to prepare and submit plans and specifications for his approval. Within an hour after accepting the order he arbitrarily sought to revoke it, assigning as the only reason that he had purchased the same fixtures from another company at a materially reduced offer. It was held that the contract was mutually binding on both parties, and that Carr could not revoke it. His refusal to take the fixtures in conformity with the contract was a breach thereof. The contract was not invalid because of the concluding clause thereof. It was sufficiently definite in description of the fixtures. (*Bernard Glecker Co. vs. Carr, West Virginia Court of Appeals, 79 S. E. 732.*)

The United Drug Co., of Massachusetts, a holding company for the New Jersey operating company, has declared quarterly dividends of 1 $\frac{3}{4}$  per cent. on preferred stock and 2 on common.

## DRUG LAWS AND RULINGS

**Caffeine Duty Affirmed.**—The Board of United States General Appraisers has affirmed the assessment by the Collector of the Port of New York, under paragraph 65 of the 1909 tariff, on caffeine imported by the National Aniline & Chemical Co. The board held that caffeine was properly classified as a "medicinal preparation not otherwise provided for," while the importers held it dutiable under paragraph 20 as coming under the class of drugs there enumerated. "It appears from the evidence," says General Appraiser Brown in his decision, "that it is used in medicine as a heart stimulant, and with bromide of soda and other chemicals as a headache cure. It also appears that it is made by soaking tea sweepings in water, then adding acetate of lead to throw out the tannin. This leaves an excess of lead, which in turn is removed by sulphide of hydrogen. The solution remaining is allowed to cool, a large flaky mass precipitating, which is known commercially as caffeine. It can also be made from coffee. This case comes within the principle established by the case of *Lehn & Fink vs. United States (T.D. 33522)*, decided May 26, 1913, wherein the Court of Customs Appeals says: "Paragraph 20 is limited by its terms to such natural, un compounded drugs as inedible barks, beans, berries, roots, etc., and does not extend to infusions, decoctions or extractions made from such substances."

**To Test Insecticide Statute in Ohio.**—George B. Kaufman, of the Kaufman-Lattimer wholesale drug firm, appeared before the Ohio State Agricultural Commission recently with his counsel, E. L. Taylor, to ask co-operation in a friendly suit to test the constitutionality of the Boggs law, which regulates the sale of insecticides and fungicides; and also the law which provides standards for stock feed. The suits are to be brought in the Franklin county courts. Members of the commission refused to enter the contest in a friendly relation, and stated that they believe the laws constitutional, and will attempt to uphold them. According to the provisions of this law a license fee of \$20 is required for each variety of insecticide carried by the druggist, and this would mean a yearly fee of something like \$14,000 from such firms as Kaufman-Lattimer and the large wholesale druggists, since there are some 700 of these preparations on the market. A personal visit of protest was made upon the Governor by Mr. Kaufman and by J. D. Price, of the Orr, Brown & Price Co., as soon as the law was passed.

**Telephone Drug Order Illegal.**—At the conclusion of a bitterly contested test case in the Massachusetts courts, based on the interpretation of the drug laws, a Boston magistrate has ruled that a telephoned order to a druggist by a physician for the sale of cocaine, morphine or opium is illegal. The defendant was Ernest Langley, a clerk employed by Frank J. McGarry, a Columbus avenue druggist, and he paid a fine of \$25. The point raised by the attorney for the defendant was that the law reads "upon the written prescription or order of a physician," and that the last four words applied to a telephone order as well as to a written one. The prosecution held that the stipulation "written" applied to both the "prescription" and the "order," and this reading of the statute was upheld by the magistrate.

**Drug Habit Growing in Georgia.**—The annual report of State Drug Inspector Dr. T. A. Cheatham, of Georgia, calls attention to the growing danger from the drug habit in the State, particularly among the negroes, and urges stringent methods to prevent the illegal sale of narcotics and particularly of cocaine. He reports a large number of druggists as violating the laws controlling the sale of narcotic drugs without the prescription of a reputable physician, and recommends social ostracism as a cure for those who are engaged in the business and who are successfully prosecuted. Arresting officers all agree that a negro under the influence of cocaine is much more dangerous than one under the influence of poor whiskey.

**Fitting a Truss Not Practicing Medicine.**—Fitting a truss is not "practicing medicine," according to a ruling by Judge Connolly, of Detroit, following which he instructed a jury to find in favor of Frank H. Seeley, a truss manufacturer, who was charged with violating the State medical law. Mr. Seeley sold a truss to a customer and fitted it to him. "If this

case constitutes a violation of the State medical law," said Judge Connolly. "You could just as well arrest a druggist for selling a toothbrush."

**To Make a Test of the Drug Law.**—E. Pickett, of Fresno, Cal., accused of selling drugs when not a licensed druggist, was arrested by a State drug inspector and held for trial. The constitutionality of the law under which the arrest was made will be tested. Seven other warrants for arrest of persons on similar charges were served later on seven other dealers; the articles sold were arnica and sweet spirits of nitre, quinine, pareg ric and iodine.

**Malt Liquor in Drug Store Evidence of Illegal Sales.**—Judge James E. Deery, of the Indianapolis city court, has held that a quantity of malt liquor found in a registered pharmacy is *prima facie* evidence of the operation of a "blind tiger." The decision was handed down in the case of Lee G. Nash, a registered pharmacist, who was fined \$50 and costs and sentenced to jail for 30 days.

**Drugs—Sale by Physician.**—The right of a physician to sell drugs without a prescription was considered in the Indiana case of *Niswonger vs. State*, 40 L.R.A. (N.S.) 1, which holds that a sale of cocaine by a duly licensed physician without a written prescription violates a statute making it unlawful for any person to sell cocaine except upon a written prescription of a duly licensed physician.

**Fined for Failure to File Prescriptions.**—A. H. George, a Cleveland (Ohio) druggist, has been fined \$1000 on two charges of failing to have prescriptions on file. His assistant was fined \$500 for selling morphine illegally. The arrest is a part of the campaign against illegal drug sellers in Cleveland, and is instigated by A. L. Flandermeyer, representative of the State Board of Pharmacy.

**To Prohibit Sale of Cocaine.**—An act providing that no person may have in his possession cocaine or any compound thereof, except upon written authorization of a physician, or unless authorized by law to have or use cocaine, has been introduced in the Rhode Island Legislature by Senator Pierce. The bill is aimed at the illegal trafficker in narcotics.

**Arrested for Displaying Red Cross Illegally.**—Leon Schatz, a druggist at Pratt and Bond streets, Baltimore, has been released on \$500 bail pending the action of the grand jury, on a charge of displaying the Red Cross illegally on three windows of his drug store. The offence is a violation of the State law.

**Ice Cream a Food.**—The Interstate Commerce Commission at Washington, on March 11, directed the express companies of the country to classify ice cream as an article of food, a ruling which will reduce the rates of carriage nearly 50 per cent. The companies have expressed a willingness to obey the order.

**Permits Granted Drug Habitues.**—Under the new anti-narcotic drug law in Tennessee which requires users of such drugs to take out permits it has been shown that there are more than 40 users in the city of Nashville alone, while more than 1000 permits have been granted in the entire State.

**To Prohibit Interstate Traffic in Fraudulent Medicines.**—Representative Frank T. O'Hair, of Illinois, has introduced in the National House a bill prohibiting interstate traffic in fraudulent medicines and surgical apparatus, and providing for the fine and imprisonment of offenders.

## MR. REHFUSS OPENS FIGHT FOR LOWER EXCISE

**Senator Whitney Introduces Bill Embodying His Suggestions—Provides for Lower Tax and Bond.**

AS an entering wedge in the movement to ameliorate the provisions of the present excise law which are needlessly burdensome to the retail pharmacist, Mr. Whitney has introduced into the New York State Senate Bill No. 1402, to amend the liquor tax law, in relation to the sale of alcohol by licensed pharmacists. After providing for the business of trafficking in alcohol in quantities of less than five gallons by dealers *who are not duly licensed pharmacists or duly licensed druggists*, the bill reads as follows:

*Upon the business of trafficking in alcohol in quantities of less than one gallon, for use for medicinal or scientific purposes, by duly licensed pharmacists and duly licensed druggists,*

*there is assessed an excise tax to be paid by every licensed pharmacist and licensed druggist engaged in such traffic the sum of five dollars.*

Under "bonds to be given," the bill provides:

*Provided, however, that a duly licensed pharmacist or duly licensed druggist who desires to traffic in alcohol in quantities of less than one gallon for medicinal and scientific purposes under subdivision six of section eight of this chapter, shall file a bond in the penal sum of one hundred dollars only, without surety or sureties.*

Jacob H. Rehffuss, president of the New York State Pharmaceutical Association, has fathered this particular effort to secure a reduction in the excise tax and bond required of pharmacist-dealers in alcohol. In a recent interview with an ERA representative, Mr. Rehffuss referred to the fact that organized pharmacy has been trying for years to separate the sale of liquor from that of drugs. The result has been that in the cities and towns few druggists engage in the liquor traffic, other than in the sale of pure alcohol, which is conceded to be a sick-room necessity and rarely used as a beverage.

"Pharmacists of this type feel that they ought not to be classified as retail liquor dealers along with the saloonkeepers. Nor should pharmacists be compelled to pay more than a nominal fee for the privilege of carrying on a business in pure alcohol." Mr. Rehffuss advocated a new classification to be known as "retail dealers in alcohol." An alcohol permit should be issued to such dealers permitting them to sell in quantities of less than one gallon, and not permitting them to sell any form of spirituous liquor. The annual fee for this permit should be five dollars and no bond should be required. The applicant should make out a sworn statement that he sells no other form of spirituous liquor.

Mr. Rehffuss summarized the situation to the effect that an alcohol permit, such as he proposed, would relieve the pharmacist of the burden of a bond which at present cost more than the license tax, the holder of such a bond would not have to be watched by the excise department for violations, the saloon interests should not object, since the establishment of a permit would place the liquor traffic into their hands, and the temperance people should not oppose its institution, since it would be a move toward the complete elimination of the sale of liquor in the drug store. The State revenue would not suffer, since many druggists at present do not take out the \$7.50 license, preferring not to sell alcohol, or to do so surreptitiously, rather than pay the State \$7.50 and a bonding company \$10 to \$12.50, as at present. In fact, the necessity of furnishing the bond is the druggist's chief objection to the entire matter.

## LEDERMAN IN CUSTODY OF CITY WARDEN.

**Justice Bijur Dismisses Writ of Habeas Corpus, Virtually Upholding Medical Society's Contention.**

Justice Bijur, in the Supreme Court, recently remanded Dr. Morris Lederman to the custody of the warden of the city prison and dismissed a writ of habeas corpus, thereby virtually upholding the contention of the New York County Medical Society that drug stores cannot legally advertise to write prescriptions and to diagnose diseases, even though they employ regularly licensed physicians. As was reported in the March ERA, Lederman was held by a magistrate on a charge of practicing medicine in violation of the Public Health law, in behalf of the Standard Pharmacy Co., 321 Bowery. Justice Bijur dismissed the writ of habeas corpus because he believed that the "relator holds himself out under his trade name as being able to diagnose and treat diseases, and offers and undertakes to do so." The justice did not render a direct decision on the holding of an office by a physician in connection with a drug store.

Justice Bijur stated that the doubts which he entertained as to the legal propriety of the advertisements might properly be resolved in the plaintiff's favor were it not for the card of free examination which read:

"Card for Free Examination, Medical and surgical office of the Standard Pharmacy Company, 321, 323 Bowery, corner 2d Street, New York. To the Doctor: Please make examination and give medical advice to bearer, who is now using....., and charge same to Standard Pharmacy Company, per..... Make no charge to holder of card."

## Eastman Co. Buys Right to Make Films.

*After 12-Year Contest in the Courts, Kodak Company was Held an Infringer on Rights of Original Inventor of the Photographic Film—Court of Appeals Allowed Time for Readjustment of the Business, But Stipulated Payment of 20 Per Cent. of Value of Films.*

WHAT is recognized as the most sweeping decision of recent years, affecting the right to manufacture a commodity in general use, and one handled by many drug stores—that relating to the ownership of the process of manufacturing films for cameras—was sustained March 18 by the United States Circuit Court of Appeals, Judge Coxe sitting. In his ruling the judge said: "After the almost unprecedented delays of this controversy we think the time has come when the complainant is entitled to prompt and adequate relief."

In 1887 the Rev. Hannibal B. Goodwin, of Newark, N. J., who in addition to his clerical labors was an enthusiast on the subject of photography, invented the gelatin film now in general use with cameras, and without which the moving-picture business would be impossible. The patent on the process was not, however, granted until 1898. The Rev. Mr. Goodwin died in 1901, and a year later action was commenced in the courts against the Eastman Kodak Co. as infringers. It was not until last September, however, that Judge Hazel, in the United States District Court at Buffalo, handed down the decision that the Eastman company had been infringing on the Goodwin patent. The Eastman company then asked that an injunction restraining them from manufacturing and selling the films be suspended for four months on the ground that the Eastman company had large quantities of the films manufactured, and some in process of manufacture, which they wished to dispose of, and further that such an injunction would interfere seriously with the business of photographers throughout the United States, as the "Eastman company alone was in a position to furnish the necessary supply."

In his decision Judge Coxe is in partial agreement with the contentions of the Eastman company: "Unquestionably it is for the interests of all, the public included, that the defendant should be permitted to complete the sales contracts and obligations now outstanding and adjust its own business to the changed situation, if this can be done without jeopardizing the interests of the complainant." He, therefore, makes special provisions for the continuance of the manufacture and sale of films by the Eastman company, but only on the condition that this company furnishes to the complainant a statement of its total sales of the infringing films made since the handing down of the decision by Judge Hazel, and pays the complainant 20 per cent. of the total value of such films. The litigation was, however, brought to an end March 27, by the payment of a substantial sum by the Eastman company to the Goodwin interests. All damages, claims, costs, etc., were wiped out, and the Eastman company was given the right to work under the patent. The judgment involved is understood to be between \$5,000,000 and \$25,000,000.

Millions of dollars were involved in the final accounting, as it is 13 years and two months since the inventor died in poverty, after the granting of his patent had been fought unsuccessfully for years by the Eastman company. When the suit was entered Mr. Goodwin was not able financially to fight it alone, and he sold part of his rights to the AnSCO company, of Binghamton, who brought a separate action. Mr. Goodwin's widow, now living in Newark, has a small interest in the company now owning the patent.

## LABOR LAW DOES NOT APPLY TO PHARMACISTS

**Frederick Haas Acquitted on Charge That He Did Not File Certificate—Judges Reverse Themselves.**

Judges Zeller, Russell and O'Keefe agreed in Special Sessions on March 25 with the contention of Charles A. Kalish, attorney for Frederick Haas, druggist, conducting stores at 28 West 38th street and 38 East 22d street, that pharmacy was a profession and that the New York State labor law was not intended to apply to any profession. Mr. Haas was charged with having failed to file the certificate required under Section 8A, subdivision 3, of the Labor law. Early in the trial the judges stated that there was no use of arguing the case as they had already made up their minds that the law applied to

druggists. Mr. Haas's attorney, who is also counsel for the German Apothecaries' Society, insisted upon the argument, and the judges changed their view and acquitted Mr. Haas.

Whether the above decision applies to all employees in a drug store in New York State is perhaps an open question. It would seem that the decision applies to all registered pharmacists and druggists. How the State Department of Labor will take the decision may prove of vital interest. It is understood that a conference of Department heads will be held in the very near future and the case may be contested in a higher court. At any rate, the Department may continue to prosecute druggists under the Labor law.

## FRAWLEY-BOYLAN BILLS PASS BOTH HOUSES.

**Illegal Sale or Possession of Cocaine a Felony in This State—Governor Pushes Boylan Measure.**

As the ERA goes to press the New York State Legislature has adjourned, having taken the following action on bills pertaining to pharmacy:

Frawley, making illegal possession or sale of cocaine, heroin, etc., a felony, instead of a misdemeanor, passed both houses and sent to the Governor for signature; Boylan, Board of Health special narcotic prescription blank measure, passed both houses; Blauvelt bichloride, killed; Walters, placing pharmacy back under pharmacy law, passed both houses. Governor Glynn requested, by special message, the passage of the Boylan bill. The Walters bill went through with an amendment protecting drug clerks against avaricious employers in the matter of alternate Sundays and their accustomed half-days off.

## Cherry Melba Sundae.

The J. Hungerford Smith Co., of Rochester, N. Y., requests us to call particular attention of the soda-fountain trade to their new product, Cherry Melba Sundae, and their Special Cherry Melba offer which is fully covered in their double-page announcement in this issue of the ERA. They claim that this Cherry Melba is one of the most delicious products they have ever produced and the reputation of this house for making high-class goods gives added weight to their statements. Soda-fountain owners looking for new specialties will find this worthy of their attention.

## French Medal for George Hall, of Boston.

For the first time in the history of this country an American has been honored with the decoration of Chevalier du Merite Agricole by the French government. It was voted to George Hall, head of the perfume department of the United Drug Co., by the French Senate, and was bestowed March 23 by M. J. C. Flamand, the French consul at Boston.

## Brooklyn C.P. Alumni Hold Annual Dinner at College

The Alumni Association of the Brooklyn College of Pharmacy held its annual dinner at the college building March 26. Dr. Stewart L. Walsh, Ex-Assemblyman George W. Wilson and Ex-Senator Dr. George W. Brush, all old-time friends of the institution, were the principal speakers.

## Manufacturing Perfumers to Meet at Whitehall Club.

The Manufacturing Perfumers' Association of the United States will hold its annual meeting at the Whitehall Club, April 1, 2 and 3.

## Startin's Compound Sulphur Ointment.

Sublimed sulphur.....	8 ounces
Ammoniated mercury.....	½ ounce
Red sulphide of mercury.....	½ ounce

Rub well together, then add—

Olive oil.....	4 ounces
Lard.....	1 pound
Creosote.....	20 minims

Mix thoroughly. Recommended in the treatment of scabies, favus and ringworm.

Riker-Hegeman sales in January, according to reports, showed an increase of 20 per cent. over the same month a year ago.

## FROM THE BUSINESS FIELD.

Sharp & Dohme, manufacturing chemists, put on trial recently in the United States Circuit Court in Baltimore on the charge of misbranding disinfecting fluid, secured a complete vindication. Judge Ross took the case from the jury and exonerated the company from all intention of wrong-doing. The company had shipped to Augusta, Ga., on April 7, 1911, a can of disinfecting fluid which, according to the label, possessed five times the efficiency of pure carbolic acid crystals. An analysis by the Government chemists showed, it is said, that the fluid was only 2.125 times as strong, the can being deemed misbranded under the provisions of the Pure Food and Drugs Act. The company, on its part, put in evidence to the effect that it employed Dr. Standish McCleary, of Baltimore, to ascertain the strength of the fluid and that he had reported the substance to be four and a quarter times the strength of carbolic acid, whereupon the efficiency had been increased to the ratio stated on the label. The company emphasized the point that it had taken every means ordinarily available to insure accuracy, and that it had no reason to doubt the correctness of Dr. McCleary's analysis. It was further brought out that in the present state of the science of chemistry similar errors were likely to occur. Judge Ross thereupon took the case from the jury.

Whitall Tatum Co. were the hosts recently when the senior class of the Philadelphia College of Pharmacy made its annual trip to the firm's large glass works at Millville, N. J. The class left Camden in a special train, arriving at Millville, N. J., about 10:15. The works were inspected by the class in sections until 12:15 p.m., when every one was invited to the firm's employees' recreation building, where a sumptuous luncheon had been prepared. The luncheon over, the dean, Prof. Joseph P. Remington, spoke of the unusual privilege which the Whitall Tatum Co. had given the class, and commented on the history and growth of the firm, to which Mr. Thorpe responded for the company. Elwyn J. Wheeler, class president, expressed the appreciation of the class, after which the sections again proceeded to the various departments to finish the inspection. Every department of the immense works was shown at work by some representative of the company. To one who is not familiar with the manufacture of prescription ware and chemical apparatus such a trip is indeed a treat and one need no longer wonder why the druggist must charge his customer for every bottle he furnishes.

Parke, Davis & Co. report that the drug trade in the Middle West, and perhaps other sections, is being visited by salesmen for "the Snyder-Wagner Company, of Chicago, Ill.," marketing a lozenge in a 10-cent package under the name of "Menthelin," who represent that Parke, Davis & Co. are behind the preparation and guarantee it, but do not wish it known for fear of criticisms on the part of the medical profession. Efforts to locate the Snyder-Wagner Company in Chicago have proved fruitless; however, few druggists should be taken in by representations of this character, which all should know are false. Reports also often come of medicine peddlers who offer their wares direct to the public, on the street corners, or in house-to-house canvass, and who use Parke, Davis & Co.'s name in support of the therapeutic claims they make for their nostrums. These may invariably be set down as swindlers of the first water, and druggists should so advise their customers. Parke, Davis & Co. assume no responsibility for any drug not sold through regular drug-trade channels.

Goodfellowship Club of Parke, Davis & Co.—Recent issues of Detroit newspapers give interesting accounts of a minstrel show, staged in the banquet hall of the Hotel Tuller, in the city mentioned, in which the Goodfellowship Club of Parke, Davis & Co. provided the talent. The performance, which was highly praised, was attended by the wives and friends of the club members and was followed by a dance, about 300 persons participating. On March 20 the performance was repeated for the benefit of the Detroit Tuberculosis Sanatorium, before an audience that filled the Light Guard Armory. There are 140 members of the Goodfellowship Club, comprising executives, heads of departments and their assistants, and scientific workers of Parke, Davis & Co. It is now in its eighth year and meets once in three months,

when a dinner is always a feature. In the Summer the entertainments commonly take the form of outings. The club was organized with a view to bringing closer together the men in positions of responsibility at the laboratories—to promote friendship among its members.

The H. W. Johns-Manville Co., because of the necessity for larger space and better facilities to handle their increased business, have been compelled to seek larger quarters for the Indianapolis, Ind., and Louisville, Ky., branches. The new address of the Indianapolis branch is 408-410 North Capitol avenue; that of the Louisville branch, 659-661 So. Fourth avenue. Both of these branches will include ample warehouse accommodations, in addition to show-rooms for the display and sale of this firm's varied line of asbestos roofing, pipe coverings, insulating materials, lighting fixtures, automobile accessories, etc. In connection with the last-named line, unusual pains have been taken in the equipment of service departments for the benefit of the customers who desire speedy adjustments, repairs or replacements.

H. K. Mulford Company's employees gave their third annual entertainment and dance at Mercantile Hall, Philadelphia, with an attendance of 700, including officers, executives, department managers and invited guests. The first part of the entertainment consisted of a vaudeville performance by selected talent from the leading Philadelphia theaters, after which dancing was enjoyed until the early hours. The committees were untiring in their efforts to make the evening a brilliant success, and it was generally agreed that the occasion had eclipsed all previous affairs of a similar nature.

F. F. Myzrantz, of Columbus, Ohio, will add another "popular-price" drug store to his string on April 1. The new store will be located at Popular and High streets and will be one of the most attractive and complete of the Myzrantz stores. This will make the fifth store in this chain. One is located in the Harrison building, another in East Main street and another in Mt. Vernon avenue.

Dr. Adolph W. Miller, president of Aschenbach & Miller, Inc., Philadelphia, has arranged for a trip to Europe in June where he will study the European ideas on medicine and drugs and at the same time add to his knowledge in this field. At their factory, at 400 North Third street, Philadelphia, they are working full time and expect 1914 to be the finest year in the history of the company.

Henry O. Huegel's drug store, 1468 South Grant avenue, St. Louis, which is also Postoffice Branch No. 45, was entered and robbed during the night of March 10-11, the thieves getting cash from the store register, and money and stamps belonging to the Government. A larger cash register and a safe containing larger sums were unharmed.

The Lauer Drug Company store in Central avenue, Jersey City, was destroyed by fire recently. The fire originated in an adjoining building and the flames spread with such rapidity that the firemen had to exert all their forces to keep the flames from spreading to the buildings nearby. The exact loss is not known.

The E. H. Bindley & Co. fire at Indianapolis, according to the latest returns, did damage amounting to \$60,000. It is said that the total damage will exceed \$300,000, as a number of firms were burned out with losses ranging from a few thousands to \$100,000.

The Richardson Drug Co., of Omaha, Neb., at its annual meeting, elected the following officers and directors: President, Charles F. Weller; vice-president, H. S. Weller; treasurer, F. C. Patton; secretary, E. P. Ellis; directors, the foregoing and J. W. Fisher.

The French-Bauer Company, of Cincinnati, stockholders have re-elected the members of the directorate, and increased the stock dividend rate from 4 per cent. to 5 per cent. Frank E. French was re-elected president, and J. J. Smith, secretary.

The Jaynes Drug Co., of Boston, has elected the following officers: President, J. S. Alley; vice-president, Hugh Henry; treasurer, W. J. Norcross (he is also general manager); S. S. McCauley, secretary.

John Wyeth & Brother, factory 11th street and Washington avenue, Philadelphia, is undergoing extensive changes and a new addition is being built. Increase in business necessitated the changes now being made.

## The Seneca Camera Manufacturing Co.

*How the Biggest "Independent" Camera Company Insures Its Quality Products.*

**"T**O what do you attribute your increase in business?" was asked Secretary and Treasurer Fred K. Townsend, of the Seneca Camera Manufacturing Company, of Rochester, N. Y.

"We sell no experiments," was the quick reply. "We make no mistakes at the expense of the buyer. Seneca cameras are calculated for every kind of use. They have been foremost in mechanical improvements since the date of their birth, more than 15 years ago, and that is why people like them and will have them.

"There is another reason why we are going ahead so fast," continued Mr. Townsend. "We are constantly interesting new dealers, who go far to help us. We try to do business fairly with the trade, and they are quick to appreciate it. We have charged the same price to all alike."

Given a quality product, and there is no combatting such a business policy as this.

The Seneca Camera Manufacturing Company is one of the oldest established independent companies in the camera business, with an immense, departmentized plant in State street ("Camera Row"), Rochester. Machine shop, stamping, polishing and nickel-plating rooms, woodworking department, as-

sembly, ranging in price from \$50 upwards, upon which a handsome profit can be made, and with the further advantage that Seneca agencies have been found good trade-pullers for the other departments of the store. A Seneca agency means something—it has the reputation of nearly 20 years of con-

*Finishing Camera Bodies at the Seneca Camera Mfg. Co.*

*The Seneca Camera Mfg. Co. Building at the Beginning of "Camera Row," Rochester, N. Y.*

sembly, testing and experimental departments are all housed under the one roof in the modern factory building. The work begins with the raw material, and, as the market does not offer the quality desired for the perfected product, the company treats its own lumber, leather and brass, after exhaustive tests of the original material. In fact, the experimentation and the testing departments of the plant are among the most fascinating to the visitor, as well as being among the most important to the company, because of the data thus made available for the perfection of any one of the various types of cameras made by this concern.

Seneca cameras are built in a wide variety of styles, incorporating every advanced idea of equipment, and all are of the one quality. After experimentation the company's experts have found the type of camera best fitted for a class of work, and have made it; the question of cost of such work has been subordinated to the perfection of the work itself. The variety includes roll film, film pack and plate cameras of the highest type, suitable alike for the professional and for the amateur, and each one is backed by the company's "money-back" guarantee.

The Seneca company has just inaugurated a National advertising campaign addressed to the consumer, to the man, woman or youngster who releases the shutter, and who turns to the druggist for films and supplies, and for printing and developing. To these druggists the company is now offering complete

scientific manufacturing history back of it, and the producing power of a modern plant which turned out last year no less than 300,000 complete cameras. That this was an increase of 40 per cent. over the output of the previous year is indicative of the growing recognition of the quality of the products bearing the Indian girl head trade-mark of the Seneca company.

Mr. Joseph Goddard, president of the company, has entire charge of the manufacturing side of the business. He is, perhaps, the most experienced authority on camera-making and assembling in this country, as he has devoted a lifetime to the intricacies of this great business, and he is enthusiastic over the prospects for the immediate future. For his company he reports that although its export business is very large, by working at capacity during the Winter a stock has been accumulated which enables it to make prompt shipments. The inquiries for information and prices were never so great as now, and the new National publicity campaign will serve more than ever to couple the agencies with the consumer.

Any druggist who is interested in the question of adding a camera and supply department should send for the 14th edition of the Seneca Camera Company's Catalogue Textbook, which

*In the Photo-Heidel Division of the Seneca Camera Mfg. Co.*

will be sent him at once. It is filled from cover to cover with just the sort of information he should have at hand about everything connected with a camera and photographic department.

### FOOD LAW IRRITATES FOREIGN HOUSES.

M. M. Sterling, of Fougere & Co., Asserts Foreign Concerns Comply Reluctantly With Provisions.

"THE trouble to which we have been put to persuade foreign manufacturers of pharmaceutical preparations to comply with the strict regulations of the Food and Drugs Act cannot very well be estimated," asserted M. M. Sterling, secretary-treasurer of E. Fougere & Co., 90 Beekman street, this city, in a recent interview with an ERA representative. F. Fougere & Co. have been specializing in the importation of French and English pharmaceutical preparations since 1841, and during this period the business has increased until now they are handling about 3500 different preparations. In his official connection with this company, perhaps few men in this country are better qualified than Mr. Sterling to report the effect of the Pure Food Law on the importation of this class of goods.

"Are foreign pharmaceutical manufacturers reluctant to comply with the Pure Food law?" the ERA representative asked.

"Since the inception of the act a great number of these manufacturers have objected very seriously to changing their labels, literature, etc. In fact, at this late date they are still objecting to it and state that they will simply lose the business rather than go to the trouble to change everything. In some cases, where the litigation has been decided adversely to them, the decisions have been open to a great deal of reasonable doubt. Where the language of the regulation is somewhat involved, they have declined to comply with it not only as a matter of pride, but because the interpretation was considered rather unfair.

"All this," continued Mr. Sterling, "has, of course, brought about the situation that there are always a certain number of preparations which it is beyond our power to supply the trade with. Although the amount of these 'outs' at times seem large it is only a very small percentage of the total items we handle. We are pleased to say, however, that after using the utmost diplomacy we have succeeded in convincing some of these foreign manufacturers that they are looking at the question from the wrong standpoint. We hope ultimately to win them all over and are working constantly to this end. In spite of the difficulties we have experienced in entering goods into this country since the passage of the Food and Drugs Act, our business has steadily increased and we are most gratified with our year of 1913, which was the largest in our history."

It is interesting to observe that E. Fougere & Co. enjoy the unique distinction of having conducted their business for 64 years without ever being obliged to borrow one cent from their bank.

A study of E. Fougere's catalogue presents an interesting perspective on the extensive line of foreign goods for which this company are the exclusive American agents. The names of many of these have been familiar to the druggists of this country for several decades and will be recognized immediately. Among the best-known are:

#### French Preparations.

Adrian's preparations.  
Astier's preparations.  
Aubergier's pastilles and syrup of lactucarium.  
Bengue's ampoules cacodylate soda, etc.  
Blancard's pills and syrup iodide of iron.  
Blaud's pills carbonate of iron.  
Boudault's pepsin in various forms.  
Ch. Chanteaud's dosimetric granules.  
Chapoteaut's pharmaceutical specialties, including the Paraf-Javal preparations of strontium.  
Clin's sterilized ampoules and other preparations.  
Declat's preparations of carbolic acid.  
Delluc's pharmaceutical specialties, cologne water, etc.  
Ducro's alimentary elixir.  
Fastet's foot powder.  
Fraisie's ampoules and preparations.  
Grillon's Tamar Indien.  
Laroche's elixirs of quina.  
Laville's liquor.  
Mathey Caylus's capsules gluten coated.  
Midy's ampoules, cachets, capsules, tablets, etc.  
Pelletier's specialties.

Prat-Dumas & Co.'s French filter paper.  
Robin's preparations.

#### English Preparations.

Ashton & Parson's preparations.  
Bienger's food.  
Brand & Co.'s beef, chicken and mutton essences.  
Browne's Chlorodyne.  
Condy's Fluid.  
De Sanctis's pills.  
Eade's pills.  
Elliman's Royal and Universal embrocations.  
Eno's Fruit Salt and other specialties.  
Huxley's preparations.  
John Gosnell & Co.'s toilet preparations.  
John Hooper's pills.  
Morson's chlorodyne, beechwood creosote, etc.  
Reynold's specific.  
Roche's embrocation.  
Savory & Moore's preparations.  
Wright's Liquor Carbonis Detergens, coal tar soap, etc.

#### The Original Castoria.

The Koreno Remedy Co., of Philadelphia, is manufacturing a brand of Castoria which they claim is made from the original formula of Dr. Samuel Pitcher, and J. E. Burt, the proprietor, has this to say in regard to his preparation:

"Castoria was patented by Dr. Samuel Pitcher, of Barnstable, Mass., on May 12, 1868. The patent expired several years ago and the courts have decided that both the formula for the preparation and the name 'Castoria' have become public property by the expiration of the patent. A patentee is given a monopoly on his invention for a certain length of time to reimburse him for the good that he does the public at large.

"Our company is putting up a brand of Castoria with the fac-simile of J. E. Burt, which is made from the original formula of Dr. Samuel Pitcher. We make no other claims for it except that it pays the druggists a much more liberal profit than does the so-called Fletcher brand of Castoria made by the Centaur Co.

"Around our bottle we make a full explanation of the circumstances so that the customer is not deceived. Our preparation has been on the market for a number of years, it gives satisfaction and is being handled by many druggists. There is no attempt on our part to work it off on the unsuspecting public as the Fletcher brand, but we have just as much right to make this preparation as has the manufacturer of any patented article to make it after the patent has expired.

"The patentee is supposed to have made his profit while the patent was in force, and now that this formula has become public property, there is no good reason why the monopoly should be continued; on the contrary, the public should have the advantage of the lower and competitive prices, as intended by our patent laws."

#### SPECIALTY HOUSE HOLDS ONE SITE 46 YEARS.

One of the oldest specialty manufacturing houses—there is hardly a place in this country where its preparations are not known—is the Wright's Indian Vegetable Pill Company, 372 Pearl street, New York City. This house was founded in 1837 by Dr. William Wright, of Philadelphia, who, incidentally, was also founder of an institution called the North American College of Health. Wright's Indian Vegetable Pills, which the company advocates as an effective remedy for disorders of the stomach, the liver and the bowels, are still compounded from the original formula first used more than 75 years ago, and are in extensive use, despite the discoveries in synthetics during the recent years.

The present manufacturers of Wright's Indian Vegetable Pills are the successors to the originator both by family relation and descent. The company's factory was originally in Philadelphia, but it was later moved, in 1868, to Brooklyn, and the firm finally located at 372 Pearl street, where it has been since. It is interesting to note that manufacturers of specialties were troubled as much by imitators and counterfeiters in 1837 as they are today. In 1844, seven years after his departure into business, Dr. Wright was obliged to trade-mark his name and literature.

The Wright's Indian Vegetable Pill Company, in addition to their well-known pills, manufacture Dr. Peery's "Dead Shot"

Vermifuge, the Crossman Mixture and Roman Eye Balsam. The manufacturers are at present making a special offer of one box of pills, free, to the druggist who orders one dozen boxes in their special counter display container.

#### REINSCHILD CHEMICAL CO. TO MOVE MAY 1.

The Reinschild Chemical Company, now located at 91 Barclay street, will move to more commodious quarters at 47-49 Barclay street on May 1. The doubly increased floor-space at this new address will permit the company to enlarge upon the scope of its activities and to better reap the fruits of its ethically conducted campaign of the past three or four years on "Regulin" and other agar-agar preparations. This house has been established for a period of more than 40 years, and Carl Reinschild, president of the Reinschild Chemical Company, realizing that the business has grown larger than its present quarters could comfortably accommodate, decided upon the change above reported.

This company controls the output in this country of the Helfenberg Chemical Works of Germany, established in 1869 by the distinguished Eugen Dieterich, and well known to every American and European pharmacist; it is also the sole representative of Professor Dr. Ad. Schmidt for the United States and Canada. It is the sole agent in this country for Dieterich's liquid iron and iron-manganese preparations, Dieterich's dried irons: an extensive list of dermatological plasters, plasters in mass, in sticks and spread, mustard plasters, breast plasters, etc.; reagent or test papers; "Regulin," in tablet and shredded form; Dieterich's tapeworm remedy, effervescent oils, solid extracts, malt preparations, etc.

#### Fastep Foot Powder.

There are many so-called foot powders that claim to "put you on your feet," but Fastep Foot Powder is the one powder that will "keep you on your feet."

"Fastep" is a scientific preparation, a splendid antiseptic and deodorant and keeps the feet in a healthy condition, besides giving great relief to those who suffer from actual complaints.

Packed in a handsome, large can which retails for 25 cents and gives the druggist a liberal profit.

The above is taken from a circular issued by E. Fougere & Co.

90 Beekman street, New York, who are sole agents for "Fastep" and want every druggist to write them for a free sample and trade prices. Mention the ERA.

#### Movie Star Adorns Diamond Dye Calendar.

The Wells & Richardson Company, of Burlington, Vt., manufacturers of Diamond Dyes, are now preparing their 1915 Diamond Dye Calendar, which will bear an artistic, especially posed portrait in colors of Miss Lillian Walker, the widely-known motion picture star. Miss Walker's beauty and great popularity are sure to make the Diamond Dye Calendar much sought after. The calendar for this year—1914—is decorated by the picture of an equally popular "movie" heroine, Miss Alice Joyce. The choice of Miss Joyce as the 1914 Diamond Dye girl was appropriate as she is herself a clever home dyer. An article—of which she is author—published in the March issue of *The Ladies' World*, tells how she created a new gown by dyeing the collar and vest of an old dress. Each year an increasing number of women remake their clothes with the aid of Diamond Dyes. They find that a fresh, new color and a few alterations, with a bit of new trimming here and there makes an old gown, or suit, as stylish and satisfying as a new one. The persistent,

national advertising of Diamond Dyes, which is always heaviest in the Spring, will surely send a flood of Diamond Dye dimes into drug stores everywhere.

#### New Serobacterin Products Now Ready.

Great advances have been made in our knowledge of bacterial therapy within the last few years, and some real information on this important subject, and particularly the advantages of the Serobacterins, are set forth in the advertisement of the H. K. Mulford Company, which appears elsewhere in this issue of the ERA. As there defined, Serobacterins are suspensions of bacteria "sensitized" by treatment with specific immune serum, and among the advantages claimed for their use are that they do not cause opsonic nor clinical negative phase; they produce immediate active immunity that is highly efficient and durable, this action making them invaluable in treatment and preventive immunization, a factor of great importance in controlling or preventing epidemics. Serobacterins also cause no local or general reactions, such as those that constitute the principal undesirable feature of the bacterial vaccines. In addition to the Serobacterins named in the advertisement referred to above, the following are now offered and are also supplied in the popular Mulford Aseptic Glass Bacterin Syringe, ready for instant use: Coli-Serobacterin (Sensitized Coli Vaccine); Pneumo-Serobacterin (Sensitized Pneumococci Vaccine), and Strepto-Pneumo-Bacterin (Sensitized Strepto-Pneumo Vaccine). For a complete review of the literature on Serobacterins druggists should consult the *Mulford Digest* for December, 1913.

#### Automassage Shaving Brush.

The Leopold Ascher Co., 118 Chambers street, New York, has brought out an improvement upon shaving brushes which consists of a cluster of rubber fingers vulcanized in the center of the bristles of a brush of ordinary size. The "Automassage Brush," it is claimed, softens the beard better than can be done by any other method; saves time by applying and rubbing in the lather in one operation, and gives an invigorating massage with every shave. It is sanitary and clean because it is unnecessary to use the hands to rub in the lather. Brushes are "Centuryset" in rubber, are made in two grades and guaranteed in every respect. Each brush is sterilized, packed individually in a sanitary sealed box, assuring the consumer a brush, which has not been tried on numerous prospective customers before he purchased it. They retail at popular prices.

#### Buying Soda Fountains Through the Jobber.

In their advertisement in this issue the Fountain Specialty Company, of Grand Haven, Mich., tell why it is a money-saving proposition for the purchaser of a soda fountain to deal with the jobber, citing the elimination of selling expenses, and the cost of maintaining sales, credit and collection departments with large salary lists, and thus saving money for the buyer, since the saving either goes into the quality of the product or comes out of the selling price. This saving of "overhead" charges makes it possible for the manufacturer who distributes exclusively through jobbers to market his product at a lower rate than that obtained by competitors for the same quality apparatus. The Fountain Specialty Company, who are the makers of the "Guarantee Iceless" fountains, have distributors and show-rooms in most of the principal cities. Any druggist thinking of purchasing a new fountain can obtain a book of fountains and the name of the nearest distributor by writing for it. Three advertising pages of this issue are devoted to the Fountain Specialty Co., and one of its distributors, the Hessig-Ellis Drug Co., of Memphis, Tenn., and further details of the fountains, etc., can be obtained from these advertisements.

#### Lilly Given Full Rights.

On Feb. 16 a decree was entered by the United States Court for the Eastern District of Pennsylvania in the case of Eli Lilly & Co., of Indianapolis, against the Diamond Pharmaceutical Company, of Philadelphia, which had been making and

S. J. G. 1914. The court decreed that Eli Lilly & Co. is entitled to the exclusive use of the name "Diamond" as a trade mark for antiseptic tablets, the exclusive use of the representation of a diamond-shaped figure as a trade mark for antiseptic tablets; and the exclusive right to the conventional shape of a diamond as a shape for its antiseptic tablets. It was further decreed that the use by the defendants of the word "Diamond," or the representation of a diamond-shaped figure or symbol as in any manner indicating or designating antiseptic tablets, is a violation of complainant's rights. A preliminary injunction was issued confirming Eli Lilly & Co.'s exclusive use of the name "Diamond," the conventional figure of a diamond, and the right to manufacture, sell or otherwise distribute antiseptic tablets of this shape and by the designation "Diamond."

#### Moving Picture Advertising.

Moving-picture slides are selling-helpers that are becoming very popular with the druggist, since in most towns moving-picture slides have not been overworked, as yet. It will be a long time before they are, and they solve to perfection the difficulties of the druggist who would advertise effectively but inexpensively. By showing only in near-by parlors, the advertising is automatically restricted to possible purchasers, and many manufacturers of toilet and proprietary goods are supplying excellent slides, with the druggist's imprint, free of charge. One of the best slides recently offered is that of Resinol Ointment and Resinol Soap. It is very striking in design and coloring and druggists who have used it report that it is most successful in stimulating general trade, as well as the demand for the Resinol preparations. This slide is especially effective because the druggist's name is filled in so as to be an integral and prominent part of the display. A request to the Resinol Chemical Co., Baltimore, Md., will bring one promptly.

#### How to Sell Pens.

The Esterbrook Pen Mfg. Co. are displaying in an advertisement in this issue several counter-display cases with varied assortments of pens in common demand, giving the number of pens in the assortment, complete illustrated descriptions of the assortments, their price, and the amount of profit to be obtained by the retailer. In addition to this they are showing replicas of the sales helps they are furnishing to handlers of their goods, hangers, show cards, envelopes, etc., as well as a reproduction of a full-page advertisement now running in publications of National circulation. Druggists handling these pens, and who are not supplied with the sales material, should send at once for these free aids to profit. Samples of pens will be sent to druggists who are not as yet handling this standard pen. See the advertisement for further details, as the statement of what the druggist can do to develop his pen business is very clear and comprehensive. Mention the ERA when writing for samples or literature.

#### Cultivate Your Local Dentists.

In catering to the needs of the dental profession the druggist will find a productive and remunerative field. Then why not sell the dentist many of his requirements? Eli Lilly & Co. manufacture a line of preparations that will appeal to all dentists as answering most, if not all, dental requirements, and as manufacturers they co-operate with the retail druggist in supplying these products to the dental profession. The Lilly Dental Preparations are made under the authority and after the formulas of J. P. Buckley, Ph.G., D.D.S., professor of materia medica, pharmacology and therapeutics of the Chicago College of Dental Surgery, a well-known authority. A handsomely illustrated catalogue of products and formulas of special interest to the dental profession is supplied by the Lilly Company, and a copy of this book placed in the hands of dentist customers by the druggist, with the further information that the druggist is prepared to supply these goods, is sure to develop new and profitable business.

#### The Tak-a-way Headache Bandage.

The Wilford Hall Laboratories have started a National advertising campaign on Hall's "Tak-a-way" Headache Bandage. This article is in the form of moist antiseptic gauze, and relieves headache by outward application, thereby doing away with the chance of injury by heart-depressing

powders, etc. Adolph Birkst, general representative of Wilford Hall Laboratories, has just returned to Chicago from his semi-annual Southern trip, and he reports that the trade there is convinced that the country is on the eve of a big boom. The Laboratories have just completed another addition to their plant at Port Chester, N. Y. This business is growing so rapidly that this is the second addition they have been compelled to add to their manufacturing space during the past six months.

#### Zinc Stearate in Sprinkler Top Cans.

The Zinc Stearate manufactured and put up by the Mallockrodt Chemical Works has gained unusual prominence with the medical profession as well as the laity because it is properly made and represents the highest degree of purity. It may, therefore, be used with impunity upon open sores, abrasions, etc., where an impure product might prove harmful. It is supplied in "M.C.W." Sprinkler-Top Cans which have become very popular, as they afford a very convenient and economical method of applying the powder either for toilet or medicinal purposes. All wholesale druggists can supply the "M.C.W." brand, which is an attractive specialty and possesses distinct merit. Try it.

#### Usoiline Oil, Medicinal.

The Oil Products Co., Inc., are calling attention in our advertising pages to their Usoiline Oil, medicinal, which was originated to cover the theory of internal lubrication and to meet all demands for liquid petrolatum, Russian mineral oil, etc. It is tasteless, odorless and colorless. The company has a co-operative plan which has been found profitable by druggists, full details of which will be sent on request to ERA readers. Druggists are also requested to write for information as to the use of Russian white mineral oil as a cream base, also stearate of zinc, U.S.P., in bulk or in 1-ounce sifting top cans.

#### Have You Stocked the Q-Ban Line?

The Hessig-Ellis Drug Co., of Memphis, have a proposition that should interest every druggist who wishes a hair dye, which is not sticky, greasy nor destructive. Q-Ban will not stain the scalp, but is a clean, refreshing treatment for both hair and scalp. Druggists interested in a satisfactory product and a good profit are requested to write to the Hessig-Ellis Drug Co., mentioning the ERA, for the Q-Ban proposition and for a book of illustrated lectures on "Hair Culture" by a specialist. This book will be furnished free for distribution to a selected list of a druggist's customers.

#### A Dog Biscuit in Heavy Demand.

The leading publications devoted to dogs, as well as mediums of general circulation, are being employed to advertise the Champion Dog Biscuit, a biscuit fed by the leading dog fanciers of the country. Druggists can very well handle this line, as the advertising sends the customers to the stores carrying this variety of food. A folder containing full details of the offer of the Champion Dog Food Co., with a special message and proposition to druggists, will be sent on request to any druggist mentioning the ERA. See advertisement for further details.

#### Thialion, Uric Acid Solvent.

Druggists who have handled Thialion, the uric acid solvent, for many years have reported much larger sales of this standard proprietary since it was put out by the manufacturers, the Vass Chemical Co., of Danbury, Conn., in its new 8-ounce size. This product has been used for years in the treatment of rheumatism, and it is claimed to act surely and quickly. The Vass Chemical Co. are offering a special proposition to druggists, details of which will be sent to anyone mentioning the ERA.

#### High-Grade Drug Store Outfits.

I. Schuman, New York City, is the maker of store fronts, store and office fixtures, etc., with factory and salesrooms in this city. He specializes in high-grade drug-store outfits at prices to suit the individual taste and purse, and will be glad to give estimates and further information as to styles, prices and materials upon application. See his advertisement elsewhere in this issue for details.

# PATENTS AND TRADE MARKS

## TOOTH BRUSH.

**T**HIS device, the invention of Fritz Reichmann, Albany, N. Y. (Patent No. 1,090,126), is a toothbrush which comprises a handle and a plurality of knots of bristles rotatively mounted upon the side of the handle upon axes extending longitudinally of the respective bristles and arranged

in a row parallel with the handle, the several knots being beveled whereby they are adapted for self-rotation. The brush-units are rotatively mounted upon the handle on axes perpendicular thereto, while gear connections operate between the respective brush-units, each of which has a knot of bristles projecting perpendicularly from the side of the handle, the outer end of the knot being beveled. Each brush-unit has a snap-member whereby it is removably mounted in connection with the snap-member on one of the brush-unit-holders.

## Liquid Measure.

Charles Fritz, Baltimore, Md., is the inventor of a liquid

1,090,607.

in alinement with the rack-bar (Patent No. 1,090,607).

## PATENTS.

### Granted February 24, 1914.

- 1,087,935—Alfred C. Eggers, assignor to Charles A. Tyrrell, New York. Rectal syringe.  
 1,087,861—Walter E. Masland, assignor to E. I. du Pont de Nemours Powder Company, Wilmington, Del. Separation of organic compounds at low temperatures.  
 1,088,208—Frederick Coates, New York, N. Y., assignor to Standard Automatic Machine Company, Rochester, N. Y. Labeling machine.  
 1,088,216—Clinton E. Dolbear, assignor to Elijah H. Merrill, Berkeley, Cal. Process of recovering sodium and potassium salts from mixtures thereof.  
 1,088,227—Carl V. Johnson, Goldfield, Nev. Bottle.  
 1,088,457—George W. Schencks, San Diego, Cal., assignor of one-fourth to James H. Shanks and one-fourth to Harrie B. Shanks, Los Angeles, Cal. Bottle.  
 1,088,663—Irwin F. Kepler, Akron, Ohio, assignor to The B. F. Goodrich Company, New York, N. Y. Pneumatic bulb.

### Granted March 3, 1914.

- 1,088,926—Albert L. Radlein and James W. Murphy, Chicago, Ill. Chemical heater.  
 1,088,954—Charles I. Wright, Tuscon, Ariz. Filter for atomizers and other devices.

- 1,088,966—Jurgen Callsen, assignor to Farbenfabriken vorm. Friedr. Bayer & Co., Elberfeld, Germany. Alkylalkoxymethyl esters of cresotinic acids.  
 1,088,973—Samuel B. Drinkhouse, Denver, Colo. Siphon.  
 1,089,185—Carl Bosch and Alwin Mittasch, assignors to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Producing ammonia.  
 1,089,205—Ernest C. Fuchs, Rochelle Park, N. J. Non-refillable bottle.  
 1,089,216—Louis C. Helmcamp and Edwin Hoxworth, Waco, Tex. Non-refillable bottle.  
 1,089,249 and 1,089,241—Arthème Matignon, Bourg-la-Reine, France, assignor to The Societe Generale des Nitrates, Paris, France. Process for the synthetic preparation of ammonia from its constituents.  
 1,089,383—Frank J. Wood, assignor to Marx and Rawolle, New York, N. Y. Process of distilling glycerin.

### Granted March 10, 1914.

- 1,089,417—Max Klar, Marquette, Mich. Process for distilling crude pyroxylicous acid.  
 1,089,717—Herman A. Metz, New York, N. Y. Bottle stopper and applicator.  
 1,089,775—Felix Lindner, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Decolorizing glycerin.  
 1,089,784—Samuel Peacock, Chicago, Ill., assignor to International Agricultural Corporation, New York, N. Y. Process of hydrating phosphorus pentoxide.  
 1,089,875—Herbert T. Snyder, Baltimore, Md. Bottle sealing machine.  
 1,089,887—August A. Waye, St. Louis, Mo., assignor of one-fourth to Joseph Kuppertz, St. Louis, Mo. Bottle.  
 1,089,933—Chovanec Lukac, Yukon, Pa. Anti-refillable bottle.  
 1,090,091—Anst Alexander and Arnold M. Steinberg, Paris, Tenn. Bottle closure.  
 1,090,123—Rene Bohn, Mannheim, and Carl Immerheiser, assignors to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Chromium compounds of oxyanthraquinone sulfonic acids and process of making same.  
 1,090,126—Fritz Reichmann, Albany, N. Y. Toothbrush.

### Granted March 17, 1914.

- 1,090,391—Tsunejichi Fujiyama, Tokyo, Japan. Apparatus for manufacturing nitrogen.  
 1,090,392—Edward F. Gingras, Buffalo, N. Y. Bottle hanger.  
 1,090,422—John W. Stovall and John T. Furniss, Stovall, Miss. Bottle seal-detaching device.  
 1,090,434—James O. Walsh, Bayonne, N. J. Bottle stopper.  
 1,090,526—Ernest Laremont Fleming, Chester, England. Manufacture of borax and boric acid.  
 1,090,607—Charles Fritz, Baltimore, Md. Liquid measure.  
 1,090,733—Peter C. Magdlen, New York, N. Y. Shaving cream.

## TRADE-MARKS.

### Published February 24, 1914.

- 33,776—Amos Rogers, Ottawa, Canada. Medicines for diseases of the stomach, liver, etc.  
 62,538—Mandel Brothers, Chicago, Ill. Perfumes, toilet waters, etc.  
 68,070—The California Pharmacy Company, San Francisco, Cal. Laxative crackers.  
 68,905—Satterlee & Smith, Lake Charles, La. Rheumatism remedy.  
 69,458—Farbwerke-Hoechst Co., New York, N. Y. Remedies for gonorrhoea, syphilis, etc.  
 70,991—Dr. J. A. Walsh Co., Boston, Mass. Tooth powder and tooth paste.  
 71,123—Soledad I. de Mendia, Mexico, Mex. Remedy for tuberculosis and pulmonary troubles.

- 58,426—The Haring Company, Philadelphia, Pa. Cough syrup, headache and neuralgia powders, etc.
- 61,696—R. J. Strassenburgh Company, Rochester, N. Y. Chemicals, medicines and pharmaceutical products.
- 67,572 and 67,573—The American Salesthyll Mfg. Co., New York, N. Y. Menthylated oil of wintergreen and salve.
- 68,150—Joseph C. Schroeder, St. Louis, Mo. Baking powder, medicinal bitters, tonic, etc.
- 68,015—Charles E. Mechel, Milwaukee, Wis. Horse remedies.
- 69,360—Arthur Letts, Los Angeles, Cal. Face powder, toilet cream, toilet water, etc.

- 69,979—Van Antwerp's Drug Corporation, Inc., Mobile, Ala. Liquid face powder, liquid rouge, etc.
- 73,745—Spencer Kellogg & Sons, Inc., Buffalo, N. Y. Liquid castor oil.
- 74,111—Jose B. Lozano, Laredo, Texas. A remedy for syphilis, rheumatism, etc.
- 74,128—C. F. Boehringer & Soehne, Mannheim-Waldhof, Germany. Yeast-fat, the active principle of yeast as a remedy for boils, furunculosis, acne, and constipation.
- 74,225—Bubenik Chemical Manufacturing Co., St. Louis, Mo. Remedy for catarrh, headache, etc.
- 74,367—The Pa Pro Company, Lowville, N. Y. Paper caps for bottles, jars, etc.
- 74,430—Embert Clayton Woodcock, East Orange, N. J. An intestinal and pulmonary antiseptic.
- 74,455—Arnt H. Scott, Chicago, Ill. A medicine for all kinds of sore throat and cold and a preventive from diphtheria.
- 74,592—The 3-L Remedy Company, Harrisburg, Pa. Rheumatism remedy.
- 74,823—Louis Lapre and Company, New Bedford, Mass. Vegetable herb tablets, for blood, stomach, liver and bowel disease.
- 74,960—Gilbert Toilet Company, Beatrice, Neb. Hand lotion, face bleach, etc.
- 75,057—Maurice Lundin, Binghamton, N. Y. Hair tonic.
- 75,181—The McKeon Co., Holyoke, Mass. A medicinal preparation for nervous breakdown, coughs, etc.
- 75,305—The C. B. Woodworth Sons Co., Rochester, N. Y. Perfumes, toilet waters.
- 75,339—Vincent Marino, Washington, D. C. Liniment.
- 75,457—Laxigo Bitters Co., Detroit, Mich. Bitters for the kidneys and liver.
- 75,458—Charles E. Mechel, Milwaukee, Wis. Horse remedies.
- 75,625—Ralph L. Marteau, Washington, D. C. Foot powders.
- 75,629—John R. Morton, Stockton, Cal. Ointments.

The Red Cross Pharmacy Co. of Logansport, Ind., has been incorporated, with \$15,000 capital, to do a wholesale and retail drug business, by M. B. Lairy, J. S. Lairy and George H. Babcock.

The Branstad Drug Co., of Eau Claire, Wis., has moved into new and larger quarters at the corner of South Barstow street and Grand avenue. Handsome new mahogany fixtures and an iceless soda fountain have been installed. The store is said to be one of the most modern in the Northwest.

The United Drug Co. employees held a series of races and games, followed by vaudeville and a moving-picture entertainment, at a Boston gymnasium, Feb. 12, the programme including a bowling match, basketball, 50-, 220- and 400-yard dashes, mile relay, mile open, wrestling match, 100-yard swimming race and fancy swimming. R. E. Hadley was chairman of the committee in charge.

NOTE—A, advanced; D, declined; C, correction; N, new.

**N**EW YORK, March 23.—The month has been characterized by a fair volume of routine trading in drugs and chemicals, the price changes, with the exception of those for menthol and cod liver oil, showing no important features. As a general proposition, consumers have been restricting their purchases to rather small parcels for prompt or nearby consumption. Among the declines noted are the reduction in chloroform prices and the quotations on tannic acid, all grades; arnica root, celery seed, lemon peel, manna, large and small flake; oil of lemon, oil of sweet orange, and strychnine. Molybdic acid, atropine and its salts, belladonna leaves, cinchonidine and its salts, and Spanish saffron are higher. Quinine is unchanged, while quotations on opium, natural, are slightly higher.

**OPIUM**—Inquiry from consumers has continued light, but the market has remained as firm as ever with a slight advance in quotations for natural, \$6.45@ \$6.90 being asked. Quotations on granulated and U.S.P. powdered remain unchanged at \$8.25@ \$8.35 per pound for the former, and \$8.15@ \$8.25 for the latter. The importations for the seven months of the present fiscal year ending January amount to 263,643 pounds, valued at \$977,875; the corresponding period for 1913 showing an importation of 270,413 pounds, valued at \$1,424,976, and for 1912, 270,925 pounds, valued at \$1,605,398.

**QUININE**—Continues to meet with a good demand and is still firmly held at the recent advance on the basis of 26c. per ounce in 100-ounce tins. The imports of quinine for the seven months ending January 31, 1914, amount to 1,455,028 ounces, valued at \$288,156, as compared with 1,775,593 ounces, valued at \$294,068 in 1913, and 1,778,814 ounces, valued at \$274,129 in 1912. Shipments of cinchona bark from Java for February

amounted to 1,440,000 pounds against 1,560,600 pounds last year.

**COD LIVER OIL**—Norwegian has materially declined, owing to favorable reports of increased supplies in the country of production. Cable advices to hand report the following results for the week ending March 21: Total catch in Lofoten 7,900,080 fish, yielding 5582 barrels, against 4,500,000 fish last year with a yield of 2396 barrels. The total catch for all Norway is 35,200,000 fish yielding 24,314 barrels of oil, as against a catch of 17,300,000 fish in the corresponding period last year with a yield of only 10,650 barrels.

**MENTHOL**—Is easier, owing to keener competition among dealers, and prices have declined to \$3.55@ \$3.80 per pound. The quantity of menthol and mint oil shipped from Japan in January was 1400 cases, a still larger quantity being exported in February. It is reported that the Japanese Government is attempting to acquire a monopoly of the menthol industry in that country, and if this arrangement is consummated, it is likely that the production and marketing will be entirely under the direction of the Government authorities.

**CHLOROFORM**—Quotations have been reduced, the range being 25c.@ 45c. per pound. The decline is due to an attempt to check the competition of Western manufacturers in this market, as also the competition from abroad which was made possible by the recent lowering of the duty from 10 to 2 per cent.

**PHOSPHORIC ACID**—A decline in quotations is noted for syrupy, 85 per cent., and for glacial in sticks, 28c.@ 38c. per pound being asked for the former, and 50c.@ 55c. per pound for the latter. Competition between domestic manufacturers, as well as between foreign manufacturers, is given as the cause of the decline.

**OIL LEMON**—Stocks have increased in some quarters and quotations have declined to \$2.90@ \$3 per pound. The market here is quiet, but it is thought that any demand of consequence will advance prices.

**OIL ORANGE**—Increased supplies and lack of important demand have contributed to a lowering of prices, the sweet variety being quoted at \$3.25@ \$3.35 per pound.

**MANNA**—Both large and small flake are in good supply and easier, with quotations reduced to 90c.@ \$1 per pound for the former and 50c.@ 55c. per pound for the latter.

**CELERY SEED**—Due more to competition than to the appearance of increased stocks in primary markets, prices have declined, and jobbers are now asking 30c.@ 33c. per pound.

**BELLADONNA LEAVES**—German are again firmer, owing to increasing scarcity, and dealers now quote 60c.@ 75c. per pound, for the limited supplies on hand. Powdered root is also higher, 30c.@ 35c. being asked.

**SOAP BARK**—Is meeting with a fair inquiry at last month's quotations, but stocks are apparently small and the market retains a firm tone.

**SAFFRON**—American (safflower) is still quoted at 60c.@ 70c. per pound, but some dealers predict higher prices on the ground that stocks are light and concentrated in few hands.

**SAFFRON**—Spanish is again firmer and jobbers, owing to a growing scarcity of supplies here, have advanced quotations to \$12.25@ \$13.50 per pound.

**FENNEL SEED**—Following a downward tendency abroad, quotations have declined, and jobbers are now quoting 18c.@ 20c. per pound.

**SANTONIN**—Is firmer and quotations have been marked up to \$35 per pound; per ounce, \$2.30@ \$2.40.

**STRYCHNINE**—Following a reduction of prices in London, quotations have been marked down for alkaloid and salts, as follows: Alkaloid, in 1/8-oz. vials, per ounce, \$1.15@ \$1.25; acetate, 1/8-oz. vials, per ounce, \$1.50@ \$1.60; nitrate, 1/8-oz. vials, per ounce, \$1.45@ \$1.50; sulphate, 1/8-oz. vials, per ounce, \$1.15@ \$1.25.

**BUCHU**—A moderate demand is reported at last month's quotations. The exports of leaves from the Union of South Africa during December, 1913, amounted to 13,694 pounds, against 6066 pounds in the corresponding month in 1912. The total exports for the year 1913 were 163,812 pounds, against 223,021 pounds in 1912.

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director, ERA COURSE IN PHARMACY,  
c/o D. O. Haynes & Co.,  
No. 3 PARK PLACE, NEW YORK.

### WHAT DO OUR STUDENTS WISH?

WITH the article for January, the ERA COURSE Department concluded a series of little lectures on various topics about which students had asked for more enlightenment. The subjects treated have been percentage solutions, alligation, chemical formulas, and chemical equations. The remarks presented in this page have been intended to furnish clear explanations of the points involved, expressed in very simple language, and judging from letters received from our students, we have fulfilled our purpose in this respect. These extra lectures have proved of great value to many students in connection with their regular recitation work. Moreover, each new problem treated was made the occasion for bringing in a number of practical examples. We have now reached the end of this particular series of talks, and would like to know what our students wish to have discussed in future. The Director requests that each student who is puzzled over any problem relating to his work in the Course, or to his practical drug store tasks, will communicate with this office, stating his difficulties, and requesting that additional material be presented in this page on these subjects. This department is not only part of the ERA; it is also a part of the ERA COURSE, and in accord with our consistent policy, all our efforts are directed to the end of helping our students in every way possible. Let us hear from you, from all who have had any difficulties.

### Matriculation Graduates to March 20, 1914. Graduating Number. Average.

7687—Wm. Floyd Jackson, Wilmington, Del. . . . . 95  
7834—B. L. Lauderback, Jr., Newark, N. J. . . . . 96

### Era Course Students Successful at State Boards.

Arkansas—Earl D. McGaughey, Hartford, registered pharmacist.

California—Augustus J. Afleck, Redding, assistant pharmacist.

Illinois—Jos. H. Skaggs, Des Moines, Iowa; registered pharmacist.

Massachusetts—Fred E. Hines, Dorchester; James E. Templeton, Westfield; assistant pharmacists.

Missouri—Thomas O'Donnell, St. Louis, registered pharmacist; C. H. McDonald, Rocky Comfort, assistant pharmacist.

New Jersey—Harry H. Hagny, Newark, registered pharmacist.

Ohio—J. M. Galbreath, Greenfield, registered pharmacist; J. A. Howenstine, A. A. Borek, Cleveland; E. A. Lehr, Columbus; Merrill Swain, Hamilton, assistant pharmacists.

### Appreciations from Our Students.

"I have found the ERA Course very satisfactory indeed. I tried for registration last month as assistant and passed. Your Course was the only instructions I had. The different lectures are worded so plainly that it was not necessary for me to write for an explanation once, which is more than I can say for any book on pharmacy I have seen."—FRED E. HINES, Dorchester, Mass.

"The ERA Course in Pharmacy is what put me by the board Jan. 28, 1914. It was the best investment I ever made."—F. R. KELLOGG, Franklin, N. H.

"I can say for the ERA Course in Pharmacy that it has been of great benefit to me, and I would gladly recommend it to any one starting to learn the drug business. I would not sell

my books of the Course, for they are helpful to me every day."—R. L. CONNER, Sewance, Tenn.

### Bay State Druggists Watch Legislation.

The present Legislature of Massachusetts has earned a reputation for killing freak legislation with despatch. The number of measures before it was larger than has ever been presented to any Legislature. That, of itself, may account for the apparent haste in disposing of freak innovations. Of the 1800 odd measures before the Legislature, 119 were referred to the committee on public health, and of these 25 had to do with pharmacy and related interests—11 to amendments to the present cocaine law; two to the use of the common drinking-cup; three to the sale of liquor by druggists; four to the making and sale of ice cream; three to the making of fruit syrups, and two to the making and sale of confectionery.

The committee on public health gave a hearing on the cocaine bills on petitions for the appointment of a State commission to investigate the evils of habit-forming drugs, and on a bill of the Rev. Roland D. Sawyer, of Ware, for a bill requiring all poisons to be sold in distinctive containers.

The bill for the State commission was backed by a large number of medical men, including Dr. Richard C. Cabot, Dr. Frank G. Wheatley, Dr. Charles P. Putnam and Dr. W. G. Faxon.

Representative Sawyer's bill was opposed by the pharmaceutical associations. The bill provided that no druggist, physician or other person shall, within the commonwealth, sell, deliver, distribute or cause to be sold, delivered or distributed any tablets, pills or other substance, not being a liquid, containing any poisonous drug in such quantity as would cause death or injury to any human being, unless the same is contained in a tablet, pill or capsule which shall be in the shape of an equilateral triangle colored bright blue. Such tablets, pills or capsules shall be delivered in a bottle which shall be in the shape of an equilateral triangle and colored bright blue. The said tablets, pills or capsules shall be placed in the bottle with a layer of absorbent cotton between them and the cork or other stopper in such manner that they would not be spilled if the stopper were removed. If the poisonous drug is in the form of a liquid it shall be sold, delivered or distributed only in such a bottle as is above described.

The bill was declared to be impracticable, and the committee on public health reported adversely upon it. Mr. Sawyer attempted to have the House reject the report and substitute his bill, but both Representatives White and Mahoney, the latter in charge of the committee's report, and the former a druggist, opposed it, and the House accepted the adverse report.

The committee on public health reported adversely on the bill of Charles W. Proctor for a commission to investigate the evils of habit-forming drugs. The same committee has also reported adversely on the bill to extend the law relating to the use of public drinking-cups.

### TRADE JOTTINGS.

The Sanitol Chemical Laboratory Company, of St. Louis, has elected these officers: President and treasurer, H. C. G. Luyties; vice-president, Dr. George A. Bowman; secretary, H. A. Werbe; directors, Dr. Bowman, Theodore W. Hellmers, George Keller, W. C. D'Arcy, Werbe, Luyties and Frederick K. James. Messrs. James and Hellmers live in New York.

Riker-Hegeman sales, according to a news note in the financial pages of the daily press, are now running at the rate of approximately \$18,000,000 a year, and it is further stated that the company will open about 15 new stores this year. It is understood that cash dividends will be discontinued and that stockholders will be given stock. Plans contemplate a 20 per cent. stock disbursement on July 1 next, and regular stock dividends every six months.

The Harle-Haas Drug Co., of Council Bluffs, Ia., has elected the following officers: President, Willoughby Dye; vice-president, Charles Straub; general manager, F. H. Garrett; secretary, T. J. Leary; treasurer, A. J. Faul; directors, Willoughby Dye, William Greer, William Skillicorn, Chris Straub, F. H. Garrett, Harry Hattenhauer and L. I. Edson. A decided increase in the volume of business last year was reported.

### CONTROL OF HABIT-FORMING DRUGS.

SELDOM has any measure of greater interest to pharmacists of the Empire State ever traversed the tortuous current of legislation than that known as the Boylan bill, which in its entirety was re-written but a few moments prior to adjournment of the Legislature and passed, thence going to the Governor, receiving his signature at once, thereby becoming a law. The reasonable provisions of this law in the light of its history before the lawmakers, are remarkable, and so far as we can discover, the law is generally approved by pharmacists. The act, an abstract of which appears elsewhere in this number of the ERA, amends the public health law in relation to the sale of habit-forming drugs, and the text of the law, in our opinion, should serve as a model draft for the pharmacists of other States who are seeking legislation of a salutary character to head off the demands of self-constituted reformers who know nothing of the drug business and care still less.

This law, as will be noted, prohibits the sale of habit-forming drugs except on the prescription of a licensed physician, but the provisions do not apply to the sale of domestic and proprietary medicines actually sold in good faith as medicines and not for the purpose of evading the law, "providing such remedies or preparations do not contain more than two grains of opium, or one-fourth grain of morphine, or one-fourth grain of heroin, or one grain of codeine, or ten grains of chloral or their salts in one fluid ounce, or if a solid preparation, in one avoirdupois ounce, nor to plasters, liniments and ointments for external use only." If the prescription calls for more than four grains of morphine, thirty grains of opium, two grains of heroin, six grains of codeine or four drams of chloral the authority for the prescription must be verified. To fix responsibility and to assist the proper authorities in locating violators of the law, all drug dealers and physicians must use official order blanks supplied by the health authorities in making purchases of the drugs enumerated, and these orders must be numbered in duplicate. This provision is particularly aimed at physicians who abuse their privileges, for by its enforcement the authorities will be able to discover and punish them, thereby

permitting vigorous steps to be taken to shut off the supply of the habit-forming drugs. Full records are to be made of all sales, and the official orders for such drugs are to be kept by the person or corporation making the sale.

A new feature which marks an advance in this kind of legislation is the declaration that the constant use by any person of any habit-forming drug, except under the direction and consent of a duly licensed physician, constitutes a danger to the public health, and provision is made for curing or caring for persons so addicted by commitment to a State, county, or city hospital or institution licensed under the State Lunacy Commission. In including this section in the law, the legislators have taken a humanitarian view of one of the great problems of the day, in that while attempting to control the extension of this most insidious scourge of our times, the attempt is also made to redeem and restore to society the victims of a habit, the effects of which are a blot upon modern civilization.

#### PUBLICATION OF A.P.H.A. PAPERS.

CONSIDERABLE time has now elapsed since the American Pharmaceutical Association added the paragraph to Article III of its by-laws which provides that "all papers presented to the association and its branches shall become the property of the association, with the understanding that they are not to be published in any other publications than those of the association, except by the consent of the Committee of Publication." If we are to believe the reports that have come to us from some of those who have prepared and read papers, especially before the branches, the practical enforcement of this provision is not wholly satisfactory. So far as we can ascertain, no one denies the right of the association to say what shall be done with the papers presented, but dissatisfaction is due to the fact that even when presented in good faith, and accepted and read before the branches, the papers may never be put into type at all, or if they be printed, the date of publication is not infrequently so far subsequent that the conditions which prompted the preparation of the papers by the authors have been lost sight of, thereby nullifying any effort to excite interest in the subject selected; in other words, the "timeliness" of the contribution being made practically nil.

We believe there is some ground for this criticism, especially in the general application of this rule to the disposition of the papers read before the local branches of the association. Most of the papers read and the topics discussed by the members of the branches relate particularly to local conditions or pharmaceutical affairs pertaining to the section of the country from which such membership is drawn. This is just what might be expected, and it is a good thing for pharmacy that enough interest can be evoked to cause druggists to maintain these local branches. These efforts should be encouraged, but in creating and maintaining the highest degree of interest the element

of legitimate publicity should not be disregarded. The writer of a paper is entitled to all of the credit and publicity he can get for the effort he has made to prepare such a contribution. Then why not permit other journals to publish these papers if they so desire?

No pharmaceutical journal, and this includes the *Journal of the A.P.H.A.*, can begin to publish all of the material that comes to hand, even should it desire to do so. The field of work covered by any one journal is circumscribed, primarily by the wants of those it seeks to serve, as well as other considerations. Logically, then, there is no convincing reason why the publication of any legitimate paper in any pharmaceutical journal should be withheld, providing any journal wishes to print it. So far as we are concerned, the ERA is not dependent on these sources of supply, and the privilege to use this material is not a vital matter. But we do desire to promote the usefulness of the American Pharmaceutical Association and its great work in advancing pharmacy. In our opinion this cannot be done to the best advantage so long as the pharmaceutical press is restricted and the field of publicity is circumscribed, a condition that is likely to prevail so long as the provision is enforced that "all papers presented to the association and its branches . . . are not to be published in any other publications than those of the association."

#### PHARMACY LEGISLATION NOT ALL BAD.

AFTER hearing the opinion expressed in some quarters, that it is the duty of druggists to oppose all legislation, whether presumed to be good or bad, which seeks to regulate the drug trade, it is a pleasure to look across to England, and see some of the results of the most drastic drug legislation ever imposed on an English-speaking country. We refer to the National Insurance Act of 1911. During the past year, through the working out of a vast scheme of "paternal" legislation, about seven million dollars have been turned over to British pharmacists, or to such as were clear-sighted enough to avail themselves of the opportunity to have their names placed on the panels. And by far the larger part of this sum represents business which did not previously go to the "chemists," as dispensing physicians are much more numerous in England than in this country. This direct monetary benefit is not the only good which is flowing from the Act. Prescription business has increased to such an extent that steps are being taken to incorporate a chain of pharmacies, which will handle prescriptions only. This is a result which will not be regretted by the upholders of "ethical" ideals.

As was to be expected, the Act was fought before its passage, and was viewed with much suspicion for some months after it went into effect. Those who were crossing the bridge before it was reached now admit that, in the language of the report of the Fabian Society, which made a detailed investigation of the scheme in operation, "the machine is working" better than they had ever dreamed. To have set such a complicated mechanism in

motion, and to have eliminated most of the friction in one short year, calls for admiration of the organizing ability of our English fellow-workers in pharmacy, and they are to be commended most highly for their support of this measure, with its far-reaching social benefits.

#### THE CREED OF THE DRUGGIST WHO WINS.

Do you believe:

That pessimism has no place in the drug business, or any other business, and that the germ of fear will eventually kill any business and the usefulness of the man who cultivates it?

That the retail drug business is an easier profession than that of lawyer, doctor or dentist, or of drug manufacturer or jobber?

That the future holds more good than the past?

That the successful druggist always obtains pleasure from his work; for while it is hard, vexing and not without its responsibilities, what line of serious endeavor is not?

That the way to meet "business depression" is so to shift the lines featured that the volume of business so necessary with fixed overhead expenses will be sustained?

Such is the business creed of one of the successful druggists of the New South, stated in answer to our query, "*What Does the Retail Druggist Really Need?*", a general discussion of which by druggists in all sections of the country will be a feature of coming issues of the ERA.

We believe opportunities for success in the drug business were never more plentiful than today; we are opposed to the undercurrent of pessimism which saps the lifeblood of business enterprises; we believe that the successful druggists of the country have found the key to an increasingly remunerative service of the public; and, beginning with the June ERA twoscore or more of these druggists will tell what they have done to meet changed conditions—and how they have done it.

#### PRICE MAINTENANCE AND THE STEVENS BILL.

At the meeting of the Association of National Advertising Managers at Chicago in April, price-maintenance was one of the principal topics considered, the organization going on record in the following words:

*Be It Resolved*, That we earnestly favor legislation recognizing and establishing the system of one-price-to-all on trade-marked and branded goods in the mutual interest of maker and consumer, and for the protection of the independent dealer against unfair practices and against the extension and encroachment of monopoly.

Following close upon this action by nearly 250 representatives of the great National advertising firms in this country, Senator Clapp, of Minnesota, introduced an amendment to the Stevens price standardization bill now before Congress with a view to removing all possibility of the proposed law being employed in the interests of capitalistic

monopoly. This amendment is brief, but very much to the point. It requires as a condition of the right to name resale prices, affidavits by producers that they have not and never had "any monopoly or control of the market," and are not and never have been parties to "any agreement, combination or understanding with any competitor in the production, manufacture or sale of any merchandise in the same general class in regard to the price at which the same shall be sold."

One of the charges brought against price-cutting as a system, and one of the strongest arguments of the advocates of price standardization, is that price-cutting has tended, and always will, to operate to the advantage of the man with the long pocketbook; that in the end it builds monopolies by eliminating those who cannot survive price-cutting wars; and that, as a result, in each community there will be a tendency for the retail businesses to become monopolies for one or two large companies, and for these to merge.

Under the Stevens bill, with the Clapp amendment, independent producers would be allowed to protect small dealers against discrimination, the public against misrepresentation, and themselves against unfair methods. Secret rebates to mail-order houses would be made impossible, and the relief thus afforded against "quantity discount" hold-ups could not but result in lowered prices to the small dealers. The monopoly bugbear would be laid to rest by the Clapp amendment, from which we have quoted.

In addition to the support of the A. N. A. M., as cited, the American Fair Trade League and the Committee for the Promotion of the Interests of Retail Merchants, recently formed in New York with Dr. W. C. Anderson at its head, are working energetically for the measure. In fact, the prospects for an equitable system of price standardization under Government sponsorship were never so bright as today.

#### MEDICINAL USES OF LIQUID PETROLATUM.

The use of paraffin oil or liquid petrolatum as an intestinal lubricant is not a new departure in the field of therapeutics, although at the present time renewed interest has been exhibited in the medical uses of this product. These facts are intelligently set forth in a contribution by M. I. Wilbert, which appears elsewhere in this issue of the ERA, an article which all pharmacists should read. For many years the real value of liquid petroleum as a substitute for cod liver oil in the treatment of phthisis and other conditions of malnutrition has been frequently questioned by medical men. In fact, many physicians have asserted that they could not understand why it should possess any distinct remedial value other than that it might be used as a protective coating for the mucous membrane as applied by means of an atomizer to the nasal cavities, throat, larynx, or even bronchial tubes. It is not a food and cannot, therefore, act as a substitute for cod liver oil, because it is incapable of saponification. It was

found that it could be emulsified and absorbed through the intestinal wall without actually becoming incorporated with the tissues and that it did assist the absorption of saponifiable fats.

At the present time, however, there is considerable demand for liquid petrolatum for use as a laxative in chronic constipation and other internal disorders, and as a mechanical lubricant in inflammation of the colon. Just which of the hundreds of the products derived from crude petroleum and now on the market shall be used for any given purpose is, in Mr. Willbert's opinion, a problem. After a thorough investigation of the subject he concludes that the time appears particularly opportune for pharmacists who are willing to assist in making for true progress to do missionary work and to point out to physicians in a rational and sensible way that paraffin oil and other petroleum products, while they may be useful, have their limitations, the claims of some manufacturers of proprietary preparations to the contrary notwithstanding. That these products have a place in the list of present-day remedies, however, seems to be established: as a recent British writer puts it, "the extensive use to which neutral paraffin oil has been put in the manufacture of chewing gum, and the fact that many physicians and their patients have regularly taken it for several years with much relief and advantage, shows that it possesses no deleterious properties at present known."

#### DRUG TRADE "APATHY."

APATHY is a word honored by abuse—many who use it as explanatory of trade conditions seem to think it means semi-stagnation—when it should be interpreted "lack of initiative." True apathy in business depends upon outside conditions, tariff, currency, over-production—apathy as an excuse simply means personal inertia, or, in public questions, lack of leadership.

At the annual banquet of the Brooklyn College of Pharmacy Alumni Association Jacob H. Rehfuss, president of the New York State Ph.A., declared that while he had heard much of "apathy in the drug trade" during his term in office, he had found that with proper leadership the druggists of the State were ready to work as one man, energetically and persistently; that the "big druggists," the men who have made marked success, were never "too busy" to respond to requests to exert their influence to secure action upon legislative measures.

A successful retailer in a large Southern city wrote us within a fortnight that when trade became apathetic he stopped featuring \$3 hair brushes and 50-cent toothbrushes, and put out \$1.50 and 25-cent varieties, thus keeping his volume of trade to the necessary level. It meant more work, harder work, bigger and better window displays—but it captured the business, and did away with the so-called "apathy" in his particular line in his city. He believes, with Mr. Rehfuss, that drug trade apathy is largely a matter of individual attitude—readily removable by the use of:

B	Extra hustle.....	}	Equal parts
	Personality .....		
	Knowledge of local conditions		

Sig., Apply locally to the seat of the trouble.

#### QUALIFICATIONS OF PHARMACY TEACHERS.

A REAL diagnosis of the qualifications that the teacher in a college of pharmacy should possess is presented in a report of an address by Dr. Albert Schneider, printed in the April issue of the *Journal of the A.Ph.A.* To our mind, this address is worthy of consideration, not only by those who belong to the restricted class known as the "professors," but by pharmacists generally, especially those who have banded themselves together for the purpose of maintaining institutions for educational purposes along pharmaceutical lines. Within certain limits, the teacher, like the poet, "is born, not made." Instruction, as we understand it, is the name given to the teacher's share in the process, or processes, through which the student acquires knowledge or habits of skill. Of course, these processes are primarily and essentially the work of the learner himself, but it is the province of instruction to facilitate them.

It follows that if the teacher would develop the activity of the student's mind, thereby evolving the consequent formation of knowledge, he must be qualified to bridge the boundary line between the intelligence of the student and the stuff out of which knowledge is made, an effort which calls for the highest type of intellect and qualification. Unless the teacher possesses this psychological groundwork, he is handicapped in his effort to teach others. The individual who cannot acquire a comprehensive view of the mental systems and perceptions is not a natural-born teacher, which is another way of paraphrasing the statement that teachers are born, not made.

The development of knowledge operates along certain well-defined lines from a lower to a higher stage of mental effort, and the ideal knowledge is really a completely unified system. To this end there must be co-ordination and correlation of instruction that will place the divisions of study upon a logical basis, a condition that far too frequently is lost sight of in the curriculum of many a college of pharmacy.

Pharmacy is built on many divisions of science, and method in science teaching must take the form of investigation, for the facts must be established before a successful attempt can be made to interpret them. How important, then, that the teacher in pharmacy should have an educational acquisition wider and broader than that given by the college in which he desires to teach, a very strong point in Dr. Schneider's address. The work of successfully instructing others calls for a mental equipment of the highest type, a knowledge of pedagogy, of science in general, of practical drug-store work, and of the multitudinous manufacturing and commercial problems of the day. If these qualifications in the instructor are conceded, they

must carry with them due recognition by a just remuneration for such ability. The great sacrifices that teachers in colleges of pharmacy have made and are making without hope of financial reward excite our admiration, but the laborer is worthy of his hire, and with Dr. Schneider we hope that "the time will soon come when competent instructors will be paid salaries high enough so that they may without reservation devote their whole time to the work."

#### THE NEW ERA FORMULARY.

At various times recently we have called attention to the new edition of the ERA Formulary just issued, and it is with some degree of satisfaction that we have read the various commendatory expressions that have been sent to us concerning the character and scope of the book. Some of the writers have told us that they have already put it into practical use in their workshops and laboratories, just the places where we believe it will prove most serviceable. As a supplement to the Pharmacopoeia and dispensaries the book will occupy an important position.

It is from such a work that the average individual, especially if he be engaged in any manufacturing enterprise, may find suggestions for a new line of effort, and a collection of formulas may be made to yield good returns if the manufacturer will try this material out. The chances are that in this collection of nearly 8000 formulas he can find something that will fit into his business, for there are formulas designated to meet the wants and needs of a wide field of workers—the manufacturer, druggist, soda-fountain operator, ice-cream manufacturer, veterinarian, agriculturist, painter, in fact, artisans in all handicrafts, and householders generally. All of these will find this book replete with suggestions for specialties of nearly every kind for which there is a demand. The large number of such preparations on the market is indisputable evidence of this demand, and also of the fact that articles of this character do yield good financial returns. We can commend the ERA Formulary as answering the requirements for an up-to-date work of this character.

## BOOKS REVIEWED

**EXPORTERS' ENCYCLOPAEDIA.** Tenth Edition (1914). Containing full and authentic information relative to shipments for every country in the world. 8vo., 1136 pages. Cloth, \$7.50 (including monthly corrections and the "Exporters' Review" for the calendar year). New York. Exporters' Encyclopaedia Co.

This book is a recognized standard authority among export shippers and has the strongest endorsements of the transportation lines, export houses, manufacturers, etc., engaged in export trade, being in use, it is claimed, by more than 5000 of the best class of manufacturers in the United States and Canada. An examination of the work shows that it is a real encyclopaedia of this kind of information. Among other things it gives the essential facts relating to the proper choice of shipping routes to every place, whether a through bill of lading to that place can be obtained or, if not, the nearest port to which such a bill may be obtained, as also complete information concerning the observance of custom regulations, marking, documentation, packing and forwarding. Some of the related sub-

jects which receive treatment are: Conversion tables showing values of foreign weights, measures and coinage; explanation of commercial terms; foreign trade-mark protection; cable rates, postage rates, money-order system (foreign), parcel post to foreign countries, freight rates, duties, explosives, fire risks, etc. The importance of this kind of information to the exporter cannot be overestimated, as failure to observe the conditions which apply to shipments of goods to foreign countries invariably results in fines, delays, annoyance to customers and, eventually, loss of business. The Encyclopaedia is published annually as a supplement to the *Exporters' Review*, a well-known monthly journal devoted to the export and import interests of American trade.

**MINERAL RESOURCES OF THE UNITED STATES.** Calendar year 1912. 8vo., in Two Parts. Part I, Metals, 1079 pages; Part II, Non-metals, 1218 pages. Washington. Government Printing Office.

This report on the mineral resources of the United States, which covers the calendar year 1912, completes the third decade of the work of the division of mineral resources, first authorized in 1882. With the experience of these years those in charge of the work have developed a high degree of exactitude in the matter of statistical treatment, and the statements of production, consumption, etc., presented in these volumes are the results of an annual census of the entire mining industry. Of the development of the various phases of this industry, it is recorded that in the 31 years from 1882 to 1912 inclusive, the value of the mineral products of the country has increased from \$451,901,159 to \$2,243,630,326. It is estimated that the population of the United States in 1912 numbered 95,610,000 persons, which would give for each inhabitant, in value of production, an average of \$23.47. The metallic products in 1912 were valued at \$867,103,085; the non-metallic products at \$1,376,027,241, while the largest quantity and greatest value of all the minerals are represented by the output of the coal mines.

These volumes contain a vast amount of material of direct interest to the pharmacist, especially if he be engaged in any kind of manufacturing based on the use of these natural products. The information given concerning the production and uses of arsenic; of borax, which as "raw material" is found in so many places and in such quantities in relation to the limited demand for borax and boric acid in the present market, that there need be no fear of catastrophe to our domestic production; of potash, the economical extraction of which has been and is being thoroughly investigated by experts of economic geology; of bromine, lead, fuller's earth, graphite, infusorial earth, mineral waters, platinum, pumice, quicksilver, soapstone, sulphur, etc., is so comprehensive and helpful that each pharmacist should endeavor to "work" his representative in Congress for a copy.

**MAKING A DRUG STORE PAY.** By Frank Farrington, author of "Selling Suggestions," "Talks by the Old Store Keeper," etc. 8vo., 303 pages. Cloth, \$2. New York: The Ronald Press Co.

This book is said to contain the true story of Mr. Farrington's experiences in the drug business from the time he started, and whatever may be one's preconceived opinion of how a drug store should be conducted to become a paying institution, he is sure to conclude when he has read this book through, that the author has actually passed through the vicissitudes of drug-store life and that he did develop the business from practically nothing to a significant success. As internal evidence of this experience he gives the details of his methods, the figures of his business, an account of his struggles with competition, advertising plans, his successful and unsuccessful side-lines, etc., all factors which must be considered by every pharmacist who would rise in the world. All of the side-lines named are treated more or less explicitly in the book, and the treatment in each instance is supplemented by copies of the advertisements in just the form they were originally used. The majority of the readers of pharmaceutical journals are more or less familiar with the author's many contributions on the subject of advertising for retailers, and this new book will appeal not only to them, but to others who are looking for hints and suggestions for extending their businesses along modern commercial lines. The advertisements given number about 200 and are so arranged that any druggist can take them from the book bodily and use them for his own store.

## WHAT THE RETAIL DRUGGIST REALLY NEEDS—*A Study in Conditions.*

LOUIS K. LIGGETT, in his recently concluded series of articles on "Pharmacy in the Past Twenty-five Years," advanced the proposition: "that many druggists pay too high a cost of doing business, that many druggists are poor business men, although one hesitates to say it; and that often they derive their first knowledge of the condition of their business from the figures of the receiver when they go into bankruptcy." Mr. Liggett cited antiquated methods of book-keeping, neglecting the inventory, and lack of knowledge of actual profits because costs were not figured correctly. He then pointed to the charges that are being brought about through mechanical aids such as the cash register and tabulating machines, such assistants being largely responsible for the transmission of the druggist from the "guesser to the man of business."

Taken apart from the accompanying text these charges seem severe; when considered from the viewpoint of a modern efficiency expert there is in them more than a modicum of truth.

Within the past few months there has been an intelligent and systematic attempt on the part of both drug journals and associations—and notably in New York by a series of special meetings at the New York College of Pharmacy, at which business experts answered business problems—to reach some common basis of consideration of the difficulties encountered by every retail druggist. The plaint is heard that the "chain store is responsible," that "the price-cutter is ruining the business," that "the dispensing doctor is taking the prescription business away from the pharmacy," that "the department store drug departments are driving the little fellows to the wall." Many another similar charge could be brought, for every "experience meeting" of every R. D. A. is punctuated by such complaints of "unfair competition."

We are of the candid opinion that these manifestations of pessimism are not symptomatic of financial breakdown or commercial prostration, but, rather, indicative of the need for a change in treatment. It strikes us that it might be well to let old Dr. Well-enough-alone go, and call in Dr. Modern Business Methods.

There has been a marked change in the merchandising methods of this country during even the past decade. The whole system of retail pharmacy has been made over within the past quarter century. The back-room laboratory of the average drug store is today principally a storage room for the products of the commercial laboratory and the proprietary house. The front store has banished the sign manual of the apothecary shop, and has become a general store, embracing more and more lines as time passes. The druggist "doctor" of the old type is, with few exceptions, as seldom found as the whaling captain of old New England, the stage-coach driver of the West, or the Mississippi pilot of Mark Twain. There are exceptions, but they are few.

There are more live-wire successes among the druggists in

this country than ever before. Changes in business methods have created them—when *they* have not created the methods. The "big" drug store of today is as scientifically efficient in its every department as any of the quasi-public-service corporations. While probably the best example of a general business possible to cite—if we except the department store—it is yet one of the best examples of specialization, due to the adoption of the department idea, and the development of many branches of endeavor within the corporate whole. There is apparently no limit to the variety of goods handled by the "big" drug store.

But all drug stores are not "big" stores and could never be—what can be offered the small druggist? What can *he* do to escape the till-ravaging department store, the five-and-ten and the cigar, confectionery and ice-cream-selling rivals "just around the corner"? How can he not only meet competition but better it?

These are real questions asked by real druggists—by men some of whom have grown old in the service of the public. They are voicing a real hurt when they protest in association meetings; and in reply they want, not verbal consolation, but workable suggestions from druggists who have solved similar problems for themselves.

It is not merely a question of meeting competition; it is not enough to know costs and allot overhead before charging up profits; it is not enough to know how to balance the loss on cut-rate goods by the sales of "own make" goods with a larger percentage of emolument. It is not enough to be told to sell "side-lines" and then more "side-lines"; or to develop the ice-cream business or the soda-water business—or the wall paper, cut glass, cut flower, or coal agency business as some druggists have done and are doing.

What does the retail druggist really need? That is the question the ERA has submitted to more than twoscore of the representative successful drug men of this country—men who have forced their way out of the ruck and stand admittedly among those who have made a success, and the first instalment of this discussion will appear in the June issue of the ERA.

We believe that the opportunities for success in the retail drug business in this country were never more general than they are today; but we are of the opinion—and we think this will be borne out in the forthcoming issues of the ERA in which this presentation of the essentials of better business is to appear—that in modernization in store, in merchandising methods, in service, and in the mental attitude of the druggist himself will be found the solution to many of the difficulties now experienced. We believe a druggist can be truly ethical even if he sells 50 side-lines—we know that there is no longer a place commercially for the little old drug shop with its atmosphere of mystery, its fly-papered windows and dusty bottles. Sanitation, service, security and salesmanship spell success. But how to ensure it—that will be the warp and the woof of the articles now in preparation.

### An Appeal from Honduras.

*Ben R. Leigh, of La Ceiba, Blamed for Disastrous Fire Which Originated While He Was Asleep—Held for Trial as a Result.*

LA CEIBA, HONDURAS, March 26, 1914.

My Dear Sir:

Since writing you last time a great big mass of misfortune has befallen me.

On the 7th a terrible fire visited Ceiba and nearly wiped the little town off the Central American map.

The fire seems to have originated in my place of business, and because I was in bed asleep and did not extinguish the fire a bunch of drunken natives started the cry that I was to blame for it, and the first thing I knew I was arrested and am now being held to appear before the court here.

Not being an over-wealthy man and not having a wealthy family to draw on for attorney's fees I find it necessary to appeal to my druggist friends in the States for a temporary

advancement of a few good American dollars to help me out and I ask your support and that of the drug press along these lines.

Hon. W. J. Bryan, through the State Department, has instructed the American Consul here to see that I get a fair trial but that is as far as they can go—they cannot furnish funds for my defence, and as my savings amounted to only one-sixth of the necessary \$1500 (3000 Pesos) I am forced to ask outside assistance.

Would it be asking too much of you to run an article asking the druggists over the country to help a brother druggist who is falsely charged with arson and whom the American consul here will vouch for his innocence?

My attorney informs me that it will require about two months to clear me.

During my 14 months as manager of Reynolds & Co., Botica Atlantida, I purchased goods from the following New York firms: J. & J. Colgate, Humphreys Homo. Rem. Co., Davis Lawrence Co., American Soda Co.

Awaiting your favors, etc., etc., I am, fraternally yours,

BEN. R. LEIGH.

## Changes in the New Pharmacopœia.\*

*Condensed abstract of Proposed Definitions and Standards Relating to Drugs of Vegetable and Animal Origin submitted by the Committee of Revision for incorporation into the next edition of the Pharmacopœia.*

(Continued from page 155 April ERA.)

**Cambogia**—When rubbed with water it should yield a yellow emulsion becoming darker and almost transparent upon the addition of ammonia water. The emulsion should not turn green upon the addition of iodine T.S. (starch). Powder: Bright yellow, containing few or no starch grains. Not less than 65 per cent. soluble in alcohol. Ash not exceeding 2 per cent.

**Cannabis**—The dried flowering tops of the pistillate plants of *Cannabis sativa* Linné, or of the variety *indica* Lamarck (Fam. Moracæ), freed from the thicker stems and large foliage leaves and with not more than 10 per cent. of mature fruits (seeds). In dark green, more or less brownish, compressed, and more or less agglutinated, resinous fragments, consisting of the short stems with their leaf-like bracts and pistillate flowers, a few of the latter being sometimes replaced with more or less developed fruits; stems cylindrical, of varying length, not more than 3 mm. in diameter; fruit light green to light brown, broadly ellipsoidal, about 3.5 mm. in length; finely wrinkled and slightly reticulated; odor agreeably aromatic; taste characteristic. Powder: Dark green, giving a strong effervescence on the addition of dilute hydrochloric acid; numerous sharp-pointed fragments of upper portion of non-glandular hairs; fragments of bracts and leaves showing yellowish-brown laticiferous vessels, rosette aggregates of calcium oxalate and bases of non-glandular hairs. Alcoholic extractive not less than 8 per cent.; alcoholic solution bright green in color. Ash not exceeding 15 per cent.

**Cantharis**—From 15 to 25 mm. in length, 5 to 8 mm. in breadth, oblong, somewhat compressed above; of a brilliant green or bluish-green, metallic luster, changing in different parts, especially beneath, to a golden-green; head triangular, separated into two lateral lobes by a faint median line; mandibles stout and partly concealed; antennæ filiform, of 11 conical joints, the upper ones being black; eyes comparatively small; prothorax angulate; legs with five tarsal joints; wings membranous and brownish; elytra or wing sheaths each with 2 parallel lines and finely wrinkled; odor strong, disagreeable; taste slight, afterwards acrid. Powder: Grayish-brown, with shining green particles and a number of long, pointed, 1-celled hairs about 0.5 mm. in length and 0.002 mm. in width. Moisture not more than 10 per cent. Ash not exceeding 9 per cent.

**Capsicum**—The fruit may include not more than 2 per cent. of stems, calyxes and other foreign matter. Oblong-conical, from 8 to 20 mm. in length and from 2 to 15 mm. in diameter; pericarp brownish-red or orange, shining, membranous and translucent; 2- or 3-locular, united below, and containing 6 to 17 flat, reniform, yellowish seeds attached to the placenta or frequently separated from it; calyx light greenish-brown, inferior, inconspicuous, 5-toothed, usually attached to a long, straight peduncle; odor characteristic; sternutatory; taste intensely pungent. Powder: Yellowish-brown; mounts made with hydrated chloral T. S. and examined under the microscope show yellowish-red oil globules; stone cells of two kinds, those of the endocarp and of the seed coat. Non-volatile ether-extract not less than 15 per cent. Total ash not exceeding 7 per cent. Ash insoluble in hydrochloric acid, not exceeding 1 per cent.

**Cardamomi Semen**—The dried seeds of *Elettaria Cardamomum* White et Maton (Fam. Zingiberacæ), which should be kept in the capsules until wanted for use. Mostly agglutinated in groups of from 2 to 7, the individual seeds, oblong-ovoid in outline, 3- or irregularly 4-sided; odor aromatic; taste aromatic, pungent. Capsules broadly or narrowly ellipsoidal, occasionally ovoid, more or less triangular in transverse section, from 10 to 20 mm. in length; externally usually of a pale buff color or whitish or greenish-brown; longitudinally striate; 3-locular; pericarp thin; leathery, and nearly tasteless, enclosing from 10 to 20 seeds. Powder: Greenish-brown; consisting chiefly of coarse, angular fragments of cells of the reserve layers

and seed-coat; cells of endosperm and perisperm filled with compound starch grains. Ash not exceeding 8 per cent.

**Carum**—Mericarps usually separated, crescent-shaped, from 3 to 7 mm. in length, about 1.5 mm. in diameter; externally dark brown with 5 yellowish filiform ribs; in transverse section nearly equilaterally pentagonal, the commissural surface with two vittæ, the dorsal surface with a vitta between each of the primary ribs; oily endosperm large, enclosing a small embryo; odor and taste agreeably aromatic. Description of characteristics under the microscope is given. Powder: Yellowish-brown, mostly of irregular, angular fragments; cells of endosperm with aleurone grains each usually containing a rosette aggregate of calcium oxalate about 0.001 mm. in diameter; fragments with light yellow vittæ, together with nearly isodiametric or polygonal, yellowish-brown, inner epidermal cells of pericarp; fragments with tracheæ and sclerenchymatous fibres, the latter about 0.010 mm. in width, slightly lignified and with numerous oblique pores. Ash not exceeding 8 per cent.

**Caryophyllus**—The dried flower-bud of *Eugenia aromatica* (Linné) O. Kuntze, (*Jambosa Caryophyllus*) (Sprengel) Niendenzu (Fam. Myrtacæ), with not more than 5 per cent. of the peduncles, stems and other foreign matter. From 10 to 17.5 mm. in length, of a dark brown or brownish-black color, consisting of a stem-like, solid, inferior ovary, obscurely four-angled or somewhat compressed, terminated by four calyx teeth, and surmounted by a nearly globular head, consisting of four petals, which enclose numerous curved stamens and one style; odor strongly aromatic; taste pungent and aromatic, followed by slight numbness. On pressure clove emits a volatile oil. Stems either separate or attached to the flower-buds; sub-cylindrical or four-angled, attaining a length of 25 mm., a diameter of 4 mm.; either simple or branching, distinctly jointed and less aromatic than the flower-buds. Powder: Varying from dark brown to reddish-brown; consisting chiefly of cellular fragments showing the large oil reservoirs, spiral tracheæ and a few, somewhat thick-walled, slightly lignified, spindle-shaped bast-fibres; calcium oxalate in rosette aggregates, from 0.010 to 0.015 mm. in diameter; pollen grains numerous, tetrahedral, somewhat ellipsoidal, from 0.015 to 0.020 mm. in diameter. The presence of stems in the powder is shown by stone cells of irregular, polygonal shape, about 0.070 mm. in diameter, with thick, porous walls and large lumina, the latter frequently filled with a yellowish-brown amorphous substance. Volatile ether-extract not less than 10 per cent. Total ash not exceeding 8 per cent. Ash insoluble in hydrochloric acid not exceeding 0.5 per cent.

**Chondrus**—The dried plant of *Chondrus crispus* (Linné) Stackhouse and *Gigartina mamillosa* (Goodenough et Woodward) J. Agardh (Fam. Gigartinacæ). Entire plants more or less matted together, consisting of a slender stalk from which arises a series of dichotomously branching, more or less flattened segments, emarginate or deeply cleft at the tips; 5 to 15 cm. in length, segments 1 to 10 mm. in width, yellowish-white, translucent, frequently coated with a calcareous organic deposit which effervesces with hydrochloric acid; sometimes with fruit bodies or sporangia embedded near the apex of the segments in *C. crispus* or with sporangia borne on short, tuberculated projections or stalks, more or less scattered over the upper portion of the segments in *G. mamillosa*, somewhat cartilaginous; odor slight; taste mucilaginous, saline. Boil one part of chondrus for about 10 minutes with 30 parts of water and replace the water lost by evaporation; the solutions should form a thick jelly upon cooling. When softened in cold water chondrus should become gelatinous, and transparent, the thallus remaining nearly smooth and uniform and not swollen except slightly at the tips; a solution made by boiling 0.300 gm. in 100 cc. of water and filtering gives no precipitate on the addition of tannic acid T.S. (gelatin), and does not give a blue color when cold, upon the addition of iodine T.S. (starch).

**Cimicifuga**—The drug may include not more than 2 per cent. of stems and foreign matter. Rhizome horizontal, more or less branching, from 2 to 12 cm. in length, from 1 to 2.5 cm. in thickness; externally dark brown, slightly annulate from circular scars of bud-scale leaves, the upper surface with numerous stout, erect or somewhat curved branches terminated by deep cup-shaped scars each of which usually shows a distinct radiate structure; interior and lateral portions with numerous root-scars and a few short roots; fracture horny; internally whitish and mealy or dark brown and waxy, bark thin, wood distinctly

\*Permission to use granted by the Chairman of the Board of Trustees, United States Pharmacopœial Convention.

radicle and of about the same thickness as the pith; odor slight; taste bitter and acid. Roots somewhat cylindrical or obtusely quadrangular, 1 to 3 mm. in thickness, externally dark brown, longitudinally wrinkled, fracture short; internally, bark dark brown, wood yellowish, 4- to 6-rayed. Powder: Light to dark brown; starch grains numerous, single or compound, the individual grains spherical or more or less polygonal, each with a somewhat central cleft, from 0.003 to 0.015 mm. in diameter; fragments showing tracheæ with bordered pores and lignified wood fibres; irregular, yellowish-brown fragments of suberized epidermis made up of more or less tabular cells, sometimes clustered and considerably thickened. Ash not exceeding 10 per cent.

*Cinchona*.—Added to the former description: Externally the bark usually shows patches of foliaceous lichens with their small, brownish-black apothecia. Powder: Reddish-brown; bast-fibres spindle-shaped, yellowish, 0.300 to 1.350 mm. in length, with thick, strongly lignified, lamellated walls having slit-like, oblique pores; starch grains single, 2- to 5-compound, the individual grains spherical or plano-convex and from 0.003 to 0.015 mm. in diameter; sphenoidal micro-crystals of calcium oxalate numerous. Heat 1 gm. of powdered cinchona in a dry test-tube, a tarry distillate should form, having a purplish-red color and a somewhat granular appearance.

*Cinchona*. *Rubra*.—In quills or curved pieces of variable length, bark from 2 to 4 mm. in thickness; or in small broken fragments or in transversely curved pieces from 3 to 7 mm. in thickness; externally gray or grayish-brown, more or less rough from corky protuberances, sometimes with transverse fissures, rarely numerous or much intersected, and having their sides sloping and with occasional patches of foliaceous lichens; inner surface reddish- or orange-brown, distinctly striate; fracture short and granular in the outer bark, shortly and rather coarsely splintery in the inner bark; slightly odorous; taste very bitter and astringent. Powder: Light brown; bast-fibres and sphenoidal micro-crystals of calcium oxalate resembling those in cinchona; starch grains resembling those of cinchona, relatively few, from 0.003 to 0.010 mm. in diameter. Heat 1 gm. of powdered red cinchona in a dry test-tube; a tarry distillate should form, having a bright red color.

*Cinnamomum Ssgonicum*.—In quills attaining a length of 30 cm. and from 3 to 30 mm. in diameter; the bark from 0.5 to 3 mm. in thickness; outer surface light brown to dark purplish-brown with grayish patches of foliaceous lichens, numerous bud-scars, finely wrinkled, especially the bark of younger twigs, otherwise more or less rough from corky patches surrounding the lenticels; inner surface reddish-brown to dark brown, granular, and slightly striate; fracture short; inner bark porous, owing to the presence of large oil cells; and separated by a continuous layer of stone cells from the outer bark. Odor aromatic; taste sweetish, aromatic and pungent. Microscopical characteristics are given. Powder: Yellowish- or reddish-brown; starch grains numerous, single or compound, the individual grains being somewhat ellipsoidal or polygonal and from 0.003 to 0.020 mm. in diameter. Volatile ether-extract not less than 2 per cent. Total ash not exceeding 6 per cent. Ash insoluble in diluted hydrochloric acid not exceeding 2 per cent.

*Cinnamomum Zeylanicum*.—The dried bark of cultivated trees of *Cinnamomum zeylanicum* Breyné (Fam. Lauracæ) with not more than 3 per cent. of the outer bark. In closely rolled double quills, composed of from 7 to 12 thin layers of separate pieces of bark, from 30 to 50 cm. in length and from 8 to 13 mm. in diameter; the bark attaining a thickness of 1 mm.; outer surface pale yellowish-brown, smooth, longitudinally striate with narrow yellowish groups of bast-fibres, and showing circular or irregular brownish patches, occasionally with perforations marking the nodes; inner surface light brown, with faint longitudinal striations; fracture short with projecting bast-fibres; odor agreeably aromatic; taste sweetish and warmly aromatic. Powder: Light brown or yellowish-brown; starch grains numerous, varying from spherical to polygonal, from 0.003 to 0.020 mm. in diameter, frequently in small aggregates; cork cells few or none; calcium oxalate in raphides from 0.005 to 0.008 mm. in length. Volatile ether-extract not less than 0.5 per cent. Total ash not exceeding 6 per cent. Ash insoluble in diluted hydrochloric acid, not exceeding 2 per cent.

*Coccoloba*.—The dried female insect enclosing her young larvae, *Coccoloba* *acti* Linné (Fam. Coccidæ). Somewhat ovate in outline, convex above, concave beneath, from 3.5 to 5 mm. in length, consisting of from 9 to 12 segments; externally grayish-

purple, or grayish; in the shell-like, somewhat horny abdomen lie numerous larvae less than 1 mm. in size; the mature larvæ with antennæ consisting of eight parts, 3 pairs of legs, the lower being with 6 to 8 segments, and a characteristic beak or rostrum composed of 4 thread-like parts which pair off into two coils. Cochineal is easily pulverizable and yields a dark red powder; with a characteristic odor and slightly bitter taste. When masticated it colors the saliva red, due to the coloring principle, carminic acid, which is soluble in water, alcohol, or alkalies, and slightly soluble in ether, but insoluble in fixed and volatile oils. Alkalies should change the color of solutions of cochineal to purple, while acids should change the color to reddish-yellow. When macerated in water no insoluble powder should separate. Ash not exceeding 6 per cent.

*Colchici Cormus*.—Usually in reniform transverse, or in ovate longitudinal slices; from 2 to 5 mm. in thickness; flat surfaces whitish, slightly roughened, and of a crystalline appearance under the hand lens; epidermal surface thin, light brown and finely wrinkled; fracture short and mealy, odor slight; taste bitter and acid. Powder: Light brown or grayish-brown; starch grains numerous, single or 2- to 6-compound, the individual grains varying from spherical or ovoid to polygonal, and marked with a triangular or star-shaped, central cleft from 0.003 to 0.030 mm. in diameter, tracheæ few and with spiral or scalariform thickenings; occasional fragments of epidermal cells with thin, reddish-brown walls.

*Colchici Semen*.—The seeds should be dried; ovoid or irregularly globular, more or less pointed at the hilum, from 2 to 3 mm. in diameter; when fresh, several seeds cohering; externally dark brown, finely pitted; tough and of almost bony hardness; internally whitish or light brown; nearly inodorous; taste slightly bitter and somewhat acid. Ash not exceeding 3 per cent.

*Colocynthis*.—The dried pulp of the fruit of *Citrullus Colocynthis* Schrader (Fam. Cucurbitacæ), with not more than 5 per cent. of seeds, nor more than 2 per cent. of epicarp. Nearly globular, whole fruits from 4 to 7 cm. in diameter, usually more or less crushed and in broken pieces, with occasional patches of the nearly smooth epicarp; yellowish-white or brownish; light, spongy; separable longitudinally when entire into three carpels, each containing near the outer surface, the ovoid, compressed, yellowish seeds; odor slight; taste intensely bitter. Ash not exceeding 15 per cent.

*Condurango*.—The dried bark of *Marsdenia Condurango* Reichenbach filius (Fam. Asclepiadacæ). In single quills or transversely curved pieces, usually from 4 to 13.5 cm. in length, bark from 1 to 6 mm. in thickness; outer surface light grayish-brown to dark brown, nearly smooth and with numerous lenticels, or more or less scaly and considerably roughened, the scales soft, occasionally with brownish-black apothecia of a fungus; inner surface grayish-white or light brown, longitudinally striate; fracture short and granular or short-fibrous; odor slightly aromatic, especially marked in the fresh drug; taste bitter and aromatic. Microscopical characteristics are given. Powder: Light yellowish-brown; consisting chiefly of fragments of stone cells and parenchyma containing calcium oxalate crystals and starch grains; stone cells chiefly in large groups, the individual cells being more or less irregular in shape with very thick, porous walls, the lumina being usually filled with air; calcium oxalate chiefly in rosette aggregates, occasionally in single prisms, mostly from 0.015 to 0.020 mm. in diameter; starch grains mostly single. Macerate 1 gm. of the powdered bark in 5 cc. of cold water, filter and heat the filtrate in a test-tube; it should become very cloudy but on cooling assumes its original transparency. Ash not exceeding 12 per cent.

*Convallaria*.—Rhizome horizontal, elongated, usually branched, cylindrical, variable in length, from 1 to 3 mm. in diameter; externally yellowish-white or pale-brown, with a few circular stem-scars; from the under and side portions at the nodes usually arise from 3 to 5 thin, tortuous, dark brown, branching roots; fracture short or fibrous; internally whitish; odor faint; taste sweetish, becoming bitter and acid. Microscopical characteristics are given. Powder: Dark brown, tending to cake on standing, consisting chiefly of cellular fragments and a few starch grains and raphides of calcium oxalate; cells of endodermis quite long with slightly oblique ends; the walls being considerably thickened, lignified and porous.

*Coriandrum*.—The fruit should contain not more than 5 per cent. of other fruits, seeds and other foreign matter. Mericarps usually coherent; cremocarp nearly globular, from 3 to 5

mm. in diameter; externally light brown or rose colored; summit with 5 calyx teeth and a short stylopodium, each mericarp with 5 prominent, straight, longitudinal primary ribs and 4 indistinct, undulable, secondary ribs; mericarps easily separated, deeply prominent, straight, longitudinal primary ribs and 4 indistinct, undulate, secondary ribs; mericarps easily separated, deeply concave on the inner or commissural surface and showing in transverse section 2 vittæ (oil-tubes) on the inner surface of each. Microscopical characteristics are given. Powder: Light brown, consisting chiefly of fragments of endosperm and lignified tissues of the pericarp; calcium oxalate crystals numerous, from 0.003 to 0.010 mm. in diameter, mostly in rosette aggregates, either isolated or in aleurone grains; sclerenchymatous fibres irregularly curved, having thick, yellowish, lignified walls and numerous simple pores; globules of fixed oil numerous; fragments of light-yellow vittæ few, associated with elongated, polygonal, epidermal cells. Volatile ether-extract not less than 0.5 per cent. Ash not exceeding 7.5 per cent.

*Cubeba*—The dried, full grown, unripe fruits of *Piper Cubeba* Linné filius (Fam. Piperaceæ), with not more than 5 per cent. of stems and other foreign matter. Upper portion globular, 3 to 6 mm. in diameter, with a straight, slender, stem-like portion from 5 to 7 mm. in length; pericarp externally grayish, brownish- or bluish-black; coarsely reticulate; about 0.3 mm. in thickness, easily cut, 1-locular, 1-seeded; the immature seed attached at the base of the pericarp; odor aromatic, distinct; taste strongly aromatic and pungent. Microscopical characteristics are given. Powder: Light brown to blackish-brown, consisting of a more or less even distribution of starch-bearing cells of the perisperm, and fragments of the pericarp with stone cells; starch grains numerous, single or compound, from 0.002 to 0.012 mm. in diameter; stone cells numerous, in palisade-like groups, in surface view rounded or polygonal with rather prominent dark lumina and yellowish porous walls; secretion cells with a yellowish, oily content becoming reddish on the addition of sulphuric acid; fragments of stalk few, with spiral tracheæ and groups of sclerenchymatic fibres from 0.050 to 1.000 mm. in length with blunt, rounded, or very much attenuated ends, the walls strongly lignified and with numerous oblique pores. Volatile ether-extract not less than 10 per cent. Total ash not exceeding 8 per cent.

*Digitalis*—The dried leaves of *Digitalis purpurea* Linné (Fam. Scrophulariaceæ) with not more than 2 per cent. of stems, flowers, and other foreign matter; leaves when entire attaining a length of 30 cm. and a breadth of 15 cm., ovate to oval, abruptly contracted into winged petioles, the latter from 5 to 10 cm. in length, or, in the smaller leaves, nearly absent; margin crenate, irregular; the commercial article usually more or less crumpled and broken, thin, dull, pale green or gray and densely pubescent on the lower surfaces; upper surfaces wrinkled, sparsely hairy; the venation conspicuously reticulated; the mid-ribs and principal veins broad and flat, often purplish, the lower veins continued into the wings of the petioles; odor slight, characteristic; taste strongly bitter. Powder: Dark green, with numerous fragments of non-glandular hairs consisting of from 2 to 8 cells (usually 2 to 5 cells), varying in length from 0.145 to 0.435 mm., some of the cells being frequently collapsed; glandular hairs few, small, with a 1- or 2-celled stalk and a 1- or 2-celled glandular head; numerous irregular fragments of lumina showing stomata and occasional water-pores and elongated fragments of veins and petioles showing fibro-vascular tissues. Ash not exceeding 10 per cent.

*Ergota*—The carefully dried sclerotium of *Claviceps purpurea* (Fries) Tulane (Fam. Hypocreaceæ), replacing the grain of rye, *Secale cereale* Linné (Fam. Gramineæ), with not more than 5 per cent. of harmless seeds, fruits and other foreign matter. Cylindrical, obscurely three-angled, tapering towards both ends, obtuse, somewhat curved, from 1 to 4.5 cm. in length and 3 to 5 mm. in thickness; externally purplish-black, or brownish-black, longitudinally furrowed; fracture short, pinkish or reddish-white, sometimes whitish; odor peculiar, disagreeable; taste disagreeable, bitter. Pour hot water on bruised ergot; no ammoniacal or rancid odor should be developed. Powder: Grayish-brown, consisting chiefly of whitish fragments composed of false parenchyma of compacted hyphæ and a few purplish colored fragments of the outer layer of the sclerotium; mounts made in hydrated chloral T.S. or in sulphuric acid show the separation of numerous globules of a fixed oil and many of the fragments should be colored yellowish, reddish or rose-purple. Ash not exceeding 5 per cent.

Ergot should be dried at a temperature not exceeding 70°C. The drug deteriorates with age if improperly stored. It should be kept in tightly closed containers protected from the light and to which a few drops of chloroform should be added from time to time to prevent attack by insects. The powdered drug should not be kept longer than one year.

*Evidictyon*—The leaves may include not more than 5 per cent. of stems or other foreign matter. Usually in fragments; when entire, laminae lanceolate, 5 to 15 cm. in length, 1 to 3 cm. in breadth; summits acute; bases slightly tapering into a short petiole; margins irregularly serrate or crenate-dentate; upper surfaces yellowish-brown, covered with a more or less shiny resin; under surfaces grayish or yellowish-white, conspicuously reticulate with greenish-yellow veins; minutely tomentose between the reticulations; coriaceous, brittle; odor aromatic; taste balsamic, bitter, becoming sweetish. Microscopical characteristics are given.

*Eucalyptus*—The leaves may include not more than 3 per cent. of the stems, fruits, and other foreign matter. Laminae lanceolately scythe-shaped, from 8 to 30 cm. in length, from 2 to 7.5 cm. in breadth; summits when present acute or acuminate; bases unequal, obtuse or more or less rounded and connected with twisted petioles from 5 to 35 mm. in length; margins slightly uneven, revolute; coriaceous; both surfaces varying from pale yellowish-green to grayish-green and more or less glaucous, glabrous, glandular-punctate and with numerous, small circular, brown dots of cork; veins of the first order anastomosing with each other and forming a line nearly parallel with the margin; odor slightly aromatic; taste aromatic, bitter, and cooling.

*Euonymus*—The bark may include not more than 3 per cent. of wood and other foreign matter. Usually in transversely curved pieces, occasionally in single quills 2 to 7 cm. in length; bark 1 to 2.5 mm. in thickness; very light in weight; outer surface grayish or light brown, somewhat wrinkled, occasionally transversely fissured from the lenticels and with scale-patches of soft cork; inner surface grayish-white, longitudinally striate and somewhat porous; fracture short with silky, projecting, bast-fibres; odor distinct; taste bitter and acrid. Microscopical characteristics are given for the powdered drug.

*Foeniculum*—The dried ripe fruits of cultivated varieties of *Foeniculum vulgare* Miller (Fam. Umbelliferae), with not more than 2 per cent. of harmless foreign matter. Mericarps usually separate, each being broadly elliptical, more or less curved, from 4 to 10 mm. in length, from 1 to 3.5 mm. in breadth, some having a slender stalk from 2 to 10 mm. in length; dorsal surface convex, yellowish-green to grayish-brown, with three prominent, longitudinal primary ribs and at the summit a short, conical stylopodium; commissural surface with three narrow, light brown, longitudinal areas separated by two dark brown or brownish-black areas containing the vittæ or oil-tubes; odor and taste aromatic and distinct. Powder: Yellowish-brown consisting of irregular, angular fragments; tissues of endosperm, colorless, the cells filled with aleurone grains each containing a rosette aggregate of calcium oxalate, about 0.002 mm. in diameter; fragments containing yellowish-brown vittæ, from 0.100 to 0.200 mm. in width; sclerenchymatous fibres few, strongly lignified and with numerous, oblique, simple pores; parenchyma cells with more or less thick walls and simple pores and occasionally reticulate thickened; tracheæ few and either spiral or annular; in mounts made with hydrated chloral T.S. numerous globules of a fixed oil separate. Ash not exceeding 10 per cent.

*Frangula*—The dried bark of *Rhamnus Frangula* Linné (Fam. Rhamnaceæ). In quills varying in length, frequently flattened or crushed; from 0.5 to 1 mm. in thickness; outer surface grayish-brown or purplish-black, with numerous, prominent, lighter colored, transverse lenticels and occasional patches of foliaceous lichens bearing small, blackish apothecia; inner surface smooth, dark brown with occasional purplish blotches, longitudinally striate, becoming red when moistened with solutions of the alkalis; fracture short, slightly fibrous in the inner layer; odor distinct; taste slightly bitter. Microscopical characteristics are given. Powder: Yellowish-brown; stone cells absent (distinguishing it from powder of *Rhamnus Purshiana*). Add 0.100 gm. of powdered frangula to 10 cc. of hot water, shake the mixture occasionally until cold and filter it. On the addition of a few drops of ammonia water, the filtrate should be colored a deep red. Macerate 0.100 gm. of powdered frangula with 10 drops of alcohol; add 10 cc. of water,

boil the mixture and filter it when cold. Shake the filtrate with 10 cc. of ether, separate the yellow, ethereal solution, and shake 3 cc. of this ethereal liquid with 3 cc. of ammonia water; the separated ammoniacal solution, on diluting with 20 cc. of water, should still possess a distinct cherry-red color. Ash not exceeding 0 per cent.

**Galls**—An excrescence on the young twigs of *Quercus infectoria* Olivier and other allied species of *Quercus* (Fam. Fagacæ), induced by the punctures on the leaf-buds and by the deposited ova of *Cynips tinctoria* Hartig (Fam. Hymenoptera). Nearly globular, from 0.8 to 2.2 cm. diameter; ex-

ternally blackish-olive-green or blackish-gray, more or less tuberculated on the upper portion, the basal portion being nearly smooth and contracted into a short stalk, heavy, sinking in water excepting the smaller galls which should not be present to a greater extent than 5 per cent.; fracture short-horny, internally grayish or dark brown, consisting of a central portion slightly radiating and resinous, occasionally hollow and traversed by a narrow radial canal extending to the exterior as shown by the perforation in the whole gall; odor slight; taste strongly astringent. Microscopical characteristics of the powdered drug are given.

## The Modern Medical Uses of Paraffin Oil and of Liquid Petroleum.\*

By M. I. WILBERT,

*Hygienic Laboratory, U.S. Public Health Service.*

**W**ITHIN recent years renewed interest is being taken in paraffin oil for internal administration in the treatment of intestinal stasis or chronic constipation. This renewed interest is largely due to the fact that a notable English surgeon, Sir W. Arbuthnot Lane, in his experimental work to prevent the formation of adhesions after surgical interference in the intestinal tract, found that paraffin oil served as an intestinal lubricant and was of material assistance in overcoming persistent constipation.

This use of paraffin oil is by no means new, however, and dates back many years to the introduction of refined petroleum products by Chesebrough and others about 1872.

Previous to this date the residues in petroleum stills had little or no commercial value and were used almost exclusively as lubricants, more particularly axle grease. The possibility of producing an odorless and practically colorless oil and heavier fat by comparatively simple methods, presented the peculiar problem of establishing a market for products of this kind and for some years at least the substances were used largely, if not exclusively, for the adulteration of other fats and oils, and it is this use of vaseline and of vaseline oil as adulterants that later led to experiments to demonstrate their possible food value and the presence or absence of harmful or toxic ingredients. Experiments carried on by N. A. Randolph, Philadelphia, about 1884, not only demonstrated that the heavier petroleum products were not absorbed from the intestinal tract but also showed that they served to act somewhat in the nature of foreign material, and might have some value in the treatment of certain forms of constipation. It was also thought that these products appeared to inhibit fermentation and would, therefore, be of value in the treatment of certain forms of diarrhœa. Some 15 years later, Robert Hutchinson, of England, reported practically the same observations and this report led to the then quite extensive use of petroleum and of paraffin oils for various intestinal disorders.

The at one time widespread use of purified petroleum products in the treatment of pulmonary disorders, is, to some extent, traceable to the administration of the naturally occurring petroleum products in various countries and at various times. Crude petroleum has been used from time immemorial as a medicine and perhaps largely because of its disagreeable odor was from very early times used in the treatment of diseases of the respiratory tract. In this country "Seneca oil" had considerable vogue from time to time and was frequently put out in the form of proprietary or "patent preparations" for the treatment of various diseases. After the introduction of purified petroleum products these were offered as substitutes for the formerly used crude oil and, even at the present time, the advertising matter put out in connection with some of the popularly exploited preparations of petroleum do not satisfactorily designate whether or no the crude or the purified product is being advocated.

During the past three or four decades, purified petroleum products have been marketed under scores, if not hundreds, of proprietary names and the misleading claims and statements made in connection with these several preparations are far from being a credit to the owners or to the persons who act as

distributors for the several articles. That there is some element of truth in the claims that have been made for petroleum products is evidenced by the fact that the use of petroleum, crude and refined, has persisted in all parts of the world and has at times, like the present, reached amounts that were quite considerable.

With the renewed interest in paraffin oil that is in evidence at present, the time appears to be particularly opportune for pharmacists who are willing to assist in making for true progress to do missionary work and to point out to physicians in a rational and sensible way that paraffin oil and other petroleum products, while they may be useful, must have limitations, that many of the claims made for the proprietary articles are unfounded and not based on fact, that in the event that the physician does wish to experiment with the product, non-proprietary oils of high quality are readily available and, finally, that these non-proprietary products can be sold to the patient at a very much lower figure than can the proprietary article and still yield the retail druggist a more satisfactory profit.

As intimated above, the products that are available at the present time are many, or at least appear to be numerous because of the varied trade names under which they are offered. On studying the nature of these products, however, it appears that there is no very great difficulty in establishing certain, at times perhaps arbitrary, lines of demarcation between them and identifying them as belonging to one or the other class of commercially available oils readily obtainable by any pharmacist.

The bulk of the available supply of heavy mineral oil comes from two sources and the products differ materially in chemical composition. The American oil is obtained from paraffin base petroleum and consists essentially of hydrocarbons of the methane series having the general formula  $C_nH_{n+2}$ .

The so-called Russian Oil, obtained largely, if not entirely, from the oil wells in the Baku district, consists chiefly of monocyclic polymethylenes or naphthenes, having the general formula  $C_nH_{2n}$ . These latter products have been described as hydrated aromatic hydrocarbons and while they behave with reagents very much in the same way as do the hydrocarbons of the methane series, they are more readily purified and generally occur in commerce as water white oils that are quite free from fluorescence or odor. The American paraffin or methane oils usually have a distinct color and are seldom quite free from fluorescence or a peculiar dichroic effect that is particularly noticeable when the preparation is viewed by reflected light. Apart from the appearance, however, there is no evidence that the two products differ in their effect on the animal organism and one has perhaps as many advocates and users as the other.

The density of the commercially available products also varies and the fact that it is proposed to extend the present U.S.P. limits of specific gravity, 0.870 to 0.940 at 25°, to read 0.845 to 0.940 at 25° clearly indicates that the members of the present Committee of Revision are themselves not convinced as to the properties that should be inherent in a mineral oil for medicinal use.

The paraffin oils official in the Pharmacopœias of the Continent of Europe are usually of the denser variety, 0.865 or higher at 15°, but this is probably due to the fact that there the oil is largely used as a basis for ointments and the various other uses are only now being developed.

\*Read before the Washington Branch of the A.Ph.A., March, 1914

In this country paraffin oil or, as it is better known, liquid petroleum, has long been in use as a basis for oil sprays in the treatment of affections of the nose and throat and for this purpose the lighter and more limpid oil appears to be preferred. For internal administration Sir W. Arbuthnot Lane prefers the heavier, European type of oil and this is now available in this country and is being introduced by a number of manufacturers and dealers under proprietary titles, to be sold at fancy prices. Even for internal use, however, there appears to be a definite limit to the solid paraffin that an oil can hold in solution and be palatable or readily taken. At comparatively low temperatures some of these oils are nearly solid and even at ordinary temperatures they are so viscid that they do not readily leave the mouth when taken internally.

Up to the present time it is by no means positively established that the comparatively dense or the viscid oil is to be uniformly preferred for internal administration, and the pharmacist can be of service not alone in assisting the physician to determine which of the two products is the preferable one but also in devising methods of administration and preferable flavors to overcome the objectionable taste of the oil, particularly of the denser variety of oil.

One further question that may be discussed briefly is the dose. One firm, the owner of the product most widely used in this country, says:

"Excellent results are obtained by giving the oil in small doses. In mild cases a tablespoonful at night gives prompt relief. In longer standing cases make it almost a part of the diet and give one or two teaspoonfuls just after meals."

Dr. Lane and many of his followers, on the other hand, give the oil in much larger doses and insist that it be given shortly before meals so as not to interfere in any way with the digestion of food which it probably would if, as proposed above, it were given with or immediately after meals and thereby intimately mixed with the stomach content.

Bastedo, in his book on materia medica, pharmacology, therapeutics and prescription writing, states that the oil is only mildly laxative and should be given in doses of 30 cc. two or three times a day. Other authorities advise even larger doses, and Robinson (*Medical News*, 1900, v. 77, p. 56) reports that he frequently administered nearly a pint in a few hours without any indications of discomfort and no untoward results of any kind. Robinson also asserts that he was able to duplicate the experiments reported by Randolph and reclaim all of the oil that was ingested. Some recent German experimenters, however, appear to believe that a part, at least, of the oil is changed or absorbed in the intestinal tract, and while the bulk of it passes through unchanged it is not possible to reclaim absolutely all of the oil as taken. At the present time, the preferred dose is from one to two tablespoonfuls one hour before meals, or from two to four tablespoonfuls on retiring. The oil may be flavored to make it less objectionable, and several authorities appear to prefer administering the product in the form of an emulsion, though others claim that the emulsion is not so satisfactory and does not give the same uniform good results.

In addition to its use internally as a lubricant or laxative, paraffin oil is also given in the form of rectal injections, and is being exploited more recently as a dressing for wounds, both recent and chronic. In connection with chronic ulcers it is being extolled as a dressing to protect the skin around the focus of suppuration. The oil in these cases not alone protects the skin against irritation from oozing, thus warding off eczema, but also keeps the dressings from sticking.

The use of liquid petroleum as a soothing application in the form of a spray to inflamed mucous membranes of the nose and throat is well-known, as is the use of the same product in cosmetics, such as skin creams or pomades, and the use of this product for these several purposes need not be discussed at this time.

In conclusion, then, the object of this communication is to call attention to the renewed interest that is being manifested by medical men in paraffin oil for internal administration, and as an adjuvant dressing for wounds, and to suggest to pharmacists that they acquaint themselves with the properties of the available material for the purpose of pointing out to physicians the nature and the kind of material that is available as well as the limitations that probably exist.

## NEW REMEDIES

*Alokresin* is an aloes-cresol resin soap, used internally in diseases of the digestive tract of horses and cattle.

*Ambrine* is a new material for dressing wounds, composed of rubber, paraffin and wax. It is melted, sterilized, and applied to the site of the wound, where it forms an elastic skin.

*Amocin* is a pure form of cellulose, with a flavor of apples, used in teaspoonful doses for constipation.

*Antilausan* is an alcoholic-aqueous distillate from cevadilla seeds and chrysanthemum flowers, used for parasites.

*Apyron* is lithium acetylsalicylate. It is soluble in water, and has a pleasant saline taste.

*Arsaferroptin* is a new arsenic-lecithin-albumen preparation.

*Arsalyt*, said to be a substitute for salvarsan, will soon be put on the market in the form of sterile ampules. It is said to be of low toxicity, without local reactions, and of great activity.

*Asellomaltyl* is maltyl containing 20 per cent. of cod liver oil and 3 per cent. of calcium glycerophosphate.

*Birosini* suppositories contain bismuth oxyiodogallate, zinc oxide, and anesthesin.

*Cholital*, a remedy for gallstones and colic, is an emulsion of 11 per cent. of pure spirits of turpentine, 26 per cent. of ether, and 34 per cent. of syrup of orange flowers and oil of peppermint.

*Coladein* is a compound syrup of guaiacol and codeine.

*Diuren* is the total extractive of fresh *Adonis vernalis*. It shows no cumulative action, and no bad effect on the stomach and bowels.

*Dubolin* is a camphor-alcohol-ether mixture, used for inunction.

*Epithelogen* is a trade name for Beck's bismuth paste, consisting of bismuth subcarbonate or subnitrate, yellow vaseline, soft paraffin and wax.

*Essital* tablets consist of aluminum acetate, and are used for the extemporaneous preparation of solutions of that substance.

*Eulaxyl*, or butylphenolphthalein, is said to be "the laxative for children."

*Eupork* is the name of an injection for combatting hog cholera.

*Eutectan* is an acid bismuth salt of guaiacol.

*Ferrocitol* is an aromatized iron-manganese preparation, with glycerophosphates.

*Gonitol* capsules contain santal oil, kava-kava resin, salol, and hexamethylenetetramine.

*Hempel's* gonorrhoea tablets contain 6 parts salol, 4 parts picchi extract, and 1 part starch.

*Lauton* consists of ampules or keratinized capsules, containing a 1 : 1000 solution of colloidal rhodium A. They are used in septic diseases.

*Lecutyl* is a combination of copper cinnamate with lecithin, containing 1.5 per cent. of copper. It is used externally in the form of an ointment in tuberculosis of the skin. Internally it is given in pills containing 0.005 g. of copper.

*Metayer* is obtained by the vinous fermentation of beef juice, honey, and cane sugar.

*Monoformyl-morphine* is prepared by the action of formic acid on morphine, is easily soluble in alcohol and chloroform, melts at 220-225°, and is said to be less toxic than morphine.

*Neptusan* is intended for addition to the bath, and liberates oxygen.

*Nuclocithin* is a cacao liqueur, containing iron nucleinate, iron glycerophosphate, and cinchona extract.

*Stomoxigen* is said to consist of sodium bicarbonate, magnesium peroxide, rhubarb, gentian, and milk sugar.

*Triposan* capsules contain santal oil, kava extract, salol, and hexamethylenetetramine. See *Gonitol* above.

*Trisantal* capsules contain oil of santal, dialysed extract of herniaria, and uva ursi.

*Urodonal* is a granular effervescent powder, containing methylglyoxalidin and sidonal.

*Wermolin* is an emulsion containing oil of chenopodium, castor oil, peppermint oil, oil of cinnamon, oil of lemon, acetic ether, and saccharin.

## Classical Discoveries in Pharmacy—VI.

### THE DISCOVERY OF ETHYL NITRITE.

OF WHO first brought together spirit of wine and impure nitric acid, we have no record. The real discoverer of ethyl nitrite would have to be sought among the hosts of alchemists who, in their unsuccessful yet resultful searchings after the philosopher's stone and the elixir of life, had combined, in numberless ways and proportions, all substances accessible to them. Tradition ascribes the discovery to the unknown alchemist whose writings were included in the works of Raymond Lully. Other chemists also observed that when alcohol and nitric acid were allowed to stand in contact, or heated together, a reaction took place. Huggens and Papin mixed the two liquids under the receiver of an air-pump, as reported in the *Philosophical Transactions*, 1675, Vol. 10, p. 443:

"Thus, some *Aqua fortis* was poured in the upper glass, and Spirit of Wine into the lower, and the recipient was so well exhausted of air, that the Spirit of Wine boyled up with great bubbles (as usually it doth,) and the *Aqua fortis* cast some small bubbles. After that both these liquors were well purged of air, the upper Glass was sunk into the lower, so as that the Spirit of Wine was mingled with the *Aqua fortis*; at which instant there was yet seen a very considerable ebullition . . . . In the very instant they mixed, they make great ebullition, but soon after they mortifie one another, and lose the properties they had before."

A little later, John Kunkel, or Kuncle, experimenting with this same mixture, noticed that an oily liquid separated, which floated on water, but he paid no particular attention to it. Kunkel, who was connected with the court of the Elector of Brandenburg, engaged in a polemic with a Dr. Voight, on the nature of heat and cold, and the existence of a "pure acid substance." In answer to Voight's contentions, Kunkel wrote a book entitled "*De Acido & Urinoso Sale Calido & Frigido, contra Doctor Voight's Spirit. Vini vindicatum*," which was submitted to the Royal Society at London, for their decision on the merits of the controversy. Both Kunkel and his opponent make frequent mention of the effects of nitric acid on alcohol. In one passage, the possibly violent reaction is warned against: "If I take a good spirit of wine, and drop upon it, *guttatim*, spirit of niter, until it ceases to cause an ebullition, the *Urinosum* is then in a balance with the *Acidum*. Only put this salt in a heated crucible, and it will go off with an explosion." (*Phil. Trans.*, 1685, Vol. 15, p. 896.)

Meantime, the solution of ethyl nitrite in alcohol, made by distilling the two substances together, was in use by physicians. It was thought to contain an "ether," or "ethereal oil," a most indefinite term applied to any kind of very volatile liquid, no matter what its source. As it happened, the ether made by treating alcohol with sulphuric acid was most readily prepared and came to be best known. The nature of this ether not being understood, there were many attempts to make it by methods which were impossible of success. In 1734, Duhamel, the French naturalist, reviewed the history of ether in a memoir presented to the French Academy of Sciences, Grosse collaborating in the work. (*Mem. Acad. Sci.*, 1734, p. 41.) Grosse repeated a number of the experiments of Frobenius, a German chemist, who had prepared ether by the action of sulphuric acid on alcohol. Heat and distillation were necessary in this method. Eight years later, Duhamel's attention was again called to the subject of ethereal oils by a communication from Navier, in which, for the first time, the chemical compound formed when nitric acid and alcohol were allowed to react, was isolated, partially purified, and its properties described. It thus came about that Thénard, in his comprehensive work on ethers and ethereal salts, credited Navier with the discovery of nitrous ether. (*Mem. d'Arcueil*, Vol. 1, p. 75.)

Duhamel prefaces the reading of Navier's paper thus:

"Two New Processes for Obtaining, without the aid of Fire, an Ethereal Liquor closely approaching that to which Frobenius, the German Chemist, has given the name of Ether." (*Mem. Acad. Sci.*, 1742, pp. 379-389.)

"According to appearances, one would have believed that there was nothing further to discover in this matter; nevertheless M. Navier, a physician established at Chalons-sur-Marne, and a Correspondant of the Academy of Sciences, who

has applied himself with much success to chemical researches, has informed me, for the Academy, of a very interesting discovery which he has made in this affair. Without distillation, without even the aid of fire, by the mere combination of spirit of niter with spirit of wine, he obtained an ethereal oil which has almost the properties of that of Frobenius, although the acids are different, since the one employed oil of vitriol, and the other the spirit of niter."

The extract from Navier's letter then follows:

"As I was compounding an antispasmodic tincture, into which entered spirit of wine and spirit of niter, the stopper of the bottle in which the mixture had been made blew out, and there spread about a strong odor of ether. This circumstance engaged me to make different mixtures of spirit of wine and spirit of niter in closed vessels, to retain this volatile spirit which had so struck my sense of smell; at last I succeeded in making an ethereal oil, following the procedure which I will now relate:

"I mixed some spirit of wine and spirit of niter, equal parts by measure and not by weight; on the 22nd of October I put the whole in a well-corked bottle; the 31st of the same month, I found about a sixth of the mixture separated and floating on the rest of the liquid; it was a very beautiful ethereal oil, very clear, and almost colorless."

Before citing further from Navier's communication, Duhamel seeks to connect the former's preparations with a remedy of the day, about which, unfortunately, nothing further is known.

"In the memoir of 1734 which I have already cited, one sees that M. Grosse did not succeed in preparing the yellow ether that an Italian employed at Paris for various maladies; perhaps this yellow liquor of the Italian resembles the martial ethereal oil that M. Navier has found the method of making, and which he also communicates to the Academy."

Navier's account then proceeds:

"The deflagration which takes place on bringing a lighted taper near the opening of a tube at the bottom of which there is being made a solution of iron, either with spirit of vitriol or spirit of marine salt, and several other experiments which it is useless to relate here, not leaving any doubt that the iron contains a rather goodly quantity of fatty and inflammable parts, I thought to try to separate them by means of my ethereal oil.

"To this end I made a strong solution of iron filings in good spirit of niter; I added to this solution about one-half of well rectified spirit of wine; after having well mixed the two liquors, I put the whole in a bottle, which I stoppered and tied securely; six months later, thinking to examine this bottle, which I had, as it were, forgotten, I found that on a very dark and red liquor there floated another, very limpid, and of a lighter red. I was surprised, on unstopping the bottle, at the petulance with which a part of what was within burst into the air; nevertheless there remained enough for me still to take out a little of the floating liquor; it was an ethereal oil, of a sharp odor, a little sulphurous, yet rather pleasant, and of a bitter taste, and it floated on water."

The preparation of the concentrated solution of iron in nitric acid is described in great detail—with useless detail, it now seems. Then good spirit of wine was added.

"At the end of 24 hours the liquor acquires a light red color, which increases from day to day, and at the same time it contracts a sharp and penetrating odor, which is a good sign. Toward the fifth day the liquid becomes cloudy, and there rises to the surface a kind of scum; then a little fermentation begins to set in, and increases to the point of bursting the bottle, if it is not of a very strong glass (this little misfortune has happened to me many a time). As the fermentation goes on, there rise bubbles of air which carry with them small portions of oil, which they deposit on the superficies of the liquor, where they burst; one sees the oil increase thus little by little.

"While all this is going on, there is precipitated at the bottom of the vessel a kind of crocus, because the nitrous acid abandons the metallic substance which it held suspended, in order to unite itself to the spirit of wine, which has charged itself with all the fatty parts of the iron; which appears to form an additional item for the Table of Relations of the late M. Geoffroy."

Laborate precautions for removing the stopper are given, so that the pressure of the gases within the bottle will not eject the contents. "The bottle being opened, there is seen a

boiling of the two liquids, which I allow to subside a little; finally I separate my oil.

"I used at first for that purpose a cotton wick, but seeing that it took too much time, and that much oil was lost or evaporated, I believed I would succeed better with a siphon which I made from the end of a barometer tube, and which actually had a better effect; but that was not without its inconveniences, for in pumping with my mouth the long arm, to fill it with oil, often I drew it into my mouth. I therefore had recourse to a little syringe of glass, which filled with oil by pulling the piston, and had none of the above disadvantages.

"The oil being separated from the liquor on which it floats, and put into a bottle with a close stopper, is clear and limpid

like water; but little by little it acquires, in the space of three weeks or a month, a fine red color, which it loses entirely if shaken with a little water; and this water retains the color that it (the oil) had previously. The oil being kept a short time with water, imparts to the latter a great bitterness, and in spite of that it becomes even more bitter than it was, when it came to be separated from above the red liquid. I think that this bitterness may come from the fatty parts of the iron.

"If one pours on our oil, when it has just been separated, a few drops of oil of tartar by deliquescence, no sensible change takes place; but after some time there form needle-like crystals which are a true regenerated niter; then if one opens the bottle, one perceives a nitro-sulphurous odor, most penetrating, which leaves no doubt that our oil contains nitrous acid."

## Seven Million Dollars Handed to British Pharmacists Through Insurance Act Fees.

*The Enormous Amount of Prescription Business Under the National Insurance Act—A New Era of Prosperity for the Druggist—The Registration of Dispensers—Other News from Our London Correspondent.*

SOME idea of the enormous amount of new business which the insurance act has created for the pharmacists of Great Britain can be derived from the fact that during the first year the number of prescriptions dispensed in the county of Lancashire alone was nearly six millions, or, to be precise—5,863,113. Statistics for the rest of the country are not yet available, but even allowing for the probability that there are more insured persons in Lancashire than in any other county, it is obvious that there has been a huge increase in the work of pharmacists throughout the country. At a rough estimate the total number of prescriptions for the whole of the insured population of Great Britain during the first year is, I should say, not much under 40,000,000. The average price of the Lancashire prescriptions works out at about 16 cents apiece, and a simple calculation shows that this total value is just about a million dollars. In the whole country, therefore, the value would be something like \$7,000,000. The interesting point is that most of this represents new business, for before the insurance act came into force the majority of the persons who are now insured were supplied with their medicines by the doctors who attended them. The unfortunate part of it is that the money put aside under the scheme for the payment of the drug bills will be insufficient in a number of districts, and the question that is now uppermost in the minds of the chemists in these districts is how is this deficiency—it amounts in some cases to 25 per cent.—to be made up? In the vast majority of cases, however, the funds are quite sufficient to pay the bills in full, and it is extremely unlikely that the Government will allow the pharmacists in any district to go short.

### A New Era of Prosperity for Pharmacists.

It will be gathered from the preceding paragraph that pharmacy is in a much more flourishing condition than it was a few years ago. About this there can be no doubt, and it is to be hoped that nothing will happen to prevent the continuance of the insurance act along the present lines. One result of the huge increase in the amount of dispensing is that pharmacists are now paying less attention to the "fancy goods" side of their business; at any rate, to those features of it which yield a very small profit. It would not be surprising to find pharmacies before long that will devote their time solely to dispensing. As a matter of fact, a company is now in the process of formation for this very purpose. The promoters of this concern have selected 10 shops in districts where the insurance population is high, and the following estimate is made of the cost of working the insurance and of the probable profits:

Total rental of 10 shops, approximately.....	\$3,000
Rates, rents and lighting.....	1,500
Salaries and wages.....	6,500
First stock of drugs.....	2,500

Total expenses for the first year.....\$13,500

The promoters state that from information they have collected there are several pharmacies in London dispensing as many as 300 insurance prescriptions a day; assuming that in each of the proposed new company's shops only 100 prescriptions a day are dispensed at an average price of 14 cents per prescription there would be a turnover yearly of about \$18,630, so that after deducting the estimated yearly outlay there would be a net profit of more than \$5000 a year, or sufficient to pay dividends of 33 per cent. on the authorized capital of the company—\$15,000. This sounds not altogether unreasonable, and the fact that a concern is being started for the purpose of dealing with insurance prescriptions alone is a sign of the times.

### The Registration of Dispensers.

A bill has been promoted by the Pharmaceutical Society and introduced into Parliament for the purpose of setting up a register of assistant dispensers to pharmacists. At present the unqualified assistant has no status, but the bill promises to institute an examination in prescription reading, posology and pharmacy, candidates for which would be required to have had three years' experience in dispensing, and if successful at the examination, would become registered as assistant dispensers. The first register would also contain the names of those who could produce evidence of a specified training in dispensing. It is questionable whether the bill will make much progress this season, owing to the important legislative measures which have to be disposed of.

### U.S. Bureau of Chemistry Test for Wintergreen Oil.

The statement that the chemists of the Bureau of Chemistry, United States Department of Agriculture, are able to detect the addition of methyl salicylate to the natural oils of wintergreen and birch is commented upon by *The Perfumery and Essential Oil Record*, of which the editor is Mr. John C. Umney, last year's president of the British Pharmaceutical Conference. The *Record* has been conducting a series of experiments and now suggests a test which may be found useful as a color test. It has been employed upon true oil of *Gaultheria procumbens*, true oil of *Betula lenta* and upon methyl salicylate. The test is on the following lines: "To five drops of the oil in a test-tube add five drops of a 5 per cent. alcoholic solution of vanillin and 1 cc. of alcohol. Shake well, and add 2 cc. of concentrated sulphuric acid and mix thoroughly." The following indicate the results of the examination by this method of typical examples: Oil of *Gaultheria procumbens*, intense crimson; oil of *Betula lenta*, deep blood-red; doubtful, reddish-brown; methyl salicylate (synthetic), yellow. It is admitted that, as with all color tests, this method must be accepted with reserve, and it is absolutely essential that identical conditions should obtain in every test.

### The British Pharmacopoeia.

It is understood that the work of revising the British Pharmacopoeia is nearing completion, but the date of publication is not known. The revision is conducted by the General Medical Council of Great Britain, and the Pharmaceutical Society is allowed to co-operate. The last revision was published in 1898.

# SELECTED FORMULAS

**Summer Toilet Cream.**

Oil of sweet almond, expressed.....	5 drams
Precipitated stearic acid.....	5 drams
White wax.....	8 drams
Tincture of quillaja.....	2½ drams
Essence of violet.....	¼ dram

Mix.

**Cucumber Cold Cream.**

Thinly sliced fresh cucumber is macerated in the cold in olive oil for 24 hours, then strained. To each 600 parts by weight of the oil thus obtained, add 125 parts of spermaceti and 100 parts of white wax, and melt together on a water-bath. Transfer the mixture to a mortar and gradually incorporate 10 parts of fresh cucumber juice previously mixed with 20 parts of 90 per cent. alcohol.

**Almond Shaving Cream.**

White soft paraffin.....	120 grains
Spermaceti.....	120 grains
Almond oil.....	2 fl. drams
White Naples soft soap.....	4 ounces
Tincture of quillaja.....	2 fl. drams
Terpineol.....	2 fl. drams

Melt the soft paraffin, spermaceti, and almond oil; transfer to a warm mortar; add the soft soap, rub down until cold, then mix in the tincture of quillaja and terpineol. A little oil of bay may be added if desired.

**Peroxide Tooth Powder.**

Magnesium peroxide.....	60 parts
Sodium perborate.....	30 parts
Castile soap and flavoring.....	10 parts

According to the *Journal of the A.M.A.*, this powder will liberate enough free oxygen to make from 40 to 50 drops of a 3 per cent. peroxide solution for every 10 grains put on the brush and placed in the mouth. Can be used morning and evening for brushing the teeth, and should be swished around the interstices for a full minute before being ejected from the mouth.

**Chameleon Tooth Powder.**

Potassium bitartrate.....	100 parts
Magnesium carbonate.....	20 parts
Precipitated chalk.....	60 parts
Cochineal.....	3 parts
Alum (ammonia).....	6 parts
Oil of rose, sufficient (about 10 drops to 6 ounces).	

Reduce the ingredients to the finest powder, and mix thoroughly. This powder is white when dry, but turns a lively red on being moistened.

**Hand Whitener.**

Lard, freshly benzoated.....	8 parts
White wax.....	3 parts
Zinc carbonate.....	8 parts
Perfume, sufficient.	

Melt the wax and lard together at a low heat, and when melted, pour into a mortar warmed by boiling water (so as to keep the molten lard and wax fluid for some time). Now incorporate the zinc carbonate, a little at a time, adding the perfume toward the last.

**Magma Bismuthi.**

Bismuth subnitrate.....	50
Nitric acid.....	50
Ammonium carbonate.....	80
Distilled water to make.....	1000 cc.

Dilute the nitric acid with an equal volume of water and dissolve the bismuth subnitrate in it, dilute further to 300 cc. and filter through cotton. Dissolve the ammonium carbonate in 3000 cc. distilled water containing 1/1000 sodium chloride and filter. Pour the acid solution slowly and with constant stirring into the alkaline solution. When the resulting precipitate has subsided, decant the supernatant liquor and wash by decantation until the magma is practically tasteless, using

distilled water containing 1/1000 sodium chloride. Then allow to settle to 1000 cc. When tested, the magma should react alkaline toward methyl orange. (*Am. Journ. Pharm.*)

**Kerosene Emulsion Insecticide.**

Kerosene.....	2 gallons
Common or white oil soap.....	½ pound
Water.....	1 gallon

Heat the solution of soap and add it boiling hot to the kerosene. Churn the mixture by means of a force pump and spray nozzle for 5 or 10 minutes. The emulsion, if perfect, forms a cream which thickens upon cooling and should adhere without oiliness to the surface of glass. For use against scale insects dilute one part of the emulsion with nine parts of water. For most other insects dilute one part of the emulsion with 15 parts of water. For soft insects like plant lice the dilution may be carried to from 20 to 25 parts of water. This insecticide acts by contact and is applicable to all non-masticating insects (suck-insects, such as true bugs and especially plant lice and scale insects), and also to many of the mandibulate insects when the use of arsenites is not advisable.

**Rat Exterminator.**

Ground malt.....	16 ounces
Powdered cantharides.....	10 drams
Musk.....	1 grain
Oil of rhodium.....	6 drops
Oil of caraway.....	6 drops
Brown sugar.....	2 ounces

Mix and divide into pellets of 5 to 10 grains each. Scatter around in the places the rats frequent or in their runways. It is said to be certain death to those that eat it, and the rats leave the building to die.

**Poisonous Fly Paper.**

Arsenous acid.....	1 part
Potassium carbonate.....	4 parts
Sugar.....	24 parts
Water.....	128 parts

Dissolve the potassium carbonate in the water, add the arsenous acid and the sugar, and dissolve. Saturate unsized paper in the solution, let drain off, and hang on strings to dry off. Instead of arsenous acid and potassium carbonate, potassium arsenite (4 or 5 parts) may be used.

**Liquid Dog Soap.**

Soft soap.....	30 ounces
Carbolic acid.....	3 drams
Oil of eucalyptus.....	1 ounce
Water, enough to make.....	1 gallon

Dissolve the soap in hot water, and when quite cold add the other ingredients.

**Brown Dressing for Untanned Shoes.**

Yellow wax.....	300 parts
Soap.....	120 parts
Nankin yellow.....	25 parts
Oil of turpentine.....	1000 parts
Alcohol.....	120 parts
Water.....	1000 parts

Dissolve in the waterbath the wax in the oil of turpentine; dissolve, also by the aid of heat, the soap in the water, and the Nankin yellow (any of the yellow aniline colors may be used) in the alcohol. Mix the solutions while hot, and stir constantly until cold. The dressing is applied to the shoes in the usual manner, rubbed with a brush until evenly distributed, and finally polished with an old silk or linen cloth.

**Black Shoe Polish.**

Carnauba wax.....	4 parts
Yellow wax.....	10 parts
Paraffin.....	6 parts
Nigrosin, fat-soluble.....	3 parts
Stearin.....	1 part
Oil of turpentine.....	80 parts

Mix on a waterbath.

## FOREIGN ABSTRACTS

### REPORTS FROM EUROPEAN WORKERS.

#### Bourquelot and Bridel on Enzyme Equilibria—Constituents of Sarsaparilla Root—Activity of Digitalic Acid Doubted—Use of Old Iodine Tinctures.

**M**OST important of all the papers reviewed this month is the series of three articles from the laboratory of Professor Bourquelot, dealing with the problems of equilibria in solutions being acted on by one or more enzymes. The authors find that the equilibria can be calculated from the law of mass action, with great accuracy. Power and Salway contribute two papers, one on the constituents of sarsaparilla root, in which they show that Schulz's earlier work cannot be confirmed in its entirety, and another on the constituents of an Australian plant, *Daviesia latifolia*. A careful study by Sharp, of the so-called digitalic acid, to which the activity of foxglove has lately been ascribed, reveals the fact that the acid is in all probability inactive, and that the digitalis leaf retains its full strength after the acid has been removed. Roques describes a simple and effective method for restoring old tinctures of iodine.

#### Changes in Enzyme Equilibria—

It has been known for a long time that enzymes such as emulsin can exercise both a hydrolyzing and a synthesizing effect on a mixture of glucoside, glucose and alcohol. Equilibrium is reached when both reactions are proceeding at equivalent rates. For instance, a mixture of beta-methylglucoside, methyl alcohol, and emulsin, with an initial rotation of  $-1.43^\circ$ , was allowed, to reach equilibrium. By adding yeast, the free glucose was destroyed. Further hydrolysis was at once set up, and by the combined action of the two ferments, all glucose was finally destroyed, and the rotation reduced to  $0^\circ$ . In a second experiment, starting with alpha-glucoside, alpha-glucosidase, and methyl alcohol, the rotation was  $6.80^\circ$  at the beginning,  $4.00^\circ$  at equilibrium, and, after adding yeast, was soon reduced to zero. The amount of glucose remaining uncombined in the first experiment was not the same as in the second, showing that the two ferments cause different equilibria. Again, a mixture of glucose, emulsin, and alcohol was allowed to reach equilibrium, when the rotation was  $1.20^\circ$ . On adding 1 g. of glucose, the rotation became  $3.33^\circ$ , and then, as synthesis proceeded, reached a new equilibrium when the rotation was  $2.43^\circ$ . With 1 g. of glucose, 20 g. of alcohol, and alpha-glucosidase, 0.326 g. of glucose went into combination. When the same ingredients were acted on by beta-glucosidase, 0.2339 g. of glucose combined.

The question was then studied, what will be the partition of glucose in two simultaneous reactions, when both ferments are acting on the same reaction mixture? The authors develop a simple formula for calculating the amount of uncombined glucose when two ferments are used. With 1.9935 g. of glucose, alcohol, yeast maceration, and emulsin, 1.1164 g. of glucose remained at equilibrium, after 28 days. The calculated amount is 1.1143, showing very satisfactory agreement, and proving that the partition takes place, in these enzyme reactions, according to the well-known laws of mass action.

If one ferment is added after the other, and when the latter has already exercised some action, or even after it has brought the reacting substances to equilibrium, the partition follows the same laws. The synthesizing effect of the second ferment added is manifested on the free glucose, which disturbs the equilibrium. Then the hydrolyzing effect of the first comes into play, splitting up part of the glucoside it originally synthesized, and so on until a new balance is attained. This is proved by the following experiment: A mixture was prepared, identical with that just described above, except that only the alpha ferment was added at first. The rotation changed from  $2.10^\circ$  to  $3.5^\circ$ . The uncombined glucose was then 1.2654 g. On adding emulsin (beta ferment), the rotation reached  $3.80^\circ$  after 6 days, and on reaching equilibrium, 1.1064 g. of free glucose were found, substantially the same result as before. Similar results were obtained with the diacid alcohol glycol. These equilibria are of the greatest im-

portance in the pharmacological study of plants, as well as in the animal economy. The authors believe that the presence of certain secondary ferments, which it is impossible to separate, made some of their results agree less closely than if pure substances could be used. However, there is no doubt as to the course of the reactions. (Bourquelot and Bridel, *J. Pharm. Chim.*, 1914, pp. 104, 155, 230.)

#### Constituents of Sarsaparilla Root—

Von Schulz, in 1892, found three glucosides in sarsaparilla, belonging to the saponins; parillin, smilacin, and sarsaponin. Using Jamaica root, Power and Salway have recently made a complete analysis of the drug, and have brought to light a number of new substances. A small quantity of pale yellow essential oil was first isolated. The alcoholic extract then furnished a crystalline glucoside, differing in some respects from von Schulz's sarsaponin, but regarded by the authors as the same substance, now obtained in pure condition. It has a tendency to separate from alcoholic solutions in gelatinous form. When the aqueous solution is shaken, it foams strongly, and if it is then shaken with a finely divided material, insoluble in water, the added substance carries down most of the glucoside when settling. On hydrolysis, sarsaponin gives sarsapogenin and three molecules of glucose. A new phytoesteroline, the alpha-glucoside of a sitosterol, was also found, as well as a stigmastanol, identified by the formation of a tetrabromide. A new dibasic acid, sarsapic acid, was obtained, of the formula  $C_8H_{10}O_6$ . The oxygen atoms are neither in the form of hydroxyl nor ketone groups. Glucose, a mixture of fatty acids, and a considerable amount of nitrate of potassium were also met with. It is to be noted that only a single glucoside could be obtained in definitely crystallized form. As for von Schulz's parillin, the authors think it was a mixture of sarsaponin and phytoesteroline, while the smilacin was a mixture of sarsaponin with various amorphous bodies. This is supported by the statement of von Schulz, that sarsaponin is the most active glucoside. (Power and Salway, *J. Chem. Soc.*, 1914, p. 201.)

#### Constituents of *Daviesia Latifolia*—

This is a plant indigenous to Victoria, Australia, and also said to occur in Tasmania and New South Wales, being known as the "native hop bush." Bosisto, by evaporating the aqueous infusion of the leaves, obtained a crystalline substance. Paul and Cowley found this to be neutral, free from nitrogen, and not reducing Fehling's solution until after being heated with an acid. They concluded it was either glucosidal or a sugar. Power and Salway have recently examined 50 kg. of material, collected during the flowering season. A small amount of volatile oil was found, which deposited benzoic acid on standing. The portion of the alcoholic extract soluble in water gave three acids, benzoic, salicylic, and p-cumaric. The bitter principle was isolated in crystallized form. It was found to be the benzoyl derivative of a new disaccharide, consisting of the combination of a hexose and a pentose, a type hitherto unknown. It is a glucoxylose, and the bitter compound is dibenzoyl-glucoxylose, melting at  $147-148^\circ$ . The resinous material gave the usual constituents, fatty acids, a phytosterol, hentriacontane, myricyl alcohol, etc. (Power and Salway, *Chem. Drug.*, 1914, p. 82.)

#### Digitalic Acid Not Active?—

According to Kolipinski, the acid resin of digitalis leaf, called by him digitalic acid, is the active constituent of the drug. Sharp extracted leaf of known toxicity with 20 times its weight of 0.720 ether for 4 days, and then percolated with 100 times its weight of ether. On evaporation a dark green resin remained, which dissolved in caustic soda. This was neutralized with sulphuric acid, and made up with alcohol to resemble the B.P. tincture. The solution was without bitterness. The exhausted leaf was next digested and percolated with 60 per cent. alcohol, and likewise made into a solution of B.P. strength. It was as bitter as the ordinary tincture. Pithed frogs, injected with the first solution, showed no effect at all in a period of 19 hours, at the end of which time the hearts were still beating vigorously. The second tincture stopped the heart beat in 4 hours. The evidence is against the activity of digitalic acid. (Sharp, *Pharm. J.*, 1914, p. 360.)

### Urea in Plants—

Ten years ago it was found by Bamberger and Landsiedl that urea, which was supposed to belong peculiarly to the excretion products of the animal kingdom, was present in considerable amounts in certain plants, especially in *Lycopodium* species. Göts and Mascé later observed it in common mushrooms. It seemed to be confined to the fungi, furnishing another point of view, that these plants, in their chemistry, show many resemblances to animals. Urea, hence, came to be regarded on the same plane as glycogen and chitin. Later investigators proved the presence of urea in many plants of various families widely separated from a systematic point of view. It was at first believed that certain plants absorbed the urea from parasites which covered them, but later it was shown that plants which give no symbiosis with fungi are rich in urea, as *Aspidistra* and *Epipactis*. This work is due to Weyland. Fess proved the presence of urea in many common plants, as chicory, pumpkin, cabbage, spinach, potato and carrot, as well as in the secretion of the mycelium of *Aspergillus* and *Penicillium*. A principal source of urea is the splitting up of proteins. Albumen, under the influence of various ferments, can give urea. Arginin, one of the products of proteolysis, breaks down under the action of arginase, into ornithin and urea. Synthesis from ammonia and carbon dioxide may also play a part. Weyland noticed that in *Lilium* and *Ophrys* urea diminished and ammonium salts increased when light was excluded, and the same was true in an atmosphere free of carbon dioxide. (Verschaffelt, Apoth. Ztg., 1914, p. 225; from Pharm. Weekblad.)

### Regeneration of Altered Tr. Iodine—

The increasing use of tincture of iodine, especially in surgery, has led to many attempts to find the best method of preventing the formation of hydriodic acid. The only method which has thus far given satisfaction is that adopted by the U.S.P., which consists in adding potassium iodide. Roques has sought to find a substance which would be insoluble, or nearly so, in alcohol, so that the tincture would not be modified so as to conflict with the standards of the French Codex. Iodate and periodate of potassium were used, as well as iodic acid. The results were negative, so far as preventing the formation of acid is concerned, but it was found that the addition of finely powdered iodic acid furnished an excellent means of regenerating old tinctures, in which considerable hydriodic acid had been formed. About twice the theoretical amount of iodic acid is needed, in order to cut down the time of reaction. For each 5 parts of iodine in the form of hydriodic acid, another part of iodine is added by the reaction, necessitating the dilution of the tincture with alcohol. The water formed is negligible. This method of regeneration makes it possible for a surgeon or physician to utilize old tinctures, regardless of the date of their preparation or the degree of alteration. (Roques, J. Pharm. Chim., 1914, p. 277.)

### Nomenclature of Enzymes—

Considerable confusion arises from the absence of a general agreement as to the system on which names should be given to enzymes, different chemists sometimes using the same name for different bodies, and different names for the same body. The system which is recommended is one of double names, the first part of the name indicating the substrate, or substance acted on by the enzyme in question, and the second part indicating the product formed, or, when more than one is formed, the principal one. Thus, enzymes causing the production chiefly of glucose are called glucases; the one which forms glucose from starch is amylo-glucase; another which forms glucose from malt is malto-glucase; ordinary diastase, which forms maltose from starch, is amylo-maltase, and so on. (Von Lippmann, Chem. Ztg., 1914, p. 81; through Pharm. J.)

### Melting Points of Menthol and Fennel Oil—

Menthol made artificially by the reduction of menthone, which may be distinguished by the name ketone-menthol, melts about 10° below the point given in the German Pharmacopœia (44°) and also has a much lower rotatory power. This is due to its being a mixture of isomers. But menthol which has been carefully prepared from an oil rich in menthol, and completely freed from oil, often has a melting point lower by 1° or 2° than the official point. If the heating is slow and the change is very carefully watched, several stages of the melting can be seen to occur from 39° to about 42° or 43°. This is probably also due to the presence of isomeric forms

occurring naturally in the plant in somewhat varying proportions. The German Pharmacopœial direction that the rate of heating shall not exceed 1° in half a minute is not nearly accurate enough, as very different rates of heating, within this limit, may be employed by different operators. For similar reasons the melting point of oil of fennel is of no value, as by variable manipulation it can be made anything from 1° to 10°. For both menthol and oil of fennel it is better to take the congealing point. If the thermometer is watched for the first appearance of crystals, the highest point to which it rises during the congealing is to be taken as the true freezing point; this is 40-41° for menthol, and 2-3° for oil of fennel. (Lehmann, Chem. Ztg., 1913, p. 1447; through Pharm. J.)

### Elimination of Water Effect in Neosalvarsan Solutions—

In order to diminish the harmful effect of the water used in making solutions of neosalvarsan, an effect attributed to micro-organisms, chemical changes, catalytic action, etc., Ravaut recommends the concentration of the solutions. By this means they become themselves isotonic, so that no sodium chloride is needed. Concentrated solutions are well tolerated; the dose now being used is 5 to 8 cc. for 0.45 to 0.90 g. of substance. The preparation is made up at the bedside, preferably in a bottle of correct capacity, containing the neosalvarsan weighed out, and filled with nitrogen, to protect the compound from the air. A slight febrile reaction is the rule after the first injection, and the exception after the succeeding ones. (Ravaut, Presse Med., 1913.)

### Determination of Free Alkali in Soap—

Five g. of soap, exactly weighed, are dissolved in 100 cc. of 50 per cent. neutral alcohol, in a 250 cc. Erlenmeyer flask, to which is attached a tube condenser. After solution is complete, cool the liquid quickly under the tap, precipitate the soap with 15 or 20 cc. of barium chloride solution, and titrate with N/40 stearic acid, after the addition of 2-5 cc. of alpha-naphtholphthalein solution. Each cc. of stearic acid solution corresponds to 0.02 per cent. of caustic soda when 5 g. of soap are taken. (Bosshardt and Huggenberg, Z. Agnew. Chem., 1914, p. 11.)

### Quantitative Determination of Urea—

Hahn and Saphra recommend a modification of Marshall's method, which is based on the action of urease, the ferment of the soya bean, on urea, forming ammonium carbonate, which can be titrated. In an Erlenmeyer flask of 50 cc. capacity measure exactly 1 cc. of urine, add 10 cc. of water, a few grains of the dried ferment, and 5 drops of toluene. In a second flask of the same size place the same substances, with the exception of the ferment. Let the two flasks stand at room temperature, closed, for 20 hours, after which time the transformation of urea into the ammonium salt is complete. Add 2 drops of methyl orange to each flask, and titrate with N/10 hydrochloric acid. The difference between the two titrations indicates the amount of urea. (D. Med. Wochschr., 1914, No. 9.)

### Oblique Graduation on Volumetric Apparatus—

Starting with the principle that the hypotenuse of a right-angled triangle is longer than either side, Goebel recommends the use of slanting lines for graduations on glass apparatus such as cylinders, burettes, and measuring pipettes. The lines follow a spiral course around the vessel, or else change direction at a sharp angle at each major division of the scale. In this way it is possible to have a greater number of sub-divisions than formerly, with the same distance between them, measured across the graduations. If the number of divisions remains the same, the distances become greater and easier to see. (Goebel, Apoth. Ztg., 1913, No. 51.)

### Commercial Rhein Cryst.—

According to Oesterle and Haugseth, "rhein cryst." of commerce contains no rhein, but consists of almost perfectly pure chrysophanic acid, free of methoxyl. This fact is all the more remarkable, since it has long been sought in vain to prepare pure chrysophanic acid. In the course of the last few years the knowledge of the natural chrysophanic acid derivatives has been considerably increased. Special designations have been used for the individual products, and the time has now come when misleading names should be dropped. The term rhein should be reserved for the 1-8-dioxanthraquinone-3-carbonic acid. (Arch. Pharm., 1913, No. 7.)

? THE QUESTION BOX ?

THE OBJECT of this department is to furnish our subscribers and their clerks with reliable and tried formulas, and to discuss questions relating to practical pharmacy, prescription work, dispensing difficulties, etc. Requests for information are not answered by mail, and ANONYMOUS COMMUNICATIONS WILL RECEIVE NO ATTENTION; neither do we answer questions in this department from non-subscribers.

In this department frequent reference is necessarily made to information published in previous issues of the ERA, copies of which, if not out of print, may be obtained for 25 cents each.

**Nuclein: Nucleic Acid.**

(X.Y.Z.)—"How is nuclein made? Would it be practicable for a retail druggist to manufacture it?"

According to the "British Pharmacopoeial Codex," the term "nuclein" is commonly used as a synonym of nucleic acid, but it is more correctly applied to the albumin nucleinates intermediate between nucleic acid and nucleo-protein. Nucleic acid, or nuclein, as used in medicine, is prepared from yeast, and consists chiefly of the true nucleic acid of yeast, with a proportion of albuminate (metaprotein) and carbohydrate. Other nucleic acids are known, notably those prepared from spleen pulp, from thymus gland substance, pancreatic tissue, etc. According to the above authority, if yeast, spermatozoa, or pus cells, be extracted with acids a residue is obtained which has been termed nuclein. This residue is acid and contains a considerable amount of phosphorus. If it be further treated with alkalis or is subject to tryptic digestion the protein is split off, the nucleic acid which remains containing all of the phosphorus. The acid occurs as a grayish-white powder, and is gradually decomposed on boiling with dilute acids, or even by heating with water, but is resistant towards the action of alkalis, especially if sodium or potassium acetate be present. It is acid to litmus, will decompose carbonates, and forms salts with metals. Nuclein and nucleic acid and nucleates are said to increase the number of white corpuscles, and it has been claimed that this increases the resistance to infections. "These results (New and Nonofficial Remedies) have been obtained by intravenous or hypodermic injection, and on this basis therapeutic deductions have been made; it is doubtful whether we are warranted in applying these conclusions to the administration of the remedy by the mouth." It is probable that this product could be manufactured by the retail druggist who has had the necessary scientific training and who possesses the proper laboratory facilities, but unless he might wish to specialize in this direction, it is extremely doubtful whether such an undertaking would be financially remunerative.

• **Per Cent. of Alcohol in Essence of Peppermint.**

(A.B.C.)—Under the Federal Food and Drugs Act it is required that the "strength" of alcohol in any mixture shall be expressed in figures showing the percentage of absolute alcohol by volume. The alcohol of the U.S.P. contains 94.9 per cent. by volume of absolute alcohol (see U.S.P., page 33, under definition). According to the formula for essence of peppermint, 100 cc. oil of peppermint are dissolved in enough alcohol to make the finished product measure 1000 cc. In other words, 900 cc. alcohol U.S.P. are used to make 1000 cc. of essence, but as stated above, the U.S.P. alcohol contains but 94.9 per cent. absolute alcohol or (900 x 94.9) 854.1 cc. Now, if the total volume of the finished product is 1000 cc., the 900 cc. of official alcohol (equivalent, as we have just shown, to 854.1 cc. of absolute alcohol) will represent but 85.41 per cent. of the volume, which, on the assumption that there is no shrinkage in volume when the oil is dissolved in the alcohol, is very close to the actual theoretical figures showing the percentage of absolute alcohol in U.S.P. spirit (essence) of peppermint. In this calculation it is also assumed that the presence of the herb added for coloring purposes is of so little importance as to be quite negligible.

It should also be stated that the actual alcoholic percentage of any sample of essence of peppermint can be determined only by analysis of that particular sample, the condition of all samples being more or less modified by storage, the effects of light and heat and consequent evaporation, etc. For the pur-

poses of the Food and Drugs Act, however, the percentage given above (85.41) is generally "rounded off" as 85.5 per cent., and these figures are given by Prof. A. B. Stevens in the ERA Dose Book for the alcohol content of this essence. The statement that 900 cc. or 90 per cent. of the volume of the essence is official alcohol is practically correct, but for labeling purposes under the Food and Drugs Act, the "alcohol" of the U.S.P. is not the standard on which the percentage is calculated, for the figures so obtained, as explained above, would not express in terms of absolute alcohol the amount present in the finished product.

**Manufacture of Absorbent Cotton.**

(H.L.M.)—There is no single book published that we know of pertaining to the manufacture of absorbent cotton, although the new edition of the ERA Formulary does give a formula for the fabrication of this product, as also for the preparation of the various forms of antiseptic cottons from such manufactured absorbent cotton. As a general proposition, absorbent cotton cannot be economically manufactured on the small scale, as the operation requires technical experience, special apparatus and a plant representing large capitalization. Some manufacturers, so-called, eliminate the preliminary manufacturing operations and buy the amount of absorbent cotton they may need, and use it as "raw material," preparing from it the various antiseptic cottons or specialties by their particular formulas. On the commercial scale the following outline represents the steps usually followed by the average manufacturer: The fat is first removed from the cotton by prolonged boiling under pressure with a solution of sodium hydrate or of an alkaline rosin-soda soap solution, and thorough washing with soft water. The cotton is then bleached by immersion in a clear solution of chlorinated lime, the latter being removed by one of several methods. One method consists in profuse washing with water, treatment with very dilute hydrochloric acid, immersion in a bath of sodium hyposulphite to remove the liberated chlorine, and addition of stearin soap. This reacts with the hydrochloric acid still retained by the cotton, stearic acid being liberated, this imparting to the cotton the peculiar "crunching" between the fingers when handled, a quality some users demand. This "crunching," however, may be removed by treatment with a very dilute solution of sodium bicarbonate. If desired, the absorbent property of the cotton may be destroyed by rinsing the material in a solution of alum. To secure a uniformly and satisfactory product thorough and copious washings with water after all operations must be rigidly observed.

**Removing Ink Stains from Mixed Goods.**

(E.C.M.)—The problem of removing ink stains can be most satisfactorily solved by first finding out something of the composition of the ink causing the stains, and then applying some approved and tested form of treatment for the removal of the particular kind of ink. The old-fashioned lasting ink consists chiefly of tannate of iron, and to remove it, a chemical that will convert the tannin into some soluble colorless iron salt must be used. In most cases oxalic acid is best suited for this purpose. Inks made from aniline derivatives or dyes cannot be converted into colorless compounds so easily. Tartaric acid is a good solvent for such compounds, and chlorine is also useful as a bleaching agent. All of the so-called "ink removers" are based on the application of these two fundamental rules and compounded accordingly. As you have given us no information concerning the character of the ink causing the stain, we are somewhat handicapped in giving you a direct answer to your question. However, the following solution will remove the stains caused by most iron tannate inks:

- Potassium oxalate ..... 1 ounce
- Cream of tartar..... 2 ounces

Mix well, sprinkle a little of the powder on the stain and apply a damp cloth. Repeat till the stain disappears, then wash with water. This solution may also remove the dye from the cloth, but in some instances the dye may be made

to partly reappear by treating the cloth after removal of the stain with a dilute solution of ammonia. Some stains may also be removed by treatment with hydrogen peroxide to which a little ammonia has been added.

For alizarine ink stains on colored cottons, woollens or silk, a weak solution of tartaric acid is recommended (if the color of the cloth permits such application); or a mixture of alum, 1 ounce; tartaric acid, 4 ounces, and water, 1 pint, may be employed.

At best, these formulas are only suggestive, but they are worthy of a trial. If these do not answer, the stain may be attacked from another direction, depending on the character of the ink causing the stain. Dozens of variant processes and formulas are given in the new edition of the ERA Formulary, a book which you should have to answer just such queries as the one you have submitted to us.

#### Santonin in Worm Lozenges.

(H.L.M.)—There is no anthelmintic that we can suggest that will so satisfactorily meet the requirements for use in a worm lozenge as santonin, all medical authorities quite uniformly agreeing that it is the best remedy in the materia medica for this form of administration. Pink root, chenopodium, naphthalin, kousso, etc., in combination with cathartics, as the first named with senna, are used in liquid combination, but as a rule, they are not suitable for administration in lozenge form. If you will take any standard work on materia medica and therapeutics and run over the list of drugs used as anthelmintics you will quickly discover how limited the number is; that of this number but one or two can be adapted or safely administered in tablet form, and of this small number, santonin is practically the only drug worth considering for the purpose named.

#### Compound Pepsin Digestive Powders.

(J.A.H.)—The following formula is taken from our files:

Sodium bicarbonate	480 grains
Bismuth subcarbonate	480 grains
Powdered ginger	32 grains
Pepsin	32 grains
Pancreatin	32 grains
Milk sugar	64 grains

Mix and divide into 32 powders.

In this formula bismuth subcarbonate is used instead of bismuth subnitrate on account of the incompatibility of the latter with sodium bicarbonate, especially in the presence of moisture. Although this and similar combinations are often employed, the advisability of prescribing pepsin and pancreatin together is questioned on the ground that ferments are generally destroyed by each other, and also during their sojourn in the stomach.

#### Prothaenime: Prothaemin.

(W.E.C.)—We strongly suspect that by the name "prothaenime" is meant "prothaemin," which, as stated in the latest (1913) annual report of E. Merck, Darmstadt, Germany, is a preparation made from blood according to E. Salkowski's directions; it contains the albuminous substances, the iron and the organically combined phosphorus of the blood. It is put on the market in the form of a fine, chocolate-colored powder, which is said to be devoid of taste and smell. As indicated by its composition, it is used as a nutrient and strengthening drug, and as a mild iron tonic. P. Korb administered it in pulmonary tuberculosis, anemia, and chlorosis, and in all his cases observed an increase in weight and an improvement in the composition of the blood. The author recommends giving the drug dissolved in milk or cocoa, in amounts of 1 to 2 teaspoonfuls three times a day. We are unable to find this preparation listed in any of the price-lists at our command.

#### Red Aromatic Elixir.

(J.A.H.)—We cannot suggest a better formula than that given for aromatic elixir in the Pharmacopoeia. This elixir contains 23.75 per cent. of alcohol and may be colored red with tincture of cudbear or cochineal coloring, cudbear being used as the coloring agent when a bright red tint or color is to be produced, particularly if the resulting elixir is to be used as a vehicle for acid combinations. For a deeper red, the aniline color known as "Ruby S" may be employed.

For an aromatic elixir of weaker alcoholic strength, the following formula, originated by F. M. Apple and presented by him to the A.Ph.A., in 1908, is given herewith:

Anethol	12 minims
Oil of coriander	1½ minims
Oil of myristica	2 minims
Tincture of vanilla, U.S.P.	1 fl. dram
Alcohol	6½ fl. ounces
Simple syrup, distilled water, of each a sufficient quantity to make	32 fl. ounces
Purified talc	1 ounce

Prepare according to the directions given for the preparation of the U.S.P. aromatic elixir.

For making a "red aromatic elixir" take of—

Tincture of cudbear, N.F.	6 fl. drams
Compound tincture of cudbear	2 fl. drams
Aromatic elixir (as above), enough to make	16 fl. ounces

Allow to stand 48 hours, if possible, and filter.

Mr. Apple states that when tincture of cudbear and compound tincture of cudbear are mixed in the above proportions, a very beautiful red color results upon dilution thereof, a color free from the purplish tint of the dilutions of tincture of cudbear, and also free from the brownish tint of the dilutions of compound tincture of cudbear.

#### Non-Sticky Cosmetic Cream.

(J.A.H.)—Try one of the following:

(1)	
Corn flour	3 drams
Boric acid	2 drams
Carbolic acid	½ dram
Glycerin	6 ounces
Distilled water	14 ounces
Perfume to suit.	

Mix the corn flour with 1 ounce of water, add the remainder of the water and bring to a boil. Dissolve the boric and carbolic acids in the glycerin and add to the flour mixture. Lastly add any desired perfume.

(2)	
Distilled water	5 ounces
Powdered borax	1 dram
Glycerin	½ ounce
Sodium sulphite	2 drams
Rose water, triple	10 ounces

This formula is given by "Pharmaceutical Formulas" under the name "English May-Dew Lotion" and recommended as a "toilet table companion, cooling and softening the skin when hot, dry, and painful from exposure to sun or wind, or heated by exercise. It is of great use in chafing, redness and roughness."

The question of what constitutes a distinctive odor for perfuming these or similar toilet creams or lotions is largely a matter of personal preference. Many manufacturers use synthetic perfumes in various combination for this purpose. Many suggestive formulas of this character are given in the new ERA Formulary.

#### Sodium Salicylate with Syrup Hypophosphites.

(E.J.S.)—"Please criticise the following prescription in your next issue of the ERA.

Sodium salicylate	4 drams
Syrup hypophosphites, compound (Lilly), enough to make	3 ounces

"After filling the prescription a white precipitate is formed."

We do not know the exact constitution of the compound syrup of hypophosphites employed in this prescription, but on the assumption that the syrup contains quinine, as most of the commercial syrups under this title do, it is reasonable to suppose that the precipitate reported is quinine salicylate. It is possible that some calcium salicylate is also formed, while if the syrup contains any ferric hypophosphite there will be a precipitation of ferric salicylate when the prescribed substances are brought together, the reaction being accompanied by the characteristic coloration showing the formation of the iron salt.

# WOMEN IN PHARMACY

Conducted by EMMA GARY WALLACE

## VI. The Woman Pharmacist's Future.

### EUGENICS—A BETTER START.

THE charge has sometimes been made that professional women soon lose their womanly qualities and cease to be interested in home and home-making. One well-known and estimable gentleman-writer of the old school has recently given press expression to the opinion that he objected to women taking an interest in public affairs in order that they might have their time for philanthropy and benevolent purpose, quite overlooking the fact that the philanthropic needs could be lessened and in time eliminated by a proper readjustment of public affairs.

It is always better to build a wire fence at the top of a cliff than a hospital at the bottom of it.

The true womanly qualities of the woman pharmacist are not affected by her professional duties. Her interest in her home, her own and other people's children, and in the welfare of the people about her is increased rather than lessened by her expert knowledge of how a home may be kept sanitary and healthful, how children may be intelligently cared for, and the race bettered by due consideration of causes and effects.

The new science of eugenics deals with the improvement of the race through proper understanding of its inborn qualities—in other words, by better breeding. The professional worker who is indifferent to or willing that babies shall die in great numbers in order that his or her business may thrive upon palliative remedies is surely asleep.

The most prosperous and honored physician is the one who teaches preventive means effectively. The Chinese are not so slow after all in paying the doctor only while the family remains in health.

No less an authority than Dr. C. B. Davenport tells us that probably 50,000,000 children are born each year and that Uncle Sam's share of this valuable crop is 2,500,000. If children are well-born, the problem of saving them is simplified. Yet statistics tell us that half a million of our babies die before they are a year old and only a half of the total number pass into adult maturity, and the care of our "half a million or so insane, feeble-minded, epileptic, blind, and deaf; 80,000 prisoners, and 100,000 paupers" costs us over \$100,000,000 a year.

Surely there is opportunity for benevolences, but alas! these will not stem the ever-swelling tide. We must work for intelligently-applied eugenics. Simply put, this means to educate young people to select their life partners with a full knowledge of the traits that are in the protoplasm and the blood on both sides, also the scientific surety of undesirable combinations; State control of propagation by the mentally incompetent; and a study of the well-defined laws of the inheritance of health and mental characteristics.

The woman pharmacist who so informs herself that she is an authority upon this subject is a mighty leavening factor in any community and the influence of a single individual may be as far-reaching in this field as that of Edison has been in electricity or James in psychology.

The Eugenics Record Office at Cold Spring Harbor, Long Island, N. Y., is ready to assist or co-operate in this work and the Oregon Social Hygiene Society of Portland, Oregon, is doing an excellent work along the same line.

It becomes exceedingly interesting to understand the potential qualities of the germ plasm carried on through several generations. It is no mere happen-so that 14 of the descendants of Jonathan Edwards have been noted among the most eminent of America's college presidents, students, and moral leaders, nor that in the case of the famous Jukes family of New York, the progeny of Ada Juke are very largely criminal; the descendants of Bell Juke immoral in marked degree; and those dating back to the other sister Effie are paupers. Dr. Davenport declares "The difference in the germ plasm determines the difference in the prevailing trait." In 75 years—ending

1877, this family cost the State of New York over one and a fourth million dollars directly traceable. Much cannot be estimated, and the multiplication of the evil since then is steadily swelling this fearful tide.

Eugenics and eutherics, must both find a place among the vital subjects to interest us all. Dr. John J. Cronin says: "It is as hard, in my opinion, for a truly healthy body to do or think wrong, as it is difficult for a defective body to do or think right." This remark bears food for deep thought.

Milk stations, standardization, pure food, and pure drugs are all worthy purposes, but in considering the symptoms let us not forget the root of the whole matter—people themselves. We need the broadening and the illuminating influence of it all and incidentally we may help others to see. It is not a small thing to have influenced even one individual so that the race determiners for the future of that line shall make for a purer and better strain.

"The Lady of the Apothecary" wields a great influence. Mothers, young girls, even young men frequently confide in her, sure of ever-ready, understanding sympathy. Opportunity and privilege for lasting and valuable service is often ours, let us be ready. The relation of eugenics to better births, better health, to the protection of womanhood, the abolition of the white slave trade, State responsibility, and the encouragement of better heritages—all should be given thoughtful attention. The world is moving and we have no desire to be left behind.

## A Deaconess in Pharmacy Work.

CINCINNATI is essentially a deaconess city—there are more Deaconess' Homes representing different denominations than in any other of our American cities. Three of these homes have charge of hospitals connected with their work, and this necessitates well equipped pharmacies and pharmacists.

The Bethesda Hospital and German Methodist Deaconess Home was founded in 1896 by Miss Louise Golder and a few German deaconesses who had received their training in Christ Hospital and the Methodist Deaconess Home of Cincinnati. Every deaconess is required to enter the course of training for a nurse; thereafter she may enter upon other branches of the work if she so desires. Some remain in the hospitals, others go into missionary, social service and church work.

MISS BERTHA OTT

In the Summer of 1902 a capable little lady, who for eight years had been laboring as school mistress in the Lone Star State, felt a strong call to enter this work. When Miss Bertha Ott turned her footsteps toward the Queen City it was with the idea of entering the field of nursing, but it so happened at this time that the hospital was without a pharmacist. One was badly needed and it fell to her lot to take the course in pharmacy and prepare for this branch of important service. At first she hesitated, rather disappointed to give up her own choice of work, but sometimes we are not privileged to please ourselves and the great and consoling fact has been proved times without number that those who do their duty cheerfully and well, will in the end find that the path has led to success. It was even so in the case of Miss Ott. She says:

"I am now fully as happy to be privileged to be classed

## Women in the College of Pharmacy, State University of Iowa.

*Upper Row—Maude Wieland, Elsie Campbell, Lucille Shirecliffe. Lower Row—Mollie Christianson, Susan Blake, Nellie Manbeck.*

**T**HE following facts are presented through the kindness of Prof. Zada M. Cooper: The College of Pharmacy of the State University of Iowa was established in 1885. Being a part of a State institution which was co-educational, the college has always been open to women as well as to men, and the first class numbered one woman among its members.

However, almost none availed themselves of the opportunity during the early years, and it was not until 1892 that a woman was graduated. Since that time there have been few graduating classes in which there were no women. Up to the present time 46 women have been enrolled, of whom 22 have graduated. For the past 10 years almost every woman registering has remained to graduate. Those who did not complete

their work were in attendance when the school was newer. The same condition existed among men students at that time, a college education in pharmacy being considered more as a luxury than a necessity.

It is a noteworthy fact that the women who have studied at the college have been successful in real life. They did not study pharmacy merely as a pastime but with a definite purpose of which they did not lose sight. Whether as clerks, managers or owners, they have been a credit to their alma mater and the community in which they live.

At the present time there are six women enrolled, two seniors and four juniors.

among the noble, energetic women—my sister pharmacists. With the theoretical knowledge and experience received at our Cincinnati College of Pharmacy, with the practical experience at Bethesda Hospital, with many a kind suggestion and timely advice of a brother pharmacist—a neighbor in the hospital—I have been able to pass successfully the State Board of Pharmacy of Ohio.

"I think hospital pharmacy the place for women pharmacists, because the privileges given them are innumerable. If the pharmacist is a teacher, the opportunity will be granted her to instruct an eager class of young women in chemistry and materia medica. If she prefers to engage in research work as a side-line, the hospital laboratory is open to her. In fact, institutional pharmacy is the only place where we can say we are engaged strictly in pharmacy without side-lines, of which we see so much in our present day.

"Again, hospital duty hours, though long, may be so arranged as not to become too strenuous for the woman pharmacist, and I hereby encourage every young woman seeking a position as pharmacist to try hospital pharmacy if the privilege is granted her."

The Bethesda Hospital with its annex, the Scarlet Oaks Sanitarium and a newer annex, the New Maternity Hospital, are institutions of imposing dignity, equipped with every modern, scientific appliance.

The deaconesses wear a special garb for practical reasons only. It insures them protection and respect. A deaconess may not marry as long as she retains her position, but if she wishes may give up her vocation. She differs from a trained

nurse in that she does not serve for money but rather for the love of humanity. She receives a monthly allowance sufficient for the defraying of simple personal expenses, and in old age or sickness is cared for.

Miss Ott is engaged in a doubly noble work, for she is devoting her life and scientific knowledge to the needs of humanity without expectation of earthly reward.

### A PRETTY TRIBUTE.

**M**RS. JOHN T. ROE, the beloved president of the Mobile presence at the monthly meeting held at the home of Chapter, has been ill. To celebrate her recovery and the vice-president, Mrs. R. S. Braswell, a unique feature was planned in the form of a "surprise shower." The house was beautifully decorated for the occasion. Mrs. Roe read a paper of historical value concerning the Chapter work, five years of harmonious fellowship having been completed, and encouraged the members to plan for greater things still in the future.

At the close of her address Mrs. Head presented Mrs. Roe with a basket of beautiful flowers.

The recipient was much pleased with the fragrant blooms and lifting one to admire its loveliness, she discovered to her still greater surprise that the flowers were but a covering for numberless small packages beneath. There was a personal gift for her from every member of her chapter. Her surprise and delight more than repaid the loving thought that was expended.

# NEWS SECTION

## MOSTLY PERSONAL

—George Hall, head of the perfume department of the United Drug Co., of Boston, has, as was stated briefly in the April ERA, the unusual honor of being the only American perfumer—and probably the only citizen of the United States—to be decorated with the French decoration of Chevalier du Merite Agricole. This order was founded by former President Grevy, of France, in 1883, and the title and decoration, Chevalier, are conferred only on those who have contributed greatly to the development of French resources. Mr. Hall's activities as a perfumer have not only contributed to French resources and the development of the French perfume industry, but greatly to the development and improvement of the American perfume industry, and to the prestige of Boston in the perfume world. The perfume department of the United Drug Company was started six years ago. Recognizing the superiority at that time of French perfume products over any produced in this country, Mr. Hall spent much of his time in France, absorbing French methods and learning the many secret processes of the greatest experts, at the same time buying flowers and distilling pomades and oils in the United Drug Company's own laboratory in Southern France. There crude materials were shipped back to the laboratories in Boston, to become the basic ingredients of various extracts, toilet waters, and other toilet accessories, which, while having an American label, are essentially French. This work has grown until the United Drug Company now imports over \$300,000 worth of perfume products into Boston annually, and the perfume laboratories out near the Fenway on Huntington avenue have become the largest in America, if not indeed in the world, the number of employees increasing in six years from only four to two hundred.

—When Congressman-elect James A. Gallivan, of the 12th Massachusetts district, left for Washington, after his election on April 7, he was accompanied by John J. Murphy, one of the best-known young men of South Boston, who laid the foundation of much of his popularity while working as a drug clerk in the district. Mr. Murphy is a former representative in the Massachusetts Legislature, and he was a candidate himself for the Congressional nomination, but withdrew in favor of Mr. Gallivan, after the various candidates, meeting with Mayor Curley, whose resignation from Congress caused the vacancy which has just been filled, found it impossible in conference to agree upon a candidate. The Mayor favored Mr. Murphy, but as harmony was the most desired end, Murphy eliminated himself and declared for Gallivan. Secretary Murphy is just 25 years old and lives in South Boston,

J. J. MURPHY

where he was born. He represented Ward 14 in the House of Representatives during the years 1912 and 1913. He is a law student and holds a certificate as a registered pharmacist. For some few years he was a reporter on Boston dailies. He was educated at the South Boston High School, Massachusetts College of Pharmacy, Boston University and Suffolk Law School

—Chester Cochran, manager of the country sales department, Meyer Bros. Drug Co., St. Louis, according to information given out by a person connected with the establishment, has recently been joked a great deal because of a story said to have been told on him by Assistant Manager Simpson. Mr. Simpson, it was said, told the story about like this: "Cochran, you know, had four hens in his back yard. One day the hens would lay one egg, the next day two eggs, the third day three eggs, the fourth, four eggs, and once in a while they would miss a day, but they managed to keep up a splendid average. Each night he would hurry home to find out how his hens were doing, and then hurry in to tell Mrs. Cochran. And she was delighted to see him so pleased with his hens. He became so enthusiastic he bought two more hens, and they were good layers, too. But, alas!—and it wasn't the hens' fault either, for what could they say?—the depressing truth has come out. The hens didn't do all that glorious work at all—some person interested in seeing him proud of his hens purchased most of the eggs at a grocer's and put them in the nests daily." About the time of this great egg production a big shipment of eggs from China was received in St. Louis and there was a scramble for them. Happily, however, none of them found their way into the Cochran nests, for they were marked with Chinese characters which, translated, meant "Dead Souls."

—Simon N. Jones, of Louisville, familiarly known as the "Grand Old Man" of Kentucky pharmacy, believes it very much worth the while of the druggist to belong to as many organizations as he can, "belonging" in this sense meaning active participation in the work of the bodies of which the "j'iner" is a member. Mr. Jones practices what he preaches, for he is a former president of the National Association of Retail Druggists, a former president of the Kentucky Pharmaceutical Association, president of the Louisville College of Pharmacy, and for 20 years president of the Louisville Retail Druggists' Association. He has been prominent for years as one of the chief advisers of the National association and for a number of years has been a member of the legislative committee of the N.A.R.D. State pharmaceutical affairs have also been given his attention, for he has had a great deal to do with shaping Kentucky pharmacy laws, and he is one of the best-informed men in the State upon matters affecting the druggist.

S. N. JONES

—John W. Williams, of Minneapolis, druggist, is 78 and still works 13 hours a day, because he wants to. He flouts the suggestion that a man should quit work because of age. Attention to a drug business at 1211 Franklin avenue from 9 in the morning until 10 at night leaves him little time for long walks—his favorite exercise, but when he does take the air his stride is quick and his step snappy. His walking proclivities are natural, since at the age of 62 the then druggist veteran pulled a sled over more than 1000 miles of Alaskan trail. At the height of the Alaska gold fever Mr. Williams, with three companions, penetrated 150 miles from the head of Copper River in search of the yellow metal. Mr. Williams took the task of hauling 1500 pounds of supplies over a snow-obstructed country. It proved necessary to cover the same ground many times—in fact one stretch of trail required so many trips back and forth that each member of the party covered between 800 and 900 miles on a 90-mile stretch

Mr. Williams made three trips of 25 miles, carrying a pack weighing 75 pounds. Mr. Williams is apparently in his prime, is physically sound—according to a recent physical examination—and credits his good health to hard work, and plenty of outdoor exercise.

—**"Sam" Rouse**, proprietor of two uptown drug stores in Houston, Texas, has stirred the enthusiasm of residents of the largest State in the Union by installing the largest soda fountain in the South in his new store at the corner of Main street and Capitol Avenue. This new piece of soda-water apparatus is made up of 22 linear feet of marble and onyx, and naturally has a very large serving capacity. An ice-cream plant, refrigeration plant, and hot-water pipes to the fountain, thus making possible the sterilization of every glass used, are features of the store, which is thoroughly departmentized. "Sam" Rouse is a native of Beaumont, Texas, and served his apprenticeship with R. T. Eakin. He attended the school of pharmacy of the University of Texas, from which he was graduated in 1898, only to enlist at once in the United States navy for the war with Spain, serving with Admiral Sampson's fleet as a naval apothecary. Mr. Rouse went through the famous Santiago blockade and subsequent destruction of the Spanish squadron, and served until the conclusion of hostilities. Returning from the war, Mr. Rouse went to his native town and established a drug store which he conducted successfully for eight years. Seeking a broader field, he went to Houston and established a drug store in the heart of the business district which has come to be recognized as one of the largest and most remunerative in Texas. The new store—Rouse's No. 2—is conceded to be the finest in the Southwest.

—**C. H. Hurd**, druggist, at Kenosha, Wis., a town of 21,000 population to which 96 saloons cater, has announced that hereafter no intoxicating liquors of any kind will be sold at his store. This is what he says about the new store: "Personally, I am neither a prohibitionist nor a tee-totaler, but selling whiskey in a drug store for medicinal use is certainly out of date. There is not one physician in the city of Kenosha who prescribes one pint in one year. Ask your family physician. I have never sold liquor by the drink behind my prescription case, nor made a practice of using it in any form at the soda fountain; I have confined my sales as nearly as possible to strictly legitimate uses. If I should decide to go into the liquor business I would pay the city \$500, same as a saloon; which I think is the proper way. We shall refuse to sell liquor just as we long ago refused to sell habit-forming drugs or anything to be used for questionable purposes, not waiting for such things to be forbidden by law."

—**Francis B. Hays**, well known to the drug trade of the country and particularly to members of the A. Ph. A. by his long connection with the editorial staff of the *Druggists' Circular*, which he has served the last decade as managing editor, has retired from active duty, owing to an affection of the eyes. He will return to his old home in Oxford, N. C., where he was born in 1867. At the age of 17 he became deputy clerk in the Supreme Court of the Old North State, resigning in 1889 to enter pharmacy, which he did by associating himself with his brother-in-law under the firm name of Furman & Hays. In 1891 he moved to New York, since which time he has pushed the quill and wielded the blue pencil in the characteristic Haysensian style so well known to those who have closely followed pharmaceutical journalism. He is succeeded in the editorial position by Dr. Harry Vin Army, professor of chemistry in the New York College of Pharmacy.

—**W. L., L. E. and R. P. Branche**, three brothers, who are the proprietors of the Branche Drug Co., of Albany, have opened one of the finest and most complete stores in that city. Mahogany, plate glass and onyx enter into the interior finish; a mammoth soda fountain with luncheonette, and a "safety first" prescription department are features of the establishment. The Branche boys were born in Watertown, this State, and were trained in the Albany School of Pharmacy. Then they went to work for different drug concerns in Albany. About a year ago they opened a store of their own in Herkimer and made a success of it, and last June planned their Albany store, just opened. Souvenirs were distributed in every department.

—**Abraham Lincoln Wolcott**, of Philadelphia—"A. L." in business matters, and "Lincoln" to his friends—has been

looking after the interests of the Welch Grape Juice Co. in Philadelphia for 20 years. In addition to this territory he has the general oversight of the Welch stores on the boardwalks at Atlantic City and Wildwood. He is a familiar figure at N. A. R. D. conventions, has been president of the Traveling Men's Auxiliary of the Pa. Ph. A., and is one of the best-known men in the drug trade. He is a native of South Jersey, a graduate of the Philadelphia College of Pharmacy, and became acquainted with the Welch family while he was a drug clerk at Vineland, N. J. Later he went to Philadelphia as the manager of Potts' drug store, and was very successful, but was secured to work for the Welch interests, and has been on the job ever since.

—**Richard H. Lackey**, president of the Pennsylvania Ph. A., has returned from a tour of the State made in the interest of a larger membership of the organization. He has appointed sub-committees of 16 members in Philadelphia and Allegheny county. Under the direction of Frank P. Streeper, of Chestnut Hill, chairman of the local sub-committee, automobile tours have been arranged for enlisting the interest of local druggists in the organization. The campaign will be terminated prior to the annual meeting of the association at Buena Vista Springs, June 23-25.

—**Alfred Cannon**, a young drug clerk of Woonsocket, R. I., is a champion hard luck specialist. While attending school in Des Moines last Winter he was quarantined four weeks with smallpox. Then the professor of chemistry in the school was killed in an accident and the department was closed for a time. Then when school was reopened young Cannon came down with appendicitis and was operated upon. No sooner had he recovered from this than he was taken ill with a serious attack of mumps. That he finally graduated is indicative of his persistence.

—**William Thiesen**, president of the Red Cross Drug Co., operating five stores at Racine, Wis., recently acted as host to 20 of his branch-store clerks and managers at the annual banquet which he gives to his employees. The affair began at 10:30 and lasted until the early morning hours. Each employee of the company made a few remarks pertaining to the business, and made timely and valuable suggestions for improvement in the future. President Thiesen spoke of the business principles which he follows at all his stores.

—**"Sam" Foot**, manager of the sundries department of Lehn & Fink, New York, was recently elected vice-president of the Hailey Cattle and Irrigation Co., controlling and operating the Evelyn Hailey Ranch at Hailey, Texas. Mr. Foot, representing the interests of several relatives, has been a stockholder in this concern for some years, and is also a stockholder in two wholesale drug houses in Texas, in which State he formerly lived for 16 years.

—**E. E. Bell**, senior proprietor of the Rexall drug store in Leon, Ia., narrowly escaped death recently. He had gone to the second story of the store and was stooping over to fill a bottle in the stock room when he slipped and fell over backwards into the elevator shaft. Involuntarily he threw up his hands, and as he did so caught the elevator cable, upon which he slid to the basement. His hands were badly burned, but otherwise he was uninjured.

—**Former-Mayor Dan J. Haas**, of Dubuque, Iowa, has again engaged in the drug business at his old stand, 2510 Couler avenue. Soon after assuming office as mayor four years ago he sold out to Frank C. Keesecker. After retiring as mayor Mr. Haas opened a new store in Couler avenue and continued the manufacture of A. B. C. remedies, but recently disposed of that store to take over his former place of business.

—**Patrick E. Mannion**, a well-known registered pharmacist employed by Dominick F. Corrigan, of Globe Village (Fall River), Mass., has been appointed a bail commissioner of Bristol county. The selection was made by Chief Justice Akin, of the Superior Court, and was endorsed by 17 judges of the court throughout the State. The duties will in no wise interfere with his position as manager of the Corrigan store.

—**L. P. Fouche**, proprietor of the Fouche Drug Co., Charleston, S. C., has resigned as an alderman of his city, has sold his drug business and moved to Atlanta, Ga., to become head prescription clerk at the main Jacobs' pharmacy, in Marietta street, Atlanta. Mr. Fouche was a member of the State Board of Pharmaceutical Examiners and also resigned from his duties in this connection.

— **Charles Honecker**, of the Quality drug store, West 25th street and Clark avenue, Cleveland, has taken into partnership Otto A. Rehburg, who entered Mr. Honecker's employ in 1894. At that time Rehburg was a boy so small he could not look over the tops of the show cases. He has remained with the Quality drug store for 20 years. The firm name is Honecker & Rehburg.

— **The Misses Clara and Anna Haase**, daughters of Fr. Fr. Haase, of New York, with their mother, Mrs. Haase, left for Havana, Cuba, on the steamship "Saratoga." They will appear in grand opera at the Teatro Paynet, where their season will last several weeks. The Misses Haase had just returned from an extended tour in Canada and the West.

— **Frank S. Stone**, for many years a leading figure in the drug business at Fitchburg, Mass., is the new manager of the corporation which has been formed to operate the H. & J. Brewer Co.'s retail drug store at the corner of Main and Sanford streets, Springfield, Mass. The Brewer store is the oldest pharmacy in Springfield.

— **J. M. Bickford**, of Rock Falls and Sterling, Ill., has been in the drug business in the Twin Cities for 35 years, the firm now being incorporated under the name of the Sterling Pharmacy. Mr. Bickford is the senior member and the largest stockholder. He celebrated the 35th anniversary last month.

— **Des Moines Drug Co. Opens New Building**.—More than 500 invitations were accepted for the reception given by the Des Moines Drug Co., April 10, when the entire six floors of the company's newly refitted building were thrown open. An orchestra furnished music, and a collation was served.

— **James R. Polkinghorne**, a former drug clerk in New Orleans, and a graduate of Flint Medical College, has opened the new Palace pharmacy at 509-13 W. Belmont street, Pensacola, Fla. For the past two years he has been in charge of the prescription department of the Pensacola drug store.

— **Daniel M. O'Brien**, who has been engaged in the drug business in Rockland, Mass., since 1892, has been nominated as postmaster in that town. He is the local representative of a number of newspapers, a member of a number of fraternal organizations, and of the Massachusetts Ph.A.

— **George R. White**, president of the Potter Drug & Chemical Co., of Boston, continues to hold the unique title of Boston's heaviest individual tax-payer. In Boston he is assessed for \$4,633,000, of which all but \$500,000 is on real estate, and his city tax is \$79,689.

— **H. C. Reck**, manager of the sundries department of Coffin, Redington Co., has been visiting factories in the Middle West for seasonable sundries and novelties, and also visited the sponge fisheries in Florida in the interest of his firm before returning to San Francisco.

— **William S. Briry**, president of the Boston Druggists' Association, and Mrs. Briry, are receiving the sympathy of New England druggists in the death of their 10-year-old daughter, Josephine, which occurred April 2, at their home in Melrose, Mass.

— **E. A. Sennewald** and **C. T. Buehler** discussed the subject of shorter names and synonyms for medicinal preparations at a recent meeting of the St. Louis Branch of the American Pharmaceutical Association at the St. Louis College of Pharmacy.

— **H. G. Posey**, after six years on the road for Lehn & Fink and Meyer Bros. Drug Co., has put away his grips and returned to the management of the prescription department of the Max Samson drug store at 117 Camp street, New Orleans.

— **Ben F. Persons**, of Macon, Ga., was banquetted recently by members of the State Board of Pharmacy (of which he is the newest member). Dr. L. A. Pellew entertained the board and local pharmacists at his home at Vineville.

— **Thomas W. Dalton**, for a number of years in the drug business in Syracuse, but more recently in the coal brokerage business, has taken possession of the Warren pharmacy at South Warren and East Onondaga streets, Syracuse.

— **Dr. H. M. Whelpley**, president of the Cahokia Mound Association, on April 20 delivered an illustrated lecture on the Cahokia Group of Mounds, under auspices of the Archaeological Institute of America, St. Louis Society.

— **Mrs. W. W. Klore** has been chosen president of Chicago Chapter, No. 2, of the W.O.N.A.R.D., the election

taking place at the annual election of that organization at the Hotel La Salle, Chicago, April 14.

— **Walter de Veer**, who has been in New York for several weeks in the interests of Julius Grossmann, the Hamburg exporter and importer of drugs, sailed for Germany April 9 on the "Kaiserin Auguste Victoria."

— **James W. Morrisson**, president of Morrisson, Plummer & Co., of Chicago, and a member of the Board of Control of the N.W.D.A., has been elected secretary of the Chicago Association of Commerce.

— **A. D. Loar**, for more than 30 years a druggist in Bloomington, Ill., but who retired for a rest several months ago, has reopened the old Fishbeck drug store at Main and Grove streets, that city.

— **William L. Harloe**, registrar of the Brooklyn College of Pharmacy, has returned to his office in the college building after several days spent at home fighting the grip.

— **W. E. Roedel**, of Cheyenne, Wyo., a former member of the Wyoming State Board of Pharmacy, has been vacationizing in Corpus Christi, Texas, and Palm Beach, Fla.

— **Karl Fritzsche**, a member of the essential oil house of Schimmel & Co., of Germany, and of Fritzsche Bros., New York, was a visitor in New York recently.

— **Carl Meyer**, of Meyer Bros. Drug Co., St. Louis, has recovered the use of his wrist, which was broken several weeks ago when he attempted to crank his auto.

— **Max Hoencke**, manager of the sundries department of the Houston Drug Co., of Houston, Texas, left recently for home after a business trip here.

— **J. E. Harper**, manager of the sundries department of the San Antonio Drug Co., of San Antonio, Texas, was a recent visitor in New York.

— **W. C. Buschardt**, manager of the sundries department of the Southern Drug Co., of Houston, Texas, has been in New York recently.

— **C. F. Forssell**, manager of the sundries department of Noyes Bros. & Cutler, of St. Paul, has been in the city on his annual visit.

— **Leonard E. Durfor**, who is connected with the Riker-Hegeman store in Worcester, has been married to Miss Marie Emily Sleeper.

— **John F. Mack**, general manager of the Goodwin Drug Co., of Hartford, Conn., is engaged to marry Mrs. Margaret Cullen.

— **D. E. Hadden**, of Alta, Iowa, has been reappointed as a member of the State Board of Pharmacy for a third term.

— **Earl P. Carney** is the manager of the new Riker-Hegeman store at North and Depot streets, Pittsfield, Mass.

Recent Deaths.

— **Henry E. Newland**, 37, a native of Cedar Rapids, Ia., and formerly proprietor of the Newland drug store, is dead after an illness of two years' duration. His death was due to tuberculosis following an attack of double pneumonia. He was a member of a number of fraternal organizations.

— **Davis W. Harry**, a former druggist of Conshohocken, Pa., whose ancestors once owned most of the site of the present town, died there recently at the age of 77 years. He was an officer in the John Wood & Brothers Iron Works.

— **Mark P. Fisher**, 37, a well-known commercial traveler, died in Westfield, Mass., recently. He was a native of Brattleboro, Vt., and went to Springfield, Mass., three years ago to enter the employ of the H. & J. Brewer Drug Co.

— **Otto P. Traubel**, 43, a druggist at Chouteau and Jefferson avenue, St. Louis, died of blood poisoning on April 9. He leaves a widow and two children. He had been in business in St. Louis for many years.

— **Orlando Plummer**, 68, a pioneer druggist of Minneapolis, who had taken an active interest in pharmaceutical affairs in Minnesota for the past 30 years, is dead.

— **Samuel Berry Hollis**, 69, a druggist for many years in the employ of C. S. Littell & Co., wholesale dealers in drugs, of Manhattan, is dead of pneumonia.

— **Louis J. Barker**, 49, a pioneer drug manufacturer of Syracuse, N. Y., died in that city recently after a brief illness.

## OBITUARIES

### J. ELWOOD LEE.

**J.** ELWOOD LEE, president of the Lee Tire & Rubber Co., and one of the wealthiest men in Conshohocken, Pa., died from heart disease on April 6, 1914, at Conshohocken. He was 59 years of age. Mr. Lee's life history reads like romance.

He began business with less than \$30 capital—\$29.85 to be exact—about 30 years ago, his line being surgical dressings, appliances and instruments. His business bent was established by going to work as a boy in a similar line, but he believed he could do business as well as the firm for which he worked, and so started with two weeks' pay in his pocket, making bandages and selling them to physicians. He was so successful that in time he controlled a business which employed 800 persons, and the plant covered several acres. Several years ago the surgical supply business became affiliated with that of Johnson &

J. ELWOOD LEE

Johnson, and Mr. Lee devoted his attention to the Lee Tire & Rubber Co., makers of automobile tires and druggists' sundries. A large plant was erected at Spring Mill near Conshohocken. Mr. Lee leaves a widow, who was Miss Jennie Cleaver, of Conshohocken, and three children, J. Elwood Lee, Jr., Mrs. A. A. Carthwaite, of New York, and Miss Nina Lee. Mr. Lee was a good friend to his workmen, a liberal contributor to charity, both public and private, and was active in religious and educational affairs. He was a member of the Philadelphia Drug Club, the Philadelphia Drug Exchange and other trade organizations, and was an enthusiastic bowler, his team winning the championship of the Philadelphia Drug Trade Bowling League for several seasons. He had been president of that organization.

### Charles A. Humphrey.

Charles A. Humphrey, 32, a pioneer drug salesman of Indianapolis, is dead of heart disease. He was born in 1842 at Jonesville, Mich., where as a boy he entered the drug business. He served in the Civil War in a Michigan regiment, afterward going to Indianapolis, where he became identified with the firm of Stewart & Morgan, wholesale druggists. That firm afterward became the Daniel Stewart Company, for whom Mr. Humphrey was a traveling representative for more than 40 years. He married Miss Ida Shipman, of Knightstown, and engaged in the drug business there and at Lewisville for about 10 years. Afterward he went back to his old firm and remained in their employ. He was a Mason and Knight Templar, and a member of the Indiana Traveling Men's Association. He leaves one son, Harvey S. Humphrey, and a grandson, Charles Humphrey.

### Emerson Goldthwaite.

Emerson Goldthwaite, of Brockton, who had one of the largest drug stores in Plymouth county, Mass., between the years 1857 and 1888, died at his home in Brockton, recently, aged 75. He had been one of the wealthiest men in that city. He was a native of Stoughton, graduated from Sumner's Academy, served an apprenticeship as a drug clerk, and in 1857 started in business on his own account. He sold out in 1888 to his nephew, Charles H. Goldthwaite, who still carries it on, while he went largely into real estate and had enormous holdings, which with the rapid development of Brockton as a shoe manufacturing center, increased greatly in value. He was one of the founders of the Brockton Agricultural Society. He was a freemason in Masonry. He leaves a family of three.

### George E. B. Fairbanks.

George E. B. Fairbanks, a well-known Rhode Island druggist, and a member of the State Ph.A., died suddenly April 6, at the age of 59. He was a native of Taunton, Mass., was educated in the public schools, and entered the drug business at the age of 18. His first employer was a Mr. Phillips in Charles street, Providence, but he started in business for himself at an early age. After a number of changes he established himself at the corner of Hope and Wickenden streets, Providence, and remained there for about 30 years. He was both an Odd Fellow and a Mason, and the funeral was according to Masonic rites.

### Thomas Gardiner.

Thomas Gardiner, one of the first druggists in Minneapolis, and a resident for 50 years at 1012 Hennepin avenue, that city, died recently after a year's illness. He went to Minneapolis in 1857 from Fredrickton, N. B., where he was born Sept. 12, 1835. With Dr. W. E. Leonard he maintained a homeopathic pharmacy in Bridge Square for many years. During the Indian outbreak in 1862 Mr. Gardiner joined a St. Paul company which went to the relief of Fort Ridgely. Mr. Gardiner was one of the founders of the Athenaeum, a member of the Territorial Pioneers' Association, and a Mason.

### Fred Colle.

Fred Colle, 59, a prominent business man and druggist of Turners' Falls, Mass., died suddenly April 6. For many years he conducted a drug store and managed the Colle Opera House in the building he owned, but leased the playhouse several years ago on account of ill-health. His early life was spent in Greenfield, Mass., and his education was completed in Germany.

## RECENT DEATHS.

—**Martin T. Meyer**, 52, a member of the drug firm of Damtoft & Meyer, of 321 State street, Bridgeport, Conn., where they have been in business for the past 18 years, died April 1 of pneumonia. He was born in Copenhagen, Denmark, was a graduate of the university in that city, and engaged in the drug business in New York City in 1886. He went to Bridgeport in 1896 and entered into partnership with K. J. Damtoft.

—**Vitorio Gusmano**, 33, proprietor of a Sicilian pharmacy at 203 Rivard street, near Lafayette avenue East, Detroit, was killed recently by a "black hand" bomb delivered through the mails. Two other men were badly injured by the explosion, and the letter-carrier who brought the deadly package to the store was blown through the door. The store was wrecked.

—**Earl Gray Combs**, 37, assistant manager of the Riker-Hegeman store at Pittsfield, Mass., a former bicycle racer, and for a number of years connected with Riker-Hegeman stores in Holyoke and Springfield, Mass., is dead from valvular disease of the heart. He was a Mason, an Elk and an Odd Fellow.

—**Frank A. Meriam**, 38, proprietor of two drug stores in the Maplewood section of Malden, Mass., died recently. He was a native of Woburn, Mass., and had been in business for the past five years. He was a member of the Odd Fellows, Masons, Red Men, Elks and Pythians.

—**Alder Morris Ellis**, formerly of Philadelphia, and son of the late William Ellis, who for many years conducted a wholesale drug store at Eighth and Market streets, that city, died recently after a short illness at Providence, R. I., where he had been connected with a wholesale drug firm.

—**T. H. Gebauer**, president of the Gebauer Chemical Co., of Cleveland, Ohio, died in a hospital recently of pneumonia. He was a graduate of Oberlin College, and of the Case School of Applied Science, and had made a name as a discoverer and manufacturer of drugs.

—**Horace S. Bartlett**, 67, for 30 years known to college students as proprietor of the College pharmacy, Harvard square, Cambridge, died recently at his home in Allston, Mass. He worked for several years in New York, but in 1874 opened his store in Cambridge.

—**J. S. Draper**, 74, for many years in the drug business in Boone, Ia., is dead from Bright's disease. He was a prominent Mason.

## NEWS FROM ASSOCIATIONS

### Manufacturing Perfumers in New York.

**A.** M. SPIEHLER, of Adolph Spiehler, Inc., of Rochester, N. Y., was unanimously elected president of the Manufacturing Perfumers' Association of the United States, at that organization's 20th annual convention held at the Whitehall Club, New York City, April 1, 2 and 3. The other officers elected were:

First vice-president, S. S. West, of the Abner Royce Co., Cleveland; 2d vice-president, F. F. Ingram, Frederick F. Ingram Co., Detroit; secretary, Frank Carpenter, Lazell, Perfumer, New York City; treasurer, A. B. Calisher, Calisher & Co., New York; executive board, to fill out unexpired term of Edwin Ross, F. K. Woodworth, C. B. Woodworth's Sons Co., Rochester; to serve to 1917, Frank B. Marsh, the Theo. Ricksecker Co., New York, and James E. Davis, the Michigan Drug Co., Detroit. Wm. A. Bradley was elected to fill F. N. Carpenter's unexpired term on the executive board.

A. M. SPIEHLER,  
President-Elect.

In his address as president, Wm. A. Bradley, of this city, felicitated the members upon the growth of the association during the past year and asserted that the broadened scope of the organization, brought about at last year's convention, had caused him to have great hopes for future success. He characterized the placing of a duty of 20 per cent. upon all the raw materials of the industry, most of which were previously on the free list, as an undemocratic and un-American measure, enacted in direct repudiation of the pledge of the Democratic party. Mr. Bradley further asserted that this duty was a heavy burden upon the industry. He recommended that the thanks of the association be extended to Theodore Ricksecker, chairman of the legislative committee, for his devoted work in opposition to the tariff.

President Bradley asserted that the association should institute some means of learning immediately of State and National legislation inimical to the interests of the members. He recommended that the incoming legislative committee employ a paid bureau or secure some service whereby the interests of the perfumers would be conserved and all copies of bills affecting the industry would be forwarded immediately to the association.

That the special committee on weights and measures was working in harmony with the New York State officials and had saved the members money by preparing the uniform labels now used by them, was pointed out by Mr. Bradley. The work of the committee on campaign of education, he said, had almost resolved into the personal efforts of Theodore Ricksecker. He recommended that the committee be discontinued unless an adequate plan be worked out. He also recommended that the association apply for membership in the Merchants' Association of New York and the Chamber of Commerce of the United States of America. He was glad to see that one of the benefits of the association had been the stamping out of the old custom of placing foreign labels on American goods.

The report of the resolutions committee was presented by George F. Merrell, of Chicago. A resolution incorporating the president's recommendation anent news service on all inimical legislation was adopted. The same action was taken relative to the campaign of education committee, no reflection being made upon its members. The committee recommended that the association should not join the Merchants' Association of New York. After considerable discussion in which Messrs. Ingram, Marsh and others participated, the negative resolution

of the committee was adopted. The proposition to join the Chamber of Commerce was referred to the Executive Board for action. A similar disposition was made of a proposition to join the National Design Registration League. The committee incorporated in its report one of the concluding paragraphs of the president's address, deeming that the sentiment expressed therein should be the keynote of the association's work. This paragraph reads:

"A third benefit, which seems to me to be of even greater importance than any other accomplishment of this association, is the good fellowship, and in many cases the warm friendship which the members have for each other. After all, this is the best thing in life, and I know of no trade organization where its fulfillment is as completely exemplified as in this body. The value of this friendship as an influence toward clean competition is one that we cannot overestimate. We must all play the game hard, but let it be on a fair basis of merit and honesty, without the tricks and jealousies that would creep in were we not bound together as friends."

The president's recommendations as included in the committee's resolutions were adopted both *seriatim* and as a whole.

The committee commented favorably upon the expeditious and economical publication of last year's proceedings, which work was in charge of Secretary Henderson. A debt of gratitude was due Treasurer Calisher for his efficient work. A handsome balance in the bank and all dues paid were worthy of pardonable pride on the part of the members. The membership committee, headed by S. I. Hanson, deserved the association's commendation for its efficient work.

Relative to the number of meetings of the Executive Board, the committee asserted that this matter was entirely up to the members of the board. They should hold as many meetings as they deemed necessary. President Bradley explained that he had brought this subject up for discussion because he was a stickler for economy and that, inasmuch as the out-of-town membership on the board made the meeting an item of considerable expense, he wished to learn exactly the opinion of the members. In behalf of the association the committee by resolution expressed its thanks to George Hall, of the United Perfume Company for the preparation of his report on Imports and Undervaluations, which was not read at the convention.

The committee recommended that Mr. Ricksecker's legislative report be printed in full in the proceedings as an example of the best fight to the last ditch for a principle the association had ever conducted. It further recommended that the legislative committee pursue a policy of watchful waiting for an opportunity to secure more advantageous conditions in the industry. Acting upon a recommendation made by Samuel Iserman, chairman of the library committee, the committee on resolutions in turn recommended that a catalogue be published giving complete lists of the books on perfumery in the libraries of six large cities. The resolutions committee recommended that each month a bulletin or letter be published from the president's office. This medium would serve to keep the members up to the minute on all pending legislation and would work up more enthusiasm among them.

The committee brought forward several propositions by which the present custom of soliciting associate members for the funds for entertaining the active members during the annual convention should be done away with. It seems that the active members did not pay for their entertainment at all, and the associate members paid even after contributing to the entertainment fund. President Bradley's motion that the expense of entertainment be borne equally by active and associate members and that the proposition be worked out in detail by the Executive Board was generally supported. Hereafter the members present will pay pro rata for their entertainment and the associate members will not be solicited before the convention. The above recommendations were adopted.

Upon the recommendation of Frank B. Marsh, who stated that the association was not prepared to take any stand relative to H. R. bill 11,321, providing for the registration of designs, this measure was referred to the Executive Board for action.

Secretary A. D. Henderson reported a total of 107 members on the occasion of last year's convention. This year there were 47 active, 63 associate and four honorary members. During the year five associate members had resigned.

Treasurer Calisher reported a healthy condition of the treasury due to the economical administration of the association's officers and the elimination of some of the usual items of expense. His report showed total receipts, \$6254; disbursements, \$2284; cash balance, \$3967; cash in banks, \$3502, \$375, and \$3967, and total resources, \$5904.

Other interesting reports presented were those of Chairman Hanson, of the membership committee, showing 10 new active members and two associate; A. B. Calisher, chairman of the ready relief fund, who pointed out the changes in the form of certificate made in accordance with the insurance laws of this State; F. F. Ingram, committee on freight and transportation, who advised members to consult both parcels post and express schedules, since the former had caused many advantageous reductions in the latter, etc.

Upon the recommendation of Theodore Ricksecker, Thomas P. Dunn, of Rochester, was elected an honorary member.

George McAneny, president of the New York Board of Aldermen, welcomed the members at their first session. Other speakers during the convention were O'Brien Atkinson, manager of the Credit Clearing House of New York; E. W. Bradford, president of the Patent Law Association of America; John Clyde Oswald, editor of *The American Printer*, and Gilbert A. Montague. At the annual banquet held at the Hotel Biltmore, Elbert Hubbard, the Rev. Warren W. Giles, of Montclair, N. J., and Charles R. Lamb, of the Merchants' Association, addressed the members. Other features of the entertainment were a theater party at the Winter Garden, followed by supper and a dance at the Hotel Astor.

### N. Y. BRANCH HEARS LEGISLATIVE RESUME.

Dr. Anderson Reports on Action on Bills at Albany.  
Dr. Mayer Reads a Very Interesting Paper.

OF all the many bills pertaining to pharmacy introduced into the State Legislature at its recently adjourned session only three passed both houses, according to the report of Dr. Wm. C. Anderson, chairman of the legislative committee, at the April meeting of the New York branch of the A. Ph. A. These bills, introduced by Messrs. Walters, Boylan and Frawley, had not at the time of this meeting been signed by the Governor, and it was thought that the last-named would not be enacted since it is defective and its author is opposed to its signature. Forty or more druggists from all over the State appeared before the Governor at a hearing on the Walters bill, and only two men opposed the measure. One representing the Labor Department argued that the bill would repeal certain provisions of the labor law. The other opponent represented the National Pharmaceutical Society, but was a traveling salesman and not a drug clerk, which fact was brought out very forcibly by the questioning of the Labor Department's representative. Nevertheless, the N. P. S. was recorded as opposed to the signing of the Walters bill. The Boylan bill passed the Senate in entirely rewritten form and has practically received the approval of the State association legislative committee. Dr. Anderson characterized the bill as "very satisfactory" and "a step forward."

Louis Berger announced that Professor Joseph P. Remington would address the members upon "The Progress of the Revision of the U. S. P." at the branch's joint physicians' and pharmacists' meeting to be held May 18. A formal letter announcing the meeting will be sent to the various pharmaceutical and medical associations and journals. John Roemer, of White Plains, elaborated upon the recent joint propaganda meeting held under the auspices of the Westchester County Pharmaceutical Association. This meeting had been unusually successful both in the point of attendance and in the fact that the physicians' side of the question was very forcibly presented.

Dr. Joseph L. Mayer presented an interesting paper upon "The Standardization of Volumetric Acid and Alkali Solutions," in the course of which he pointed out that the U. S. P. VIII recognizes but one substance for the standardization of volumetric acid and alkali solutions, this substance being potassium bitartrate. The bitartrate, after purification, is, of course, employed to standardize the alkali, which then serves to standardize the acid. This method is accurate, but complaints are constantly made because of the time and trouble involved in properly preparing the bitartrate. In fact, many students and pharmacists are inclined to employ some other method. To determine the relative accuracy of other com-

monly used methods as compared with the U. S. P. method, Dr. Mayer undertook the work which formed the basis for his paper.

He employed the bitartrate method, following the directions on page 532 of the U. S. P. VIII for the purification of the salt and the method for standardizing V. S. KOH on page 552. Sulphuric acid, V. S., was standardized by measuring 25 cc. into a 100 cc. Erlenmeyer flask and titrating in boiling solution with the KOH solution, employing phenolphthalein as an indicator. The factor for the sulphuric acid V. S. was 1.0391.

The other methods employed by the speaker were the ammonium sulphate, sodium carbonate, oxalic acid, silver chloride and barium sulphate. The first of these he carried out by accurately weighing two small beakers, adding to each 25 cc. of the sulphuric acid V. S. and an excess of redistilled ammonia water, evaporating to dryness on a water bath and then heating in an air oven at 110°C. for periods of 20 minutes. When the weight became constant the ammonium sulphate was calculated to sulphuric acid. To avoid contamination with silica, at the time of making the test, strong ammonia was placed in a test tube and the gas distilled into distilled water. The factor for sulphuric acid V. S. was 1.0385.

The sodium carbonate method was carried out by employing Merck's Reagent anhydrous sodium carbonate, heating in a platinum dish a few minutes and quickly transferring to a stoppered weighing bottle. After cooling, Dr. Mayer weighed off a portion for analysis, dissolving it in water and titrating against the V. S. sulphuric acid, using methyl orange as an indicator. The factor for the V. S. sulphuric acid was 1.0409.

To carry out the oxalic acid method, Dr. Mayer weighed off portions of Merck's Reagent oxalic acid crystals and after dissolving in water, titrated against KOH solution using phenolphthalein indicator. The KOH solution was then employed to standardize the acid, using 25 cc. of the latter, titrating in hot solution, and employing phenolphthalein indicator. Factor for sulphuric acid V. S. was 1.0398.

The silver chloride method was carried out by taking 25 cc. of hydrochloric acid V. S., about 200 cc. distilled water, adding an excess of one drop of silver nitrate solution, heating to boiling, allowing to stand until granular and after filtering out washing on a Gooch crucible.

After drying on a hot plate the granules were weighed and the quantity of hydrochloric acid in the solution was calculated from the weight of the silver chloride. The V. S. hydrochloric acid was then run against the KOH solution, titrating in hot solution. The KOH was also run against the V. S. sulphuric acid in hot solution, phenolphthalein being the indicator employed. Factor was found to be 1.0367.

In carrying out the barium sulphate method, Dr. Mayer precipitated barium sulphate in 25 cc. quantities of the V. S. sulphuric acid; the barium chloride solution which was boiling being added from a pipette drop by drop to the boiling sulphuric acid solution which had been diluted with water.

The material was allowed to stand on a hot plate until the solution became clear. It was then filtered through Gooch crucibles, and after washing, drying and heating, was weighed as barium sulphate. From this the quantity of sulphuric acid was calculated. The sulphuric acid V. S. factor was 1.0440.

Dr. Mayer stated that all his determinations were run in duplicate and yielded very close checks. He presented a table which showed at a glance the results obtained by the various methods. This table was as follows:

Potassium bitartrate method (U. S. P. VIII)	factor	1.0391
Ammonium sulphate	"	1.0385
Sodium carbonate	"	1.0409
Oxalic acid	"	1.0398
Silver chloride	"	1.0367
Barium sulphate	"	1.0440
		6) 6.2390

1.03983

With the exception of the barium sulphate figure the results agree closely. Dr. Mayer included this figure in making up the average despite the fact that it is a trifle high. Numerous determinations made on sulphuric acid solutions, he said, always yielded a higher result by this method than by others. The sulphuric acid was originally standardized on June 4, 1912, and the factor which was the average of all the methods was 1.0388.

Considerable fungus growth was present in the solution at the time the work detailed in Dr. Mayer's paper was begun and carried out, this being on Nov. 12, 1913, and the factor, which was the average of all the methods, was as above noted, 1.0398, the difference between the two figures after about 17 months being (1.0398—1.0388) 0.001, which proved that the age of the solution and the fungus growth had not affected it.

In conclusion, Dr. Mayer observed that, as pointed out by Clark, a volumetric solution whose factor has not changed more than four points in the third decimal place in titrating 25 cc. of one solution against 25 cc. of another is regarded as not having changed its strength. The results indicate that any of the above methods may be used with perfect safety for the standardization of volumetric acid and alkali solutions, Dr. Mayer's personal preference being for the ammonium sulphate, sodium carbonate and potassium bitartrate methods.

The speaker took occasion to acknowledge his indebtedness to his assistant, Dr. I. Schwartz, for his work in carrying out some of the duplicate determinations.

Among those who discussed Dr. Mayer's paper were John Roemer, Dr. M. R. Schmidt, Otto Raubenheimer, Dr. Frederic E. Niece and others.

Dr. Geo. C. Diekman, reporting on the progress of pharmacy, gave the results of some investigations of specialties in Germany. Salicol, claimed to be acetyl-salicylic acid with citrosalicylic acid, proved to be only an impure form of the first-named compound. Codeine tablets were uneven in size and weight, and contained about 30 per cent. of the claimed strength. An eye water, for which ridiculous claims were made, showed itself on analysis to be merely a weak solution of zinc sulphate and sodium chloride. Schumacher's "Cell Regenerator" was simply a very pure milk sugar, without medicating substances. An examination of various digitalis preparations showed great variations in strength, the figures generally running quite low. In a discussion of the sale of patent medicines in other countries, Dr. Joseph Weinstein stated that only 180 such were allowed to be sold in Russia.

## 168 MEMBERS ENROLLED OVER 15 YEARS.

### G.A.S. Statistics Are Compiled by Recorder George Leinecker—Hy. Diedel Oldest Member Honored.

HEREAFTER the German Apothecaries' Society's official organ, the *Apotheker-Zeitung*, will publish the year of election after each name in the monthly membership list. This was decided upon at the society's April meeting, called to order by President Dr. C. F. Klippert. The work of compiling these dates has been completed by Recorder George Leinecker who was obliged to search through the minutes of the past 35 years. Mr. Leinecker reported that at least one previous secretary had entered his minutes on letter heads and that some of the minutes were missing. Carl F. Schleussner was the first secretary to introduce a system into the secretary's work.

From the statistics gathered by Mr. Leinecker, the following are of particular interest:

Out of a membership of 350 the society has eight honorary and 20 associate members. The oldest member is Henry Diedel, who has belonged to the society for more than 50 years. Herman Sellheim joined more than 46 years ago. Thirteen members have belonged more than 40 years, 24 more than 30 years, 37 more than 25 years and 168, or more than 50 per cent., have been members for more than 15 years. As to residence of members, 217 live in either Manhattan or Bronx boroughs, 77 live in Brooklyn, nine in Long Island, outside of Brooklyn; three in Staten Island and the balance reside in various cities or towns.

Mr. Leinecker was honored with a special vote of thanks. Mr. Schleussner proposed that Henry Diedel be notified that he is now entitled to life membership without further payment of dues. The motion received unanimous support.

Mr. Leinecker, as recorder, also reported that Dr. Frederick Grosse had requested to be supplied with documents of the society for exhibition at the Leipsic Exposition to be held next year. Mr. Leinecker arranged for exhibition the following list:

- (1) Manual of the New York Pharmaceutical Society, 1858;
- (2) Constitution of the N.Y.D.A.V., 1864; (3) Historical Sketches of the N.Y.D.A.V. after 13 Years of Age, 1865;
- (4) History of the N.Y.D.A.V., compiled by Secretary Rup-

recht upon the occasion of the society's 25th anniversary, 1876; (5) Copy of the history and constitution of the society when it was in its 41st year, 1892; (6) Catalogue of library of the society, 1900; (7) Constitution, 1901; (8) History of the society compiled by Gustave Ramsperger, one of the founders, on occasion of 50th anniversary, 1901; (9) *Bier-Zeitung*, the programme of arrangements, 60th anniversary, 1911; (10) Programme of the *kommers* arranged in honor of the Thursday Bowling Club after winning a piano in a popularity contest held by a German daily paper, 1912.

The above documents will also be exhibited at the 1915 exposition at San Francisco.

S. V. B. Swann, chairman of the legislative committee, reported that 16 or more bills pertaining to pharmacy introduced in the State Legislature had been killed. He recommended that the Frawley bill be supported and a resolution introduced by George T. Riefflin that 350 members of the society favor this measure, but oppose the Boylan bill, was adopted. Mr. Swann also reported the recent Special Sessions decision placing pharmacists under the pharmacy act and not the labor law.

Robert S. Lehman reported that applications are being received continually from persons signifying their intention to participate in the society's European trip. He said that the outlook for the trip was very favorable. Otto P. Gilbert, chairman of the entertainment committee, again called attention to the date, June 18, of the society's annual outing at Witzel's Pavilion, College Point, L. I.

Fred Schaefer, chairman of the propaganda committee to increase membership in the mortuary fund, reported progress and requested those present to join this feature of the society's activities. At the conclusion of his remarks, five members were enrolled. The committee, consisting of Mr. Schaefer, Paul F. Gebicke, custodian of the fund, and August Diehl, will call on each member personally and request the latter to join.

Otto Raubenheimer, chairman of the scientific committee, announced that in the near future Prof. H. V. Army, F. F. A. Haase and Prof. Curt P. Wimmer would present interesting papers. Mr. Raubenheimer delivered a lecture at this meeting on the discovery of morphine. President Dr. Klippert observed that the discovery of morphine was a triumph for German pharmacy.

Martin Heldt, 1272 Boston road, was elected a member. C. E. Trautmann, Jersey City Heights, was proposed for membership.

A *kommers* will be held after the May 7 meeting, during the first part of which Otto P. Gilbert will preside and during the second part, the "Fidelitas," Paul F. Roenne will be in charge.

## KINGS CO. P.H.S. COMMENDS DRUGGISTS' HOME.

### Dr. Anderson Asserts Stevens Bill Will Prevent Giving Away of Coupons, Etc.—Routine Reports.

THE sum of \$25 was donated to the Druggists' National Home by the members of the Kings County Pharmaceutical Society, who unanimously adopted a motion proposed to that effect by Thomas J. France at their April meeting, held at the Brooklyn College of Pharmacy. Upon the suggestion of Jacob Rehffuss, the treasurer was instructed to make the society's check payable to Thomas Lamb, the Home's Brooklyn representative. Dr. Wm. C. Anderson, C. O. Douden and others spoke highly of the institution and commended the society for giving its support. The resolution was adopted following the announcement by Mr. France of the bazaar, entertainment and ball of the Retail Druggists' Protective Association, held at Saengerbund Hall, for the benefit of the Home.

Dr. Anderson presented an interesting report on the action taken on bills relating to pharmacy at the recent session of the State Legislature. All of these are treated elsewhere in this issue. As to National legislation, he stated that the Bacon-Hughes army pharmacists bill had not been advanced during the past month. He outlined the proposed amendments in the Harrison bill, which are presented elsewhere. The Stevens bill, he said, will prevent the giving away of coupons and presents.

Treasurer Adrian Paradis reported a balance on hand of \$326.73. T. J. France, chairman of committee on supervision, reported that the college examinations would occur April 25

to May 5. Otto Raubenheimer, committee on affairs pertaining to pharmacy, announced that Dr. Joseph Mayer would address the society at the May meeting. The secretary was instructed to invite Samuel F. Brothers, corresponding secretary of the American Medico-Pharmaceutical League, to attend the May meeting and on that occasion to explain the purposes of his organization. T. J. France reminded the members that the day of meeting was the 49th anniversary of the assassination of Abraham Lincoln. Charles V. Lewis spoke at considerable length upon the standard of ethics of a particular physicians' supply house which had recently opened a drug store. A committee was appointed to investigate the matter.

#### DRUG TRADE SECTION FAVORS LEGISLATION.

Instructs Legislative Committee to Draft a Bichloride Measure for Introduction in Congress.

THAT it introduce into Congress its own bichloride bill, was the gist of a resolution unanimously adopted at the April meeting of the Drug Trade Section of the New York Board of Trade and Transportation. The legislative committee, upon the suggestion of Dr. Henry C. Lovis, was instructed to draft a bill which would safeguard the public against the mistaken use of bichloride of mercury and at the same time not make it difficult for the trade to comply with. Dr. Lovis considered it essential that the section should put forward an adequate measure on this subject before Congress should pass some one of the several objectionable bills now before it. Dr. Lovis had in mind a bill containing provisions similar to those proposed for adoption by the local Board of Health.

Dr. Lovis also outlined several amendments to the Harrison bill proposed by the National Drug Trades Conference. By resolution, the section endorsed the Conference's action. The amendments include the elimination of the provision for the sale of hypodermic syringes and the elimination of the word "pharmacist" where it might be construed to exclude a retail pharmacist.

Secretary William F. McConnell presented a report upon the recent session of the State Legislature. Fifteen bills of interest to the members had been introduced, the most important of these being the Nelson and Boylan bills. The Duhamel-Nelson "pure food commission" bill was not reported out of committee. The Boylan-Kerrigan bill was written upon the day of adjournment and was passed. It will probably be signed by the Governor. The Blauvelt bichloride measure was defeated by vote upon the floor of the Senate. The Frawley bill is now in the hands of the Governor. Other bills which either failed to pass or were killed in committee were those introduced by Messrs. Ramsperger, Carswell, Ahearn, Suffern and Griffin.

#### A.P.H.A. AT DETROIT.

The annual convention of the A.Ph.A. at Detroit on Aug. 24-29 promises to be one of the most successful ever held, particularly from the point of view of systematized work and recreation. There will be little "lost motion," and as little conflict in interests as is possible with an organization with so many sections and so many affiliations. The entertainment programme, while not all mapped out, is sufficiently defined to warrant the statement that it will be one of "the best ever"—since Detroit is exceptionally favored with natural advantages, in addition to being a center of many important industries. When it is also realized that "live wire" committees, backed by ample funds, are in charge of the local arrangements, the membership of the A.Ph.A. will have no reason to fear an uneventful visit to Detroit for convention week.

#### Scientific Section, A.Ph.A.

Chairman Edsel A. Ruddiman, of Nashville, Tenn., who is directing the affairs of the Scientific Section, A.Ph.A., is soliciting papers for presentation at the meetings of the section at the A.Ph.A. annual meeting at Detroit in August. The officers of the section wish to have as many of the papers discussed as the time will permit, and to prepare properly for discussion the papers should be in the hands of the chairman as early as possible, and not later than a month before the meeting.

#### City of Washington Branch, A.Ph.A.

The March meeting of the City of Washington Branch of the American Pharmaceutical Association was held at the National College of Pharmacy and called to order by the president, W. S. Richardson. The first subject was "Price Standardization," by J. Leyden White. Mr. White graphically described conditions in pharmacy today and traced the origin of cut prices to monopoly. He presented House Bill 13305, a bill "to prevent discrimination in prices and to provide for publicity of prices to dealers and to the public." The history of this bill, as well as the origin of the Fair Play League, was related, and also the "ins" and "outs" of price protection. While the reception of this bill before noted has not been over-cordial in Congress, Mr. White stated that a number of those who had radically opposed it at the outset had been won over, without the loss of any of the original supporters. After hearing his address, the branch tendered Mr. White a vote of thanks.

Martin I. Wilbert then read a paper on "Russian Oils" (which is printed elsewhere), wherein he gave a complete history of their origin, use in medicine, their preparation, and alleged medicinal virtues. He further invited attention to the fact that the average retailer can purchase these oils at 80 cents a gallon and bottle them himself and have a product superior to that for which he is paying 40 to 60 cents a pint under fancy names.

In the absence of S. L. Hilton, who has made extended observations of these Russian oils recently, Dr. H. E. Kalowski read his paper, which covered his experiments with all the leading brands of oils on the market. Samples were exhibited and their merits reported. In addition, Mr. Hilton has made many experiments to produce a wholly satisfactory aromatic oil. Samples of these, 30 or more in number, were exhibited and passed among the members for inspection. The samples flavored with cardamom, natural wintergreen and the combined oils used in aromatic elixir and compound spirit of orange attracted much favorable comment. Following a full discussion of the matters which had been brought before the branch by the address made and the papers read, the branch adjourned.

#### Maine Ph.A.

The 47th annual meeting of the Maine Ph.A. will be held at the Bangor House on June 30, July 1, 2. A feature of the sessions will be the presentation of prize papers upon a wide variety of topics. The transportation committee is made up of M. L. Porter, Danforth; S. R. Crabtree, Island Falls, and F. H. Neal, Fairfield. The committee in charge of the entertainment consists of Chas. H. Davis, Bangor; C. M. Brown, Bangor; W. C. Mutty, Oldtown; C. E. Walmsley, Bangor, and Fred E. Miller, Bangor. Walter M. Chase, 5 Hammond street, Bangor, is the chairman of the committee on papers.

#### N.Y.S.P.A., as Usual, Must Change Place of Meeting.

True to precedent, the New York State Pharmaceutical Association will be obliged this year to change its place of meeting. The Sagamore Hotel, located at Bolton and one of the largest on Lake George, was recently destroyed by fire at an approximate loss of \$250,000. It is the general impression in Bolton that the fire was of an incendiary origin. The hotel was the property of the Green Island Improvement Co and was insured for \$150,000. The association may meet at Otsego Lake.

#### West Virginia Ph.A.

The annual meeting of the West Virginia Pharmaceutical Association will be held at Loch Lynn Hotel, Mountain Lake Park, Maryland, June 23-25. A large attendance is looked for, and it is hoped that Prof. Joseph P. Remington, of the Philadelphia College of Pharmacy, will be present. The travelers' auxiliary is planning one of the best entertainments yet presented at an annual convention.

#### Women's Ph.A. of the Pacific Coast.

The monthly meeting of the Women's Pharmaceutical Association of the Pacific Coast was held in the Assembly Hall, Pacific Building, San Francisco, March 27. Mrs. R. E. White, the president, was in the chair. Difficulties in spreading asafoetida plasters; syrup of hypophosphite and syrup of hypophosphites comp.; acetic acid in eye drops; London purple, and

taka-diatase were discussed during the roll call. Mrs. White had a very carefully prepared paper on various methods of preparing cold cream and samples of U.S.P., G.P. and B.P. cold creams. Miss Roehr read a paper prepared by Mrs. Rees on "Ventilation in Drug Stores." The discussion of the evening was on the Proposed Recipe Book of the American Pharmaceutical Association, and this was opened by Dr. Winslow, followed by Mrs. White, Mrs. Kane and Miss Roehr.

#### ST. LOUIS DRUG CLUB IN NEW QUARTERS.

The St. Louis Drug Club has taken a big room in the Southern Hotel for quarters and will have advantage of the many conveniences to be offered by the hotel when it is opened on May 1. The club has a successful growth to date but now it promises soon to reach the full growth for such an organization in the big field afforded by St. Louis drug business.

The new location will put the club in the heart of the jobbing district not only for drugs, but for drug specialties and accessories, within a few blocks of all other downtown hotels, near the leading theaters—in fact, right in the center of downtown business and social activities.

Plans are to take advantage of all the opportunities afforded by making the club headquarters for retailers, wholesalers, manufacturers and traveling men and other visitors to the city. Telephones will be installed for the use of all visitors and members, card indexes will be provided for persons having use for them in looking up business, a secretary will be present to look after the wants of visitors, and every effort will be made to make the club serviceable in business as well as in a social way. One of the features will be a sample room for traveling men.

Being in the hotel, the club members will be able to get their meals under the same roof, get a shave, a turk sh bath, write letters, make a speech in the convention halls or spin a yarn in the lobby. Everything demanded, even to a shine, will be handy.

The big men of the St. Louis drug world are taking hold and it is expected that members of the St.L.R.D.A., which met at the Southern for years, will make the club a gathering place when they run downtown for business or a social hour.

In pushing the club one of the most active members is Jerome A. Wilkerson, the club secretary until the recent election. This position is held only a year by each secretary, and O. J. Cloughly, the hustling ex-president of the St.L.R.D.A., is now recording secretary, with L. Tolle, assistant secretary, Henry L. Hudson is the new president and Joseph Horn 1st vice-president. George Scheu is treasurer. The trustees named are Frank Singleton, E. W. Rose, Martin Scherer and William Cory.

#### Illinois Pharmaceutical Travelers' Association.

The Knights of the Grip who call on the pill-rollers throughout Illinois, held their annual banquet April 4, at the Hotel Sherman, Chicago. In the afternoon the travelers met for a business session. President Burhans and Secretary-Treasurer Herbert E. Cornish inaugurated this idea of holding a business meeting on the day of the annual banquet to discuss matters pertaining to the welfare of the association. The committee appointed by the president for the revision of the constitution, consisting of Messrs. Keim, Dudley and Stevenson, submitted an entire new set of laws and rules for discussion. A number of changes were adopted. All of the officers present submitted reports on the progress which is being made in the plans for the convention of the Illinois Ph.A. at Fox Lake in June.

At the banquet in the evening A. C. Kennedy, representing the down-State members, acted as toastmaster. Ralph Dorland, president of the Illinois Ph.A., made a brilliant address complimenting the Travelers on the progress their association was making, and expressed the hope that the retail druggists of the State would soon awaken to the fact that a concentrated effort of co-operation among them was necessary to build up and make the Illinois Ph.A. what it should be, the most powerful State association of the retail druggists in the country. M. L. Burhans, the president of the Travelers, spoke on the progress made by the Travelers during the past year. Thomas Potts, in his usual jovial manner, addressed the association on "Fraternalism." Mr. Cornish outlined the plans being made to entertain the druggists of the State during the "week end at Fox Lake" and called upon every jobber, manufacturer and

traveling man to boost the coming convention. J. M. Schwalbe, chairman of the entertainment committee, proved a very able master of ceremony. Brother Dudley, one of the pioneer workers among the traveling men, brought good news from the down-State boys. Hugh Craig, editor of the *N.A.R.D. Journal*, greeted the travelers on behalf of the press. Among the other speakers were Prof. W. B. Day and Messrs. Lahl, Matheson, Schwalbe and Hobart.

#### For A.Ph.A. Home in Philadelphia.

At a meeting of the executive committee of the Philadelphia Branch of the American Pharmaceutical Association, held recently, it was decided to ask every pharmaceutical interest in Philadelphia to co-operate in the work of securing a proposed home for the association. The general plan provides for the erection of a fireproof building, large enough for the editorial and secretary's offices, with a library, a suitable place for keeping the association's valuable records and an experimental laboratory. The executive committee decided that it would assume the attitude that if the association at large considers Philadelphia as the best location for such a building, then the assurance can be secured of the united co-operation on the part of the city's large pharmaceutical interests. The medical interests, too, will probably be asked to join in this movement.

#### Massachusetts Ph.A.

At a recent meeting of the Board of Directors of the Massachusetts Ph.A. it was decided to hold the 33d annual meeting of the association at the New Ocean House, Swampscott, Mass., on Tuesday, Wednesday and Thursday, June 16-18.

#### Northwestern Branch, A.Ph.A.

The April meeting of the Northwestern branch of the American Pharmaceutical Association was held immediately after a special meeting of the Minnesota State Pharmaceutical Association at the Nicolett Hotel, Minneapolis, on April 15. The following papers were presented: "The Preparation of Ampoules in the Pharmacy," F. A. U. Smith; "Some Recent Problems of the Pharmacist," W. A. Frost; "Spices: Official and Unofficial Varieties," M. H. Haynes; "Some Tests on the Ethereal Tincture of Digitalis," F. A. U. Smith, and "Should Students in Pharmacy Take Military Drills," Dean F. J. Wulling. The meeting was preceded by a dinner.

#### Pittsburgh Branch, A.Ph.A.

The April meeting of the Pittsburgh Branch, A.Ph.A., was held at the Pittsburgh College of Pharmacy on April 17, with the following programme:

"Lantern Slides of Medicinal Plants," by Dr. L. K. Barbaker.

"Activities of Enzymes and Bacteria," by Dr. J. H. Wurdack

A discussion of Heroin Sales in their legal and moral aspects was a feature of the evening.

#### Wilmington Auxiliary Holds Session.

The women of the Woman's Auxiliary Retail Druggists' Association of Wilmington, Del., recently met at the home of Mrs. J. O. Bosley, in that city. Following the business session the members enjoyed a social hour. Refreshments were served by the hostess. The next meeting will be held at the home of Miss Nora Brendle, Eighth and West streets, Wilmington, Del.

#### Boston Druggists' Association.

The quarterly meeting of the Boston Druggists' Association was held at Young's Hotel, March 31, with 75 members present, and with President William S. Briry presiding. The guests included Dr. Milton W. Franklin, Sidney B. Paine and Dr. Paul H. Provandie. The after-dinner exercises included addresses by Mr. Paine on "Ventilation and Ozone," and by Dr. Provandie on "Preventive Medicine."

#### A.W.P.A.

The April meeting of the American Woman's Pharmaceutical Association was held in the alumni room of the New York College of Pharmacy on April 13. Dr. Schroeder, of the New York Board of Health, was the guest of the evening, and gave a very interesting talk on "Milk," which was much appreciated. Refreshments were served.

## AMERICAN CHEMICAL SOCIETY MEETS.

Cincinnati Meeting Swelled by A.Ph.A. Members and  
by Ohio Valley D.A. Delegates.

CINCINNATI, April 10.—With fully 1500 chemists present, the sessions of the 40th Spring meeting of the American Chemical Society came to a close today. More than 15 papers were read before the various sections, the Chairman of which follow: Biological Chemistry, Dr. Carl L. Nye; Inorganic Chemistry, Dr. J. P. Blackbridge; Pharmaceutical Chemistry, I. R. Lohr; Industrial Chemistry, Geo. P. Adamson; Organic Chemistry, P. A. Cutler; Physical and Inorganic Chemistry, F. W. Robinson; Water, Sewage and Sanitation, Leonard Burton.

President Theodore W. Richards, of Harvard University, called the meeting to order, and the delegates were welcomed by Mayor Spiegel, of Cincinnati. Professor Charles Dabney, of the University of Cincinnati, in the buildings of which institution the meetings were held, responded. Other important addresses were by Prof. Arthur T. Day, of the Geophysical Laboratory at Washington, on "The Chemical Problems of an Active Volcano"; Prof. Wilder D. Bancroft, of Cornell, on "Flame Reactions," and Irving Langmuir, of the General Electric Company's laboratory, on "Chemical Reactions at Low Pressure." The mornings of April 8 and 9 were given over to the reading of papers, while the afternoons were devoted to visits to the Globe Soap Works, the filtration plant of the Cincinnati water works, the Procter & Gamble plant, the National Cash Register Company at Dayton, and the American Rolling Mills Company at Middletown.

Prior to the regular sessions the executive board met at the Sinton Hotel, and selected New Orleans as the next meeting-place. It was also decided to meet with the American Association for the Advancement of Science at New York, in 1917, and in Chicago, 1921, instead of the following year.

One of the most noteworthy features of the convention was an address by Dr. Edward Gudeman, before one of the sections, in the course of which the speaker startled his audience by affirming that sulphurous acid fumes, if inhaled, will cure tuberculosis in its early stages. The gas was stated to have the property of penetrating intercellular tissues. The treatment is not patented, may be used by anyone, and Dr. Gudeman reported that he had successfully applied it to several of his own patients. Cincinnati physicians were not inclined to attach much attention to the announcement.

## Aroma Club Now Full Blown.

The Aroma Club, an organization of perfumers and toilet goods manufacturers in New York City and vicinity, has built up a membership of 180 in three months. To W. G. Ungerer, of New York, is due the chief credit for the inception of the club, which holds weekly luncheon-meetings, which are entirely informal and for the purpose of furthering the already friendly feeling which exists among the trade. At the meeting held on February 4, the following officers were elected: President, W. E. Swindell, of Swindell Bros., Baltimore, Md.; vice-president, L. E. K. White, of A. P. Babcock Co., New York City; treasurer, A. B. Calisher, of Calisher & Co., New York City, and secretary, Louis Spencer Levy, editor of the *American Perfumer*.

## Boston Chapter, W.O.N.A.R.D.

"Charity Experience," was the subject of a very interesting and informing address which was given April 16 at the Hotel Vendome before the members of Boston Chapter 1, W.O.N.A.R.D., at their regular April meeting, by Mrs. M. R. Martin.

During the social hour tea was served by Mrs. W. R. Acheson, Mrs. G. A. Wilson, Mrs. Florence L. Berry and Mrs. J. G. Kilburn, assisted by Mrs. Fred A. Hubbard and Miss Sallie LaPierre.

Plans are now under way for the annual luncheon which will be held May 8, followed by the annual meeting and the election of officers.

## AMONG THE ASSOCIATIONS.

The annual meeting of the Louisville R.D.A. was a "jubila-

tion meeting" over the defeat of the bill introduced in the last Legislature which sought to give persons graduating from medical colleges prior to July 1, 1905, the right to practice pharmacy without taking an examination. The reports of officers showed the organization to be in a prosperous condition. The officers were re-elected as follows: President, John J. Seiberz; vice-president, W. H. Fisher; treasurer, William Vottler; secretary, Robert J. Frick.

The March meeting of Boston Chapter, W.O.N.A.R.D., was held at the Hotel Vendome and the members heard a most instructive address on "Juvenile Delinquency," by Edwin Mulready, State Commissioner of Probation. Songs were sung by Miss Elsa Lindell, with Miss Teeling as accompanist. Miss Sallie LaPierre was in charge of the tea room, and the pourers were Mrs. Charles A. Stover, Mrs. J. F. Finneran, Mrs. John W. Lowe and Mrs. William R. Acheson. They were assisted by Mrs. Leopold Bartel and Mrs. Elie H. LaPierre.

At the annual meeting and election of the Savannah (Ga.) Retail Druggists' Association, W. D. Jones was elected president to succeed H. C. Shuptrine. Other officers elected were: Vice-president, W. T. Knight; secretary, R. A. Anderson; treasurer, H. H. Livingston. The board of control is made up of these officers: I. A. Solomons and W. A. Pigman.

At the annual meeting of the Rock County (Wis.) druggists' organization the following officers were elected: President, J. P. Baker, of Janesville; secretary-treasurer, J. M. Farnsworth, Beloit. The meeting adjourned till Oct. 2, 1914, when important business will come before the association.

The Madison (Wis.) R.D.A. has elected the following officers: President, Alfred E. Kundert; vice-president, W. M. Atwood; secretary, A. J. Helstrom; treasurer, Adolph H. Glenz. The retiring officers were: A. W. Krehl, president; A. E. Krueger, secretary; B. B. Collyer, treasurer.

The second boat excursion under the auspices of the New Orleans Drug Clerks' Club was given aboard the steamer "Sidney," April 17, the boat leaving at 8:15 and returning about midnight. Arnold Troxler was chairman of the outing committee.

The Ladies' Auxiliary of the St. Paul R.D.A. entertained about 500 at the Ryan Hotel, April 1. The hostesses were Mrs. L. J. Aberwald and Mrs. W. E. Burke.

The druggists of Biddeford, Me., have voted a new schedule of hours for Sunday, the stores being open from 8 till 10:30 a.m. and from 5 to 8 p.m.

The Ohio Ph.A. will hold its annual session at Cedar Point, Ohio, July 7-10 inclusive.

## Newspaper Therapy—Up to the Minute.

The following clipping relating a most unusual occurrence and the first instance, no doubt, on record, where a serum treatment was attempted to counteract poisoning by a vegetable drug, appeared recently in the *Kansas City Star*:

## "Fights for Life Against Poison."

"Serum made from the poisonous jequirity bean, one of which Samuel D. Workin, a New York School of Pharmacy senior, chewed and swallowed Thursday, is being injected by his physicians in an effort to save the student's life. The serum was prepared by a wholesale drug house that manufactures an essence from the bean for diseases of the eye."

The K.C. Drug Club inquired into the matter and received the following report from the secretary of the N.Y. College of Pharmacy:

ALBERT N. DOERSCHUK,

President K.C. Drug Club, Kansas City, Mo.

Dear Sir:—In reply to your letter of March 25, I have to say that the statement made in the clipping herewith is entirely without foundation. No serum was administered to the young man whatever.

Very truly yours,

W. SIMPSON, Secretary.

## Canary Bird Food.

Dried yolk of egg.....	2 parts
Poppyheads, powdered coarsely.....	1 part
Cuttlefish bone, coarsely powdered.....	1 part
Granulated sugar.....	2 parts
Wheat biscuit, dried and powdered.....	8 parts
Mix.	

## SCHOOLS AND COLLEGES

### ALBERT PLAUT ESTABLISHES FELLOWSHIP.

At a recent meeting of the Board of Trustees of the New York College of Pharmacy, it was announced that Vice-President Albert Plaut had founded a Fellowship in memory of his father, the late Isaac Plaut. The terms of this Fellowship are as follows:

"For the encouragement of graduate study and original research, this Fellowship has been founded by Albert Plaut, in memory of his father, Isaac Plaut.

"It consists of the payment annually of the sum of \$500, to provide for a year of study at a foreign school or university, by that Bachelor of Science in Pharmacy of this College, who shall have shown, during his course of study here, the greatest taste and aptitude for original investigation, among the members of his class. Should no member of a class be deemed worthy of the award, it will be withheld, and the money retained for this or other cause shall be used for the formation of a fund, the income of which shall be annually added to the Fellowship payment for the respective year.

"The Fellow shall be appointed by the Council of the University upon the nomination of the Trustees of the College of Pharmacy. He shall attend a foreign institution to be selected by himself and approved by the Faculty of the College of Pharmacy and shall pursue a course of study approved by the Faculty. At the close of his incumbency, he shall present to the Faculty a written report of his work.

"The Fellowship payment shall be made in three equal instalments: one on June 15, one on November 1, and one March 1, provided that the Fellow continues faithfully to pursue the work undertaken. In case of failure so to do, he shall forfeit all further privileges and emoluments conferred upon him by his appointment to the Fellowship, and the Trustees of the College of Pharmacy may declare the Fellowship vacant. The terms of the Fellowship will become effective in June, 1915."

### New York College of Pharmacy.

The 84th annual commencement of the New York College of Pharmacy will take place Thursday, May 14, at Carnegie Hall. This year, Nicholas Murray Butler, president of Columbia University, will make the address to the graduating class. The commencement of Columbia University will be held on June 3.

The Phi Chi Fraternity held a dinner at Healy's on March 31, at which Dr. H. H. Rusby was the chief guest of the evening and Dr. Fred Leslie acted as toastmaster. The Kappa Psi dinner on April 2 was held at the Chemists' Club, and among other guests was Prof. Charles F. Chandler. Mr. Jeannot Hostmann, of the Department of Chemistry, acted as toastmaster. Prof. Chandler told the boys of the old days of the College of Pharmacy. He has been a teacher for over 50 years and directly connected with this institution for 47 years.

The 85th session, which begins next September, promises, in point of attendance, to surpass even the present large class. Matriculation has commenced and already over 60 seats have been assigned to members of the class of 1916.

The student activities at the college, under the leadership of Leo Roon, of the Department of Pharmacy, promise successful results. On Junior Night the entertainment will consist mostly of music rendered by the College Orchestra and the Mandolin and Glee Clubs.

### BROOKLYN ALUMNI HOLD ANNUAL BANQUET.

#### J. H. Rehfuß Tells Graduates Fight on Ridiculously Drawn Narcotic Bills Must Not Be Relaxed.

JACOB H. REHFUSS, president of the New York State Pharmaceutical Association, made some interesting post-prandial observations on legislation and "apathy in the drug trade" on the occasion of the recent annual banquet of the Alumni Association of the Brooklyn College of Pharmacy. Mr. Rehfuß asserted that because the druggists had killed a few ridiculously drawn anti-narcotic bills this session of the

Legislature there was no reason why they should relax their vigilance. The anti-narcotic societies are out for records and employ paid secretaries who must "make good." "These people are devoting their entire time to anti-narcotic legislation." The papers frequently quote the anti-narcotic people to the effect that the druggists wire their representatives in the Legislature to "kill all narcotic legislation." "This is not true. Druggists favor anti-narcotic legislation, rightly drawn. What they do object to is this kind of legislation ridiculously drawn up. The anti-narcotic people are all right in principle."

Mr. Rehfuß discussed the Frawley bill to some length. He stated emphatically that druggists should take more interest in politics. "One or two good druggists in each house could do a world of good." And again, on the general subject of narcotics, "Next year the narcotic fight will be worse than this year. Prepare now." Mr. Rehfuß outlined a plan by which a sub-committee should be appointed, the membership in the same to consist of one man from each district. These district representatives should be supplied with pamphlets presenting all the points on all pending bills, and they should keep in touch with their Assemblymen and Senators.

Mr. Rehfuß concluded by asserting that he had heard much of "apathy in the drug trade," but he had found that druggists would work when the leader was "on the job." "Big men all over the State got right 'on the job' whenever they were wired to get after their representatives to oppose or advance legislation."

Among the speakers were Dr. Stewart L. Walsh, Ex-Assemblyman George W. Wilson and Ex-Senator Dr. George W. Brush, Dr. H. J. J. Kassebaum, Charles V. Lewis and others.

### Philadelphia College of Pharmacy.

The quarterly meeting of the Philadelphia College of Pharmacy was held in the College Library March 30. The annual reports of the president and the various committees were read. The election resulted as follows: President, Howard B. French; 1st vice-president, R. V. Mattison, M.D.; 2d vice-president, Joseph L. Lemberger; treasurer, Richard M. Shoemaker; corresponding secretary, A. W. Miller, M.D.; recording secretary, C. A. Weideman, M.D.; curator, Joseph W. England; editor, Henry Kraemer; librarian, Katharine E. Nagle; trustees, Joseph P. Remington, C. Stanley French, George B. Evans; publication committee, Samuel P. Sadtler, Henry Kraemer, Joseph W. England, Joseph P. Remington, Martin I. Wilbert, Charles H. LaWall, John K. Thum; committee on pharmaceutical meetings, Henry Kraemer, Joseph P. Remington, C. B. Lowe, M.D., George B. Weideman, Elmer H. Hessler. Of the reports, that of the president was particularly interesting, portions of which are appended:

"The college buildings at the present time are in good condition. The walls and ceiling of the library have been painted, the floor covered with a cork carpet, and new chairs provided. The walls of the back stairway have been coated with a light colored paint which has proven of advantage in brightening up this portion of the building. Alterations were made in the third floor microscopical laboratory, giving greater facilities for the revised and expanded course in bacteriology, which is now an obligatory course. Changes have also been made in Alumni Hall for the benefit of classes in microscopy.

"Following the approval of the Board of Trustees of a petition signed by a number of students, asking that a lunch room be established, a lunch counter was started a few weeks ago and is being continued with increasing success.

"The total number of students in attendance at the college at this time is 434, an increase of 14 over last year. Of those seeking admittance to the college at the beginning of the Fall term, 29 applicants were not able to furnish satisfactory entrance credentials. These were given the privilege of remaining at the college and repeating the first year work during 1914-15, in the meantime being expected to qualify. Of these, only four are attending at the present time and under the circumstances are not listed as students. In the department of analytical chemistry, 76 students are doing special work. Twenty-five students are taking the special laboratory course in bacteriology; of this number, seven are specials and 18 regulars. Fourteen of the special chemistry students are availing themselves of the special course in microscopy. The work in the department of pharmacy has been successfully carried on. The recording of attendance, as now required by the State Pharmaceutical Board, has been of considerable

value, and resulted in a higher grade of scholarship being attained by the classes. The course in commercial training, under the control of the department of pharmacy, and for which students are not charged, has been greatly increased; the number of hours devoted to this branch having been doubled since last year. The department of botany and pharmacognosy has developed a special course in microscopy for the special chemistry students, broadening their knowledge as analysts for the detection of adulteration and deterioration in drugs and foods. It is of interest to note the increasing demand among agricultural experiment stations and Government laboratories for pharmacognosists; and as microscopical courses are not as a rule included with chemical courses given in this country, the Philadelphia College of Pharmacy, in the establishment of such a course, will undoubtedly be enabled to prepare students of chemistry for a broader knowledge and a deeper understanding of the intricacies of the work they have elected, thus extending the educational prestige of the college.

The college has received in the past year from Mrs. Anna Shinn Majer, daughter of your late treasurer, James T. Shinn, a sum sufficient to convert the Shinn Memorial into a scholarship. The Pennsylvania Scholarship Fund of \$2500 is nearing completion, \$2200 of which has been collected.

Your president wishes to call attention to the fact that on the 21st of March, 1921, the college will have attained the 100th anniversary of its existence. This is but seven years away, and your president desires to urge all members to collect and place in possession of the college any historical matters obtainable.

On March 26 the senior class of the Philadelphia College of Pharmacy were the guests of the Smith, Kline & French Co. at the firm's laboratory. The class, divided into squads, inspected every department, those in charge taking pleasure in explaining processes and answering questions. After the inspection the firm served luncheon which was enjoyed by all. The luncheon over, Harry B. French addressed the class, reminding the prospective drug-store proprietors that wholesalers gave more than mere credit, that confidence was placed in the buyer and the wholesaler expects that obligations be met. He then introduced Professor Remington, remarking that this was the professor's 67th birthday, at which moment two waiters approached with an immense cake, placing it before the dean, who acknowledged the honor in his usual jovial style. Professor LaWall, who was in the company's employ for a number of years, spoke in a reminiscent vein. Professor Lowe paid a tribute to the memory of Mahlon N. Kline, one of the founders of the firm. Class President Wheeler responded for the class, which wound up the occasion with the college yell. The occasion was a most profitable and enjoyable one.

Prof. Herbert W. Hess, of the Wharton School, University of Pennsylvania, delivered a special lecture at the college April 6 on "A Diagnosis of Some Drug Store Ills and a Suggested Prescription." He said that a drug-store was a wonderful institution, that it served the young and old, the living and the dying, both day and night. In order that a druggist may be successful he must have a firm belief in the things he sells and the general appearance of his store must be suggestive of health. After a brief resumé of "things we sell" he explained the professional and commercial phases of pharmacy, emphasizing that there was a difference between publicity for public benefit and advertising for selfish gain. By several practical illustrations, Professor Hess differentiated sharply between advertising and salesmanship. In order that any article or proposition may be salable it must possess or excite three things, namely: utility, environment and emotion. In concluding, he gave a few practical rules to follow, the most important one being that a druggist above all other professional men must be happy because he works.

#### University of Illinois School of Pharmacy.

The Alumni Association of the University of Illinois School of Pharmacy (Chicago College of Pharmacy) held its annual meeting and election of officers recently. The treasurer's report showed that the finances of the association are in good condition, there being \$498.08 on hand in the general fund and \$553.04 in the Alumni Ebert fund, which is intended for a scholarship or other suitable memorial of the late Albert E. Ebert. The report of the historian, Miss Charlotte E. Stimson, was presented and it was suggested that the executive committee consider some action looking to the publication of

a history of the college. Arrangements for the annual banquet were discussed. It was decided to hold the banquet as usual on the evening of commencement day and to leave the selection of a place with a committee appointed by the president. This committee later decided upon the Congress Hotel. The election resulted as follows: President, George P. Mills, '84; 1st vice-president, A. H. Clark, '04; 2d vice-president, Herman Fry, '87; 3d vice-president, Rose P. Schmid, '10; secretary-treasurer, B. L. Fisher, '11; historian, Charlotte E. Stimson, '00.

The 54th annual commencement of the University of Illinois School of Pharmacy was held at Howard's Theater April 22. Prof. John Uri Lloyd addressed the graduating class. President Edmund J. James, of the University of Illinois, conferred the degrees. George E. Canham made the valedictory address for the class. The Becker prize for scholarship in pharmacy and the microscope offered by Herman Fry for scholarship in materia medica and botany was presented. The graduating class numbered about 40.

The Alumni Association held its 32d annual banquet on Wednesday evening, April 22, at the Congress Hotel.

#### College of Pharmacy, State University of Iowa.

The Mortar and Pestle Society held two very profitable meetings recently. At the first meeting B. B. Hunter, '15, read a paper on "Prescription Bottles," and W. E. Palmer, '14, one on "Druggists' Profits." Following the programme ice cream and cake were served and everybody enjoyed a social hour. At the second meeting Prof. R. A. Kuever read a most interesting and instructive paper on the subject of Pharmacopoeias, in which he compared the German with that of the United States.

Easter vacation began April 8 at 10 p.m. and continued until April 15, when all classes began again at 8 a.m.

J. E. Booge, Ph.G., '09; Ph.C., '10, for several years past an instructor in chemistry, was recently elected to Sigma Xi, the honorary scientific society.

The sixth annual university dinner was given under the auspices of the Iowa Union and of the Women's League. The toast programme was an excellent one. Prof. T. H. Macbride, acting president of the University, responded to the toast "The University of the Present," and the Hon. D. D. Murphy, chairman of the State Board of Education, to "The University of the Future."

Phi Delta Chi gave an informal dance at Sueppel's Hall recently.

#### University of Washington College of Pharmacy.

The Easter vacation was held from April 3 to 13.

Among those taking the State Board examination held here at the university, were Messrs. Smith, of Edmonds; Webb, of Sedro; Woolley and Hale, of Seattle, all former students of the U. of W.

F. C. Robinson, '17, of Seattle, and Miss Katie Johnson, of Everett, were recently united in marriage. Mr. Robinson is still pursuing the role of a student.

Dean Chas. F. Johnson recently made a trip to Portland to visit the North Pacific College of Pharmacy, and while in Oregon inspected the large vinegar plant at Hood River. This trip was made in connection with his work as State Chemist of Washington.

The Pharmacy Club held a very successful "mixer" in the Woman's League building on the campus. Music, games and a "feed" were the diversions of the evening. Miss Hopkins rendered an excellent vocal solo which was followed by a clever impersonation by Gerald Patton. The great surprise of the evening was the new Pharmacy Orchestra, which rendered several selections in an effective manner.

M. V. Veldec, B.S., '13, has received appointment as bacteriologist in the Federal Water Inspection Service. He is now doing preliminary work in the Federal laboratories at Cincinnati.

The first annual cadet day of the University of Washington was a distinctive affair. Classes were suspended and every one turned out to witness the display of military tactics. A number of contests such as wall scaling, rescue race, equipment race and shoe race afforded amusement. Captain Sewell, of the pharmacy department, took third prize in competitive drill for companies, and received as a prize a fine saber. The military ball was held in the National Guard armory in the evening. More than 1200 people were present, mostly in

military attire. Governor and Mrs. Ernest Lister were among the patrons and patronesses.

**Valparaiso University Department of Pharmacy.**

The members of the Pharmaceutical Association of Valparaiso University have been favored the past month with lectures of special interest to pharmacists and medical men. O. B. R. Smith, of Parke-Davis, was present on April 2, 3, 4. On Thursday afternoon he delivered a lecture on Standardized Products in which he pointed out the necessity for standardization, owing to the varying content of active principles in crude drugs, and sketched the history of this line of research work. Then he spoke in much detail of the various physiological tests used, such as ergot on the cock, cannabis indica on the dog, and strophanthus on frogs. On Friday afternoon Mr. Smith lectured on bacterial vaccines and tuberculins. After giving a short account of the discoveries of Pasteur, Koch, von Pirquet, Sir A. E. Wright, and other noted workers in this field, the speaker explained just what bacterins are, how they are prepared, the exact tests to which they are subjected, the positive and negative phases of the opsonic index, and showed the various styles of packages now furnished to the profession for immediate use. On Friday night the lecture was given before an audience composed of pharmacists, medical students, and many not so closely interested along these lines. He gave a very interesting talk on the methods of preparing and standardizing antitoxins, explaining fully the great advance made in their preparation during the last few years. His lecture was fully illustrated with lantern slides, showing the various laboratory methods used in their preparation and the animals on which tests are made.

On April 9 Dean Timmons, of the Department of Pharmacy, gave a most instructive lecture on and demonstration of liquid air. His exposition of the various chemical and mechanical means resorted to was so clear and so fully illustrated with lantern slides that every one of the immense audience could understand the procedure followed. After the introductory lecture Dean Timmons performed many interesting and instructive experiments showing both the chemical and physical activity and properties of the fluid.

**University of Colorado School of Pharmacy.**

Dean Washburn has received the following books for the Pharmacy Library: Stilles' "Therapeutics and Materia Medica," Edes' "Therapeutics and Materia Medica," Stevens' "Pharmacy and Dispensing," Gallaudet's "Chemistry," "Daggett's "Pharmaceutical Chemistry," Thornton's "Medical Formulary," Rusby's "Manual of Botany," and Rosenau's "Preventive Medicine and Hygiene."

On Friday evening, April 10, Dr. W. H. Jenkins, of Detroit, delivered an interesting illustrated lecture on the "Manufacture of Antitoxins and Other Biological Products."

Rex Harrington, Harry Bennett, K. W. Sloyd and Charles F. Poe were successful in passing the recent examination held by the State Board of Pharmacy.

W. E. Law on "Window Advertising," and J. R. Caldwell on "Different Things to Learn in Dispensing" were the speakers at the April meeting of the Washburn Pharmaceutical Society. The second annual banquet of the society was held April 3 at the Boulderado Hotel, with the following speakers: W. A. Hover, president of the W. A. Hover Drug Co.; C. W. Clark, of the Rocky Mountain Druggist; Prof. J. B. Ekeley, Dr. C. T. Burnett and Prof. Francis Ramaley. Dean H. C. Washburn was the toastmaster.

**Atlanta College of Pharmacy.**

The commencement exercises of Atlanta College of Pharmacy were held at the Atlanta Theater on March 30, at 8 p.m., with the dean, Prof. George F. Payne, Ph.D., presiding. There were 44 members of the graduating class, and the class speakers were: William T. Morgan, salutatorian; Stanley C. Davis, historian; Robert C. Powell, poet, and Samuel C. Moon, valedictorian.

A large number of friends of the young graduates attended the exercises in spite of the rainy weather.

In his report for the year, Secretary H. C. Owens made this statement about the attendance:

"We have had in attendance the past session of six months a total of 110 students, of whom 42 will graduate tonight with the degree of Ph.G., and two with the degree of Ph.C.

Those in attendance were from the following States:

"North Carolina, 4; South Carolina, 11; Georgia, 44; Florida, 6; Alabama, 8; Mississippi, 19; Louisiana, 3; Texas, 1; Tennessee, 8; Arkansas, 3; Cuba, 3—a total of 110."

The faculty of the college is as follows: Prof. George F. Payne, Prof. Carl H. Owen, Prof. H. M. Davison, Prof. W. A. Medlock, Prof. T. N. Bussey, Prof. W. E. Person.

**St. Louis College of Pharmacy.**

St. Louis College of Pharmacy will celebrate its 50th anniversary or "Golden Jubilee" on Oct. 7 and 8. The big central idea of the jubilee celebration will be a new home. The college has been out of debt a year or so, and, being out of debt, it desires to push ahead again, to take care of the increased demands upon it. It has been suggested that the new college site be near the magnificent group of hospitals and medical buildings of Washington University now being erected at a cost of several millions of dollars on a great tract facing Forest Park. The old home has been outgrown after having done great service to pharmacy in the West and the South since its erection in 1892. It has been decided to give a complimentary banquet to all living graduates of the school that can be brought together. Dr. O. A. Wall has been an instructor in the college for 40 years and he probably will have a big part in rounding up the graduates. Besides the banquet, there will be a programme of exercises, in which Dr. H. M. Whelpley and other leaders in the college work and invited guests will take part.

Class of '84, St. Louis College of Pharmacy, plans to hold a reunion. George Berg, president, 3421 Hartford street; Oscar F. Bausch, secretary, 3405 Pestalozzi street, and Louis Bierman, treasurer, Meyer Bros. Drug Co., are in charge of arrangements.

**Phi Delta Chi Fraternity of Massachusetts C. of P.**

Phi Delta Chi Fraternity of the Massachusetts College of Pharmacy held its 13th annual banquet at the Hotel Brunswick April 15, with an attendance of members and guests numbering 60. Dr. T. J. O'Brien, former acting dean of the college, was toastmaster, and the guests included the present dean, Theodore J. Bradley, Hon. Frank J. Donahue, secretary of the commonwealth; Prof. A. W. Balch and Prof. Elie H. LaPierre, all of whom spoke. Music during the dinner was furnished by an orchestra, and the programme included many college songs, in which the whole company joined. The banquet was arranged by John F. Correa, Jr., chairman; T. C. Armstrong, Stanley B. Pinks, Earl F. Smith, Ralph E. Coburn, R. C. Sharon, J. D. Clancy, H. C. Newton, G. A. Moulton, Jr., M. Fry, W. B. Shangraw, E. A. Smith and T. E. Henry.

**Kansas City College of Pharmacy.**

The 29th commencement of the college will be on Thursday, May 7, at Spaulding's Auditorium. On Tuesday evening, May 5, the Alumni Association will give a ball to the graduating class and their friends at Drexel Hall.

The members of the graduating class were guests of Prof. and Mrs. Whitney recently.

Prof. and Mrs. Whitney and the juniors, of which Thos. S. Evilsizer is president, enjoyed the hospitality of Mr. and Mrs. Evilsizer April 16.

F. N. Fricke, State Food and Drug Commissioner of St. Louis, gave an interesting talk before the students on "Drug Laws and Requirements" recently.

The Missouri State Board of Pharmacy held their April examination in the college building. There were more than 60 applicants, among them two women.

**Buffalo College of Pharmacy.**

Dean Willis G. Gregory spent Monday, March 30, in Elmira with his alumni of the Buffalo College of Pharmacy. That evening at the Hotel Rathbun an Interstate Alumni Association was organized of the alumni of all the departments of the University of Buffalo. Fifty graduates of this university sat down to a bountiful meal. The courses were interspersed with college songs and after the coffee, addresses were made by Dean Gregory, in pharmacy; Dean Squire, in dentistry, and Doctors Wende and Kauffman, in medicine. The affair was in charge of a local committee in which Abraham G. Hample, Phar.B., of '03, represented the pharmacists; the decision was unanimously and enthusiastically reached to repeat

University of Buffalo permanent organization was held at the University of Buffalo.

#### University of Illinois, School of Pharmacy.

The commencement of the University of Illinois School of Pharmacy (Department of Pharmacy) was held at the University of Illinois on April 22. The principal address was given by Professor John Uri Lloyd on the subject, "The Year of Opportunity." President Edmund J. James of the University of Illinois, conferred the degree of Graduate Pharmacist on a class of 53 candidates as follows: Edna Becker, St. Johns, Ariz.; Edna Becker, De Pere, Wis.; J. Burdette Jones, Ill.; W. Bryant, Elizabeth, Ill.; George C. Converse, Ill.; Lawrence Converse, Chicago, W. Va.; Fred C. Grogan, Chicago; Oscar Fisher, Chicago; Jeremiah G. Garrity, Spring Valley, Ill.; Harry E. Haines, Farmer City, Ill.; J. H. Hollandt, Lake Mills, Wis.; Elwood J. Howell, Madison, Ill.; Harry E. Johnson, Rockford, Ill.; Joseph G. Johnson, Chicago; Elmer C. Lane, Kankakee, Ill.; Paul F. Marshall, Chicago; Richard W. Merschat, Chicago; Arthur Myerson, Chicago; Charles C. Orr, Chicago; Irving F. Paul, Chicago; Elmer E. Rueckert, Lake Mills, Wis.; Harold S. Smaad, Chicago; Ralph H. Thompson, Earlville, Ill.; Adrian Tom, Chicago; Clio Vavra, Chicago; Ladislav J. Wiatyński, Chicago; Albert J. Cook, Class of '13, Terre Haute, Ind.; George C. Kraemer, Class of '13, Chicago; Wm. A. Lee, Class of '13, Chicago; Alva W. Rackaway, Class of '13, Mt. Vernon, Ill.; Chas. E. Wach, Class of '13, Chicago; Mary L. Smith, Class of '09, Dallas City, Ill. Seven others received certificates as follows: Paul W. Edgett, Earlville, Ill.; Hubert S. Huston, Carthage, Ill.; Gennaro D. Lavieri, Chicago; Fred L. Leib, Anna, Ill.; Albert Schreiner, Batavia, Ill.; Frank J. Vondrasek, Chicago; George Vaupell, Chicago. Prizes were awarded as follows: The Becker Prize, Jeremiah G. Garrity; the Herman Fry Prize, Miss Edna Becker; and the Faculty Prizes consisting of A. Ph. A. memberships—in materia medica, Albert Anderson; in pharmacy, Albert Schreiner, Jr.; in chemistry, George Vaupell. In the evening the Alumni Association held its annual reception and banquet at the Congress Hotel. The members of the graduating class were the guests of the evening. A feature was the reunion of the class of 1889, which celebrated its 25th anniversary. Toasts were responded to by President Edmund J. James, of the university; L. L. Abbott, of the board of trustees; George P. Mills, president of the Alumni Association; Acting Dean W. B. Day, Wm. A. Converse, of the class of '89, and Ralph Thompson, president of the class of '14. Professor A. H. Clark presided as toastmaster. About 150 of the alumni and their friends attended.

#### Medico-Chirurgical College of Philadelphia.

On April 7, Tredwell G. Hopkins, of the M. P. Gould Advertising Co., addressed the students on the subject of "Drug Store Advertising." The Pharmacy Alumni Association held its regular meeting on Wednesday evening, April 1, when it was decided to hold the annual banquet and reception to the graduating class April 29 at the Colonnade Hotel. Prof. Geo. H. Meeker addressed the association and outlined plans for the future of the department of pharmaceutical chemistry which he reported to be in a flourishing condition. Dean J. W. Sturmer called attention to the fact that entrance requirements for the coming session would remain as they are, namely one year of recognized high school work, or 15 counts. After refreshments had been served, the members were invited to inspect the new pharmaceutical dispensing laboratory which has recently been equipped with power machinery to demonstrate the manufacture of compressed tablets, pill coating, etc. G. E. Barton, chemist for the Whitall-Tatum Co., addressed the graduating classes in pharmacy and chemistry on the subject of "Glass and the Manufacture of Laboratory Apparatus" on April 16.

#### Tau Epsilon Phi Fraternity Holds Annual Banquet.

Tau Epsilon Phi fraternity held its annual banquet at the Carlton, East 81st street, members attending from Alpha chapter, Columbia University; Beta, New York College of Dentistry; Gamma, New York University; Delta, Cornell University; Epsilon, Fordham University, and Zeta, Bellevue Medical College. Harry Chiert officiated as toastmaster. The speak-

ers were Monroe H. Weil, Nathaniel Lifshitz, Morris E. Pike, Charles G. Roth, Arnold M. Goodhardt, Morris Bender and Harry B. Silver. The guests of honor were Virgil Coblentz, Charles W. Ballard, Joseph L. Mayer, J. Leon Lascoff and R. H. Alpert. The committee having in charge the arrangement of the banquet consisted of Louis H. Richless, chairman; Harry Chiert, Louis Gurik, Nathaniel Hochberg, David Lothringer, Benjamin Maslon, Benjamin Polage and L. Peter Segal.

#### Creighton University C. of P.

Beginning next September the requirements for admission to the law, medical and dental departments of Creighton University will be raised. The homecoming for the alumni of the medical and pharmacy departments during the last week in April was a feature of the commencement. Both the dental and medical colleges held their annual clinics that week and the commencement exercises of the professional schools took place on April 30. A mammoth spread was held April 29, at which time all the outgoing seniors were admitted to the Pan-Alumni organization.

#### NOTES OF THE COLLEGES.

The St. Louis College of Pharmacy commencement will be May 27. The college will hold its big birthday party Oct. 7-8, and a most elaborate programme is in preparation for this event.

The 28th annual banquet of the alumni association of Northwestern University was held at the Hotel Sherman, Chicago, April 13, when the 125 graduates of the class of 1914 were the guests. One of the principal addresses was made by President Abram W. Harris, of the university, who said, among other things: "Prepare your service for the betterment of mankind, and learn to do things for the benefit of your community. You have more to learn than what is contained in mere books. Equip yourselves for a service of your community and its people and make yourself the chief center." Among the other speakers were Hugh Craig, Dean J. H. Long, H. A. Parkison and Dr. C. H. Miller. C. M. Turnquist was the toastmaster. G. R. Carr, president of the association, received the members and guests, and he was assisted by the other officers, and by more than 75 patronesses, who were headed by Mrs. Lorado Taft.

#### MELTING OF GLYCERIN SUPPOSITORIES.

By RALPH P. HRON.

*University of Oklahoma School of Pharmacy.*

Why do glycerin suppositories melt when placed in the body when their melting points are above the average body temperature (37.5°C.)? The fact that they do melt suggests some cause other than the heat of the body. This view is also strengthened by the fact that the suppositories in their boxes can withstand a temperature several degrees above 37.5°C. without becoming liquid. Their melting then when placed in the body orifices must be due to an additional cause and in all probability this is the moisture present in the membranes.

The author prepared two sets of glycerin suppositories, one set being made strictly according to the directions in the U. S. P., the mixture containing the glycerin being heated on a water bath, while the mixture from which the other suppositories were made was heated over a direct flame, as some difficulty was experienced in getting the stearic acid dissolved and the liquid clear. In this latter case some acrolein (CH<sub>2</sub>, CH. CHO) was liberated from the glycerin and the liquid darkened somewhat.

The suppositories prepared from the mixture which was heated on the water bath had an approximate melting point of 70° S., while those from the mixture which had lost acrolein melted approximately at 55° C. This shows that the excessive heat used in the latter case reduced the melting point several degrees and therefore impaired their keeping qualities. They were also of a darker color than those prepared on the water bath, the latter being practically colorless.

This little experiment, then, shows that the melting of glycerin suppositories in the body is not due entirely to body heat but also to the moisture present, and furthermore, that overheating and loss of acrolein reduces their melting point in air several degrees, thus impairing their keeping qualities.

## DRUG LAWS AND RULINGS

### Curbing the Sale of Narcotics.

**W**ITH the general indorsement of the amended Harrison bill, now before Congress, the passage of the Boylan bill in New York State, the recent enforcement of a new narcotic law in Tennessee, and the consideration of other legislation of the same general tenor in many other States, there seems to be a better outlook than ever for really well-considered control of the traffic in narcotics. We present herewith abstracts of some of the recent legislation and proposed enactments touching upon this vital subject:

#### BOYLAN BILL INCLUDES DOCTORS AND HEROIN

**T**HE Boylan bill, which after various vicissitudes in both houses of the State Legislature, passed the Senate in an entirely rewritten form immediately prior to adjournment, is of direct interest to every pharmacist in New York since it has been signed by Governor Glynn and thus became law. Its provisions are as follows:

The Boylan bill amends the public health law, in relation to the sale of habit-forming drugs. It is divided into sections, section 245 relating to sale prohibited, exception; 246, prescriptions, certificates; 247, order blanks, filing; 248, physicians, etc., to keep records; 249, hypodermic syringes, sale of, records, penalty; 249-a, commitment, procedure, discharge; 249-b, revocation of license, and 249-c, revocation of license after conviction, and 249-d, penalties.

245. Requires prescription for the sale, offer for sale, or giving away of any chloral, opium, or any of its salts, alkaloids or derivatives or any compound or preparation of any of them—provided provisions of section do not apply to the sale of domestic and proprietary remedies, actually sold in good faith as medicines and not for purpose of evading section and provided such remedies and preparations do not contain more than two grains of opium, or  $\frac{1}{4}$  grain of morphine or  $\frac{1}{4}$  grain of heroin or one grain of codeine, or 10 grains of chloral or their salts in one fluid ounce or if a solid preparation, in one avoirdupois ounce, nor to plasters, liniments and ointments for external use only.

246. Unlawful for any person to sell at retail or give away any of the drugs enumerated in 245, except as herein provided, without first receiving a written prescription signed by a duly licensed physician, veterinarian or dentist. Prescription must contain name in full of physician, veterinarian or dentist issuing such, his office address, office hours and telephone number, and the name, age and address of person to whom and date on which such prescription is issued.

Unlawful to issue prescription containing enumerated drugs except after physical examination of any person for treatment of disease, injury or deformity.

Unlawful to sell at retail any of enumerated drugs without first verifying authority of any prescription containing more than four grains of morphine, 30 grains of opium, two grains of heroin, six grains of codeine or four drams of chloral. Such verification may be made by phone or otherwise. Prescription shall be filled at time of receipt for the full quantity prescribed and no prescription so received shall be filled out more than 10 days after date. No copy of prescription shall be taken—prescription shall be retained by dispenser and be filled but once. It shall be kept on general prescription file and given a regular consecutive number on such file. On the prescription inscribe name and address of purchaser and date of purchase. Dispenser shall place on package or deliver therewith a certificate stating name and address of person selling or furnishing same, the name and address of the physician, veterinarian or dentist upon whose prescription sale is made, and the date and name of person to whom sale is made.

Possession—a misdemeanor unless authorized by certificate. Nothing shall be construed to prohibit sale of any such drugs by any manufacturing pharmacists or chemists or wholesale or retail pharmacists or druggists, or to hospitals, colleges, scientific or public institutions, except that such sales shall be made in manner provided for in section 247.

247. State Commissioner of Health shall furnish to all boards of health or officers official order blanks, serially numbered in duplicate, bound in book form, with carbon or transfer paper between the duplicate pages. Same be furnished to local, duly licensed physicians, dentists, pharmacists, druggists or veterinarians, upon which must be written all orders for the purchase of enumerated drugs (245) for use of such physicians, etc. Unlawful to sell, furnish or dispose to any physician, etc., any of enumerated drugs without first receiving from such physician, etc., an official order blank as provided for—which order shall be retained by the person or corporation who sells, etc., any of enumerated articles and such order shall be kept in a separate file or book and an entry made or caused to be made on order stating the date of sale, name and address of purchaser and name of person making such sale.

248. All physicians, etc., shall keep on record name and address of each person to whom such physician, etc., administers or disposes in any way of enumerated articles and the quantity so administered, disposed of or given away. Preserve record for five years open for official inspection—violation a misdemeanor.

249. Unlawful to sell at retail to any person other than a duly licensed physician, etc., a hypodermic syringe or needle without written order of licensed physician or veterinarian. Upon such sale—before delivery—enter in book kept for that purpose, date of sale, name and address of purchaser and description of instrument sold, disposed of, furnished or given away. Violation a misdemeanor.

249-a. Constant use by any person of any habit-forming drug, except under direction and consent of a licensed physician, dangerous to public health. Provision for commitment and discharge on cure.

249-b. License of any physician, dentist, veterinarian, pharmacist or registered nurse may be revoked by proper officers or boards having power to issue licenses on proof licensee is addicted to use of any habit-forming drug or drugs after due opportunity to be heard. Recovery one year a term—re-issuance provided for.

249-c. After conviction for any of violations of article—provision for revocation—applies to physicians, dentists, veterinarians, pharmacists, registered nurses—hearing provided for.

249-d. Violations of any provisions a misdemeanor. Nothing in article shall be construed to amend or repeal section 1746 of penal law. It takes effect July 1, 1914.

#### TENNESSEE FILLED WITH DRUG ADDICTS.

**D**R. LUCIUS P. BROWN, head of the Tennessee Pure Food and Drugs Department, in a recent interview, made the following sensational statements:

"The mass of people have no idea of the extent of the use of narcotics in Tennessee and the United States of America today. They refer to China as the drug-ridden nation, and philanthropists and uplifters have spent years of work and millions to cut down the use of the drug in the Orient, while the same scourge has been for generations assiduously slipping upon and getting a more powerful grip upon their own country.

"It is terrible to contemplate the facts that my department is disclosing in Tennessee. The anti-narcotic laws going into effect recently are serving to uncover a terrible state of affairs. Already we have issued 1360 permits in the State, a large proportion of these to Nashville people, allowing druggists to sell them narcotics for habit use.

"And while one-quarter of a grain twice a day is sufficient for the non-user of morphine, it requires eight grains daily for the person with the habit. Those who are on our books as having permits use an average of 251 grains a month. There are 1107 of them already registered and in the aggregate they use 278,618 grains a month. This costs them approximately \$4644 a month.

"And I believe I conservatively estimate that the number of permits already issued covers not more than one-tenth of the narcotic users in the State. On this basis the narcotic bill of Tennessee narcotic users reaches monthly the vast amount of \$46,440."

Dr. Brown's term of office expires shortly, and there has been more or less opposition to his reappointment, some from druggists and some from manufacturers of proprietaries, but President F. W. Ward, of the State Board of Pharmacy, thinks

The opposition is probably more "politics" than valid objection to the new law of the State department. The fear that politics will be introduced into any action in regard to the narcotic sale is expressed by the Memphis Drug Club at a recent meeting of the association's official opinion, although the majority of the members also, Commissioner Brown. Mr. Ward is one of the leaders of a movement among Tennessee druggists to secure State funds for the endowment of wards in city hospitals to care for drug habitues, and it is proposed to start the movement by setting aside two rooms in the Memphis City Hospital for such treatment. "We can get these unfortunates cleaned out in a few weeks—their systems entirely purified—and lay them on their feet," continued Mr. Ward. "There is no need for habitues to worry over the strict enforcement of the law at present, as they are taken care of through a system of registration with the aid of the physicians."

Secretary Ira B. Clark, of the State Board of Pharmacy, and president of the Nashville Ph.A., says that druggists in all parts of the State believe in the strict enforcement of the law, and that the opposition to Dr. Brown is political, as many of the druggists have endorsed a Republican for the place, Dr. Brown being a Democrat.

### TO COUNT DRUG VICTIMS IN OHIO.

Chief Drug Inspector W. R. Hower, of Ohio, has just announced that a partial census of drug users in the State will be secured during the next few months, and that physicians and druggists will be asked to file with the State Agricultural Commission lists of persons known to be habitual users of drugs. These lists, of course, would be confidential. Inspector Hower asserts that he is confident there are more than 100,000 habitual users of narcotics in the State. He declared that one-third of the negro population in the larger cities of the State use such drugs habitually.

### CONNECTICUT LAW GENERALLY OBEYED.

Curtis P. Gladding, of Hartford, Conn., chairman of the State Board of Pharmacy, declares that the new narcotic law passed as Chapter 191 of the Acts of 1913, is being generally enforced. During the legislative session of 1911 an attempt was made by druggists to secure the passage of a law to prevent the sale of heroin tablets except through a prescription. The attempt was unsuccessful, but last year the present law was framed and adopted. The sponsors were well-known Connecticut druggists, John Mack, of the Goodwin store; Mr. Gladding, Mr. Rapelye and Philo W. Newton. Due to the agitation of the subject by these four leading druggists all the reputable pharmacists in the State stopped selling heroin tablets, although there was no law against the sale at that time. Now the sale is strictly guarded, every druggist filing all applications for anything containing a narcotic, with the name of the purchaser, the physician making out the prescription and the salesman making the sale, and these records are inspected monthly by the county health officers.

### Rexall Stores Fighting Narcotics.

According to William C. Neilly, of the United Drug Co., the Rexall stores are earnestly battling against the use of narcotics. In an interview given in Atlanta, Ga., last month, he said: "One of the many activities of the more than 7000 stockholders of the United Drug Co. is to fight the traffic in habit-forming drugs. Many of the stores have thrown out cocaine entirely, many have eliminated trade in liquor, and all seek full knowledge of all State laws regulating the sale of either drugs or liquor and then endeavor to advance their standards higher than that required."

### Physician Convicted of Selling Morphine.

Dr. John Van Horn, who at one time served as a representative of the Kings County Pharmaceutical Society in the effort of that organization to acquaint Brooklyn physicians with the National Formulary and to induce them to prescribe official preparations instead of secret compounds and nostrums, was convicted of selling morphine illegally on April 8 and later sentenced to imprisonment for one year in Sing Sing, and to pay a fine of \$500. His connection with the Pharmaceutical Society was discontinued some years ago.

Van Horn was once an assistant superintendent of a Sunday

School maintained by one of the leading churches of New York, and had practiced medicine for about 15 years. He was the first licensed physician to be convicted of unlawful traffic in cocaine and morphine. The evidence at the trial developed that he had had a large and lucrative business, and that among his clients were many wealthy persons. The probation officer who reported on the convicted man's career, said that Van Horn once spent 30 days in the Raymond street jail for illegally practicing dentistry in Brooklyn. In imposing sentence, the court denounced the prisoner as a menace to society.

### New Jersey Judge Rules "Morphine" Means "Heroin."

In the case of State vs. Norwood in the Hudson County Court of Quarter Sessions, Judge Sullivan recently ruled that the word "morphine" in the New Jersey law included "heroin," a morphine product. Mr. Norwood had gone on the stand and frankly stated that he sold heroin without a prescription, and that he sold it in entire good faith. If he was guilty it was an innocent guiltiness. The indictment was framed on five counts, two of which were for the sale of morphine without a prescription. What in the beginning of the case appeared to be a serious question of fact for the jury to decide was eliminated by the judge reading heroin into the law.

### New Jersey Druggist Gets 18 Months Jail.

NORTH HUDSON, April 10.—Ex-Assemblyman Frederick Weismann, a well-known druggist of this city, and who has served a number of times on grand juries, has been sentenced to 18 months in the penitentiary. He pleaded *non vult* in Jersey City recently to an indictment charging him with the unlawful sale of heroin and cocaine. It is reported that Mr. Weismann had been led to believe by his counsel that he would be given a nominal fine. The judge's sentence was a great surprise to him. Under his plea he will have no appeal.

### Prosecutions Follow in Illinois.

Prosecutions of a number of Illinois druggists have been instituted by the State Board of Pharmacy and the Federal authorities, acting in co-operation, for violations of the laws governing the sale of narcotics. The attention of President Fred Kern, of the State Board of Pharmacy, was drawn to the matter by Dr. Kelley, superintendent of the Kankakee State Hospital, who found that 15 per cent. of the inmates of that institution had been driven insane by the use of drugs.

### Court Dismisses Case Against Edward J. Woods, Inc.

The charge of practicing medicine unlawfully brought by the New York County Medical Society against Edward J. Woods, president of Edward J. Woods, Inc., manufacturers of Woods' proprietary medicines, was dismissed, Judges Russell and Fleming voting in General Sessions to that end on the ground that the evidence was insufficient to prove the charge. Judge Moss dissented. The transaction occurred at the office of Edward J. Woods, last August, a representative of the society calling on several occasions for a liquor cure proprietary, each time insisting upon seeing the proprietor. The motion for dismissal was based on the ground that no attempt had been made to represent Mr. Woods to be a physician nor to diagnose the ailment of the caller. The relations were those of buyer and seller.

### A Half-Million Dollar A.D.S. Branch for the South?

"The American Druggists' Syndicate is contemplating the establishment of a Southern branch, but nothing definite has been done as to its location. Representatives of the syndicate are looking over the field and several large cities, Atlanta, New Orleans and Houston, are receiving consideration." This was the comment of C. H. Goddard, secretary of the A.D.S., when asked about a recently published statement by J. F. Gorman, organizer for the syndicate in Texas, that Houston would probably get a half-million-dollar branch.

### K.C. Drug Club Luncheon.

The new Kansas City Drug Club gave an elaborate "open house" luncheon at the Coates Hotel, April 14. A large cabaret company furnished entertainment, and many out-of-town druggists were present. The subjects discussed were the mutual interests of retail druggists in Missouri and Kansas, drug-store merchandising to well people—the sick must come to us, and more practical commercial training in our colleges.

## LEGAL DECISIONS

### Selling Wrong Material—Contributory Negligence.

**A** DAIRYMAN sued a druggist for negligently delivering to the plaintiff five pounds of common salt in lieu of five pounds of epsom salts, as ordered, which, as alleged, proximately caused the death of the plaintiff's cow to which he administered a dose of it—two pounds, as the evidence showed. The defendant pleaded contributory negligence. On appeal from a verdict and judgment for the plaintiff, it was held that whether or not the defendant was guilty of error or negligence in supplying the plaintiff with an article radically different in fact from the article ordered, and whether or not that negligence, if found, proximately produced the untimely demise of the plaintiff's cow, were disputed questions of fact to be determined by the jury. But that the plaintiff was himself guilty of the grossest negligence, which was immediately productive of the animal's death, was a clear conclusion of law from which there was no escape. There is no confusing similarity in the appearance of common salt and epsom salts. Both are household articles in common use, and more or less familiar to all men of ordinary intelligence and experience. Moreover, the plaintiff was a dairyman of long experience, and quite familiar with the use of both articles in the course of his business. He was skilled in the art of bovine healing by a practice of 30 years upon his own animals, and he habitually administered to them epsom salts for the relief of those digestive disorders to which they were frequently subject. He saw and intimately handled this salt, which was not labeled epsom salts, and which was in a bag showing on its face that it came from the defendant's "seed and dairy" store, a separate and distinct branch of its business, from which the plaintiff customarily bought his butter salt for use in his dairy. It was not at all like epsom salts, and on his cross-examination, the plaintiff demonstrated his ability to readily distinguish it from that article. "The ordinary conduct of rational beings," said the court, "must be governed by common prudence and common sense, and he who fails in this to his own hurt cannot justly charge the ills that follow to the antecedent and remote fault of another, albeit such remote fault supplies the condition without which the injury would not have occurred. The result here complained of was plainly due to the inexcusable carelessness and folly of plaintiff, and to allow him to recover damages from defendant under the circumstances shown would certainly insult the common sense of mankind. The verdict of the jury was contrary to the law and the evidence, and should have been set aside by the trial court on the motion of defendant." It was also held that the instance of a man who "swallowed a pound of salt in a pint of ale, and died in a few hours, with all the symptoms of irritant poison," read from a medical book, was fundamentally illegal and inadmissible as evidence in the case. (*Gorman-Gamill Drug Co. vs. Watkins*, Alabama Supreme Court, 64 So. 350.)

### Intoxicating Liquors—Wrongful Sale by Druggists—Special Penalty.

On an agreed statement of facts in proceedings against a druggist for selling liquor without a West Virginia State license as a druggist, it was admitted that the accused had not a State license for the sale of intoxicating liquors; that he sold a person a pint of whiskey, that he was then a licensed druggist, and that the purchaser of the whiskey had no prescription of a physician therefor. The accused maintained that he could not be prosecuted as an ordinary seller of intoxicating liquors without a State license, but only as a druggist, as to whom a lighter penalty is prescribed. A druggist, said the court, is merely an excepted person under the general law prohibiting sales of intoxicating liquors without a State license. When he does not sell intoxicating liquors in the only way that the exception in his favor permits him to sell them, he is a violator of the general terms of the West Virginia statute which says that no one without a State license shall sell them. When in making a sale a druggist does not comply with the restrictions of the exceptions in his favor, he is simply one selling without a State license. By the exception he may sell alcohol for mechanical or scientific purposes, or

alcohol, spirituous liquors, wine, porter, ale, beer, and other intoxicating drinks for medicinal purposes on the prescription of a reputable physician. But if he sells any of them otherwise, unless he had a State license therefor, he brings himself within the general terms of the statute which prescribes that no person without a State license shall sell them. He may then be indicted, and proceeded against just as any other person selling without a State license. But the West Virginia Legislature has prescribed a lesser penalty for an unlawful sale of intoxicating liquors by a druggist than for such a sale by an ordinary seller. (Code 1906, ch. 32, secs. 3 and 5.) Formerly it was not so, but the reverse. (*State vs. Cox*, 23 W. Va. 797.) Therefore, if the evidence establishes that the accused at the time of the sale was a druggist and unlawfully sold as such, only the lesser penalty imposed for such special offence can be inflicted. (*State vs. Wills*, West Virginia Supreme Court of Appeals, 80 S. E. 783.)

### Sub-Station Accounts.

Marcus Sachs and his son, Simon Sachs, became partners in the drug business. This continued for a number of years when, it appeared, Simon Sachs sold the partnership property and formed a corporation, doing the same business as had been done by the partnership. During the partnership Simon Sachs was appointed a deputy clerk for the sale of postal money orders, with a branch station in the firm's drug store. Each day he deposited the moneys received from the sale of postal money orders in a bank. The checking account with the bank was in the firm name, but the deposits were made with two deposit slips, one showing the receipts from the sales of postal money orders, and the other the total amount of deposits of the drug store business and of sales of postal money orders. The account was kept by the bank in this manner, the deposits of postal order receipts being kept in a separate account under the heading "Station Receipts." Each day Simon Sachs made a report of the sales of money orders to the Postmaster, and attached thereto a check to the Postmaster's order on the bank for the money deposited as "Station Receipts" for the period covered by the report. Marcus Sachs filed a bill alleging misapplication of the partnership funds by Simon Sachs, and obtained the appointment of a receiver of the corporation, who took possession of the funds deposited in the bank about April 12, 1911. Subsequently the Postmaster filed a petition, setting forth, among other things, that Sachs made his daily report for April 10, 1911, showing sales of money orders to the extent of \$678.84, and delivered a check payable to the Postmaster for that sum, dated April 11, and a daily report for April 11 showing sales to the amount of \$300.24, and a check for that sum dated April 12; and that, on presentation of these checks to the bank, payment was refused. He prayed for an order that the money represented by the checks be paid. Simon Sachs also presented a petition to the same effect. At the bearing of the case it appeared that the receiver had taken possession of \$494.04 of the money on deposit in the bank. As stated by a witness, the bank had apparently peremptorily taken five or six hundred dollars of the balance of the deposit to apply on some note. The receiver was ordered to pay over to the Postmaster the money turned over to him by the bank. There was no mingling of the money deposited from the sale of money orders and from the drug business. The bank kept the former in a separate account, designated as "Station Receipts." The bank's account was, in substance and essence, with the Postmaster, and the adoption of a convenient method of checking it out under the firm name did not change the substance of the transaction. (*Sachs vs. Sachs*, 181 Ill. App. 296.)

### Implied Warranty of Manufacturer.

A manufacturer is liable only to his immediate vendee for breach of an implied warranty as to the merchandise manufactured by him, as his liability depends upon privity of contract; but exceptions exist where injury is caused by something noxious or dangerous, or where the manufacturer practices fraud or deceit, or is negligent with respect to the sale or construction of a thing not imminently dangerous. "Within one of the exceptions is to be found the reason for holding the manufacturer of patent or proprietary medicines to answer at the suit of the ultimate consumer. Direct actions are allowed in such cases because the manufacture of medicine is generally shrouded in mystery, and sometimes, if not generally, they con-

tion poisons which may produce injurious results. They are prepared by the manufacturer for sale and distribution to the general public, and one purchasing them has a right to rely upon the implied obligation of the manufacturer that he will not put in ingredients which if taken in prescribed doses will bring harmful results. Knowledge may be had to the following cases which sustain and to which many other cases are cited which sustain this exception: *Thomas vs. Winchester*, 6 N.Y., 37, 57, 40, 145; *Lord & Balm Co. vs. Cooper*, 83 Ga. 457, 11 S.E. 118; *Wolcott vs. Holzman*, 33 Wash. 87, 73 Pac. 77, 9 Am. St. Rep. 932. Another exception, it is now said—though this is comparatively recent—is referable to the modern method of preparing food for use by the consumer, and the more general and ever-increasing use of prepared food products. A manufacturer of food products under modern conditions, it is held, impliedly warrants his goods when dispensed in original packages, and such warranty is available to all who may be damaged by their use in the legitimate channels of trade, including those who purchase them for resale, as well as the ultimate consumers. The violation of the pure food law by a manufacturer of food products is evidence of negligence in the preparation and sale of such food, and it is available in a suit by a middleman, as well as by a consumer. (*Mazetti vs. Armour & Co.*, Washington Supreme Court, 135 Pac. 633.)

### SEIZED PRODUCTS BELOW U.S.P. STANDARDS.

#### One New York Company Is Fined Many Times for Shipment of Articles Bearing Official Titles.

WASHINGTON, April 20.—The Department of Agriculture has given public notice of judgments 2701 to 2760, imposed by the courts in cases brought by the United States involving violation of the Food and Drugs Act, most of them relating to misbranding or adulteration.

A libel was filed for the seizure and condemnation of five barrels of witch hazel in possession of Humiston, Keeling & Co., Chicago, alleging that the product had been shipped by the Tunkhannock Distilling Co., Tunkhannock, Pa., and charging adulteration and misbranding. Product was labeled: "From Tunkhannock Distilling Company, Manufacturers of double distilled witch hazel, Tunkhannock, Pa." It did not come up to the U.S.P. standards in that it contained more than 15 per cent. methyl alcohol. No claimant appeared for the property and it was ordered destroyed.

A fine of \$50 and costs was imposed upon the Fitzpatrick Drug Co., Helena, Ark., for shipping quantities of "Phoenix Diarrhoea Mixture" and "Phoenix Seminola Hair Restorer," which were misbranded. The former did not correspond to Dr. Squibb's Mixture as given in the N.F. Prosecution was recommended upon the ground that the mixture failed to bear a statement showing the quantity or proportion of alcohol and morphine, and the hair restorer failed to bear a statement on the label showing the quantity or proportion of alcohol.

A libel was filed for the seizure and condemnation of 20 dozen bottles of peroxide of hydrogen in the possession of the Lemon & Wheeler Co., Kalamazoo, Mich., alleging that the product had been shipped by the Duosep Chemical Co., Chicago, and charging adulteration and misbranding. Product was labeled: "Duosep Household Peroxide of Hydrogen; pure, potent, harmless. \* \* \* ." It did not conform with U.S.P. standards. The claimants, Duosep Chemical Co., the Hydrox Chemical Co. and Lemon & Wheeler, having consented thereto, judgment of condemnation and forfeiture was entered, and product was ordered destroyed.

A fine of \$10 and costs was imposed upon the Western Wholesale Drug Co., Los Angeles, for shipping "2 Pounds, Oil Pennyroyal, Poison. \* \* \* ." which was adulterated in that it did not conform with U.S.P. standards.

Magnus, Mabee & Reynard, New York, was fined as follows, for shipping products which did not conform with U.S.P. or N.F. standards: Oil of white thyme, \$100; spearmint oil, \$50; oil of sassafras, \$50; oil of lavender flowers, \$50; oil of cassia, \$25; oil of fennel seed, oil of cajuput and oil of rosemary, \$150; oil of savin, \$100; oil of cassia and oil of anise, \$50; oil of lavender flowers, \$50, and oil of bitter almond, \$100. The company was fined \$50 for shipping adulterated and misbranded oil of sweet orange, the same consisting of a mixture containing ethyl alcohol and a lemon oil product and the packages containing which product were short weight.

The following were fined \$10 each for selling quantities of

dilute hydrochloric acid which were adulterated and misbranded, in each case product being labeled "Dilute Hydrochloric Acid," but differing from the official standard for dilute hydrochloric acid:

Moses Sexton, Peter J. Duncan, Samuel A. Richardson, Rhode Island Pharmacy (Inc.), Henry Walters and Henry W. Smith, all of Washington, D. C.

The Sidney Ross Co., New York, was fined \$50 in each of two cases for the misbranding of "Jaquequina." Product was labeled in the Spanish language, and the label translated into English was as follows: "Preparation for the relief and Cure of Headache, Neuralgia, Rheumatism, Painful Menstruation, Sciatica, etc. Is not a laxative. Contains no morphine or opium. \* \* \* ." Label did not bear a statement of the quantity or proportion of the acetanilid contained therein.

An information was filed against the Buckhorn Lithia Water Co., Henderson, N. C., alleging shipment of a quantity of so-called Buckhorn Lithia Water which was misbranded. Product was labeled: "Note the marvelously quick effect on the kidneys. Buckhorn Lithia Water. \* \* \* Beneficial in all fevers, especially typhoid.

"Lithium bicarbonate 4.700. \* \* \* ." Label statements were misleading, deceptive and false. The defendant company entered a plea of guilty and the court suspended sentence upon payment of the costs.

A fine of \$25 and costs was imposed upon the Cordial Panna Co., Cleveland, for the shipment of a quantity of misbranded cordial panna, labeled: "A. Alai" " \* \* \* Aids Digestion—A Sustaining, Stimulating Auxiliary Food. Rich in all Nutritive Principles. Milk Cordial—Panna Cream \* \* \* ." The statements "panna," "milk" and "cream," taken in connection with the picture of a cow borne on the label, were false and misleading. The product contained neither milk nor cream.

An information in six counts was filed against the Lowenthal-Strauss Co., Cleveland, alleged shipment of a quantity of "Lithuanian Stomach Bitters," which was misbranded in that product consisted of ingredients manufactured in the U.S. and not in Germany; a quantity of peppermint extract compound which was adulterated and alleged to have been misbranded, dilute alcohol containing but a trace of peppermint oil having been substituted wholly for the genuine product, and a quantity of Jamaica ginger compound which was adulterated and alleged to have been misbranded, capsicum having been substituted in part for ginger. The company entered a plea of nolo contendere to the first and second counts and a plea of guilty to the third and sixth counts, and the court imposed a fine of \$25 on each count, aggregating \$100, with costs of \$28.41. The fourth and fifth counts were nolle prossed.

An information in six counts was also filed against the above company, alleging shipment of a quantity of ginger cordial which was misbranded and alleged to have been adulterated, capsicum having been utilized as an adulterant; quantities of extract of peppermint and extract of Jamaica ginger which were alleged to have been adulterated and misbranded, and a quantity of extract of wintergreen which was adulterated and alleged to have been misbranded; in this case a dilute extract of wintergreen artificially colored being the adulterant. The defendant entered a plea of guilty to the second and fifth counts of the information and the court imposed a fine of \$25 on each of these counts, and costs. The remaining counts were nolle prossed.

An information in 15 counts was filed against Melville Liebenthal and Sylvester Liebenthal, partners, doing business as Liebenthal Bros. & Co., Cleveland, the seventh count relating to the shipment of a quantity of misbranded damiana, labeled "High Grade Damiana Harmless Color Exquisite Alcohol 11 per cent." Product contained 16.3 per cent. alcohol. Further, it contained insufficient material derived from damiana to warrant the use of the name. It was alleged in this count that defendants had entered a plea of guilty to a prior offence charged in the second count of cause No. 3942, and thereupon judgment was entered and defendants were sentenced for the commission of the crime. A fine of \$40 was imposed, the aggregate fine on all the counts, excepting the fourth and sixth, was the sum of \$550.

An information filed against the above company alleged the shipment in interstate commerce of a quantity of Creme de Violette which was adulterated and misbranded. Methyl violet

being employed as a coloring agent; a quantity of quinine-whiskey which was misbranded, no quinine being present, and of a quantity of blackberry cordial which was adulterated and misbranded, an imitation cordial being employed as an adulterant. A fine of \$200 was imposed on the first count, and fines of \$50 on each of the others. The "Creme de Violette" was of domestic manufacture despite the impression of French origin made by the label.

The court suspended sentence in the case of Farrington & Whitney, Inc., Brooklyn, charged with the shipment of "4 oz. net. Absolutely pure. Fisher's Famous (\* \* \*) Black Pepper. \* \* \*," which product was misbranded in that the weight was less than four ounces net.

### SOME SIDELIGHTS ON MEDICO-PHARMACEUTICAL LEGISLATION.

IN view of the present agitation regarding the alleged encroachment of members of both the pharmaceutical and medical professions on the domains pre-empted by each, the following notes on the history of medical legislation are of special interest:

The history of medical legislation as told by William Archer Purrington, of the New York Bar, in the *March Case and Comment*, is a tale of action and reaction, of commendable attempts to protect the public by restricting practice to the fit, or presumably fit, perverted in time for personal advantage, then relaxed when made unpopular by overzealous enforcement, and again renewed after letting down the bars, which has permitted the field to fill with the quacking flock. When the council of Tours in A.D. 1163 forbade the monks, who had found the cure of the body more interesting and lucrative than that of the soul, to perform any bloody operation, the result was, so far as the rule was effective, to throw surgery into the hands of smiths and barbers. The English courts upheld the College of Physicians in its attempt to enforce the statute preventing apothecaries from prescribing, as well as dispensing. But when Apothecary Rose took his case into the House of Lords, he prevailed; for it seemed all wrong that a noble peer for his servants or a poor man for himself should, in case of illness, be obliged to call a physician to prescribe, an apothecary to dispense, and a surgeon to let blood.

Then followed a long period during which practice was open to all, until the apothecaries in turn felt that the healing of the sick should be restricted to educated men, and procured from Parliament the apothecaries' act, whereunder the apothecaries, having become general practitioners of physic, and not mere dispensers, endeavored, in the course of time, successfully to prevent the chemist, who corresponds to our apothecary, from prescribing, thus nullifying Rose's case, but unsuccessfully to prevent physicians from dispensing. So the struggle has gone on, class and selfish interests, as well as public spirit, playing their parts in the enforcement of these laws.

In New York, the reaction due to efforts of a few to keep Hahnemann's disciples beyond the pale of the law, coupled with the enthusiasm of those who accept whatever is new as true, resulted in the statute of 1844, permitting anyone to practice medicine, subject to punishment for misdemeanor only upon conviction of gross ignorance, malpractice, or immorality. This statute, characterized by Beardesley, J., in *Bailey v. Mogg*, 4 Den. 60, as a triumph for quackery, was supplanted in 1874 by an enactment making practice without a diploma or license a misdemeanor. Since then the law has been from time to time amended, with the result of substituting the test of State examinations, both in general medicine and dentistry, for the futile diploma standard. The medical practice act of New York has been modified also to allow the practice of "osteopathy," "chiroprody," and "the religious tenets of any church" (Laws 1907, chap. 344). The supreme court, after failing in *Smith v. Lane* adequately to define medical practice, has abandoned its attempts at definition, and left each case to be decided upon its particular facts.

#### Federal License for Habit-forming Drugs.

In the same number of *Case and Comment*, Dr. G. W. Goler makes a plea for Federal action to control the abuse of habit-forming drugs. He advocates taking away the manufacture and sale of such substances from both manufacturing wholesale and retail druggists, and putting their manufacture and sale in the hands of the Government. Further, no habit-forming drug should be sold save on a physician's prescription,

and each physician must be compelled to take out a special license for their use, this license to be revokable by Federal authority for cause.

## Day of Rest in Drug Stores.

*Self-Explanatory Correspondence Between Secretary of Pharmacy Board and State Labor Commissioner and Attorney-General.*

HON. THOMAS A. CARMODY,  
Attorney-General.

*Dear Sir:*—Chapter 740 of the laws of 1913, known as the one-day-of-rest-in-seven law, exempts in Section 2, among other employees, superintendents or foremen in charge.

Section 233 of the pharmacy law reads in part as follows:

"Apprentices may prepare or dispense receipts or prescriptions, may sell or furnish medicines or poisons in the presence of and under the immediate personal supervision of a pharmacist or druggist."

This section of the law delegates to the licensed man in charge of a licensed pharmacy supervising power over the acts of apprentices. In fact, it is mandatory that he use this supervising power in the sale of poisons and preparation or dispensing of prescriptions.

Will you kindly advise me if, in your opinion, where one or more licensed pharmacists are employed in a pharmacy together with a number of apprentices could one licensed pharmacist be rightly termed a superintendent or foreman in charge within the meaning of the law? Very truly yours,

WARREN L. BRADY, *Secretary.*

### OFFICE OF THE ATTORNEY-GENERAL.

MR. WARREN L. BRADY,

Secretary State Board of Pharmacy.

*Dear Sir:*—I acknowledge the receipt of your letter of March 12, relative to the employment of a "superintendent or foreman in charge" of pharmacies and of apprentices in a drug store. There is sent herewith a copy of a letter received from the Commissioner of Labor.

In the opinion of the Commissioner I concur as a general proposition. It would be a question of fact in each case, and no general rule applicable to all cases can be laid down.

In the ordinary case the licensed pharmacist would not become a superintendent within the meaning of the law from the mere fact that there were apprentices working under him.

Cases might arise, however, in large establishments where the licensed pharmacist in charge might fairly be considered a superintendent.

Yours very truly,  
THOMAS CARMODY, *Attorney-General.*  
J. A. KELLOGG, *First Deputy.*

### OFFICE OF THE COMMISSIONER OF LABOR.

HON. THOMAS A. CARMODY,  
Attorney-General.

*Dear Sir:*—Response to your letter of March 13 regarding the application of the day of rest law to drug stores has been delayed by my absence from the city and the pressure of other matters.

It seems to me that the question of whether or not a pharmacist is a superintendent or foreman in charge and therefore exempt from the provisions of the day of rest law is entirely a question of fact. I am utterly opposed to considering any person a superintendent or foreman if that title is given to him for the purpose of evading the law. The fact that he may have an apprentice under his tuition would not in my judgment constitute him a superintendent or foreman in charge within the meaning of the law. Very truly yours,

JAMES M. LYNCH, *Commissioner.*

#### Department of Agriculture Seizes Hair Remedy.

Two seizures of hair remedy have recently been made in New York City on the advice of the U.S. Department of Agriculture. Thirty-seven cases were seized on March 21, and 17 cases were seized two days later. The product was labeled "Swisco Hair & Scalp Remedy," and both shipments were from Swisco Hair Remedy Co., Cincinnati, Ohio. That the circular accompanying the remedy bore therapeutic claims

which are false, fraudulent and misleading, is the charge. It has not yet been determined by the court whether these seizures were justifiable, but this will probably be decided within a short while.

### ADVISORY COUNCIL FOR HEALTH DEPARTMENT

#### Thomas Lamb, of Brooklyn, Accepts Commissioner's Invitation to Be a Member—Meeting May 1.

Commissioner of Health S. S. Goldwater has extended invitations to various business and professional men of this city to become members of an Advisory Council to the Department of Health. So far as can be learned at this time, the Council will contain three or four druggists in its membership.

Thomas Lamb, of Brooklyn, being one of the druggists who were invited to join the new body. After consultation with the president of the N.Y.S.P.A. and the president of the Retail Druggists' Protective Association of Greater New York, both of whom promised their support, Mr. Lamb accepted the invitation.

The text of Commissioner Goldwater's letter, which is in part herewith presented, is enlightening:

"It is the aim of this Department to enhance its usefulness to the community. To accomplish this end without contact with citizens of diverse views and interests,

THOMAS LAMB

without stimulating suggestions from experts in matters relating to public health, and without candid and well-informed criticism, is impossible. In the hope of bringing these elements of progress into the daily life of the Department, it is proposed to organize an Advisory Council to the Department of Health, which will be subdivided into committees corresponding to the several departmental Bureaus. Mr. Bailey B. Burritt has consented to serve as a member of the Advisory Council and has been designated to act as Chairman of the Committee on Food Inspection.

"The purpose of this communication is to solicit your cooperation. You are respectfully and earnestly invited to become a member of the committee above named and, in this capacity to give to the Department the benefit of your initiative and of your special knowledge and experience in matters concerning which, from time to time, the advice of the committee will be sought. I am aware that in presenting this invitation I am asking you to make some sacrifice, but I venture to do so in the belief that you sympathize with the Department of Health in its desire to raise its efficiency to the maximum."

The Council will hold its first meeting May 1.

### N. J. LEGISLATURE KILLS ALL DRUG BILLS.

#### State Association's Pharmacy Bill and Obnoxious Measures All Receive Similar Treatment.

TRENTON, N. J., April 15.—Not one of the many bills pertaining to pharmacy got through both houses during the recent session of the New Jersey State Legislature. Assembly bill No. 282, the State association's pharmacy bill, passed the Assembly, but never came out of the Senate public health committee. The strongest opposition to the measure was made by the small country storekeepers. Assembly bill No. 741, an anti-narcotic measure, which went through the lower house without a single dissenting vote and which was immediately reported out of the Senate committee, was set upon "hammer and tongs" by two assemblymen who were "getting even" because of action taken on some of their own attempted legislation. No. 741 was killed, despite the fact that a letter from Governor Fielder advocating its passage was read before the Senate.

The failure of the legislature to pass any legislation of a pharmaceutical nature had its bright side. The McGinnis

bill, which if enacted, would allow physicians to practice pharmacy, was killed. The Scoville coffin-shaped bichloride tablet bill was beaten. The Egan bill, which aimed to stop the sale of all bichloride of mercury preparations, except upon prescription, and required that all bichloride tablets be of a cubical shape and colored green, failed to pass. Senate bill No. 334, which would have required an official prescription blank similar to that provided for in the Boylan bill, never came out of committee.

The State pharmaceutical association's legislative committee, consisting of S. D. Woolley, Ocean Grove, chairman; J. C. Gallagher, Jersey City; George M. Beringer, Camden; Isaac J. Keuper, Trenton, and David Strauss, Newark, are not discouraged, despite their defeat at the hands of the present Legislature and will bring up the pharmacy bill at the next session if the State association so directs them.

## Drug Laws and Rulings.

**Patent Medicines in Ecuador.**—Patent medicines which contain no ingredient detrimental to health may be sold in Ecuador without restriction; but the entry of medicines containing deleterious substances is prohibited by the customs law. Patent medicines "of unknown composition" are dutiable at 50 centavos (24 cents) per kilo (2.2046 pounds) with surtaxes amounting to 62.7 centavos (30.5 cents) per kilo. Traveling salesmen, with samples, visiting Ecuador for the purpose of placing orders, are required to pay a tax of 100 sucres (\$48.66) before permission is granted to land the samples. To obtain domicile in Ecuador and consequent exemption from the tax on samples, a foreign corporation must present and register according to law the articles of incorporation and statutes and a power of attorney in favor of a resident agent, given under the corporate seal and duly authenticated in the home country of the corporation. The expenses connected with the registration, including fees for lawyer, notary, and recorder, range from 250 to 300 sucres (\$121.66 to \$146).

**Patent Medicines in Venezuela.**—In response to an inquiry of certain American exporters as to the rules governing the admission of patent medicines into Venezuela, the Ministry of Finance has issued the following customs decision: "The term 'patent medicines' shall be applied only to those medical preparations which are imported and retailed to the public in their original packages, such as bottles, boxes, tubes, etc. Pharmaceutical preparations, such as fluid extracts, elixirs, wines, sirups, pills, etc., imported in bulk without special wrapper, to be put up by local druggists, shall be classified as drugs and medicines not specified." [Patent medicines, if approved by the examining board (Junta de Examen), are dutiable at 1.25 bolivars per kilo (\$17.13 per 100 pounds, inclusive of surtaxes), the same as drugs and medicines not specified; if not approved by the examining board, patent medicines are dutiable at 50 per cent. more (or \$25.70 per 100 pounds).]

**Apothecaries' Measures Found Unsealed in Massachusetts.**—In the annual report of Thure Hanson, of Worcester, the new State commissioner of weights and measures, attention is called to the fact that so far as he can discover the law relating to the sealing of apothecaries' measures, once in three years, has never been enforced in Massachusetts, and that as a result of the severe uses to which this class of weights and measures have been put, hardly one is found to be perfect. The commissioner is planning a campaign which will be carried on through the Summer and Fall, when he hopes to have all the druggists in Massachusetts using properly sealed scales.

**What Is Legal Merchandise for Sunday Sales?**—More than 50 merchants of Salt Lake City have filed a petition with the county attorney protesting against the sale of kodaks, films, phonograph records, and other general merchandise on Sunday, on the ground that such sales do not constitute the legitimate business of a drug store, and demanding that such sales be stopped.

**To List All Users of Drugs.**—Senator Nelson has introduced a bill in the U.S. Senate which provides that physicians, dentists and druggists shall keep for two years the names of all persons using opium, coca leaves or other narcotics. The lists would at all times be open to inspection of revenue officers.

## TOO LATE FOR CLASSIFICATION

### GATHERED IN PHILADELPHIA.

**T**HE report of the general drug trade in this city is as being very good, many dealers and manufacturers reporting business better than it has been for years. The Harris & Berntz Company, 630 Arch street, are at present having a fair business, with a prospect of having better business with the coming of the warm weather. They are increasing their sales force.

A demand for menthol, peppermint and vanilla is reported by Dodge & Olcott, importers, of 503 Arch street. The demand for peppermint is exceeding their expectations, and it is believed that the price will be raised owing to its scarcity. There is a reaction in the demand for menthol, but the dealers think the present supply will last until the next crop, which comes in August. The reduction of the tariff rate on vanilla beans on July 1, will cause a big drop in the price of vanilla.

The last of the scientific lectures at the Philadelphia College of Pharmacy was held recently. Dr. E. M. Chace, of the Bureau of Chemistry at Washington, D. C., talked about the "Volatile Oil Industry in America."

Plans and specifications are being prepared for a six-story reinforced concrete factory for Powers, Weightmann & Rosengarten, at Ninth and Parrish streets.

Fore & Company, 44 North Fourth street, manufacturers of menthol inhalers, are having the best business in years. Mr. Fore has recently returned from an extensive trip through Iowa.

The establishment of George H. Steinmetz, at Broad street and Erie avenue, has been sold to Gracy and Hooker, who will improve the property.

The John H. Wood Company, 126 Market street, was recently incorporated under the laws of Pennsylvania, with a capital of \$40,000. The officers are: John H. Wood, president; William H. Wood, vice-president; George H. Wrecht, secretary, and James C. Kirk, treasurer. William H. Landis, formerly of the Smith, Kline & French Company, is in charge of the laboratory.

The Evans drug stores have been offering a convenience to their patrons, on a rainy day, by lending them umbrellas, on which they must deposit \$1, and the customer has the use of the umbrella for two weeks. If during that time the umbrella is returned, the person receives the dollar back. If not, the Evans' company are entitled to the deposit. This ought to be very interesting to the members of the local trade as the dealer does not lose, but really gains. This has some effect upon the business, too, as the patron generally purchases in the store when returning the favor.

The filled tablet case donated by the H. K. Mulford Company to the junior class student in Temple Medical College who passed the best examination, on Dr. T. B. Roger's course, "Contagious Diseases of Animals Communicable to Man," was awarded to Miss Clara Chase Leach. Miss Leach is a Wellesley graduate.

#### A.D.S. Drug Store Opens on Broadway May 3.

The Gray Drug Company will open a retail drug store at 43d street and Broadway on or about May 3. Those having in charge the renovation of the store have been very unfortunate as to strikes, and on this account the opening has been considerably delayed. C. H. Goddard, secretary of the American Druggists' Syndicate, informed an ERA representative that the Gray Drug Company is controlled by the syndicate, and will open its store at Broadway and 43d street in order to get A.D.S. products into the center of the city. The present headquarters of the A.D.S. in Fifth avenue are out of the line of traffic. Asked relative to the intimation in a recent publication that this store was to be the first of a "chain" of A.D.S. stores, Mr. Goddard reiterated that the only idea was to display A.D.S. products in a prominent position.

#### Brooklyn Wholesalers to Build \$90,000 Warehouse.

Work will begin soon on a seven-story warehouse and loft building to cost \$90,000 for Town & James, wholesale druggists. The building will be located on the east side of Duffield street, 147 feet south of Willoughby avenue, and will be 62x100.

#### N.Y. Retail Druggists' Association.

The call issued by the N.Y. Retail Druggists' Association for the monthly meeting met with the usual response and the meeting was well attended. It was held at Burger's, 20 Avenue C, on Friday evening, April 3, President Weinstein in the chair. After hearing the reports of the standing committees, the question of securing a permanent, centrally located meeting-place was taken up, and a special committee was authorized to act on the matter. In the absence of Mr. Diamond, chairman of the legislative committee, the president gave the information that the pharmacists came out of the last session of the State Legislature not as badly as it was anticipated and feared, since most of the obnoxious bills died in the committees, while others were defeated on the floor. The shortness of the session was also a helping factor. But, above all, the thanks of the pharmacists are due to the untiring activity of the legislative committees, whose efforts have brought about these desirable results.

Under new business the appointments on the Board of Pharmacy to fill the vacancies that will soon become open were discussed. All present were of one mind, that this large organization is surely entitled to representation on the board. Dr. Joseph Weinstein and Peter Diamond were the unanimous choice of the members present. After Dr. Weinstein declined in favor of Mr. Diamond, upon motion duly seconded and carried, the secretary was instructed to prepare a petition to be forwarded to the Regents of the University of the State of N. Y. submitting the name of Mr. Diamond for the appointment.

The meeting lasted, as usual, till after midnight, when the members had in the cafe their repast, at which they continued their friendly chat on matters so near and dear to the hearts of the pharmacists.

#### Philadelphia Branch, A.Ph.A.

The regular monthly meeting of the Philadelphia branch was held on Tuesday evening, April 7, at the Philadelphia Drug Club. President E. F. Cook called the meeting to order promptly at 8 p.m. and after a short business session, which included the election of J. Rosin to membership and the election of Theodore Campbell as treasurer for the ensuing year, the scientific programme was taken up. The following papers were presented:

"Theory Underlying the Use of Serums and Vaccines," by Dr. A. P. Hitchens; "Phylacogens—History, Theory, Preparation, Indications, Dosage and Clinical Results," by Dr. F. C. Waldecker, of New York; "Clinical Results from the Use of Curative and Prophylactic Sera and Vaccines," by Dr. J. Hamilton Small; "A Consideration of Autogenous Vaccines from the Standpoint of Their Preparation and Administration," by Dr. Vincent Lyon.

Because of the many recent developments and improvements in the use and preparation of biological products, this programme proved to be of very much interest to members of both professions who had gathered in goodly numbers to hear and discuss the papers presented.

Among the interesting points discussed was the preparation of autogenous vaccines by pharmacists. It was the consensus of opinion of the experts in this line of work, that the manufacture of autogenous vaccines could not be made a profitable side line in the drug store. The next meeting of the branch will be held on Tuesday, May 5, at the Drug Club, 512 Arch street.

#### Protective Association Nets \$1000 for Home.

The Retail Druggists' Protective Association of Greater New York held its bazaar in behalf of the Druggists' National Home at Saengerbund Hall, Brooklyn, on April 14, 15 and 16. The affair terminated with a ball which was well attended. It is estimated that Thomas Lamb, the representative of the Home in Brooklyn, will have in receipts from the bazaar and in donations more than \$1000 to forward to the N.Y.S.P.A., to be turned over to the Home.

The programme prepared for the bazaar was a snappy publication which contained, besides information relating to the association and a greeting extended by President Jacob H. Rehfuss, chairman of the reception committee, a brief history and description of the National Home.

The new ERA Formulary, just out, \$5.00 per copy.

# BOARD EXAMINATIONS

## Colorado.

DENVER, April 20.—At a recent examination held by the Colorado State Board of Pharmacy the following were successful: Recipients—Pharmacists—Robert B. Porter, Alma, Neb.; Francis Maynard, Ft. Collins; C. Chung, Pueblo; J. E. Friday, Colorado Springs; A. G. M. Ruppel; William C. Heuser, Edgewater; Hugh J. Wessely, Salsda; Ray C. Laughlin, Greeley; Arthur W. Deven, William L. Ayres, Denver; Howard B. Haver, Leavenworth; C. Porter, Denver; Peter A. Danico, Denver; Sister Mary Andrew.

In addition to the above, 10 were successful for registration as assistant pharmacists.

## Delaware.

WILMINGTON, April 2.—At a special meeting of the State Board of Pharmacy at the Hotel Dupont the examination papers of the applicants for registration who took the tests at Newark recently were canvassed, and the following were granted certificates:

Pharmacists—W. B. Swain, Trappe, Md.; E. A. Shur and M. H. Katz, Philadelphia; J. L. Berk, New York City.

Assistants—J. A. Devine, Wilmington; Morris Citrenbaum, Homer Freitag and C. F. Kletter, of Baltimore.

The next examinations will be held at Newark, July 1.

## Maryland.

The Maryland Board of Pharmacy has just held a two days' session, at which it put some 73 candidates for registration as pharmacists and assistant pharmacists through an examination. How many of the applicants passed will not be known for several weeks, the interval being devoted to an examination of the papers. Meanwhile, also, it is thought, Governor Goldsborough will appoint a successor to Ephraim Bacon, the secretary, whose term of five years will expire on May 1. Mr. Bacon would be reasonably sure of reappointment but for the fact that he is a resident of Baltimore and does business in the city, while the law says that two members of the board shall come from the city and three from the counties. Among the other members are David R. Millard, of Morgan & Millard, and J. Fuller Frames, of J. P. Frames & Son, both of Baltimore, so that there is no room for another city member. At the time of Mr. Bacon's appointment he was in the county, afterward removing to the city, but being allowed to serve out his term. Among the druggists prominently mentioned as likely to succeed him are J. N. Gilbert, of Annapolis, and Mr. Campbell, of Lonaconing.

## Nebraska.

CLEARWATER, April 30.—At a meeting of the Nebraska State Board of Examiners in Pharmacy, held at Omaha, 90 applicants presented themselves, 31 passed, 59 failed. The following were successful:

Edna B. Anderson, Dow City, Iowa; Albert Doetken, Joe W. English, Fred S. Grunel, John H. Hings, Emil J. Hermansky, Genevieve L. Hayes, Elmer W. Highley, Wm. Jiskra, Lawrence B. Jewett, Jos. A. Katka, Wm. Milder, all of Omaha; Wm. D. Miller, David City; Roger J. McElroy, South Omaha; F. A. McCunniff, Omaha; Harry E. McGowan, Omaha; Garth H. McLeese, Davenport; Elmer C. Malm, Stromsburg; John L. O'Neill, Council Bluffs, Iowa; F. C. Pexton, Harlan, Iowa; Bruce Porter, Alma; Albert J. Putnam, Twin Falls, Idaho; Robert J. Robal, Plattsmouth; Mrs. E. L. Rolph, South Omaha; A. F. Reams, Franklin; G. F. Taffe, Omaha; O. A. Treinon, Omaha; Chas. N. Vandas, Omaha; O. A. Windolph, Humphrey; Harry E. Wages, Palmer; Leo C. Weber, Arlington.

## New York.

The number of penalties paid the board during the month of March, 1914, and the character of the violations, are thus given out by Secretary Warren L. Bradt, of the board:

Adulterated and deficient prescriptions.....	8
Adulterated and deficient pharmacopoeial products.....	2
Junior violations .....	4
Total .....	14

## North Dakota.

FARGO, April 20.—The North Dakota Board of Pharmacy at Fargo examined a class of 23. Three applicants for registration under the N.A.B.P. plan were registered as follows: Magdalene G. Gernon, Westport, S.D.; Samuel N. Rinde, Grafton, N.D. (Ill.); R. C. Pryse, Dawson, Ky. The next meeting of the board will be held at Fargo, June 16. Those successful in the examination for registered pharmacists were Thomas S. Campbell, of Lisbon; Oliver Elingston, of Cando; W. E. Henderson, of Velva; Charles C. Kingsbury, of Sherwood; Dunean A. McArthur, of Anamoose; Susan S. Millard, of Ortonville, Minn.; Joseph W. Trimbo, of Forman; Vincent J. Officer, of Hope, and Guy W. Waite, of Fitgal.

The successful candidates in the assistant's examination were J. F. Courtney, of Minneapolis, and Leigh Smith, of Steele.

Received by exchange were R. C. Pryse, from Kentucky; Sam N. Rinde, from Illinois, and Magdalene Gernon, from South Dakota. Conducting the examination were Senator Porterfield, of Fargo; Burt Finney, of Bismarck, and W. L. Parker, of Lisbon, secretary of the board.

## Oregon.

PORTLAND, April 20.—The State Board of Pharmacy, following recent examinations, has granted certificates to the following: Seniors—Frank W. Schell, Portland; Arthur B. Poole, Salem; Lulu B. McNair, Ashland; Walter H. Leisman, Oregon City; Harry G. Skinner, Portland; A. H. Nitschke, The Dalles; T. H. Ghormley, Portland; Arthur W. Burton, Portland. Juniors—J. F. Newsome, Portland; Roy F. McMullin, Portland; Otto C. Schindler, Milwaukie; Benjamin Wolfe, Portland; R. H. Albers, Shoshone, Idaho; John T. Ostfield, Portland; Stacy H. Reeves, Salem; George W. Davis, Silverton; Harry Burns, Portland; L. H. Schultz, Portland; George R. Baum, Portland; Charles Harlocker, Portland; Harry G. Edkins, Portland.

## Pennsylvania.

HARRISBURG, April 20.—Of 32 applicants for registration as pharmacists 13 were successful at the recent examination in this city. Of 84 applicants for certificates as registered assistants 60 were successful. The next examination will be held at Philadelphia and Pittsburgh on June 12-13. The following are the new druggists and assistants:

Pharmacists—Joseph H. Goodfriend, Fred W. Slocum, Alvin N. Wilcox, Harry A. McLaughlin, Viscidi Gerard, all of Philadelphia; Perry N. Black, Pittsburgh; Thomas P. O'Connor, Scranton; William J. Morgan, Pecksville; R. R. Eschenbaugh, Lebanon; Elvern T. Allen, Sparta; John E. Hamilton, Smithton; Jacob W. Houser, Chambersburg; Maurice Brown, Chester; Alfred C. Walker, Jr., Sewickley; Albert R. Ney, Jr., Monessen; Emil H. Allendorfer, Johnstown.

Assistant Pharmacists—F. W. Arnold, Abraham Arrow, R. Lee Bicking, Joseph N. Bongiovanni, Clarence Burk, Morris Brisgol, Walter Elmer, Henry Finestone, Leroy Frankhouser, Albert Lerner, Thomas J. McAnn, Jr., J. Fred McGinnis, S. P. Kindt, Harry Russock, Myer Segal, Michael Titman and Boyd Weatherford, of Philadelphia; Niles A. Knauß, Allentown; J. W. Stroup, Easton; Elmer W. Bowman, Norman M. Maxwell, C. W. Longenecker, Clarence H. Fenstermacher, Robert L. Dry, George Smithgall, of Lancaster; Harold Dohner, West Reading; Herbert Jones, Lebanon; Arnold Huber, Pottstown; Norman D. Keefer, Chambersburg; Howard L. Peters, John W. Porr, Steelton; Frank Oncay, Kingstons; H. Raymond Greenlee, Downingtown; Walter H. L. Delle, York New Salem; Ross F. Shoemaker, Bedford; Lester C. Trash, Hazleton; J. Gilbert Dickson and Frank N. Britcher, of Hanover; Emmett E. Parker, Penbrook; Basil J. F. Mott, Bellefonte; Howard G. Isby, Clark's Summit; Earl M. Cole, East Stroudsburg; David F. Whitstone, Everett; Albert C. Gibboney, Belleville; J. L. McCrudden, New Castle; John A. Thomas, West Pittston; Paul V. Weismiller, Johnstown; Harrison J. Ball, Mahanoy City; Curtis B. Murland, Wilmerding; James C. Powell, Tower City; Leroy O. Lohrman, Macungie; W. Charles Sarver, Bellevue; Fred S. Laucks, Harrisburg; W. Arthur Briggs, Carlisle; Lester Sater and Clarence Wolf, of Altoona; William S. Koller, Mechanicsburg; Dole M. Smith, Rockford, Ohio; Harvey V. Stokely, Upper Sandusky, Ohio; James W. Gillilan, Jr., Skowhegan, Me.

## Rhode Island.

PROVIDENCE, April 20.—Francis M. Landy, of Cumberland, was the only applicant for registration in pharmacy at the April examination in this city. He passed the tests successfully. The board discussed the possibility of obtaining a National narcotic law.

## N.Y.S.P.A. Convention to Be Held at Saratoga.

The New York State Pharmaceutical Association will hold its annual convention at the United States Hotel, Saratoga, June 23, 24, 25 and 26. This notice was received at the ERA office just as the May issue went to press.

## Drops Dead at Easter Service.

—Jesse W. Sargent, who had been in the drug business in Malden, Mass., for 30 years, dropped dead on Easter Sunday, while attending a Knights Templar service in the First Universalist Church in his home city. He was one of the prominent members of Beausant Commandery, and had met his fellow sir knights at their asylum earlier in the day, and with them marched to the church. After taking his seat he was seen to fall forward, and apparently died immediately. Mr. Sargent was 55 years old, a native of Boston, and had conducted a drug store near the Boston & Maine railroad station on the Western division.

## College Notes.

The courses at the University of Colorado Summer School, June 22 to July 31, will include—in addition to courses in general chemistry—food analysis, sanitary water analysis, pharmaceutical assaying, chemistry of foods, and physiological chemistry.

The council of the University of Winnipeg has decided to establish two new chairs, one in pharmacy and one in pathology, and committees have been named to make appointments at the recommendation of the president. Dr. H. R. Armes, lecturer in chemistry, has been promoted to the rank of assistant professor.

# TRADE SECTION

A Modern Pharmacy — Following a Prescription at Newman's, Louisville.

Sectional View of the Sanitary Prescription Department of the Newman Drug Co.

Sectional View of the Pharmaceutical Laboratory of the Newman Drug Co.

WE hear so much nowadays of "exact sanitation," "conservation of energy," "promotion of efficiency," "direct routing of product," without the details essential to the understanding of just how modern pharmacy operates along scientific and sanitary lines that it is a pleasure to present a sketch, with illustrations, of the Newman Drug Co., Inc., of Louisville. Newman's was established by George A. Newman, one of the originators of "California Fig Syrup," in 1867; was incorporated as the Geo. A. Newman Co. in 1890; and when in 1894 Mr. Newman's stock was purchased by the two remaining stockholders the concern became the Newman Drug Co., with Addison Dimmitt as president and G. A. Wesch, secretary and treasurer. Other changes and developments came in due course, and only last Fall the entire second floor of the building was leased, remodelled, and one of the most modern and complete prescription departments and laboratories in the United States installed. Everybody in Kentucky knows Newman's—probably other druggists will be glad to follow a prescription through the departments from the time of its receipt.

## THE STORY OF A PRESCRIPTION.

Its progress begins with a record blank, in which the name of the customer, time received, time promised, etc., are carefully filled. If the prescription is to be sent the address is filled in; if the customer is waiting a duplicate number claim check is given out. One good feature of these checks is that they are filed alphabetically so if the claim check should be lost or a prescription label be defaced the record is at hand at all times. Then, too, it shows the exact time the prescription was received, how long it took to fill, who filled and checked it, and also is a record of all refills. We reproduce the check in the form in which it was originated by the Newman Drug Company:

### PRESCRIPTION DEPARTMENT RECORD OF THE NEWMAN DRUG CO.

Name .....  
 Address .....  
 Date .....  
 Time Received..... A.M..... P.M.

#### Time to Be Finished.

In 10 Minutes.....In 20 Minutes.....In 30 Minutes.....  
 In 45 Minutes.....In One Hour.....Noon .....  
 Afternoon .....Tonight .....Tomorrow .....

To be called for.....Waiting .....To be sent.....  
 Price .....C. O. D.....Charge .....  
 Original back.....Copy Wanted .....Double Quantity...  
 Filled by.....  
 Checked by.....  
 Prescription No.....Check No.....  
 Refill .....

Refill contains Narcotic, Cocaine, Abortive.

Permission given to refill by Dr.....  
 Finished and sent down at.....A.M.....P.M.

Following the filling out of the identification points on this blank the receiving clerk places the prescription with the blank attached under a clamp in a small wooden tray, and it is at once sent to the prescription department by a dumb waiter. The color of the tray indicates the order in which the prescription is to be filled—red, emergency; white, regular order; blue, tomorrow. The head prescription clerk receives each prescription, stamps upon it the serial number, date and price and then hands it, still on the tray, to one of the prescription clerks to compound, with instructions to read it first very

carefully noting doses, chemical changes or incompatibilities, if any; also if all ingredients and directions are clearly written and are perfectly understood. If he is uncertain of any detail the matter is again referred to the head prescription clerk, who, if at all in doubt, telephones to the physician who wrote it for verification.

The clerk who compounds it leaves each package of ingredients by the tray until the prescription is complete and the directions written on the typewriter and attached. He then calls one of the other prescription men, and the latter takes the original prescription and checks carefully the ingredients and amounts as they are called out. The head clerk then again inspects the prescription and if found correct, wraps the packet, attaches claim check or delivery directions and sends it to the store for delivery.

Now for the department in which this work is done. The ceiling, walls and fixtures of the prescription room and laboratory are finished with six coats of white enamel; the floor is covered with white and blue linoleum. Dumb-waiters, speaking tubes and telephones connect the rooms with the sales-rooms. Near the dumb-waiters is the receiving desk of the head prescription clerk. In front and to his left is a six-foot enclosed table covered with one-inch white Belgian glass. On the north side of the room—as shown in the cut herewith—are 400 modern box files, each large enough to hold four one-pint bottles. In these are kept all the open packages of proprietary preparations, fluid extracts, pills, tablets, etc. Each group is indexed alphabetically.

Along the east wall is the dispensing counter proper, with white Belgian glass top and shelves, and it carries 600 recessed glass-labeled dispensing bottles, many of which are of blue glass to protect the ingredients from the light. On this counter are the scales, etc., while below in the drawers are the prescription bottles, all washed, drained and stoppered; pill and powder boxes, capsules and konseal machine, etc. In the east side of the room is a refrigerator in which all suppositories, spirits of nitre, lactic bacillary tablets, etc., are kept. All

kinds of ointments, cerates and plasters are kept in a special glass-shelved ointment case in uniform glass jars. The ointment slab is of glass, and there are special Bunsen stoves, suppository moulding machines, etc. In the center of the room—as shown—is the work table, 4x8, covered with white Belgian glass. A specially made white enamelled typewriter stands on the table. Above the box files and the dispensing counter, and reaching to the ceiling, is 48 feet of encased shelving, finished in white enamel, in which is stored the extra stock of proprietary medicines. On the west side of the room is an eight-foot one-piece white enamel sink, over which are four corrugated enamel drain shelves for holding graduated, mortars, pestles, etc.

The laboratory is the room adjoining the one just described and it, too, is finished in white enamel and white Belgian glass with enclosed shelving. On the shelves are to be found a complete stock of U.S.P. and N.F. preparations in uniform amber bottles, neatly labeled, and a stock of pharmaceuticals and chemicals. Analytic scales, gas attachments, four vacuum filter attachments, and a complete outfit for properly and accurately assaying any chemical or pharmaceutical preparation are located in the laboratory, as well as Stokes' apparatus for distilling water and a syphon carboy of saturated lime-water with washed air attachment.

All this equipment will be appreciated when it is remembered that to every U.S.P. and N.F. product manufactured the Government tests for purity and accuracy are applied. A record is kept with control numbers.

Among the dispensing features are the following: Every package, bottle or box used is new and absolutely clean. No old bottles are refilled. Pill and powder boxes are all hinged so that tops or directions cannot be confused. Ointments are dispensed in collapsible tubes. All labels are typewritten.

The photographic reproductions of views in the prescription department and laboratory tell the story better than words—a story of spic-and-span cleanliness and sanitation, and of scientific arrangement.

## A New Raid on the Retail Druggist—Chain Stores to Give "Cigar Store" Coupons.

*Chain Drug Stores to Emulate United Cigar Stores and Join With This Concern in Giving "Something for Nothing" Credits to Customers—Underwood Bill May Offset This Attack on the Small Druggist.*

THE United Profit Sharing Corporation has been incorporated in Delaware with an authorized capital of \$350,000 for the purpose of issuing and redeeming coupons and certificates. The United Cigar Stores Company, it is reported, is sending to its stockholders a circular notifying them of the formation of the new company and explaining the basis upon which they will be allowed to buy shares. The new company, it is asserted, will, in addition to selling and redeeming the certificates of the United Cigar Stores sell its coupons to the Riker-Hegeman Company and other concerns which wish to include the profit-sharing scheme in their business. John F. Whelan has been elected president of the corporation.

Immediately following the news on the New York Curb that the new holding company, organized to handle the premium business of the United Cigar Stores, would deal with the Riker-Hegeman chain, a rumor gained credence that the United Drug Co. chain—the L. K. Liggett stores—would also take advantage of the new coupon premium system. The ERA at once wired Mr. Liggett for confirmation of the statement that the L. K. Liggett Company was to become a patron of the United Profit Sharing Corporation of Delaware, and received this reply, just as our last forms were being closed:

"There is not a word of truth in the rumor.—L. K. LIGGETT."

When the 90 or more Riker-Hegeman drug stores adopt as a feature of their system of merchandising the coupon or certificate scheme now utilized by the United Cigar Stores, which will probably be put in operation by allied tobacco and other interests, the independent retail druggist will "buck" a competition which will be particularly difficult to overcome by the former qualifications of a successful business—"ability," "quality," "economy," etc. The capable business-man-phar-

macist may now build up a successful business, despite his small buying power and his one-man ideas. But if it comes to pass that to practice pharmacy he must combat a scheme which has for its basis the "something for nothing" propaganda of the coupon collector he will be forced to adopt new business methods. His ability as a pharmacist, his qualifications as a business man, his value to the community as a capable citizen will amount to little if the prescription is taken to be filled at the "trust" store simply because by so doing Mother can put away a few more certificates toward that bamboo parlor stand.

To argue that the public should be permitted to purchase its merchandise at its proper price and not be required to pay for so-called "profit-sharing" certificates; to argue further that the public should be permitted to spend the value of that profit-sharing coupon where it prefers—and not at the company's premium stores—these are not effective arguments. No pressure is put on the public, except its own short-sightedness. The strength and weakness of the whole system exists in the weakness for saving the certificates. An immediate two cents saved is nothing. An almost completed collection necessary to secure some particular article will send a collector blocks out of his or her way.

There are probably but two ways by which the certificate scheme of merchandising may be coped with successfully. One of these is to secure legislation making the cost of redemption prohibitive—and such legislation, except for revenue purposes, would probably be unconstitutional. Representative Oscar Underwood has introduced a bill in the House of Representatives which aims to make the redemption of coupons on manufactured tobacco goods prohibitive, a tax of two cents being placed upon every coupon or certificate.

The other alternative is "fighting fire with fire." Retail druggists might have to issue certificates. But to compete successfully, the certificate scheme adopted would have to be well thought out and carefully planned. No plan to redeem certificates with drug-store stock would suffice. The ladies

## Getting a Better Job, by Sol Eckstein, of Milwaukee.

**T**HERE are three important stages in the business life of the drug clerk: Getting his first job; holding to it while he betters his training and fits himself for better things; and getting a better job. The moment he steps beyond the last barrier to participation in the profits—and the responsibilities—of a partner or owner he, naturally, is no longer a drug clerk, and his days of "jobs" have passed. To aid the drug clerk in getting out of the rut, Sol. A. Eckstein, of Milwaukee, hustler and organization man, has crystallized years of experience in a few paragraphs of sound common-sense. When it is remembered that Mr. Eckstein as a youth walked into a drug store, after removing the "Boy Wanted" sign from the door, with the greeting—"I'm the boy!"—it will be admitted that he is well-fitted to speak on this topic. Here is his advice, just as the president of the Wright Drug Co. gave it:

"We get better jobs by getting better results than the other man. All things considered, position, influence and the financial rewards which go with such, naturally come to the wide-awake, competent, tireless worker, whether he be a mechanic or a drug clerk."

"I think many drug clerks hurt their chances for advancement because they don't stay at it steady enough; they don't give the business the attention it demands. Too many young fellows have no interest in the vocation they have adopted; they think the salary is of paramount importance in making good, whereas it is not; service and results are the most important. The man who works for the salary only is the man who stays a clerk all his life."

"There is no reason in the world why the drug clerk's business should pall on him; it is fascinating work if one has his whole soul in it. I have been in the drug business for 40 years and I am as much interested now as on the first day I entered it as an errand boy."

"A clerk should know his stock as he knows his A B C's; he should know what he has, what has been sold, and just where it is, so that he can go directly to the place for what the customer asks for, or if the article is out of stock, he is able to say so on the spot. A fellow who has to fumble over half the stock to find what he wants forfeits the confidence of the customer in the first place; and to get and retain that confidence is about half the success of the battle in the drug business."

"I think it is good policy to call the customer by name whenever that is possible; one should surely make it a point to find out the name of the customer, and the next time he comes in be able to say, 'Mr. Smith.' That is a big advantage. For any one likes to be recognized as distinguished from the

crowd—that is, providing one is tactful—I imply that; on the other hand, over-familiarity is to be avoided. If I forget a person's name I make it my business to find out what it is at the earliest opportunity."

"It seems to me a great deal of success in the drug business is wrapped up in one's attitude toward the trade; to be pleasant and accommodating every minute of the day is to assure success, other things being equal. This, of course, implies that one should ever be on the alert, never allow a customer to stand around waiting, when he might be accommodated."

"One should be as affable and courteous to one who purchases a 2-cent stamp as to any one else. The person who buys a stamp is likely to be disposed to return if he is used well; and that may eventually mean a regular customer. Good treatment and the square deal build up trade."

"As a general rule, whatever it is which will get the people coming into your store is good for the business; if your goods are right, and you know how to treat your customers, success is yours."

"How did I build up my cigar business? Well, I always had what the customer wanted. I make it a rule to keep every brand of cigar which is favorably known, that is, the brand which demand shows has especial merits, and fits especial tastes. You know, every man likes his own cigar. Probably it is recognition of this fact which has helped me much to build up my cigar business; if a man can't find what he wants in my show case I take him back to my store room, where I have them piled up to the ceiling; every shape, every kind, every flavor. That inspires confidence in my cigar stock, and it is seldom or never that I am not able to suit the customer—and bring him back for more. I have two cigar salesmen out on the road."

want chairs and tables and lamps—not "stuff for sick people." The successful certificate opposition will have to provide for the redemption of certificates with any article now handled by the United States Cigar Stores premiums stores. To the extent of issuing certificates, the independent druggists will be obliged to become units of a certificate-issuing and redemption proposition or—watch their old-time customers buy their cigars at the certificate cigar store, their drugs at the certificate drug store and their other goods at such "chain" stores as may handle the certificates issued by the profit-sharing company just organized.

H. R. 13723 introduced into the House of Representatives by Mr. Underwood is a bill to levy a tax upon the issuance of coupons, prize tickets, and other devices, and on the redemption, payment, purchase, or exchange of coupons, prize tickets, tags, bands, or other articles, things, or parts of articles or things that shall have been attached to, or packed in or with, or formed a part of, or encircling, or given with any manufactured tobacco, cigar or cigars, cigarette or cigarettes, or snuff, or any stamped package or receptacle thereof, and to forbid the packing of other things into packages of tobacco, cigars, cigarettes, or snuff.

The bill provides for a tax of two cents upon every coupon, prize ticket, etc., attached to, or packed in or with, or forming a part of, or encircling, or given with or accompanying any sale of any manufactured tobacco, cigar or cigars, little cigar or little cigars, cigarette or cigarettes, etc., if any such coupon, prize ticket, or other device, contains any direct or indirect promise, or proposition, or offer, to make redemption or payment in cash therefor, or for any number of same, or to exchange property therefor, or for any number of same, whether such redemption, payment, or exchange, is made or is to be

made by a manufacturer of, or dealer in, such tobacco, cigars, cigarettes, or snuff, or any other person, firm, or composition.

Section 2 of the bill provides for the levying, collection, and payment, by adhesive stamps, of a tax of two cents for, and upon redemption, payment, purchase, or exchange of, any coupon, prize ticket, tag, etc., or any article, etc., which before being offered for such redemption or purchase shall have been attached to, packed in or with, or formed a part of, or encircled, or given with, or accompanied any sale of any manufactured tobacco, cigar or cigars, etc. Section three provides for the stamping of coupons, etc., by the person, firm, or corporation presenting the same for redemption, purchase, or exchange. Section eight provides for a fine of \$50 for every failure to affix such stamp or stamps.

### Statement of Ownership, Management, Etc.

Statement of the ownership, management, etc., of THE PHARMACEUTICAL ERA, published monthly at New York, N. Y., as required by the Act of August 24, 1912, Section 467½, Postal Laws and Regulations: Editor and managing editor, E. J. Kennedy; business manager, D. O. Haynes; publishers, D. O. Haynes & Co., all of No. 3 Park Place, N. Y. Owner, D. O. Haynes, No. 3 Park Place, N. Y. No bonds, mortgages or other securities issued. Signed, D. O. Haynes & Co., by D. O. Haynes, Pres. Sworn and subscribed to before P. Frank Sonnek, Notary Public, Queens Co., N. Y., on March 30, 1914. Commission expires March 30, 1915.

### Peek & Velsor Have Another Fire.

A fire did more than \$5000 damage to the stock of botanical drugs in the warehouse of Peek & Velsor, dealers in crude drugs at 9 Gold street.

## FROM THE BUSINESS FIELD.

**Calvert Drug Co. Reorganizes.**—There has been an important change in the Calvert Drug Co., a Baltimore corporation, which has been the property of the Baltimore druggists, since the death of the late David K. Millard. Morgan & Millard, the late partners of the Thomas & Thompson Drug Co., were formerly prominently at the head, to such an extent that other things to druggists at wholesale prices were almost a thing of no business. At a meeting of the stockholders, President Harry F. Lindeman and the late David K. Millard, as treasurer and general manager, retired from the management of the board, and new officers were elected to take their place. The new officers are Geo. C. Potter, president; Walter & Potfield, president; J. Fuller Frames, of J. P. Frames & Sons, secretary; H. Geo. Wendel, treasurer, and R. E. Lee Williamson, of Lee Williamson & Co., general manager. The new officers took hold of affairs at once and have been gradually getting a line on the activities of the company. Mr. Williamson is also identified with the W. H. Richardson Company, which conducts a store at Charles street and Mount Royal avenue. He does not contemplate withdrawing from these concerns, but he states that he will give practically his entire time to the direction of the Calvert Company's affairs. For some time past there has been more or less dissatisfaction with various matters related to the management of the Calvert Company, and the disagreements have become more pronounced about the time when Mr. Beck, who had been the virtual directing head as general manager, suffered a nervous breakdown, and was compelled to seek a rest and medical treatment. Mr. Beck not long ago returned to his duties fully restored, but the discontent of some of the stockholders seemed to have made much headway, and the meeting of the board at which the changes were decided upon followed. Mr. Beck was formerly in the retail business at Hartford and North avenues, and he has been prominent in the affairs of the Calvert Company ever since it was launched. He was active in securing the erection of the handsome new five-story structure which the corporation occupied last year, at 100 and 108 West German street, and which was constructed at a cost of not less than \$50,000. He has also various other business interests and has been a very busy man. In fact, it was the strain of the work upon him to which was attributed his breakdown.

**The Behrens Drug Co.,** of Waco, Texas, has just removed to its new fireproof, reinforced concrete building, which, from the point of view of the wholesale druggist, is reported to be a model. The building has four stories, and basement, with a floor area of 63,800 square feet, is located at the corner of Fourth and Mary streets, with a front on Fourth street, while private driveways and a private railroad switch facilitate receiving and shipping of goods. Every modern convenience and appliance for the expeditious handling of an increasing business have been installed under the direction of General Manager John G. Mason. Mr. Mason, who is also a director of the company, is well known throughout the country. He was for years connected with the Meyer Bros. Drug Co., of St. Louis, as the head of the sales department, resigning to take the management of Carter, Carter & Meigs, of Boston. He is a member of the A. Ph. A. and of a number of State associations. The stockholders of the Behrens company recently voted an increase in the capital stock of the corporation of 600 shares, and this has now been fully subscribed and paid in, so the company is operating with a capital of \$250,000. The officers of the company are: President, Dr. W. R. Clifton; vice-presidents, E. Rotan and H. C. Risher; secretary-treasurer, E. H. Hardin, and John G. Mason, general manager. Among the specialties handled are Oxidine, and Mrs. McCormick's Beauty Cream and Beauty Cream Soap.

**The Wisconsin Rexall Club,** at its recent convention in Milwaukee, elected the following officers: L. A. Duffin, White-water, president; vice-presidents, R. Milbauer, Clintenville; B. Schwabert, Wausau, and A. E. Krueger, Madison; secretary, F. A. Rhyne. One of the features of the convention was a talk by Miss Frances Schoen, a saleswoman in the employ of the A. Spiegel Co., who told the druggists how to sell toilet preparations. She said women ought to be persuaded to use perfumes, powders and toilet waters, all of the same

odor, and she gave some valuable pointers on how to take care of the women customers. Miss Schoen was introduced by Adolph Spiegel, Milwaukee, who said that he was the original "pharmaceutical salesman" of Wisconsin, having employed women in his store as far back as 1888. "Everybody said I would soon be in bankruptcy," said Mr. Spiegel. "Women are good salespeople and every department in which they have been employed has improved."

**The Davis-Fuston Drug Co.,** of Nashville, has been chartered to operate a chain of drug stores, under the direction of William F. Davis, Sumner Fuston and Fred Fuston, all three men being at present proprietors. The stores to be operated under the control of the new company are: The Hemlock pharmacy, at 22d avenue and Church street; the Fuston pharmacy, 28th and West End avenue; the Ben Wise pharmacy, at 901 Fourth avenue, South, and the two drug stores conducted under the name of the Nashville Drug Co. These are located at 12th avenue and Jefferson street and at 18th avenue and Cedar street. The company has a paid-up capital of \$35,000. For the present only stores in Nashville will be operated, but the company expects to branch out to other towns later on.

**The National Co-operative Drug Co.** will open its first houses at St. Louis and San Francisco within a month, according to the announcement recently at the meeting of stockholders and officers at Cincinnati made at the meeting of stockholders and officers at Cincinnati recently. This company is organized under the laws of Delaware with a capital of \$1,000,000 and will operate co-operative wholesale drug houses in all the large cities of the country, these to be modeled upon the Cincinnati house. There are more than 700 druggist members and applications are going in at the rate of 20 a day. Thirty cities will be organized, and within a short time offices have been established in a majority of the cities now chosen. In Des Moines, Louisville, Memphis and St. Louis the company's affairs are progressing very rapidly.

**Gustatory Diplomacy in St. Louis.**—The value of a good dinner as an aid to diplomacy is shown in the story recently told of how a tense situation in the retail drug business of St. Louis was settled. Something like an incipient explosion was threatened—just whether over the prices or not is not mentioned. Several uptown druggists and several downtown druggists, according to the story, got together over a little dinner, and when the dinner was over the druggists were calling one another in a brotherly way by their first names and shaking hands in a manner which meant that the relations were more cordial, if anything, than ever, and that the difficulties, threatened or feared, as the case may have been, were no longer a matter of concern.

**The Waterloo (Ia.) Drug Company** has been incorporated with \$100,000 capital, with S. Bruce Galloway, W. H. Galloway, John Berg, Judson Laughlin and J. F. Mahedy as the first board of directors. S. Bruce Galloway is president; Judson Laughlin, vice-president; Wilbur H. Galloway, secretary and treasurer, and J. F. Mahedy, general manager. The corporation began its corporate business on April 1. According to its charter it will manufacture, buy, sell, exchange, export and import drugs, patent medicines, chemicals, corks and bottles, liquors, perfumes, soaps and toilet articles, cigars, confectionery, paints and oils, and other such articles and supplies commonly handled by a wholesale drug house.

—**Alvin Geist,** of Allentown, Pa., who recently purchased the stock of the City drug store at Sigfried, Pa., is making many alterations at his new place of business. The store will be renovated and a large display window, the width of the building, will be added. The entrance will be moved to the corner of the building and there will be a new floor, display shelves and show cases. A large marble soda fountain will also be installed. Mr. Geist, who has been a resident of Allentown for the past 10 years, is a graduate of the Philadelphia College of Pharmacy, and until the time of his entering business for himself was employed at the Kincaid pharmacy at Madison and Chew streets, Philadelphia.

**Employees See Themselves in Moving Pictures.**—During the Winter months at the laboratories of the Lilly Company the lecture room in the Lilly science building is thrown open once a week to the men employees for a noon meeting. These gatherings usually take the form of a short talk by some well-known local speaker. The last one of the Winter season had attendance record "beaten to a frazzle."

The occasion for the S. R. O. sign was the Lilly moving picture exhibition shown for the benefit of the employees. "To see ourselves as others see us," proved to be a most enjoyable and amusing sight.

**The Interstate Remedy Co.,** Farmer street, Detroit, has been forbidden the use of the mails. The order includes the confiscation by the Detroit postoffice department of all mail to the addressee. The Detroit company was put on the plane of other such concerns proceeded against from time to time by the Federal authorities, in that it offered to cure everything from failing memory to weak back. The attorney-general says that few of the letters received by the company actually reached a physician, but are sorted over by clerks, who also select the "remedies." The ailments were divided into two classes, "kidney" and "nervous," and only those that puzzled the clerks went to "Dr. A. E. Robinson." The investigators also state that the company offered to sell to another company "the choicest lot of debility names in the country," while proof was found that between 80,000 and 90,000 of these "confidential" letters were actually sold. Edward O. Hayes was found to be the owner, while H. F. Coon is named in connection. The authorities say that a fraud order was issued against the Dr. Knapp Medical Co., which Mr. Hayes conducted in 1904.

**The Wartman Drug Co.,** 624 Delaware avenue, Milwaukee, recently filed a voluntary petition in bankruptcy, following closely upon the action of the Government in closing the postal sub-station conducted in the store for years. J. F. Wartman, head of the concern, died suddenly July 24, 1912. An investigation of the post-office accounts showed that the station was \$2000 short, according to the post-office inspector. Postal authorities took possession of the store, Jan. 30, in an attempt to compensate the Government for the loss. The bankruptcy petition shows liabilities of \$10,895.82 and assets of \$11,333.20.

—**The Des Moines Drug Co.'s New Building Open.**—The firm operates in three States, Iowa, Missouri and Minnesota, and carries one of the largest stocks of any drug jobbing house west of the Mississippi, utilizing a basement and six floors, every square yard of which is used. Lunch, cloak and rest rooms for both men and women employees, and modern shipping and stock rooms are among the features of the establishment which was first occupied in February. The entire building is equipped with automatic sprinklers, and every modern idea has been utilized in equipment and arrangement.

**The Riker-Hegeman Drug Company** increased its sales 16 per cent. for the first half of April, as compared with last year. This rate of increase would mean close to \$17,500,000 for the full year. The sales for 1913 totaled \$15,000,000. However, it is likely that the gross for the full year will be slightly below this amount, although possibly over \$17,000,000. January sales increased 20 per cent. over a year ago. Inclement weather, particularly on Saturdays, hurt sales in February and March, but despite this handicap the company was able to show a slight increase for each month.

**The National Cigar Stands Company,** a United Drug subsidiary, has incorporated under Massachusetts laws, with an authorized capital of \$350,000, comprising 1500 shares of preferred stock, and 2000 shares of common, with a par value of \$100. The entire capital stock has been issued for stock of the National Cigar Stands Company of New Jersey. The 2000 shares of common stock were exchanged share for share, while the 1500 shares of preferred were issued in exchange for 3000 shares of preferred stock of the New Jersey corporation, which had a par value of \$50.

—**Dr. Herbert F. Palmer,** veterinary representative of the H. K. Mulford Company, delivered an illustrated lecture on "Hog Cholera" at the last meeting of the Ohio State Veterinary Association, and the Missouri Valley Association. During the past few months Dr. Palmer has given illustrated lectures on serums, vaccines and bacterins at six of the principal veterinary colleges in the United States. Dr. Palmer will deliver a series of lectures and conduct examinations on "First Aid to Animals" for the Boy Scouts of Philadelphia.

**John T. Milliken & Co.,** of St. Louis, manufacturing chemists, this Summer will erect a four-story factory, 272 by 130 feet, at northwest corner of North Market street and Leffingwell avenue. The present factory is at 316 Clark avenue.

The new building is to be of reinforced concrete, with metal window sashes and glazed terra cotta front. Driveways for loading wagons and trucks and loading platforms will be inside of the building. The general offices will be on the second floor. The estimated cost is \$75,000.

**The United Drug Co.,** according to W. J. Howell, manager of the St. Louis branch, will probably build a manufacturing plant in that city which will cost \$1,250,000 and employ 1000 men. B. T. Wilkerson, manager of the stationery department of the company, has established a distributing center in Liverpool and an office in Paris for the European market, and this, it is said, makes it more essential than ever that a manufacturing plant be established in the West as Boston will be the center for the export trade.

**The Schempf Drug Co.,** of Watertown, Wis., has sold its business and stock to two former Watertown young men, Erwin T. Bittner and Max Tetzlaff, who will conduct the business under the firm name of the Bittner & Tetzlaff Co. Both Mr. Bittner and Mr. Tetzlaff have been engaged in the drug business in Racine, Wis., for the past four or five years. During the past three years they were business rivals, serving as managers of the only two drug stores on the North Side in Racine.

**Shreveport, La.,** is to have a large wholesale drug house at an early date if present plans materialize. It is understood that Robert T. Gibbs, formerly of the firm of Conger, Kahn & Gibbs, and now representing Meyer Bros., of St. Louis, will be the president and general manager of the new concern, and that several prominent business men of Shreveport will be associated with him.

**The Cleerhed Specialty Co.** has been incorporated in Green Bay, Wis., with a capital stock of \$100,000, to engage in the manufacture of an olive oil laxative capsule. The business is in charge of R. L. McDonald, who recently disposed of his drug business in Green Bay, and is now secretary-treasurer and general manager of the new manufacturing concern.

**The Womack & Waldrum Drug Co.,** a \$100,000 corporation, has been chartered in Nashville, Tenn. The new corporation will establish and maintain a chain of pharmacies in all sections of Nashville. The incorporators are Charles R. Womack, Jonas Y. Waldrum, Will G. Harris, Charles L. Stephens and T. J. McMorrough.

**The Michigan Drug Co.** is contemplating the closing of its Saginaw branch, formerly the Valley City Drug Co., and operating its entire business from the Detroit headquarters. In this event James Smart, Saginaw manager, will be given an executive position in the local offices, and all Saginaw employees will be retained.

—**J. C. Field & Son** have opened a new retail store at 332 Park avenue, Plainfield, N. J. F. R. Story, who is a well-known and capable pharmacist of Plainfield, will be in charge. Years ago Mr. Field was engaged in the drug business at Plainfield with L. W. Randolph, and is also a registered pharmacist.

**The Texas Rexall Club** has elected the following officers: President, A. E. Kiesling, Houston; 1st vice-president, L. C. Curlin, Waxahachie; 2d vice-president, L. Douthit, Palestine; 3d vice-president, B. F. Heuson, Orange; secretary and treasurer, J. W. Covey. Dallas has been selected as the 1915 meeting place.

**The Wilmington (Del.) Association of Retail Druggists** has elected the following officers: President, Oscar C. Draper; secretary, W. A. Grant; treasurer, James T. Challenger, New Castle; executive committee, Lawrence Sanders, R. H. Newsom, Miss Nora V. Brendie and W. L. Morgan.

**Barclay & Co.,** Brooklyn, N. Y., has been incorporated with \$3,000,000 capital to carry on the business of druggists, chemists and dealers in pharmaceutical supplies of every kind. The incorporators are William H. Hayward, Henry Essig, Jr., and Charles F. Clarke.

**George Boundy,** pharmacist at the Kellogg drug store in Oconomowoc, Wis., for some time, has opened a new pharmacy at Sullivan, Wis. Temporary quarters have been secured by Mr. Boundy, but he expects to locate in new quarters on July 1.

**The Swanson Rheumatic Cure Co.** has removed from Chicago to Newark, Ohio.

## THE ERA COURSE IN PHARMACY

Information for Era Course Students

The Era Course in Pharmacy is a systematic home-study course, designed to give a theoretical and working knowledge of Pharmacy, and intended especially for young men and women who cannot attend a college. It is divided into ten Parts and 58 Lectures; it can be completed in a year or less, depending on the experience of the Student; its cost is merely nominal. A complete Prospectus can be had by addressing

Director, ERA COURSE IN PHARMACY,  
c/o D. O. Haynes & Co.,  
NO. 3 PARK PLACE, NEW YORK.

### Synthetic Camphor Again.

Some time ago, in this Department, we had occasion to point out the difference between the so-called "artificial camphor," and synthetic camphor. A number of inquiries have arrived, asking us to make clear the distinction again. Artificial camphor is not camphor at all, any more than artificial flowers are real flowers. It is merely a substance that looks like camphor, and smells somewhat like it, but chemically speaking, it is unrelated to it. Artificial camphor is the hydrochloride of pinene, which is a terpene hydrocarbon and the principal constituent of oil of turpentine. It contains no oxygen. Synthetic camphor, on the other hand, is real camphor. It is chemically the same substance as the official camphor of the U.S.P., the chief difference being that it is optically inactive, while the official camphor is dextrogyrate, or dextro-rotatory. It has the formula  $C_{15}H_{16}O$ , and is a ketone. The synthetic camphor is not official, as the U.S.P. states that camphor comes from the tree *Cinnamomum Camphora*.

### Assayed Tinctures of the U.S.P.

In addition to the two tinctures containing inorganic substances, those of ferric chloride and iodine, the following tinctures are directed to be assayed by the U.S.P.: Aconite, belladonna leaves, cinchona, colchicum seed, hydrastis, hyoscyamus, nux vomica, opium, deodorized opium, physostigma, and stramonium; thirteen in all.

### Tinctures Prepared by Percolation.

In Part V, it is stated that the usual method of preparing tinctures of non-cellular drugs is by maceration, since these materials, on coming in contact with a menstruum, form sticky masses which prevent the passage of any liquid. It was also pointed out that in some cases percolation, especially when preceded by maceration, was permissible. These exceptional cases may be thus defined. In case the drug, although non-cellular, is still sufficiently porous to allow percolation, the latter process may be used. This is exemplified in the official directions for preparing the tinctures of opium. In other cases, if a cellular drug can be mixed with the substance, percolation is possible. Glycyrrhiza is the cellular drug most commonly employed for such a purpose, but purified sawdust is also excellent, and very cheap. Another substance to be added to make the mass porous is clean sand. This permits a ready descent of the menstruum through the drug, and does not give up any substances to the percolate which in any way affect its taste, color, or therapeutic properties.

### Matriculation Graduates to April 21, 1914. *Graduating Average.*

7501—Edward J. Hargis, Grand Junction, Colo.	96
7583—Kimbro Pope, Rockwood, Tenn.	96
7633—O. J. Lonibos, New Orleans, La.	92
7835—Jas. L. Humble, So. Pittsburg, Tenn.	93
7913—Benjamin H. Rubin, Chicago, Ill.	93
8055—James A. Bacon, Harriman, Tenn.	92
8205—C. H. Brockmeyer, Fredonia, Ky.	91

### Kind Words from Our Graduates.

"I am more than satisfied with the results I have obtained from the Course."—O. J. LONIBOS, New Orleans, La.

"I have derived great benefit from the Course. It has been both a help and a pleasure to me, and I want to extend to you my hearty thanks."—J. L. HUMBLE, So. Pittsburg, Tenn.

"Allow me to express to you my sincerest thanks for the

inestimable good your Course in Pharmacy has done for me."—JOHN C. KIMBLE, Montezuma, Ga.

"I must say that your Course is more than you claim for it. Every pharmacist should review his work at some time, and this Course covers it all. Many thanks for your promptness in all your dealings."—C. H. BROCKMEYER, Fredonia, Ky.

"I am highly pleased with the ERA COURSE IN PHARMACY. It is a thorough and well arranged course of study, and takes the student over the ground he wishes to cover, especially if he is preparing for an examination. I attribute my success in passing the last examination of the Arkansas Board of Pharmacy largely to my careful study of the Course. I recommend it highly to any drug clerk, either experienced or inexperienced."—EARL D. MCGAUGHEY, Hartford, Ark.

### SPEAKING OF FLIES.

*From the Poster of the Idaho State Board of Health, James H. Wallis, Commissioner.*

Flies are the most dangerous insects known to man.

Flies are the filthiest of all vermin. They are born in filth, live on filth and carry filth around with them. They are maggots before they are flies.

Flies are known to be carriers of millions of death-dealing disease germs. They leave some of these germs wherever they alight.

Flies may infect the food you eat. They come to your kitchen or to your dining table, fresh from the privy vault, from the garbage box, from the manure pile, from the cuspidor, from decaying animal or vegetable matter, or from the contagious sick-room with this sort of filth on their feet and in their bodies, and they deposit it on your food, and YOU DO swallow filth from privy vaults, etc., if you eat food that has come in contact with flies.

Flies may infect you with tuberculosis, typhoid fever, scarlet fever, diphtheria, and other infectious diseases. They have the habit of feasting on tuberculosis sputum and other discharges of those sick with these diseases, and then go direct to your food, to your drink, to the lips of your sleeping child, or perhaps to a small open wound on your hands or face. When germs are deposited in milk they multiply very fast; therefore milk should never be exposed to flies.

Screen your windows and doors. Do it early before fly time and keep screens up until snow falls.

Screen all food, especially milk. Do not eat food that has been in contact with flies.

Screen the baby's bed and keep flies away from the baby's bottle, the baby's food and the baby's "comforter."

Keep flies away from the sick, especially those ill with typhoid fever, scarlet fever, diphtheria and tuberculosis. Screen the patient's bed. Kill every fly that enters the sick-room. Immediately disinfect and dispose of all discharges.

Catch the flies as fast they appear. Use liquid poisons, sticky fly papers and traps.

Place either of these fly poisons in shallow dishes throughout the house:

(a) Two teaspoonfuls of formaldehyde to a pint of water, or

(b) One dram of bichromate of potash dissolved in two ounces of water, sweetened with plenty of sugar.

To quickly clear rooms of flies, burn pyrethrum powder or blow powdered black flag into the air of the room with a powder blower. This causes flies to fall to the floor in stunned condition. They must then be gathered up and destroyed.

Sprinkle chloride of lime or kerosene over contents of privy vaults and garbage boxes. Keep garbage receptacles tightly covered, clean the cans every day, the boxes every week. Keep the ground around garbage boxes clean.

Sprinkle chloride of lime over manure piles, old paper, old straw and other refuse of like nature. Keep manure in screened pit or vault if possible. Manure should be removed at least every week.

Pour kerosene into the drains. Keep sewerage system in good order, repair all leaks immediately.

Clean cuspidors every day. Keep 5 per cent. solution of carbolic acid in them all the time. Get rid of sawdust boxes used as cuspidors—destroy them—they're insanitary.

Don't allow dirt to accumulate in corners, behind doors, back of radiators, under stoves, etc.

## Brand &amp; Co., Ltd., of London—An English Firm with an Interesting History.

WHEN a business has been in existence for 80 years and has continued steadily to increase in both size and importance during practically the whole of that period, it is the natural inference that the basis of the business and the consequent growth is something which possesses genuine merit, and that the foundations of the business are secure. This can be said truly of the historical English house of Brand & Co., manufacturers of specialties for invalids, such as essence of beef and essence of chicken, these two products in particular being known in all sections of the world. A representative of the ERA who recently visited the London factory and interviewed the general manager was led to believe from what he observed that the steady progress of the past eight decades is likely to continue, and that Brand's specialties will be as familiar to future generations as they are to English people today.

The story of the beginning of the house of Brand is an interesting one, and not without a spice of romance. In the days of King George the Fourth there was on the staff of employees in the royal kitchen a man by the name of Brand—or, to give him his full name, Henderson William Brand. It is on record that this Brand was not only a clever cook but a capable writer as well, for he was the author of a book, published in 1834, entitled "The Complete Modern Cook," which was a compendium of kitchen practice and of dinner-table management. Mr. Brand was the founder of the business of which we are writing, and was led into manufacture through the invention of his sauce, "Brand's A1." Brand was somewhat of a favorite with his royal patron, to whom the advent of a new sauce was a matter of no little importance. The story runs that when Brand offered the sauce for the first time for the approval of the "first gentleman in Europe" the latter at once pronounced it to be "A1."

In due time the chef left the royal kitchens and became in turn chef for various celebrated gourmards and hosts, including T. W. Coke, of Holkham (the "Coke of Norfolk," at whose table Charles James Fox was a frequent visitor), and afterwards to Earl Manvers; then to His Grace the Duke of Norfolk; the Marquis of Ailsa; Lord Rolle, and others. At a later date—in 1835—he determined to enter into business on his own account.

Accordingly, in that year, he opened premises in Mayfair, and began to prepare those food products, the perfection of which has for 80 years been uniformly maintained. It appears that the business began to flourish from the very beginning, and in an issue of *The Times* of 1838 appeared the following advertisement:

TO TRAVELLERS and INVALIDS.—BRAND'S CONCENTRATED BEEF TEA. This valuable article is pronounced by medical gentlemen to be a highly important acquisition to persons of delicate constitution. It is nutritious, strengthening, and free from all fat, spice, and vegetable substance. Any quantity can be made ready for use in a few minutes by the simple aid of boiling water. Warranted to keep in any climate. Prepared by H. W. Brand, (from the kitchen of His Majesty George IV.) 11, Little Stanhope-street, Mayfair. N.B. Food prepared for invalids according to medical prescription. Preserved fresh provisions, warranted to keep in all climates until required for use.

The firms which advertised in *The Times* over 70 years ago and are flourishing today are comparatively few in number and the copy of an old advertisement is therefore not without interest.

Twenty-seven years ago the business had grown to such proportions that the factory in Mayfair was not large enough to cope with the orders. It became necessary to find a suitable site for the erection of premises on a much vaster scale and the site on which the present establishment stands was selected. This is situated in historical surroundings in Vauxhall in close proximity to the river Thames and only a

few minutes' tram ride from Westminster Abbey and the Houses of Parliament, and within a few minutes' walk of Lambeth Palace, the residence of the Bishop of London.

A tour through the buildings is both instructive and interesting. One is especially struck by the spaciousness, loftiness and airiness of the various departments. The great "kitchen," the vast hall in which, at the time of your representative's visit, the "cooks" were at work carving the finest meat procurable and transferring it to huge steam-jacketted "coppers" in which the processes of extraction are carried on, is a model of cleanliness. It is shown in the illustration herewith.

The Big Kitchen at Brand's Where Meat Juices and Concentrates are prepared.

Here was seen an army of white-aproned, white-capped cooks busily engaged in carrying out their several duties. A large section of this gargantuan kitchen is devoted to the production of Brand's Essence which consists solely of the juice of the finest British beef extracted by a gentle heat without the addition of water or any other substance. It has been introduced into medical practice as a stimulant after loss of blood from any cause, and in cases of nervous exhaustion and enfeebled digestion. It is liquid in warm weather, but in cold weather or when iced it takes a jelly form, in which state it is usually preferred.

At the meeting of the British Medical Association at Toronto in 1906, Sir Victor Horsley, F.R.C.S., F.R.S., one of the most famous among English surgeons, made the following observation in the course of an address on surgery: "As regards cardiac stimulation, that has always seemed to me to be a clinical error. The heart does not require accelerating as a rule, but does require feeding. Undoubtedly, repeated enemata (every two hours) of four ounces of beef tea in which is dissolved Brand's Essence or pancreatized milk is the readiest means, etc."

Another concentrated form of food prepared in Brand's "kitchen" is Brand's Beef Tea. This is the original preparation referred to in *The Times* advertisement quoted above; it may be obtained either in bottles, when it is known as home-made beef tea, or in a concentrated form, put up in skins and metal cases. Brand's concentrated beef tea is in a stiff jelly and can be taken cold or dissolved in the mouth if no means of obtaining hot water are available. It is stated that missionaries, explorers, ship captains, and others whose supply of medical comforts have run low, have often been known to barter almost everything for a few bottles of Brand. Another preparation which appeals to the traveler and the medical man is Brand's meat juice. This is obtained from

... by submitting to assurance in the cold. Another product consists of the "Senecey meat lozenges" which have been described as "A wafer lozenge in a waistcoat pocket."

The following is the recipient of many awards for the excellence of their products, as the following list shows: First Order of Merit, Adelaide, 1887; Gold Cross of Honour, Amsterdam, 1885; Gold Medal, Universal Exhibition, Paris, 1889; Vienna, 1891; Sp. (Belgium), 1891; London, 1892; Douai, 1893; London, 1894; Lincoln, 1892; Dublin, 1892; Geneva, 1893; Brussels, 1893; H. (H. over), 1893; Truro, 1893; Antwerp, 1894; London, 1894; London, 1895; Belfast, 1895; Amsterdam, 1895; Wiesbaden, 1896; London, 1896; Brussels, 1897; International Paris, 1900; Medical Congress (Buenos Ayres), 1894; Emperors and Citizens, London, 1905; Cape Town, 1905; London, 1905; Liverpool, 1906; Grand Prix, Milan, 1906; Crystal Palace, 1906; Silver Medals: Paris, 1878; International H. Exhibition, 1884; Medical Congress (Rome), 1894; Medical Congress (Naples), 1895; Dessau, 1901; Diploma and Bronze Medal: Toronto and Ottawa, 1880; Diploma of Honour: Food and Cookery, Imperial Institute, 1890; Royal Horticultural Hall, 1906; Madrid, 1907. Messrs. Brand also hold various royal "appointments."

Enough has been written to give readers some idea of the importance of the historic house of Brand. The chairman of directors is Thomas Dence and the managing director is A. H. Dence. E. Fougere & Co., Inc., are the U. S. agents.

### One Stropper for All the Razors in the Family.

A stropper upon which all "the boys" in the family may strop their various safety razor blades and which may be used with equal facility by "Grandpap" to sharpen his old-fashioned razor, would seem to be the Universal Stropper, manufactured by Hermann Boker & Company, 101-105 Duane street.

A few of the stroppers on the market may be adapted to stropping more than one make of safety razor blades, but none of these may be used by all the men in a family—unless all the men use one make of razor. An ERA representative witnessed a demonstration of the Universal and to his own satisfaction saw several standard safety razor blades and an old-fashioned razor stropped. The manufacturers claim that this stropper will strop all the different standard styles of safety razor blades, and any style, size, width or make of the old-style razors, giving to each a keen, smooth, shaving edge. Particulars concerning this stropper—its construction, the grade of horsehide, etc.—are presented in their advertisement on another page. An auxiliary holder is utilized to hold blades of the thin or wafer type. All other blades do not require this holder.

### Money in a Camera Department.

The Seneca Camera Mfg. Co. has adopted a plan which should be of great help to any druggist who wishes to start a camera department. As it is impossible for their traveling men to call upon all the trade wishing to put in Seneca cameras as a side line, and as selecting from a catalogue is rather difficult in the case of a new line, this company has prepared a leaflet showing a number of representative assortments which not only answer the requirements of the dealer just setting up in business, but when augmented by the advertising pictures, catalogues, display cards and booklets (which are sent without charge) make a dignified and impressive showing. Each of these assortments is arranged with expert care and will fill every want in a camera department, omitting nothing that an amateur and many regular photographers would call for. As the sales are made it is not necessary to re-order goods in large quantities. A dealer can order just enough to

keep the assortment complete, and get the same discount as on the original order. No technical knowledge is necessary to successfully sell Seneca products. It is just an ordinary merchandising proposition. Seneca cameras are so simple and easy to manipulate that their workings are understood at a glance and the books sent with each instrument clearly explain to the beginner each step in the art of picture making. This company claims that their dealers have proved that without adding a penny to overhead expenses, without making any big additional investment, a Seneca department has handsomely increased the volume of business done by their store. The booklet may be obtained on request from the Seneca Camera Mfg. Co., Rochester, N. Y.

### Universal Poison Guard.

The cut herewith shows a new poison bottle safeguard that has recently been patented. It consists of a gummed band which goes around the neck of the bottle underneath the lip, and a wire loop which is put over the cork. The gummed band sticks around the neck like a label, and to remove the cork a slight pull detaches the wire loop, which springs back into shape when released.

This device seems to answer the purpose for which it is intended; it is inexpensive, and its use would be an additional protection, as the cork cannot be removed until the wire loop is pushed back from its normal position. The owner of this device is John W. Mackay, 181 14th street, Portland, Ore., who also owns the patent, and he would like to hear from manufacturers who would be interested in its manufacture and sale.

### Protection Against Mercury Poisoning.

Many attempts are being made to do away with cases of accidental poisoning by the inadvertent use of bichloride of mercury tablets, due in the majority of instances to the fact that in the dark or to a child all tablets are very much alike. To safeguard the public from such accidents the Wm. S. Merrell Chemical Company, of Cincinnati, has developed a new form of bichloride of mercury carrier in the shape of oblong pieces of porous paper, about two by four inches in size, in which has been absorbed the corrosive sublimate necessary to make a solution of the same strength as that obtained from the ordinary bichloride tablets. These Antiseptic Leaves are printed with complete information as to the contents and method of preparing the solution, and as they cannot be eaten or mistaken for candy, lozenges, tablets or any other form of internal medication are perfectly safe in use. These leaves are put up in convenient packages of 25, wrapped in self-sealing waterproof paper, and enclosed in a carton with full information.

### Window Display Competition.

In order to increase the interest of the general public in the use of disinfectants in their homes, and at the same time to assist the dealers in disposing of their goods, Platt's Chlorides are offering a series of cash prizes for the best window display showing the application of odorless disinfectants for household and sick-room uses. This is the time of the year when it pays the druggist to feature these goods, and those druggists who desire to participate in this competition ought to send at once to Henry B. Platt, 42 Cliff street, New York, for circulars giving particulars as to this contest.

### R. R. Shuman Heads Own Agency.

R. R. Shuman, of Chicago, announces that the partnership which has existed since March 1, 1913, under the name of the Shuman-Booth Company, was dissolved April 13. Mr. Shuman buying out the interest of Carl H. Booth in the partnership. Mr. Booth has retired to become the vice-president of the

Metallurgic Engineering Co., of Chicago, patentees and builders of electrical melting furnaces. Mr. Shuman has organized a stock company with \$20,000 capital to carry on the business under the name of the Shuman Advertising Co., with headquarters at 620 Westminster building, Chicago. The old organization will remain intact, and with the increased capital which this move gives it is expected to play a still larger part than heretofore in trade and technical journal advertising, as well as in carrying on a general advertising agency business.

#### VANADIUM RUBBER A NEW DISCOVERY.

After 25 years of almost continual experiment, J. Ellwood Lee, of Conshohocken, Pa., announced a discovery which he claimed would revolutionize the rubber industry—the production of vanadium rubber.

While possessing certain qualities of resilience and plasticity found in no other material, even the best grades of rubber possess characteristic defects that interfere materially with satisfactory service. Deteriorating rapidly with age, rotting on contact with oil, easily ruptured by impact from rough or jagged surfaces—it has come to be generally recognized that rubber goods must needs be of recent manufacture, and frequent replacements are expected, as a matter of course.

Following the discovery that many materials, particularly in the metal field, could be greatly toughened by the addition of certain ingredients at the time of their manufacture, the same line of reasoning was applied to rubber.

The use of vanadium in steel, with resulting toughness, resilience and resistance to stress and strain led to the consideration of this metal for use with rubber, and in July, 1912, experimentation began in the laboratories of the Lee Tire & Rubber Co., at Conshohocken. The first successful experiments were concluded a year later, in July, 1913, and in September of the same year the investigators felt assured of the practicability of the new compound.

According to an official announcement from the manufacturers:

"The relative strength of vanadium rubber, as compared with the best grades of rubber produced by ordinary processes, was shown by a series of tests, which determined the fact that the best grades of Para, untreated with vanadium, reached the breaking point at 876 pounds the square inch, while vanadium rubber resisted breaking until a pressure of 1800 pounds per square inch had been applied—thus exhibiting more than double the tensile strength of ordinary rubber.

"The first set of automobile tires produced from vanadium rubber were placed upon a large touring car devoted to the personal use of Mr. Lee, in July, 1913. During the months that followed they were subjected to a daily grueling over rough country roads until each of the four tires had rendered more than twice the mileage ever received before on the same car from the most expensive tires made. They were then removed, are at present open to inspection and appear to be still in a condition to give many more hundreds of miles of service."

It is claimed that the new product almost turns the edge of a knife; that it is practically oil proof, and that by the use of larger or smaller amounts of vanadium with the crude rubber a standardization of vulcanization time and of uniformity of product can be assured.

#### Rebo Roach Destroyer.

This preparation, which has been on the market for the past 20 years, is now being advertised through the drug trade, and the proprietor is desirous of hearing from druggists who are interested in the sale of insecticides. This product is put up in two sizes in attractive sift-top boxes, and retails at 10 cents and 25 cents, and the proprietor has a special introductory proposition which he is making to druggists at this time. He requests druggists to write for his special offer. The address is Jos. Ober, 118 E. 28th street, New York.

#### Wrigley's Spearmint.

Wm. Wrigley, Jr., Company, 1206 Kesner building, Chicago, will be glad to furnish window displays to those dealers who desire to co-operate in increasing their sales of Wrigley's Spearmint. Druggists and confectioners who wish to keep their windows fresh and attractive, can secure a handsome lithographed trim with additional matter to make an appro-

appropriate display in any size window they desire to use. Transportation charges will be prepaid. In writing please give size of window, and mention the ERA.

#### A Cork Gauge Sent Free.

The Armstrong Cork Company, makers of the Circle A and Circle B corks and of Armstrong's Household corks, have perfected a new cork gauge in handy form which they are mailing to retail druggists on request. The Circle A and Circle B corks are well known to druggists everywhere, while the Household corks come in cartons each holding three dozen 10-cent packages. See their advertisement for further details.

#### INCREASING USE OF GLYCERIN IN ARTS.

WASHINGTON, April 21.—Imports of glycerin into the United States during the last calendar year amounted to 38,000,000 pounds, compared with 30,000,000 in 1912; while the domestic production, all of which is consumed in the country, more than doubled in a decade, rising from 15,000,000 pounds to 1900 to 35,000,000 in 1913.

Glycerin, for many years treated as a waste product in the manufacture of soaps and candles, is now commercially important by reason of its wide application in the arts and industries. Domestic production has never been sufficient to meet the home demand, and during the last 10 years fully 350,000,000 pounds have been imported from foreign countries. Last year, according to official statistics of the Bureau of Foreign and Domestic Commerce, Department of Commerce we imported 10,000,000 pounds of glycerin from England, 9,000,000 from France, 4,000,000 from Belgium, and 1,500,000 pounds each from the Netherlands, Russia, Spain, and Italy, these countries being important manufacturers of soaps. The remaining imports were chiefly from Canada, 1,000,000 pounds; Mexico, 500,000, and Cuba, 250,000.

This glycerin, on being imported, is transported to the centers of those industries in which it is used. Last year, for example, 13,000,000 pounds were imported at New York, 10,000,000 at Philadelphia, 4,000,000 at Wilmington, Del., 4,000,000 at Omaha, 1,500,000 at Cleveland, and 133,333 at Chicago. Our Eastern cities use large quantities of glycerin in the preparation of medicines, aniline colors, formic acid, and copying inks. Our canning and packing-house centers find it of value in the preparation of preservatives for meats and other food products. Soap factories refine considerable quantities of glycerin and reincorporate it by mechanical admixture with soap, thus producing the glycerin soaps of commerce. A large proportion of the imports and domestic product was used at Wilmington, Del., in the manufacture of explosives; vast quantities of dynamite, derived from nitroglycerin, having been required in connection with excavation work on the Panama Canal. Over 24,000,000 pounds of nitroglycerin, valued at \$3,129,665, were used in the manufacture of explosives in 1905, and a somewhat larger quantity in 1910.

Discovered in 1779, it was not until 1847 that glycerin was first made in the United States, and in 1850 only 150 pounds were produced. Six years later it was still comparatively rare and selling at \$1.75 per pound, while today it is an article of household necessity, with an average wholesale price of less than 15 cents per pound at the foreign points of shipment.

#### Production and Use of Denatured Alcohol.

Germany now uses between forty and fifty million gallons of denatured alcohol a year, of which over thirty million gallons are sold to the general public for burning purposes. The importance of this fuel in Germany may be appreciated when it is considered that France uses about eighteen million gallons, the United States about ten million gallons, and the United Kingdom only four million gallons, according to a monograph by Charles A. Crampton, commercial agent of the Department of Commerce, recently issued by the Bureau of Foreign and Domestic Commerce. Denatured alcohol is not only gaining in favor for general burning purposes, but a determined effort is being made to find a way of using it as a motor fuel in place of the high-priced gasoline. All the recent developments are dealt with in the new monograph, which is entitled "Production and Use of Denatured Alcohol in Principal Countries" (Special Agents Series No. 77). Copies at five cents each may be had from the Superintendent of Documents, Government Printing Office, Washington, D. C.

### Hudnut's Pharmacy Sold.

The stock and fixtures of the Hudnut Pharmacy, 925 Broadway, near 21st street, Manhattan, valued at \$50,000, were sold at auction on April 23. It is understood that Richard Hudnut has been looking for an opportunity to retire from the retail drug business, and that the above action is the result of his desire. The wholesale and manufacturing business will continue undisturbed at 115-117 East 29th street. The Richard Hudnut perfums and toilet specialties are a well-known line in the trade.

The original Hudnut Pharmacy, first established in 1855 by Alexander Hudnut, the father of Richard Hudnut, and later moved to 205 Broadway, New York, was at one time the "hang out" for the city's and nation's famous men. The proprietor was locally known as the official "unofficial" weather recorder of New York. In 1890 Alexander Hudnut, upon the indication of failing health, sold the business to H. L. Cutter, who had been associated with him in business, for \$200,000. It soon passed into other hands, and in 1902 was assimilated by Hegeman & Co., 200 Broadway. The pharmacy operated by Richard Hudnut at 925 Broadway was also well known, and was one of the landmarks of the metropolitan district.

### Missouri Division, Rexall Dealers.

Missouri division of the International Association of Rexall Dealers of the United Drug Company, will give away 500,000 fly swatters, it was decided at the convention at the Planters Hotel. The plan was suggested by W. J. Howell, manager of the St. Louis United Drug branch. The convention decided to install sanitary paper cups at soda fountains in the stores of the delegates. B. T. Wilkerson, representing the Boston office, said that if a factory were located in St. Louis it would mean an expenditure of more than \$1,000,000. These officers of the Missouri division were elected: E. J. O'Rear, Maryville, president; F. G. Funk, Festus, 1st vice-president; J. H. Clifton, Webster Groves, 2d vice-president; J. B. Smith, Carrollton, secretary and treasurer. The next meeting will be held at Kansas City in October. J. C. McCormick, treasurer, Boston; Mr. Wilkerson and W. M. Federman, of Kansas City, were among those present at the semi-annual convention. The convention closed with a banquet at the Planters Hotel with plates for 200.

### Illinois I.P.A. and I.P.T.A.

Secretary Cornish, of the Illinois Pharmaceutical Travelers' Association, writes us that as the time for the annual convention nears, the indications of a banner attendance are pronounced. At the Spring meeting and banquet which took place at Hotel Sherman, Chicago, on April 4th, much enthusiasm was displayed by the travelers and the reports were that numerous down-State druggists would make the trip by automobiles. There can be no doubt that the retail druggist is by reason of his profession a much confined person and he is just beginning to realize that an outing like "The Week End at Fox Lake" will add renewed vigor for the hot, trying Summer months to come. This I.P.A. and I.P.T.A. Convention takes place at Mineola Hotel, Fox Lake, Ill., on June 11, 12 and 13.

### Pickard-Dean Co. Open for Business.

With new fixtures, new stock, new and much larger soda fountain, the Pickard-Dean Drug Company, No. 124 Peachtree street, Atlanta, Ga., is open for business, the opening day being Saturday, April 19. This company had been in business only a few months when the entire stock was destroyed by fire, and no concern in Atlanta or elsewhere had made such a business record in such a short time as had the Pickard-Dean Drug Company. At the opening carnations were given the ladies who visited the store, and with each purchase a small box of candy or a small box containing four toilet articles (Soul Kiss) was given.

### Tilden's Birthplace Burns.

The little white house opposite the church at New Lebanon, N. Y., built in 1789 by Elam Tilden, the one in which his son, Samuel J. Tilden, was born 100 years ago last February, was burned recently, probably by an incendiary. The house was occupied by a Mr. and Mrs. Harold Bjerke and the latter's mother. They were awakened by Mr. and Mrs. Ross Ridd, neighbors, and escaped in their night clothes. Gov. Tilden left

the homestead by will to two nephews, Samuel J. Tilden, president of the Tilden Company, New Lebanon, who died within a short time, and George H. Tilden, of Pittsfield. The loss is about \$5000.

### Virginia Rexall Club.

Following a two days session at the Jefferson Hotel, Richmond, Va., the Virginia Rexall Club elected these officers and committees: President, Gilpen Willson, Staunton, Va.; 1st vice-president, A. Tyler Hull, Hampton, Va.; 2d vice-president, John Reilly, Harrisonburg, Va.; 3d vice-president, E. C. Hamner, Lynchburg, Va.; secretary and treasurer, Floyd Black, Pocahontas, Va. The next meeting will be in March at Staunton, Va., on the second Wednesday and Thursday.

### NEW INCORPORATIONS.

- David Laboratories, New York, manufacture and deal in drugs and chemicals; capital, \$100,000; incorporators, V. M. Bowie, G. S. Mulligan, D. E. Ushkow.
- Santame Remedies Co., Wilmington, Delaware; capital, \$1,000,000; to manufacture and deal in drugs and chemicals; incorporators, Charles B. Bishop, Clarence J. Jacobs, Harry W. Davis, all of Wilmington.
- Ele-Kem Co., Chicago; \$15,000; incorporators, John J. Schayer, Louis Schelbite and Max W. Zabel.
- Polk Miller Drug Co., Inc., Richmond, Va.; capital increased from \$50,000 to \$75,000; W. Withers Miller, president; W. H. Miller, secretary, both of Richmond.
- John L. Stevenson Drug Co., Ennis, Texas; capital, \$5000; incorporators, John L. Stevenson, John M. Loggins and J. L. Champion.
- The Modern Chemical Co., Lawrenceville, Ill.; capital, \$16,000; manufacturers and dealers in disinfectants and deodorizers; incorporators, C. P. Danks, Charles Mahan and W. E. Paichor.
- Cobble Pharmaceutical Co., Chicago; capital, \$2500; manufacturers of pharmaceuticals; incorporators, H. M. Haynes, R. E. Branstad and Arthur L. Ballas.
- United Supply Syndicate of America, manufacturers of drugs, chemicals, etc.; capital, \$150,000; incorporators, V. C. Dreisbach, Jr., F. E. Dreisbach, of Philadelphia; L. J. Donovan, Camden, N. J.
- Beaumont Pharmacy Co., Beaumont, Texas; capital, \$2000; incorporators, W. H. Burgess, E. G. Burgess and J. R. Jefferson.
- The Palmetto Pharmacy, Columbia, S. C.; capital, \$2000.
- Remington-Bowles Drug Co., of Shawnee, Okla.; capital, \$5000; incorporators, Lena Remington, W. L. Chapman, of Shawnee; C. A. Bowles, of Oklahoma.
- Korns Drug Co., Waterloo, Ia.; capital, \$6000; officers: president, J. F. Korns; vice-president, O. L. Wray; secretary and treasurer, E. H. Korns.
- McGill Remedy Co., Bluffton, Ind.; capital, \$100,000; to manufacture and sell medicines; J. H. McGill, Bluffton; M. E. McAfee, H. H. Barsch.
- Femme Products Co., drugs, New York; capital, \$150,000; Philip Mantel, A. Trimble.
- Etafo Chemical Co., Richmond, N. Y.; \$10,000; Andrew J. Cotton, Louis J. Altman and John Bowe.
- German-American Drug Co.; capital, \$100,000; Wray C. Arnold, Lansdowne, Pa.
- Barnes & Hall, Lexington, Ky.; capital, \$10,000; Alexander H. Hall, H. H. Barnes, John F. Hall and C. E. McCarthy.
- Lente Chemical Co., Manhattan; drugs, chemicals, etc.; capital, \$25,000; H. Tippenhauer, J. A. Christie and S. Lewin.
- J. F. Bartlett Drug Co., Cleveland, O.; Claude W. Skimmon; capital, \$10,000.
- Natura Drug Co., Indianapolis; manufacture and sale of drugs; capital, \$100,000; Willis S. Payne, B. O. Wright and Marcus W. Payne.
- French-American Chemical Co., Paterson, N. J.; chemists, druggists, etc.; capital, \$200,000; P. S. Warman, N. Kantrowitz and W. L. Rucker.
- Eelis & Goltermann, Inc., Great River, N. Y.; manufacture and deal in toilet articles; capital, \$100,000; J. B. Kilburn, F. L. Eelis and F. A. Huck.
- Werner Chemical Co., New York City; capital, \$250,000; A. H. Werner, J. F. Curtin and H. O. Coughlan.
- New York Calcestry Corporation, Manhattan; drugs, medicines, etc.; capital, \$25,000; D. P. Bergheimer, J. A. Byrne and A. A. McGivney.
- Colson Medicine Co., Hamilton county, Tenn.; capital, \$20,000; G. W. Colson, Annie Smith, D. L. Truan, J. E. Vandergriff and H. C. London.
- The Kokomo Blue Grass Drug Co., Kokomo, Ind.; capital, \$8200; to deal in drugs, etc.; C. M. Graff, F. W. Graff and F. W. Leeds.
- The Sentanel Remedies Co., Delaware; to manufacture and deal in medicines, etc.; capital, \$1,000,000; C. N. Bishop, C. J. Jacobs, H. W. Davis.
- Le Liebig Remedy Co., Buffalo, N. Y.; capital, \$20,000; Robert E. Rayman, G. Wiley Hickok and Charles D. Ream.
- Swiss Drug Co., Findlay, Ohio; capital, \$10,000; Albert Schwynn, president; Clarence Young, vice-president; J. B. Young, secretary and treasurer.
- Union Drug Co., Los Angeles, Cal.; capital, \$10,000; H. A. Barber, M. M. Barber and G. F. Craig.
- Waco-Tone Co., Wilmington, Del.; capital, \$100,000; to manufacture and sell the Hoffman Remedies; F. D. Buck, George W. W. Greal, B. M. Greal, all of Wilmington.

PATENTS AND TRADE MARKS

**POISON PROTECTIVE DEVICE.**

**W**ILLIAM P. ROBERTSON, New York, N. Y., assignor to Sharp & Dohme, has devised a poison protective device (Patent No. 1,091,441), which is described as the combination of a pill or tablet having a physically separate

1.091.441

1.091.114

and flexible label attached thereto, and a thread or cord embedded therein and extending beyond the outlines of the tablet. The pills or tablets may be arranged in series, the thread or cord passing through each pill or tablet so arranged.

**Dose Indicator.**

This device, put out as a new article of manufacture, is the invention of Ithamar P. Berthrong, Washington, D. C. (Patent No. 1,091,114). It consists, as will be seen from the accompanying illustration, of a glass cover and medicine dose indicator having a central concavity to receive and support a spoon bowl, and an upstanding flange surrounding the concavity, in which flange are seats grouped about the central portion to receive a spoon handle. Adjacent to the seats on the flange are dial figures.

**Poison Indicator.**

This device, the invention of Ralph W. Bugbee, St. Louis, Mo. (Patent No. 1,092,110), is a poison indicator of the class

1,092,016.

1,091,271

1,093,481.

described, comprising an elastic band, tubular in form and made of spirally arranged spring wire, and globular bells mounted in the bore of the tubular band to roll therein.

**Medicine Dropper.**

A medicine dropper, which is the combination with a receptacle encircled by a longitudinal shield with a slot opening at one end thereof, an ejector supporting member formed with the receptacle and projecting therefrom to extend through the slot and an ejector carried by the said member and lying exteriorly of the shield, has been devised by Louis P. Savage, Laporte, Ind. (Patent No. 1,093,481). Means for connection with the shield and closing the slot and to hold the receptacle against removal from the slot are provided.

**Funnel With Filter Chamber.**

Cornell Badig and Samuel Berger, New York, have invented a funnel which presents some novel features (Patent No. 1,091,271). It comprises a body portion and a spout having a filter chamber in which is a cup for receiving fibrous filtering material, an apertured disk mounted in the chamber above the cup, and a spring-restrained rod reciprocable in the spout and aperture of the disk. Upon the lower end of the rod a valve is mounted for normally closing the aperture to prevent the passage of liquid therethrough, while a weight of skeleton form mounted in the cup for slightly compressing the filtering material therein is provided to prevent the valve from contacting with the material when the same is moved to uncover the aperture.

**PATENTS.**

**Granted March 24, 1914.**

- 1,090,855—Emil Jagenberg, Dusseldorf, Germany. Machine for placing bottles in transport cases.
- 1,090,863—George J. Kelley, Attleboro, Mass. Atomizer.
- 1,090,033—Harry P. Bassett, assignor to The Spar Chemical Co., Baltimore, Md. Process of separating sodium and potassium salts.
- 1,091,114—Ithamar P. Berthrong, Washington, D. C. Dose indicator.
- 1,091,209—Marshall Edison Gates, Helena, Mont. Tooth brush.
- 1,091,230—Anton Messerschmitt, Stolberg, Germany. Method for extracting potassium and sodium compounds from silicates which contain alkalies.
- 1,091,234—Alwin Mittasch and Hugo Morawitz, assignors to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Producing ammonium sulphate.
- 1,091,287—Cornell Badig and Samuel Berger, New York, N. Y. Funnel.
- 1,091,276—Engelbert Berge, assignor to Badische Anilin & Soda Fabrik, Ludwigshafen-on-the-Rhine, Germany. Producing unsaturated terpene hydrocarbons.
- 1,091,301—Edward J. Doheny, Woonsocket, R. I. Stopper extractor.
- 1,091,308—Louis Drosin, New York, N. Y. Bottle holder for chloroform inhalers.
- 1,091,314—Carl H. Erickson, Denver, Colo. Tooth brush.
- 1,091,325—Richard Friedrich, Glosa, near Chemnitz, Germany, and Friedrich Hirsch, Vienna, Austria-Hungary. Process of manufacture of solid sulphites or bisulphites of homogeneous chemical constitution.
- 1,091,365—John C. McCain, Tacoma, Wash. Supporting bracket for dispensing bottles.
- 1,091,411—Winfred R. Writwell and John C. Kelly, Redondo Beach, Cal. Non-refillable bottle.
- 1,091,441—William P. Robertson, New York, N. Y., assignor to Sharp & Dohme. Poison protective device.

**Granted March 31, 1914.**

- 1,091,626—Joseph Butkus, Chicago, Ill., and John A. Butkus, Baltimore, Md. Process of manufacturing bottle caps.
- 1,091,688—Michael J. Milmo, assignor to W. C. Ritchie & Co., Chicago, Ill. Box labeling machine.
- 1,091,793—George L. Bender and John G. Rapp, San Francisco, Cal. Labeling machine.
- 1,091,850—Frederick H. Knapp, assignor to The Fred. H. Knapp Co., Westminster, Md. Labeling machine.
- 1,091,973—Wesley L. Smith, Pittsburgh, Pa. Apparatus for administering anesthetics.
- 1,091,993—Peter F. White and Walter Grant, McNeil Island, Wash. Tooth brush.
- 1,092,014—Thomas L. Briggs, Brooklyn, N. Y. Tooth brush.
- 1,092,016—Ralph W. Bugbee, St. Louis, Mo. Poison indicator.

**Granted April 7, 1914.**

- 1,092,176—Paul A. H. A. Schulz, Columbia, S. C. Aseptic package for surgical dressings.
- 1,092,318—Benjamin T. Winchester, assignor by mesne assignments, to Sharp & Dohme, Baltimore, Md. Capsule holder.
- 1,092,319—Same as preceding. Capsule filling machine.
- 1,092,369—George Kolsky, Niagara Falls, N. Y. Process of making chlorates and apparatus therefor.

- 1,092,589—Rubin Rothman, Brooklyn, N. Y. Method of sealing bottles.  
 1,092,591—Willie L. Blanchard, Lehigh, Okla. Funnel.  
 1,092,592—William H. Cadwell, New Britain, Conn. Combined bottle cap and extractor.  
 1,092,593—Charles A. Wolf, Philadelphia, Pa. Crotalin preparation.  
 1,092,594—Fred H. Chapman, Winchester, Mass. Non-refillable bottle.  
 1,092,595—Kirjath A. Godwin, Salem, N. J. Tool for finishing heads of bottles.  
 1,092,596—Leon Coulet, Hyeres-les-Palmiers, France. Combined box and dropping bottle with a sugar magazine.

#### Granted April 14, 1914.

- 1,092,975—Thomas Carroll, assignor to The National Cash Register Co., Dayton, Ohio. Cash register.  
 1,093,039—Thomas A. DeVilbiss, assignor to The DeVilbiss Manufacturing Co., Toledo, Ohio. Atomizer or the like.  
 1,093,247—Otto Bonhoeffer, and Hugo Guntrum, assignors to Farbwerke vorm. Friedr. Bayer & Co., Elberfeld, Germany. Cellulose formates and process of making same.  
 1,093,288—Albert L. Newson, assignor to Oscar C. Hockett, Richmond, Va. Stopper and extractor therefor.  
 1,093,365—Henry W. Van Leir, assignor by mesne assignments, to S. S. Wenzell Machine Co., Philadelphia, Pa. Valve for bottle filling apparatus.  
 1,093,481—Louis P. Savage, Laporte, Ind. Medicine dropper.

#### TRADE-MARKS.

#### Published March 24, 1914.

- 61,383—H. Trommsdorff, Aachen, Germany. Ointments for human medical use, etc.  
 67,108—New York and London Drug Co., New York, N. Y. Anti-septic throat pastilles.  
 67,743—Marius Biondy, Philadelphia, Pa. Toilet preparations.  
 71,613—F. W. Churchill, Proctor, Vt. Toothache remedy.  
 74,147—T. B. Key Co., San Francisco, Cal. Remedy for rheumatism, syphilis, Bright's disease, etc.  
 75,244—Bell & Co., Inc., Orangeburg, N. Y. Indigestion remedy.  
 75,264—Martha A. Parker, Shelbyville, Tenn. Remedy for eye diseases.  
 75,298—Maurice F. Schlesinger, New York, N. Y. An oil for intestinal stasis, autointoxication, etc.  
 75,327—Dr. Flint Medicine Co., New York, N. Y. Remedy for diseases of the throat and lungs, etc.  
 75,586—Nelson, Baker & Co., Detroit, Mich. Vulneraries.  
 75,616—Rosalie S. Kowalski, Vallejo, Cal. Liniment.

#### Published March 31, 1914.

- 13,036—The Sanitas Company, Ltd., London, England, assignor to "Sanitas" Co. (U.S.A.), Jersey City, N. J. A disinfecting fluid, etc.  
 68,673—David E. Wright, deceased, Bloomfield, N. J.; Isabella Wright, Harrisburg, Pa., executrix. Hair tonic.  
 72,496—The Bovine Co., New York, N. Y. Beef juices and meat extracts.  
 72,617—The Expurgo Manufacturing Co., Chicago, Ill. Preparations for the treatment of diabetes, gall stones, etc.  
 73,098—Harvey & Co., Ltd., Dublin, Ireland. Worm and condition powders; hair restoring ointment, etc.  
 74,526—Frederick G. Earl, New York, N. Y. Aperient tablets.  
 74,875—Adolphe F. DePatie, Chicago, Ill. A hair grower salve.  
 74,960—Harold S. Eggers, Troy, N. Y. Ointment for relief of whooping cough, coughs, colds, croup.  
 74,980—Hollandische Melksuikerfabriek, Amsterdam, Netherlands. Milk sugar.  
 75,019—Webster Chemical Co., St. Paul, Minn. Ointment for injuries and eruptions.  
 75,026—Curtis A. Clark, College Corner, Ohio. Preparation for fistula, poll evil, farcy, etc.

- 75,105—Stewart & Holmes Drug Co., Seattle, Wash. Medicines for blood and skin diseases.  
 75,215—Arsene J. Van Exem, New York, N. Y. Toilet preparations.  
 75,349—Arthur W. Madden, Pittsburgh, Pa. Ointment for irritations of the skin.  
 75,478—Calsalvo Chemical Co., New York, N. Y. Medicine for lime starvation.  
 75,602—James Savage and Margaret Savage, Pittsburgh, Pa. Salves.  
 75,765—James S. Kirk & Co., Chicago, Ill. Talcum powder, toilet water, etc.  
 75,798—Business of Orator F. Woodward, Deceased, LeRoy, N. Y. Corn plasters.  
 75,799—James Clausen, St. Louis, Mo. Hair tonic and dandruff remedy.  
 75,836—The J. B. Williams Co., Glastonbury, Conn. Toilet powder.  
 75,851—Bartolo Ruggiero, Brooklyn, N. Y. Remedy for cuts and sores.  
 75,950—The Rhubarb Co., Wheeling, W. Va. Remedy for catarrhal affections of the stomach, kidneys, etc.  
 75,958—Frederick N. Booth, Honolulu, Hawaii. Ointment for salt-rheum, boils, eczema, etc.  
 75,973—Friedrich M. Sames, New York, N. Y. An ointment.  
 75,974—Van Horn and Sawtell, New York, N. Y. Remedies for intestinal disorders.  
 76,062—Francis B. Shields, Danville, Ill. Liquid face powder and tan remover.  
 76,090—Ada H. Ross, Los Angeles, Cal. Hair grower.  
 76,094—Mark L. Underwood, Chaffee, Mo. Saline laxatives.  
 76,150—Radical Remedy Co., New York, N. Y. Remedy for indigestion, constipation, etc.  
 76,157—Thomas M. Warner, Denver, Colo. Remedy for hay fever and other catarrhal affections of the head.

#### Published April 7, 1914.

NQTE—A, advanced; D, declined; C, correction; N, new.

**N**EW YORK, April 22.—Trading during the past month has been of a routine character and quiet, although some jobbers report that mail and telegraphic orders have been received from various sections in fair numbers. The purchasing, however, has been generally restricted to small quantities for prompt or nearby consumption. The changes in quotations are about evenly distributed between advances and declines. Practically all products native to Mexico have been featured in a large way by a stronger undertone, but with the possible exception of American saffron, no changes in the quotations of these products have yet reached the jobbing market. Opium is higher, while advances are also noted in the prices of acetphenetidine, molybdic acid, arnica root, belladonna leaves, oil of wintergreen, and santonine. Quinine is unchanged but firm. Owing to the stronger situation in Norway, cod liver oil is well maintained. Menthol lacks quotable change, and supplies for tamarinds in this market are about exhausted. Glacial acetic acid, C.P., is easier, and colchicum seed, both whole and powdered, is considerably lower. Among the oils, cloves, cubeb and English sandalwood have been marked down in price, quotations also being lower for powdered sugar of milk.

**OPIUM**—A stronger feeling characterizes the market and jobbers have advanced quotations on natural to \$6.60@ \$7 per pound, with prices for granulated and U.S.P. powdered remaining unchanged at last month's quotations, viz., \$8.25@ \$8.35 per pound for the former, and \$8.15@ \$8.35 for the latter.
